THE ENCYCLOPAEDIA OF ISLAM
EXECUTIVE COMMITTEE:

The preparation of this volume of the Encyclopaedia of Islam was made possible in part through grants from the Research Tools Program of the National Endowment for the Humanities, an independent Federal Agency of the United States Government; the British Academy; the Oriental Institute, Leiden; Académie des Inscriptions et Belles-Lettres; and the Royal Netherlands Academy of Sciences.

The articles in this volume were published in double fascicles of 128 pages, the dates of publication being:

- 1986: Fasc. 99-100, pp. 1-128
- 1990: Facs. 113-114a, pp. 897-1044

ISBN 90 04 08112 7

PRINTED IN THE NETHERLANDS
AUTHORS OF ARTICLES IN THIS VOLUME

For the benefit of readers who may wish to follow up an individual contributor's articles, the Editors have decided to place after each contributor's name the number of the pages on which his signature appears. Academic but not other addresses are given (for a retired scholar, the place of his last known academic appointment).

In this list, names in square brackets are those of authors of articles reprinted or revised from the first edition of this Encyclopaedia or from the Shorter Encyclopaedia of Islam. An asterisk after the name of the author in the text denotes an article reprinted from the first edition which has been brought up to date by the Editorial Committee; where an article has been revised by a second author his name appears in the text within square brackets after the name of the original author.

**ADDENDA AND CORRIGENDA**

**VOLUME I**

- P. 56b, *ABD AL-CAZIZ, 1.4,* instead of 20 June read 26 June.

**P. 106b,** *ABU L-ARAB, add:* One of the works of Abu l'-Arab Muhammad b. Ahmad b. Tamīm b. Tamīm b. Tamīm al-Tamīnī (the thus the nasb) which has been preserved (in a unique Cambridge ms.) is his Kitāb al-Mīshān, a work in the tradition of the makātib books. It deals with a wide range of deaths in battle, by poisoning, persecution of al-Aids, sufferings of Ahmad b. Hanbal in the mihna [q.v.] of the early 3rd/9th century; see for an analysis of its contents, M. J. Kister, *The “Kitāb al-Mīshān”,* a book on Muslim mortuary rites, in *JSS, xx* (1975), 210-18. The complete work has now been edited by Yalā’ī Wahīb al-Qāddārī, Beirut 1403/1983.

**VOLUME II**

**P. 809b,** *FARRUKHAN,* l. 5 from bottom, instead of seventy years read thirteen years (90-103/709-21).

**VOLUME III**

**VOLUME IV**

**VOLUME V**

- P. 94b, *BAHMAN SHAH, AL-MALIK AL-AMDJAD,* 1.2, instead of Shāhānshāh read Turāngānshāh.

**P. 1007b,** *BARĀDUST,* l. 37, instead of 395/1005 read 1005/1597.

**P. 1300b,** *BULANDSHAHR,* l. 30, instead of 644/1246-665/1266 read 796-815/1394-1412.

**ADDENDA AND CORRIGENDA**

**VOLUME I**

- P. 56b, *‘ABD AL-CAZIZ, 1.4,* instead of 20 June read 26 June.

**VOLUME IV**

- P. 75b, *‘ABD AL-MADI D I, 1.39,* instead of 25 June read 26 June.

**P. 106b,** *ABU L-ARAB, add:* One of the works of Abu l'-Arab Muhammad b. Ahmad b. Tamīm b. Tamīm b. Tamīm al-Tamīnī (the thus the nasb) which has been preserved (in a unique Cambridge ms.) is his Kitāb al-Mīshān, a work in the tradition of the makātib books. It deals with a wide range of deaths in battle, by poisoning, persecution of al-Aids, sufferings of Ahmad b. **ADDENDA AND CORRIGENDA**

The islamisation of Khotan apparently took place already around 1000, at any rate before 1008, since the Chinese annals for the year 1009 report the arrival of a kuei-hu (¼ Turk) sent by the he-tian (¼ Khagan) of Yu-tien (¼ Khotan) with tribute to the Imperial Chinese court; the envoy had been travelling for a year (see M. Abel-Rémy, Histoire de la ville de Khotan tirée des annales de la Chine et traduite du chinois, Paris 1820, 86-7). The Muslim ruler at this time was the Karakhānīd Yūsūf Kāfīr Kān of Kāshghar (on whom see O. Pritsak, Die Karachaniden, in Id., xxi [1953-4], 30-39, repr. in Studies in medieval Eurasian history, London 1981, xvi, and telk-išahāns). The conflict between Khotan and Kāshghar must have started earlier, however, for in a letter written in Khotanese by King Viśā Sūra in 970, the ruler refers to “Our evil enemy the Tażhīk (Khot. Tarīkha) Tcūm-hyai-nã (Ts’un-hsiân?), who [is] there among the Tażhīks,” and in a letter in Chinese from the ruler of Shou (Tun-hsuan) to the king of Khotan, in the Pelliot collection, from around 975 we read “the prince of the west is leading Taśīdīq (Ta-shīh) troops to attack [your] great kingdom” (see Bayley, Saka documents, text vol., Corpus inscr. iranicarum, ii, V, London 1968, 58-61, li 50-1; Hamilton, Sur la chronologie, 48-9). Hamilton has suggested that the “evil enemy” may be Viśā Sūra’s brother, another son of Viśā Saṁbhava (in Chinese, Li Sheng-t’ien), two of whom are known to have borne the name Tcūm/Ts’un. Kumamoto, op. cit., 231, suggests that this ruler may have been a Karakhanīd. The last known king of Khotan was Viśā Dēbharma (still ruling in 988), whose name shows that he was not a Muslim. The definitive struggle over Khotan must therefore have taken place during the ensuing two decades. See also M. A. Stein, Ancient Khotan, 2 vols., Oxford 1907, repr. New York 1975, i, 180-1; W. Samolin, East Turkestan to the twelfth century, The Hague, etc. 1964, 80-2.

P. 1029b, AL-MADIJAWI, i. 4, instead of Algiers, read Constantine.

P. 1232a, AL-MAHDI: ii. 33-48. This passage was modified by the Editors without the author’s consent. The author’s original should be restored as follows:

This hadīth, whose first part is patterned upon the revolt of ‘Abd Allāh b. al-Zubayr, probably goes back to ‘Abd Allāh b. al-Hārīth b. Nawfāl b. al-Hārīth b. ‘Abd al-Muṭṭalib, who appears in its isnad and claimed to have heard it from Umm Salama, widow of the Prophet. ‘Abd Allāh b. al-Hārīth was chosen by the people of Baṣra as their governor in 64/684 after the death of the caliph Yazid and the flight of his governor ‘Ubayd Allāh b. Ziyād. He then recognised Ibn al-Zubayr as the caliph and took the pledge of allegiance of the Baṣrāns for him. The hadīth was evidently proclaimed by him in this situation with the aim of stirring up support for the cause of Ibn al-Zubayr.

VOLUME VI

P. 334a, MA’AN, at end of bibliography add Abu ‘I-Wafa’ al-Urdjī, Maḍīn al-dhīābā bin ‘l-rīḍjāl al-mugharrafa bi-him Ḥalaṣ, MS B.M. Or. 3618.

P. 358a, AL-MANĀMA, i. 3, instead of side read site.

Add to Bibliography Mahdi Abdalla al-Tajri, Bahrain 1920-1945, Britain, the Shaikh and the administration, London 1987.

P. 374b, AL-MANĀZIL, i. 8, after Ibn Kutayba insert a comma.

l. 27, after names insert became.

No. 5 of the list, instead of ‘a22. Orions read ‘a21. 2 Orions. No. 9 of the list, instead of 8 read x.

P. 390a, No. 28 of the list, instead of al-hū read al-hūt.

l. 23, instead of 1800 read 1840.

P. 459b, MAPPILA, l. 37, instead of 1948 read 1498.

P. 460b, l. 10, instead of ist read its.

l. 30, instead of or read of.
XVI ADDENDA AND CORRIGENDA

P. 461a, l. 13 from below, instead of wiser read wider.
P. 462b, l. 17, instead of nor read not.
P. 463a, ll. 29-30 from below, instead of remaining read remains.
P. 464a, l. 16 from below, instead of wisely read widely.
Pp. 511 and 517, MAR‘ASHIS. Owing to an unfortunate oversight Table A has been included twice.
P. 641a, MĂSARDJAWAYH, l. 10, instead of πανδέκτης read Πανδέκτης.
  l. 24-25, instead of p. 20, l. 341 read p. 20, l. 341.
P. 736b, MASKĂT, add to author’s signature “shortened by the Editors”.
P. 764b, MASRAH, add at the end of the Bibliography: Modern Persian drama. Anthology, tr. G. Kapuscinski, Lan-

SUPPLEMENT
P. 127a, BĂRIZ, DJABAL, add: One should note the present-day settlement of Pāriz, in the northwestern
  part of the Djabal Bāriz, on the Ragsandjan-Sa‘īdābād (Sīrjān) road, which could possibly be the,
  classical Perškāne polis, town of the Parikanioi. See A. D. H. Bivar, A Persian fairyland, in Acta Iranica
  derives the legends and romances around the peris or fairies of Iran (Av. παρικός, MP pāriš, NP pāri)
  from indigenous Persian traditions connecting them with the Parikanioi, whose epigoni were suspect
  in Sāsānian times by Zoroastrian orthodoxy for their non-Zoroastrian local beliefs and customs, hence
  equated with demonic and supernatural beings.
P. 163b, ČĂČ—NĂMA. The last item in the Bibliography has been published in Y. Friedmann, ed., Islam
  in Asia, 1: South Asia, Jerusalem 1984, 23-27.
P. 395a, IBN NĂZIR AL—DJAYSH, add to Bibl.: The Tathkif is now available in the edition of R. Veselỳ,
  IFAO, Cairo 1987; see also on the author, D. S. Richards, The Tathqif of Ibn Nāzir al-Jaish: the identity
The judicial functions of the Prophet, which had been expressly attributed to him in the Kur'ān (IV, 65, 105; V, 42, 48-9; XXIV, 48, 51), were taken over after his death by the first caliphs, who administered the law in person in Medina. Already under 'Umar, the expansion of the Islamic empire necessitated the appointment of judges, originally for the expeditionary forces, then, in the natural course of events, also for the conquered territories; this institution of army judges (kādi‘l-djund) remained in being down to the Ottoman period as the kādi‘-askar [q.v.]. The source of jurisdiction in the Shari‘a is the caliph; the judges act as delegates of the authority by which they have been appointed, and are authorised to delegate their powers in turn to other persons. The appointment of a judge is made by contract consisting of offer and acceptance in the presence of at least two witnesses. The validity of the appointment does not depend upon the legality of the appointing authority; by this open-minded disposition, the Shari‘a has accommodated itself even in theory to the actual facts. On the other hand, the authorities are free to restrict the competence (wilāya) of the judge with regard to place, time and subject matter. In the early period, there used to be judges only in the big towns, and the judicial districts were accordingly large (the whole of Egypt, for instance); under the Ottomans this came to change, perhaps in consequence of the intense practical application of the Shari‘a in their territory. The restriction with regard to subject-matter was originally intended to divide labour and alleviate the burden of the chief judge, especially by erecting into independent offices some of his functions that were not purely judicial; in modern times, the restriction with regard to time and subject-matter is used in order to modify or eliminate the application of provisions of the Shari‘a without interfering directly with its material dispositions (see section 4. xiii. Reforms in the law applying in Shari‘a courts, below). Under the Umayyads, the judges were as a rule appointed by the governors; the 'Abbāsids made a point of assuming directly the exercise of this function of the sovereign; although they had to delegate it more than once to practically independent princes, they still tried to retain it, at least in form, even when their power was in full decay. The compromise between these tendencies, together with the large size, and even the accumulation in one person, of judicial districts brought about a complicated system of delegation to substitutes. The Fājmīds, the Umayyads in Spain and the Ottoman sultans likewise appointed their judges directly; the latter continued to exercise this privilege also in ceded territories such as Egypt, of which the chief kādi‘ was nominated in Istanbul until 1914. The kādi‘ could be deposed at any time by the authority which had appointed him; a change of the person in charge of this function very often caused a re-filling of all the judicial posts dependent on it. According to the theory of the fīsh, only a delegate, not an independent kādi‘, loses his office by the death or dismissal of the person who appointed him. Corresponding to this right of nomination is something like a right of supervision, which manifests itself in receiving complaints as well as in giving official directions. Another kind of higher instance was represented by the unanimous opinion of the learned men whom the judge ought to consult in cases of doubt; these could come to form a sort of unofficial court of appeal. A third kind of higher instance, the most important in practice, was control by the successor, which was often exercised with the utmost severity; every judgment of a kādi‘ could be annulled by any of his successors, a possibility which led to an endless duration of some law-suits. All this affords certain possibilities for the revision of judgments, which in theory is not provided for at all. In theory, the kādi‘ acts as a single judge; this did not prevent several judges, even if belonging to different juridical
judicial district, especially in the capitals. A judgment was often had (for the first time in Cairo in 525/1131) in Baghdad (under Harun al-Rashid); in the western caliphs and their political organs: viziers, governors, nazar al-mazdlim, etc., or by judges appointed expressly for this purpose. It retained certain general principles of the Shari'a, but based its judgments mainly upon equity and custom and applied an elastic and often summary procedure. This state of things was to some extent sanctioned by the Kur'anic injunction to obey those in authority. In the sphere of secular jurisdiction, the last and the present century brought the creation of courts on the European pattern, controlled by the government, and the introduction of modern codes. The final step was the reorganisation, again on European lines, of the juridical system in a number of Muslim countries, resulting in the introduction of courts of appeal and of benches consisting of more than one judge. All this derives from the power of the authorities to restrict the competence of the kādīs.

In the following, we shall briefly discuss the spheres and organisation of Shari'a justice in the Muslim countries, its material law and procedure, the reforms in the law applying in Shari'a courts and their application by the kādīs.

MAHKAMA

Liebesny, The law of the Near and Middle East, Albany 1975, chs. 1-2; Subhi Mahmassani, al-Azda al-tashkhtiya fi 'l-dawal al-arabiyya muddahh uwa-haidhurah, Beirut 1965, with bibliography of Arabic works. (J. Schacht*)

2. THE OTTOMAN EMPIRE

i. The earlier centuries

As the official seat of the kâdî [q.v.], the makkama was a fixed location within the bounds of a kâdî or hukûma, the jurisdiction area assigned to a kâdî. The number of makkamas in a particular jurisdiction area was determined and fixed by the sultan, and their locations could not be changed at the will of the sultan. The location of the makkama was usually chosen for its easy access to the commercial community, generally in the bazaar or somewhere within the precincts or near to the congregational mosque of the town. For instance, one of the makkamas of Istanbul was in the courtyard of the mosque of Divan Kû'affîn (see R. K. Bire, Turkish Hist. Soc. ms. Y4, f. 87b). When the population of a district grew or when new circumstances arose, the sultan could decide to divide the existing kâdî's jurisdiction into new ones. The location of the makkama was thus easily changed which made it possible for the sultan to give it to his favorites or to distribute it among his allies. The number of makkamas in a particular jurisdiction area could not be increased; the sultan could only divide the existing jurisdiction into smaller areas.

In the Ottoman Empire, makkamas usually had their own premises, at least in the 18th century, as appears from the court records. The exact number of makkamas in a jurisdiction varied according to the population. In Istanbul, for example, there were five makkamas scattered in the kâdî of Istanbul, and in 993/1585 the kâdî submitted a request for opening of new makkamas for the convenience of the population (A. Refik, Istanbul hayâtes, i, 30). In other kâdîs of greater Istanbul, namely Eyüp (Khâşylar), Galata (Pera) and Üskûdar, there were other makkamas. Bur- sa had seven makkamas at various parts of the city in the 11th/17th century.

The jurisdiction of a makkama and abuses of power. Within a kâdî's boundaries, an individual was free to choose which makkama to use. Some makkamas developed a specialty in a certain field; for instance, the makkama of Eyüp became the court specialising in cases of water rights (O. Nûrî, Mağâilla, i, 1221). In the period before Süleyman's reign, important cities had judges of both the Hanafî and Shâfi'i law schools. However, Süleyman ordered that all courts in the Ottoman dominions should be administered only according to the Hanafî rite (Abu 'l-Su'ûd, Ma'rûdî, in MTTM, i, 340-1). Despite this rule, Shâfi'i judges continued to function in the courts of Antakya and all the cities in the Arab provinces (see Ewliyâ Čelebi, Şehâbât-nâmeh, iii, 38). By a hûkm of 928/1522 (ms. Veliyuddîn 1969), the local beys were authorised to appoint kâdîs of the Shâfi'i school in the province of Diyarbakr. In Raqâb 981/October-November 1953 a firman confirmed that the kâdîs in the province of Tarabûls al-Qharî (Libya) could follow the Mâlikî school in their decisions (Mühmmîm defteri, xxiii, 153).

The kâdî or hukûma al-shâr of a court derived his authority directly from the sultan and was responsible only to him. A kâdî once dismissed by the sultan had no power to issue any document. In the Ottoman empire, the kâdî administered, not only the religious law but also the secular kânûn [q.v.], a practice peculiar to that régime. The hâkim had the power to impose jizya [q.v.] punishments and to imprison debtors. Local makkamas, however, had to refer to the Porte all cases concerning the military class, state interests and public security, as well as those involving more than a certain amount of money. Some cases concerning the foreigners covered by the capitulations were also to be referred to the dîvân-i hâmâyûn [see Mi'tâvâyât, ii]. The sultan could order a hâkim not to hear certain kinds of cases. The kâdî's decision was in principle final, and there was no provision for appeal in the Ottoman judicial system. However, if the interested party complained directly to the sultan of injustice in a decision, the imperial dîvân, while not capable of reversing it, could order according to the circumstances either a retrial by the same kâdî, a transfer of the case to a nearby hâkim's court, or the dispatch of the parties to the imperial dîvân for a new trial.

Governors were strictly forbidden to interfere in the courts' activities (for the sultan's strong reaction in such a case of interference, see Taqûkpurû-zîde, Şokâ'î al-nâ'âmanîyya, 216). In a fatwa, Abu 'l-Su'ûd equated such governors with infidels. If a governor-general caught a kâdî in a flagrantly illegal action, he could put an end to his activities, but he had to notify the sultan immediately, since a kâdî could only be tried in the imperial dîvân itself. The sultan could at any time decide to remove a kâdî from office. At the beginning, the term of a kâdî's office was unlimited. Later, in 1001/1598-9, it was limited to three years, with the possibility of two-year interim appointments. From the end of the 11th/17th century onwards, the regular term of office or mudâdat-i tarîyya became one year. Originally an outgrowth of the need to find appointments for the mulzims or qualified candidates awaiting their turn for a post, these frequent changings of office were seen to be the prime factor in the deterioration of the Ottoman judicial system and a cause of widespread corruption (such criticisms made in the political pamphlets are summed up by K. Rohrborn, Unter- suchungen zur Osmanischen Verwaltungsgeschichte, Berlin 1973).

Local populations had the right to complain to the sultan about their hâkimâ' activities and behaviour, this being a fundamental right enjoyed by the re'ûyâ against any agent of the sultan. General inspections were carried out from time to time to redress wrongs attributed to the kâdî (for punishments meted out after such an inspection, see Topkapi Palace Library, Revan, no. 1506; M. Cezar, Levendler, Istanbul 1965, document no. 1 in the appendix). In Ottoman history, popular discontent against abuses at the makkama was taken seriously by the sultans, and periodic reforms were carried out from the time of Bayezid I onwards. The principal subject of complaint was the collection of court fees, considered to be contrary to Islamic principles and actually denounced by the Ottoman muftis. The government tried to regulate the rates of these fees in various dates, as can be seen from the following table.

These fees constituted the principal source of income of the hâkimâ. They were prone to raise the rates or to force people to come to court unnecessarily for cases such as inheritance division or kûsmat-i mûrûd. Ewliyâ Čelebi gives as the normal amount the income from each kâdî, including the income from abuses. It was only in the period following the Tanzîmât [q.v.], when the kâdîs were assigned fixed salaries, that such fees were finally abolished. In addition to this basic source of abuse, the hâkimâ were inclined to increase the number of the makkamas in their jurisdiction in order to obtain extra revenues and then to farm them out to the na'bîs. This practice, forbidden under Süleyman I, was approved by the firman of Egypt of 931/1524-5, was included among the general abuses in the 'addât-nâmeh of 947/1540-1 (H. İnalçik, Addâlet-nâmeler, in Begeler, ii, 76) and in a firman of 958/1551

the due for inheritance division was dramatically reduced from 2.5% to 1.5% (see Mucigdi majmū‘ī, British Museum Or. 9505, f. 65b).

Another widespread subject of complaint was imposition of ijmā‘ (for the existence of such a council from early Islamic times, see E. Tyan, Organisation judiciaire, 213-36). However, a mufti is rarely mentioned as sitting regularly in Ottoman mahkamas, though local muftis were often referred to for the issue of fatwas [q. v.] on particular cases. In addition, the study of mahkama records reveals that the judge summoned individuals with knowledge and expertise on specific matters to act as witnesses, or šuhud al-kāh in the court, and these were registered as such at the end of the court sijillāt. The use of šuhūd, an old Islamic practice [see šāhīd], was designed to check the kādī and to ensure that a decision was reached in the presence of an unbiased and expert body. There is no evidence that in the Ottoman Empire a permanent body was appointed by the kādī as professional witnesses, who existed as a kind of corporation in Egypt. For everyday cases, persons in the court or court officials could be employed as witnesses. We find that the šāhīr kast- Público regular presence at the court and was often included among the witnesses.

The personnel of a given mahkama changed in number according to its importance, with a minimum of a kātib and a muḥādir. In large mahkamas, the following additional officials were to be found: a nā’tb or nā’hīs, kātībs under a bash-kātīb, chief secretary, and a mahkama emīn, acting trustee. The kādī’s staff included in some places a mukāyid or recorder and a čukādir or messenger (see C. Ulucay, 18. asrda Manisa, docum. 27). Under a muḥādir-bashi (in other Islamic states, ṣāhid al-majdīji or dīšuq), there were muḥādirs and yasakā ’īs (Janissaries), who acted as the court police. The bash-kātīb could also function as nā’tb and the muḥādir-bashi as emīn or emīn. In some large mahkamas they were also found dānishmends, college graduates training to become kādīs. Nā’hīs were agents of the kādī appointed by him and authorised to give legal decisions on his behalf in a certain mahkama or on certain specific issues. Each mahkama was assigned to the control of a nā’hī. Nā’hīs, sometimes also called simply kādīs, were required to have the same qualifications as kādīs themselves. Although in principle a nā’hī was appointed by the kādī and exclusively responsible to him, the government imposed certain restrictions in order to prevent some common abuses. As early as Süleyman I’s time (926-74/1520-66), the system of farming out the office of nā’hī was officially abolished, and the practice of selecting nā’hīs from the local population was also prohibited (see Inalcı, Addineamüder, 76-7). Yet despite these measures, the farming-out of the office of nā’hī became a well-established practice, since in the 12th/18th century most of the important kādī posts in the provinces were administered by nā’hīs appointed by the great kādīs who remained resident in Istanbul, or by those who received their kādī as apatāl [q. v.]. Apparently the real concern in this period became how to maximise income deriving to a kādī from a jurisdiction area. Another category was the itinerant nā’hīs who carried out inspections within the jurisdiction, handing down decisions on various offences, and determining the nisāṭet sumu or fines. Besides these, there were nā’hīs appointed to deal with only a proportion of the cases or with cases involving certain expertises in a busy mahkama. Among these the kassam-ı baladı, in charge of division of inheritances belonging to the non-military classes [see kassam], may be mentioned. A separate nā’hī, the gağe nā’hī, was appointed to hear cases at night. An apak nā’hī, or wandering nā’hī, was in charge of enforcing prescriptions against religiously-forbidden things such as fraud by shop-keepers, drinking of wine, etc. In the mahkama of Istanbul, the most extensive in the empire (its record books, numbering several thousands, are preserved today in a special archive attached to the müftüler of Istanbul), there was a bāb nā’hī, or judge for hearing ordinary cases. Nā’hīs were also appointed by the kādī of Istanbul to oversee business at certain locations at the city’s principal market places such as the flour, honey, and butter warehouses, the candle works, the vegetable market, and others. They were authorised to hear cases and to issue decisions on disputes arising in these
particular locations. Ndîbs were also appointed to make investigations for a mahkama, the keshif ndîbi, and to decide disputes in connection with payment of 'awdrid taxes [q. v.], the 'awdrid nîbi. In the last quarter of the 10th/16th century, it is repeatedly stressed that, without prior decision by a hakim, no member of the military class could impose any punishment, even a small fine, on the re'sâya. The enforcement of decisions, however, was left entirely to the military. By accepting a bribe from the guilty party, they quite often omitted to enforce a hakim's decision. This anomaly in practice to a separate settlement of the case by the military. The mahkama could order detention of the criminal only as a precautionary measure.

The hakim based his decisions on sharî'î texts, kânûn-nâmés, daftars [q. v.], imperial hukms and fatâwaîs. In the 'adilet-nâmé of 1004/1595-6 (see İnalçık, Addîletnâmeler, 105), it is asserted that under Sûleymân I 'imperial kânûn-nâmés were codified and deposited in the mahkamas of kâdis in every city'. Alongside a great many unofficial copies of the general kânûn-nâmés used by the kâdis in their mahkamas, one official copy bearing the tughrâ [q. v.] of the sultan has survived to our day (Nationalbibliothek, Vienna, Cod. mixt. 870). Because regulations were constantly being amended by imperial hukms, the hakims were not required to follow a universally-applied official version. As to the sharî'î text to be used, the hakim was free to consult any reference books, on condition that they belonged to the Hanafi school. In 1107/1695-6 Muştafa Î ordered that only sharî'î texts be used in the mahkamas (O. Nüeri, Meğlileî, i, 568), but this seems to have lasted only a short period.

In principle, the Islamic judicial system does not recognise the institution of attorney (Tyan, Organisation judiciaire, 262). The system of legal representation by askâlîtîs, widely used in Islamic mahkamas, including those of the Ottoman empire (R. Jennings, The office of Vekil, in SI, xili [1975], 147-69), cannot be equated with attorneyship. Nevertheless, it appears already from 10th/16th century documents (see İnalçık, Addîletnâmeler, 99) that court suits of individuals were pursued by their private representatives in return for a fee, and these agents sometimes called daîrûdî vekîlîs formed a semi-professional group in Ottoman cities, although the government tried to eliminate them from the courts, objecting to their use of false witness and other tactics to subvert the course of justice.

Cases concerning public security or injustices inflicted upon the re'sâya by the local authorities, the so-called 'azâlîm [q. v.], cases, could be heard by the local kâdis' courts, by muftis or inspectors, or by the dîwânî courts set up by one of the vezîris while on tour in a province, or in the final resort, by the dîwân-i hümâyûn [q. v.] itself. The beylerbeyîs or governor-generals held their own dîwânîs to hear and decide on cases involving sipahîs and other timâr-holders in their provinces, and had the authority to inflict various disciplinary punishments, including dismissal. In their dîwânîs, the beylerbeyîs also heard complaints by the re'sâya of their provinces against timâr-holders, but in order to be able to take action, the case and investigation had to be referred to a topruk kâdisî, rural kâdisî, for a legal decision. In order to save the re'sâya from hardships, a sultanic decree forbade the timâr-holders from taking such cases to an urban kâdisî. Any non-disciplinary case involving a timâr-holder was to be referred to the mahkama of the local kâdisî and to be decided according to the şahrî'sa and the kânûn. The priority recognised by the beylerbeyîs for hearing cases involving people under his command was also recognised to all military

regiments in the Empire whose commanding officers had the responsibility to hold diwânîs and to give disciplinary punishments. The heads of the community organisations, too, such as the guilds and the Dhimmi minorities, were also authorised to decide cases involving their internal regulations and security. Apart from these cases, the mahkama was the sole place of resort for justice, and preserved this characteristic up until the 12th/18th century, when community courts began to usurp some of its authority (see Pan- tazopoulos, Church and law, 44-112).

The effects of imperial decline on the courts of the kâdis, Mahkamas became the target of strong criticism from the writers of the late 10th/16th century, and it was from this period that the character and functions of the mahkama began to change. Apart from its function as a law court, the mahkama served as a town meeting-place to which the city notables, representatives of the craft guilds, as well as imânûs representing the people of their respective districts, were invited periodically by the kâdis. Such meetings were usually convened by the kâdis for the purpose of explaining new orders issued by the sultan of concern to the public at large. Beginning in the 11th/17th century, however, these meetings became more frequent and assumed greater importance. The reason for this was that in that century the 'awdrid-i diwânîyya (extraordinary levies in the form of provisions, services or money) began to be collected on a regular basis, and distribution among the population of such impositions was decided in the town meetings held in the mahkama. Also, at these meetings the city's expenses were discussed and written down in budgets. As a consequence of this development, in their capacity as representatives of the local population, town notables began to assume leadership at such meetings, supplanting the kâdis' authority in various fields concerning community interests. (H. İnalçık)

The reform era (ca. 1789-1922)

As the preceding discussion makes clear, the Ottoman Empire traditionally relied mainly on the courts of the kâdis for performances of judicial functions, though it also attributed some measure of judicial functions to other institutions, such as the dîwânûns of the sultans and senior military-administrative officials, the heads of the non-Muslim subject communities, or the guilds. Ottoman authorities recognised law based on custom (tâdîr) or on the sultan's decree (kânûn), as well as the şahrî'sa, and expected those with judicial responsibilities, kâdis, as well as military-administrative officers (dhî'-farî), to apply both sharî'î and non-sharî'î law. The judicial functions of the kâdis' courts and the dîwânûns of the military-administrative authorities certainly differed in a variety of respects (Heyd, 252-b), but there was no formal distinction of şahrî'sa and mazâlîm jurisdiction. In effect, Ottoman policy was to avoid such distinction. Similarly, the remarkable development among the Ottomans of regulatory acts (kânûn, kânûn-nâmé [q. v.]) ancillary to the şahrî'sa—a development unmatched in other Islamic states—did not in principle signify neglect of the şahrî'sa. Rather, the emphasis on the kânûn, an ideal means for assertion of the sultan's authority, coexisted with a larger pattern of policy aimed at legitimating the state through appeal, in law as in other matters, to Islamic values. As expressed in legal and judicial systems, this larger policy provided the basis for Schacht's opinion that the Ottoman Empire was the şahrî'sa 'a development of actual efficiency ... it had ever possessed in a society of high material civilization since early 'Abbâsid
Yet the equilibrium between shari’a and känun, and that between tribunals of different types, did not remain constant in every period. For example, the känun went into decline after the 10th/16th century. One consequence of this appears to have been an increase in emphasis on the shari’a in certain respects (Heyd, 152-57; cf. Inalcık, KANUN, in EP, iv, 560, 561). Simultaneously, the decay in the provincial military-administrative hierarchy, and the alteration in local power-relationships, seem to have enlarged and altered the functions of the kadıs’ courts, as indicated at the end of the preceding section. Later, as the empire moved into its 19th century reform era, the balance between shari’a and non-shari’a legal systems shifted in the opposite direction. The main reason for this was that the regulatory powers of the sultans began, from the time of Selim III (1789-1807) onward, to find a new use as the chief means for the pro-mulgation of innovative reforms. As this occurred, a new body of law, and eventually a new system of courts, began to emerge. This time, the jurisdictions of the two types of courts did become differentiated, with the result that it now became quite exact, in a sense that had not obtained several centuries before, to refer to the kadıs’ courts as shari’a courts. The new legal and judicial systems continued to grow in scope, however, and the end result was the closing of the shari’a courts and the creation of an exclusively secular court system under the Turkish Republic.

Paradoxically, then, the same empire that had so impressed Schacht through its emphasis on the shari’a ultimately evolved in such a way as to prepare the legal and judicial foundations for the most secular Islamic state of the 20th century.

For the sake of continuity with the discussion of Ottoman tribunals of earlier periods, it will serve best, in considering the 19th century, to look first at the shari’a courts. The succeeding discussion of what became known as the nişâmiyê courts will then make clear where the primary emphasis of judicial reform lay.

Reform of the shari’a courts. After earlier, episodic attempts at reform of the judiciary, a serious effort to reform standards occurred during the reign of Selim III (Uzunçaşlar, Ilm., 255-60). During the 19th century, other such measures followed. Perhaps the first was a penal code applying to the kadıs’-askers, kadıs, and ná lbs, issued at the same time as another for civil officials, in 1254/1838 (Hıfız Velpel, Kanunlaştırma, 170-1). Within another three years, the first attempt to substitute salaries for compensation by fees had occurred, and seemingly also failed (Inalcık, Tanzimat’ın yüzyılannası, 626, 686). Subsequently, there were regulations defining conditions of service for shari’a judicial officials, of whom all judges except those in the greatest cities came ultimately to be designated as ná lbs, their judgments being termed niyâdeti (a change presumably reflecting the increasing tendency to use the term kadi to refer to an administrative district; Heidborn, 260 n. 177). By the 1870s, these regulations covered subjects such as appointment by examination, ranks, duration of terms of service, maintenance of systematic service records, and—once again—salaries. While some of these concepts, such as examinations and ranks, had long been known among the ‘ulema, others were new; and all together signify the evolution, here as in other branches of government service, of essentially modern patterns of personnel administration (Aristarchii, ii, 320-4; Young, 200-1; Heidborn, 260-6; Distr. i, 1, 315-24; ii, 721; Distr. ii, 352-61). There were also efforts to upgrade meshrede training; and in the second half of the 19th century, new schools were founded in Istanbul specifically for the training of ná lbs and kadıs (Ergin, Türkiye maaşı tercihi, i, 135-42; Distr. ii, 127-38; ix, 598-690). Regulations were issued to define the functions that could be performed in the various shari’a courts and the fees that were still to be collected (Aristarchii, ii, 324-38; Distr. i, 1, 301-14; Distr. iii, 95, v, 1). The process of legal reform and codification affected the shari’a courts, particularly through the Medjelle [q.v.], published between 1870 and 3176. Chiefly the work of Ahmed Djevdet Paşa [q.v.] and based on Hanafi fiqh, the law had civil law and procedure and was intended for application in both the religious and the secular (nişâmiyê) courts (R. H. Davison, Reform in the Ottoman empire, Princeton 1962, 253-5; Heidborn, 283-6, 387-97).

Under the Medjelle, for example, the appeal of decisions from provincial shari’a courts became a matter of system (arts. 1835-40; Young, i, 287-95; Distr. iv, 123; Distr. iii, 85-8, v, 728). Other acts regulated the division (kûnet) of estates in certain circumstances (Young, i, 294-302; Distr. i, 1, 289-97; Distr. iii, 88-95; vi, 394-96). As the secular courts developed, the types of cases that were to go before the shari’a courts were increasingly delimited (Young, i, 291-3; Distr. iii, 165-6; EP, iv, 560, 561).

The Young Turk era produced more radical changes, under the influence of Ziya Gökalp’s Western-inspired concept of religion, a number of major reforms, aimed at restricting the role of the Şeyhül-İslâm to iftâ, were carried out in 1917. One of these measures was the placing of the shari’a courts under the authority of the Minister of Justice (Distr. i, ix, 270-1). A new law on shari’a court procedure appeared in October 1917 (Distr. i, ix, 783-94), as did a new code of family law, including provisions for Christians and Jews as well as Muslims (Distr. ix, ix, 762-81; x, 52-57; Berkes, Secularism, 415-19). After World War I, responsibility over the shari’a courts was briefly returned to the Şeyhül-İslâm (Pakalin, Kadi, 125). But with the complete dismantling of the traditional religious establishment under the Turkish Republic, the shari’a courts were abolished in 1924 (B. Lewis, The emergence of modern Turkey, Oxford 1968, 265-74).

The nişâmiyê courts. The best way to understand the rise of the nişâmiyê courts is to begin by examining how the reassessment of the sultans’ discretionary legislative power stimulated a new development in the tradition of the dîwanî, which the Ottomans used both as consultative and as judicial bodies.

The decree-power of the sultan provided the essential legislative sanction for all the reformist initiatives, including the Gül-kâhne Decree of 1839, the Reform Decree of 1856, and the Constitution of 1876 (Inalcık, Pâdişah, in İa, ix, 495). Concluding with the promise that new laws would be framed to elaborate its egalitarian principles, the Gül-kâhne Decree (Hurewitz, i, 271; Distr. i, 6) was of particular significance. For it provided the impetus for a good tide of new legislation, much of it explicitly borrowed from Western models (Veldel, Kanunlaştırma, 175 ff.; Heidborn, 283-4, 320-54, 366-86, 416-41). The fact that the terms nişâm or nişâm-nâmé now often replaced kânun or kânun-nâmé as designations for the new laws, cannot obscure the continuity, at least as far as the underlying legislative authority is concerned, between the reformist legislation and the laws of earlier centuries. The terms were not necessarily synonymous; and the designation of major political
periods of the reform era in terms of nizām or its derivatives (Nizām-i Lüfet, Tanzyimāt [q.v.]) is symbolic of the new shift in the historic balance between kānūn and ğhārā’s (Findley, Bureaucratic reforms in the Ottoman empire, ch. 5). The practice of referring to the new courts created in this period as nizāmīyye courts signifies that they were responsible for trying cases under the new laws. While some of the conciliatory bodies most distinctive of the “classic” Ottoman governmental system—such as the imperial dīwān at the palace or the dīwān of the leading military-administrative functionaries in the provinces—had long since declined, the tradition of the dīwān or councils (meglis-ā), as they were more often termed during the reform era, responded to this legislative reassertion in two respects. On one hand, the Supreme Council of Judicial Ordinances (Meglis-i Wādī-yi Akhām-i ʿAldiyeye), a body which Mahmūd II created out of the dīwān of the Grand Vezīr in 1838 and which evolved into the Council of State (Shurd-yl-ʾUlūm-i Dārul, 1868), assumed the bulk of the work of preparing the new legislation for the sultan’s sanction (Shaw, Central legislative councils, 51-84). On the other hand, simultaneous efforts to create a new kind of local administrative apparatus led to the creation in 1840 of new local councils, referred to as Meglis-i Muḥāṣṣil-īn, Muḥāṣṣilīn Meglis-ī, or Memleket Meglis-ī. These were intended in part to supplant the role that the kādī’s courts had acquired in administrative affairs, though not of course their judicial functions in ğhārā’s cases. Both the local councils and the Supreme Council of Judicial Ordinances in Istanbul also served as judicial bodies in certain types of cases arising under the new legislation (Heidborn, 219). Including various of the local administrative officials, the kādī and muḥāṣṣil, the leaders of the local non-Muslim communities, and in directly elected representatives of the local notables, the local councils were found at various administrative levels: lütūr or sanjāk, kādāt (a term used increasingly in this period to refer to the administrative subdivision of the lütūr), and sometimes on a reduced scale in lower-level subdivisions as well (Ortaylı, Mahāli şarʾerler, 13 ff.; İnalick, Tanzyim in uygulanması, 626, 633-5, 664-5; idem, Application of the Tanzyimāt and its social effects, in Archivum Ottomanicum, v [1973], 100-1, 107-10; Kornrumpf, Territorialverwaltung, 44-57 passim).

The assignment of judicial functions to the local councils marked the first step toward creation of the nizāmīyye courts, which continued to reflect their origins in being collegial bodies. Decades were to pass before a distinct hierarchy of nizāmīyye courts emerged, and incidentally before they were officially referred to by the term mahkeme (in 1868 according to Heidborn, 226, n. 57). Even then, the local administrative councils and—except for a few years during the Young Turk period—the Supreme Council of Judicial Ordinances, later the Council of State, retained responsibility for administrative justice (Shaw, Central legislative councils, passim; Findley, Bureaucratic reforms, 174-6, 249-9, 508-9).

Between the creation of the councils just described (1838, 1840) and the first comprehensive attempt to regulate and systematise the system of nizāmīyye courts (1879), a number of steps had to be taken. The 1840s witnessed the development of a system of commercial courts, beginning with a single one in Istanbul, where cases between Ottoman subjects and non-Ottomans were tried before a panel of judges, also of mixed nationalities. The number of these was set first at six, then raised to eight at the kādāt level (Dstr.1, i, 175). Half-Muslim and half-non-Muslim, these were to be elected by the same procedure as the elected members of the local administrative council (meglis-i ʿidār) that became the successor, under the 1864 law, of the earlier memleket meglis-ī. Under the provincial administration law of 1864, the provincial commercial courts, created in 1860, were also effectively integrated into the nizāmīyye court system. Numerous features of the system of 1864 reflect its incipient state of development. These include reliance on ğhārā’s court judges, as well as the fact that the hierarchy of courts thus far had only two echelons. A similar significance no doubt attaches to the fact that these provisions appeared in a law dealing with provincial administration; but this pattern proved short-lived. The new Law on Provincial Administration, promulgated in January 1871, contained virtually nothing on the courts (Dstr.1, i, 625-51; Aristarchi, iii,
This fact reflects a new policy—separation of powers—introduced into Ottoman practice with a reform of the Supreme Council of Judicial Ordinances in 1868. The Supreme Council was then separated into two bodies, one intended to perform legislative, the other judicial, functions. The new legislative body was the Council of State (Şura-ı Divan). This continued, aside from the short-lived parliament, to function as the main legislative body. The highest level of nizâmiyye justice became the responsibility of what can probably best be envisaged as a High Court of Justice (actual title, Divân-ı Ahkâm-ı Adilîye). The organisation and functions of this body underwent redefinition a number of times over the next several years. The various appeals courts already in existence in Istanbul for criminal and commercial cases were gradually brought together under the new agency, and it became the nucleus from which a Ministry of Justice 'shortly emerged (Dstr.1, i, 32-42, 357-63; iii, 2-3; Aristarchi, ii, 42-55; v, 26-8; Heidborn, 225-6).

This creation of the ministry, like the promulgation of the Constitution of 1876, was essentially a response to the crises of the late 1870s and to the need which the Ottomans felt to demonstrate their ability to meet the challenges of all types of case, even without European interference. The constitution itself contained a few provisions on matters related to the courts, such as the independence of the judiciary, conditions of service in it, and judicial procedure. The constitution also asserted that the organisation and competence of the courts and the duties of the judges must be defined by law (Dstr.1, iv, 14-16; Aristarchi, v, 19-21). A series of acts published in 1878 in the wake of the Congress of Berlin (Heidborn, 228), attempted to meet these demands.

The acts of 1879 in fact established the Ministry of Justice and the nizâmiyye court system essentially as they were to remain until the Young Turk period. These acts included organic regulations for a Ministry of Justice and Religious Affairs (‘Adîîye ve Meşâbîh Nîzâmîyye Nâzîrlâviyesi) and as the double mission of which gave it jurisdiction over judicial and other affairs of the non-Muslim communities, as well as over the nizâmiyye courts (Dstr.1, iv, 125-31; Young, i, 159-60). There was also an organic law for the nizâmiyye courts. This included provisions not only on the organisation and competence of the tribunals, but also on the organisation of the judiciary and on the systems of public prosecutors (müddet-i yaz’ umumî) and judicial inspectors (Dstr.1, iv, 235-50; later amendments ibid., vi, 81; vii, 171-2, 1080-1; viii, 136-7, 665-6; cf. Young, i, 166-80; Heidborn, 231-48). Also among the acts of 1879 were laws on the system for execution of the judgments of the courts (Dstr.1, iv, 225-35; vi, 837; vii, 752-3; Young, i, 197-210; Heidborn, 248-9), on notaries (Dstr.1, iv, 338-44; 1065-8; Young, i, 193-7; Heidborn, 249-50), and on judicial fees (Dstr.1, iv, 319-37; v, 582-96; vi, 456; viii, 744-7; Young, i, 210-23). There were also codes of civil and criminal procedure (Dstr.1, iv, 131-224, 257-318; later modifications ibid., vi, 230-1; vii, 16-17, 31-3, 89-90, 114, 151, 1081; viii, 135-6, 751-2; cf. Young, vii, 171-300; Heidborn, 397-441). About the same time, efforts were made to found a law school to train judges and lawyers competent in the new legal system (Ergin, Maarif tarihi, ii, 582-92; iii, 890-918; Heidborn, 245-60). The system for investigating and carrying out preliminary investigation of major crimes (kabdhdt ve dhunhd) continued, aside from the short-lived parliament, to function as a court of cassation in cases involving minor offences and misdemeanours (kahhâvât ve gînha) and carry out preliminary investigation of major crimes (gînayet). It could also hear commercial cases, if there was no separate commercial court in the kâda’s. The kâda’s court was authorised to hear appeals from the courts of arbitration at lower levels. It was also empowered to judge in last resort in cases where the matter in question had a monetary value that fell within stated limits, as well as in minor criminal offences (kahhâvât).

In kâda’s that coincided with the centre of a higher-level administrative circumscription, the court of first instance took on additional attributes. In the ‘central’ kâda’s of a liwâ’ or sandjak, for example, the court of first instance was to have two sections for civil and criminal cases. These functioned separately as courts of first instance for that kâda and jointly to try major crimes (gînayet) or hear appeals from the other kâda’s of the liwâ’.

There was also provision for a commercial court of the liwâ’, which functioned similarly as a court of first instance for the central kâda’s and as a court of appeal for the other kâda’s of the liwâ’. The law of 1879 does not specifically mention the courts of first instance located in kâda’s that coincided with province capitals. By 1908, however, these reportedly existed, serving as courts of first instance for the kâda’s in which they were located and as an appeals instance for cases coming up from the liwâ’ courts. There was also provision for provincial commercial courts. These are reported to have existed in most provinces, though only occasionally in lower-echelon administrative centres (Heidborn, 234).

A tribunal expressly designated as an appeals court (isti’ naf mahkemesi) was supposed to be located in every province capital. This court was to have separate civil and criminal sections. These were empowered to hear appeals from the courts of first instance located at the centres of the various liwâ’s of the province, as well as from those in the kâda’s of the central liwâ’. The criminal section served the central liwâ’s of the province and although various acts of the reign of Abd al-Hamid make clear that official interest in them did continue (Dstr.1, vi, 1155-68; vii, 27-38; viii, 712-28, 747, 753). The triple-tiered system of regular courts was also not as fully developed as its nomenclature implied. The law of 1879 in fact began by stating that the courts were of two levels, first instance and appeal. There was only one court of cassation, located in Istanbul; and even the functions of the courts of first instance and appeal varied as much with the level of the administrative hierarchy at which they were found as with their ostensible placement in the judicial hierarchy.

As prescribed in 1879, however, there was to be a court of first instance in every kâda. In a normal kâda, the court of the first instance was empowered to hear civil and criminal cases, all types of case, from those in the kâda’s that coincided with province capitals. For Istanbul, the law of 1879 prescribed an

RODUCTION and appointment of judges, who were no longer to be elected, and prescribed the keeping of systematic personnel records on all judicial officials (Dstr.1, v, 1058-64; vi, 1307-8; 1476; Young, i, 182-4).

As defined in the organic regulations of 1879, the nizâmiyye court system was supposed to include courts of arbitration (sulh dâ ’treleri) in the villages and nâhîyes, as well as courts of first instance (hidîyet), appeal (isti’ naf), and cassation (t les), (Dstr.1, vii, 228-32) indicated that the courts of arbitration were never really set up, although various acts of the reign of Abd al-Hamid make clear that official interest in them did continue (Dstr.1, vi, 1155-68; vii, 27-38; viii, 712-28, 747, 753). The triple-tiered system of regular courts was also not as fully developed as its nomenclature implied. The law of 1879 in fact began by stating that the courts were of two levels, first instance and appeal. There was only one court of cassation, located in Istanbul; and even the functions of the courts of first instance and appeal varied as much with the level of the administrative hierarchy at which they were found as with their ostensible placement in the judicial hierarchy.
analogous organisation, allowing that the number of sections and staff members could be increased in case of need, as was in fact done (Destr. iv, 240). In addition, there was an important deviation from the provincial pattern in that the Istanbul commercial court acquired three sections, one hearing only cases between Ottoman subjects and foreigners, one only cases between Ottoman subjects, and one only maritime cases. The capital city also had an appeals court with civil, criminal, and commercial sections (Heidborn, 237). At the apex of the nizâmiyye court system, finally, stood the court of cassation (mahkeme-i temyiz), also in Istanbul. This, too, had three sections, the functions of which were gradually defined in acts of the 1880s and 1890s (Destr. iv, v, 853-4, 992; vi, 89-90; Young, i, 180-1; Heidborn, 237-8). The first section, that of petitions (sind 2'dâ fi dâ'îrs), received all appeals to the court. This section had power to decide directly in certain matters, such as conflicts of jurisdiction, reassignment of cases from one court to another, or the unacceptability of petitions on grounds of technical irregularity or lapse of the period set for cassation. The petitions section referred the cases it accepted to either the civil or the criminal section, which either rejected the appeal or overturned the lower court ruling on ground of judicial error. In major criminal cases (sulh hâkimleri), when the courts of arbitration (sulh ddîresi), provided for in the capitulations, effective from 1 October 1914, had important implications for the criminal cases often had considerable patterns of organisation and staffing created in 1879 for the nizâmiyye courts at the administrative levels of the kadi 2's, nâhibs, and villages to hear minor cases of various types (Destr. v, 322-48, 619, 775-7, 827, 869-75; vi, 156-7, 294-5, 342-3, 1353; vii, 561-2; Meyer, Rechtswesen, 138). The patterns of organisation and staffing created in 1879 for the nizâmiyye courts at the administrative levels of the kadi 2's, liwâ 2's, province (wilâyet), and in Istanbul were amended at several points, starting in August 1909 (Destr. ii, 165-6; iii, 180-1; iv, 217-18, 793-5, 866). The abolition of the capitulations, effective from 1 October 1914, had important implications for the courts system, since in fact it required the abandonment of all courts and judicial procedures specifically for the benefit of foreigners (Destr. vi, 1273, 1336, 1340; Meyer, Rechtswesen, 117-18, 135). The attack on the traditional religious institutions in 1917 was of comparable significance, since it resulted in the placement of the şer i的应用 courts under the Ministry of Justice and the creation of a section for şar i的应用 courts in the Cassation Court in Istanbul (Meyer, Rechtswesen, 139-41). Though briefly reversed during the armistice period, these changes in the status of the şar i的应用 courts brought Ottoman judicial systems to a point very near complete unification, which occurred with the establishment of the secular, national court system under the Ministry of Justice of the Turkish Republic. 3. IRAN

Under the ‘Abbasids, as Schacht pointed out, the office of kādi became permanently connected with the sacred law, but, as he went on to say, the kādis very soon lost control of the administration of criminal justice. Ostensibly to supplement the deficiencies of the tribunals of the kādis, the mazālim [q.v.] courts were set up for the redress of grievances, deriving from the administrative practice of the Sāsānid kings, were set up by the political authority and received theoretical recognition (The law, in Unity and variety in Muslim civilization, ed. G. von Grunebaum, Chicago 1955, 74-5).

Al-Māwardi [q.v.], recognising that the mazālim could not deal with issues that fell within the general framework of the law. In a significant statement he claimed that it was charged with the enforcement of decisions made by kādis not sufficiently strong to see that their judgments were carried out against defendants occupying high rank or powerful positions, and with the suppression of evil-doing and the enforcement of regulations within the jurisdiction of the muhātasib but beyond his power to apply (al-Ahkām al-sultāniyya, Cairo 1386/1966, 83). In his account of the origins of the mazālim court, he attributes its emergence to the lapse into kingship after the golden age of the Medinan caliphate. It was concerned with cases against officials, suits concerning injustice in the levy of taxation, complaints by those in receipt of stipends from official sources that these had not been paid or had been reduced, and claims for the restoration of property wrongfully seized. It was also charged with the investigation of matters which concerned aukfūf, the care of public worship and the due performance of religious practices in general. Whereas the kādi’s court was bound by strict rules of evidence, the mazālim court was subject to no such limits, although Al-Māwardi states that in the hearing and decision of disputes in general the rules of procedure which determined cases that came before the kādis and judges were to prevail (al-Ahkām al-sultāniyya, 77 ff. See also R. Levy, The social structure of Islam, Cambridge 1957, 348-9). One of the most important functions of the mazālim court was arbitration. In exercising this the head of the court, the nizir al-mazālim, was, according to al-Māwardi, not to go outside the limits of what was demanded by the law and his decrees were to be in keeping with the rules expounded by the kādis (al-Ahkām al-sultāniyya, 83). Al-Māwardi further lays down that kādis and jurists, to whom the nizir al-mazālim might have recourse in case of difficulty or doubt, were to be present when the mazālim court sat (ibid., 80). It was thus a channel through which sanction was given to ‘urfī practices.

The lawbooks lay down the qualities demanded of the kādi and the rules of procedure for his court. They also lay down the method of his appointment; but in this Sunnī theory differs from Shi‘ī. Until the Šafawīs imposed Imāmī Shi‘īism as the official religion of their empire, Persia was, apart from certain districts, predominantly Sunnī. The dominant rites were the Šāhī‘ī and the Ḥanafī and it was the rules concerning kadā‘ laid down in the lawbooks of these schools which, for the most part, prevailed (for these see especially Al-Muzaffar al-Abbāsī, al-Ahkām al-sultāniyya and idem, Ādāb al-kādi, ed. Muḥyī l-Ḥalāl al-Sirāhī, Baghdād 1391/1971). According to Sunni theory, it was essential that there should be a valid delegation of authority to the kādi in order that his decisions should, in turn, have validity. As long as the caliphs held political authority they had delegated authority to their kādis. When they ceased to exercise power it was accepted that the kādi should be appointed by the ruler. Al-Ghazālī, concerned for the legality of the life of the community, held that any kādi nominated by one holding power (ṣābi‘ shawakat) could give valid decisions (Wadījī, ii, 143, quoted by E. Tyan, Histoire d’organisation judiciaire, i, 258). Once instituted, the kādi was regarded, not as the personal representative of the one who had delegated authority to him, but as the deputy or nā‘ib of the caliph or the Prophet. With the weakening of the power of the caliph and his overthrow by the Mongols, it became the normal theory to regard the kādis as the deputies of the prophet. This reinforced their independent status (see further Tyan, i, 134-5, 147-8). The death of the imām (or that person who had delegated authority to the kādi) did not result in the revocation of the kādis’s appointment (thus reinforcing his theoretical independence). On the other hand, the death of the kādi resulted in the revocation of the appointment of his deputies. If the inhabitants of a town which had no kādi appointed one, this designation was null and void if there was an imām in existence. If there was no imām, the appointment was valid and his judgments were to be executed (al-Ahkām al-sultāniyya, 76). This again emphasizes the independent status of the kādi. But his independence was relative: when a new imām was appointed, his agreement was required for the kādi to continue to exercise his functions (ibid.). The fact that the law administered by the kādi was the shari‘a, to which, in theory, the ruler was subject and which was independent of his will, also contributed to the independence of the kādi (cf. Tyan, i, 149-50)—an independence which they continued to enjoy to a greater or lesser extent over the centuries. Two factors in particular, however, limited their independence. First, the ruler who had nominated them could also dismiss them, and secondly, they had to rely on the officials of the government for the enforcement of their judgments. The competence of the kādi might be general or restricted. In the former case, the kādi’s functions were to settle disputes either by arbitration within the limits of the shari‘a between the parties to the dispute or by enforcing, after proof, liabilities by judgment in favour of those entitled to them upon persons who disputed them; to exercise control over persons who had not charge of their property by reason of sadness, infancy or insolvent; to oversee aukfūf; to execute wills and testaments; to give widows and divorced women in marriage; to apply the legal penalties; to supervise public utilities in order to prevent encroachment upon roads and public spaces; to make the necessary investigations concerning legal witnesses; to judge between the powerful and the weak; observing equality between them; and to decide with equity cases between the khass and the ‘āmm. If he was invested with authority for some specific purpose, i.e. if his authority was restricted (khūsūs), he exercised his functions within those limits only (al-Ahkām al-sultāniyya, 70 ff.).

Whereas the Sunnis considered the ultimate source of the kādi’s authority to be the Prophet, the Shi‘a held this to be the imāms (see al-Kulaynī, Usūl al-kāfi, ch. on kadā‘). The Imāmī Shi‘a, perhaps because their imāms apart from ‘Ali b. Abī Tālib did not hold political power, were not concerned with the valid delegation of authority by the holders of power to their subordinate officials. They regarded all government
in the absence of the imam as unjust (dfi‘ir). In their discussions of kaddi they differentiate between the time when the imam is present and the ghaba, i.e. the period of occultation. However, they could not entirely escape the problem of cooperation with an unjust government, the validity of whose title to rule they did not recognise. They attempted to solve this problem by permitting a limited degree of cooperation with the adoption of takﬁya (q.v.), dissimulation of one’s belief in the event of danger.

Muhammad b. al-Hasan al-Tusi (d. 460/1067) sets out, in a somewhat equivocal fashion, the Imami Shi‘i doctrine concerning the application of the legal penalties and the exercise of the office of kadi as follows: ‘‘No one has the right to execute the legal penalties except the sultan of the time, who has been appointed by God most High [i.e. the imam], or that person whom the imam has appointed to apply the legal penalties. It is not permissible for anyone except those two to apply the legal penalties on any occasion. But permission has been given for the people to apply the legal penalties to their children, their own people and their slaves in the time when the true imams are not in control and tyrants have usurped power, provided that they do not fear that any harm will come to them from the tyrants and are safe from harm from them. If this is not the case, it is not permissible to apply the legal penalties. If an unjust sultan makes someone [who is an Imami Shi‘i] his deputy and appoints him to apply the legal penalties, it is for him to do so fully and completely, while believing that what he does at the command of the true sultan; and it is incumbent upon believers to cooperate with him and to strengthen him as long as he does not transgress what is right in that over which he is appointed and does not go beyond what is legal according to the Shi‘i of Islam. If he does, it is not permissible for him to do so while practising takﬁya, as long as the killing of anyone is not involved. In no circumstance is takﬁya to be practised in the case of killing anyone (al-Nihdya fi mudgarad al-fukh wa’l-fatawa, Beirut 1970, 300-1, Persian text, ed. Muhammad Bâkîr Sabzawâri, Tehran 1333/1954-6, 2 vols., i, 201-1).

Similarly, al-Tusi states that it is not permissible for anyone to give judgment between the people except that person to whom ‘‘the true sultan’’ has given permission (ibid., 301, Persian text, i, 201). He continues, ‘‘The true imams, upon them be peace, have cast [the mantle of judgment (hukumât) on the fukahâ of the Shi‘a during such time as they themselves are not in a position to exercise it in person’’ (ibid., Persian text, i, 201; the Arabic text omits the words a’mmma-i hak and reads ‘‘They have entrusted this (the function of judging) to the fukahâ of their shi‘a during such time as they are not able to exercise it in person’’, 301). This statement, which would appear to be one of the earliest occasions when it is stated that the fukahâ are in effect the successors or deputies of the imams in the giving of judgment, does not provide for any immediate source of authority for the fukahâ. The qualities required for the office of kadi (ibid., 266, 301) are wisdom and maturity, being learned in the Kurgan works, and that he should avoid sins and refrain from lust and have an intense concern for piety. Only someone endowed with these qualities was permitted to undertake the office and to judge between the people provided that there was no fear for his life, his people, his possessions or for any believers (al-Nihdya fi mudgarad al-fukh wa’l-fatawa, 301, Persian text, i, 226). It was permissible to take wages and subsistence from a just sultan (i.e. the imam) for the exercise of the office of kadi, but in the case of an unjust sultan it was only permissible in the event of necessity or fear. It was, however, better, in al-Tusi’s opinion, to refrain in all cases from taking wages for the office of kadi (ibid., Arabic text, 367, Persian text, i, 246).

‘‘If,’’ al-Tusi states, ‘‘anyone is able to carry out a judgment or a settlement (sulh) between people or to execute a decision between two litigants, as long as he does not fear harm for himself or for anyone of the faith and is safe from harm in so doing, he will receive recompense and reward. But if he fears any of these things, in no circumstances is it permissible for him to undertake these matters. If someone calls upon one of the fukahâ of the people of the truth (i.e. the Imami Shi‘a) to decide something between them (the Shi‘a), and that fukahâ does not agree to do so, preferring that it should be referred to a person who is charged with the matter on behalf of tyrants, he will have stepped outside the truth and committed sin. It is not permissible for a person who is charged with giving a decision between two litigants, or judgment between the people, to do so except in accordance with the truth; it is not permissible to give judgment according to the Sunni schools. If anyone undertakes judgment on behalf of unjust persons, let him strive to give judgments as demanded of him by the ghari‘a of the faith; but if he is constrained to give judgment according to the Sunni schools because he fears for himself, his people or believers or for their property, it is permissible for him to do so [while practising takﬁya], provided it does not involve the killing of anyone, because takﬁya is not to be adopted in the case of killing someone’’ (ibid., 301-2, Persian text, i, 201).

Concluding his discussion of the application of the legal penalties and the execution of judgment, al-Tusi succinctly explains in what circumstances a fakih might undertake these functions under an unjust ruler and how the fakih was to believe while doing so that he was, in fact, acting on behalf of the imam. He

‘‘Abd Allâh (Dja‘far al-Sâdîk) concerning two of our companions who are involved in a dispute over debt or inheritance and who seek judgment before a sultan or kaddi. Is this lawful (hâl?l)? Abû ‘Abd Allâh replied, ‘‘He who seeks judgment from a fakih (i.e. tyrants) and obtains judgment receives only a denomination, even if his claim is valid, because he has accepted the decision of fakih. God has commanded that (such a one) be considered an unbeliever (kâfir).’’ Umar b. Hanzala said, ‘‘What should they do?’’ Dja‘far al-Sâdîk replied, ‘‘Look to one of your number who relates our hadith, who considers our hâdîl and our hârin and who knows our shari‘a, and who is one of our jurists for I have made him a hakim over you. If he gives a decision in accordance with our judgment and (the litigant) does not accept it, then it is God’s judgment he has scorned and us he has rejected. One who rejects us rejects God and he is subject to the punishment due for polytheism (‘sâl hadd al-dalîl’).’’ (Furû‘ al-kâfî, i, 357-9). The qualities required for the office of kadi were wisdom and maturity, being learned in the Kur‘ân and the Sunna, and a knowledge of Arabic; it was also a condition that he who undertook this office should be devout and abstinent and much given to good works, and that he should avoid sins and refrain from lust and have an intense concern for piety. Only someone endowed with these qualities was permitted to undertake the office and to judge between the people provided that there was no fear for his life, his people, his possessions or for any believers (al-Nihdya fi mudgarad al-fukh wa’l-fatawa, 301, Persian text, i, 226). It was permissible to take wages and subsistence from a just sultan (i.e. the imam) for the exercise of the office of kadi, but in the case of an unjust sultan it was only permissible in the event of necessity or fear. It was, however, better, in al-Tusi’s opinion, to refrain in all cases from taking wages for the office of kadi (ibid., Arabic text, 367, Persian text, i, 246).

‘‘If,’’ al-Tusi states, ‘‘anyone is able to carry out a judgment or a settlement (sulh) between people or to execute a decision between two litigants, as long as he does not fear harm for himself or for anyone of the faith and is safe from harm in so doing, he will receive recompense and reward. But if he fears any of these things, in no circumstances is it permissible for him to undertake these matters. If someone calls upon one of the fukahâ of the people of the truth (i.e. the Imami Shi‘a) to decide something between them (the Shi‘a), and that fukahâ does not agree to do so, preferring that it should be referred to a person who is charged with the matter on behalf of tyrants, he will have stepped outside the truth and committed sin. It is not permissible for a person who is charged with giving a decision between two litigants, or judgment between the people, to do so except in accordance with the truth; it is not permissible to give judgment according to the Sunni schools. If anyone undertakes judgment on behalf of unjust persons, let him strive to give judgments as demanded of him by the ghari‘a of the faith; but if he is constrained to give judgment according to the Sunni schools because he fears for himself, his people or believers or for their property, it is permissible for him to do so [while practising takﬁya], provided it does not involve the killing of anyone, because takﬁya is not to be adopted in the case of killing someone’’ (ibid., 301-2, Persian text, i, 201).

Concluding his discussion of the application of the legal penalties and the execution of judgment, al-Tusi succinctly explains in what circumstances a fakih might undertake these functions under an unjust ruler and how the fakih was to believe while doing so that he was, in fact, acting on behalf of the imam. He
states, "If a fażīkh exercises authority (seṭlāyā) on behalf of a tyrant, let him think that in applying the penalties of the law and in giving judgment he is acting on behalf of the true imām and let him undertake (these duties) for the sake of the greater interest of the faith; and whenever he is empowered to execute punishment against a transgressor, let him do so, for verily this is one of the greatest (forms) of diṭāhā. If, however, someone does not know the conditions in which the penalties should be applied and cannot execute them [properly], it is not permissible, in any circumstances, for him to apply them—if he does he will be a sinner. But if he is compelled to do so, then it will not be anything against him. Let him endeavour to keep himself apart from things which are illegitimate (al-ākāff). It is not permissible for anyone to choose to execute oversight on behalf of tyrants unless he has (first) determined that he will not transgress what is obligatory and will only execute what is right and that he will allocate such things as sadakat and dārūmā and so on to their proper use. If he knows that will he will not be able to control these things, it is not permissible for him voluntarily to undertake such work, but if he is compelled to do so, it is permissible. Let him strive (to act) as we have said" (ibid., 302-3, Persian text, i, 201-2).

Al-Tūsī’s theory thus made it possible for Imām Shī'ī to accept the office of kādi from unjust rulers, whether Sunni or Shi'ī, although he did not provide for any immediate source of their authority. His theory was for the most part accepted by later jurists. Hasan b. Yusuf b. al-Muḥtaḥār al-Hilli (d. 726/1325), writing in the reign of Ağāy (703-16/1304-16), who was converted to Shī’ism, was a sinner and it was incumbent (kuddt al-djawr) on this, states with reference to the exercise of judicial functions: C. Schefer, Paris 1891, Persian text, 10). His main concern appears to have been to strengthen the authority of the ruler rather that to ensure that justice was done to the individual. He continues, “A few cases which are of greater importance shall be submitted to the kādi, but he makes a distinction between the exercise of office by a muḏājahād and one who was not muḏājahād. He permits a kādi to carry out the ta‘ṣīr punishments but states that the execution of the hadd punishments was the muḏājahād’s prerogative, and in carrying out a hadd punishment his inward intention (niyyāt) must be that he was carrying it out as the deputy, not of the temporal governors (hakkām), but of the imām. He also states that it was not permissible for the leader of the Muslims to appoint a kādi or muḏājahād except with the permission of a muḏājahād (Kashf al-ghidā, lith., pages unnumbered).

Under the Great Saljuqs there was a delicate balance between ṣar-t ‘a and muḏīf jurisdiction. The sultan as judge and guardian of public order sat in the masāṣilā court. This function was delegated by him to the provinces or the provincial governor to the mukta’ (see further A. K. S. Lambton, The internal situation of the Saljuq empire, in Cambridge history of Iran, iv, ed. J. A. Boyle, Cambridge 1968, 247 ff.). Niẓām al-Mulk, discussing the masāṣilā court, holds that it was indispensable for the ruler to hold such a court twice a week to hear personally, without an intermediary, what the subjects had to say (Siṣṣāt-nāmā, ed. C. Schefer, Paris 1891, Persian text, 10). The internal situation of the Saljuq empire, in Cambridge history of Iran, iv, ed. J. A. Boyle, Cambridge 1968, 247 ff.). Niẓām al-Mulk, discussing the masāṣilā court, holds that it was indispensable for the ruler to hold such a court twice a week to hear personally, without an intermediary, what the subjects had to say (Siṣṣāt-nāmā, ed. functional authority of the kādi derived from the shari‘a (see further Lambton, Quis custodiet custodes, in SFa, 1956, 132-3).

A document issued by Sandjār’s diwān appointing Majd al-Dīn Muhammad kādi of Gulpāygaš states that the office of kādi and hākim was the greatest religious office (ṣughl) and the most delicate shari‘i charge (ʿamāl) (Muntadī al-Dīn Bāḍī al-Dişwānī, ‘Atabat al-kataba, ed. ‘Abdāb Iḵtāl, Tehran 1329/1950, 45). Nizām al-Mulk also recognises that the office of kādi was a delicate one “because they (the kādīs) were empowered over the lives and properties of the Musliṁs” (Ṣuyūṭī-nāma, 19). Cf. also al-Ghazālī’s letter to Fakhr al-Mulk b. Nizam al-Mulk, Faddā’il al-anām, ed. ‘Abdāb Iḵtāl, Tehran 1333/1954-5, 28). It was no doubt partly on this account that care was urged upon the kādīs in the drawing up of testimonies, title deeds and other documents (cf. the document issued by Sandjār’s diwān appointing ‘Imād al-Dīn Muḥammad b. ‘Abdāb as kādi of Nišāpūr, Ḍalā’il al-kubrawī, 27). They were, thus, in some measure government servants. Their function as such was probably to watch over the religious institution on behalf of the government in order to prevent the spread of unorthodox opinions (which were in the eyes of the government inevitably linked with sedition). Nizām al-Mulk also states that the kādīs were to be supported by other officials and their prestige guarded. In keeping with the Sunni principle, kull mudjtahid mustāṣir, he states that the judgments of kādīs, even if wrongfully given, were to be executed by other officials. The latter were, however, to report wrong judgments to the ruler so that he might dismiss and punish a kādi guilty of such. Anyone who behaved presumptuously and refused to appear at the kādi’s court when summoned was to be forced to do so, even if he was a great man (ibid.). In some cases, the diploma appointing a kādi stipulates that he was to judge according to a particular rite. Cases are, however, recorded of kādīs giving fatwās according to more than one rite.

In Nizām al-Mulk’s theory there is a certain ambiguity in the position of the kādi. On the one hand he was appointed by the ruler, but on the other he enjoyed a certain independence because of his relationship to the caliph. “The kādīs”, Nizām al-Mulk states, “are all the deputies (nāʿībān) of the king. It is incumbent upon the king to support them. They must be accorded full respect and dignity because they are the deputies of the caliph, whose mantle has devolved upon them” (ibid., 40-1). This statement is to be seen, perhaps, in the light of the theory that the caliph should be a mudjtahid and that the ruler, if he was not a mudjtahid, required a deputy to act on his behalf in certain matters. Nizām al-Mulk states that “when the king is a Turk or a Persian or someone who does not know Arabic and has not studied the decrees of the shari‘a, he inevitably requires a deputy to conduct affairs in his place” (ibid., 40). Thus he foreshadows the theory to be put forward in the late 9th/15th century by Fadl Allāh b. Rūzbihān Khlūdji, who states that kings who were mudjtahids were few and far between and that when a kādi was not a mudjtahid it was incumbent upon him to appoint a muttāf (Ṣalāk al-mutlak, B. L., ms. Or. 253, ff. unnumbered).

The documents issued by Sandjār’s diwān collected in the ‘Atabat al-kataba make clear the separation of sharī‘i and ‘urfy jurisdiction and also the subordination of the provincial kādi to the provincial governor. In a taktīl ʿurtṣa, with the agreement of the kādi, imāms and notables of the province (ibid., 25. Cf. also ibid., 28). A diploma in the name of Abu ‘l-Faḥr Marzābān al-Shārk. b. ‘Alā’ al-Dīn Abī Bakr b. Kūmdād for the governorship (ayālat wa shahādāt) of Bālḵ instructs him to give judgment and to settle cases after consultation and according to the advice of experienced and reliable persons and leaders (mukaddamān). ‘Urfy matters were to be referred to the kādi’s court. Rasmiyyāt (matters concerning salaries and allowances), māʿāmlāt (matters concerning mukāya’ contracts) and diwāni affairs were to be referred to the diwāni-rūyāt. Abu ‘l-Faḥr was given full powers in the preservation of order and the punishment of miscreants, but in the exercise of these powers he was to consult the kādīs (ibid., 79). Another diploma in the name of Abu ‘l-Faḥr Marzābān al-Shārk. b. ‘Alā’ al-Dīn Abī Bakr b. Kūmdād for the deputy-governorship (niyābāt-ayālati) of Ray enjoin him to put down the corrupt, transgressors, thieves and highway robbers and to consider the exaction of the legal penalties (ḥudud), after consultation with the kādīs, imāms and reliable persons, as being among those things which are incumbent according to the sharī‘a and upon which the well-being and good order of religion and the world depend (ibid., 85).

Among the duties of the kādi was the supervision of the hisba. A document issued by Sandjār’s diwān for the office of kādi and kibāst of Astarābād entrusts the grantee with the execution of the requirements of the hisba, such as the putting down of transgressors and the corrupt, the prevention of evil by them, and the adjustment of weights and measures and prices, as far as possible (ibid., 82).

So far as the supervision of awkāf was concerned, in the event of a mutawwalli having been designated, the kādi exercised general supervision only, otherwise he administered the awkāf. There was in practice probably a certain conflict of jurisdiction between the kādi and the wazir in the matter of awkāf. The latter, as head of the financial administration, also exercised general supervision over awkāf, though exactly what form this took is not entirely clear. In some cases the awkāf of a district were placed exclusively under the kādi and expressly removed from the control of the diwān (cf. ibid., 33).

In the period between the disintegration of the Great Saljuq empire and the Mongol invasion, the chief official in charge of ‘urfy courts appears to have been known as the ādābīk (see further H. Horst, Die Staatsverwaltung der Grosssaljuqs und Horasanschāds (1038-1231), Wiesbaden 1964, 92-3. See also ibid., on the term juklak-ī ʿālī, which appears to have been some sort of maḥānīm court). Various local officials apparently also exercised jurisdiction. A document probably belonging to the latter half of the 6th/12th century, appointing a certain Shams al-Dīn mīrār of Khizrārz in and entrusting him with the agricultural development of the province, enjoins him to chastise and correct anyone who fails to perform the suffi cient effort in this and if such reproach and censure did not bring the culprip to see the error of his ways,
Shams al-Din was to refer the matter to the supreme diwan so that reproof might be administered to him and he might be replaced by someone who would seek to create abundance (Bahāʾ al-Dīn b. Muʿayyad, al-Tāhirī, ed. Ahmad Bahāʾīnīyār, Tehran 1315/1936-7, 113). That local officials had certain powers of punishment would seem to be confirmed by Nādir al-Dīn Rāzī. He states that bailiffs, village headmen and landlords’ representatives should “reprimand the corrupt and enjoin the people to do that which is recommended and to forbid them from doing that which is forbidden. If they saw presumption or corruption on the part of one of the peasants (raʾṣyāt), they were to punish him and bring him to repentance” (Mīrzālī ʿîshād, ed. Husayn al-Husaynī al-Nīfʿmat Allāhī, Tehran 1312/1933-4, 296).

The distinction between ʿarṣī and ʿīṣāʾi jurisdiction was more sharply drawn under the Ilkhan period prior to their conversion to Islam. The Mongols brought with them their own laws and customs, though it seems improbable that the Great Yasa of Chingiz Khan existed as a written code of laws (see further D. O. Morgan, The Great Yasa of Chingiz Khan and Mongol law in the Ilkhanate in J. M. Rogers (ed.), The Islamic world after the Mongol conquest [forthcoming]; but see also D. Ayalon, The Great Yasa of Chingiz Khan: a re-examination, in SJ, xxxii (1971), 97-144, xxix (1971), 151-80, xxxvi (1972), 113-53, and xxxviii (1973), 107-56). There was a court of interpretation known as the ʿarṣī, but we have very few details as to its terms of reference and rules of procedure. It appears to have dealt specifically with disputes between Mongols, Mongol state affairs and cases against officials, especially of alleged peculation and conspiracy (see further Morgan, op. cit.). With the conversion of the Ilkhan to Islam, the ʿarṣī was probably to some extent assimilated to the maṣūlim courts and the ʿīṣāʾi associated with their proceedings. A ʿīṣāʾi for the appointment of a provincial ʿīṣāʾi issued by Ghazān Khan (694-703/1295-1304) reads as follows, “In the case of disputes which occur between two Mongols or between a Mongol and a Muslim or cases, the decision of which is difficult, we have ordered the ʿīṣāʾi, maʿāks, biṭāqā, ʿīṣāʾi, Aʿlids and ʿulāmāʾ to assemble every month for two days in the Friday mosque in the ʿīṣāʾi and maṣūlim taking the ʿīṣāʾi and maṣūlim as the printed text to hear cases together, and after thoroughly examining a case to give judgment according to the ruling (ḥukm) of the ʿīṣāʾi.” Their decision was to be given in writing so that it might not later be abrogated (Rashīd al-Dīn, Tūrākhī-i muḥārabā-i ghāzānī, ed. K. Jahn, London 1940, 219). The Dastūr al-ʿāṣīr of Muhammad b. Hindūshah Nakhdjīvānī, which belongs to the late Ilkhan period, describes the functions of the amīr ʿĪṣāʾi. He is instructed to act on the basis of equity (ʿadd, maʿdalat, inṣāf, niṣfat and rāṣīt) (ed. A. A. Alīzādeh, Moscow, 1/1 [1964], 1/2 [1971], 2 [1976], 30, and see further Morgan, op. cit.).

Somewhat similar procedures appear to have prevailed in some of the succession states. Ibn Baṭṭūta, describing his arrival at the court of the amīr of Khārazm, ʿUtūdumūr, states “It is one of the regular practices of this amīr that the ʿīṣāʾī comes daily to his audience hall and sits in a place assigned to him, accompanied by the jurists and his clerks. Opposite him sits one of the great amīrs, accompanied by eight of the great amirs and shahiks of the Turks, who are called arghās. The people bring their disputes to them for decision; those that come within the jurisdiction of the religious law are decided by the ʿīṣāʾi and all others are decided by those amirs. Their decisions are well-regulated and just, for they are free from suspicion and partiality and do not accept bribes” (The travels of Ibn Baṭṭūta A. D. 1325-1354, tr. H. A. R. Gibb, Cambridge 1971, iii, 545).

According to Mongol practice, the ʿīṣāʾi and ʿulāmāʾ were granted certain tax immunities. Although they were treated with respect, prior to the conversion of the Ilkhan to Islam, they ceased to enjoy in official circles that pre-emination which had been theirs when religion and state were, at least in theory, one. If, as was probably the case, the ʿīṣāʾi in the main centres continued to receive their appointment from the ruler, al-Ghāzālī’s theory that any ʿīṣāʾi nominated by anyone holding power could give a valid decision would have been of peculiar relevance. Waṣṣāf records a case in Fārs ca. 678/1279-80 of the appointment of two eminent divines to the office of kadī al-ʿīṣāʾī of Fārs. This was made by the waṣṣāf of Fārs after consultation with the religious classes and the notables (Tūrākhī-i Waṣṣāf, Bombay 1269/1853, 205-6). After the conversion of Ghāzān Khan to Islam, the influence of the ʿīṣāʾi in official circles almost certainly increased. Their tax immunities were confirmed and pensions were allocated to them on the revenue (Tūrākhī-i muḥārabā-i ghāzānī, 218).

Under Ghāzān there was a diwan-i qādī, the head of which was the kadī al-ʿīṣāʾī of the empire, who once more became an important official. He was in charge of ʿīṣāʾi officials in general and also of ʿawākāf. These appear to have increased in extent and importance in the 7th/13th century (though for what reason or reasons is not entirely clear) (see further Lambton, Waṣṣāf in the 7th/13th and 8th/14th centuries in Persia, in G. Baer, ed., Social and economic aspects of the Muslim waṣṣāf, forthcoming). An undated document belonging to the late Ilkhan period issued by the ʿawākāf (who had been charged with the appointment of all ʿīṣāʾi officials in the empire and was at the same time mutawwālī of charitable and private ʿawākāf) for his deputy, who was also to hold the office of hākim of charitable ʿawākāf, states it was impossible for him personally to oversee ʿīṣāʾi affairs in all regions because of his being in the reinite of the ruler. He needed a deputy. Consequently, Husayn al-ʿAssādi was appointed deputy kadī al-ʿīṣāʾī with a general designation and with a special designation over Tūrākhī-i ʿArab, Adhārbāyānī and various other districts. He was also appointed mutawwālī of charitable and private ʿawākāf with power to appoint and dismiss those in charge of religious offices and the execution of Islamic decrees (Dastūr al-ʿāṣīr, ii, 191 ff.). Another document in the same collection, delegating the office of hākim of the ʿawākāf of the empire to the kadī al-ʿīṣāʾī Shāykh ʿAllī, gives him full powers in the administration of the ʿawākāf and over the appointment and dismissal of the mutawwālīs and muḥārabās and of deputies to act for him as hākim-i ʿawākāf in the provinces (ibid., ii, 207 ff.). To ensure that the ʿawākāf were properly run and their revenues devoted to the purposes laid down by their founders was no small matter. Usurpation was common. Demands for redress came before the kadī and it was his duty to investigate them (cf. ibid., ii 175-6, 327-9).

Rashīd al-Dīn Fadl Allāh, Ghāzān Khan’s waṣṣāf, gives an extremely unfavourable account of the administration of justice by the ʿīṣāʾi in the Ilkhan empire prior to the reign of Ghāzān Khan (as he does of other aspects of the administration). He alleges that corrupt and ignorant persons insinuated themselves into the service of the Mongols and by flattery and bribery secured the office of kadī and other ʿawākāf offices. Corruption was especially prevalent in transac-
tions over landed property. Fraudulent claims based on obsolete property deeds and bonds which had remained in the hands of the original owners or their heirs after the property had changed hands were common, and there was often no means for the kādīs to verify the validity of such deeds. Rashīd al-Dīn states that Malik-Shāh and his waṣīr Nizām al-Mulk, faced by a similar situation, had issued a decree (miḥālī), conformable to the shari'a, that claims based on title deeds which had not been preferred for thirty years should not be heard and that this decree was given to the mujtāds of Kūrāsān, ʿIrāq and Bāghdād so that there might issue fatwās in accordance with the shari'a, which were then to be sent to the dār al-khulāsa to be signed (ʿīmād al-niṣāḥa and). Rashīd al-Dīn claims that Malik Shāh's decree was extant and that it had been shown (or reported) to Hūlegū, who had issued a yarligh on similar lines, as had Abaka, Arghun and Gaykhuṭ (Tārīḵ-i mubārak-i ḡazānī, 236 ff.). Rashīd al-Dīn also asserts that 'before this time past sultans and Čingis Khān in all their fortūnās and yarlighs made mention that thirty-year-old claims should not be heard' (ibid., 221-2). These decrees, however, had, he alleges, been inoperative, because first they had not had shariʿī, kāfī or ʿurfī confirmation, and secondly those charged with putting them into operation had wished to benefit themselves from the existing situation to buy property. Ghāzān Khān, on the other hand, consulted the kādis and Fākhr al-Hārī, the kādi al-kūdāt of the day, drafted a yarligh and wrote a decision on the back in accordance with the shariʿa stating that land claims which had not been preferred for thirty years would not be heard (ibid., 236 ff.). The yarligh is dated 3 Raḏḥāb 699/26 March 1300. Any kādīs who contravened it were to be dismissed and the names of any powerful persons who urged them to act in a contrary fashion were to be sent to the ḍar al-khulāsa, the kādis and the conduct of kādīs in the matter of land cases (ibid., 218 ff.).

'surf jurisdiction seems to have encroached upon shariʿī jurisdiction under Timūr (807/1405), but under Shāhrukh (d. 850/1446-17) it seems to have been a deliberate reassertion of shariʿī jurisdiction, although 'urfī jurisdiction nevertheless continued to be dominant. Clavijo, who visited Timūr's camp in Samarkand in 808/1405 states that all litigants and criminals were dealt with by one of three courts. The first deal with criminal matters and bloodshed arising from quarrels, the second with money frauds such as might affect the government and the third with cases arising in the provinces. Wherever Timūr's camp might be, three great tents were erected, to which were brought all criminals and litigants for cases to be heard and sentences given (Embassy to Tamerlane 1403-1405, tr. G. le Strange, London 1928, 294-5).

When Ismāʾīl II (907-30/1502-24), the founder of the ʿAfšāwī dynasty, made Imāmī Shīʿism the official religion of the state, a more flexible attitude towards the acceptance of public office in general and that of kādī in particular developed among the Shīʿī šalāmās that had been the case heretofore, although there were always some who refused office out of religious scruple. The Shīʿī šalāmā became, like the Sunni šalāmā before them, public officers and as such relied upon the machinery of the state for the execution of their judgments. Imāmī Shīʿism superseded the Sunni šalāmās, and the Shīʿī šalāmās retained the functions of the Sunni kādis. Although those in charge of shariʿī jurisdiction—though this did not, of course, happen overnight. Changes also took place in the religious hierarchy. The kādī lost some of his importance, first to the sādīr, who became the chief officeholder in the religious institution, and then to the ḥāib al-sīlam, while the muḥāfīds, who owed their pre-eminence not to any official appointment but to their own learning and sanctity, exercised a great, though undefined, influence over the religious institution and the kādī's courts. The general tendency, however, was probably for 'urfī jurisdiction to be strengthened, at least prior to the reign of Shāh Sulṭān Ḥusayn (1105-35/1694-1722), and for subordinate jurisdictions of a local nature to proliferate. There was a bewildering diversity at different times and in different provinces. The fact that the shīʿa did not accept the Sunni principle, kūl mujāhīdī muṣīḥī, resulted in the decisions of the kādī's courts being subject to review and reversal. It was perhaps for this reason that most Persians, according to Chardin, preferred the governments courts to the kādī's courts, in which their cases were not easily brought to a decision (Voyages, ed. Langôt, vi, 91).

Already under Tāḥmāsp (930-84/1524-76) there was growing financial centralisation, and during the reign of Shāh 'Abbās I (996-1038/1587-1629) centralisation spread to all aspects of the administration. The empire was divided into khāṣa and mamlāṭī, i.e., regions under the central government and regions alienated from it, though usually reserved to the provincial governors. The extent of the two categories varied at different times, the khāṣa reaching its greatest extent about 1071/1660-1 (see further K. Rohrborn, Provinzen und Zentralgewalt Persiens im 16. und 17. Jahrhundert, Berlin 1966, 113-14, 115, 118 ff.). In the khāṣa, the provincial waṣīr had general oversight of all aspects of the administration, including the administration of justice, but probably played little part in its day to day administration (ibid., 125). In some cases the provincial waṣīr also appears to have exercised judicial functions, but this was probably exceptional (see ibid., 112). Under Shāh 'Abbās the chief 'urf judge in the capital was the diwānīgī, who ranked among the great amirs. Power of life and death were usually reserved to the shīk (ibid., 64-5), though in some cases he would delegate these powers to the provincial governor, especially if he was a member of the royal house.

The tradition of personal access to the ruler had remained strong and was, to some extent, a curb on the extortion and tyranny of officials, which in the absence of any clearly defined rules was widespread. On the occasion of a royal progress, the local people would bring their cases to the royal court for decision or redress. There were, however, attempts to institutionalise this. Ismāʾīl II (984-5/1576-8), shortly after his accession appointed Ahmad Beg Ustadjū as the officer in charge of the transmission of demands for redress (parvarōndī-ī-a ʿijza wa maṣākīn) (Kādī Ahmad, Khulāsāt al-ṭawāsq, Berlin, Staatsbibliothek, ms. Or. 2302, f. 256 b, quoted by Rohrborn, 66; and see H. Busse, Untersuchungen zum islamischen Kanzeleiwesen, Cairo 1959, 71, on earlier uses of the term parvarōndī). Shāh 'Abbās in 1019/1610 issued an order that demands for redress should be referred to the sādīr-i mamlāṭī and the diwānīgī (and not to him personally when he went out into the countryside). Chardin describes the crowds of plaintiffs who would assemble at the court (Voyages, v, 280).

Ismāʾīl II also set up, shortly after his accession, a diwānī-ī ʿadāliyā. He appointed one of his cousins as diwānīgī-ī ʿadāliyā, a post which he combined with the waṣīr of the supreme diwān and two khīlbāhs.
amirs to hear cases (Rohrborn, 67). There were three types of cases: sharʿiydt, which were decided by the ḥādi al-kudrāt (Shahs, 303), and the kāḍī al-kudrāt of Fars, dated 25 Rabbā II 955/3 June 1548 (H. Horst, Zwei Erlasse Sādūr). The jurisdiction between the diwān-i ḥukkum (diwān-i sādūr, whose decree was sealed by the wazir) and the great sādūr, whose decree was sealed by the shah, was discussed (Muhammad Tahir Wahid-i Kazwīnī, Tadhkirat al-mulūk-i Mirza Rafted, Add. 27, 241, 319a, ff. quoted by Rohrborn, loc. cit.). Shah Abbās II (1052-77 loc. cit.).

Shahwānīs, who was an important official, also exercised jurisdiction in disputes concerning the water of the Zayandārūd. In cases affecting all the landowners and peasants, he would be ordered by the shah to go, with the wazir of the supreme diwān, the wazir of Isfahan, the kāḍī and the muḥassils (officials) to the districts watered by the river to decide the water rights of each district on the basis of the shahī registers and to settle disputes on the basis of common sense (gulʿūr) and "according to what was customary and the practice of past years" (ibid., xvi/4, 433).

In the provinces, the provincial governor was the chief sāfī judge. Lesser cases were sometimes tried by the darāīga. According to Chardin the darāīga was appointed in the second half of the 11th/17th century by the shah, not by the provincial governor (Voyages, v, 259). The provincial wazir, who was appointed by the central government, or his deputies, also took part in these courts (see further, Rohrborn, 68-9).

Many districts in the provinces were alienated in the form of tā♀ūsī and nayırlāhī from the direct control of the government and its officials. These grants frequently, though not invariably, gave the grantee immunity from the entry of government officials. In such cases the holder exercised local jurisdiction. For example, a diploma issued by Shāh Muhammad Khudābanda, dated 989/1581, granting a nayırlāhī to a certain Sultan Ibrāhīm in Fārs, gives him immunity from a number of taxes and dues and states that "cases which occurred between the peasants (na♀ēr) of the districts mentioned [i.e. those granted to him] as a nayırlāhī should be referred to him so that he might settle them in accordance with the law of the gharīa'ī" (H. Horst, Ein Immunitätsdiplom Schah Muhammad Khudābandās von Jahrh 989/1581, in DZMG, cv/2 [1955], 292). A powerful tā♀ūsī, even if rights of jurisdiction were not specifically granted to him, would in practice exercise such usurpation. In cases of arbitration the local kāḍī was probably from time to time associated with the tūsūlār as he was with the provincial governor.

The ṭā♀ūsī had already emerged as one of the chief officials of the religious institution under the Timūrids (see H. Roemer, Staatsgeschichte der Timuridenzeit, Wiesbaden 1952, 143, and also G. Herrmann, Zur Entstehung des ṭā♀ūsī-Amts, in V. Harmann and P. Bachmann, eds., Die islamische Welt zwischen Mittelalter und Nezeit, Festschrift für H. R. Roemer, Beitr. zum Wiesbaden 1979, 278-95). He acquired a new importance under the Safawīs and was the official through whom they controlled the religious institution. He was responsible for the appointment of ṭahrīr officials, though the documents for the appointment of officials such as the provincial kāḍī al-kudrāt continued to be issued in the name of the shah (cf. the diploma issued by Taḥmāsp for the kāḍī al-kudrāt of Fārs, dated 25 Rabiʿ II 955/3 June 1548 (H. Horst, Zuen Erlass Sādūr).
leaders, ḵawājis, muʿaddids, hujjāzs, muʿarrifān, washers of the dead and grave-diggers (the last two on the recommendation of the ghassāl-bāḥīj), their dismissal and the dismissal of the religious hierarchy, as witnessed by the maḵkūfāt-i tawfiqī (xvi/1-2, 64-5). Šarīʿī affairs in Isfahān and the surrounding district (which was administered by the Fayd Āḥār department) came under the sadr-i ḵāṣṣa to the exclusion of the sadr-iʾṣāma (ibid., xvi/1-2, 65). The sadrūd, although their importance declined in the latter part of the Safawid period, nevertheless retained their pre-eminence over other officials of the religious hierarchy, as witnessed by their association with the diwānābegī (see above). Mirzā Raftī makes this point by stating that other šarīʿī officials had no part in the examination of the four offences known as aḏāḥ-i arbaʿa. The two sadrūd also decided cases concerning title deeds (kabālādāḏ) and šarīʿī deeds (ibid.).

In some periods, the sadr-i ḵāṣṣa, according to Mirzā Raftī, also held the office of sadr-iʾṣāma (xvi/1-2, 66). Unfortunately, he does not state which of the sadrūd held this office. That the sadrūd should also be sadr-iʾṣāma would seem to be a natural consequence of his succeeding the sadr-i ḵāṣṣa, who also sometimes held the office of sadr-iʾṣāma, as the most important religious official of the state. However, under Shāh Ismāʿīl and at the beginning of the reign of Tahmāsp, the sadr-iʾṣāma of Tabrīz (or Aḏšārābāyjān), who also had charge of the public treasury (mawkūfāt-i ʿawāfī), was a powerful figure (see Rorbach, 127-8). Before Šūdār were appointed in Isfahān, the sadr-iʾṣāma used to sit in the kāḏiʾ-ḵāna of the diwānābegī and give decisions in šarīʿī cases for the military, but when it was laid down that the diwānābegī should hear šarīʿī cases (unfortunately Mirzā Raftī does not state when this was the sadr-iʾṣāma ceased to come to the kāḏiʾ-ḵāna, and his functions came to be confined to validating with his seal the payment orders made in favour of the army. He had no salary but received a commission of 1% from the military on their pay (Dastūr al-mulūk, xvii/1-2, 70).

Although the importance of the office of sadr-i ḵāṣṣa was reduced by the emergence of the sadrūd, the kāḏīs continued to be influential and in the smaller provincial cities, where they had no rival in the person of the sadr-i ḵāṣṣa, or the religious hierarchy, they constituted an important part in local affairs. So far as the šayḫāʾ al-ʿilām was concerned, there appears to have been some conflict of jurisdiction with the kāḏī in Isfahān if not elsewhere. According to Mirzā Raftī, the šayḫāʾ al-ʿilām of Isfahān heard the cases of the people in his house every day except Friday and enjoined the good and forbade evil. Divorce according to the šayḫaʿ was given in this presence, and for the most part the custody of the property of orphans and those who were absent was his responsibility, though on some occasions these matters were referred to the kāḏīs. The šayḫāʾ al-ʿilām also sealed documents and title deeds, which were not confined to transactions between Muslims but might also be documents exchanged between non-Muslims. Chardin mentions that the šayḫāʾ al-ʿilām of Isfahān signed and witnessed documents concerning a financial transaction between him and some Dutch merchants in respect of a sum of money which the šayḫ owed him (Sir John Chardin’s travels in Persia, London 1927 121-2). The šayḫāʾ al-ʿilām received annually 200 Tabrīzī tūmāns as a pension (waṣafīz) from the public treasury (Dastūr al-mulūk, xvii/1-2, 69).

Under the early Kāḏīs, ṣafīʾi jurisdiction was administered by the šāhs, the sīyāsī provincial governors and other local officials. There was little or no differentiation of function: matters concerning security, law and
taxation were, for the most part, referred to the same officials. The lowest court was that of the village headman, who was empowered to inflict slight punishments and to impose small fines. More serious crimes were referred to the district collector (dibiti) and those more serious still, either because of the nature of the crime or the rank of the persons concerned, to the governor of the province. The right to pronounce the death sentence was seldom delegated by the shah except sometimes to the governors of the royal house or when the country was in rebellion.

The 'urf courts were usually held in public. This, in Sir John Malcolm's opinion, operated "as a salutary check on their proceedings". "These courts", he continues, "are sometimes very tumultuous though the judge is aided by a host of inferior officers, whose duty is to preserve order. The women who attend these courts are often the most vociferous: the servants of the magistrates are not permitted to silence them with those blows, which in the case of disturbance they liberally inflict upon the men" (History of Persia, London 1829, 2 vols., ii, 319). According to Malcom, 'urf officials referred to the shari'i courts all cases which for personal or political reasons they wished to be decided by their authority. In criminal cases the chief judge of the shari'i courts was associated with the 'urf officials and pronounced sentence to the criminal in excess of thirty days imprisonment (ibid., p. 320). Curzon, writing towards the end of the century aptly describes the lack of a clear dividing line between the two jurisdictions. He states, "The functions and the prerogative of the co-ordinate benches vary at different epochs, and appear to be a matter of accident or choice, rather than of necessity; and at the present time, though criminal cases of difficulty may be submitted to the ecclesiastical court, yet it is with civil matters that they are chiefly concerned. Questions of heresy or sacrilege are naturally referred to them; they also take cognisance of adultery and divorce; and intoxication as an offence, not against the common law but against the Koran, falls within the scope of their judgment" (Persia and the Persian question, London 1892, 2 vols., i, 453). Prior to the attempts at judicial reform in the reign of Nasir al-Din Shah (1848-96), it was usual in the 17th and 18th centuries, mainly in the commercial and financial transactions, loans to the government and its officials and transactions between individuals were commonly sealed and witnessed by religious dignitaries. Transactions with government officials were sometimes registered in the diwan-khadna, but neither practice safeguarded those by whom the documents were concluded from litigation (cf. eadem, The case of Haji 4Ab al-Karim, in Iran and Islam, ed. C. E. Bosworth, Edinburgh 1971, 331-60).

Contact with Europe had been joined in the 16th, 17th and 18th centuries, mainly in the commercial field. This had resulted in the grant of immunities to European merchants by the shahs. In the 19th century this contact took on a new form and was dominated by the strategic and political interests of the great powers. Under the commercial treaty concluded at the same time as the Treaty of Turkomanfay (1829) extra-territorial privileges were granted to Russian subjects, which were later also claimed by other foreign states for their nationals under most favoured nation treatment [see further IMTIYAZAT. iii. Persia]. This treaty regulated the position of foreign merchants. Disputes to which they were a party and claims by them were removed from the control of the shari'i courts and were settled by a mufti appointed by the shah or by an official known as the kargahdar and in the capital by the diwan-khadna and later by the Ministry of Foreign
Affairs. Disputes between local dhimmis and Muslims were still heard in the shar'i courts, but from about the middle of the century attempts were made to transfer such cases to the diwân-khâna. In 1851 when Nasîr al-Dîn was in Isfâhan he laid down that inheritance disputes between an Armenian, Jewish or Zoroastrian convert to Islam and an adherent of the community to which he had previously belonged were not to be referred to the shar'i or 'urf judges in the province but that the two parties were to be sent to the capital and the matter investigated by the diwân-khâna (Rûmânâ-yi usûkî-yi ittîfâkîyya, 3 Safâr 1268/1851). On the other hand, an order (ta'llûka) was issued by the sadîr-i 'âzam in Dhu ‘l-Hijjâja 1270/1854 stating that any dispute between a Jew, Christian or Zoroastrian on the one hand and an 'Ishâh 'Aghâri on the other over partnerships in trade or land should go before the Imâm Qûmâ-yi Isfâhan and be settled according to the shar'i a'idî (ibid., Dhu ‘l-Hijjâja 1270/1854). In 1863 new procedures to be followed by the diwân-i 'adliyya in mixed cases were laid down (see Rûmanâ-yi dawlat-i 'âli-yi 'alâ-yi 'Irân, 17 Radjâb 1279/1863).

From about the middle of the 19th century, there were various attempts by Nasîr al-Dîn and some of his ministers to centralise the administration of justice through the diwân-khâna and to extend the field of 'urf jurisdiction, while at the same time regulating its procedure. The first was resisted by the provincial governors and the second by the 'ulâmâ. In 1854 an order was published in the official gazette stating that if anyone refused to attend the diwân-khâna when summoned by the authorities, one-fifth of the claim against him, whether he was of high or low estate, a Kâdîr prince or not, would be confiscated and he would be forced to appear (Rûmânâ-yi usûkî-yi ittîfâkîyya, 4 Dümâdî I 1270/1854). In 1855 an attempt was made to abolish the legal force of contradictory juridical opinions. This, like the order concerning the inheritance disputes of converts to Islam, was also an encroachment on the authority of the shar'i courts.

In the same year, Mîrzâ Akâ Khân Nûrî, who had succeeded Mîrzâ Taqî Khân Amir Kabîr as sadîr-i 'âzam in 1851, apparently submitted a plan to the shâh for the promulgation of a body of laws drawn from various European codes, having as their basis the security of life, property and honour of the subject as in the Ottoman Khâtât i shar'î-yi Guilkhâna (Great Britain. Public Record Office. F.O. 60: 201, Taylor Thomson to Clarendon, no. 23, Tehran, 18 February 1855). Nothing came of this and it was not until 1858 that further steps were taken towards legal reforms. A council of ministers was set up and regulations for the procedure of the diwân-khâna-yi 'adliyya-yi 'a'zâm, or ministry of justice, were laid down (see further MUKîMâ. ii, Persia, and DUSTûR. iv. 'IRân). It was further announced towards the end of the year that a department of justice (diwân-khâna-yi 'adliyya-yi 'a'zâm) would be set up in each province under a diwânâbegî. Its decrees, if they concerned 'a'zâm matters, were to be referred to a mudjâhid, and if they concerned 'urf matters to the provincial governor. 'A'zâm documents were to be registered with the diwânâbegî (Rûmânâ-yi usûkî-yi ittîfâkîyya, 11 Rabî‘ II 1275/1858). This attempt to assert the authority of the central diwân over the provincial courts and of the diwânâbegî over 'a'zâm as well as 'urf courts was abortive. In the face of the opposition from both the 'ulâmâ and the provincial officials the decree was suspended. Whether it was because of the failure of these various measures designed to achieve some measure of legal reform or not, it is not clear. On the 9th of Shaban 1277/1860 that the shâh would hold a maqâlîm court every Sunday (Rûmânâ-yi usûkî-yi ittîfâkîyya, 28 Muhammad 1277/1860). A rescript (dast-khâtî) was issued for the procedure to be followed. The 'ijzhâkâstî-bâghi and the diwânâbegi, and the decisions of the court were to be on duty. The first minister and the deputy first minister were to be present and the latter was to record the answers given to the petitions. Petitions were to be presented by the nasakî-bâghi and the diwânâbegi. Petitioners were not to assemble near the guardhouse; in Tehran they were to gather in the Maydân or the Kûfâ-yi Arg and in Shiraz, or elsewhere in summer quarters, in the open country. They were to come forward one by one or two by two. The Karâwûl regiment, the farrâh-i khâltûstan and the pishkhârdîmâtan were all to be on duty. If the petitioners made a confession when they assembled they were to be punished. Only petitions for the redress of grievances would be received: petitions for an increase of pay, pensions or ta'âdûs would not be heard. Petitions from the provinces could be submitted in writing, through the official provincial post (gâhirîy). These instructions suggest that Nasîr al-Dîn feared both assassination and rioting by the populace; they also recall Nîzâm al-Mulk's fears of commotion by petitioners at the maqâlîm court—though apparently the Safawîs had no such fears (see above).

In 1863 there was an attempt to revive the measures of 1856. Mîrzâ Husayn Khân Moshîrî al-Dawla, who had spent twelve years in Turkey as the Persian representative there, submitted draft regulations for the reorganisation of the Ministry of Justice for the shâh's approval. The purpose of these regulations was to centralise the administration of justice and to limit the authority of the provincial governors. These measures brought Mîrzâ Husayn Khân into conflict with both the 'ulâmâ and the provincial authorities, and the proposal to set up departments of justice in the provinces under the Ministry of Justice was again shelved (Rûmânâ-yi dawlat-i 'âli-yi 'alâ-yi 'Irân, 17 Radjâb 1279/1863, and Lambton, The Persian 'ulâmâ and constitutional reform, in Le Shi'isme imâmite, ed. T. Fahd, Paris 1970, 259-60. See also F. Adamiyyat, Fikr-i 'a'zâm in Persian literature, 2 vols., ed. T. Fahd, Paris 1970-71, 72 ff.). In 1871 Mîrzâ Husayn Khân Khânedâr Khân al-Dawla, who had succeeded his father as sadîr-i 'a'zam, issued a decree in the shâh's name, setting up six courts or departments of the ministry of justice and regulations for their operation. The settlement of disputes outside the court was, however, permitted, provided both parties consented to this. The decrees of the 'a'zâm courts were to be registered and enforced by the Ministry of Justice. In the same year tortuous procedure was again forbidden (see further Shahbâk, Iran: monarchy, bureaucracy and reform under the Qajars, 1858-1896, London 1978, 83 ff.). Mîrzâ Husayn Khân's reforms were also abortive. On 22 May 1888, as a result of promptings by Drummond Wolff, the British minister, Nasîr al-Dîn issued a decree giving security of life and property to all Persian subjects unless publicly condemned by a competent tribunal. The effect of this on the lives of the people was, however, negligible. The last attempt at legal reform was made after the cancellation of the Tobacco Concession in 1891, when Âmîn al-Dawla urged upon the shâh the establishment of regular tribunals. Muhîn Khân Moshîrî al-Dawla, the minister of justice and commerce, was accordingly ordered to set up a so-called addâlat-khâna. This plan also proved abortive (Âmîn al-Dawla, Khâtât-i Mîrzâ 'Ali Khân Âmîn al-Dawla, ed. H. Farnâmfarmanîân, Tehran 1962, 184 ff.).

By the end of the century there had thus been little
change in the administration of justice. The functions of the minister were theoretically to take general note of the law throughout the country and to enforce the execution his power, like that of other ministers, was depended for the execution of their decisions upon the religious leaders. The successor, who would consider all matters proposed in the madjlsis and reject wholly or in part any proposal at variance with the sacred laws of Islam. Article 28 states that the three powers shall always be separate and distinct from one another, and Articles 81 and 82 affirm the irremovability and independence of the judges. (These articles were emended in the reign of Muhammad Rida Shah.) Article 71 states that the Supreme Ministry of Justice (diwan-i 'adlat-i 'ulamâ) and the judicial courts are the places officially destined for the redress of public grievances, while judgment in shar'i matters is vested in just madjlsisahids possessed of the necessary qualifications, thus implying that the jurisdiction of the judicial courts was general and that only those matters which were judged to pertain to the shar'i were to be referred to shar'i judges. The text is, however, ambiguous, perhaps intentionally.

The committee of madjlsisahids laid down in Article 2 of the Supplementary Fundamental Law was set up by the second madjlis in 1911 but later fell into desuetude. The result of its work was the provisional law known as the kânâni-i muwakkati-yi tashkildt wa usul muhabkamat 1329 (the provisional law for the regulations of judicial procedure of 1911). This law, in spite of its provisional nature, was the basis on which the judicial reforms carried out after the grant of the constitution rested. Under its authority a number of provisional laws were passed, a procedure which enabled the government to take "experimental" action and which avoided the question of whether the madjlis was contravening Article 2 of the Supplementary Fundamental Laws or not. Article 45 of the provisional law of 1911 defines shar'i matters as "matters which are established in accordance with the law of the iljustrous shar'i of Islam". The lack of any more precise definition of shar'i and 'urf matters illustrates the difficulty which the legislators experienced in making a separation between the two systems. The law further divides cases into those concerning shar'i matters, 'urf matters and "joint" cases, i.e. cases which concerned both shar'i and 'urf matters. The last could only be referred to the 'adilsya (the Ministry of Justice) with the consent of both parties. Shar'i cases are defined inter alia as cases arising from ignorance of a shar'i judgment or shar'i matters, cases concerning marriage and divorce, debt, inheritance, awâf and the appointment of malâzalâtís and legal guardians. The shar'i courts (muhâzir, sing. muhâzir) were presided over by a madjlsisahid possessing the necessary qualifications (dhimâl-shar'i al) and two deputies (karîb al-shar'i). The effect of the provisional law, although it was perhaps intended to limit the competence of the shar'i courts, there were various
reasons for this: a lack of trained personnel to administer a secular law, lack of familiarity on the part of the public with the lengthy formalities involved by the new procedures, the fact that in the provinces cases were for the most part decided by the governors on an ad hoc basis and the existence of a separate court in the Ministry of Foreign Affairs with branches in the provinces known as kārgudārīhā for cases involving foreign subjects. For these and other reasons, reform proceeded slowly. Courts of first instance and courts of appeal, special commercial and military tribunals and a court of cassation (divān-i tamyiz) were, however, set up.

Under Rūdā Shāh (1925-42) the government embarked upon an ambitious programme of legal reform, and with the increasing power of the central government, the tendency to ride roughshod over opposition on the part of the religious classes grew. Various parts of the civil code were promulgated between 1925 and 1933, thereby increasingly limiting the competence of the shārī'ī courts. Negotiations were begun for the abolition of the capitulations, which finally became effective from 10 May 1928, the provincial tribunals presided over by the kārgudārī having already been dissolved by the law of 12 Shahrīvar 1306/3 September 1927 [see INTEXT, iii, Persia]. In 1305/1926-7 the Ministry of Justice was established and it assumed into its jurisdiction the provisional law of 1911, and as a result a number of new provisional laws were passed. The 'adlīyya was reorganised and the list of matters which were to be referred to the shārī'ī courts was revised. By the law for the regulations of judicial procedure of 7 Day 1307/1928-9, the existence of shīrī'ī courts was reaffirmed, but their competence was limited broadly to cases referring to marriage and divorce, matters of succession and guardianship and the administration of wills and aukāf. In the following year, by the law of Khurād 1308/1929 their competence was further reduced, while the law of 10 Aḏār 1310/1930 abrogated earlier laws concerning shārī'ī courts and recognised only those courts which were presided over by a madžīdhūd possessing the necessary qualifications. Finally, in 1337 new Regulations for judicial procedure ('aṭīn-i dādarāt-yi madānī) in 789 articles were presented to the madżīdī. They were finally passed on 25 Shahrīvar 1318/1939 and replaced the earlier provisional laws.

In these various ways, which would in mediaeval terminology have been described as hīyān, an open clash between the modernists and the authorities of the religious law was avoided and a civil law was codified and brought into operation. The sections on marriage, divorce, inheritance, aukāf, irrigation and dead lands were simply a codified version of shārī'ī law already in operation with minor changes. In matters of divorce, the position was materially altered by the Family Protection Act of 1967. A penal code, based mainly on French law but also influenced by Swiss and Belgian law, was promulgated in 1928 and replaced by a new code in 1939. A provisional law for commercial courts was set up under the provisional law of 1911 and a commercial code promulgated in 1932.

Throughout the period under review down to the early 20th century shārī'ī and 'urfi jurisdictions continued side by side. The former, administered by the kādī and the shārī'ī judges, covered in theory all aspects of the believer’s life, was a written law, and subject to known procedures. In theory it was supreme and unchallenged, but in practice it was limited to the ordinary operation. The latter, administered by the ruler and his deputies, was unwritten, its judgments were executed by the strong hand of power and it was in practice dominant. At best it was regulated by custom and at worst wholly arbitrary and guided by the whim of the ruler. The distinction between the two jurisdictions was not, and could not be, clearly drawn since the shārī’ī could, in theory, have no rival. The operation of the two jurisdictions was personal: now the one, now the other, extended the field of its operation. The relationship between them was uncertain and uneasy. The power of execution in all cases rested with the 'urfi officials, but so far as the shārī’ī officials were associated with the 'urfi courts, a quasi-shārī’ī sanction was given to their proceedings.

Bibliography: Sections on kādī are to be found in all major works on fāhī, both Sunnī and Shi'i. Material on the general principles of taking up government office is also to be found in the sections on al-amn wa’t-nahy and al-makāshī and al-hubā. Information on the exercise of the office of kādī by individuals is to be found in biographical dictionaries and histories. For the modern period, see Ahmad-Daftary, La suppression des capitulations en Perse, Paris 1930; idem, ‘Aṭīn-i dādarāt-yi madānī wa’l-bāzarānī, Tehran 2 vols., i, 1324/1956-7, ii, 1334/1966-7; Mustafa ‘Adl Maṣūr al-Salṭāna, Ḥukkū-i madānī, Tehran 1308/1929; ‘Ali Pašā Sālīh, Kuwas-yi mukhtārāt-i shādī, Tehran 1343/1964-5, Muhammad Qā’far Langārdūz, Dānishmāna-yi huqūk, 3 vols., Tehran 1343-52/1964-74; D. Hinchcliffe, The Iranian family protection act, in The international and commerical law quarterly (April 1968), 516-21; E. Gräf, Der Bruch (urf/ada) nach islamischen Recht, in K. Tauchmann, ed., Festschrift für H. Petri, Vienna 1973, 122-44. (A. K. S. LAMBTON)

4. THE ARAB LANDS AND ISRAEL IN THE MODERN PERIOD

i. Egypt

In the period of direct Ottoman rule in Egypt, the Shārī’ī courts had a very wide jurisdiction, which comprised civil law, including personal status and waqf, and also criminal and administrative matters. Their personal jurisdiction applied also to disputes between non-Muslims and Muslims, between non-Muslims of different denominations, and even between non-Muslims of the same denomination who agreed to litigate before a Shārī’ī court.

Muhammad ‘Ali established many judicial authorities which took away important powers from the Shārī’ī courts: madżīdī ḍhālām al-adwā and madżīdī ḍawāw al-balād, which dealt with claims for specific amounts and with agricultural matters; and al-madżīdī al-markaza-yī, which heard appeals against decisions of the latter courts and had original jurisdiction in claims for greater amounts. The courts of first instance (al-madżīdī al-bītād-yī) in the provincial capitals heard criminal matters and civil claims up to substantial amounts. Their judgments were appealable to the courts of appeal (madżīdī al-is’īn-yī). The highest appellate court was the madżīdī al-ahkām, which sat in Cairo. Other judicial authorities were madżīdī al-tājīrā (a commercial court) and madżīdī ma’dyya-yī al-balād. Jurisdiction in criminal cases and the ‘investigation of complaints’ in the old sense were exercised by the chief administrative office, al-dīwān al-khādūsī, headed by the Khādūsī as representative of the Pasha; the chief of police (dībād) and the mawzaawī also had considerable powers of punishment.

A major reform in the judicial system was carried
out in the days of Isma'il Pasha. The Hasbiyya Courts Law of 1873 was a first, moderate step in restricting the powers of the Sharī'a courts. The hasbiyya courts (reorganised under a law of 1896 and renamed medielle courts, or madjalis nizdmiyya in 1947) were competent to look after the financial interests of local absent persons and minors, both Muslims and non-Muslims. Certain matters of personal status were also transferred to these new courts; the Public Treasury (bayt al-mdl) was abolished. A national system of civil jurisdiction, comprising a number of madjalis, was established in 1874. In 1876, mixed tribunals were set up in which both foreign and local judges served. They heard disputes between foreigners of different nationalities and between foreigners and Egyptians. The local judges of these courts were exposed to the influence of Western legal principles and judicial norms.

The Code of Procedure of Sharī'a Courts of 1880 limited the jurisdiction of the Sharī'a courts to matters of personal status, succession, usūf, and gifts, and cases of homicide. They had concurrent jurisdiction, by the side of the provincial councils, in matters of blood-money.

The British occupation of Egypt in 1882 did not, in theory, change the juridical status of the country, which nominally continued to be part of the Ottoman Empire, though enjoying a large measure of autonomy. As a result of reorganisation, the jurisdiction of the Sharī'a courts was restricted to personal status, succession and part of the law of landed property, including usūf of Muslims; the Sharī'a courts in the major towns had jurisdiction also in cases of homicide referred to them by the madjalis nizziyya.

Until 1883, the Sharī'a courts had general and residuary jurisdiction with regard to all residents of Egypt. They also had jurisdiction in matters of personal status of non-Muslims, both local and foreign, if the parties had no communal court of their own or did not signify their acceptance of milla (communal) jurisdiction, or if they belonged to different denominations, or if a non-Muslim husband had converted to Islam after marriage. The sphere of the Sharī'a courts was restricted, either by direct limitation or by definition of the spheres of the other courts. In 1883, the judicial system was reorganised: the civil courts (madjalis nizziyya) were replaced by national courts (mahākim ahliyya) based on European models (the reform was only completed in 1889). Mixed and national courts took over many of the powers of the Sharī'a courts. They were competent to hear criminal matters (homicide) and many matters of personal status and usūf. The law of 1896 further restricted the jurisdiction of the Sharī'a courts, viz. to matrimony, dowry, divorce, the custody of children, maintenance (including maintenance between relatives), paternity, succession, usūf and gifts; homicide was removed from their jurisdiction to that of criminal courts.

The dichotomy between the sharī'i judicial system, in which the non-codified Sharī'a applied, and the variegated system of the national and mixed courts, in which judges with a modern legal training applied Western-inspired codes, increasingly sharpened. In 1899, Muhammad 'Abduh (q.v.) suggested the amalgamation of all judicial authorities within the framework of the Sharī'a courts or, more concretely, the vesting of the Sharī'a courts with jurisdiction in criminal matters and incidental jurisdiction in other matters (along with the hearing of matrimonial and usūf cases). He also suggested integrating the mufīfs in the higher echelons of the judicial system. His suggestions were not accepted.

Another law, of 1909-10, defined the jurisdiction of the different Sharī'a courts in greater detail, but brought nothing substantively new. The law of 1931, which was in force until the abolition of the Sharī'a courts, superseded it in matters of personal status, non-Muslims can now be tried before Muslim judges, although the latter are supposed to apply the religious law of the parties.

Following the Ottoman conquest, the dominant doctrine in the Egyptian sharī'i system was the Hanafi one, although the population was mainly Shī'ī (in the north) and Mālikī (in the south). The kānūn of the sultan, ostensibly designed to supplement the Sharī'a, superseded it in matters, especially criminal, in which difficulties arose in its application in the Sharī'a courts. Egypt was not affected by the Tanzimāt legislation of the Ottoman Empire, and neither was the Medjīt introduced there.

After an endeavour had been made in 1855, under Sa'id Pasha, to codify the criminal law, one which only resulted in a "confused compilation" based mainly on the Sharī'a, the code of the latest general reform under Isma'il Il Pasha in connection with the creation of the mixed tribunals (1876). At the time of the creation of the national courts (mahākim ahliyya) (1883), new civil, criminal and commercial codes were proclaimed which were based on French models.

In the late 19th century, Muhammad Kadri Pasha prepared codes, based all on the Hanafi doctrine, of several departments of law: (1) Kitāb Murshid al-ḥayrān ilā ma'rifat ahlu al-insān, which dealt with civil law, it was not officially recognised; (2) Kitāb Ahwāl al-sharī'yya fi 'l-ahwāl al-ahliyya, which dealt with personal status, succession, incompetence, gifts etc.; though not adopted by act of parliament, it was published by the Egyptian government in 1875 and enjoyed semi-official status; it was only intended to meet the increased need, caused by the creation of the mixed and national tribunals, for a convenient summary of the law administered by the Sharī'a courts and had no authority of its own with the latter; there are official translations into French and Italian and a commentary by Muhammad Zayd al-Ibyānī; and (3) Kānūn al-uds wa l-issal fi 'l-kādā' wa l-muḥākāt al-aqəq (Būlāk 1893, 1894, and later editions), which deals with pious foundations.

A law of 1890 provided that the judgments of the Sharī'a courts could be based exclusively on the most approved opinion of the Hanafi school, except for
cases of homicide, in which the kādi's, to avoid corruption and the spilling of innocent blood, were permitted to follow the two disciples of Abū Ḥanīfa, Abū Yūsuf and al-Shāfi'i, or, in cases of deliberate homicide, the three other schools. Muhammad 'Abduh, within the framework of reforms in the sharī'ī judicial system, suggested appointing a commission of 'ulamā' to prepare comprehensive codes, especially as to personal status and 'urf, culled from all the Sunnī doctrines according to considerations of public welfare; they were meant to be applied in the Sharī'a courts by order of the ruler; but 'Abduh's suggestion was not adopted. The Sharī'a Courts Organisation Law of 1910 again required the kādi's, in principle, to follow the most approved opinion of the Hanafi school.

From 1920, Parliament engaged in extensive reformist legislation on matters of personal status, succession and 'urf; it deviated from the Hanāfi doctrine and adopted elements of other Sunnī doctrines and of the Shi'a. This legislation comprised Law no. 25 of 1920 and Law no. 25 of 1929 on maintenance, divorce and other matters; Law no. 78 of 1931 on the organisation of the Sharī'a courts, introducing also reforms in family law; the Succession Law, no. 77 of 1943; the Testimentary Disposition Law, no. 71 of 1946, the 'urf Laws, no. 48 of 1946 and no. 180 of 1952, and Law no. 116 of 1952 concerning the denial of guardianship over a person. The Civil Code of 1948, prepared by 'Abd al-Razāzāk al-Sanhūrī, who served as model for the civil codes of several Arab countries, draws inspiration from the Sharī'a as one source among many, and not the most important. It is based on the codes of 1875 and 1883, which in turn go back to the Code Napoléon. Part of the reforms were at first carried out in the Sudan, through the Grand Kādi, who was an Egyptian jurist.

The Sharī'a Courts Abolition Law, no. 462 of 1955, provides that the national courts shall decide matters of personal status and 'urf in accordance with section 280 of the Sharī'a Courts Organisation Law of 1931, that is to say, in accordance with the most approved opinion of the Hanafi school, except for matters specially provided for in that law and in statutes of the nineteen-twenties and subsequent years supplementing it. In the national courts, Islamic law applies also to non-Muslims in matters of succession and wills and where the parties do not belong to the same denomination, or one of them has converted to Islam in the course of the proceedings.

After the unification of the judiciary, there were several attempts to codify the law of personal status. There was a growing realisation that the national courts should apply a uniform material law, valid for members of all religions and for foreigners as well as for local residents. But reformist legislation was only resumed in the second half of the nineteen-seventies, and even then not to the extent planned: Law no. 26 of 1976 introduced amendment in matters of maintenance and Law no. 44 of 1979 brought important reforms in matters of maintenance, divorce, maintenance of divorced women and custody of children.

In recent years, the efforts of Islamic orthodoxy have centred on an attempt to disprove the legitimacy of statutes inconsistent with the Sharī'a. The prime objective was establishing the position of the Sharī'a in the constitution of the state. The provisional constitution of 1964 (i.e. of the time of 'Abd al-Nāṣir) did not mention the Sharī'a at all. The 1971 constitution (art. 2) says that Islam is the state religion and that the principles of the Sharī'a are a chief source of legislation, i.e. one of several. On 22 May 1980, following a referendum, it was laid down that the Sharī'a was the chief source of legislation. There have been several attempts by superior courts, in reliance on article 2 of the constitution, to disprove the legality of laws contrary to the Sharī'a (see, e.g. al-Dir'awī, February 1980). The Muslim Brothers [see al-Tikrāwān al-Muslimūn] demand that the judicature, even at its lowest levels, should be enabled to pronounce on the legality of statutes. Alternatively, they suggest including the sharī'ī laws, especially the penal ones, among the statutes (see e.g. al-Dir'awī, July 1980).

Since 1972, legislation has been proposed, by both private and governmental agencies, to introduce Kur'ānic punishments (kaddād) for theft and embezzlement, the consumption of alcoholic beverages, armed robbery, unchastity (zinā), false accusation of unchastity (kadiyy), and apostasy from Islam (ridāda). In 1975, a supreme committee for the initiation of laws conforming to the Sharī'a (al-Lajnah al-`ulāyya li-tatwir al-`aṣlulāmin waft al-shari`a) was set up. Up till now, these efforts have had scanty results. The legislative proposals were not adopted, except for a bill concerning the consumption and sale of alcoholic beverages, which became law in 1976 (al-Masām, August 1980).

In the period prior to the occupation of Egypt by the British, procedure and the rules of evidence in the Sharī'a courts were based on the Sharī'a. Upon the reorganisation of the courts under the law of 1880, procedure was also revised. In 1883, immediately upon the British occupation, new regulations for civil and criminal procedure, based on French models, were proclaimed (the criminal code was brought up to date in 1904); but they were only applied by civil courts. As to the Sharī'a courts, in the Règlements since 1897, there has been an increasing tendency to do away with oral evidence of witnesses and acknowledgment (tkār) as means of proof and to prefer documentary evidence. Muhammad 'Abduh suggested making the use of written documents a condition of the jurisdiction of the Sharī'a courts. Reformist legislation from the nineteen-twenties onwards concerning personal status and succession included also procedural provisions which served as means to circumvent substantive sharī'ī legislation.

The Sharī'a Courts Abolition Law, no. 462 of 1955, provides that the Civil Procedure Law shall apply to matters of personal status and 'urf in national courts, except for matters to which special provisions apply according to the Sharī'a Courts Law or laws supplementing it. In addition, Law no. 57 of 1959 (amended by Law no. 106 of 1962) is to be applied to proceedings before the Court of Cassation (mahkamat al-nakbi).

In the days of Muhammad `Abli, there was in Cairo a chief kādi, sent every year from Istanbul, who delegated the bulk of the business to the deputy he brought with him from Istanbul. The plaintiff had, as means of proof and to prefer documentary evidence. Muhammad 'Abduh suggested making the use of written documents a condition of the jurisdiction of the Sharī'a courts. Reformist legislation from the nineteen-twenties onwards concerning personal status and succession included also procedural provisions which served as means to circumvent substantive sharī'ī legislation.

In addition to this chief court of justice, there were subsidiary courts in Cairo and the suburbs at which official witnesses of the chief court administered justice as deputies and under the supervision of the
chief kādī. In the country towns there were also kādīs, who were usually aided by muftīs. The kādīs were paid by the litigants and not by the state. Saʿīd obtained the right to nominate kādīs (but not the chief kādī) and ʿIsāʾi requested permission to nominate, temporarily at least, the deputy of the chief kādī, who himself remained in Turkey. By a law of 1880, the benches of the Shariʿa courts in Cairo and Alexandria were made to consist of three judges, the court in Cairo became a court of appeal from the decisions of single judges, and the judgments of the two courts were made appealable to the Hanafi (chief) muftī; in cases of doubt, the courts were referred to the competent muftīs, but for the rest they were made independent of them.

A further step forward was marked by the Règlement de Réorganisation des Mehkemehs of 1897, modified in 1909-10; between the two versions came the fatawa of Muhammad ʿAbduh on the reform of Shariʿa jurisdic-
tion of 1899. Both versions provided for an organisa-
tion in the Shariʿa courts in three stages: sommâr (qiyāṣʿyya), de première instance (ibštīdaʿyya) and suprême (ʿulāya), according to the terminology finally adopted; single judges sat in the first stage, colleges of judges in the other stages (always three according to the earlier version, three in the intermediate instance and five in the highest court in Cairo according to the later version). The court of appeal was the next highest court; the more important cases were at once brought before the court de première instance. The earlier version gave the muftīs definite places on the bench of the collegiate courts; in the later version, the vice-president acted as muftī, except in Cairo. The Règlement of 1931 brought the number of judges in the highest court down to three. The Shariʿa Courts Abolition Law of 1955 provides that matters of personal status shall be dealt with by national courts of three grades, to be specially established for this purpose. Those of the lowest grade, called the summary courts (al-μahdākim al-djazʿyya), are to hear all matters of personal status, as defined in the Shariʿa Courts Law no. 78 of 1931, except guardianship, succession and personal status, which are to hear matters of wakf and appeals from judgments of the summary courts as far as these are appealable. Non-final judgments of the courts of first instance sitting as courts of original jurisdiction are appealable to the Personal Status Appeals Department of the Court of Cassation.

A summary court has a bench of one; a court of first instance has a bench of three and may include shariʿi kādīs. The president of the court of first instance is a senior judge of the Court of Appeal. Courts of first instance exist in every provincial capital. The Personal Status Appeals Department has a bench of three, one of whom may be a shariʿi kādī of the rank of qābīb or a member of the Supreme Shariʿa Court of Appeal. The president of the Supreme Shariʿa Court is made a member of the Court of Cassation, of which the Personal Status Appeals Department forms a part and which sits in Cairo.

The law of 1955 provides that the kādīs of the Shariʿa courts of all grades shall be integrated into the national courts system, the public prosecutor's department and the Ministry of Justice as far as matters of personal status are concerned. Actually, most shariʿi kādīs have been integrated into the summary courts, in which judicial proceedings in matters of personal status are mainly conducted. At the same time, a not inconsiderable number of civil lawyers deal with matters of personal status of Muslims. The Shariʿa Courts Law of 1931 provided that only advocates might represent parties in court, a kādī's school established in 1907 trained also shariʿi advoca-
tes. They set up a bar association similar to the bar association of civil advocates. Since the abolition of the Shariʿa courts, shariʿi advocates have been permitted to appear, in matters that had formerly been within the jurisdiction of the Shariʿa courts, before national courts of the corresponding grade.

In the mid-seventies a tendency emerged—to tolerate by the authorities for reasons of domestic policy—to apply Shariʿa laws, even if not anchored in statutory legislation, in the jurisprudence of the national courts and to refuse to apply statutes considered inconsistent with the Shariʿa (Rose al-Yusuf, 18 February 1980; al-Dawwa, 18 February 1980, February 1981).

ii. Syria

In the Ottoman era, the shariʿi judicial system of Syria was integrated in the Ottoman legal system. The powers of the Shariʿa courts were re-determined by Law no. 261 of 1926; they comprise matters of personal status, succession and wakf. However, in contrast to the position in Lebanon, the Shariʿa courts are regarded as the ordinary judicial authorities in matters of personal status of non-Muslims, except for matters left to the jurisdiction of the communal courts. In matters of guardianship, succession, wills, interdiction (hadīr), legal majority (rushd), maintenance of relatives within the wider family, wakf kāshri and the like, non-Muslims are amenable to the Shariʿa courts. Matters of personal status of foreign Muslims who in their countries of origin are subject to civil law are amenable to the civil courts. The Shariʿa court consists of a single kādī, whose judgment may be appealed to the shariʿi department of the Court of Cassation (mahkama al-tamyiṣ). The judicial authority Law, no. 12 of 1961, provides for 25
Muslim courts throughout Syria, each consisting of a single kadi, except for those in Damascus and Aleppo, which have three kadis each. The Shi’a courts, unlike those of Lebanon, have no courts of their own, and are theoretically subject to the Sunni Shari’a courts. But it seems that they settle matters of personal status through unofficial arbitration by their leaders.

By virtue of the law of 1926, the non-Muslim communities have religious courts of their own, with jurisdiction limited to some matters not within the competence of the Shari’a courts: betrothal, marriage, divorce, maintenance and children’s maintenance.

The Syrian Law of Personal Status of 1953 replaced the Ottoman Family Rights Law of 1917. It is based on the Hanafi doctrine and on reformist legislation anchored in other Sunni doctrines. In the absence of an express provision in it as to a particular matter, the ruling opinion of the Hanafi school is to be followed.

The Syrian constitutions from 1950 onwards provide that the Shari’a courts shall be the principal source of legislation. The said law applies also to the Shi’is, as well as to non-Muslims (Christians and Druzes), except for those matters within the competence of the religious courts of the latter to which their religious law applies (art. 308). In other words, this law represents an attempt to frame a code of personal status, applying to all citizens of Syria without distinction of school or religion.

Procedure was unified by the Law of Procedure of 1947. Under the Jurisdiction Law of 1961, Shari’a, Christian and Druze courts apply the rules of procedure of the civil courts; the special rules of the different communities, including the Ottoman Shari’a Procedure Law, were abolished.

The 1945 law established a two-grade judicial system for the Druzes: courts of first instance consisting of a single kadi and a court of appeal—the Principal Council (al-hay’a al-na’izya)—which is the supreme madhhabi authority and whose seat is in the province of Djabal al-Duruz. The latter’s judgments were to be final. Law no. 294 of 1946 provides that the Principal Council shall consist of three madhhabi leaders. The kadis were to be appointed by the Minister of Justice upon the recommendation of the Religious Council (al-hay’a al-diniyya), on which the spiritual heads of the Druze community were represented. The judges were to be enforced by the authorities of the state. Law no. 56 of 1959 restricted the judicial autonomy of the Druzes. It provided that a Druze kadi should be appointed, by order, on the recommendation of the Minister of Justice of the Syrian province of the United Arab Republic. Appeals against his judgments were to be heard before the civil Court of Cassation in Damascus (in which the Druzes were not represented) under the rules of procedure obtaining in respect of Muslim shar’i kadis. The Druze Court of appeal was abolished and, by way of compensation, a “Druze Department of Legal Opinions” (da’u’at al-itt’a li ‘l-madhab al-durzi) was set up, consisting of the kadis of the former court of appeal. This body is unconnected with the judicial system. Law no. 56 of 1959 was amended by Law no. 98 of 1961, which provides that, in the event that the Druze kadi requires not only the recommendation of the Minister of Justice but also the consent of the High Judicial Council (madijadi al-kadi’ al-a’la),

The Bedouin of Syria used to settle their disputes before an arbitral board (lajnda takhdimiya) consisting of two arbitrators and an umpire, elected by the parties, which followed tribal custom (taf). The Tribes Law, no. 124 of 1953 (amended in 1956), forbed Bedouin, by means of penal provisions, to carry out raids (ghawu). In 1956, matters of personal status of Bedouin were assigned to the Shari’a courts, and in 1958 the Tribes Law was repealed and the Bedouin became amenable to the ordinary legal system of the state and to the laws applying therein.

Upon the severance of Lebanon from the Ottoman Empire, the status of the Muslims was assimilated to that of the other communities. The French administration made the Mufti of Beirut a "Grand Mufti (al-madjlis al-shar'i al-aHa)," designed to assist him in running the religious affairs of the community and administering the waqfs. It consists of six kaid and the President of the Supreme Shar'i Court.

The Lebanese Shi'is, unlike their brethren in Syria, were recognised as a religious community entitled to their own judicial autonomy. The powers of the Sunni and Di'aafari Shi'it Shar'i courts were defined by Law no. 241 of 1942 (amended in 1946) and by the Law Concerning the Organisation of Sunni and Di'aafari Shar'i Jurisdiction of 1962, which superseded the former. They comprised personal status, succession and wills and matters such as legal majority (balagh, raqd), interdiction (kadir), missing persons (mafkud), control of moneys of orphans, waqf dhawri and mustasfi, wakf madbuth and wakf malbuk of Sunni is within the jurisdiction of their waqf administrative council, while those of Di'aafar is waqf jurisdiction of the Di'aafari courts.

The Ottoman Family Rights Law of 1917 is still in force in Lebanon. In the absence of an express provision in this law as to a particular matter, the SunniShar'i court must follow the dominant opinion of the HanafI school. The court also uses the codification of the laws of personal status of the Egyptian, Kador Pagla (see Section i above). In matters of interdiction and legal incompetence and of management of moneys of minors, the Shar'i court applies the Medjelle as amended by Lebanese legislation, which sometimes deviates from the Hanafi doctrine.

The Di'aafari court applies the laws of the Di'aafari doctrine and the provisions of the Ottoman Family Rights Law compatible with it. Where the parties do not belong to the same school (Sunni or Di'aafari), the doctrine is determined by the court in accordance with the matter under consideration. In matters of succession and wills, e.g., the courts follow the school of the deceased. For reasons of convenience, a certain mobility exists among Shi'is and Sunnis in matters of personal status and succession. The Hanafi doctrine applies to many matters of non-Muslims, such as succession (until 1959), waqf, interdiction and legal incompetence. The laws of 1942 and 1946 laid down also rules of court deviating in some respects from the Ottoman ones; there are certain differences in procedure between Sunni and Di'aafari courts.

There are two separate systems of courts, a Sunni one and a Di'aafari one. Each consists of courts of first instance, manned by a single kaid, in major centres and a supreme court, manned by three kaidis, in Beirut, which acts as a court of cassation (mahkamat al-tamyiz) in some matters and as a court of appeal (mahkama istanfiyya) in others. The judgments of both courts are enforced by the execution offices of the state. The state appoints and dismisses the kaidis and pays their salaries.

The wide autonomy of the courts of the Christian communities (mahkamat ruhiyya) is another carry-over from the special status of the Province of Mount Lebanon in the second half of the 19th century. Article 156 of the Ottoman Family Rights Law of 1917 abrogated the judicial powers of the spiritual heads of the Christian communities in matters of personal status, but the French administration ignored that article; in fact, it was repealed by order of the governor of December 1921 and the Christian courts remained in existence. The powers of the courts of nine Christian communities (and of the Jewish community) were defined by laws of 1930 and 1951. These powers are wider than those courts had in the past but still narrower than those of the Shar'i courts. The widening of the powers of the Christian courts met with strong public opposition for national reasons (submission to foreign law) and legal-professional ones. The laws of wills and succession of non-Muslims, of 1929 and 1959, respectively, freed the Christian communities from the sway of Islamic law.

The Druzes of the Province of Mount Lebanon were not recognised as a religious community under Ottoman rule. At the same time, there is evidence that they enjoyed a certain autonomy, by administrative arrangement, in matters of marriage, divorce and wills in which Druze religious law takes a special position; the Spiritual Head of the Druze community dealt with these matters "in accordance with ancient custom." That autonomy was abolished by order of the Shaykh al-Islam during World War I, together with the judicial autonomy of the Province of Mount Lebanon, and Druze matters of personal status were assigned to the Sunni Shar'i courts; but the order was not implemented, and the autonomy remained in force.

In 1930, the Druze courts were granted jurisdiction in matters of personal status of the members of the community, similar to that exercised by the Sunni and Di'aafari Shar'i courts. In 1936, the Mandate authorities formally recognised the Druzes as a religious community. The powers of the courts were re-defined by a law enacted in 1948 and especially by the Druze Administration of Justice Law, no. 3473 of 1960. The courts are competent to hear all matters to which Druze religious law, Druze custom and the Law of the Personal Status of the Druze Community apply.

Until 1948, the Druze courts applied non-codified religious law, Druze custom and the Hanafi doctrine as far as was not inconsistent with Druze tradition and custom. The Law of the Personal Status of the Druze Community in Lebanon, of 1948—the most impressive modern family law at the time—is a synthesis of many sources of law, religious and secular, local and foreign, but its most important source of inspiration is ancient Druze religious law. In the absence of an express provision in the 1948 law as to a particular matter, the Hanafi doctrine is to be followed.

Order no. 3294 of 1938 requires Druze courts to apply the rules of procedure applicable in Sunni and Di'aafari courts. The Druze Administration of Justice Law of 1960 provides that, in the absence of an express provision in that law as to a particular matter, the Druze courts shall apply the rules of procedure applicable in Muslim Shar'i courts, and that in the absence of an express provision also in the latter, they shall apply the general principles of civil procedure as far as they are not repugnant to Druze religious law and Druze tradition.

Before the establishment of statutory Druze courts, the two shaykh al-'aks served as an appellate authority acting, in a traditional manner, in accordance with customary law. The statutory status of the shaykh al-'aks as spiritual heads of the Druze community was regulated in 1962. In 1947, it was prescribed that the court of appeal, known as the Supreme Council (al-
hay'a al-‘wilāya), should consist of the two shaykh al-‘akl and a Druze civil judge. If it was not possible to man the Council, the Minister of Justice might appoint one or several judges of the court of first instance (other than those whose judgment was appealed against) to complete the bench. In 1958, it was ordained that if it was not possible to appoint a second shaykh al-‘akl, the Minister of Justice should appoint a second Druze civil judge and that judgments relating to minors or legally incompetent persons, the Public Treasury (bayt al-mādi‘), waqf, and dissolution of a marriage on the ground of absence of the husband, might only be executed after confirmation by the appellate authority.

The Druze Administration of Justice Law of 1960 (amended in 1967) establishes a two-grade judicial system integrated in the general Lebanese legal system: courts of first instance, manned by a single kādi ma‘ṣūḥab, in Beirut, ‘Āliya, Bā‘lān, Rasheyyā and Hāshayyā and a Druze civil judge and a court of appeal (Supreme Court), manned by a presiding judge and two assessors, in Beirut. The court of appeal performs the functions of a disciplinary committee for kādī of the first instance. The status of the Druze kādī is the same as that of the Muslim sharī‘i kādī, with certain modifications. In the absence of an express provision in that law as to a particular matter, the provisions of the Sunni and Dja‘fari Sharī‘a Law are to be the same as that of the majority of the inhabitants.

In July 1916, after the capture of Baghdaḍ by the British, the ʻāliyya courts were reconstituted in Baghdaḍ and other cities. Early in 1918, the sharī‘i judicial system was reorganised with a view to adapting it to the new political situation. Personal jurisdiction was limited to Sunnīs, and matters of personal status of Sharī‘i, Christians and Jews were assigned to civil courts of first instance, which followed the personal status law of the parties or any custom applicable to them, provided it was not contrary to justice, equity or good conscience. These courts were authorised to render such matters to the Sharī‘ī muḍāḥah or to the Christian or Jewish religious authority, as the case might be. The judgments of these were subject to confirmation by the civil court. In 1921, the Dja‘fari courts were set up in Baghdaḍ that were authorised to hear matters of personal status. Their judgments, too, were subject to confirmation by a civil court. Appeals against judgments of the Sunni courts were heard before the Sharī‘a Council of Cassation (mahkama tāmisir al-‘wilāya) under the Sharī‘a Courts Regulations of 1918.

After independence, the judicial system was reorganised. In 1923, a dual system of Sharī‘a courts, Sunni and Dja‘fari, with equal status, was set up. Their jurisdiction comprises personal status in a wide sense, succession and wills, waqf, orphans’ money, etc. A Basic Law of 1925 confirmed the dual system of courts. It provided that separate courts for the two schools should be set up in Baghdaḍ and Baṣra, but only one court in other places, where the school of the kādī was to be the same as that of the majority of the inhabitants. The Establishment of Courts Law of 1945 provided that the Sharī‘a courts should be set up in localities where there were civil courts and that in the absence of a kādī, the case should be taken by a judge of the civil system.

Until 1963, appeals against judgments of Sharī‘a courts were heard before the Sharī‘a Council of Cassation, which had separate departments for Sunnīs and Dja‘farīs. It could only confirm or set aside the judgment or direct the court to re-hear the case. The Minister of Justice had power to amend the decisions of the Council. In 1963, the Council was abolished, and appeals were to be heard before the State Court of Cassation (mahkama tāmisir al-ʻwilāya), which combined the functions of the Sunni and Dja‘fari Departments in the Personal Status Committee (hay‘a al-muwāhid al-‘wilāya).

In the Ottoman era, the Sharī‘a courts followed the non-codified official Hanafi doctrine. The two Ottoman māfas of 1915 relating to personal status, and the Meğdelle, the land law, with certain modifications, applied in ʻIrāq, but not the Ottoman Family Rights Law of 1917. The Hanafi doctrine applied also to matters of succession of Christians and Jews until special laws were enacted for them by the Civil Courts Regulations of 1918.

After World War I, the Hanafi kādī, if the parties belonged to another Sunnī school and demanded that the Hanafi doctrine be not applied, might either deal with the matter himself according to the school of the parties or refer it to an ʻālim of that school. If the parties belonged to different schools, the court, under the Sharī‘a Courts Law of 1923, had to follow the school of the deceased in matters of wills and intestate succession, the school of the husband in matters of marriage, divorce, dower, guardianship and the like, the school of the founder in matters of waqf and the school of the defendant in matters of maintenance of relatives. In ʻIrāq, the Dja‘fari doctrine was applied if, in a place where there were no separate courts for the
two schools, a Sunni kadi dealt with matters of Shi'i, he had to rely on a fatwa of a Shi'i alim, and vice versa.

After several abortive attempts (in the nineteen-forties) to codify the 'Irakî law of personal status, the Supreme Muslim Council took over the task of codifying personal status law, applying equally to all 'Irakî Muslims, both Sunni and Shi'i, was promulgated in 1959 following 'Abd al-Karîm Kâsim's coup d'état the year before. A succession law was taken over from a European source. Other important reforms concerned marriage and divorce. The 1959 law presents a blend of Sunni and Shi'i principles in some sections, while other sections preserve separate norms for the two branches of Islam. In 1963, after 'Abd al-Salâm 'Arim's coup, under pressure from the 'ulamâ, a retreat occurred from reforms which did not seem compatible with the Shari'a. The foreign succession law was repealed, and in its stead the system of succession of the Twelver Shi'a was made applicable to all 'Irakî Muslims. In 1978, further important amendments were made in the Personal Status Law of 1959 in matters of marriage, divorce, alimony and probate. The other matters of personal status and succession are within the jurisdiction of the civil courts.

In the Ottoman era, tribal courts (mahbûkîn al-`ashdûr) applying customary law operated among the Bedouin. These courts were reorganised by the British in 1916 on a pattern borrowed from Indian legislation. A "political officer" appointed special tribal councils (mahdûš) authorised to hear civil and criminal cases if at least one of the parties was a Bedouin. The relevant law was replaced by the Tribal Actions Regulation (nisâm al-da`awî `l-`ashdûr) of 1918, which was amended several times (in 1924, 1933 and 1951). Some of the tribal customs were abrogated by statutory legislation. The judgments of the tribal courts were subject to scrutiny by the mulasârrîf. The tribal courts were abolished in 1938, after the coup d'état, with a view to integrating the Bedouin into the general legal system, which included also the Shari'a courts.

operated among the Bedouin. In the years 1919 to 1922, the government maintained a "Blood Council" (madjlis al-damum) which tried homicide cases, and in 1924 permanent tribal courts with specified powers were appointed; each court consisted of two representatives of the clans of the major Negev tribes, with the District Officer of Beersheba as chairman. In 1928, these courts were given power to hear criminal cases and impose light prison sentences and fines. From 1933 there was also a tribal court of appeal; it consisted of two members, with the District Officer as chairman.

The Government of Israel has reconstituted the Shari'a courts with the same powers as they had under the Mandate, except for a few modifications: the Age of Marriage Law, 1950, vests exclusive power to permit the marriage of a girl under seventeen in the District Court, and the Succession Law, 1965, reduces the jurisdiction of the Shari'a courts—like that of the other religious courts—from exclusive to concurrent in matters of succession and wills, but not in matters of personal status, in which it is still exclusive. The revocation of the Supreme Muslim Council Order of 1921 by the Kadi's Law, 1961, implicitly revoked the Defence (Muslim Waf)' Regulations, and it seems that the powers of the Shari'a courts are thereby restored to their original extent, so as to include wa'ifs of the madhab category.

The Knesset intervened in many matrimonial matters with a view to equalising the legal status of women with that of men. Nevertheless, it abstained from impinging on any religious-legal prohibition or permission relating to marriage or divorce and resorted to procedural provisions and penal sanctions rather than substantive provisions as means of deterrence, and in matters for which substantive provisions were enacted, the parties were usually left an option to litigate in accordance with their religious law. It is only in matters of succession that there is—since 1965—a clear separation between religious justice, in which religious law applies, and civil justice, in which secular law is followed.

The Shari'a judicial system is integrated in the general legal system. The Shari'a Courts (Validation of Appointments) Law, 1953, validated the appointment of the first kadi (madhun) and with the settlement of disputes in matters of marriage and divorce, made by administrative action immediately after the establishment of the state. The Kadi's Law, 1961, regulates the appointment and tenure of the kadis. They are appointed by the President of the State upon the recommendation of an appointments committee, most of the members of which are Muslims. Their salaries are paid by the Government. Shari'a courts of first instance, consisting of a single kadi, exist in Nazareth, Acre (with an extension in Haifa), Jaffa (with jurisdiction—since 1967—including also East Jerusalem (see Section 4. vi below)) and the village of Tayyia in the "Little Triangle".

The tribal courts have been abolished in Israel (though not their juridical basis), and the Bedouin are now amenable to the Shari'a courts in matters of personal status and succession. The Negev Bedouin were under the jurisdiction of the Shari'a Court of Jaffa till 1976. In that year, a separate court of first instance was established for them in Beersheba.

A court of appeal of two or three kadis exists in Jerusalem. Until 1975, this court consisted of the kadis of the courts of first instance, except the kadi whose judgment was appealed against. In that year, it was administratively ordained that the court of appeal should consist of permanent members not serving in courts of first instance.

In Palestine, the Druzes were not recognised as a religious community. In the Ottoman era, the Shari'a court had residuary jurisdiction over them. They in fact resorted to it, especially in matters of succession. At the same time, they enjoyed a certain autonomy within the framework of their religious and customary law, in matters of personal status and wills. The Mandatory authorities refused to recognise them as a religious community, in the interest of maintaining the status quo in matters of religion. They continued to recognise a certain Druze autonomy with regard to the performance of marriages, while residency jurisdiction was transferred from the Shari'a courts to the civil courts, though in fact the Druzes continued to resort to the Shari'a courts.

In Israel, the Druzes were recognised as a religious community in 1957. Pending the establishment of their own religious courts in 1963, they continued to resort to Shari'a courts, although this practice has no foundation in law. But in matters in which the Druze religious system is utterly different from the Islamic, such as polygamy, divorce and wills, the Druzes turned to religious functionaries who acted by voluntary agreement of the parties; their decisions had not the effect of judgments enforceable in execution proceedings but of arbitral awards anchored in their personal authority and supported by religious and social sanctions. The arbitrators decided in accordance with custom and tradition ('alddi wa-tak'dlil); there were no strict rules of procedure.

The institutionalisation of arbitration and its transformation into a judicial proceeding began in the Ottoman era with the appointment of the first "kadi" in Palestine in 1909. He acted as an arbitrator, and his existence did not do away with the residuary jurisdiction, in respect of the Druzes, of the Shari'a court in the Ottoman era or of the District Court under the Mandate. The office of "kadi"—arbitrator was hereditary in the Tarif family. In 1954, a "Committee of Religious-Legal Supervision" (ladghat al-mar'ikaba al-madhabiyiyah) was set up to supervise marriage solemnisers (madzahin) appointed under an Ordinance of 1919. In 1959, a "Committee for Druze Wakf Affairs" (al-ladghat al-mu'taqi al-madhabiyiyah) was established. The two committees in fact also dealt with the settlement of disputes in matters of marriage and divorce. They did not act as statutory judicial authorities; their decisions were valid only with the consent of the parties and could not be enforced in execution proceedings. At the same time, they showed many characteristics of institutionalised judicial authorities. The awards of "judgments" of the committees were recognised, though with some hesitation by the various state authorities. The committees were a kind of unofficial courts of law, and most of their members later became kadis of the Druze courts.

The Druze Religious Courts Law, 1962, vests the courts with exclusive jurisdiction in matters of marriage and divorce of the Druzes in Israel and with concurrent jurisdiction in all their other matters of personal status. They also have exclusive jurisdiction in matters relating to the creation or internal administration of a religious endowment established by the various state authorities. The committees were a kind of unofficial courts of law, and most of their members later became kadis of the Druze courts.

In its original version, the law provides that the Court of First Instance shall consist of three kadis and the Court of Appeal of not less than three. In 1967, it was laid down that if it was not possible to form such courts the court might consist of two kadis, and in 1972 it was provided that the Court
of First Instance might consist of one kādi. The kādis are appointed by the President of the State on the recommendation of an appointments committee, most of the members of which are Druzes. A transitional provision prescribes that the first Court of Appeal shall consist of the members of the “Religious Council”, i.e. the Spiritual Leadership of the Druze community. The Druze courts are integrated in the general legal system of the State, which enforces their judgments. Since the establishment of Druze courts, the Druzes have ceased to resort to the Muslim shari‘a courts.

The Druzes of the Golan Heights formerly settled most of their matrimonial affairs, without resort to any judicial authority, by means of religious functionaries acting as arbitrators, and in so far as they did go to a court, it was, in the Ottoman era, the Druze madhab court in Djabal al-Duruz or in Hāshbayyā in Lebanon, and under Syrian rule, the Muslim shari‘a court in Kunaytra. In 1967, after the Six-Day War, the latter court ceased to function. In 1970, by order of the military commander of the region, a court of first instance and a court of appeal were set up with powers similar to those of the Druze courts in Israel. From 1972 onwards, the kādis of the Israeli Court of First Instance and Court of Appeal acted as members of the corresponding Golan Heights courts by virtue of the above mentioned order. In 1974, a court of first instance consisting of local kādis was set up in the Golan Heights.

Before being recognised as a religious community in Israel, the Druze had no codified law of personal status and succession. They dealt with these matters in accordance with their esoteric law and with custom, and in so far as they restored to a judicial authority, it was the shari‘a court, which applied the Ottoman Family Rights Law or, in the absence of an express provision in the latter, shari‘a law according to the Hanafi school. In 1961, the Spiritual Leadership of the Druze community in Israel, in its statutory capacity as the “Religious Council”, adopted the Personal Status Law of the Druze Community in Lebanon of 1948 (see Section 4. iii above) with the following modifications: (a) the Hanafi doctrine, which served as a source of law in matters of intestate succession and in the absence of the express provision of law in a particular matter of personal status, was replaced by custom and “the law accepted by the members of the Druze community in Israel”; (b) Lebanese legislation designed to supplement the Druze Personal Status Law was replaced by Israeli legislation. The “Religious Council” sanctioned the Druze Courts Procedure Regulations of 1964, which incorporate norms of Israeli law.

The law applying to matters of personal status in the Golan Heights was until the introduction of Israeli law there on 14 December 1961 the Syrian Personal Status Law of 1953 (see Section 4. ii above). The Israeli Succession Law of 1965 was extended to the Golan Heights by the above-mentioned order of the military commander of 1970. In practice, the kādis, in matters of personal status, apply the Lebanese Druze Personal Status Law, as adopted by the Religious Council. Since the introduction of Israeli law in the Golan Heights, this practice has been validated. All Israeli legislation in matters of personal status expressly referred to religious courts is likewise applicable in Druze religious courts there.

Under Egyptian military rule in the Gaza Strip, there were three shari‘a courts of first instance at Gaza, Khan Yunis and Dayr al-Balah, respectively. They had jurisdiction in matters of personal status and wakf within the meaning of the Palestine Order in Council, 1922. Under Israeli military rule (since 1967), two additional courts have been set up in Djabal Lydda and Rafah. A shari‘a court of appeal operates in Gaza in accordance with the Egyptian Law of Procedure of Muslim Religious Courts no. 12 of 1965. The Ottoman Family Rights Law of 1917 applies in these courts. The salaries of the kādis are paid by the Military Government.

Bibliography:
minister and is directly subordinate to the Prime Minister.

The jurisdiction of the Shari'a courts in the West Bank has been assimilated to that of their counterparts in the East Bank. The Jordanian constitution of 1952 and other enactments of the early nineteen-fifties vest the Shari'a courts with jurisdiction in all matters of personal status and succession as defined in Islamic law, which definition is wider than that of the Palestine Order in Council, as well as in matters of waqfs and blood-money (diva) of Muslims. Their jurisdiction in matters of personal status is limited to Muslim courts. Administrative jurisdiction of personal status of non-Muslims has been transferred to a civil court of first instance, except where the parties agree to the jurisdiction of the Shari'a court. In matters of blood-money and of waqfs established before a Shari'a court, the Shari'a courts have jurisdiction also with regard to consenting non-Muslims.

The law applying to matters of personal status on both banks of the Jordan was until 1951 the Ottoman Family Rights Law of 1917. In 1951, it was replaced by a liberal family law. Previously, in 1927, a new personal status law was adopted in Transjordan, but it was repealed in 1943 in favour of the traditional doctrine of family law. A provisional Jordanian family Rights Law, no. 26, was enacted in 1947, to be superseded by the law of 1951. The Law of Personal Status, no. 61 of 1976, replaced the law of 1951. The new law is more extensive and detailed than the earlier one and includes important amendments. The Shari'a Courts Establishment Law and the Personal Status Law of 1951 provide that the courts shall hear matters within their jurisdiction in accordance with the most approved opinion of the Hanafi school, save where a provision of law to the contrary exists. A similar provision exists also in the laws of personal status of 1951 and 1976. An overwhelming majority of the Kingdom's population belongs to the Shi'i school. The Shari'a courts on both banks of the Jordan apply the Shari'i Procedure Law, no. 31 of 1959, which replaced the Procedure Law no. 10 of 1952.

The Shari'a Courts Establishment Law of 1951 established a unitary judicial system on both banks. Twenty-four courts of first instance, each consisting of a Muslim judge sitting alone, were set up at district and sub-district centres, eight thereof in the West Bank. The Court of Appeal consists of a president and two members. It passes decisions by a majority of votes and its judgments are final. The law enables the establishment of an additional court of appeal, and in fact two courts of appeal, one in 'Amman for the East Bank and one in Jerusalem for the West Bank, were set at first up; however, after a short time, in August 1951, it was decided that there should be only one Shari'a court of appeal, which was to have its permanent seat in 'Amman but might be convened in Jerusalem when necessary. The Shari'i Law Council, headed by the Director of the Shari'a Office, is responsible for the appointment and dismissal of kadis. Its decisions require the approval of the king.

The powers of the courts of the Christian communities in Jordan have been greatly widened compared with the Ottoman period and assimilated to those of the Shari'a courts. According to the Religious Councils Law, no. 2 of 1938, which was extended to the West Bank in 1958, and the Constitution of 1952, they have jurisdiction in all matters of personal status and succession, as well as in matters of the establishment and internal administration of waqfs founded for the benefit of the community. They apply the law of the community except in matters of succession and wills, which are governed by Islamic law.

The Bedouin in Jordan are not amenable to Shari'i jurisdiction. They have tribal courts (mahakmam al-'azhar'ir) regulated by a law of 1966, which replaced a law of 1924. Every muftiyar is responsible for the activities of the court by virtue of his office, and the army commander is responsible for the court in the Desert District. A law of 1949 provides that these courts shall have jurisdiction in all disputes of Bedouin, except matters of ownership and possession of immovable property and written partnership agreements concerning thoroughbred horses. The muftiyar enforces the judgments, but the penalty for offences must not exceed one month's imprisonment and a fine of a specific amount. The muftiyar or the army commander, however, as the case may be, may transfer cases from the tribal court to a civil court.

A judgment of a tribal court is appealable to a tribal court of appeal. This court may consult experts in tribal law. It may increase or reduce the penalty or return the matter to the court of first instance for a re-hearing. The tribal courts apply customary law. However, state law forbids certain customs, such as giving girls as diva. Procedure in tribal courts is also customary.

As a result of the Six-Day War in 1967, the West Bank was separated from the Kingdom of Jordan, but Jordanian law still applies there, except in East Jerusalem, where Israeli law has been introduced. This situation affects the functioning of the religious establishment. The Shari'a courts of first instance have been left without their court of appeal, the permanent seat of which, as stated, is in 'Amman. On 24 July 1967, Muslim political leaders and religious functionaries in East Jerusalem set up a "Muslim Council" (al-hay'a al-islamiyya), which assumed authority for the conduct of Muslim affairs in East Jerusalem and the West Bank. The sole purpose of this body, which has no statutory status in either Jordanian or Israeli law, is to fill the place of the absent Muslim sovereign. The Council appointed its president to be kadi'l-kudsi of the West Bank with powers as defined by Jordanian law.

The Israeli Shari'a Court of Jaffa, the area of jurisdiction of which has been extended to include East Jerusalem (see Section 4. v above), is not recognized by the Jordanian Government as an integral part of the West Bank. Despite this, the local Shari'a court, which is subject to the Muslim Council, is not recognised by the Israeli authorities. East Jerusalem Muslims do not resort to the Israeli court unless they are interested in the execution of a judgment or in the performance of some act in a government office on the strength of a certificate from the court. In the West Bank, the Israeli Military Government has inherited the powers of the Jordanian Government in its various spheres of activity and is consequently charged with the operation of the courts, the appointment and dismissal of the kadiis and the payment of their salaries, and the collection of court fees. In fact, however, it is the Jerusalem kadi'l-kudsi who appoints the kadiis and the Jordanian Government which pays their salaries. The Military Government recognises their appointments ex post facto and the executive officers subject to it enforce their judgments. As the Shari'a Court of Appeal of the West Bank is in Jerusalem, its judgments are not valid in the West Bank, but in day-to-day reality they are enforced there. The Shari'a courts of the West Bank and of East Jerusalem apply the Jordanian law of personal status and rules of procedure.

Along with their judicial tasks, several East Jerusalem kadiis carry out various other functions—exegetic (the Mufid of Jerusalem), administrative and public—connected with the religious establishment.
The Muslim Council has conferred on the Shan^a Court of Appeal the powers of the Council of Endowments and Islamic Affairs, the General Administration of Endowments and the Committee for the Rehabilitation of the al-Aksa Mosque and the Dome of the Rock, bodies anchored in Jordanian legislation.

(vii) Saudi Arabia

The Arabian Peninsula was under the nominal sovereignty of the Ottoman Empire, but the 19th century legal reforms of the Empire were not applied there except in the major urban centres of the Hijaẕ, and even there with only limited success. At the time of his conquest of the Hijaẕ in the early 20th century, 'Abd al-'Aziz Ibn Sa'ud found there a legal system progressive by the standards of other regions of the peninsula. In the small towns of Najḏ, disputes were settled by the local amir or a kadi appointed by him. Among the Bedouin, customary law, applied by arbitrators, reigned absolute.

The 'constitution' of the Hijaẕ of 1926 makes no express reference to the judicial system, but says that the King is limited by the Shan^a and that the legislation of the kingdom shall be based on the Kur^an, the Sunna of the Prophet and the ijma of his Companions. A faits of the 'ulama', of 1927, demanded inter alia that 'Abd al-'Aziz forthwith repeal the Ottoman laws in force in the Hijaẕ and restore the position of the Shan^a.

A royal decree of 1927 established three grades of courts in the Hijaẕ:

(1) Expedient Courts (mahkama musta'qila), competent to try misdemeanours (dhanah) punishable by a fine not exceeding a specific amount, offences the penalty for which was left to the discretion of the kadi (a'zirah) and felonies (djinayat) entailing Kur^anic punishments (haddah), except mutilation (ka'ti) or death; they consist of a single kadi. Some courts were set up in Mecca and Medina and later in Riyadh and other major cities. Mecca had a further Expedient Court, hearing claims by Bedouin. In small administrative units, and especially among the numerous tribes of desert Bedouin, the local amir acts as kadi; he generally applies the Shan^a but sometimes resorts to the local practice.

(2) Greater Shan^a Courts (mahkama shari'ya kubra), competent to deal with serious criminal (qaza') matters and civil (hanḍi) claims, except those under the jurisdiction of the Expedient Courts, and with matters of personal status, probate and land. One such court exists in Mecca and one in Medina.

The one in Mecca consists of three kadi. Ordinary cases are heard by a single kadi, but the judgment is given by the full court. Cases in which the punishment may be death or mutilation are heard by the full court. The court in Medina consists of a single kadi (with a nãhû) and so does the one in Qidda, but after the recent abolition of the Expedient Court in Qidda the Greater Shan^a Court there hears all cases, except those under the jurisdiction of al-madjlis al-hubal (see below). In all the other towns of the Hijaẕ and Najḏ, the court, consisting of a single kadi, hears all cases.

The practical application of the law in certain Arab states; on the Shan^a courts in the West Bank and East Jerusalem, see A. Layish, ha-Mismad ha-dati ha-muslemini ha-gadah ha-ma'avorit ha-tekufa ha-yardenit ("Muslim religious institutions in the West Bank under Jordanian rule"), in Medina, Minhag al-Yahud ve-Yahadut Beinumyam, xi (1977), pp. 97-108; D. Farhi, ha-Mo'atza ha-muslemini be-mizra' Yerushalayim we-Yehuda ve-Shomron me-as milhemet sherhet ha-yamin ("The Muslim Council in East Jerusalem and in Judea and Samaria since the Six-Day War"), in Haminizra' Hehadasha, xxvii (1979), 1-2, 3-21, Y. Meron, The religious courts in the administered territories, 195-66. On the position of the Shan^a and the Shan^a courts in tribal society, see J. Chelbod. Le droit dans la société bidounie, Paris 1971; A. Layish and A. Shmuely, Custom and shan^a in the Bedouin family according to legal documents from the Judean Desert, in BSOAS, xlii (1979), 1-29-45, A. Layish, The islamization of the Bedouin family in the Judean Desert, as reflected in the stijlis of the Shan^a court, in E. Marx and A. Shmuely (eds.), The changing nomad: Bedouin in and around Israel, New Brunswick, N. J., 1983.

(3) The Commission on Judicial Supervision (hay'at al-mursakha al-kadd^iyya), the seat of which is in Mecca. It comprises a Board of Judicial Review (hay'at al-talddikí) consisting of four members and headed by a ra'i al-kadd^i. This body acts as a court of cassation (mahkamat al-tamýiz). It examines judgments and confirms them or returns them to the lower court for a re-hearing in order to clarify a point or to rectify a procedural error. It may reverse judgments incompatible with the Kur^an and the Sunna and direct the lower court to retry the case. If the kadi abides by his original decision, the case must be referred to another kadi. The Board also examines sentences of mutilation, death and confiscation. The Commission on Judicial Supervision gives legal opinions on matters not within the competence of the Shan^a courts.

The ra'i al-kadd^i performs the functions of President of the Supreme Court and Minister of Justice. He also supervises the Public Treasury (hay'at al-mal),
the mechanism of religious-legal opinions (ijāta) and disciplinary proceedings against kādis, and handles complaints against the functioning of any part of the sharī‘a system. Moreover, he supervises all the Public Morality Committees (hay‘at al-amr bi ‘l-ma‘ṣūfa wa l-nahy ‘an al-munkar) in the Hidżāz and Najd, the religious functionaries, education and şarī‘a institutions, including the Islamic University of Medina, and religious instruction at state educational institutions.

This şarī‘a judicial system remained in existence until the mid-seventies. Minor amendments were made by orders of the years 1931, 1936, 1938 and 1952. The name of the Commission on Judicial Supervision was changed in 1938 to Office of the Chief Justice (rīsālat al-kādāh), but its functions remained the same. In 1967, amendments were introduced in the organisation of the judiciary and in the powers of the kādis, and in 1970, a Ministry of Justice was set up. In 1974, the şarī‘a judicial system was thoroughly reorganised. Three grades of courts were established on the Western pattern: magistrates’ courts (mahākim dżuz‘yuna), district courts (mahākim ʿāmmma) and a court of cassation (mahākimat al-tamyīz). Moreover, a High Judicial Council (maddīlīs al-kādāh al-ʿalā) was formed whose functions were to supervise the kādis and to try disciplinary offences. The law ensures the independence of the kādis (they cannot be removed from office); their appointment and promotion are effected by the king on the recommendation of the Judicial Council.

Şarī‘a law applies to all matters within the competence of the Şari‘a courts. In 1927, the kādis were ordered to decide in accordance with the teachings of the Hanbali school. Six books of that school, in a specific order, were recognised as authoritative sources that must be adhered to. Thus, in a way, introduced an element of codification and unification of the material law into the nation’s judicial system. In 1927, ‘Abd al-‘Azīz Ibn Sa‘ūd, inspired by Ibn Taymiyya, suggested the preparation of a code of Islamic law based not only on the Hanbali doctrine but also on any other doctrine which, with regard to the matter in hand, was close to the Kur’ān and the Sunna. But he abandoned the idea under pressure from Hanbali scholars. In the Ottoman era, the Hanbali doctrine prevailed only in Najd and the Şarī‘a doctrine in the Hidżāz, except for the courts in the major towns, where the Hanafi doctrine enjoyed official status. An order of 1930 provided that where an express provision existed in those authoritative sources as to a case being heard by a Şari‘a court consisting of several kādis, a decision might be given without convening the members of the court; in the absence of such a provision, they were to be convened in order to exercise their collective discretion. The kādis were permitted to resort to other orthodox doctrines where the opinion of the Hanbali school was likely to cause damage and was not compatible with the public interest (majlubat al-ʿumūr). An order of 1934 required the court, in deference to local custom, to decide matters relating to contracts of lease of agricultural land (wukūd al-musākāt) or palm plantations (ṣīţār al-nakhl) in accordance with the doctrine prevailing in the locality where the action was brought. In matters containing religious observances (ibādat), the individual is free to follow the doctrine of the school to which he belongs. The Şari‘a courts are subject to the şarī‘a rules of procedure. Enactments relating to these rules were made in 1931, 1936 and 1952.

Professional lawyers have recently been authorised to appear before Şari‘a courts. In 1928, a Notarial Office (kībatat al-ṣadd) was established for the registration of şarī‘a documents (ṣuhib), powers of attorney, sales and pledges, but not of waqfs, which are within the competence of the Şari‘a courts. There are notaries in Mecca, Djidda and Medina. In provincial towns, the functions of the notary are performed by the kādi. A programmatic statement by Crown Prince Faysal’s government in 1962 promised the creation of the post of State Public Prosecutor at the Ministry of Justice.

From time to time, the King confers quasi-judicial powers on various bodies with a view to solving problems cropping up in the economic, social or administrative sphere. Some of these bodies in fact enjoy extremely wide powers. They function concurrently with the şarī‘a judicial system and are ostensibly designed to supplement it, but in reality restrict it.

The most important of these bodies is the Grievances Board (diwil al-ma‘alīm), established in 1954, whose seat is in al-Riyād, with an extension in Djidda. Anyone who believes that an injustice has been done to him by a decision of a judicial authority or by an administrative authority may complain to it. Its functions are to investigate the complaint and to suggest to the Royal Chancellery and to the government ministry concerned the adoption of measures against the authority in question; to investigate, together with other bodies, corruption offences, disciplinary offences in the army, and offences against economic boycott regulations (if the recommendations of the Board are rejected, the matter is to be brought before the King); to hear appeals against decisions of the Minister of Commerce in matters relating to foreign capital investments; to supervise the application of Şari‘a by the government in day-to-day life (the Board includes experts on Şari‘a matters and sometimes refers complaints to the Şari‘a court) and—at the special request of the King—to deal with serious matters relating to Bedouin and matters in which foreigners are involved; and to execute foreign judgments.

The chairman of the Board is appointed by the King and has the status of a government minister; since 1964, he has been responsible to the King for the work of the Board (all the other members of the Board require the approval of the King). The Grievances Board is a permanent institution. Its simple procedure and the fact that most of its members are lawyers with a modern background ensure greater flexibility in the conduct of proceedings than prevails in şarī‘a justice.

Other administrative-judicial bodies are the Commission on Cases of Forgery (taṣawwīr), established in 1960, headed by the Minister of Justice and including representatives of the Grievances Board; the Commission on Cases of Bribery, established in 1962 and headed by the chairman of the Grievances Board; and the Commission on the Impeachment of Ministers, competent to try various offences, ranging from interference by Ministers in the working of the judicial system to high treason (punishable with death); it is an ad hoc body appointed by the Prime Minister and consists of ministers and senior kādis; death sentences must be passed unanimously; the judgments of the Court are appealable to the King.

Several judicial bodies deal with commercial matters: the Central Committee on Cases of Adulteration (ghishsh tidjari), which tries offences connected with food and drugs; and Chambers of Commerce (şurūfat al-tidjara), established in 1963 and consisting of representatives of the economic minorities, which can act as arbitral boards in commercial disputes. The most important of these bodies was the Commercial
Tribunal (mahkama tidjariyya), first established in Djidda in 1926 for the handling of commercial disputes. Its composition and powers were laid down by a commercial regulation in 1931. It consisted of a presiding man. Their judgments were appealable to the Commercial Tribunal in Djidda. Damman were abolished and their functions taken over by the Ministry of Commerce in 1954. They were restored in 1963, when Commercial Disputes Arbitration Boards were set up, one in each city, each Board consisting of three officials of the Ministry of Commerce and Industry. A Commercial Disputes Appeals Board was established in 1967, consisting of three officials of the same ministry, one of them, its head, the Deputy Minister. These Boards are not bound by the Shar‘i ‘a, but can draw upon it as well as upon Western law and international law and agreements. The Saudi authorities have recently directed that agreements of commercial companies shall contain an express clause forbidding the settlement of disputes by arbitration contrary to the principles of the Shar‘i ‘a.

A Supreme Board on Labour Disputes was set up in 1963; it consists of the legal advisers of the Ministry of Labour and Social Affairs and the Ministry of Petroleum and Minerals. Disciplinary Councils for Civil Servants try offenders—by virtue of regulations of 1958—only after they have been convicted by a Shar‘i ‘a court. Disciplinary Councils for Military Personnel act as military tribunals by virtue of regulations of 1947. Their judgments may be set aside or appealed by the Chief of the General Staff or the Minister of Defence. Disciplinary Councils for Internal Security Personnel try police officers, members of the coast guard, frontier patrolmen, members of the fire brigade and criminal investigators. The King supervises the judicial system by virtue of his being the supreme šerif and sometimes sits on the bench himself. The same system operates in Egypt. In 1962 the country was divided into four provinces, each with a high court (zakf). The provinces are administered by a governor assisted by a high commissioner.

Saudi Arabia was not subject to the influence of foreign systems of law other than the Ottoman, the impact of which was limited to the Hijaz. The Shar‘i ‘a functioned here in a sovereign Muslim state which had grown out of the Wahhabiyya, a movement directed that agreements of commercial companies have been entered into, although the terminology is Shar‘i ‘a as far as possible; social laws and laws regulating labour relations and transport have been enacted; slavery was abolished in 1962 in deference to international public opinion, although there are indications that reality is still stronger than the law; Shar‘i ‘i criminal law, including the harsh Kur‘anic penalties (decapitation and mutilation for theft), is still mainly applied, although a tendency to replace corporeal punishment by imprisonment or fines is discernible; new penalties, not strictly conforming to the provisions of the Shar‘i ‘a, have been introduced (e.g. the drinking of wine (shurb al-khamr) entails a discretionary punishment (ta‘zir), not a Kur‘i ‘i one (had); blood-money (diya) has been limited; penalties have been prescribed for forgery, strikes, causing death or injury in road accidents and military offences); there are deviations from the Shar‘i ‘a as to the status of non-Muslims (e.g. their testimony in criminal proceedings has the same weight as that of Muslims and their oath is accepted; the same blood-money is exacted for them as for Muslims).

Towards the end of their rule in Yemen, the Ottomans tried to apply their laws there and firmly to establish there the Şafi‘i school, whose main foothold was in the Tihama region and in the south of the country. The Imam resisted this attempt successfully. A sultanate firmân of 1913 confirmed the Treaty of Dâ‘ân of 1911, by which the Ottomans agreed to the demands of the Imam, the most important of them being the reinstatement of the Shar‘i ‘a as the only system of law in Yemen. The Imam was fact impair its substantive validity; important reforms have been made in commercial law: regulations based on the Ottoman Commercial Code of 1850, in turn based on a purely French model, have been enacted with the omission of all references to interest (that Code is applied in the tribunals of the chambers of commerce); banks have begun to operate on the basis of interest, although it is called commission; marine and other property insurance is permitted, though not, for the time being, life insurance; extensive fiscal legislation (customs duties, income and alms (zakat) tax, etc.) has been enacted; contracts regulating oil concessions to foreign companies have been entered into, although the terminology is Shar‘i ‘a as far as possible; social laws and laws regulating labour relations and transport have been enacted; slavery was abolished in 1962 in deference to international public opinion, although there are indications that reality is still stronger than the law; Shar‘i ‘i criminal law, including the harsh Kur‘anic penalties (decapitation and mutilation for theft), is still mainly applied, although a tendency to replace corporeal punishment by imprisonment or fines is discernible; new penalties, not strictly conforming to the provisions of the Shar‘i ‘a, have been introduced (e.g. the drinking of wine (shurb al-khamr) entails a discretionary punishment (ta‘zir), not a Kur‘i ‘i one (hadd); blood-money (diya) has been limited; penalties have been prescribed for forgery, strikes, causing death or injury in road accidents and military offences); there are deviations from the Shar‘i ‘a as to the status of non-Muslims (e.g. their testimony in criminal proceedings has the same weight as that of Muslims and their oath is accepted; the same blood-money is exacted for them as for Muslims).

Towards the end of their rule in Yemen, the Ottomans tried to apply their laws there and firmly to establish there the Şafi‘i school, whose main foothold was in the Tihama region and in the south of the country. The Imam resisted this attempt successfully. A sultanate firmân of 1913 confirmed the Treaty of Dâ‘ân of 1911, by which the Ottomans agreed to the demands of the Imam, the most important of them being the reinstatement of the Shar‘i ‘a as the only system of law in Yemen. The Imam was
authorised to appoint kadis to the courts in regions populated by Zaydi Shi'is (the San'a region and the northern mountainous province). The power of the Ottoman sultan was confined to the enforcement of their judgments.

After World War I, when Yemen obtained full independence, it became a theocracy. Zaydi Shi'i law, which is nearest to Sunni law, held unlimited sway in the imamate. The Imam was the spiritual head, the head of the executive branch and the Supreme Judge (al-kadi al-lā'i).

The powers of the Shari'a courts are very wide. They comprise personal status and criminal law. Severe Kur'anic punishments, such as death and mutilation, are still applied, though not frequently. The Imam has directed that Zaydi Shi'i law shall be applied in the courts. The Shari'a courts system consists of several grades. The court of first instance is manned by a single judge (ādām). His judgement is appealable, with the consent of the local governor (āamil), to a higher judge and finally to the High Court of Appeal (ra'a' al-istīn 'nāf), which has its seat in San'a. The Imam is the supreme appellate authority, but appeals to him are infrequent. The Imam appoints the judges in all the districts and sub-districts from among the graduates of al-Madrasa al-ilmīyya in San'a. The amir al-lā'ī enforces their judgments, but the supervision of the shari'a system is the prerogative of the Imam.

Concurrently with the Shari'a judicial system, a judicial system of the provincial governor (âmīl) functions which handles civil matters. Its judgments are appealable to the prince as ruler of the principality (lūđ) or, in certain cases, to the Imam. This system is governed by the Shari'a as far as commercial transactions and tax matters are concerned.

The Imam's courts operate in the towns. Outside the towns, among the tribes, an arbital (mankud) system exists, and tribal councils adjudicate disputes concerning water, boundaries and criminal offences in accordance with tribal custom (urf) and tradition (ādāliyya). Appeals against judgments of tribal courts are heard by the āamil, whose judgments are in turn appealable to the provincial amir. Here, too, the Imam is the supreme appellate authority. The Imam has sought to eliminate customary justice and to subject the Bedouin to the Shari'a. For this purpose, he has appointed persons with a religious training as judges in the customary judicial system, hoping that they will gradually substitute the shari'a for traditional customary law, but he has had only partial success. He has had to recognise 'urf justice officially by the side of shari'a justice.

When Aden was a British protectorate, it had a dual judicial system, part shari'a (with wide powers in matters of personal status and criminal law) and part customary. The Imam of Yemen accepted the situation on condition that the Shari'a was applied. Most kadis were ordered to adhere to the Shafi'i doctrine and even more to that of Ibn Ḥadār. There is evidence of the application of Kur'anic punishments, including the death penalty. Only minor reforms were introduced during that period.

In the period preceding the British conquest of Aden in 1839, the kadis of Lahj and al-āmil were appointed by the Imam of Yemen; their judgments were only enforced with the consent of the parties. After the British conquest, a central administration was established in the sultanate of Lahj and, inter alia, Shari'a courts equipped with wide powers, including the imposition of sanctions, were set up there by the sultan. Customary courts functioned side by side with them; their procedure and rules of evidence differed only slightly from those of the Shari'a courts. In 1950, a law establishing an Agricultural Court (al-mahkama al-zir'īyya) was enacted in the sultanate of Labdh; this court applies the provisions of that law as well as custom and agricultural practice. The purpose of that law was to exclude agricultural matters from the jurisdiction of the Shari'a courts and the application of the Shari'a.

Since the achievement in 1967 of the independence of the People's Republic of Southern Yemen, of which the Aden Colony and the Western and Eastern Protectorsates form part, the judicial system has, in the main, continued unchanged. On the other hand, in 1974, a family law was enacted of a rationalism unparalleled in the Muslim Middle East. Under Marxist influence, it aims at complete equality between the sexes. Some of the reforms contained in it have no basis whatsoever in Islamic law (see Section 4, x below). The courts apply a combination of customary and shari'a procedure. A procedural law was under consideration at the beginning of 1972.

ix. The Gulf states

Under the British protectorate, most of the Persian Gulf Shaykhdoms and Trucial States had no courts of law in the accepted sense of the term. Justice was administered "under the palm tree" by the rulers themselves, who applied the Shari'a loosely and arbitrarily or were assisted by kadis. Some of the Shaykhdoms had a dual judicial system: part shari'a, dealing with matters of personal status, and part civil, dealing with all other, including criminal and commercial, matters and strongly influenced by English law.

After independence, the judicial system was reorganised. The Provisional Constitution of the United Arab Emirates of 1971, confirmed for another five years in 1976, provides that Islam shall be the religion of the Union and that the Shari'a shall be a principal source of the Union's legislation. But in fact, even the Shari'a judicial system is not, in most of the countries, based on pure shari'a law. Shari'a law is here attenuated or superseded by customary law or modern legislation. The civil courts apply several sources of law, of which the Shari'a is only one and not the most important. In some of the countries, a civil code modelled on the Egyptian Civil Code of 1948 has been introduced, of which the Shari'a is supposed to be one source of inspiration; but the role of the Shari'a is this context should not be exaggerated. The new graded civil system comprises many lawyers from other Arab countries.

In Kuwait, a dual judicial system, part shari'a and part civil, was functioning under the British protectorate. The jurisdiction of the Shari'a kadis was confined to matters of personal status. The ruler set up two new courts, for criminal and civil matters, respectively. He had jurisdiction not only over his own subjects but
also over resident nationals of some other Arab countries. Those courts applied the Šarīʿa and the ordinances of the ruler. The harsh Kūrānic punishments were abolished. In 1959, an Organisation of Judicial and other matters, including the personal status and succession. The legal system remained unchanged after independence (1961).

The courts apply the products of some very intensive modern law-making: codes of procedure, of criminal law and of commercial law have been enacted. Matters of personal status and blood-money (diya) of Muslims are still dealt with in accordance with the Šarīʿa, as taught by the respective schools. The Kuwaiti constitution provides that the Šarīʿa shall be the principal basis of legislation, but in point of fact the main source of inspiration is reformed Egyptian legislation, especially the Civil Code prepared by ʿAbd al-Razzāk al-San히ī. In 1977, a commission was appointed to amend and develop Kuwaiti legislation in accordance with the provisions of the Šarīʿa, but it is too early to assess the real significance of these terms of reference.

Under the British protectorate, a dual judicial system, part sharʿi and part civil, was set up in Bahrayn. The Šarīʿa courts, subdivided into Sunnī and Diʿāʾi sharʿi sections, dealt with matters of personal status and applied the Šarīʿa in accordance with the relevant doctrine. The Shāykh and members of his family acted as judges in the civil courts. These courts applied the ordinances of the Shāykh and customary law, which was largely based on Sudanese law; in any case, the Šarīʿa was not applied in these courts. The ruler also had jurisdiction over resident nationals of some other Arab states.

The dual, Šarīʿa and civil, system remained in existence after independence (1971) and so did the subdivision of the Šarīʿa courts (including the appeal stage) into Sunnī and Diʿāʾi sharʿi sections. The powers of the Šarīʿa courts are confined to matters of personal status of Muslims, while the civil courts have jurisdiction in civil, commercial and criminal matters and in matters of personal status of non-Muslims. The Constitution of Bahrayn of 1973 provides that the Šarīʿa shall be a principal source of legislation, and the Judicature Law of 1971 lays down that in the absence of a suitable provision in legislation, the judge shall base his decision on the principles of the Šarīʿa or, if the latter, too, fails to offer a solution, on custom. Local custom is to be given priority over general custom, and where no guidance is found in custom, the tenets of natural law or the principles of equity and good conscience shall be applied.

In Kātar, too, a dual, Šarīʿa and civil, judicial system was established under the British protectorate. The Šarīʿa courts decided matters of marriage, divorce and succession in accordance with the Šarīʿa as taught by the Hanbali school. The ruler set up a civil court, which heard also criminal cases. It applied customary law and the decrees of the ruler. The ruler had advisers from among the religious leadership, whose task it was to see that the decrees did not deviate from the Šarīʿa. The ban on the import, sale and consumption of alcoholic beverages was also strictly enforced. Through the activity of the ruler's British adviser, who served in the civil judiciary, English law, as applied in India and the Sudan, greatly influenced the criminal law of Kātar. The harsh Kūrānic punishments, such as mutilation, had long been abolished. The last few years have seen a considerable output of civil and criminal legislation, which is applied in the civil courts. In 1971, a Civil and Commercial Law was enacted, based on the Egyptian Civil Code of 1948. It designates the Šarīʿa as a source of law only to be applied in the absence of a suitable norm in either statute or custom. There has also been legislation in specific spheres of commerce, such as the Share Companies Law, 1961, for the settlement of disputes with foreign oil companies by arbitration.

Šarīʿa justice in Abū Ḍubayḥ Zabī is regulated by legislation of the years 1968 and 1970. A distinction is made between matters of personal status and succession, dealt with by Šarīʿa kādīs, and other civil matters, dealt with by civil judges. However, there is no formal distinction between a Šarīʿa and a civil judicial system. Every District Court has a Šarīʿa kādī. A civil matter other than of personal status or succession may be referred to the Šarīʿa kādī with the consent of the parties. Both the civil judges and the Šarīʿa kādīs are to act in accordance with justice or conscience or with the general principles of justice, provided that they are guided by Islamic law. The ruler appoints all the judges, including the kādīs.

The dual judicial system in Dubayy is still the Šarīʿa one. The entire legal system is regulated by the Courts Law of 1970. The civil courts are competent only for a few specific matters, leaving the Šarīʿa courts with residiary jurisdiction. Still, under the same law, the ruler may transfer any matter or action from the Šarīʿa court to the civil court. Most commercial matters have recently been so transferred. There are also criminal courts. The Šarīʿa courts are competent to apply the Šarīʿa with the qualifications required by the laws of the emirate. Except for a few matters regulated by local custom and tradition, legal disputes are settled in the Šarīʿa court in accordance with the principles of the Šarīʿa. The civil courts are to apply usage and custom, the principles of natural justice, the law of equity, and the laws and legal practices of neighbouring countries, in addition to the laws of the emirate and the Šarīʿa. The Law of Procedure of 1971, which relates to civil and commercial matters, allows significant deviations from Šarīʿa procedure, such as written testimony. The ruler appoints the kādīs, including the Chief Šarīʿa Judge.

Until 1968, Šarjah (al-Šārika) had only Šarīʿa courts. Sunnīs and Shīʿīs had separate courts (and waqf administrations). These courts had jurisdiction in all matters. In 1968, the judicial system was reorganised: civil courts were established by the side of the Šarīʿa courts, whose jurisdiction was from then on confined to matters of personal status, succession and wills of Muslims, and waqf and blood-money (diya) where at least one of the parties was a Muslim. The civil court has jurisdiction, in civil and criminal matters, also over non-Muslim foreigners. A law of 1971 reconfirmed the dual judicial system and empowered the ruler to establish ad hoc judicial bodies for all matters. The law applying in the Šarīʿa courts is
Islamic law, Sunni or Shi'i, as the case may be. The civil courts are to apply the statutes of the Shâhkîdîm, the principles of Islamic law, the decisions of Muslim jurists, common law and local custom, and the general principles of English law: right, justice and equity. There has been intensive legislative activity in the fields of criminal law, contracts, commercial law etc., as a result of which the Sharja legal system is the most developed of any of the United Arab Emirates.

TheSharî'a is the principal system of law also in 'Adjmân, Umm al-Khaywayn, Ras al-Khayma and Fujayrah. 'Adjmân and Ras'a al-Khayma have also civil courts. In Ras'a al-Khayma, a Courts Law patterned on the corresponding law of Dubaiyy was enacted in 1971; it confers wide powers on the Sharî'a courts, also in civil matters other than personal status and in criminal matters. A law of 1972 regulates the functioning of the Sharî'a Court of Appeal. In the case of death sentences, appeal is automatic.

In the sultanate of Muscat and Oman (Maskat and 'Umân) (Oman since 1970), the Sharî'a is about as firmly established as in Sa'ūdi Arabia. There is no written constitution. The Sharî'a courts have wide jurisdiction, including criminal matters involving Kur'ânic punishments, although there is a tendency to mitigate the latter. There are still public executions, but decapitation and mutilation are banned. The Sharî'a courts apply the non-codified law of the Iṣâbi sect (see Mādīyya), to which most of the population of the sultanate belongs, with such modifications as are out of legislation enacted by the Sultan in civil and commercial matters to meet present-day requirements, viz. legislation relating to investments by foreigners, commercial companies and banking. The judgment of the kâdi is appealable to a bench of kâdis and to a Chief Court, the seat of which is in Oman. A final appeal lies to the Sultan.

There is a separate court for matters in which foreigners are involved; its seat is in Muscat. When the sultanate was a British protectorate, the Consular Court had jurisdiction in certain matters concerning British nationals, but when the British subjects and local nationals, the Sultan had jurisdiction. The Commercial Companies Law of 1974 established a Committee for the Settlement of Commercial Disputes, vested with judicial powers. In large areas of the sultanate outside the urban centres, tribal justice and custom reign almost absolute.

x. Morocco

Before the establishment of the French and Spanish Protectorates, the peoples under the sultan's authority had recourse, more or less, to matters of personal status, property and contracts or religious enforcements (aškā, to the kādis who were to be found in centres of some importance. Till the middle of the 19th century, the kādi of Fâs had the title of kādi 'l-kudâr and filled all religious offices. Later, the Moroc-
MAHKAMA

quenty controlled them; they were nominated, transferred on their own demand (because they were immovable) and on occasion penalised, by dahirs. At the time of their nomination they received a silver seal, which charged no fees. In any case, a dahir of 20 Shawwāl 1332/11 September 1914 already envisaged the retention of customary law (which some Berberists strove to collect and record in written form), but it was the dahir of 10 Dhu ‘l-Hijja 1348/15 May 1930 which firmly established courts at Rabat (4 Sha‘bān 1345/7 February 1927), Tétouan and Tangiers.

In his mahkama, the kāddis is assisted by a number, fixed for each centre, of notaries which he proposes himself but who have to pass an examination unless they have certain qualifications. These ‘udul, whose status was established by a decree of 24 Rabī‘ II 1337/23 June 1936, are paid, according to complicated calculations, on the issuing of the judicial deeds which they have to task of drawing up. Furthermore, the mahkama has in certain cases an executive official (‘awm) and a matron (‘arifa) to take care of women. After the dahir of 16 Sha‘bān 1342/23 March 1924, litigants could be represented by an oukli (wakil, pl. wukalā‘) or legal pleader whose functions were laid down in a very detailed dahir of 18 Safar/7 September 1925. Advocates, for their part, could only intervene, and then only on a written basis, before an appeal court. In each gharīz court, six registers had to be kept: for landed property, miscellaneous deeds, successions, lawsuits, appeals and the careers of the ‘udul: after the dahir of 12 Safar 1363/7 February 1944, acts of witness were entered in a separate register.

As for the mahkān [q.v.] courts (al-mahkāmāt al-makhzanīyya), that is, those of the pashas in the towns and of the kā‘ids among the tribes, these were regulated by several dahirs, the most important of which was that of 26 Shawwāl 1336/4 August 1918. These officials had limited competence up to a certain sum of money in civil and commercial cases; they could refer complicated cases to the kā‘ids or have recourse to expert criminal law. As early as 17 Muharram 1376/25 August 1956, the shari‘a courts had a certain number of Moroccans who had the protection, as individuals, of a foreign power benefited from the capitulations [see smrīzār] and thus received justice from the regular courts; these last were replaced in the French zone on 9 Ramadan 1331/13 August 1913 and in the Spanish one on 1 June 1914 by courts with exclusive competence in all cases where non-Moroccans were involved, whilst at Tangiers mixed courts were set up by dahir of 16 February 1924.

For its part, the Jewish community in Morocco had, in respect of personal legal status, courts which were controlled by dahir, in 1918 in the French zone, in 1914 at Tangiers and in 1914 in the Spanish zone, as well as a rabbinical high court. Finally, foreigners and a certain number of Moroccans who had the protection, as individuals, of a foreign power benefited from the capitulations [see smrīzār] and thus received justice from the regular courts; these last were replaced in the French zone on 9 Ramadan 1331/13 August 1913 and in the Spanish one on 1 June 1914 by courts with exclusive competence in all cases where non-Moroccans were involved, whilst at Tangiers mixed courts were set up by dahir of 16 February 1924.

Among the Berber tribes, it was the djama‘a which continued to decide cases between members of the group according to local customs, also unwritten. As the French forces advanced into the dissident areas, some kā’ids were progressively installed there, but experience showed that those seeking justice continued in general to address themselves to the djama‘a, which charged no fees. In any case, a dahir of 20 Shawwāl 1332/11 September 1914 already envisaged the retention of customary law (which some Berberists strove to collect and record in written form), but it was the dahir of 10 Dhu ‘l-Hijja 1348/15 May 1930 which firmly established courts at Rabat (4 Sha‘bān 1345/7 February 1927), Tétouan and Tangiers.

For its part, the Jewish community in Morocco had, in respect of personal legal status, courts which were controlled by dahir, in 1918 in the French zone, in 1914 at Tangiers and in 1914 in the Spanish zone, as well as a rabbinical high court. Finally, foreigners and a certain number of Moroccans who had the protection, as individuals, of a foreign power benefited from the capitulations [see smrīzār] and thus received justice from the regular courts; these last were replaced in the French zone on 9 Ramadan 1331/13 August 1913 and in the Spanish one on 1 June 1914 by courts with exclusive competence in all cases where non-Moroccans were involved, whilst at Tangiers mixed courts were set up by dahir of 16 February 1924.

For its part, the Jewish community in Morocco had, in respect of personal legal status, courts which were controlled by dahir, in 1918 in the French zone, in 1914 at Tangiers and in 1914 in the Spanish zone, as well as a rabbinical high court. Finally, foreigners and a certain number of Moroccans who had the protection, as individuals, of a foreign power benefited from the capitulations [see smrīzār] and thus received justice from the regular courts; these last were replaced in the French zone on 9 Ramadan 1331/13 August 1913 and in the Spanish one on 1 June 1914 by courts with exclusive competence in all cases where non-Moroccans were involved, whilst at Tangiers mixed courts were set up by dahir of 16 February 1924.

called sadadiyya, regional (iklimisyya) courts and the high Sharifian court and fixing their spheres of competence in both civil and criminal affairs. A dahir of 14 Radjab 1348/16 December 1929 had created conciliation boards with the task of settling conflicts in labour matters; these were replaced on 28 Ramadan 1376/29 April 1957 by labour courts (mahkāmat al-shughl).

As for sharī‘i justice, it had been reorganised by a dahir of 5 Dū‘amād 1 1376/8 December 1956, which had created several new courts, apart from those which were to replace the customary law courts, and had instituted in the various regional courts boards with the task of examining appeals directed against judgements of the kādis‘ courts. In the following year, on 23 Dū‘amād I 1377/16 December 1957, the procedure to be followed by the sharī‘i courts was fixed by a law less detailed than the code of civil procedure promulgated in 1913. In the same year, on 22 Muharram/16 August, there was set up a commission with the task of codifying fākh. It began immediately on the law of personal status, which was naturally to remain in the sphere reserved to the kādis‘, and it speedily brought its activities to an end. On 20 November 1962 a criminal code, in large measure based on French legislation, was promulgated.

Regarding appeal courts, the dahir of 25 Sa‘far 1377/29 September 1957 ended that of Tetouan, reorganised the one at Tangiers and created one at Rabat to replace the high Sharifian court; a third appeal court has been set up at Fās on 29 Shawwāl 1380/15 April 1961. From 2 Rābi‘ 1377/27 September 1957 onwards, control over the Moroccan legal system was vested in the Superior Council (al-māqālīs al-a‘dād). The law of 23 Ramadan 1384/26 January 1965 made the Moroccanisation, Arabisation and unification of the administration obligatory, and this was followed by a formal unification of the judicial system and by a decree of the Minister of Justice requiring use of the Arabic language in all documents laid before the courts. Despite the progress achieved, in particular in the sphere of criminal law, which is no longer in the hands of administrators, there still exists a certain vacillation arising from the divergent tendencies of the personnel involved, some wishing to preserve at least part of the system bequeathed by the Protectorate whilst others want to create a totally new and original system.

xiii. Reforms in the law applying in Shari‘a courts.

In the 20th century, many reforms, some of them very far-reaching, have been effected in matters of personal status: succession and wakf, which are under the jurisdiction of the Shari‘a courts. The most important of them are the raising of the age of competence for marriage and the imposition of restrictions on the marriage of minors; the prohibition of forced marriages; the prohibition of marriage of persons having reached the age of competence for marriage; the prevention of great differences in age between spouses; the restriction of the institution of equality in marriage (kafā ‘a) to the point of complete abolition and the limitation of the functions of the marriage-guardian; the limitation of the amount of the dower (Southern Yemen, 1974); the refinement of the use of stipulations in the marriage contract to improve the position of women; the performance of marriages in courts of law (‘Irāk, 1978); and the prohibition of polygamy, leaving discretion to the kādis‘ to permit it under special circumstances (in Southern Yemen, the consent of the District Court is required for polygamy, 1974).

The amount of maintenance of the wife is fixed in accordance with the economic position of the husband; both spouses are responsible for their own support and that of their children, each according to his or her ability (Southern Yemen, 1974); maintenance awarded by the court is paid by a government authority, which in turn recoups itself from the judgment debtor (Egypt, 1976; Israel 1972).

Worongs resulting from the husband’s right of arbitrary divorce have been redressed: repudiation pronounced in a state of drunkenness or in a state of ignorance or a fit of anger and divorce by way of an oath or a threat (provided there is no intent to divorce) are invalid; the effect of a double or triple repudiation pronounced on a single occasion has been reduced to that of one revocable divorce; divorce against the wife’s will is prohibited (Israel 1951, 1959); the husband must seek judicial approval or registration of the divorce or dissolution of the marriage by the court (Southern Yemen, 1974); compensation to the amount of one or two years’ maintenance, in addition to waiting-period maintenance, is due to a wife divorced without justification (Syria, 1953; Jordan, 1976; Egypt, 1979); the respective economic resources of the spouses must be equalised upon divorce (Israel, 1973). Additional grounds have been provided for dissolution or the initiative of the wife by the court: spouses: a physical or mental defect of the husband, sterility of the husband; non-payment of prompt dowry (before consummation of marriage) or of maintenance to the wife; cruelty; the taking of a second wife; prolonged separation from or abandonment of the wife without legal cause (even if maintenance is provided), prevention of the wife from entering the conjugal dwelling after marriage; imprisonment of the husband for several years, together with non-supply of maintenance; and adultery of the spouse (‘Irāk, 1978).

The period of the mother’s custody of minors has been extended in the interest of their well-being; both parents have been declared the natural guardians of their children (Israel, 1951, 1962). The rights of heirs within the nuclear family have been strengthened, with daughters, in the absence of sons, being given preference over other Kur‘ānic heirs; the spouse enjoys the radd, the residue of the estate, in the absence of Kur‘ānic heirs and dhu‘ayn ‘l-‘aridim; germane brothers—contrary to the position of the Hanafi school—share the uterine brothers’ portion of the estate in cases where the Kur‘ānic portions exhaust the estate (Jordan, 1976); the Shi‘ī system of succession, which is not based on the agnatic principle, has been adopted (‘Irāk, 1963); the rights of heirs have been determined on the basis of equality of the sexes (‘Irāk, 1959 to 1963; Palestine, 1923; Israel, 1951,
bequests in favour of legal heirs have been permitted to the extent of one-third of the estate; the absence of the principle of representation has been indicated in the deed; a stipulation by the founder as to the conduct of the beneficiary is no longer valid; the disinheritance of legal heirs by means of a Wakf exceeding one-third of the estate has been prohibited; Wakf property is to be administered by the beneficiaries; Wakf property damaged beyond repair through neglect is to be liquidated. Most of these reforms relate to Wakf to be established in the future. The military regimes in Syria (1949) and Egypt (1952) abolished the family Wakf completely. In 1957, Egypt nationalised the property of that Wakf for the purposes of agrarian reform. In Israel (1965), the family and Khayr al-husn was as far as they comprised absentee property, were abolished; the property is to pass into the full ownership of the beneficiaries and of Muslim boards of trustees, respectively. Important reforms have also been effected in the rule of law in most of the countries of the Arab world. Written evidence is now admissible and is accorded the same weight as oral testimony—in fact, with regard to some matters, documentary evidence is eligible but not oral testimony; witnesses may be cross-examined; the court is given discretion to assess the credibility of the witness and the testimony; the defendant may bring witnesses to refute the testimony of the plaintiff’s witnesses; the defendant may return the oath to the plaintiff; circumstantial evidence is admissible; periods of prescription of actions have been introduced. Rulers and parliaments have used a wide gamut of methods to introduce reforms in the law applied by the courts: (1) The procedural expedient: refusal of legal relief to parties who disregard a particular reformist norm, such as the age of competence for marriage. That expedient is based on the ruler’s right to restrict the powers of the court (takhsí i l-kadí). (2) The takhassus expedient: the selection of elements within or outside the horizon of the ruling school which suit the purpose the legislator seeks to achieve; sometimes such elements, patched together into a statute, contradict one another (talif). The theoretical justification of this expedient lies in the power of the ruler to direct the kadi, his agent, to apply a particular doctrine, and disregard others, in the public interest (maslah). In the Sudan, the direction was given by means of a “judicial circular” issued by the Grand Kadi with the consent of the British Governor-General. (3) Administrative orders, provided that they do not conflict with the Sharí’a; they rely on the duty of Muslims to obey their rulers. In Saudi Arabia, the reforms are carried out by means of royal orders based on the utility principle: al-maslah al-mursala or maslahat al-umum or istiṣḥāṣ al-khawāṣṣ. (4) Criminal legislation which, while its sanctions are supposed to deter potential violators of reformist norms, such as the age of competence for marriage and the prohibition of polygamy, does not derogate from the substantive validity of the Sharí’a. (5) A “modernistic” interpretation of the textual sources (Kur'ān and Sunnah) which is aimed at adapting them to the requirements of present-day society. In Saudi Arabia, the plenum of the Greater Sharí’a Court may practise legal reasoning (iṣlāḥ) collectively. (6) The abolition of the Sharí’a courts and the application of Islamic substantive law by civil courts; that is, the doctrine of legal reasoning (iṣlah) in the absence of the principle of representation has been abolished; iṣlah is implied to be a Court may practise legal reasoning (iṣlah) collectively. This has been considered by some scholars as a purely technical, resemblance to the classical iṣlah (q.v.). There are material differences as to the mode of using those sources (replacement of the deductive kiyās (q.v.) by the maslahah or utility principle) and as to the sources of inspiration and motivation of the reforms (Western ideas, and pressures arising from a disturbance of balances in Muslim society as a result of modernisation and Westernisation). The reforms rely on state-imposed, not religious, sanctions, and their somewhat forced link with Islamic sources has been severed in the process of legislation. They have an autonomous existence, independent of the sources, and should only be interpreted within the framework of the statutes in which they are embodied. In some cases, they have no basis at all in religious law. They are, first and foremost, legislative acts of the legislators. It is true that even in the past the secular legislation of caliphs and temporal rulers was outside the Sharí’a, but there was then the pious fiction that this legislation was intended to supplement the Sharí’a and that everybody, including the ruler, was subject to the latter, whereas today the parliaments are the declared sources of sovereignty and set bounds to the Sharí’a. Most Arab countries are today at an advanced stage of transition from jurists’ law to statute law, and the question of iṣlah has thus ceased to be relevant. The purpose of resort to traditional mechanisms in legislation is a national and tactical one: the creation of the impression that the reforms are a kind of internal renovation of the Sharí’a. Islamic law is conceived as part of the Arab national-cultural heritage; this prevents the creation of an ideological deth and subjection to the West. Reference to the modernist school of Muhammad Abduh is intended to facilitate acceptance of the reforms by the 'ulamā’ and conservative circles and by the sharī'ī judiciary. The success of the reforms depends, to a decisive extent, on the kāfis charged with the application of the legislation designed for the Sharí’a courts. The kāfis, including those integrated into the national courts in Egypt, have in their vast majority had a traditional sharī’ī training. It seems that, contrary to the expectations of the legislator, they do not exercise the wide discretion given to them and that in many cases, out of devotion to taklīf, they ignore reformist legislation. At the same time there have been cases (in Israel) in which that legislation impressed the kāfis and they explicitly relied on it in their judgments. Here the kāfis were not opposed to legislation in so far as it did not supersed the Sharí’a. Some kāfis would even welcome additional legislation, procedural or penal, with a view to using the statutory sanction to buttress the sharī’ī norm, which is sustained by a toothless ethical sanction. Druze kāfis still use religious and social sanctions of court. Some kāfis do not shrink from calling for legislation for a definitely substantive character. The increasing ascendency in the Sharī’a courts of lawyers with a secular training and a modern social outlook will eventually, in judicial practice, lead to a
kind of synthesis between the *Shari'a* and national law. There are *kādis* who, in their liberal interpretation of religious law, do not hesitate to deviate from *takhlīd* and *thaflīk*, by means of the techniques of *tadkīq* and *talīfīk*, have scored achievements not inferior to those of parliamentary legislation. In Saudi Arabia, the *kādis*, in the absence of an express provision as to a particular matter in authoritative Hanbali literature—as designated by decree—are permitted to rely on elements from other doctrines as far as it is in the public interest to do so, and there have in fact been cases in which they applied the *majāla* mechanism in their decisions.

The *kādis* make use of their personal authority, sometimes with the assistance of mediators, to bring about a peaceful settlement of disputes and to give the effect of judgments to compromises that have been reached. They thereby continue a tradition of tribal arbitration. This method also prevents a confrontation with religious law. The proceedings are simple, quick and matter-of-fact. Druze *kādis* are sometimes called upon to act as arbitrators in criminal cases heard before civil courts.

The *kādis* react in different ways to the encounter of *Shari'a* and custom (*urf, *nda* [q.v.]), according to their degree of orthodoxy, education and professional training, their social philosophy and the measure of their understanding of the Islamisation processes of a society not yet wont to regard Islam as an obligatory way of life. Some reject custom absolutely; others acquiesce in its sovereign existence by the side of the *Shari'a*, but there are also attempts to absorb custom, whilst compromising with it, into the *Shari'a*. Custom is an extremely important source of law in the jurisprudence of the Druze courts, owing to the absence of a tradition of institutionalised communal justice and the esoteric character of Druze religious law.

Following the introduction of a uniform and binding material law (secular statutes), and a hierarchy of collegial courts and appeal stages, in the *shari'ā* judicial system, there are significant indications of the development of a case law, a phenomenon alien to the *Shari'a*. For the time being, there are no significant effects of the abolition of the *Shari'a* courts in Egypt. The *kādis*, who have been integrated into the national courts, continue, out of loyalty to *takhlīd*, to resist not only Islamic substantive law but also the Islamic rules of evidence and procedure, as they used to do in the *Shari'a* courts. But there can be no doubt that in the long run, as their place is taken by civil judges with a secular legal training and no traditional *shari'ā* education, the reform will make itself felt and Islamic law will be exposed to the influence of secular—national and Western—legal principles.

5. THE INDO-PAKISTAN SUBCONTINENT. [See Supplement]

6. INDONESIA

The complex history of Islamic courts in Indonesia is evident in the many names by which they have been known over the last century in various parts of the country: among them *Pengadilan Sarambi*, *Priesterraad*, *Road Agama*, *Penghulu Gerecht*, *Rapat Kadi*, *Pengadilan Agama*, *Makhamah Syariah*, and at the appeals level *Makhamah Islam Tinggi*, *Keranatan Kadi Besar*, *Makhamah Syariah Propensi*, and *Pengadilan Tinggi Agama*. The mixed roots of these terms reflect the subtle interplay of Islamic, pre-Islamic, and Dutch colonial influences in the evolution of the courts. When in 1960 the Ministry of Religion finally imposed a uniform religious-judicial nomenclature throughout Indonesia, *Pengadilan Agama* (*pengadilan = court, agama = religion), combining Arabic and Indic roots, rather than the Arabic and Islamically derived *Makhamah Syariah*, became the name of choice for first instance religious courts. Appellate religious courts are now called *Pengadilan Tinggi Agama* (*tinggi = high*).

Unlike many other Islamic countries, where religious courts have been progressively restricted, in Indonesia they have actually grown in number and influence. Despite continual efforts to confine or eliminate them, since the late 19th century the politics of their development has led, at every stage, to some institutional accretion. Legally, they are subordinate to civil courts, on which they depend for enforcement decrees, but socially they enjoy a measure of autonomy and authority guaranteed by Islamic commitment and political power.

The modern history of these courts began in 1882 under the colonial administration of the Netherlands East Indies. Earlier they existed in various forms throughout Java and only here and there in the other major islands, always under the control of local aristocratic authorities whose Islamic credentials were often dubious. In Java, where Islamic courts were paid most attention in the colony, they were known as *swârmbi* courts, from the forecourt of the mosque in which they convened, serving in part as general courts of the land and in part as Islamic courts proper. In the colony these *swârmbi* courts were related to the first instance colonial civil courts for Indonesians (*landraden*) in two ways: religious judges served as advisers to the *landraden*, and Islamic court decisions were required to obtain enforcement decrees (*executor verklaring*) from the *landraden*. The first rule has long since faded, but the second still survives.

In 1882 the colonial administration reorganised the Islamic courts, which were now called *Priesterraad* (priest's courts)—though popularly *raad agama*, or *landraad agama*, after the style of the Dutch courts—on an erroneous understanding of the mosque administrators, *penghulu*, who staffed the courts. The new courts were collegial, with three judges, following from European rather than Islamic judicial traditions. The most important effect of the reform, however, was to make the courts formally more autonomous, and potentially independent of the local Javanese aristocracy that had traditionally appointed and controlled Islamic officials.
The reform of 1882 was roundly criticised by the famous Dutch Islamologist C. Snouck Hurgronje, whose arguments helped to inspire a second round of reforms, resulting in a new regulation of 1931 whose implementation, for economic and political reasons, was delayed until 1937. Applying only to Java and the nearby island of Madura, the new law responded superficially to Snouck’s earlier criticism by renaming the courts Penghulu Gerecht (penghulu court) and reconstituting them, following Islamic tradition, as a single kadi (kadi) accompanied by two assessors and a clerk. Originally, the reform had called for payment of regular salaries to the religious judges and their staffs, who had acquired a reputation for venality, but this measure was put off because of budgetary short-tages during the depression. Only later, during the revolution, did the Islamic courts begin to receive financial support from the state. But the heart of the 1930s reform, promoted by Dutch and Indonesian adat (customary) law scholars who opposed recognition of Islamic law except as far as it was “received” by indigenous customary law, had to do with issues of substantive jurisdiction. Matters of waqf (waqf) and, crucially, inheritance, were removed from the competence of the Islamic courts and given over to the civil landraden. When this provision was implemented, it caused an uproar among Islamic groups, who have tried unsuccessfully ever since to restore the inheritance jurisdiction to Islamic courts in Java. It was a major symbolic as well as practical loss for Islam, which at about the same time was able to ward off a challenge to polygamy. In compensation, the reform established a new Islamic appellate instance, the Mahkamah Islam Tinggi (Islamic High Court) to hear appeals from all the religious courts of Java. Although suspect at first among Islamic officials, the Mahkamah Islam Tinggi was eventually opened in the central Javanese city of Surakarta, where it remains today. Outside of Java, only in Kalimantan (Borneo) were similar reforms begun, also in 1937, mainly by way of reorganisation of local religious courts (Rapat Kadi) and the creation of appellate courts (Kerapatan Kadi Besar), before Japanese forces occupied the country during the second World War.

During the occupation and early in the revolution (1945-50) against the returning Dutch administration, efforts to eliminate Islamic courts failed utterly in the face of Islamic determination to preserve and develop Islamic public institutions. A political compromise led in 1946 to the establishment of a new Ministry of Religious Justice, which soon absorbed various elements of Islamic administration, including the existing courts, and later became a driving force behind their consolidation and expansion throughout independent Indonesia. Islamic judicial affairs were organised in the Ministry under a Directorate of Religious Justice. With the revolution, the primary issues of the Islamic judiciary shifted to the islands outside of Java, particularly Sumatra, where religious courts were few and poorly developed. In 1946, during a period of violent local conflict, Islamic groups in Aceh (northern Sumatra) established new Mahkamah Syariah (Qa’ri’s councils). These courts ambitiously assumed a wide jurisdiction, which the national government later whittled away gradually by creating competitive civil courts and subjecting the Mahkamah Syariah to legal limits as a condition of their incorporation into the national religious bureaucracy. In response to what had happened in Aceh, however, in 1947 the republican governor of Sumatra issued an instruction to establish Islamic courts, also fashioned as Mahkamah Syariah, elsewhere in Sumatra. The tempo-
judiciary. But only a few such appeals have been heard, by late 1982, and it is too early to predict the influence of the Supreme Court on the religious courts.

The next major stage in the evolution of Islamic courts was unexpected and rather surprising in its effects. In 1973 Parliament considered a new unified marriage law for all religious groups which incensed many Muslims by its challenge to polygamy and other Kur'ānīc legal symbols. Islamic groups protested vehemently, and after a great deal of political tension the government revised the original drafts of the law to meet Islamic objections. One result of the new law in its final form was to place more authority and functional responsibility squarely on the Islamic courts.

Until the passage of the 1974 marriage law, the overwhelming daily fare of Islamic courts everywhere in the country was made up of divorce issues. Despite the additional jurisdiction over inheritance of the courts outside of Java, not many cases of the sort actually came to them. (Ironically, the Javanese religious courts continued informally even after 1957 to hear many inheritance cases, often deciding them in the form of fatāwis, advisory opinions, as people continued to bring them; sometimes because they were ignorant of the legal change, sometimes because the Islamic courts were much speedier than the civil courts, and sometimes because devout Muslims simply regarded the Islamic courts as the proper authority to take care of their inheritance problems.) The vast majority of the Islamic courts’ clients were women, as only women had to go to court for a decree invoking their husband’s divorce (talak) on prescribed grounds. Husbands bent on divorce need only pronounce the talak and register it at a local religious office.

The law of 1974 changed all this, however, making divorce more difficult for men by requiring them also to go to court, an equalising measure intended to promote family stability. The traffic in Islamic courts naturally increased, though less than expected because the new legal procedures themselves had the effect of discouraging divorce. In addition, all Islamic courts now have jurisdiction over a wide range of family law issues, including, among others, permission for a husband to take an additional wife, permission to marry in the absence of or disagreement among appropriate kin, dispensation from marriageable age rules, prevention of marriages, annulments, charges of neglect, determination of child custody, support of divorced wives, child support, legitimacy of children, withdrawal of parental authority, appointment of a wali, and review of administrative refusal to allow mixed marriages. Several of these questions require only administrative action, while others constitute litigation, but all together impose on the courts a more variegated responsibility, indeed main symbolic.

A consequence of this burgeoning significance of the religious courts, the Ministry of Religion moved enthusiastically to demand more courts, more funds and more facilities. By ministerial regulation, two new appellate courts were provided for West and East Java, confining the old Mahkamah Islam Tinggi to the territorial jurisdiction of Central Java. Increasing attention has begun to be paid matters of recruitment and training of religious judges. The national standardization government revised the original drafts of the law to incorporate a further commitment to uniform policies in their development.

Indonesia’s Islamic courts have survived as one critical symbol of the Islamic community, but they have been progressively integrated into state administration. The law of 1974 has transformed them into rather fully-fledged domestic relations tribunals, responsible for profoundly important matters of social life and state policy.

MAHLUL (A.), a term used in the Ottoman administrative parlance to mean vacant. It is used in the registers of a grant or office which has been vacated by the previous holder, by death, dismissal, or transfer, and not yet re-allocated. The term is also used more generally for land and other assets left without heir (see also MULULALAF). (Eb.)

MAHMAL (modern pronunciation of the word vocalised by the lexicographers mawšul, mawšul, or mawšul, a type of richly decorated palanquin, perched on a camel and serving in the past to transport people, especially noble ladies, to Mecca (cf. al-Sam‘ānī, Kītāb al-Ansāf, under the word al-makāmilī). The famous al-Hādjīdājī b. Yūsuf is said to have been the first to use them.

In a more restricted and precise sense, the word designates palanquins of this same type which became political symbols and were sent from the 7th/13th century by sovereigns with their caravans of pilgrims to Mecca (or the principal caravan when it was split up) in order to bolster their prestige. In the modern period in Egypt, the head-rope of the camel which carried it was solemnly presented to the leader of the pilgrimage, in the course of a ceremony during which the camel, followed by some musicians, performed seven circuits on the ground in front of the officials’ platform. In time, the crowds accorded these palanquins, encompassed by the glory of the Holy Places, a veneration which was excessive and at times condemned (e.g. the kissing of the head-rope, the seven circuits, the participation of the religious brotherhoods in the ceremonies, allowing the belief that it was actually a religious emblem). Forming the centre of picturesque demonstrations in Cairo, Damascus and other cities, the caravans accompanied by the returns of the caravans of pilgrims, they were mentioned by European travellers. At the end of...
1952, the Egyptian mahmal, the last still in service, was suppressed by a governmental decision. The camel which carried it, a splendid and well-nourished animal, stayed resting all the year at the dar al-kiwa, at Khurumish Street in Cairo, waiting for the ceremonies in default of journeys.

There exists little precise evidence, in the Middle Ages, on the form of these political mahmals. On the other hand, those of the modern period have been described, photographed and displayed in museums. In Egypt, the last ones were built of wood and approximately cubic, broader (1 m 75) than they were long (1 m 35), crowned by a four-faced pyramid, with, in the upper angles of the cube, four gilded balls and on top of the pyramid, a much larger ball surmounted by a stem, a star and a crescent: the whole was covered in an embroidered material. There existed two types of coverings: the first, for towns and the parade, was in a very rich brocade, enhanced by pompons and fringes. The name of the sovereign and a verse of the Qur'an (e.g. a "throne verse", II, 255, on that of King Fu'ad I) was embroidered respectively on the face in front of the pyramid and on a band encircling the top of the cube. The second covering of simpler material (green in recent times) was put on for the journey or minor halts. The oldest covering which has been preserved is that of the mahmal of Sultan Kansâwâl al-Ghûrî (d. 922/1516) at present in Istanbul, in the Topkapî Museum (Turkish embroideries section, no. 253, Mehmel). A good photo of it is supplied in the magazine La Turquie Kémalisite, Istanbul, August 1941. The embroidered text expresses pious wishes but is not Kur'ânic. It is reproduced in J. Jomier, Le Mahmal du sultan Qânsâwâl al-Ghûrî, in Annales Islamologiques (1972), 183-8. The richness of certain coverings has been mentioned by chroniclers: such as that of the mahmal of the 'Irâkîs in 721/1221, crusted with gold, pearls and precious stones (Die Chroniken des Stadt Makka, ed. Wûstenfeld, ii, Göttingen 1859, 278).

Various legends concerning these mahmals are to be dismissed at the outset. The legend according to which the Egyptian mahmal goes back to the reign of Queen Shaddarat al-Durr is not found in any previous source. The first covering to which the palanquin contained Kur'ânic or served to transport the hangings (kiwa) of the Ka'ba have no firm basis. The mahmal was normally empty. The word "sacred cloth" used by Westerners to designate it is pure fantasy. In Arabic it is called the noble mahmal, al-mahmal al-sharîf, an adjective very often applied to that which is in contact with the Holy Places. It is in this period that the Yemeni mahmal ceased to be sent. Toward the end of the same century, M. d'Ohsson (Tableau général de l'Empire Ottoman, iii, Paris 1790, 263-6) mentions as customary a symbolic departure of the mahmal at Istanbul, with the official delegation of the pilgrimage, this palanquin then being dismantled and returned to its store.

When the Wahhabîs seized the Holy Places in 1807, the Egyptian mahmal fell into their hands and was burnt by them. Its sending was only resumed after their defeat. The war of 1914 put an end to the sending of the Syrian mahmal; the Egyptian one continued to be sent until 1926, the date on which a clash between the soldiers of the escort and the Wahhabîs of 'Ith Îwân caused its despatch to be definitively suppressed. The Egyptian Government and King Husayn of the Hijâjz (1915-21) had already confronted each other on the subject of this palanquin and especially the ceremonial which was to preside over its reception. Despite exchanges of points of view, the conflict twice led to the suspension of its sending. After Ibn Sa'îd had become King of the Hijâjz, negotiations took place on the same subject, the Wahhabîs refusing to allow the music which accompanied the procession and various superstitious practices. Symbol of a political protection over the Holy Places, the mahmal no longer had its raison d'être after the suppression of the caliphate and the Wahhabîs' desire for independence.

The popular festival aspect was manifest in Egypt in the course of three annual ceremonies (in the Middle Ages), in the course of which the mahmal was solemnly led across the city with a large escort and parts of the caravan, accompanied by troops armed with lances and sometimes even clowns. Ladies were accustomed to go out to see the processions. The first procession announced the approach of the season of pilgrimage, the second was that of the departure and the third that of the return.

In the desert, the mahmal was the centre of the principal caravan. When in 1882, and then in 1884 and after, the Egyptian caravan ceased to take the desert route and left by train (for Suez) and then by boat, the mahmal was hoisted into a train (it had its own special carriage) and then embarked. From 1920 to 1931/1910-13, it went via Alexandria, the sea, Haifa and the Medina railway. In the Hijâjz itself, the small caravan re-formed and it was always the centre of it. The goings and comings of this caravan have been described in the valuable reports, full of realistic details, composed by the physicians who accompanied it and published pro-manucripto from the beginning of the century by care of the Quarantine Service. Information and photos are also to be found in al-Barâmandjî, al-Rihîl al-hijâjî, Cairo 1929 A.H. and Rifât, Mir'at al-harâmîn, 2 vols., Cairo 1925. Two of the old processions (departure and return) lasted until 1926 in Cairo. Suppressed after the incident with the
MAHMAL — MAHMÚD

Sacudi Ikhwan, they were re-established in 1937, the year in which the hangings (kiswd) of the Ka'ba were once again again and accepted, although the mahmal was formally refused. These processions inside Cairo lasted until 1952, the date of their definitive abolition. The custom in Egypt was for the façade of the pilgrims' houses, in the popular quarters, to be decorated around the door with naive frescos recalling their journey. These frescos painted at the time of their return might stay in place for several years before being worn away by time. Until 1952 the mahmal was almost always represented. At present it appears only rarely: the new generations no longer know what it is. See Giovanni Canova, Nota sulle raffigurazioni popolari del pellegrinaggio in Egitto, in Annali della Facolta di lingue et letterature straniere di ca' Foscari, xiv/3 (1975), 83-94, with 8 plates (University of Venice).

Finally, how can one explain the choice by Baybars of this type of symbol? Did he merely want a royal tent? Did he dream of the leather kubbah, carried on chariots in the steppes of Asia, familiar to some Mamluks, and which had a religious meaning or at least one of honour? Or should we not look in the direction of the known symbolic palanquins of the Arabs, such as the one among the Rwala at the beginning of this century which was the emblem of the tribe (G. May, London 1919, p. 8 ff., described under the name Abû Zhûr al-Markab), or that which bore 'Abbâs at the Battle of the Camel? The question remains open.

Tresse, Le pèlerinage syrien aux villes saintes de l'Islam, Paris 1937; Lance, Manners and customs of the modern Egyptians, London 1936, ii, 180-6, 245 ff. (with a reproduction of the Egyptian mahmal); Burton, A pilgrimage to el-Medinah and Mecca, London 1856, iii, 12, 267; Snouck-Huqronje, Mecca, i, 29, 83 ff., 152, 157 (with a photograph in the Atlas, P. v.); T. Juynboll, Handbuch des islamischen Gesetzes, 151 ff. In Arabic, apart from the texts mentioned in Jamier, op. cit., see 'Abd al-Kâdir an-Nâṣîr al-Dhajjar, Al-Durr al-farqûb el-munazzama fi akhbars al-mahâl wa-ṣair Makkah al-mu'azzama, especially the autograph ms. at al-Azhâr (first version and the autograph ms. at Fâs, Karawiyûn (completed version, printed by the Matba'a Salâfiyya, Cairo 1384, sponsored by Sa'ûdîs). The author was for a long time the official responsible (kâbi) for the Pilgrimage Office (diwân al-hadîj) in the 10th/16th century. The work is a compendium of all the knowledge (Arab tribes, itineraries, gifts to make, functionaries, a chronicle of the pilgrimage year by year, etc.) necessary for an Amir al-hadîj.

MAHMÔD, the name of several mediaeval rulers of the Deccan.

1. MAHMÔD I, Nâṣîr AL-DîN (846-64/1442-59), was a descendant of Ilyâs Shâhî dynasty of Bengal. On the assassination of the tyrant, Shams al-Dîn (ca. 846/1442), the grandson of the usurper, Râdja Ganîèh (817-21/1414-18), a scramble for power began among the nobles, which led one of them, named Nâṣîr Khân, to seize power by killing his rival, Shâdî Khân. But within a week, Nâṣîr Khân himself was put to death. Thereupon, the nobles chose Mahmûd, who was a descendant of Sulîn Ilyâs Shâh and was living in obscurity, carrying on agriculture. He ascended the throne as Nâṣîr al-Dîn Abu 'l-Mu'âzamâr Mahmûd.

Mahmûd was just and liberal and an able administrator. Since the Shârkti rulers of Djuwanûr (846-842), the chief constant threat to the kingdom of Bengal, were involved in conflicts with the Lodîs, Mahmûd was able to enjoy peace, and this he utilised in promoting the prosperity of his people, in constructing mosques and khânkâhs, bridges and tombs. In Gâwr, his capital, he built a fort and a palace and other buildings. Unfortunately, only the five-arched bridge, the Kôtwâl Darwâza and a part of the walls of the fort have survived. These were not the only achievements of Mahmûd. He also strengthened his military power and extended the boundaries of his kingdom by annexing parts of the districts of Djuasawir and Khuânî along a portion of the twenty-four parganas. He died after a successful reign of approximately seventeen years and was succeeded by his son, Rûkûn al-Dîn Barbêk.

2. MAHMÔD II, Nâṣîr AL-DîN, was the third Habâshî (Abyssinian) Sultan. Some modern historians consider him to be the son of Djalâl al-Dîn Fath Shâhî (886-92/1481-87), the last ruler of the Ilyâs Shâhî dynasty; but Firîghla, ii, 300-1, and Nizâm al-Dîn, iii, 269, regard him as the son of Sayf al-Dîn Firûz Shâh (857-90/1452-87), the grandson of a Habâshî Sultan of Bengal. This view seems to be correct, because it was Firûz who appointed a tutor for Mahmûd's education and,
when he died, Mahmud succeeded him. However, since Mahmud was very young, the government was carried on by his tutor, Habash Khan. Meanwhile, another Habash, Sidi Badr, nicknamed Diwana (“the Mad”), killed Habash Khan and declared himself himself Sultan and ascended the throne as Ghiyath al-Din Mahmud III. Makhdum, however, refused to recognise him and allied himself with Shir Khan (later Shih Shah), whose power was steadily growing. Mahmud, on the other hand, refused to enter into an alliance with the Nuhans of Bihar, who were weak and without an able leader. The result was that, when in 940/1533 Mahmud sent the army against Makhdum, who was defeated and slain, as the Nuhans were able to prevent Shih Khan from coming to his assistance. However, the victory did not benefit Mahmud because after setting out to fight, Makhdum had entrusted all his treasure to Shih Khan’s envoy. Meanwhile, Jalaal Khan, the Nuhani ruler of Bihar, plotted the assassination of Shih Khan, but his attempt having failed, he was affected with panic, and crossed over to Bengal with his supporters and sought the protection of Mahmud, which was given. Mahmud succeeded in occupying Bihar and, in Ramadān 940/March 1534, a strong force under Ibrahīm Khan moved out of Monghyr and met Shih Khan on the plain of Suradjgarh, near the town of Bhar. But Ibrahīm was defeated and killed, while Jalaal Khan again fled to Mahmud. Now it was Shih Khan’s turn to retaliate and, taking advantage of Humayūn’s preoccupation in Gudjarat, he opened a campaign in 942/1536. Since Mahmud had strongly fortified the Teliyagafhi Pass with Portuguese help, Shih left behind a detachment under his son, Jalaal Khan, and having made a detour, marched through the Jharkhand country and appeared before Gaur, Bengal’s capital. Mahmud was taken by surprise. The Portuguese advised him to hold out until the outbreak of the monsoon, when Shih’s retreat could be cut off by their navy. But Mahmud was so demoralised that he did not follow their advice and, instead, came to a settlement with Shih Khan, by agreeing to pay him an annual tribute of ten lacs of tankas and to cede the territory from the river Kosi to Hadjpur and from Gafhli to Monghyr, which was of considerable importance to the security of Bengal. Shih Shāh (who had by now assumed the title of Shāh) was too ambitious to remain satisfied with these gains and, on the pretext of non-payment of tribute by Mahmud, invaded Bengal. He entered the Telīyāghiri Pass, which the Bengalis failed to defend, and laid siege to Gaur. But hearing that Humayūn had invested Čunār, he at once set out to relieve it, leaving behind his son Jalaal to continue the siege. Mahmud despairing of any outside help, for the Portuguese refused immediate assistance, and being faced with dwindling supplies, sallied out of the fort to give battle. But he was wounded and fled to north Bihar. Meanwhile, on 6 Dhū al-Ḥijjah 944/4 April 1538, the Afghans captured the fort by an assault. Mahmud, now a fugitive, appealed to Humayūn, who immediately marched towards Gaur. But before he could reach the city, Shīr Shāh had carried away all its treasure. It was on his way to Gaur with Humayūn that Mahmud heard of the murder of his two sons by the Afghans. This effected him so much that he died soon afterwards. Mahmud was a voluptrious, but the Portuguese account that he had 10,000 women in his harem is an exaggeration. He was incompetent, and inept in the art of diplomacy, lacking courage, tact and imagination. His mistake in antagonising Shīr Shāh and his failure to make an alliance with the Mughals and the Sultan of Gudjarat led not only to his own overthrow but also to the loss of Bengal’s independence.

MAHMUD, the name of two of the Dihli sultans of mediaeval India.

1. MAHMUD I, NĀṢIR AL-DĪN was the son of Ilutmish (Firuzshāh, i, 70-1; Minḥāḏ-i Sirādī Džudžānī, i, 471-2) and not his grandson, as some modern historians have asserted. He ascended the throne on 23 Muharram 940/10 June 1246 through the joint efforts of Balban [q.v. in Suppl.], and Mahmud’s mother. Since Mahmud was weak and of a retiring disposition, devoting himself “to prayers and religious observances”, and he owed his throne to Balban, the latter became very powerful. He further strengthened his position by marrying his daughter to the young Sultan and securing the important office of wakil-i dar-āmīn and the title of Ulūkh Khān (Premier Khan). His younger brother, Sayf al-Dīn Abībak, was given the title of Kāshī Khān and made amīr-i hādij, while one of his cousins, Shīr Shāh, was appointed governor of Lahore and Bhatinda. In 651/1253, however, a eunuch named ‘Imād al-Dīn Rayhān, who was jealous of Balban, organised a group of discontented Indian Muslims and some Turks and succeeded in persuading the Sultan to dismiss Balban and his relations. They were accordingly ordered to leave for their respective tābi‘āt. Balban was replaced by Rayhān, who now became wakil-i dar and virtual ruler. Shīr Shāh was replaced by Arslīn Khān as governor of Lahore and Bhatinda. Deprived of power and position as a result of these changes, the Turkish element became discontented and organised itself under Balban’s leadership to overthrow the Sultan, and in Ramadān 652/October 1254, marched towards Dihli. Mahmud, under the influence of Rayhān and his followers, moved out against the rebels and encamped near Samana. Rayhān wanted an armed conflict, but Mahmud refused, because most of his nobles favoured Balban, and agreed on a compromise. Rayhān was dismissed and transferred first to Bahārī and then to Bādā’un. Balban was reappointed nāb and his
kinsmen and followers were reinstated. In consequence, the Turkish nobility, and with it Balban, became even more powerful and strongly entrenched than before.

But the problems which Balban had to confront were great, because Ilutmish had not been able to consolidate the Sultanate; nor had his immediate successors done anything to strengthen it. In fact, it was threatened with dissolution by refractory Hindu zamindars, ambitious provincial governors and Mongol pressure. Already in 645/1247-8, a year after Mahmud’s accession to the throne, Balban had led a campaign against a zamindar in the Dō āb and captured a fort called Talsindah in the Kannawdj district. He had then attacked a Rādjiūt chief “Dulka va Mulka”, who ruled over the area between the Djamnā and Kalindjar, and defeated and expelled him. It took Balban two campaigns to secure control over the “Katahriya infidels”, who ruled Bādā'ūn and Sambhal. Balban also reduced the refractory tribes of “Djarali and Datolī”.

But these successes were temporary, and he had to undertake annual campaigns in the Ganges-Djamnā area to maintain peace. In 646/1248-9 he attacked Ranthambor and Mēwāt, but the campaign was abortive. In fact, Balban’s efforts to subdue the Rādjiūt during Mahmud’s reign proved a failure; he had, although he had two conditions against the Mēwātīs [q.v.], who were led by the Rādjiūt and massacred a large number of them, he failed to crush them.

Owing to the preoccupation of Mahmūd’s government with the Mongols, who had become a great threat by 635/1237, the provincial governors raised the banner of revolt. Kūṭlugh Khān, Mahmūd’s stepfather, who held the province of Awadh [q.v.] and was anti-Balban, allied himself with Rayhan and defied royal authority. Balban therefore sent Sandjār Siwastānī to take over Bahrāʾī from Rayhan. But Kūṭlugh came to Rayhan’s aid, intercepted and seized Sandjār. Sandjār managed to escape and, having collected a small force, attacked Rayhan and killed him. Balban thereupon ordered Kūṭlugh to leave Awadh and take over Bahrāʾī; but the latter refused and rebelled against Balban and was defeated by the Rādjiūt and the Himalayan foothills. In 656/1258 he came out of his retreat, reoccupied Awadh and even made an attempt to occupy Karra and Mānūkūr; but Arslān Khān, who held the province, expelled him.

In 655/1257, Yuzbeki Tughrī, a Kipcak Turk, who was governor of Lakhnawtī [q.v.] defied the Dihli government. He led a successful expedition into Dīgnagar (Orissa), occupied Awadh and had the khutba recited in his name. But in a campaign in Kāṁrūp, he was taken prisoner by the forces of its Rādjiā and executed.

Yuzbek was succeeded by ʿĪzz al-Dīn Balbān-i Yuzbeki. But the latter did not rule long, for in 657/1259-60, Arslān Khān, governor of Kārrā, without Dihli’s permission, advanced on Lakhnawtī and seized it. Yuzbeki was defeated and slain. Owing to the central government’s preoccupations with other problems, it could do nothing. Fortunately however, Arslān Khān died on 18 Djamāda I 665/27 February 1265. The authority of Dihli over the Pangāb and Sind was weak partly because of the Mongol pressure and partly due to their distance from the centre. In 639/1241, Lahore had been occupied by the Mongols. Although Balban appealed to Dihli for help, Balban at once marched with a strong army, whereupon the Mongols withdrew. Balban placed Mūltān under Kūṭlugh Khān, while Uṭch was left with Kābīr’s family. Kūṭlugh was, however, allowed to annex Uṭch as well on condition that he relinquished Nagawur. But Kūṭlugh refused to give up Nagawur and did so only when he was compelled. In 647/1249-50 Hasan Karīgh returned from Lower Sind and seized Mūltān from Kūṭlugh. Yet he was not able to retain Mūltān long, for it was occupied by Shir Khān, governor of Lahore and Bhatinda, who not only refused to restore it to Kūṭlugh, but dispossessed him of Uṭch as well. It is more than probable that Shir Khān’s action was inspired by Balban.

Although Kīţlūgh was compensated by the governors of Bādā’ūn, he was not reconciled to the loss of Mūltān and joined the anti-Balban faction led by Rayhan. In spite of this, Kīţlūgh was, on Rayhan’s dismissal, given back his former possessions of Mūltān and Uṭch according to the settlement of 652/1254. But after establishing himself firmly, Kīţlūgh threw off the authority of Dihli and transferred his loyalty to Hūlegū, and Mahmūd’s government was not able to return to power. Not satisfied with this, Kīţlūgh, early in 655/1257, joined his father-in-law, Kūṭlugh Khān, and together they marched on Dihli. Balban moved out to meet them near Samana. While the two forces were preparing for a conflict, some religious leaders of Dihli sent word to Kīţlūgh that they would surrender the town to him. This leaked out and the conspirators were banished. So when the rebel army reached Dihli on 21 June 1257, after eluding Balban’s forces and Kīţlūgh found that no support was forthcoming, he returned to Uṭch. Nothing is known as to what happened to Kīţlūgh. But Kīţlūgh paid a visit to Hūlegū in “Irāk seeking help to attack Dihli and, at the end of 655/1257, a Mongol army under Saih Bāḥadūr arrived in Sind; but, deterred by Balban’s military preparations, it did not attack Dihli. Balban succeeded in occupying Bādā’ūn and the Pandjaḏ. Two Kīţlūghs tried to occupy Mūltān with Mongol help, but failed. Early in 656/1258, Hūlegū’s envoys arrived in Dihli. Balban organised outside the city a spectacle, consisting of soldiers and common people, human heads and corpses, to express the might and invincibility of the Sultanate. It seems that Balban was able to arrive at some understanding with Hūlegū, by which he was able to occupy Uṭch. Mahmūd died in 665/1266-7. No contemporary evidence exists to reveal the manner of his death. But Ibn Baṭṭūṭa and ʿĪṣāmī say that he was poisoned by the ambitious Balban, and this is not improbable. On Mahmūd’s death, Balban ascended the throne as Ghiyāḥ al-Dīn Balbān. Bibliography: Dūzdānī, Tabākht-i Nāṣirī, ed. ʿAbd al-Hayy Habibi, Kābul 1342/1963, also ed. 2. Mahmûd II, Nâsr al-dîn b. Sultân Muhammed Shah b. Frûz Shah Tabûqulq: ascended the throne of Dihlî on 20 Dîjâmâdâ 796/23 March 1394, on the death of his brother 'Alâ al-dîn Sîkan-dar Shah, after two weeks of discussion between the Frûz Shahi slaves and the Afghân Lodîs amîrs. Maharâmd tried to reconcile the nobles belonging to the two groups. He appointed Malik Sarwar, a eunuch, as supporter and went against Dîjâmâdâ 797/23 March 1395, as governor of Lahore. But on 15 Muharram 800/8 October 1397, Sârang was defeated by Tâtar Khân. Such was the condition of Dihlî and its provinces when the sultanate was in process of disintegration. Proceeds had declared their independence; even the territory around Dihlî was in state of turmoil. In Radjab 796/May 1394, Maharâmd sent Malik Sarwar to suppress the rebellion of a zamindâr in Dijumnâpûr and gave him the title of Sultan al-Shârqi. Malik Sarwar suppressed the rebellion, annexed considerable territory and founded the kingdom of Dijumnâpûr. Meanwhile, Bir Singh Deva, the Tomâr zamindâr of Dânamorl, attacked Gawîlâr [q. v.] and occupied it. Maharâmd marched towards Gwalîyâr with Sa'âdat Khân in 796/June 1394, leaving behind Mukarrâm Khân, the heir-designate, in charge of Dihlî. On approaching Gwalîyâr, Malik Ikbâl, however, escaped to Dihlî to the protection of Mukarrâm Khân. Maharâmd and Sa'âdat Khân therefore returned to Dihlî, but finding its gates closed to them, besieged it. In the course of the siege, which lasted for three months, Maharâmd became dissatisfied with Sa'âdat and went over to Mukarrâm. Thereupon Sa'âdat withdrew to Fîrizâbâd, which he seized, and, in Radj 801/January 1395, set up Nusrât Khân, another grandson of Fîriz Shah, as Sultan. But not long after, Sa'âdat's fellow-slaves turned against him and he fled to Dihlî, where Mukarrâm put him to death. However, the rebel slaves remained loyal to Nusrât Shah and recognised him as king. The result was that there were two rulers: Maharâmd, who was supported by the Lodis [q. v.] and held the forts of Dihlî and Sîrî and their suburbs, and Nusrât, who was supported by the slaves, and was in possession of Fîrizâbâd, including some parts of the Dîsâb, Sam-bâh, Pânîpât and Rohât. For three years skirmishes continued between the partisans of Maharâmd and those of Nusrât, until suddenly Malik Ikbâl, the most unscrupulous of the Dihlî nobles of the period, brought Nusrât to Dijânîpânâh and professed loyalty to him, but then attacked him. Nusrât fled to Fîrizâbâd and then to his wazir, Tâtar Khân, in Pânîpât. Malik Ikbâl occupied Fîrizâbâd and fought against Mukarrâm for two months, and then killed him. But he did not hurt Maharâmd, whom he now acknowledged as Sultan and whom he dominated.

Owing to these interregne conflicts, the Dihlî government was absolutely ineffective and, as Bâda'î'ânî was to observe later: 'the rule of the Sultan of Dihlî is from Dihlî to Pâlâm' (hukm-i shâhâdât-i 'alam ad Dîhllî tâ Pâmân). Ghûjarât, Râdijâshân, Bengal and Bihâr no longer acknowledged the authority of Dihlî: Kannâwâdî, Dalmâw, Awadh and Bahráîî were annexed to the new kingdom of Dijumnâpûr. The Hindû zamindârs to the east and west of Dihlî were in a state of rebellion. In the north-west, Khân Khân held Mûlân; but in 798/1395-6 Sârang Khân, who had been assigned Dijumnâpûr, attacked Khân Khân and seized Mûlân with the help of his brother, Malik Ikbâl. He then defeated Shâykhâ Khokar and appointed his younger brother, 'Adî Khân, as governor of Lahore. But on 15 Muharrâm 800/8 October 1397, Sârang was defeated by Tâtar Khân at the battle of Kôtâdî.

Such was the condition of Dihlî and its provinces when the sultanate was in process of disintegration. The sultanate was in the process of disintegration. Proceeds had declared their independence; even the territory around Dihlî was in state of turmoil. In Radjab 796/May 1394, Maharâmd sent Malik Sarwar to suppress the rebellion of a zamindâr in Dijumnâpûr and gave him the title of Sultan al-Shârqi. Malik Sarwar suppressed the rebellion, annexed considerable territory and founded the kingdom of Dijumnâpûr [q. v.].

Meanwhile, Bir Singh Deva, the Tomâr zamindâr of Dânamorl, attacked Gawîlâr [q. v.] and occupied it. Maharâmd marched towards Gwalîyâr with Sa'âdat Khân in 796/June 1394, leaving behind Mukarrâm Khân, the heir-designate, in charge of Dihlî. On approaching Gwalîyâr, Malik Ikbâl, however, escaped to Dihlî to the protection of Mukarrâm Khân. Maharâmd and Sa'âdat therefore returned to Dihlî, but finding its gates closed to them, besieged it. In the course of the siege, which lasted for three months, Maharâmd became dissatisfied with Sa'âdat and went over to Mukarrâm. Thereupon Sa'âdat withdrew to Fîrizâbâd, which he seized, and, in Radj 801/January 1395, set up Nusrât Khân, another grandson of Fîriz Shah, as Sultan. But not long after, Sa'âdat's fellow-slaves turned against him and he fled to Dihlî, where Mukarrâm put him to death. However, the rebel slaves remained loyal to Nusrât Shah and recognised him as king. The result was that there were two rulers: Maharâmd, who was supported by the Lodis [q. v.] and held the forts of Dihlî and Sîrî and their suburbs, and Nusrât, who was supported by the slaves, and was in possession of Fîrizâbâd, including some parts of the Dîsâb, Sam-bâh, Pânîpât and Rohât. For three years skirmishes continued between the partisans of Maharâmd and those of Nusrât, until suddenly Malik Ikbâl, the most
hearing that Muzaffar Shāh I of Gūḍəṛat was advancing towards Dvānpur, withdrew to save his capital. Mahmūd took advantage of ʿĪbrāhīm Shārkī’s retreat to occupy Baran (Bulandshahr) and Sambhal. It was a temporary success, for in Ramāḍān 811/January 1409, Khīḍr Khān sent Malik Ṭubhā, one of his lieutenants, to plunder the Dōʾ ʾalab, while he himself set out towards Dvāhpur and besieged Mahmūd in Sirī and Iḥṣīyār Khān in Fīrūzābād. Lack of provisions due to famine compelled Khīḍr to withdraw. But in 813/1410-11 he conquered Rohtak, and the next year he again invested Dvāhpur. Iḥṣīyār, who held Fīrūzābād, submitted, but Mahmūd held out in Sirī, and Khīḍr Khān was once again compelled to withdraw on account of the lack of provisions. Mahmūd died in Ṣafar 815/November 1412, and Dawlat Khān Lodū became the ruler of Dvāhpur. In Ramāḍān 816/November-December 1413, Khīḍr for the third time advanced on Dvāhpur and besieged Sirī. He was imprisoned in Hisar-Fīrūza, and Khīḍr obtained possession of Dvāhpur on 17 Rahl 1 817/June 1414, thus laying the foundations of the short-lived Sayyid dynasty.

(Mohibbul Hasan) **MAHMUD**, the name of three mediaeval rulers of Gūḍəṛat,[q.e.v.] in India.

1. MAHMUD I, SAYF AL-DIN, BEGARHA OR BEGRA, a younger brother of Sultan Kūb al-Dīn and son of Muhammad Shāh, ascended the throne on 1 Shāh 863/3 June 1459, at the age of thirteen, with the title of Khan-i Džahan. At the foot of the Gīrnār hills he founded the city of Mustafābād, which became one of his capitals.

2. MAHMUD II, NASIR AL-DIN, died without offering any resistance. It was suggested to Mahmūd that he should annex Sind but he refused, saying that his mother belonged to its ruling family. On his return from Sind, Mahmūd heard that Mawlānā Mahmūd Samarkandī, a poet and philosopher, who had long been in the service of the Bahmānī rulers, while sailing in a ship bound for Hormuz, had been driven to Dwārkā, situated in the north-western corner of Kāthiāwar, where pirates had robbed him of all his belongings, including his womenfolk. After many hardships, the Mawlānā arrived in Muṣṭafābād. Angry at his plight, the Sultan marched towards Dwārkā. Its Rajput chief, Būhm, took refuge in the island-fortress of Bet or Sankhodhār. Mahmūd marched through dense forests, full of wild animals, and invested it. Būhm was defeated in a sea fight and taken prisoner. The Mawlānā’s goods were now restored to him.

4. MAHMUD III, DARIJ AL-DIN, DARIJ AL-DIN, BEGARHA OR BEGRA, a younger brother of Sultan Kūb al-Dīn and son of Muhammad Shāh, ascended the throne on 1 Shāh 863/3 June 1459, at the age of thirteen, with the title of Khan-i Džahan. At the foot of the Gīrnār hills he founded the city of Mustafābād, which became one of his capitals.

In 866/1462, Mahmūd marched to the help of Nizām Shāh Bahmani, whose kingdom had been invaded by Mahmūd Khādīj I,[q.e.v.] of Māwā. But learning that Nizām Shāh had been defeated, he entered Khāndesh,[q.e.v.] and thereby cut off the retreat of Mahmūd Khādīj who had to make his way back through Gondwāna after much hardship. Next year again Mahmūd Khādīj invaded the Dakhan, but withdrew on hearing that Mahmūd Begārha was coming to Nizām Shāh’s assistance. Henceforth, the Khādījī ruler never again committed aggression against Nizām Shāh.

In 868/1464-65, Mahmūd invaded Dūn, situated between Gūḍəṛat and Kōṇkēn, because of its Rāja’s acts of piracy. The Rāja was defeated and his fortress occupied; but it was restored to him on condition of an annual tribute.

In 871/1466, Mahmūd attacked Gīrnār (Dūnāgarh), and compelled its chief, Rao Mandaḷik Gūḍasama, to pay tribute. But although Mahmūd received the tribute regularly, he decided to annex Gīrnār and led an invasion. The Rao retreated to his citadel of Uparkot, situated north-west of the town, but as supplies ran short, surrendered on 10 Dūmmād 875/December 1470. Mahmūd had to undertake three campaigns in four years to subdue the Rao. Gīrnār was annexed and its chief, having entered the service of the Sultan, embraced Islam and was given the title of Khādījī Džāhnī. At the foot of the Gīrnār hills the Sultan founded the city of Muṣṭafābād, which became one of his capitals.

Mahmūd next marched against the frontier tribes of the Sumrās, Sodhās and Kāhāls who lived on the Kaṭhō border and who, although claiming to be Muslims, were in fact ignorant of the ʿArāb’s. They surrendered without offering any resistance and agreed to send their leaders to Ahmadābād to be taught the tenets of Islam.

In 877/1473, the Dāṭī and Bālōc tribes rebelled against Mahmūd’s maternal grandfather, Dāṭā Nizām al-Dīn. Mahmūd crossed the Rann of Kaṭhō in order to suppress the rising, but the rebels dispersed without offering any resistance. It was suggested to Mahmūd that he should annex Sind but he refused, saying that his mother belonged to its ruling family. On his return from Sind, Mahmūd heard that Mawlānā Mahmūd Samarkandī, a poet and philosopher, which had long been in the service of the Bahmānī rulers, while sailing in a ship bound for Hormuz, had been driven to Dwārkā, situated in the north-western corner of Kāthiāwar, where pirates had robbed him of all his belongings, including his womenfolk. After many hardships, the Mawlānā arrived in Muṣṭafābād. Angry at his plight, the Sultan marched towards Dwārkā. Its Rajput chief, Būhm, took refuge in the island-fortress of Bet or Sankhodhār. Mahmūd marched through dense forests, full of wild animals, and invested it. Būhm was defeated in a sea fight and taken prisoner. The Mawlānā’s goods were now restored to him.

Tired of the Sultan’s constant wars and his plans of invading Cāmānpār, which would be a prolonged affair, the Gūḍārī patrons plotted to overthrow him and set up his son on the throne. But Ray Rayān, an important Hindū noble, revealed the plot to the Sultan, they fled. Mahmūd had thus crushed the plot by his courage and presence of mind. Malik Shāb bān, though restored to his office, soon retired and Mahmūd took the reins of government in his own hands.
Accordingly, on Dhu 'l-Ka'ba 887/12 December 1482, he marched towards Campaner on the pretext that its Rādja, Rawal Dājī Singh, had raided his kingdom. The Rādja was defeated and took refuge in the hill fortress of Pavagadh... Above Campaner, Mahmūd thereupon besieged it. But learning that Mahmūd Khālidī I, to whom the Rādja had appealed for aid, was marching towards Gudjārāt, Mahmūd left his officers to continue the siege, and he himself set out to intercept the Mālwa army. But as Mahmūd Khālidī withdrew to Mālwa, the Sultan returned to prosecute the siege. Supplied with a force of three thousand men, after a siege of forty days he captured the place with a bombshell, it was captured. Of the 700 Rādūpsīr, who performed the djəxvar, all were slain except the Rādja and his minister, who were seized and executed. But the Rādja's son accepted Islam and was given the title of Nizām al-Mulk and made the ruler of Idār. Čampaner was renamed Muhammadābād.

Mahmūd now turned his attention to Rādja Ādal Khān II of Khāndesh (861-907/1457-1501), who had not only not paid his annual tribute, but had dismissed his independence. In 904/1498, Mahmūd invaded Khāndesh and compelled its ruler to pay tribute and recognise his suzerainty. Later, on the death of Rādja Ādal Khān's son, Ghazni Khān (914/1508), who left no male heir, Mahmūd took part in the dispute over succession. Ahmad Nizām Shāh of Ahmadnagar, Īmād Shāh of Berār, and Husain Shāh of Gudjārāt, a powerful noble, all favoured Ālam Khān, who belonged to the Fārūqī dynasty. But Mahmūd supported his maternal grandson, also called Ālam Khān, and marched with him to Thālnār, the capital of the Fārūqī rulers. Thereupon, the rulers of Ahmadnagar and Berār, who had arrived in Bārmānpur, withdrew, and on 19 Dhu 'l-Hijādja 914/10 April 1509, Mahmūd installed Ālam Khān as Ādal Khān III on the throne of Khāndesh; and when, subsequently, a rebellion supported by Nizām Shāh broke out, he sent troops to the aid of his grandson, so that the rebels fled.

The Portuguese had diverted the trade between Europe and the East from the ancient route via Egypt and the Red Sea to the new route via the Cape of Good Hope, discovered by Vasco da Gama in 1498. So, in 1526, Alfonso (1410-86) of Portugal sent an expedition to the Gudjārāt coast to destroy the Portuguese power, Mahmūd readily sent his naval ship under Ayāz, a Turk in his service, to his help. In a naval battle off Chaul in Ramadan 913/January 1508, the Portuguese were defeated and their commander, Dom Lourenço, son of the Portuguese viceroy Almeida, was killed. To avenge the defeat and the death of his son, Almeida attacked the combined Egyptian and Gudjārāt navy near Diu and scored a victory. Impressed by this victory, the Sultan sent an ambassador to the Portuguese Viceroy, Alburquerque (1505-15), and a treaty was concluded. It was agreed that the Portuguese would not hinder Gudjārāt trade and would respect the right of Gudjārāt vessels to ply in the Indian waters. In return, the Portuguese prisoners would be released and the Portuguese vessels would be permitted to visit the Gudjārāt ports. Mahmūd released the prisoners of war and offered the Portuguese a site for a factory at Diu.

Mahmūd died on 2 Ramadan 917/23 November 1464. He had been a great builder, and his reign was the most prosperous period of mediaeval Gudjārāt. Brave, just and liberal, possessing great energy and a strong will, he was not only a military genius but also an able administrator. He appointed able officers like Malik Gopi, his Hindu chief minister, to carry on the government. He advanced money to religious houses, he well maintained his planted trees on both sides of the roads, made roads safe for travellers and merchants, freed the country from internal strife and tried to exterminate piracy. Owing to these measures, trade increased, agriculture flourished and the people became prosperous. Mahmūd was a cultured ruler and enjoyed the society of learned men. He had the famous biographical dictionary of Ibn Khallikān translated into Persian, under the name of Manzar al-Islām. He also patronised Sanskrit, and his court poet Udārayādī wrote a poem in his praise. He was also a great builder, and his contribution to Gudjārāt architecture is considerable. He laid out two beautiful gardens, Bāgh-i Firdaws and Bāgh-i Shāhī 8bānī near Ahmadābād. He founded the towns of Musulābād, Muhammadābād and Muhammadābād-Cāmpaner and embellished them with palaces and mosques. He beautified Ahmadābād with broad streets and a number of fine buildings. At Cāmpaner he constructed a magnificent Djamā Masjīd, and at Sārkhādī he built for himself on the banks of a reservoir a grand palace. The fame of Mahmūd's achievements spread far and wide; in Sāfār 914/June 1508, an embassy came from Sikandar Lodi of Delhi. This embassy also visited from Shāh Ḩusain Islām of Persia, but as the Sultan was lying seriously ill he could not receive the Persian envoy.

be assassinated on the night of 14 Sha'ban 932/27 May 1526, and raised to the throne Muzaffar Shah of his six-year-old son Naṣīr Khān as Māḥmūd II. However, jealous of Ḵūshkādām, who was the de facto ruler, the nobles, led by Ṭāj Khān Nāripūlī, offered the throne to Muzaffar Šāh's second son, ʿAlāʾūd-Dīn Khān; Ḵūshkādām appealed to the neighbouring princes and to Bābur, but received no help. On receiving the nobles' invitation, Bābār, who was on his way to Djiawnpur to try his fortune there, rushed back to Ḍuṣmānābād and ascended the throne on 26 Rāmāḍān 932/July 1526. From Ḍuṣmānābād he marched to Cāmpanārī, and having occupied the fort with little out meeting much resistance, executed Ḵūshkādām and later Māḥmūd II, whose reign of about forty days thus came to an end.

**Bibliography:** See that for MĀḤMŪD I; also Mīr ʿAbū Turāb Wālī, Taʿrīḥ Gǔdarjārā, ed. E. D. Ross, Bibl. Ind., Calcutta 1909.

3. MĀḤMŪD III, ʿAḤŪṬ-ŪFĪ ṢĀʿĪD EṢṢ-DĪN, was the third son of Lāṭīf Šāh, son of Sīrūr, Muzaffar Šāh II. On the death of Bābār Šāh on 3 Rāmāḍān 943/13 February 1537, who left no son, Muhammad Zamān Mīrzā, the Empress Humayūn's brother-in-law, claimed the throne on the ground that Bābār Šāh's mother had adopted him as his heir, and he had the ḵūla recited in his name in the Djiāmī Maṣqūdī at Bābār. But the Gǔdarjārā nobles refused to acknowledge him as Sultan and offered the throne to Mīrzā Muhammad Šāh Fārūqī, son of Bābār Šāh's sister. Mīrzā set out from Būrān- pūr, but died on the way (962/1557). Thereupon, the nobles decided to set up on the throne Lāṭīf's younger son Māḥmūd Khān, who, during the reign of Bābār Šāh, had been in the custody of Mīrzā Muhammad Šāh of Khāndesh. But Mūbārak Šāh, Mīrzā's successor, refused to release him, he himself being a claimant to the throne of Gǔdarjārī. So Khān Siyāvūn Khān Siddīkī invaded Khāndesh and brought Māḥmūd to Ahmadābād, where he was enthroned as ʿAḥūṭ-Ūfūḥāt, Saʿīd d-EṣṢ-dīn Māḥmūd Šāh III. But as Māḥmūd was only eleven years of age, Iḥtiyār Khān became the Regent. He was an able man, but jealous of his power, and Muhāfīz Khān and Dārūy Khān had him assassinated. But these two last soon fell out and fought with each other to dominate Māḥmūd. Dārūy Khān emerged victorious; but not long after he was replaced by ʿAlām Khān, another noble, who now dominated the young Sultan. In 856/1546 Māḥmūd, weary of being a puppet king, decided to assert himself and shifted his capital to Ahmadābād, which had been founded by Māḥmūd I.

On 4 September 1538, Sulaymān Pāḫa, the Ottoman governor of Egypt, arrived off the coast of Diū with a large fleet in order to overthrow the Portuguese power in the Indian waters. Māḥmūd helped him when, in Diūmādā I 945/October 1538, he attacked Diū abortively. In 14/1454, Māḥmūd himself made an attempt to seize Diū. The Portuguese governor, Dom Joāo de Castro, retaliated by committing great atrocities on the Gǔdarjārī coast: Realising the inviability of the Portuguese, Māḥmūd made peace with them and granted them favourable terms. In 1551 Māḥmūd thought of invading Mālwā, but instead directed his attention to the suppression of Rājpūt landlords, who had rebelled because of the resumption of the large land grants which they held. The rebellion was crushed with great severity and their lands were seized; but the Rājpūt peasant was not interfered with. Māḥmūd was planning to march towards Māndū to the help of the Emperor Humāyūn when, on the night of 12 Rābiʿ I 961/15 February 1554, he was assassinated by his attendant Būhrān dūn, in revenge for the punishment which he had once inflicted on him.

Māḥmūd was weak and incompetent, but capable of committing acts of cruelty and of displaying occasional outbursts of energy. He was nevertheless generous and distributed food and clothes to the poor, and in winter gave them firewood and even bedding. He was a cultured prince and fond of the society of the learned and the pious. In Ahmadābād he erected an enclosure, six miles in area, which he named the Deer Park (Diāmūn), and in which various kinds of wild animals roamed freely. He built in it splendid buildings and laid out nice gardens and spent his time there in the company of beautiful women, with whom he hunted and played polo.

Māḥmūd left no male heir because, dreading that he would have a rival, he used to procure the abortion of any of his women who happened to become pregnant. So after Māḥmūd's death, the nobles asserted their independence in their districts and fought with each other for power. They first set up a boy, who was related to him as Sultan with the title of Ahmad III, who ruled nominally until 968/1561, and then Muzaffar III who reigned until 980/1572, when the Emperor Akbar invaded Gǔdarjārī and put an end to the prevailing chaos by annexing it.

**Bibliography:** See those for MĀḤMŪD I and MĀḤMŪD II of Gǔdarjārā son (MǔḤRĪBUL ḤASĀN)
out of Mandū towards Sārangpur. This led to the recall of Prince Muhammad by his father. Mahmūd, having prevented any help reaching ‘Umar Khān, defeated and killed him and then, on hearing that Ahmad Shāh had withdrawn to Gudjarat because plague had broken out in his army, he returned to Mandū. But after seventeen days, he set out towards Cānderī and captured it after a siege of four months. Here he received a request of help from Bahār Khān, mutakā 4 of Shahr-i Naw, which was being invested by Dungar Sen of Gwālīyār [q.v.]. Mahmūd, instead of marching towards Shahr-i Naw, advanced towards Gwālīyār. This strategy was successful, because Dungar Sen, realising the danger to his capital, retired from Shahr-i Naw. Mahmūd, having achieved his object, withdrew from Gwālīyār and proceeded to Shahr-i Naw, where Bahār Khān acknowledged his suzerainty.

After consolidating his position, Mahmūd in 848/1440-1 turned his attention towards the border chiefs. He first advanced on Khandwā, situated between Mālāwā and Khāndehāq and of great strategic importance. Ray Narhar Dās, its chief, finding himself unable to resist, fled, so that Mahmūd was able to annex it, along with Khorā and Khikrī, and secured the submission of Kherlā’s chief, Narsingh Deva. From Kherlā [q.v.], Mahmūd marched towards Sargūjā. On the way, the petty zamindārs sent elephants as tribute and begged him to spare their territories. Rājā Bhodjā of Sargūjā submitted and promised to supply elephants to the Sūltān. Similarly, the mukaddams of Raypur and Ratanpur came forward with elephants as tribute. Mahmūd returned from Sargūjā to Mandū in 845/1441-2.

Mahmūd’s reputation having spread far and wide, some of the šāhān 2 of Dihlī invited him to overthrow its Sayyid ruler, Sultān Muhammad Shāh (837-47/1434-43). Mahmūd accepted the invitation and set out towards Dihlī at the end of 845/1442. But in an engagement near Dihlī he was unable to defeat Prince ‘Alī 3 al-Dīn, Sultān Muhammad Shāh’s son, and, finding no hope of future success, he returned to Mandū on 1 Muharram 846/12 May 1442.

Mahmūd now turned his attention to Rānā Kumhār of Mewār, who had caused him to retire a grievance. The Rānā had helped Prince ‘Umar Khān of Gudjarat to seize the throne of Mālāwā, and had reduced the Rājdūpū tribes on the borders of Mālāwā, which had accepted the suzerainty of Sultān Hushang Shāh. Mahmūd took advantage of the rivalry between the Sisodīās and the Rāthrōs and of the struggle for power between Rānā Kumbhā and his brother, Khem Karon. Since the latter was expelled by the Rānā, Mahmūd used it as a pretext for its invasion. On 26 Dhu ‘1-Hijdūd 846/30 November 1442, he advanced towards Mewār. On reaching Kumbhalgarh, he attacked the Banmata temple, situated at its base, occupied it after seven days and razed it to the ground because it contained arms for the defence of the main fort and, although outwardly a temple, formed part of the defences of the main fort. Mahmūd then marched towards Cītor, but before he could attack it, he heard the news of his father’s death in Mandasor. He therefore proceeded to Mandasor and, after the period of mourning was over, returned to Cītor, but finding its capture difficult, returned to Mandū and decided to reduce Mewār gradually. So on 13 Shawwāl 847/3 February 1444 he occupied Gagrawn and named it Mustafābād. Two years later he reduced Kruddā, the last of the Bahmani strongholds on the borders of Mālāwā, but failed. In 851/1447-8, he marched on Gwālīyār and defeated Dungar Sen, who was compelled to retreat into his fort. Mahmūd proceeded to Agra and thence to Bayana, whose chief, Muhammad Khān, submitted to him. In 859/1455, Mahmūd occupied Aqīmār and, early in 861/January 1457, he besieged the strong fort of Mandalgarh. He took it on 1 Dhu ‘1-Hijdūd 861/20 October 1457, by first breaking the dams of the fort’s reservoir, which caused the water to flow out, and then affecting a breach in the fort’s walls. He destroyed an old temple and built a mosque in its place, and returned to Mandū after arranging for its administration. Until the end of his life Mahmūd made several attempts to reduce Cītor, but failed; and although he defeated Rānā Kumbhā, he failed to crush him and occupy any large part of Mewār.

In Sha‘bān 848/January 1444, Mahmūd came into conflict with the Shinjīrī ruler of Dīwān Bīr [q.v.], who had occupied Kālpī and refused to restore it to Naṣīr Khān, his vassal. This led to an armed conflict. However, through the mediation of the Shāykh al-Islām, Sayyidnā Dālī, who enjoyed the respect of both the Sultāns, a settlement was arrived at and Kālpī was given back to Naṣīr Khān [see MAHMUD SHAH SHARJHI].

Mahmūd, taking advantage of the incompetence of Muhammad Shāh of Gudjarat, tried to interfere in the affairs of his kingdom. Accordingly, in 854/1450 he set out to the assistance of Ganga Dās of Čāmpāner, which had been attacked by Muhammad Shāh. But instead of marching to Čāmpāner, he directed his attack on Ahmadābād, capital of Gudjarat. Alarmed for the safety of his capital, Muhammad Shāh raised the siege of Čāmpāner and returned to Ahmadābād. Meanwhile, having received an invitation for the invasion of Gudjarat, Mahmūd marched at the end of 854/January 1451 and entered Gudjarat. But since Muhammad Shāh had died, Mahmūd found himself confronted by his successor, Kutb al-Dīn, at Kāparbandī. On the last night of Safar 855/2 April 1451, he made a night attack on the Gudjarat army, but it proved abortive. In an engagement the next day, Mahmūd suffered a defeat and had to retreat with the loss of eighty elephants and his baggage. On his return to Māndū, Mahmūd, to avenge his defeat, sent Prince Ghānī to raid the Gudjarat ports of Sūrat and Rainder. Accordingly, the prince plundered the suburbs and countryside of Sūrat and returned to Māndū with the booty. However, realising that his chances of success against the Gudjarat army were remote, Mahmūd decided to compel Kutb al-Dīn to make peace by a show of his military power. This device worked, for when, on 6 Dhu ‘1-Hijdūd 855/30 December 1451, he sent an army to invade Gudjarat, Kutb al-Dīn agreed upon a treaty by which they were to respect each other’s territories and Mewār was to be divided into two parts for the military activities of the two rulers.

In Muharram 857/January-February 1455, Mahmūd invaded the Deccan under the impression that the Bahmani Sultān ‘Alī 3 al-Dīn Ahmad II, had died. But on reaching the borders of Mālāwā, he discovered that the Bahmani ruler was not only alive, but had personally come to attack him; hence he returned to Mālāwā.

In 866/1461 Mahmūd again invaded the Deccan, defeated the Bahmani forces at Maheshkar on the Mandjar river and invested Bīdār. The Dūwghar Queen, mother of the boy-king, Nizām Shāh, sent an army under Mahmūd Gāwān and at the same time approached Mahmūd I of Gudjarat [q.v.] for aid. Realising that he was not strong enough to fight the two armies simultaneously, Mahmūd withdrew to
Mâlwa. He for the third time invaded the Deccan on 26 Rabî‘ al-Awwal 867/19 December 1462, and occupied Dawlatabad, but his advance was stopped. But since the route via Khândeh was blocked by the Gujarati forces, Mahmūd had to make his way back through the forests of Gondwâna and suffer great hardship. Convinced that he would not be able to conquer the Deccan, Mahmūd came to a settlement with the Bahmanids. It was agreed that Elijpur in Malwa and the Bahmanids, and that Mahmūd would not in future invade the Deccan.

Mahmūd died on 19 Dhu ‘l-Ka‘da 873/31 May 1469 at the age of sixty-eight and was succeeded by his eldest son, Ghiyâth al-Dîn Shah. He had been a precocious child and, impressed by his intelligence, Sultān Husânh Shâh used to keep him by his side, and gave him the title of Khân when he was only sixteen. So it was no surprise that Mahmūd proved to be the greatest ruler of mediaeval Mâlwa, which reached the height of glory under him. He was wise, brave and benevolent, and a man of great energy and determination.

Although religious, he was tolerant towards Hindus and associated them in his government; Sangrâma Singh was his treasurer and Rây Rayân Siva was one of his most important and respected nobles. It tried some time to settle, but this was done in the territory of his enemies in the course of his campaigns; in his own kingdom he respected the sanctity of Hindu places of worship.

Mahmūd tried to promote the welfare of his subjects. When the crops were damaged by the marches and counter-marches of his troops, he compensated the peasants for their losses. He encouraged trade by patronising the Jains and encouraging them to settle in Malwa, and he made the roads safe for the movements of goods. He established a big hospital in Mândū which he richly endowed. He also opened a college with a hostel, where board and lodging was provided for both teachers and students.

The fame of Mahmūd’s achievements reached as far as distant Egypt and Transoxiana. In 867/1462 al-Muzaffar ibn Khân, the puppet 'Abdâl Shâh of Egypt, sent an envoy to Mândū with a Khâtâ [q. v.] and a diploma of investiture, conferring on Mahmūd sovereign powers. Some years later, in 867/1462, an envoy came from Timūr’s great-grandson, Abī Sa‘îd of Transoxiana and Khûrâsân, with presents for Mahmūd. In return, when the envoy left, he was accompanied by Prince Abī ‘Alâ‘ ibn Khân and his father’s envoy and carried rich presents for Abū Sa‘îd. Unfortunately, no details of Mahmūd’s mission to Harât are available.

Mahmūd was an enthusiastic builder. He completed the mosque and tomb of Husâh Shâh, whose foundations had been laid by the latter. He also erected ten colleges to build monuments to his victory over Rânâ Kunbha of Mewâr.

2. MAHMUD KHALDJî I, whose real name was ‘A‘âmum Hûmâyûn, the third son of Sultan Naṣîr al-Dîn Shâh (906-16/1501-10). The latter had designated his eldest son, Shîhâb al-Dîn, as his successor, but as Shîhâb al-Dîn had rebelled, he nominated ‘A‘âmum Hûmâyûn to succeed him, and gave him the title of Shâh Shâh. Accordingly, on the death of his father, Mahmūd declared himself Sultan. But his two elder brothers, Shîhâb al-Dîn and Shâhîb Khân, refused to recognise him. The former set out towards Mándû, but his advance was checked by Muḥâfîz Khân and Khawâsî Khân, who were in favour of Mahmūd. In consequence, he retired to Khândeh [q. v.]. Mahmūd, who had been following him, succeeded in entering Mándû and ascended the throne on 6 Rabî‘ al-Âsir 1 917/5 June 1511.

Mahmūd was weak, incompetent, fickle-minded and a puppet in the hands of his nobles, who struggled with each other to dominate him. He first came under the influence of ‘Alâ‘ Khân and Muḥâfîz Khân, who were so powerful as to assassinate the wâzîr, Basant Rây, in the audience hall, and secure the banishment of Sangrâma Singh, his minister. But Muḥâfîz Khân soon turned against them and allowed himself to be dominated by Muḥâfîz Khân. ‘Alâ‘ Khân and Muḥâfîz Khân thereupon recalled Shîhâb al-Dîn, and finding their life in danger, left Mándû to join the pretender. Shîhâb al-Dîn advanced from Khândeh by quick marches, but died on the way due to heat and exhaustion. Meanwhile, Mahmūd, weary of Muḥâfîz Khân’s domination tried to overthrow him. But before he could take any action, the minister himself struck and raised to the throne his elder brother, Shâhîb Khân, as Muhammad Shâh II. Mahmūd, finding himself helpless, escaped from Mândû and went first to ‘Ujîdâyin and then to Cândri, where his governor refused to help him. However, he secured the help of Ray Când Pûriya, upon whom he conferred the title of ‘Alâ‘ Khân, and attacked Sahîb Khân. He defeated him and then besieged him in Mándû. Shâhîb Khân, unable to hold out, fled to Gudjârât with Muḥâfîz Khân and was given protection by its ruler, Muzafâr II.

Mahmūd, in recognition of Medni Rây’s services, made him his wâzîr. But this aroused the hostility of the nobles like Sikandâr Khân of Satwas and Bahdjat Khân of Cândri, who rebelled and took up the cause of Shâhîb Khân, who had returned to Mâlwa. Medni Rây succeeded in reducing Sikandar Khân to obedience, but operations against the other rebels had to be postponed because Muzafâr II invaded Malwâ and besieged Mándû. Fortunately, however, finding Mándû too strong to be reduced, Muzafâr withdrew and Mahmūd, with Medni Rây’s help, was able to occupy Cândri and expel Shâhîb Khân in ‘Umâdâ I 920/July 1514.

The victories achieved by Medni Rây made him very powerful, and he began to fill all the important posts by his own Râjpûts followers, dismissing old Muslim officers. Mahmūd resented these changes, and chafing under Medni Rây’s domination, demanded that the dismissed Muslim officers be reinstated, and that the Râjpûts should not keep Muslim women as mistresses. Medni Rây accepted their demands, but his assistant Salîvâhan refused. Mahmūd therefore decided to get rid of both of them by assassination. Medni Rây escaped with minor in-
juries, but Salivahan was killed. This led to the revolt of the Radjputs. Medni Rây, however, pacified them and continued as wâzîr. But Mahmûd, having failed to overthrow him, escaped from Mandû at the end of 923/1517 to Guджràt and sought the aid of Mużaffar II. The latter, thereupon, invaded Mâwîlî in order to restore Mahmûd’s authority. On hearing of the invasion, Medni Rây proceeded to Çitor to seek the aid of Rânà Sàngarámã Sêngî, leaving his son, Rây Pithora, in charge of Mañfûd. Meanwhile, Mużaffar II invested Mândû and having taken it by an escalade on 4 Safar 924/15 February 1518, ordered the massacre of the Radjputs who had defended the fort. He reinstated Mahmûd and returned to Guджràt, leaving behind 10,000 troops for his protection.

These events completely alienated Medni Rây and his Râджût followers from Mahmûd. Medni Rây oc-cupied Gâgrawân and, when Mahmûd besieged him, he appealed to Rânà Sàngarâmã Sêngî for help. The Rânà marched to his relief. Mahmûd raised the siege and set out to intercede the Rânà, but was defeated, wounded and taken prisoner. He was taken to Çitor, and allowed to return to Mâwîlî after his wounds were healed, but had to surrender his crown and leave behind his son as a hostage. On his return to Mândû, he found his position ex-tremely weak; and it was further weakened by the withdrawal of the Guджràtî forces by Mużaffar II at his request. The result was that Rânà Sanga occupied Mân-dasor; Medni Rây seized Çandere; Sîlhdâi oc-cupied Bhîlsa and Raisin; and Sikandar Kîhân declared his independence in Satwa. The disintegra-tion of Mahmûd’s power was almost complete, and he was left with only a small territory around Mândû. But instead of consolidating his position and trying to recover his territories, Mahmûd committed the mistake of giving asylum and support to Çand Kîhân against his brother, Bahâdur Kîhân, who had ascended the throne of Guджràt. Bahâdur Kîhân was greatly offended and invaded Mâwîlî. He besieged Mâyûd, captured it by assault on 9 Shá’îbân 937/2 April 1531, and caused the khutba to be recited in his name. Mâwîlî thus passed into his possession. Mahmûd and his sons were sent as prisoners to Campaner. On the way, he made an attempt to escape, but was seized and killed along with his sons on the night of 14 Shá’îbân 837/2 April 1531; with his death the Khâlîjî dynasty of Mâwîlî came to an end.

MAHMÚD, the name of two Ottoman sul-tans.

1. MAHMÛD I (1143-68/1730-54), (with the title of Çâhâzî and the literary nom-de-plume of Sabkâtî). The eldest son of Sultan Müştafî II, he was born on the night of 3 Muharram 1108/2 August 1696 in the Palace at Edirne. His mother was Wâhlî Sâlîba Sultân. He undertook his first studies on Wednesday, 20 Dhu ‘l-Hijja 1113/18 May 1702 with a grand ceremony at the Edirne Palace which his father Muştafî II attended in person, and was given his first lesson by the Şaykh al-Islâm Sayyid Fâyîd Allâh Efendi. In due course, the latter’s son Rûmûlî Pâvîlî Ibrahim Efendi was appointed to act as his tutor. Following the deposition of his father Muştafî II as a result of the “Edirne Incident” and the accession of his uncle Ahmed III on 10 Rabî’î 1 1115/23 August 1703, Prince Mahmûd, together with his mother and her other children, was taken into custody by the in-surgents at the Palace in Edirne and was subsequently taken to Istanbul along with the Ottoman palace staff and shut up in a private apartment in the Imperial Palace (the Sarâ-yî dêjîdî). His circumcision was ef-fected with a simple ceremony on Thursday, 22 Dhu ‘l-Hijja 1116/17 April 1705.

Prince Mahmûd’s life of seclusion in the Palace continued for 27 years up to 1730. It was only when Ahmed III was forced to abdicate the Ottoman throne as a result of the Patrona Khâlîf revolt that he was set free, becoming sultan on Monday, 19 Rabî’î 1 1143/2 October 1730. Having ordered his release from the apartment in the Palace where he had been shut up, his uncle invited Mahmûd to spend the night of 1-2 October with him so that he could advise him on the administration of the Empire. He then joined his two sons in swearing allegiance to Mahmûd and was thus the first to recognise him officially as sultan. The formal-ities necessary for his accession were completed at Eyyûb on Friday, 23 Rabî’î 1 1143/6 October 1730, when he girded on the sword and the khutba was read in his name for the first time.

During the first days of Mahmûd’s reign, the rebels had complete control over the affairs of the state. In particular, their leader Patrona Khâlîf forced the sultan to carry out his wishes with regard to new ap-pointments, while Mahmûd I also complied with the rebels’ demands by agreeing to the abolition of one category of taxes and to changes in the way some others were collected, and he had to sit idly by as the buildings at pleasure-grounds such as Kâhîfîhâmîne and Fenerbahcîhâmîne were despoiled by the in-surgents. However, disorderly conduct of this kind was not permitted for much longer. Under the leadership of Mahmûd’s mother Sâlîba Sultân, some of the Empire’s most experienced statesmen—the Kislâr ahgâtî Bèshîr Agha, Kaplan Gîrây, a former Khân of the Crimea, and the Kapudan-i deryâ Dânîm Khôdîa Mehmêd Pâgha—cooperated with Kabakûlak Ibrahim Agha and others in arranging for the leading rebels to be put to death in the Imperial Palace—inside the Rewân Kâs’r and the Sûnnet Odâsî—on 25 November 1730, and Mahmûd was thus assured of the freedom to rule without such interventions.

Despite the outbreak of a second uprising on 25 March 1731, which seems to have been a continuation of the first revolt and may even have been organised by Bâhrî Mas’ud, the daughter of Abdîm III and widow of the executed Grand Vizier Newâbêhéhî Ibrahim Pâgha, in order to revenge herself on the new Sultan, the people’s manifest support for Mahmûd and the strong measures taken by the Grand Vizier Kabakûlak Ibrahim Pâgha and the Kapudan-i deryâ Dânîm Khôdîa Mehmêd Pâgha meant that this disturbance was confined to the neighbourhoods of Bâyezîdî and Aksaray and was suppressed before it could gain strength.

After achieving a strong position in the internal af-fairs of the Empire, Mahmûd I turned his attention to the problems facing it abroad. His first moves were against Nâdîr Shâh, who was causing the Ottoman Empire difficulties in the East. The forces which he sent against Iran under the command of the governor of Baghîdâd, Eyyûbî Ahmêd Pâgha, won the first suc-cess of his reign at the battle of Koridjan on 13 Rabî’î 1 1144/14/15 September 1731, and by the treaty signed on 10 January 1732 the Safawî ruler Shâh Tâhêmâtî II agreed to cede the districts of Gangjâ, Tîfîs, Rewân, Shîrvân and Dâghîstân to Mahmûd. Never-theless, the war between the Ottomans and Iran could not be concluded because of Mahmûd’s objections over the question of Tabriz, and it continued to rage with full force through the districts of al-Mawât, Kûrkî, Baghîdâd, Tabriz, Gangjâ, Tîfîs and Kars until the end of 1735, during the period when Nâdîr
Shāh was acting as guardian to ʿAbbas Mirzā (III). It was on account of the successes of the Ottoman forces during the early years of this war that Mahmūd I adopted the title of Ghāzi. Later on, however, the Ottoman army suffered defeat after defeat and eventual-ly, as a result of negotiations which were initially conducted by the representatives of Nādir Shāh and a Turkish delegation under the commander of Gandja, GenʿAli Pasha, in the Mughān steppe in Adhar-baydājān and later by an Iranian delegation led by ʿAbd al-Bākī Khān and Mahmūd I himself in Istanbul, an agreement was reached between the two powers which dealt with the border question but left the modāghbāh dispute unsettled.

At this point, Nādir Shāh wished to turn his attention to Iran's eastern borders, while Mahmūd I was intent on dealing with the Russian threat from the north. Relations between Mahmūd I and the Russian Empress Anna Ivanovna had been soured by the Polish question and a number of other border disputes, and, because, in the course of the struggle with Nādir for control of Kars and the surrounding area in 1735, a contingent of Crimean troops had crossed Kabartay territory on their way to reinforce the Ottoman army in northeastern Anatolia. Finally, after the Russian attack on the fortress of Azak on 31 March 1756, Mahmūd I held a great divān in Istanbul on 2 May and personally took the decision to declare war on Russia. However, Tāmāl Khān, the Habusburg Emperor's representative in Istanbul, who later joined the Ottoman army in the field, followed a policy of distracting the Ottoman government with plans for peace, this campaign was not given the necessary degree of importance and the Ottoman commanders were therefore unable to gain any success during the first year. Furthermore, from June 1737 onwards, while the Habusburg Emperor Charles VI took Russia's side in this war, Mahmūd I was forced to defend the borders of the Empire along a very broad front. There were engagements on the banks of the Sava in northern Bosnia, in the Nish and Vidin areas south of Belgrade as well as in Little Wallachia, along the Aksu (Bug) and Turla (Dnestr) rivers near Özü and Bender, in the Crimea, and around Azak. In his attempts to gain the upper hand against both these states, Mahmūd I frequently changed his Grand Vizier. Eventually, the victories which the Ottoman forces won against the Austrians on the western front, which was considered the more important, forced both states to come to terms with Mahmūd through the good offices of the French ambassador, the Marquis de Villeneuve, and led to the signing of the treaty of Belgrade on 18 September 1737.

Mahmūd I thereby regained from the Habusburg Empire a number of towns, Belgrade being the most important, which had been lost by the treaty of Passarowitz in 1718. For their part, the Russians had to evacuate several areas they had occupied in northern Moldavia. In return for the Marquis de Villeneuve's services, France's commercial advantages were increased by the capitulation dated 30 May 1740. At the same time, in order to improve his political relations with Russia, Mahmūd I sent the Deftomēnī Mehmed Emni Beyefendi on an embassy to St Petersburg, while the Birindī ṭuğlūkandī Djanīb ʿAli Efendi was dispatched as ambassador to the Habusburg Empire. Meanwhile, a commercial treaty had been signed with the kingdom of Sweden in 1737 and a defence pact in 1740, in which same year a purely commercial agreement was reached between the Ottoman Empire and the kingdom of the Qajar Sālihs. However, while Mahmūd I was still putting his political relations with the European states in good order, his relations with Nādir Shāh reached another crisis point. Nādir Shāh, who had returned from his campaign in India, again marched to Iran's western borders and laid siege to the border cities of Baghādād and Kīrkūk in the spring of 1743 under the pretext that, during the truce, Mahmūd I had not accepted the Qīrāfī school as the fifth modāghbāh, as Nādir had proposed. Because the Turkish mission which Mahmūd I had previously sent to Iran under Mūṁī Muṣṭafā Efendi in July 1741 had been unable to prolong the good relations with Nādir Shāh, the second phase of the war between the Ottomans and Iran had begun before the gates of Baghādād, Kīrkūk and al-Mawṣīl. However, Mahmūd I, with the assistance of Ahmad Pasha, the Ser'ater of Kars, had Šafī Mirzā, a member of the Safawī dynasty who was living in the Ottoman Empire, sent to the Iranian frontier and turned a number of khanān in the Dāḡjāstan and Shir-wān areas south of the Caucasus against Nādir Shāh by granting them their independence. Nādir Shāh was therefore unable to remain in the Baghādād and al-Mawṣīl areas and had to lift the sieges of these two cities and abandon Kīrkūk, which he had already taken, in order to move to the area around Kars. The fighting in this area and around Rewān continued until the end of 1745. In the end, in the face of the determination and perseverance shown by Mahmūd I and despite the fact that he had gained a number of victories, Nādir Shāh, who was also influenced by events at home, abandoned the struggle for the Kars region and made a serious peace proposal to Mahmūd. The peace negotiations between the Ottomans and Iran began at a great divān on 1 February 1746, after the delegation which Nādir had sent under the leadership of FāthʿAlī Khān had arrived in Istanbul.

Mahmūd I reacted favourably to the proposals put forward by Nādir Shāh on this occasion and, having decided upon a new border settlement which was based on the Kār-i Shīrīn treaty of 1639, but leaving aside the problem of the Qīrāfī school, he dispatched a Turkish delegation to Iran under the leadership of Muṣṭafā Nazīf Efendi on 9 March 1746 with authority to negotiate with Nādir Shāh. This delegation met Nādir Shāh in the Kirmānshāh and around Azakh, and, as a result of their negotiations, peace was declared between the two states on 17 Shāban 1159/4 September 1746. Mahmūd I, who signed the instruments of this settlement in December 1746, sent the text of the treaty back to Nādir Shāh in the care of the ambassador Kēsrīyēl Ṭahmāb Pāḥa.

After Nādir's death, Mahmūd I followed a conciliatory policy towards his neighbours such as Iran, Russia and Austria up until his own death. Meanwhile, however, the internal problems of the Empire, such as the agitation among the Palace Aghas, after the death of the Kūstār ṣagāši Behgīr Aḥsā, the suppression of the Lewend bandits [q.v.], who were bringing destruction to Anatolia, the murder of Sayyīd Faḍī in Syria, the revolt of the Janissary garrison at Nīsh, the Wahbābi movement in Nagīd, the uprising in Istanbul on 2 July 1748, and many other similar incidents, occupied his attention. Mahmūd died at the Demirkapī in the Imperial Palace while on his way back from the Friday prayers on 27 Safar 1168/13 December 1754. He was not interred in the mausoleum which he had built beside the Nūr-i ʿOṯmānīyye mosque, but was buried beside his grandfather Mehmed Meḥmed IV and his father Muṣṭafā II in the mausoleum of Wālīde Turḥān Kaḥīdījī Soltānī in the mosque of ʿOṯmānīyye, as ordered by his brother and successor ʿOṯmān III.
He was a thin, short, well-tempered man, who gave priority to the maintenance of public order inside Istanbul and would go to meetings of the divân in order to hear the people's complaints. He knew enough about the sports of ğâlî [p. e.], horse-racing and swimming and was knowledgeable about poetry and music. We know that he used the mâkelâs Sabkâtî and that he wrote poetry in Arabic (Şehîrzâde Sa'îd Efendi, Melâzân ar-şafi, Beleciye Küütüphanesi, ms. Muallim Cevedet 0.74, f. 53b; Tayyâr-zâde Aḥmad 'Aţâ, Ta'rîkh-i Şâhî, iv, Istanbul 1293, 67; 'Ali Efendi, Taqawwâr al-mulîdik, Istanbul 1319, 30). He knew enough about the music to be a composer in his own right, but he is more often spoken of as an instrumentalist and as a patron of other musicians (Yılmaz Öztûnû, Türk müsîkitâ lâğûtî, 120, 407; Sübûh Ezgi, Nâzari, ameli Türk müsîkitâ, İstanbul 1940, iv, 93). This Sultan, who was interested in chess and had a passion for flowers, is also known to have lavished a good deal of attention on the cultivation of tulips. In his free time and while the weather permitted, he would make trips to the pleasure-grounds along the Bosphorus, at Kâğıtštânî and at Fenerbâhçesi, and would spend his time in the summer houses there. Although the Nûr-i Ümânîyiye complex, with its mosque, madrasa, maktûb, library, mausoleum, 'îmârât el-sebîr, was built at his orders, it was given its present name because the whole of it was completed during his reign. He built the Newâbîdîn near the Yali Koshkî, the Dar Kapûfsî mosques and the mosque of the Tulum-Öthman had any children, the Ottoman dynasty was called Newâbîdîn, as he had had it built up from scratch in 1740, and the third in the Ghalata Sarayî in 1754. Furthermore, in his time in the summer houses there. Although the Kâğıtštânî and at Fenerbâhçesi, and would spend his time in the summer houses there. Although the Nûr-i Ümânîyiye complex, with its mosque, madrasa, maktûb, library, mausoleum, 'îmârât el-sebîr, was built at his orders, it was given its present name because the whole of it was completed during his reign. He built the Newâbîdîn near the Yali Koshkî, the Dar Kapûfsî mosques and the mosque of the Tulum-0thman had any children, the Ottoman dynasty was called Newâbîdîn, as he had had it built up from scratch in 1740, and the third in the Ghalata Sarayî in 1754. (MÜNZER AKTEPE)

2. MAHMÜD II (reigned 1223-55/1808-39). Born at Topkapı palace on 13 Ramadan 1199/20 July 1785, he was the youngest of twelve sons of sultan 'Abd al-Hamid I. He succeeded to Mustafa IV on 28 July 1808. An armed coup led by the provincial governor Mustafa Bayrakdăr [q.v.] aimed at restoring to the throne the formerly deposed sultan Selim III. In the course of the action, however, Selim was assassinated, the reigning Mustafa deposed, and Mahmûd, as the only remaining legitimate candidate, was declared sultan. Until his ascendance to the throne, Mahmûd had spent his entire life in seclusion, according to Ottoman practice.

At this point the Ottoman empire appeared to be on the verge of final disintegration. The central government wielded minimal authority over the provinces, administered largely by self-appointed local rulers [see ÂÇVÂN, DEREBEY]. A temporarily inactive state of war with Russia and Britain imposed further strains on the political fabric. In Istanbul itself political power was exercised by extra-legal forces, composed mainly of ʿulamâ' and soldiers. The sultan's office was reduced to political impotency (Djewdet, ix, 16).

During the first months of Mahmûd's reign real power was wielded by Bayrakdăr, who had himself appointed grand vizier. He convened an assembly of provincial rulers in Istanbul which adopted the Deed of Agreement (see ÂÇVÂN, DERBESE). This document sought to change the constitutional framework of the empire by limiting the sultan's sovereignty and establishing a quasi-feudal political system. In addition, it aimed at reviving Selim III's military reforms. In mid-November 1808, Bayrakdăr's government was brought down by a popular uprising led by the Janissaries of Istanbul. It was the culmination of a movement opposed to reform as well as to the seizure of the central government by provincial elements.

Following their victory, the Janissaries set up in Istanbul a reign of terror and once again began to interfere in state affairs. The anarchy which prevailed at the capital since the fall of Selim III in May 1807 left the political élite hopelessly divided and demoralised. Meanwhile, Mahmûd exhibited characteristics of strong leadership and dedication to traditional values. The religious and bureaucratic élites desiring the re-establishment of orderly government began to turn to the court for guidance (Djewdet, ix, 59-61). Thus were laid the foundations for the restoration of the court as an active centre of government. Mahmûd seized this opportunity to curb the Janissaries. Throughout his reign he consistently endeavoured to strengthen the court's position by subordinating all other political forces. Gradually, he formed a network of advisers and assistants who helped him carry out his policies. Some of these at various times attained positions of great influence [see ŞâLeT EFEND], but throughout, Mahmûd remained the supreme autocrat.

In January 1809 a peace treaty was concluded with Britain, in spite of strong protests by Napoleonic France. But negotiations with the Russians, who had in 1806 occupied Bessarabia, Moldavia and Wallachia, failed. In April 1809 the war was resumed with the Russians attacking south of the Danube. The Ottomans suffered defeat in several battles, but succeeded in foiling a Russian attempt to take Shumla and to storm across the Balkan mountains. Faced with the mounting threat of war with France, the Russians were prepared to compromise. The war was terminated with the Treaty of Bucharest (May 28, 1812) which ceded Bessarabia to Russia, while the Ottomans regained Moldavia and Wallachia.

Meanwhile, Mahmûd initiated a policy designed to restore central authority over the provinces, and when the war ended this became his primary concern. By 1820 Istanbul succeeded in re-asserting its power over most of the provincial centres in Anatolia, as well as over Thrace, Macedonia and the Danube districts. The local ruling notables were replaced by governors appointed from Istanbul. In the view of the government, all local notables were usurpers of legitimate authority (mümteğallibe). Consequently, their suppression was often ruthless and indiscriminate. This tended to destroy the local administrative infrastructure, thereby weakening thereby the very bases of Ottoman power (cf. Şahântâde, ii, 230-1, 246-7, Djewdet, x, 146-8, 181-7, 217-19). This was a factor which facilitated the emergence of the national movements of the Serbs and Greeks.

During the same period, the sultan intervened occasionally in the affairs of his Syrian and Mesopotamian provinces, but achieved ephemeral results only. In Arabia the power of the Wahhabis was curbed by enlisting the military services of Muḥammad ʿAllī, the governor of Egypt. While still maintaining his allegiance to the sultan, Muḥammad ʿAllī gradually transformed Egypt into a formidable state. The sultan had no means with which to reassert his authority over the distant African provinces of Tripoli, Tunis and Algiers, but he claimed suzerainty over them.

The Serbs had taken advantage of the weakening of Ottoman provincial administration to rise in 1804-13 and again in 1815. Under Russian pressure the sultan agreed to grant the Serbs complete autonomy. The process was gradual, and was completed in 1829. The drawn-out conflict between the sultan and Tepecelendi ʿAli Pasha [see ʿALİ PASHA TEPECİLEND], the most powerful noble in Albania and Greece, aided the Greek cause. The sultan initiated the conflict with ʿAli in July 1820 and the Peloponnesus was up in arms in March 1821. Although Mahmûd was profoundly shaken by the outbreak of the Greek uprising, for almost another year he continued to direct the main military efforts against ʿAli, whom he considered the greater threat to the realm (A. Levy, Oto- man attitudes to . Balkan nationalism). ʿAli was finally defeated and executed in February 1822. Meanwhile, a series of border skirmishes with Iran in 1820 escalated into a full-scale war. After several years of desultory fighting, peace was restored in July 1825. The sultan now concentrated all his efforts to subdue Greece. Uprisings in Macedonia and Thessaly were suppressed, but the Ottoman forces proved incapable of advancing into the Peloponnesus and a stalemate ensued. The sultan once again appealed to Muḥammad ʿAllī for assistance, promising to cede to him the governorship of Crete and the Peloponnesus in return.
for his services. In February 1825 the modernised Egyptian army landed in Greece, drastically altering the military balance. The Ottomans renewed their attacks and by April 1826, with the fall of the key fortress of Missolonghi, the Greek position became desperate.

The Greek uprising made a great impact not only on the Ottoman political elite but also on wide segments of the Muslim population at the centre of the empire. The proximity of the fighting and the destruction of long-established Turkish communities in Greece and the islands were among the main reasons which caused Muslim society to view this conflict as a threat to its very survival. In addition, the poor performance of the largely untrained Ottoman troops could be compared with the effectiveness of the modernised Egyptian army. This created a perceptible change in the mood of Ottoman society favouring military reform (Déjewet, xii, 139-46, 159).

In early 1825, Mahmud had been cautiously introducing significant improvements in several military branches, especially in the artillery and navy. But in the spring of 1826, with his authority restored at the capital and in many provinces, and with the Greek rising appearing close to extinction, it seemed to Mahmud that the time had come to carry out more comprehensive reforms. But he adopted a gradual approach. The first step was to adjust the fanar for the organisational structure of the Janissary corps as an elite unit of active soldiers called Efkhindigân. The sultan took precautions to enlist the support of the religious and bureaucratic élites as well as the Janissary officers themselves. Nevertheless, on the night of 14 June the Janissaries rose up in arms. The sultan reacted with speed and determination. He mustered loyal troops and on 15 June, within hours, the rebellion was crushed with considerable bloodshed. Two days later an imperial order declared the Janissary corps abolished.

It is difficult to exaggerate the impact which the suppression of the Janissaries made on contemporary Ottoman society as well as on Europe. It was considered the end of one era and the beginning of another. In an effort to gain for it universal approval, the sultan's treasurer asked the Ottoman ambassadors to: “Beneficial to fair” (wa'ak-a'lid bakrayye) and the court historian Es'ad Efendi was charged with recording the official version of future generations. Es'ad's detailed account entitled The foundation of victory (Uss-i safer) was printed in 1828.

Military defeat and the apparent failure of the government's reform policies rekindled unrest and rebellion in widely flung provinces, especially in Bosnia, Albania, eastern Anatolia and Bagdad. These movements, sometimes led by former Janissaries and their sympathisers, were partly a delayed conservative reaction against the government's reforms. More commonly, they represented protest against increased taxes, forced conscription and, in some instances, the lack of reparation for heavy-handed centralising policies. The government was generally successful in putting down these movements by employing the new disciplined troops, which proved sufficiently effective as an instrument of suppression and centralisation. Nevertheless, throughout the remaining years of Mahmud's reign, unrest and rebellion continued to flare up in various districts.

In 1830 the sultan tried unsuccessfully to prevent the French occupation of Algiers. Meanwhile, Muhammad ʿAli became determined to seek compensation for his losses in Greece. His perception of the sultan's military weakness encouraged him to demand the governorship of Syria. When this was refused, in October 1831 the Egyptian army invaded Syria, defeated two Ottoman armies and completed the conquest by July 1832. When the sultan countered by preparing yet another army, the Egyptians marched into Anatolia, defeated the Ottomans again at Konya (21 December), occupied Kütahya (2 February 1833) and were in a position to march on Istanbul. The sultan sought help from the great powers, but only the Russians dispatched a naval force to defend Istanbul (February 1833). This induced Britain and France to offer mediation, resulting in the Convention of Kütahya (April 8). It conferred on Muhammad ʿAli the government of Syria and the province of Adana. Meanwhile, Russian paramilitary in Istanbul was underscored by the Treaty of Hünkâr (Kânnkâr) Iskelesi (8 July), a Russian-Ottoman defensive alliance. But the treaty alarmed other European powers, especially Britain, who became determined to help the Ottomans liberate themselves of Russian dependence. The Ottoman empire now came under the protection of the European Concert, and its foreign relations with Britain, Austria and Prussia were increasingly improving.

In spite of military disasters and political setbacks, during the 1830s Sultan Mahmud relentlessly proceeded with his reformatory measures. His main objectives continued to focus on centralisation of government and the attainment of greater efficiency in its work. In 1835 the entire administration was reconstituted into three independent branches: the civil bureaucracy (kalemiyye), the religious-judicial...
hierarchy (‘ünime) and the military (seyfiyye). Their respective heads—the grand vizier, the şerîkât-ül-İslâm and the ser-‘asker—were now considered equals, and therefore responsible directly to the sultan (BBa, HH 24031; Lufî, v, 25-6). Throughout most of Mahmud’s reign the court had been the most important centre of power. Now it was officially recognised as such. The aggrandisement of the court was mainly at the expense of the grand vizier’s office. Traditionally, the grand vizier was considered the sultan’s absolute deputy (vâdit-i mâdâh) and as such the head of the entire government, civilian and military. To underscore the reduction of his authority, in March 1838 the grand vizier’s title was officially changed to that of chief deputy, or prime minister (bagh vâdit). At the same time, the grand vizier’s chief assistants were given the title of minister (nâzir and later vâdit). These changes were combined with attempts to attain a better definition of administrative responsibilities. Consequently, from 1836 government departments were being regrouped into ministries (sâset) for internal, foreign and financial affairs. A further distinction was made between the executive and the legislative. Consultative councils were established to supervise military and civil matters and to propose new legislation. The highest of these, the Supreme Council for Judicial Ordinances (Mâgâlis-i ullah-yi ahkâm-i‑sadîqî), established in 1838, acted as an advisory council to the sultan. New regulations granted the civil servants increased security, but also required higher standards of performance. But all these were mere beginnings. The difficulties were due mainly to the lack of trained personnel. In most cases the staffs of new departments were drawn from old ones, and the administrative reforms often amounted to a mere reshuffle of offices. Nevertheless, the groundwork was prepared for the emergence of a new generation of administrators with a more modern outlook.

The military, which during Mahmud’s last years was allocated about 70% of the state’s revenues, continued to be the focal point of reform. Most significant was the gradual extension of the authority of the commander-in-chief (ser-‘asker) of the Manşâre over other services and branches. Thus the headquarters of the ser-‘asker Baş-ı Ser-‘asker (q.v.) gradually came to combine the roles of a ministry of war and a general staff and was in charge of all land forces. The navy continued to operate as a separate organisation under the grand admiral, whose administration comprised a separate ministry. In the different branches of the army, larger permanent units were formed with their regular commanding officers and staffs. Segments of the old feudal (tâmâra) cavalry were reformed. In 1834 a provincial militia (redîf) was established. The last two measures were intended to provide the regular army with reserve forces as well as to co-opt the provincial notability into the new system by conferring on them commissions and honours. After 1833 the strength of the regular armed forces was considerably increased, and by the end of Mahmud’s reign there were some 90,000 men in all the services, exclusive of the militia and other semi-regular organisations. Several European governments began extending modest military assistance. The Russians and British each sent a few military instructors. The British also helped establish the beginnings of a modern arms industry and sent teams of engineers and workmen. Most useful services were rendered by the Prussian military mission which increased from one officer (Helmuth von Moltke) in 1835 to twelve by 1837.

This was the beginning of a continuing pattern of military cooperation which was to last until the 20th century. At the same time, the sultan rejuvenated the military engineering schools which had been founded in the 18th century and had subsequently fallen into decay. He also established a military medical school (1827) and an officer school (1834). The sultan enlisted the support and cooperation of the ‘âlamâr in many of his military reforms (A. Levy, Ulema). But the paucity of adequately trained personnel and limited financial resources made progress difficult. The commissary system could not support the rapid increase of the military establishment as demanded by the sultan. Epidemics were rife and over a quarter of all recruits succumbed to disease. Desertion was also very high, and it was necessary to replenish the ranks continuously with new, untrained conscripts (BBa, Kepesi 6799; Moltke, Briefe, 349-50).

In May 1835 the international community was taken by surprise when an Ottoman expeditionary force occupied Tripoli in Africa, claiming it back to the sultan. In the following years Ottoman fleets appeared several times before Tunis, but were turned back by the French navy (BBa, MMD, ix, 99-110). The continued occupation of Syria by Muhammad ‘Ali could not be tolerated by an autocratic ruler like Mahmud. In the spring of 1839, believing that his army had sufficiently recovered and that a general uprising in Syria against Egyptian rule was imminent, Mahmud precipitated another crisis. On June 24 the Egyptians, once again, decisively routed the Ottoman army at Nizib. On July 1 Mahmud died, probably without learning of his army’s last defeat.

During Mahmud’s reign, due to the inertia effects of long historical processes, the Ottoman empire continued to decline in relation to the West. Its dependence on Europe increased and it continued to suffer military humiliation and territorial losses. Yet, within the reduced confines of his realm Mahmud’s achievements were considerable. He resurrected the sultan’s office, and with that he reformed and rejuvenated the central government. He arrested the disintegration of the state and even initiated a process of consolidation. In spite of his intensive reformatory activity, Mahmud was inherently dedicated to traditional values. He did not attempt to alter the basic fabric of Ottoman society, but rather to strengthen it through modern means. He generally succeeded in integrating the old élite into the new institutions. This was in keeping with his strong attachment to the ideal of justice in the traditional Ottoman sense. The sobriquet he selected for himself, ‘Adî, “the Just,” is an indication of the cast of his mind. It may be said, therefore, that the principles which guided him throughout his reign were Islam, autocracy and justice. Nevertheless, though he may not have intended it, the reforms which Mahmud introduced were to produce basic change and to launch Ottoman society on the course of modernisation in a final and irrevocable manner.

Bibliography:

The Ottoman archives contain a vast number of relevant documents dispersed in numerous collections. All the documents cited above are from Başbakanlık Arşivi (abbreviated as BBA). For a description of the holdings of this archive see M. Sertoğlu, Muhtevî bakımdan Batışkât Arşivi, Ankara 1955. Especially valuable concentrations of documents are located in the following collections: Kanunname-i askeri defterleri (abbreviated as KAD), vols. i, ii, vi (military legislation, organisation, history), the military medical defterleri (abbreviated as MMD), vols. vi-x (mainly internal political matters); Maliyeden mudevver defterleri, vol. 9002 (financial and administrative matters); Tel-
mahmud — mahmud shah sharki

61

Cihat ve redif ve mevad ve muhimm-i aski derleri (abbreviated as TRD), vol. xxvi (military reform and financial administration); Tezvat, zehayar, esnaf ve sittihat derleri, vols. xxvii - xxviii, (local provisions and various matters); Kamil Kepçio tasnifi (numerous documents dealing with the financial administration of the government and armed forces). The Cedit tasnifi and Hatt-i hıdıyalar (abbreviated as HH) collections are very useful, but more disparate.

European archives contain extensive information in the correspondence and reports of envoys stationed in the Ottoman empire. At the Archives de la Guerre, Paris, carton no. MR1619 contains an especially valuable collection of detailed and informed reports on political and military conditions.

The Ottoman chronicles for this period are: Ahmed Düşmez, Ta'rikh, 2 vols., Istanbul n.d. (vol. ii discusses the events of 1808); Şahîzade Mehmed 'Ağaullah, Ta'rikh, 4 vols., Istanbul 1290-1/1873-4 (events of 1808-21); Mehmed Es'ad, Ta'rikh, 2 vols., unpublished ms. (events of 1821-6); Ahmed Djuwedit, Ta'rikh, 12 vols., Istanbul 1270-1301/1854-83; 2nd ed. 1302-9/1884-91 (vols. ix-xii discuss events of 1808-26; Ahmed Lu'fi, Ta'rikh, 8 vols., Istanbul 1290-1328/1873-1910 (vols. i-vi discuss the period 1825-39).

Of the extensive western travel accounts, most relevant to the Ottoman empire and other contemporary works, the following have special value: A. F. Andreossy, Constantinople and the Bosporus of Thrace, Paris 1841; A. Boué, La Turquie d'Europe..., Paris 1840; J. Dekay, Sketches of Turkey in 1831 and 1832, New York 1833; V. Fontanier, Voyages en Orient..., Paris 1829; A. Juchereau de St. Denys, Les révolutions de Constantinople en 1807-1808, Paris 1819; idem, Histoire de l'Empire ottoman depuis 1792 jusqu'en 1844, Paris 1844; C. MacFarlane, Constantinople in 1829, London 1829; idem, Turkey and its destiny..., London 1850; Helmut von Moltke, Briefe..., Berlin 1841; R. Wagner, Molte und Mischbahn zusammen unter den Halbmonde, Berlin 1893 (very useful; based on private and public documents).

MAHMUD KHAN, NASIR AL-DIN, the founder of a short-lived dynasty ruling in Kâlpî [q.v.] in the first half of the 9th/15th century. He was the son of Malikzâda Frîzû b. Tâqî al-Dîn Turk, the wazîr of Ghiyâth al-Dîn Tughluk II, who was killed with his sovereign in Dîhilî in 791/1390; after that event he fled to Kâlpî, îskîd, giving it the honorific name of Muhammadaîb, and 'aspired to independence' (dam az istiklâl mizad). This was not difficult to attain in the disrupted conditions of the Dîhilî sultanate after Timûr's sack and withdrawal, and Muhammâd consolidated his position at the expense of his Hindî neighbours. His status was never really secure against the growing power of the neighbouring sultanes of Mîlâwâ and Djawanpur [q.v.], and the historians of those regions indicate that the arrogated titles of shâh and sulûn were contested by the rulers of the larger and more powerful regions. Mahmud died in 813/1410-11 and was succeeded by his son (Ikhât-î al-Dîn Abu 'l-Muqaddâm) Kâdir Khân, referred to by Fîrîha as 'Abd al-Kâdir al-mawium be-Kâdir Shâh (Lucknow lith., ii, 306, 307), d. ca. 835/1432, in a war of succession between his three sons, Mîlâwâ and Djawanpur again intervened, resulting in a son called Djalât Khân being installed under the suzerainty of Mîlâwâ; he managed to assert his independence more firmly than his father or grandfather, for he issued coins as Fath al-Dunya wa 'l-Dîn Djalal Shâh Sultâm in 841/1437-8. The length of his reign is not known, but his brother Nasîr Khân, ruling in 847/1443, was chastised by the Djawanpur forces and temporarily deprived of his throne after being suspected of apostasising from Islam; thereafter, this semi-independent dynasty does not appear in the historians.

Bibliography: The prime text is Muhammad Bihâmâd Khânî, Ta'rikh-i Muhammâdî, B. M. ms. Or. 137 (Kiev, Cat. Pers. ms. i, 84 fl.), completed in 842/1438-9; the author was brought up in the house of Sultan Mahmud's father, and later served under Muhammâd's brother and wazîr Djunayd Khân, receiving the îskîd of îrîc for military services. His information is corroborated by Yâbîy b. Ahmad Sirhindî, Ta'rikh-i Muhabbât Shâhî, and Fîrîha, and he is cited as an authority by Nîzâm al-Dîn Ahmad, Tabakât-i Akbarî (whence also the later information on Nasîr Khân); S. H. Hodvâlî, The unassigned coins of Jalal Shâh Sulûnî, in JASB, NS xxv (1929), Numismatic Supplement N. 41-6 (J. Burton-Page).

MAHMUD SHAH SHARKI, ruler in Djawanpur [q.v.], the eldest son of Ibrahim Shah Shârkî, ascended the throne in 844/1440. In 846/1442, he decided to invade Bengal, but owing to reasons not clear he refrained from carrying out his plans. The account in the Mu'âla' al-îsâdîn that he did so because of a warning from the Timûrid Shâh Rûkh is not accurate.

In 847/1444, hearing that Nasir Shâh, ruler of Kâlpî (Muhammadaîb), had plundered the town of
Mahmud Shaikh Sharki — Mahmud Shihab al-Din

Shahpur and harassed its Muslim population, Mahmud decided to punish him, ... of the Council of Regency; Malik Hasan Nizam al-Mulk as Mir NaDib; Fath Allah clamd al-Mulk, also a Hindu convert to

Soon afterwards, Mahmud crushed a rebellion in Cunar and annexed a greater portion of it. He then invaded Orissa which he plundered and, after laying the foundations of two mosques at Paharpur, returned to Dihl!.

Mahmud now put forward a claim to the throne of Dihl! on the ground that its ruler Sultan 'Ali al-Din 'Alam Shah (847-83/1443-76) was his wife's brother. The Sultan was a puppet in the hands of his wazir, Hamid Khan, who was the de facto ruler. But weary of his minister's domination, he had gone away to Badu'un. Hamid Khan, finding his position insecure on account of the machinations of the Sultan and the hostility of some Dihli nobles, invited Bahlul from Sirhind. Bahlul immediately set out towards Dihl! and occupied it on 17 Rabi' 1 855/19 April 1451. He then imprisoned Hamid Khan and declared himself king.

At the beginning of 856/1452, Mahmud Shah, instigated by his queen, Bibi Radji, invited the nobles who detested the uncouth Afghans, advanced towards Dihl! with 170,000 cavalry and 1,400 war elephants under Darya Khan Lod! and Fath Khan eda; a holy man much respected by both the rulers; Mahmud Sharki agreed to restore Kali toNASR Shah.

because Djawna Khàn, the Sharki governor of Shamsabad, refused to surrender it. Bahlul therefore attacked him and after expelling him, handed over Shamsabad to Ray Karan. Mahmud hastened to the aid of Djawna Khan. Kub Khan and Dary Khan made a sally against the town on his behalf, but this proved abortive and Kub Khàn was taken prisoner. Greatly distressed on hearing of Kub Khan's imprisonment, Bahlul set out to attack Mahmud. But the latter fell ill and died in 862/1458. He was succeeded by his eldest son, Bihikam Khan, who ascended the throne of Dijawnpur as Sultan Muhammad Sharji.

Mahmud was an able ruler and his subjects were happy and prosperous during his reign. He is said to have spent his time in the society of the 'ulama? and Sufis. He was interested in architecture and built the famous Lai Darwaza Mosque in Dijawnpur, and adja-

cent to it a magnificent palace for his queen, Bibi Radyi. He also built a bridge and madrasas, and laid the foundations of another palace outside Dijawnpur.

Mahmud Khaldji advanced towards Erach on 2 Sha'ban 886/5 April 1481. He succeeded in per-

suading the boy-king to order the massacre of the Afak!s, or Ghar!b!s, comprising Turks, Persians and the natives and old settlers, and the Newcomers called

The result of Darya Khan's defection was that the Sharki army became demoralized and, although numerically superior, it was defeated by Bahlul's 7,000 troops. Fath Khan was put to death (859/1455). Udjdjayn was then annexed. Mahmud Khaldji advanced towards Dihl! with 170,000 cavalry and 1,400 war

Islam, as wazir and Mir Djumla as finance minister. Kasim...

In 891/1486, four years after his accession, Mahmud, anxious to assert his power, conspired with Kasim Barid and Dastur Dinár, the leader of the Abyssinians (Hababhis), to get rid of both Nizám al-Mulk and I màd al-Mulk. But the plot leaked out and the Sultán apologised to them. However, I màd al-Mulk, realising his life to be in danger, left for his own province of Bérat. Mahmud then returned again. Nizám al-

Mulk, who took no precaution, was strangled to death by his friend, Dilpasand Khán, at the instigation of Mahmúd.

Nizám al-Mulk’s removal from the scene led to the victory of the Afáiks. But the Dakhánis, alarmed and angry by the murder of their leader, plotted to assassinate the king with the support of the Hababhis; and on 21 Dhu ‘l-Ka’dá 892/8 November 1487, they entered the palace, locking the gate behind them so that no one else could enter. They killed the Turkish guards, but Kasim Barid, with a detachment of 12,000 men, scaled the walls of the palace and rescued the king. The next morning, Mahmúd ordered the massacre of the Dakhánis, and for three days this continued until it was stopped by the intercession of Shah Muhibb Alláh, son of the saint Khél. Taking advantage of these events, Kasim Barid raised the banner of revolt, and compelled Mahmúd to make him wakil or prime minister (897/1492).

Meanwhile, Malik Ahmad, Nizám al-Mulk’s son, who was at his dàjâr [q.v.] of Djunayr, on hearing of his father’s death, adopted the title of Nizám al-Mulk and without seeking the permission of the king, conquered all the forts in Mahráráshtra, including the whole of Konkón and the territory up to the river Godávári. He then came to Bídár, where he was received by Mahmúd and confirmed in his new possessions; but at the same time Mahmúd sent troops against Malik Ahmad and also ordered Yusús Údíd to march against him. The royal troops were defeated, while Yusús Údíd, in defiance of the king’s order, congratulated Malik Ahmad on his success. It was in 897/1492 that Malik Ahmad, Nizám al-Mulk’s son, with the help of Nizám al-Mulk, who took no precaution, was strangled to death by his friend, Dilpasand Khán, at the instigation of Mahmúd.

Yusús Údíd’s position became strong due to the betrothal of his daughter to the crown prince, Ahmad, early in 903/1497, which enabled him to secure the dàjâr of Gurbágha, Aland and Gangáváti which had been assigned to Dastur Dinár. Previously to this, Kasim Barid, being jealous of Yusús Údíd, had contrived his overthrow. He had suggested to Narasa Náyák, the prime minister of Vídajáñagar, to occupy Rayyúr and Mahmúd, which were in Yusús Údíd’s possession, and had also tried to win over Malik Ahmad against Yusús Údíd by offering him Panhála, Konkóñ and Goa, which were at the time in Bahádúr Gilání’s possession. But Yusús Údíd had succeeded in foiling Malik Ahmad’s plans. He had first marched towards Bídár, but Kasim Barid defeated Khán and Mahmúd, near the capital. He had then directed his attention towards the Vijdáñagar, which he had defeated on 1 Radjab 899/1 April 1493 and had reoccupied Rayyúr and Mudad, thus upsetting Kasim Barid’s plans.

Disenchanted with Kasim Barid, Mahmúd now invited Yusús Údíd and Kútb al-Mulk to his rescue at the end of Dhu ‘l-Hajj 900/4 August 1497. They came and besieged Kasim in his dàjîr of Asúra, but gained no success, for the minister was soon reconciled to the king. However, in 909/1503-4, Kasim Barid was replaced by Khán-i Díjahán, also a Turk, until Kasim Barid contrived his death. Thereupon, Yusús Údíd, Kútb al-Mulk and Dastur Dinár marched on Bídár to wrest power from Kasim. The latter was defeated and fled, but this did not improve things, because he once again won over Mahmúd. Frustrated in their attempts to rescue the king, the tarafdárs in disgust returned to their respective dàjârs, leaving Kasim Barid as powerful as before. When he died in 910/1504-5 he was succeeded by his son Amir ʿAli Barid, whose domination was even more effective than that of his father.

Taking advantage of these internecine conflicts, Krignádóvara contrived Yusús Údíd to evacuate the Dòáb. The Gangdís of Orrisa, on the other hand, occupied the whole east coast which had belonged to the Bahmáníds. In 923/1517, Mahmúd tried to recover the Dòáb from the Rádja of Vijdáñagar, but he was defeated and wounded and compelled to retreat.

Mahmúd’s last days were unhappy. In addition to these territorial losses, there were risings of his tarafdárs, who were engaged in carving out independent kingdoms for themselves, which he was helpless to prevent; soon his writ did not run beyond the walls of Bídár, and even there he was subject to the will of Amir ʿAli Barid.

Mahmúd died on 4 Dhu ‘l-Hijjá 924/7 December 1518. He was succeeded by four kings, one after the other, set up or set aside according to Amir Ahmad’s pleasure. Kallím Allah, Namíl’s son, was the last king. He wrote to Bábúr for help against Amir Barid, but as the last found this out, Kallím Allah fled to Bídjáúr and thence to Ahmadnagar, where he is supposed to have died in 945/1538.

MAHMÚD B. ISMÁ’ÍL. [See LU’LU’, BÁDR AL-DÍN.]

MAHMÚD B. MUHÁMMAD B. MALIK-SláH, MUHÁMMAD AL-DUNYÁ WA ’L-Díín Abú ’L-KÁSÍM, Great Sálídúj sultan in western Persia and Iraq 1375-1418.

The weakening of the Great Salídúj central power in the west, begun after Malik-Sláh’s death in the
period of the disputed succession between Berk-ya'rük and Muhammad [q. v.], but arrested somewhat once Muhammad had established his undisputed authority, proceeded apace during Mahmūd's fourteen-year reign to extend his influence from that initiative in his youthfulness (he came to the throne, at the age of 13, and as the eldest of his father's five sons, on 24 Dhū 'l-Hijjah 511/18 April 1118, through the support of Kamāl al-Mulk Simūrūmī, subsequently his vizier), but stemmed mainly from the continued vitality among the Saldjūks of a patrimonial concept of rule which made clear-cut father-eldest son succession difficult to enforce. Mahmūd's uncle, Toghrīl (q. v.) remained as undisputed ruler of the eastern Persian lands, and from his seniority and experience became, and was regarded as head of the Saldjūk family, even though since the time of Toghrīl Beg the holder of the seat of power in the western half of the sultanate had normally been regarded as supreme sultan. But what made Mahmūd's reign so full of strife were the pretensions of his four brothers, Mas'ūd, Toghrīl, Sulaymān Shāh and Saldjūk Shāh. All of these Seldjūk some degree of power in various parts of the western sultanate at different times, and the first three of them eventually achieved the title of sultan itself, though their reigns followed after the brief one of Mahmūd's son Dāwūd (525-6/1131-2) and were interspersed with those of two other sons, Malik-Shāh III (547-8/1152-3) and Mahmūd II (548-55/1153-60).

The claims of these fraternal rivals for power during Mahmūd's reign could not have been sustained without military support from their own Atabegs or guardians [see ATABAK] and other Turkish commanders, through whose control large sections of the sultanate were frequently abstracted from Mahmūd's direct rule, with deleterious effects on his finances, his ability to pay his troops and therefore his enforcing his authority. As lamented by Anūqīrīwān b. Khalīd [q. v.], who acted as Mahmūd's vizier 521-2/1127-8, "they [sc. Mahmūd's rivals] split up the kingdom's unity and destroyed its cohesion; they claimed a share with him in the power, and left him with only a bare subsistence" (Bundarī, 134). Mahmūd's sultanate also witnessed further steps in the process of the revival of the 'Abbāsid caliphate in Baghdād's temporal power, and the growing confidence of Mahmūd concerning temporary al-Mustarshīd (512-29/1118-35) was only held in check by the caliph's enemies in central 'Irāk, the Ṣhī'ī Arab dynasty of the Mazyadids [q. v.] under Dubays b. Ṣadakā. The ascendancy over the young sultan Mahmūd immediately established by the Chief Hācjī 'Ali Bār soon led to an invasion by Sandjar, who came westwards with a powerful army, defeated Mahmūd at Sāwā and dictated peace to him, but on a fairly amicable basis (513/1119), Sandjar secured control of the Caspian provinces and Ray, but gave Mahmūd one of his daughters in marriage and made him his heir. Meanwhile, Mahmūd was losing control of some parts of his dominions, for his brother Toghrīl's cause was espoused in northern Džībāl by the Atabeg Kūntoghdāl, and from a base at Karwīn, Toghrīl defied Mahmūd for the whole of his reign. Also, ʿAdharbāyjān and al-Dżāzirā had been granted to Mas'ūd b. Muhammad, with Ay-Aba Džuyūq Bāg as his Atabeg. The separatist tendencies of local Turkish and Kurdish chiefs, including 'Imād al-Dīn Zangī, encouraged Mas'ūd, and in 514/1120 he and Ay-Aba rebelled openly, but were defeated by Mahmūd's general ʿAk Sunkur Bursuḵī at Asadābād near Hamadān, and Mas'ūd's vizier al-Ḥasan b. ʿAli al-Toghrīl [q. v.], the famous poet and stylist, was executed. Ay-Aba had hoped to incite Dubays b. Ṣadakā against Mahmūd, and over the next few years the amir of Hilla's hopes of reducing Saldjuk influence in 'Irāk were raised. Fortunately for Mahmūd, fear of the Shi'i threat had the effect of forcing the caliph al-Mustarshīd into close cooperation with Mahmūd's own vizier Shams al-Mulk ʿUthmān b. Nizām al-Mulk, and in 520/1126 Mahmūd came with an army to Baghdād to enforce his rights and reinforce the authority of his ʿšhrāna or military governor there.

On the extreme northern fringes of the sultanate, a threat had arisen from the resurgent Georgians [see AL-KURJ] under David IV the Restorer (1089-1125), who had stopped paying tribute to the Saldjūks (see W. E. D. Allen, A history of the Georgian people, London 1932, 96-100). An army sent by Mahmūd in 515/1121, and including Toghrīl, Dubays and the Ar-tukid Il-Ghāzī, failed to halt the Georgians, who captured Tiflis and Ānā and dislodged the latter's Mustarshīd prince, and a further expedition to Shir-wān led personally by the sultan (517/1125) achieved nothing either. Toghrīl and dubays tried soon after this to stir up 'Irāk against Mahmūd and al-Mustarshīd, but failed and had to flee to Khūrāsān. They persuaded Sandjar to move westwards to Ray in 522/1128, but Mahmūd became reconciled to his uncle; Dubays had eventually to move to Syria, and in 524/1130 Mahmūd and Mas'ūd made peace, the latter being confirmed in his appanage centre on Gān:dža in Adharbāyjān.

Mahmūd died in Džībāl on 15 Shāwwal 525/10 September 1131 at the age of only 27, and his death was to plunge the western sultanate into sharp succession disputes. Despite an alleged love of luxury, Mahmūd achieved a favourable mention from historians for his justice and reasonableness and for his Arabic scholarship, rare among the Saldjūk rulers. He patronised many of the leading poets of his time, and both he and the caliph al-Mustarshīd were the mamādūs of Ḥayṣa Bayṣa [q. v.] (see 'All Dzhawād al-Ṭāhirī, al-Shī'ī al-'arabī fi ʿl-'Irāk wa-bi ʿl-ʿAafīmī, 198 ff. There is a biography in Ibn Khallikān, ed. Dżawzjī, and of the Saldjuk, sources, Bundarī, 203-6; Ibn al-Kalānisī, Dhāt al-sudr, 88-9, 96-9; Ibn al-Kalānisī, Dhājī Taʾrīkh Dimāșq, 198 ff. There is a biography in Ibn Khallikān, ed. Ihsān ʿAbbasī, v, 182-3, no. 174, tr. de Slane, iii, 337-8).

MAHMUD b. SEBUKTIGIN, sultan of the Ghaznawid dynasty [q.v.], reigned 388-421/998-1030 in the eastern Islamic lands.

Abu 'l-Kasim Mahmud was the eldest son of the Turkish commander Sebuktigin, who had risen from being one of the slave personal guards of the Iklhâl-i bâzûr or commander-in-chief Alptegin [see ALP TAKîN] under the Sâmâniids to become the virtually independent amir of a principality centred on Ghazna [q.v.], at that time on the far eastern fringe of the Sâmâniid empire. Mahmud was born in 361/971, his mother being from the local Iranian (?) gentry stock of Zabulistan [q.v.], a district around Ghazna in what is now eastern Afgânistân; hence in the eulogies of his court poets, Mahmud is sometimes called "Mahmûd-i Zâbulî".

Mahmud was involved at his father's side in the confused, internecine warfare which marked the last years of the Sâmâniid amirate. In 384/994 the two of them fought on behalf of the amir Nuh II b. Masûr against the rebels Abu 'l-Alî Simdûgûr and Fârîk Khâshâ, and Mahmud was rewarded with the honorific title Sayf al-Dawla and command of the army of Khorûsân in place of Abu 'l-Alî. Control of this powerful military force was of prime value to Mahmud when, in Shâhân 387/August 997, Sebuktigin died and Mahmud had to establish by force of arms his own claim to the amirate in Ghazna against that of Ismâ'îl, his younger brother, whom Sebuktigin had, by a decisive puzzling decision (387/998), appointed his successor (388/999) but who had no military experience or reputation comparable to that of Mahmud.

Once securely in power, the latter's first step was to re-establish the position in Khorûsân by ejecting the general Beguzûn, who had taken over the province whilst Mahmud was involved in civil war with Ismâ'îl. By securing a decisive victory over all his opponents in Khorûsân, Mahmud was able to turn against his old masters the Sâmâniids on pretext of seeking vengeance for the deposed amir Mansûr b. Nûh II; he then secured from the 'Abbâsîd caliph al-Kâdîr [q.v.] direct investiture of the governorships of Khorûsân and Ghazna and the idâkah of Yâmîn al-Dawla and Anis al-Mîlla (the former honorific being that by which Mahmud became most widely-known, to the point that the whole Ghaznawid dynasty was often referred to later as the Yâminîyân). With the final disintegration of the Sâmâniid state in the face of a fresh invasion from the north by the Karâkânids or Ilek Khâns [q.v.], it was a question for Mahmud of moving quickly to consolidate his hold over his own share of the former Sâmâniid dominions, those south of the Oxus, for the Ilek Khân Nasr b. 'Ali coveted Khorûsân also. Whilst Mahmud was pre-occupied in India in 396/1005-6, a Karâkânid army invaded Khorûsân, and the united forces of the Ilek and his kinsman Yusuf Kâdir Khân of Kâshghar were not finally driven out till 398/1008, after which Mahmud's grip on Khorûsân was never again threatened from that quarter.

Mahmud's 32 years of rule were filled with almost ceaseless campaigning over a vast expanse of southern Asia, so that by his death he had assembled an empire greater than any known in eastern Islam since the decline of the 'Abbâsîd caliphs. Continuance of his father's policy of raids into the Indian subcontinent enabled Mahmud to build up a great contemporary reputation as hammer of the heretical Ismâ'îlî Shi'îs in Mâhâm and the Hindu princes of the Sûfis above all, of the pagan Hindus. In retrospect, it appears to us that the prime motivation for Mahmud's raids was financial greed rather than religious zeal. The temple treasures of India were thereby tapped, and the proceeds used to beautify mosques and palaces in Ghazna and at places like Lashkâr-i Bâzûr [q.v.], but above all, to maintain a huge, but largely private, highly expensive, multi-national professional army which could not be stood down between campaigns. For the army, indeed, the manpower of India, in the form of infantrymen and elephant-drivers, was pressed into service, and it does not seem that Mahmud balked at employing these men whilst they were still pagan. The details of Mahmud's Indian campaigns, usually estimated at 17 in all, can conveniently be read in Nâzîm's Sulûk Mahmud [see Bâbîl.], 86-122.

Briefly, the Hindûshâhî [q.v.] dynasty of Whyhind, which had stood as a bulwark in northwestern India against Muslim expansion down the Indus valley and across to the Gangetic plains, was assaulted in several campaigns, and successive Râdas, Dîjâyâl [d. 395/1002-3], Anandânâpî, Trîlocaînâpî (d. 412/1021-2) and Bhîmpûrî (d. 417/1026), the last of his line humbled, despite their attempts at alliance with other threatened potentates such as the Râdjâs of Kulîngiâr, Kanâwâdî, Gwâlîyôr, Dîhî and Uddîjân. Expeditions against these latter rulers led Mahmud well into the Dô 'Aâb and into Central India, whilst a spectacular march across the Thar Desert in 416/1026 gained him fabulous plunder from the idol-temple at Sûmânhî in Kâthâwârîf, ancient Sûrâshfâra, an ethnically Muslim region throughout the Muslim world, and the fresh idâkah of Kahf al-Dawla wa-l-'Ilam. Nor were Muslim dissidents spared, and the Ismâ'îlî ruler of Mûlân, Abu 'l-Fath Dâwîd b. Nasr, one of the local Arab rulers in Sind who had acknowledged the distant suzerainty of the Fâtîmids, was subdued and finally deposed in two campaigns (396/1006 and 401/1010).

The raiding of India was thus a financial necessity for maintaining the momentum of the Ghaznawid military machine. A political annexation and the mass conversion of the Hindus were probably never envisaged, and could not have been maintained in face of the strenuous opposition offered by the Hindu princes except by an enormous army of occupation and the settlement of myriad of Muslim colonists. By the end of Mahmud's reign, Islam must have had a good hold in the lower and middle Indus valley, but Lahore remained for nearly two centuries essentially a frontier bastion for Muslim ghâtî activity against Hindu-held territory which lay not far to the east; it was to be the task of Mu'azzîr al-Dîn Mûhâmmad Ghi'rî and his commanders really to establish Islamic political control over northern India in the 7th/13th century [see GHURIDS and DIHLÎ SULTANATE].

The other aspect of Mahmud's imperialist policies concerned the Iranian world, where, as successor-state to the Sâmâniid, the sultan employed a mixture of direct conquest and the extension of tributary states over outlying regions. Thus the local Safârîd rulers of Sîstân were reduced to vassalage (393/1003), as had been already at Mahmud's accession the Farîghunîds [q.v. in Suppl.] in Gûzîn [q.v. and the Shîrs or princes of Gharîcâstân [q.v.]; whilst the rulers of Kûşdâr and Mâktrân [q.v.] in modern Bulûshîstân had to acknowledge Mahmud in 402/1011 and at the sultan's accession respectively. His forcible annexation of the ancient kingdom of Khârâzm [q.v.] on the lower Oxus and the extinguishing of the native Ma'mûnî dynasty of Khârâzm-Shâhîs [q.v.] in Gurândî in 408/1017, an isolated outpost of conquest which Mahmud's son Ma'sâ'î had to relinquish only five or six years after his father's death, nevertheless enabled the Ghaznawids to turn the flank of the

Encyclopedia of Islam, VI
western branch of the Karakhansids, who under ʿAlītigin had never ceased to show hostility to the sultan, and to achieve a position of dominant influence in the Caspian region. The death of Fakhir al-Dawla [q.v.] of Ray and Dibāl in 387/997 inaugurated a period of weaker rule for the northern Būyids under his son and successor Mustaq al-Dawla Rustam [q.v.] and his imperious mother and regent Sayyida. Mahmūd made the Ziyārīd ruler of Gurgan and Tāṣarāstān Manūzār b. Kābus [see zvānān] his vassal, but only towards the end of his life did he feel free from his other commitments to lead a full-scale expedition against the Būyids (an expedition into the Būyid province of Kirmān in 407/1016-17 in support of a Būyid claimant to the governorship there; had achieved no lasting result). Mahmūd al-Dawla was dethroned and his amirate annexed, and the Ghazzanwids pushed into northwestern Persia, temporarily subduing local Daylamī and Kurdish princes like the Kākuyids and Mūsāfīrīds [q.v.] (420/1029). The whole campaign was retrospectively justified by propaganda denouncing the Būyids for their Shīʿism, their encouragement of heretics and their tutelage of the caliphate in Baghādād, and grandiose plans for advancing on ʿIrāq and confronting the Fatimids on the Syrian Desert fringes envisaged. All these plans were cut short by the sultan’s death at the age of 59 on 23 Rabīʿ II 421/30 April 1030 and rendered impossible of execution for his son Masʿūd because of the growing menace from the Turkmen incursions, which were to lead eventually to the triumph of the Saljuqs at Dandānqān [q.v. in Suppl.] and the Ghazzanwids’ loss of Khurasān.

The contemporary image of Mahmūd was that of a Sunnī hero, sedulous in sending presents to the caliph in return for honorifics and investiture patents, and zealous to maintain orthodoxy within his dominions against all religious dissent and against odd pockets of paganism in regions of Afghanistan like Ghūr and Kāfīrīn. The centralised, despotic machinery of state with the sultan at its head, as created by Mahmūd and his Persian officials, typifies the Perso-Islamic “power-state” in which the ruling institution of officials and soldiers was clearly set apart from the masses of tax-paying subjects, the ṭaqāṣā. It was not for nothing that within half-a-century of Mahmūd’s death, the great vizier Nizām al-Mulk [q.v.] could hold the sultan up in his Siyāsat-nāma as an exemplar for his own Saldjūq masters, and the military state typified by that of the Ghazzanwids became the model for many later Islamic powers, a large proportion of them likewise directed by Turkish military castes. However, the figure of Mahmūd also exemplifies how speedily and successfully the Islamic cultural milieu could attract and mould in its own image an outsider whose father had been a barbarian from the pagan Turkish steppes; for amongst other things, the literary and intellectual circles at Mahmūd’s court, which nurtured several leading poets like ʿUnṣūrī, Farruḵkhi and, for a short time, Firdwāsi [q.v.] and provided a congenial centre of work for the scientist al-Bīrūnī [q.v.], show that the sultan conceived of himself as a full member of the comity of Islamic prince-patrns.

Bibliography: Primary sources. The main contemporary source is ‘Utbī’s al-Taʾrīḵ al-Yamāni, together with that of a generation or so later, Gardizi’s Zawārat al-ṣakhirār; this last plus Ibn al-Aḥīr contains valuable material from the lost Taʾrīḵ Wulīd Khurāsān of Sallāmī. Although the relevant volumes of Bayḥākī’s Muṣāfiʿlāt for Mahmūd’s reign have not survived, those subsequent ones forming the Taʾrīḵ-i Masʿūdī give important retrospective information, e.g. for the conquest of Khurāzām. The later biographies of viziers, such as Nāṣīr al-Dīn Munghī Kirmānī’s Nasīr al-ṣaḥār and Sayf al-Dīn ʿUṣaylī’s ʿAḥīr al-unzurān, are important, as are adab works and collections of anecdotes, including ʿAṣīrī’s Dīwān ʿAḥīrī and Fakhir-i Mudābbīrī’s Addāh al-bahr wa l-ṣaḥāraʾ.

2. Secondary sources. M. Nāẓīm’s The life and times of Sultan Mahmūd of Ghazna, Cambridge 1931, is a detailed, somewhat eulogistic, full-scale study; briefer, but more critical, is M. Habīb’s Sultan Mahmūd of Ghazna, Delhi 1951. Other studies containing important information include Barthold, Turkestān down to the Mongol invasions, London 1928; C. E. Bosworth, The Ghaznavids, their empire in Afghanistan and eastern Iran 994-1040, Edinburgh 1963; idem, in Camb. hist. of Iran, iv, ch. 5, v, ch. 1; and idem, The medieval history of Iran, Afghanistan and Central Asia, London 1977 (contains several reprinted relevant articles). For a survey of later historiography about Mahmūd, see P. Hardy, Mahmūd of Ghazna and the historians, in Jnl. of the Panjab Univ. Historical Soc., xiv (Dec. 1962), 1-36. (C. E. Bosworth)
policy. The regency lasted throughout the reign of Ahmad III and during the minority of the next sultan, Muhammad III (867/57-1463-82). The short reign of Ahmad III saw two major military conquests, namely, a war with Kālpīlghāwār of Ufīsā (Orissa), who took advantage of the sultan’s youth to invade the Deccan from the north-east, and the struggle with Mahmūd Khāldī of Mālāwā, who invaded it from the north; in both of these, Mahmūd Gāwān’s policy and strategy were successful. While Kālpīlghāwār had to retreat and pay a large indemnity, Mahmūd Khāldī, who menaced the very existence of the Deccan as an independent state, was defeated with the help of the sultan of Gudjārāt [q.v.]. This alliance of Gudjārāt with the Deccan was initiated at the instance of Mahmūd Gāwān and became the cornerstone of the foreign policy of the Bahmanī kingdom for many years to come.

Three years after the accession of Muhammad III in 867/1463, a palace intrigue caused the murder of one of the members of the council of regency, Khādja Djāhān Turk, followed later by the retirement of the dowager queen from the day-to-day affairs of state. Mahmūd Gāwān was now invested with the insignia of premiership and the title of Khādja Djāhān [q.v.] conferred on him. Mahmūd Khāldī was again repulsed by the help of Gudjārāt, and following the policy of conciliation already exercised effectively, the Deccan now entered into a treasured friendship with Mālāwā. Soon an opportunity arose for interference in the affairs of Ufīsā when in 875/1470-1 two factions came to grips at Djāḏāngār, the capital of the Gadjapatis, and one of them sought the help of the Bahmanī sultan (JāSB [1893], and Būrḥān-i mādthir). Mahmūd Gāwān thereupon sent Malik Hasan Bahārī (later Nizām al-Mulk and ancestor of the Nizām-Shāhi dynasty of Ahmadnagar [q.v.]) to Ufīsā. Malik Hasan not only succeeded in putting the rightful claimant on the Ufīsā throne, but also in annexing Rājdāmdrī and Kondavdu to the Bahmanī Kingdom.

It was now the turn of the lands beyond the Western Ghāfs to be pacified. Goa had already been reduced by the founder of the dynasty, Allārī dīn Bahman Shah (748-59/1347-58), but it was necessary to make sure that it had subsequently passed into Vidjayanagar’s orbit. Moreover, certain local chieftains were in the habit of waylaying Bahmanī ships plying in the Arabian Sea. By a series of brilliant campaigns which lasted three years from 873/1469 to 876/1472, Mahmūd Gāwān successfully negotiated the difficult terrain, captured the great fort of Sangameshwar and boldly marched to Goa, which he entered on 20 Sha’bān 876/1 February 1472.

The frontiers of the kingdom had now reached the Bay of Bengal in the east and the Arabian Sea in the west, and Mahmūd Gāwān rightly felt that it was time to reform the administration which had remained more or less static since the reign of Muhammad I (759-76/1358-75). He ordered that the whole land should be measured and a record of rights kept, thus forestalling the reforms of Akbar the Great and Rājdā Tōdar Mal by about a century. He re-divided the kingdom into eight instead of four provinces, brought certain tracts in each province under the direct rule of the sultan as royal domain, made khādaras or commanders of fortresses in each province directly responsible to the centre, and demanded accounts from military ḍābdīs or feudatories. He thus curtailed the power of the fiefholders and provincial magnates, who had exercised absolute power for several decades. Although himself an Afākī or “Newcomer”, he tried to keep the balance between the native Dakhnīs and the Afākīs in the matter of the distribution of high posts, and thus strove to solve a problem which had adversely affected the body-politic. Two significant events vastly increased the prestige of the kingdom, and with it that of the Khādja. One was the complete rout of Puruṣottam of Ufīsā, who had advanced to the banks of the Godāvāri to make common cause with the rebels of Kondavdu, and the other was the state visit of Adil Khān Fārītīk of Khandesh to Bīdar. Adil Khān’s visit is remarkable in that it resulted in the circulation of Bahmani coins in Khandesh as well as the mention of the Bahmani sultan’s name in the khaba at Burhānpur, the capital of the principality. Thus Khandesh, which was once at daggers drawn with the Deccan, became virtually a protectorate of the Bahmani at this time.

It was when Muhammad III was away on an expedition to Nellur and Kāndī (Konjivaram) in Shawwāl 885/December 1481 that a conspiracy was formed in the royal camp at Kondāppali (Muṣṭafānagar, now in the Kīrghāna district of André Pradesh) against Mahmūd Gāwān. The old feudal lords resented the loss of their power at the hands of the Khādja, while the Dakhnīs had never reconciled themselves to the rise of a mere “Newcomer” to such heights. Nizām al-Mulk Bahārī, who was the leader of the conspirators, persuaded Mahmūd Gāwān’s Hāshhi private secretary, under the influence of strong drink, to affix the Khādja’s seal to a piece of paper. The conspirators then forged a letter purporting to be from the Khādja to the Rājdā of Ufīsā and suggesting that the time was opportune for an invasion of the Deccan. This letter was shown to the sultan on his return from the south. He at once summoned the Khādja to his presence, and as his ears had been poisoned against him from time to time ever since he had been leading the western campaigns, he did not even enquire how the letter had come in the possession of Nizām al-Mulk. The old man was decapitated forthwith as a traitor, on the sultan’s orders, on 5 Safar 886/5 April 1481 when he was 73 lunar years old.

The Khādja was not merely the political and military leader of the Deccan, but was its cultural leader as well. He no doubt re-built a number of forts such as the one at Parenbā, but it is the noble edifice of the great madrasa at Bīdar which was to remain a permanent symbol of his concern for the public welfare. The college is a three-storeyed building, covering a site of 205 ft by 180 ft., and is surrounded by a large courtyard which was once fringed by a thousand cubicles where students lived and were provided not only with free education but with food and clothes as well. The library was the central feature of the institution, and it is related that no one could give the Khādja a more acceptable present than a rare manuscript. This and other works of utility such as water-works and numerous public buildings must have made Bīdar known far and wide. The Russian traveller, Afanasy Nikitin, who was in the Deccan from 1469 to 1474, says that this city was “the chief town of Hindustan” and was the centre of trade in horses, cloth, silk, pepper and many other species of merchandise.

Mahmūd Gāwān continued the policy of making the kingdom the resort of the learned which had been initiated by Fīrūz Shāh (800-25/1397-1422). He was himself a scholar of high repute and one of the most learned exponents of the Persian language. He has left us two important works, namely...
the 

the former, which was compiled in 880/1475, is a hand- 

book of Persian diction of the ornate type in fashion 

in those days, treating of the subject in a pro- 

legomenon, two discourses and an epilogue. The 

is a collection of his letters written to 

kings, ministers, princes and divines in practically all 

the states in India and the Middle East. It contains 

historical material of almost unsurpassed value, as it 

is the only contemporary record of many important 

events in which the 

was the chief actor. 

Mahmud Gawan's real character may be gleaned 

from the contrast between the image of the public 

ministerial levels. Under Muṣṭafā Nāʾīlī Pasha he was 

sandaret māštughrāt for three months from 23 Dījāmādī I 

1270/24 March 1854, and then māštughrāt of the 

Foreign Ministry from 29 Ramadan 1275/25 June 

1854. For 16 days he was detached to carry orders to 

the commander-in-chief Ekrem ʿOmer Pasha, in 

Bulgaria, during the war with Russia. On 7 Dījāmādī I 

1271/25 February 1855 Mahmud Nedim attained the 

rank of wāżīr with appointment as wāżīr of Sidon. 

He was transferred as wāżīr to Damascus in Rabiʿ II 

1272/December 1855 and to Izmir in Muharram 

1274/August 1857. He managed to return 

to the capital in Radjab 1274/February-March 1858 

as a member of the Tanzimat Council. Two months 

later he was acting Foreign Minister for a time while 

the minister, Fuʿād ʿAlī Pasha [q.v.], was at the Paris 

conference on the Danubian Principalities. He became 

a minister, finally, on 20 Muharram 1275/30 August 

1858 with the portfolio of commerce, from which he 

was dismissed in Dījāmādī I 1276/November- 

December 1859. For half a year he was unemployed. 

Till this point, Mahmud Nedim had a mixed 

reputation. He was thought to be able, but some con- 

sidered him a hypocritical and untrustworthy. Reşhd 

Pasha once compared him to mushy soap, suitable 

neither for washing hands nor for doing laundry. He 

knew the bureaucratic forms and language, but no 

foreign languages. 

On 19 Dhū ʿl-Hijja 1276/8 July 1860 Mahmud 

Nedim was named wāżīr of Tarābulus-i Ǧarb, a post 

not much sought-after, at his own request, and re- 

mained there for seven years. Toward the end of this 

period occurred the original conspiracy of the small 

group of New Ottomans [see ʿilāmiyāt] of which 

Mahmud Nedim's nephew Saḥḥār Ahmed-zāde 

Mehmed Bey was a member. Mehmed Bey proposed 

that the grand vizier ʿAlī Pasha, whom the con- 

spirators detested, be replaced by his uncle Mahmud 

Nedim. The plan was leaked to the authorities and 

known to ʿAlī Pasha. Therefore in Dhū ʿl-Hijja 

1283/April-May 1867 Mahmud Nedim returned to 

Istanbul to clear his name with the Grand Vizier. 

Although ʿAlī at first refused to see him, Mahmud 

Nedim eventually talked his way back into Sultan's 

graces. By 15 Saḥar 1284/18 June 1867 Mahmud 

Nedim was a member of the Medjlis-i wāżīr-i akhḫām-i 

ṣaltuṣuṣ, on 23 Rabiʿ II 1284/24 August 1867 he was 

declared dead, and on 11 Dhū ʿl-Kaʿa 1284/5 March 

1868 he was briefly sandaret māštughrāt for the second time. 

Eight days later he became Minister of Marine, a post 

which he held for more than three years, during 

ʿAlī Pasha's last grand vizierate. Mahmud Nedim 

cultivated relations with the Palace, catered to Sultan 

ʿAlī al-ʿĀzīz's interests, and emerged as the sultan's 

choice to succeed ʿAlī Pasha after ʿAlī's death. 

On 22 Dījāmād I 1288/8 September 1871 

Mahmud Nedim entered on his first grand vizierate, 

which lasted eleven months. His administration was 

chaotic, marked by a constant shifting of officials both 

in provincial posts and in the capital (in 11 months: 

five sevākurs, four navy ministers, four justice 

ministers, five finance ministers, six arsenal com- 

manders, etc.). He cut salaries in the name of 

economy, exiled important rivals, among them Hū- 

sain ʿAwnī [q.v.], to the provinces, hobbled the ṣāʿaṭa ṣalaṭa 

system and in general created new enemies for 

himself. He evidently took bribes from the Khedive 

Isāmī II of Egypt. Although the New Ottomans at first 

welcomed his appointment as an improvement over 

the "tiny minister," September 1871. In 1288/November 

Nâmik Kemal [q.v.] in his newspaper ʿIstebet began to 

criticise Mahmud Nedim, who then suspended the
paper and ordered Nâmi£ Kemaî out of Istanbul to the post of mucaait if tarif of Gelibolu. The Russian ambassador, Ignatyeiv, however, thought well of Mahmud Pasha's reputation. His opponents have stressed his Russophile views, his alleged venality, a character that included fickleness and deceitfulness, and his chaotic administrations. Yusuf Kemal Pasha thought him qualified only to be a chief secretary to a vizier. In each session of the Ottoman Chamber of Deputies, 1877 and 1878, there were votes to try him for crimes and incompetence. This was not done. Among Mahmud Nedim's writings are some unpublished poems, a published one (Has-i bâl) on his career, and an unpublished apologia pro vita sua, Midhat't-nâme or Reddiyye, much quoted in Pakalin and Inal.

In each session of the Ottoman Chamber of Deputies, 1877 and 1878, there were votes to try him for crimes and incompetence. This was not done. Among Mahmud Nedim's writings are some unpublished poems, a published one (Has-i bâl) on his career, and an unpublished apologia pro vita sua, Midhat't-nâme or Reddiyye, much quoted in Pakalin and Inal.

Mahmûd Nedîm Pasha (? - 879/1474), Ottoman Grand Vizier. Contemporary Ottoman historians tell us nothing of his origins. Authors of taqdîkiraps from the 10th/16th century down to ʿothmânî yazida Tâhib (Hadîk al-osâzâra, Istanbul 1271/1854-5, 9; facs. repr., Freiburg 1969) state that he was a native of Alâda Hisar (Krusevac) in Serbia, but this seems unlikely. According to T. Weitzel and G. A. C. Founder, the Serbian mother and a Greek father. Cha中科olyds makes his mother Bulgarian, while Kritovoulos (Turkish tr., Tâvîg-i Mehmed Khân-i thâbi, in TOEM, Suppl. 1328/1910, 192) makes him the descendant of a noble Greek family, whose father, Michael, was a descendant of Alexios III Philanthropenos. Accordingly to Martinus Crusius (Turcograecia, Basel 1584, 21), Mahmud Paşa was, on his mother's side, the Serbian-born grandson of the Byzantine nobleman Marko Yagari. He also tells us that Mahmud Paşa's cousin, George Amurites, the protossecuritas of the Comnene Emperor of Trebizond, David, was a grandson of the same Yagari. According to F. Babinger (Mehmed the Conqueror and his time, Eng. tr. R. Manheim, ed. W. Hickman, Princeton 1978, 115), based on Cha中科olyds (L'Histoire de la décadence de l'Empire Grec, Paris 1620, i, 229, 246), he was the son of Michael Angelus of Novo Brdo. He was in all probability a scion of the Angelis, i.e. the Thessalian branch of the Serbian despotate. It is uncertain when the Ottomans captured Mahmud Paşa. The accounts in Cha中科olyds (op. cit., i, 246), Taşkhoprûzâde (al-Sulak ib al-munawwiyâ, tr. M. Cemil, Istanbul 1269/1852-3, 176) and ʿAskîrân Celebi, ʿUlema-yi Şampa (Istanbul, Turkish ms. 2406, f. 215a) are identical in all but a few minor details. They each relate how the commander Mehmed Agha took Mahmud Paşa and his
mother prisoner on the road between Novo Brdo and Smederovo and, since Tashkopriizade (loc. cit.), it seems likely that Mehemmed Agha patronised all three, and it is undoubtedly through him that he was presented to Murâd II. Tashköprüzade's claim that Murâd II attached him to the suite of Prince Mehmedmehmed, later Mehmed II, is probably false (cf. ‘Ashîk Çelebi, op. cit., f. 214a).

He underwent a period of education in the Palace at Edirne and, after the accession of Memmed II 855/1451, began to receive royal favours. He attained the rank of qâglî agharî, and was in the sultan's company at the siege of Constantinople. According to some accounts, the sultan sent him to Constantinople at the beginning of the siege at the end of Rabî‘ I 857/beginning of April 1453 to demand the surrender of the city. During the siege, Mehmûd Paşa and the beglerbeğî of Anadolu, Ishak Paşa, received the command to attack the city wall between modern Edirne Kapı and Yedi Kule, and a section of the sea-walls in this area (Kritiovoules, op. cit., 48, 76). Those tarihârin which include a biography of Mehmûd Paşa and certain histories claim that Mehmûd Paşa participated in the siege as a vizier and beglerbeğî, but this information is almost certainly false. The most reliable source, agree that his promotion to the vizier on 865/1461, the city surrendered to the Ottomans (Ibn Kemâl, Ta’rikh-i Ebu ’l-Feth, i, 739), and despatched 1,000 Janissaries which the Sultan had allotted to his expense, Mehmûd Paşa added the troops of Anadolu, which makes it clear that he received Ali Emîri Library, Istanbul, Turkish ms. 806, f. 83a). Since his uncle Karadja Beg was beglerbeğî until his death at the siege of Belgrade in 860/1456 (Tewdrih-i Mehmûd Paşa, Tevârîkh-ı al-saltânî al-Oljânmîyya, ed. Mükrîmîn Haflî Yânîn, in Türk tarihî enjûmanî mejmû‘âtasi [1340/1921-2], 147). Mehmûd Paşa must have become beglerbeğî after his siege, as Orudj Beg (Tawdrikh-i Val-i Olymîn, ed. F. Rubin, ii, 272) and Istîrîfsî Bisâtî (Hâjî behgî, Ali Emîrî Library, Istanbul, Persian ms. 806, f. 83a) confirm (cf. also Ibn Kemâl, op. cit., 152; ‘Ashîk Çelebi, op. cit., f. 214b). The statement by Kûkûk Nishânjî Ramadânzâde Mehmed (Ta’rikh, Istanbul 1279/1862-3, 162), that he was at the same time kâdî ’usker, is probably based on a reference in the Menâkîb-nâmé (Menâkîb-i Mehmûd Paşa-yi Wâlî, Ali Emîrî Library, Istanbul, Turkish ms. 43, f. 50a), which makes it clear that he received his appointment temporarily while the kâdî ’usker ‘Alî Efendi performed the pilgrimage.

Mehmûd Paşa accompanied Memmed II on a number of campaigns, in all of which he achieved outstanding successes. The Sultan promoted him to the vizierate in recognition of his courageous exploits at the siege of Belgrade (Ibn Kemâl, op. cit., 122), after which he served as vizier and beglerbeğî with Rumelia. When, on 24 Djumâdâ I 863/30 May 1458, the Serbian Queen removed Mehmûd Paşa’s brother Michael Angâloviç and appointed a Catholic Bosnian in his stead, the Serbian boyars contacted Memmed II and offered him azerainty over Serbia (J. W. Zinkeisen, Geschichte des Osmanischen Reichs in Europa, Gotha 1845, ii, 116). The Sultan ordered Mehmûd Paşa to settle the Serbian question. To the Romanian troops which he had equipped at his own expense, Mehmûd Paşa added the troops of Anadolu and 1,000 Janissaries which the Sultan had allotted to him (Dursun Beg, Ta’rikh-i Ebu ’l-Fetî, in TOEM, Suppl. 1350/1912, 82; Sa’d al-Dîn, Tawdrikh-i Ta’rikhi mûmenî medjmu’asi, Istanbul 1279/1862-3, i, 463) and marched to Sofia. He succeeded, with numerous promises, in overcoming the objections of the troops, who refused to advance when the Serbs announced that they would observe the terms of the agreement only if the Sultan came in person, and that otherwise they would refuse to surrender the fortresses and join with the Hungarians. Continuing the advance, the Ottoman forces seized several fortified places, the most important being Reasava and Kuruca (for the other fortresses, see ‘Ashîk Çelebi, op. cit., Tawdrikh-i al-i Olymîn, ed. ‘Ali, Istanbul 1332/1913-14, 150; Dursun Beg, op. cit., 86). Mehmûd Paşa then unsuccessfully laid siege to Smederovo, before withdrawing to the fortress which the Sultan had built nearby. Shortly afterwards, he improved the fortifications, and captured the castles of Ostrovica and Rudnik (Dursun Beg, op. cit., 89; Enwerî, op. cit., 109; Ibn Kemâl, op. cit., 154; Bihârî, Tawdrikh-i al-i Olymîn, BL ms., Add. or. 7869, f. 168a).

After celebrating bayram at Yellû Yurt near Niğhî, Mehmûd Paşa appeared before Goâlucâc. He seized and repaired the fort before despatching Minnet Beg Oğlû Mehmîd Paşa with âkîdî troops to raid into Hungary. He then joined the Sultan in Skoplje. It was he who dissuaded the Sultan from demobilising the army when the Hungarians crossed the Danube. A number of sources state wrongly that Mehmûd Paşa commanded the Serbian expedition which resulted in the fall of Smederovo in 864/1460 (cf. J. von Hamer, GOR, i, 447), whereas Dursun Beg (op. cit., 90) and Istîrîfsî Bisâtî (op. cit.) make the Sultan himself the commander. (cf. also Zinkeisen, op. cit., i, 116).

In 864/1460, Mehmûd Paşa took part in Mehemmed II’s Morean campaign (see D. Zakynthinos, Le despotat grec de Morée, Paris 1932, ii, 285 ff.). On the Sultan’s command he led the siege of the fortress of Mistra which the Despot Demetrios held and, with the Sultan’s Greek secretary, Thomas Katavolos, acting as intermediary, he persuaded the Despot to surrender and sent him, on 9 Sa’dân/30 May, to the Sultan in Istanbul. Since the Despot had previously strongly opposed the Sultan’s invasion, the Sultan treated him well (Ducas, Historia Byzantina, Bonn 1834, 521; Kritiovoules, op. cit., 128; Dursun Beg, op. cit., 94; Ibn Kemâl, op. cit., 168).

In the following year, Mehmûd Paşa served with great distinction under the Sultan on the campaign against Sinop, Amâsa and Trebizond. Mehemmed II apparently attached great importance to the conquest of the Genoese-held Amastr, which earlier sultans had neglected to capture (‘Ashîk Paşa-zâde, op. cit., 153; Nezîri, op. cit., ii, 739), and despatched Mehmûd Paşa to blockade the city with a force of 150 ships, while he himself came overland. In 865/1461, the city surrendered to the Ottomans (Nezîri, loc. cit.; Ibn Kemâl, op. cit., 185; Haddîf, Tawdrikh-i Val-i Olymîn, University Library, Istanbul, Turkish ms. 1268, f. 126b). Mehmûd Paşa also mounted the operations which resulted in the fall of Sinop. Sending a fleet of 100 galleys from Istanbul, with a letter written by Dursun Beg, he himself went first to Edirne and then to Bursa with the assembled troops. In describing the campaign Nezîri (op. cit., ii, 743) wrote: “Mehmûd Paşa was now at the height of his glory. It was as though the sultan had renounced the sultanate and bestowed it on Mehmûd”. In describing the council held at Bursa in the Sultan’s presence, the Ottoman writers tell how Mehmûd Paşa influenced the other members by speaking
against the enemy of the Ottomans, Isfendiyâr-Oğlu Ismâ'îl Beg of Sinop, and attribute the preparations for the expedition to Mahmûd Pasha. According to an anonymous author who mentioned the campaign ahead of date (Library of the Topkapı Sarayî, ms. Revan 1099, 91), he spread the rumour that the expedition was aimed against Trebizond. At Ankara, the sultan announced the true goal of the campaign, and sent Mahmûd Pasha ahead to Sinop. Dispatching a letter composed by Dursun Beg, Mahmûd Pasha secured Ismâ'îl Beg's submission to the Sultan (Dursun Beg, op. cit., 98; ʿAbîk Pasha-zâde, op. cit. i, 156; Chalcocondylas, op. cit., i, 277). In the meantime, Ya'qûb Yûcel, Qandar of Gallata besieged, in Belleten, xxxiv/135 (1970), 373-407.

Before the Trebizond campaign, Mahmûd Pasha accompanied the sultan on his way to confront Uzun Hasan Aq Koyunlu, as far as Yassî Çimen, where, according to one account, a joint deputation from Uzun Hasan's mother Sara and Kûndân Şeyxân Hasan, the beg of Cennâgîc, secretly presented him with a petition for peace (Sa'd al-Dîn, op. cit., i, 479). Afterwards, he took part in the Trebizond campaign as commander of the troops of Rumelia. At the head of the left wing in the vanguard of the army, Mahmûd Pasha appeared before Trebizond, and persuaded first the townspeople, and then the Emperor David and his family to surrender (Chalcocondylas, op. cit., i, 277; Dursun Beg, op. cit., 21, 121). As David's fron tessariarius, Mahmûd Pasha's cousin, the philosopher George Amiruzes played an important role as intermediary, which had led a number of Greek writers to accuse him of treachery (Ducas, op. cit., 343; on the fall of Trebizond, see J. P. Fallmerayer, Geschichte des Kaisertums Trapezunt, Munich 1827; Heath Lowry, The Ottoman tahrir defters as a source for urban demographic history: the case study of Trabzon, Ph. D. thesis, UCLA 1977, unpublished, ch. i [in course of revision by the author]).

In 866-7/1462, Mahmûd Pasha participated in the Wallachian campaign, where he successfully prevented Vlad Drakul from routing Ewrenos Beg's atîngî troops and repulsed Vlad's night attack (Enwerti, op. cit., 104; Dursun Beg, op. cit., 106). Vlad sought refuge in Hungary, where he was imprisoned by Matthias Corvinus. According to S. Veretic (Magyarország a török hódítás korban, Budapest 1886, 41), Matthias' motive in imprisoning him was a letter which he had sent in the same year to Mehemed II and Mahmûd Pasha, offering Transylvania to the Ottomans (cf. Zinkeisen, op. cit., ii, 176). In 862/458, the Duke of Lesbos, Niccolò II Gattilusio, had strangled his brother Domenico, whom he accused of treachery (Ducas, op. cit., 346, 511; Kritovoulos, op. cit., 178). In 869-70/1465, Mahmûd Pasha conducted negotiations in vain with Venetian envoys who had given the sultan a false account of the Venetian campaigns in Albania under the command of the Sultan (Mangâ\'âtî, ms. Selîm Âğa Library, Istanbul 862; Kritovoulos, op. cit., 189; Ibn Kemâl, op. cit., 300).

In 872/1468, Mehemed II intervened in the troubles in Karaman following the death of Karaman oglu Ibrahim Beg. Accompanying the Sultan to Konya and Gevele, Mahmûd Pasha received orders to pursue the beg of Karaman, Piri Ahmed, who was, however, unable to capture. Mahmûd Pasha's rival, Rûm Mehmed Pasha, used this opportunity to win the Sultan and the army to his cause, by ascribing Mahmûd Pasha's failure to negligence. Although the event angered the sultan (Sa'd al-Dîn, op. cit., i, 311), he concealed his wrath and sent Mahmûd Pasha firstly in pursuit of the Turghudlu Turcomans and then, shortly afterwards, commanded him to deport all the master-craftsmen from Konya and Lârenda to İstanbul. Mahmûd Pasha could not, however, restrain himself from absorbing some of these from deportation, and offering his consolation to the_rest (Ibn Kemâl, op. cit., 291). To discredit him further, his rivals claimed that he had deported only the poor, and spared the rich in return for bribes (Hâsîdî, op. cit., f. 139b; ʿAbîk Pasha-zâde, op. cit., 170). It was not long before these accusations influenced the Sultan. Mahmûd Pasha's post went to Rûm Mehmed Pasha and, according to an unsubstantiated report (F. Babinger, op. cit., 272) the former Grand Vizier's tent was collapsed over his head when his army arrived at Alyon Karahisar. Through the misrepresentations of Rûm Mehmed Pasha, he had been dismissed from both the vizierate and the beylerbeglik of Rumelia.

Ibn Kemâl (op. cit., 293) and Hâsîdî (op. cit., f. 140a) state that, shortly after his dismissal, Mahmûd Pasha retired to his khas but, before long, he was appointed Admiral (kapudan) with the rank of sandjak beg of Gelibolu, with the task of restoring and equipping the Ottoman fleet (spring 873/1469 or 874/1470).

On 5 Dhu-l-Hijja 874/5 June 1470, he left Gelibolu at the head of a large fleet to attack the Venetian island of Euboea. (Ngegropontos, Egrithromatia). Mahmûd Pasha arrived off Euboea after capturing the island of Skiros and warding off the Venetian Ad-
MAHMUD PASHA — MAHMUD SHABISTARI

When Uzun Hasan’s troops began to advance into Anatolia, Mahmud Pasha, in recognition of his part in the conquest of Euboea, replaced Rüm Mehmed Paşa as Grand Vizier (Dursun Beg, op. cit., 148; Ibn Kemâl, op. cit., 350). In Istanbul, he attended the council which the Sultan had convened to consider what measures to take against Uzun Hasan. At Mahmud Pasha’s suggestion, the beylerbeyi of Anadolu, Dawud Paşa, serving nominally under Prince Mustafa, he imprisoned him in Yedi Kule. According to contemporary sources, Mahmud Pasha’s refusal of the leadership led to a breach between himself and the sultan.

On 13 Dhul-Qa‘da 877/11 April 1473, Mahmud Paşa left Istanbul with the sultan and marched to Sivas, where he encouraged Mehemmed to attack Karahisâr-i Sharîkh (Şehbînkarâşî) [see Karâ 895]. The Sultan rejected his advice and, at the battle of Otluk Beli, cast him in a secondary role by positioning him with the beylerbeyi of Rumelia, Khâş Murâd Paşa. Mahmud Paşa acted with great perspicacity and, perceiving Uzun Hasan’s strategy, warned Khâş Murâd not to cross the Euphrates. Khâş Murâd ignored him and, after his death, Mahmud Paşa fought with Uzun Hasan’s son, Ughurlu Muhammad (Maâli, 141). At the battle of Başkent on 19 Rabî‘ I 878/11 August 1473 (Ibn Kemâl, op. cit., i, 154), he fought among Dâwûd Paşa’s forces (R. R. Arat, Fatih Sultan Mehmed’in yarısı, in Türkayt memcaus, vi [1936-9], 285-322). Popular opinion attributed the victory to Mahmud Paşa (Maâli, op. cit., 154); but Mahmud Paşa’s enemies disgraced him in the sultan’s eyes and caused his downfall (Bihishti, op. cit.).

He retired to his estates at Khâşkoy, but returned to Istanbul on the death of Prince Mustafa and, against the advice of hisâyî Kûrt Hâfiz, appeared before the sultan. The sultan received him coldly. Suspecting him of taking pleasure in the death of Prince Mustafa, he imprisoned him in Yedi Kule. He was executed shortly afterwards on 3 Rabî‘ I 879/18 July 1474 (Ibn Kemâl, op. cit., 396-7; Sa’d al-Dîn, op. cit., i, 553 gives the month as Rabî‘ II) and buried in the türbe near the mosque in Istanbul which he had endowed (built 867/1462).

In the Persian tadhkiras, dates varying between 718/1318 and 729/1330 are given for his death. The tomb at Shabistari, where he was buried next to his teacher Bahá’ al-Din Ya’qub Tabrizi, has become a place of pilgrimage. It has been restored several times during the last century.

The fame of Mahmūd rests entirely on a short mathnawī (1,008 bayāts in the most recent edition), the Gulshan-i rāz (“The rose garden of the secret”). According to the poet’s introduction, it was written in the month of Shawwal 717/December 1317-January 1318 in a versetext (text sent by a “well-known notable” (buzzurgi muhfiq) from Khorāsān. A generally accepted tradition, appearing for the first time at the end of the 9th/15th century in Dāmmī’s Nafshadāt al-uns (ed. Tehran 1337/1958, 605), specifies that the letter contained questions on difficult points of mystical doctrine and was composed by Ḥusayn Sādāt Amīr (q.v.), who was an expert writer on the subject in his own right. These details are not con-

firmed by the text of the poem. The text of the letter, which is extant in some manuscripts of the Gulshan-i rāz, was probably only put together afterwards with lines taken from the title of the poem itself, which precede each of the fifteen main divisions under the heading su’al (“question”). The answers given by the poets are subdivided into theoretical parts (kā ḫīda) and illustrative passages (qasīda). The subject-matter of the poem is the doctrine of man’s perfection through gnosia. This involves a number of cosmological, psychological and metaphysical themes as well as topics proper to the Sūfī traditions, such as the problem posed by expressions of identification with the Divine Being. The influence of Ibn al-ʿArabī, acknowledged by Mahmūd in his Saʿīdat-nāma, is quite obvious. He also continues, however, the older tradition of Persian religious poetry as it appears from his treatment of poetical images as mystical symbols in the last sections of the Gulshan-i rāz, and from a reference to ʿAṭṭār (q.v.) as his example.

The great value attached to the poem is reflected, especially, in the many commentaries which were written on it throughout the centuries. The diversity of its contents, in spite of its concision, made it a standard and important text for elaborate expositions of mystical doctrine, like the celebrated Mafdtih al-iʿadżd, ascribed to “Asisi”) and his anthology of mystical poetry in German translation (Blütensammlung aus dem morgenländischen Mystik, Berlin 1825). The text, with a full translation, was published by J. von Hammer-Purgstall (Rosenhof des Geheimnisses, Pesth-Leipzig 1838) and by E. H. Whinfield (The mystic rose garden, London 1880; repr. 1978). Several other editions were published in Russian and in the Indian subcontinent. A critical edition was prepared by Gurban-eli Memmedzade (Baku 1973).

Of the other works ascribed to Mahmūd Shabistāri, the most likely to be authentic are the mathnawī called the Ṣaʿīdat-nāma, on mystical theology, containing also valuable data for the biography of the author (cf. Rieu, ii, 877; Ateṣ, no. 351/2; Munzawi, iv, 2909-10) and Ḥakk al-yākin fi maʿraj ratb al-ʿilmān, a prose work which was repeatedly printed (cf. Browne iii, 149-50; Munzawi, ii/1, 1129-30). The Mirʿāt al-muhakātīn, also in prose, is in some manuscripts ascribed to Ibn Sinā or others (cf. Munzawi, ii/1, 842-4 and 1374-5). No longer extant are the ʿShāhid-nāma, mentioned in Ḥakk al-yākin as well as in Gāzūrgānī’s Muqātūs al-saḥḥāk, and a translation of Muḥammad b. Ṣaʿīd al-Dīn Kurbālī’s Manākat al-muḥaddith, 1337/1958; pp. Ixxvii ff; Tahsin Yazici, in IA, s.v. ʿṢebisteri; H. Corbin, Trilogie ismaïlienne, Tehran-Paris 1961; E. E. Bertel’s, Izbrannye trudy. Sufizm i sufyskaya literatura, Moscow 1965, 109-25; A. Ateṣ, Istanbul Kitabhanerinde farsça manzum eserler, i, Istanbul 1968; A. Munzawi, Fīristi-n nazḵāba-yi farsī, ii/1, Tehran 1349/1970 and iv, Tehran 1351/1972; Shaq Ismailov, Filosofiya Makhmuda Shabistari, Baku 1976.

MAHMŪD SHEWKAT PASHA

(Mahmūd shewkot pasha) (1856-1913), Ottoman general, war minister and Grand Vizier (1913), was born in Baghdad. He came from a Georgian family long settled in Iraq and thoroughly Arabised, so that he was known as an Arab Mahmūd at the War Academy. His father Kethkhdāzade Süleymn was a former mutasarrif of Basra, and his mother an Arab lady of the ancient house of al-Farūkhī. After completing his early education in Baghdad he entered the War Academy in Istanbul, graduating in 1882 at the head of his class. He was appointed to the General Staff with the rank of captain and thereafter promotions came with regularity. He was made a major in 1886, colonel (1891), brigadier-general (1894), and divisional general or ferik (1901). In 1905 he became army com-
mandor or binası for and was appointed governor of Kosovo, one of the most troublesome provinces in Ottoman Macedonia. He soon established a reputation as a tough, efficient, and fair-minded administrator who did not bow to the Hamidian clique in Istanbul. As a result, immediately after the constitution was proclaimed in July 1908, Shewkat Pasha was appointed commander of the Third Army at Salonica and in November, acting Inspector-General of Rumelia, succeeding Huseyn Hilmi [q.v.].

In April 1909 when military insurrection and counter-Revolution broke out in Istanbul, Shewkat Pasha marched with his Third Army from Salonica and crushed it with ruthlessness determination. He soon emerged as the most powerful political-military figure in the Empire. Though he permitted the creation of a civilian government, Shewkat Pasha, as martial law commander and Inspector-General of the first three army corps, refused to accept its authority, especially its attempts to control the military budget. For a time there was even tension between the Pasha and the Committee of Union and Progress (Ittihâd we Terakki Dîmiyâyeti [q.v.]), whose fortune he had saved in April 1909, but which resented the Pasha's independence of cabinet control. When İbrahim Hâkı Pasha [q.v.] became Grand Vizier in 1910, he tried to bring Mahmud Shewkat under cabinet control by appointing him Minister of War. But the Pasha did not work either and the Pasha even resigned (October 1910) when the Finance Minister attempted to inspect military spending. The ministerial crisis that followed was resolved on the Pasha's terms: the audit law was not to be applied to the War Ministry.

By the beginning of 1911, as the government faced rebellion in the Yemen, Albania and Macedonia, as well as political disintegration at home, there were murmurs in the press that Shewkat Pasha intended to seize power and set up a military dictatorship. Despite his independence of and contempt for the civilians, Shewkat Pasha had no such intentions. He denied these charges in the Assembly, claiming that he had not availed of such an opportunity when it had presented itself in April 1909. His position—and that of the CUP—declined following the outbreak of an unsuccessful war with Italy in September 1911. By the spring of 1912 an anti-CUP opposition had emerged in the army, reminiscent of the movement of 1908. Shewkat Pasha introduced legislation to curb this movement, but with no effect. The rebellion continued unabated, and he was forced to resign as War Minister on 9 July 1912 though he retained his military command.

Shewkat Pasha remained in political eclipse until 23 January 1913 when the CUP seized power. Again, the Unionists turned to the Pasha because of his popularity with the army and the people, and had him appointed Grand Vizier and War Minister. But now the Unionists were in control, and used Shewkat Pasha's talents to reorganise the Ottoman army after the disasters of the Balkan Wars. It was under Mahmud Shewkat's influence that the decision to invite a German military mission under Liman von Sanders was taken. Meanwhile, in the turmoil following the fall of Edirne (26 March 1913), the Liberal opposition began to conspire to overthrow the CUP. As a part of that conspiracy, Shewkat Pasha was assassinated on 11 June as he drove to the Sublime Porte.

Mahmud Shewkat Pasha was one of the most important military-political figures of the Young Turk period, whose fortune he had saved in April 1909, when military insurrection and counter-Revolution broke out in Istanbul. Shewkat Pasha's influence was based on the shared goal of an independent and strong Ottoman state. While Turkish sources do not deal adequately with his alleged financial corruption, German sources, quoted by George Hallgarten, find him "hardly less corrupt than other Turks" (Imparliamsus vor 1914, ii, Munich 1951, 139). Yet it is worth noting that he did present the Unionists from the beginning of the war with Serbia with the Yıldız Palace treasure by martial law authorities after April 1909. He was always considered pro-German, and there can be little doubt that his ten years in Germany and the influence that Field Marshal von der Goltz had upon him inclined him in that direction. But there was no question of his seizing power in order to set up a military regime devoted to German interests, as a Unionist paper claimed, even in 1909. Mahmud Shewkat Pasha was primarily a professional soldier and a cautious statesman devoted entirely to the Ottoman state, and unwilling to involve it in any rash adventure. While he was alive there was little danger that he would take any risks that would threaten the Empire's very existence. Had he lived, he might have provided the stalwart leadership to prevent the war party in the CUP from dragging Turkey into the World War at a time not of its choosing.

MAHMUD TARDJUMAN, interpreter and diplomat for the Ottomans. Born in Bavaria of a noble family, he was taken captive (probably at the age of 16) by the Turks at the battle of Mohacs (1526) while serving as page to Louis II. Sent to the Palace School in Istanbul, he became famous for his extraordinary knowledge of languages. From 1550 at the latest, he served as interpreter to the Porte, with the title âgha, and in 1573 he was promoted to chief interpreter, with the title bey. As Turkish ambassador he played an important role in the diplomatic relations of the Porte with the Hungarian king John Sigismund and the latter's widow Isabella (1533-4). In 1569 a diplomatic mission brought him to France, and in 1570 he was sent as ambassador to Venice in order to summon the Republic to withdraw from Cyprus. The negotiations remained inconclusive, war broke out...
and Mahmūd was kept back in Verona. Only in 1573 did he return to Istanbul. In 1574 he was sent to Vienna and in 1575 to Prague, where he died. His body was brought to Gran (Esztergom), then on the border of the Hungarian region, which had been conquered by the Turks. Mahmūd was described by his contemporaries as a learned and capable diplomat. Although it cannot be proved unequivocally, it is assumed that Mahmūd can be identified with the author of the same name who wrote the Ta'rikh-i Üngūrū, chronicle of the history of Hungary in Turkish, the unique manuscript of which is in the collection of the Library of the Hungarian Academy of Science (Török. F. 57).

MAHMÚD TAYMÚR (born in Cairo 16 June 1894, died in Lausanne 25 April 1973), Egyptian writer whose prolific output includes novels and short stories, theatrical pieces, accounts of journeys, articles and various studies, in particular relating to Arabic language and literature. He is beyond doubt the best known of the Taymūr family, although his brother Muhammad (1892-1921) was a talented short-story writer and dramatist.

Hagiography has claimed the most remote origins for this family. Henceforward, the most reliable source for information on these origins is "the story of the Taymūrs", from the pen of the learned adîb Ahmad Taymūr, father of Muhammad and of Mahmūd, which figures as supplement to his work Lu-šab al-Ārab "The games of the Arabs", 1st ed., Lajnūq al-mu′alla'fāt al-Taymūriyya, Cairo 1936/1948.

The first known ancestor of the Taymūrs, Muhammad b. ʿAli Kurd Taymūr, was a Kurd from the region of Mawsīl who arrived in Egypt with the troops sent by the Porte after the departure of the French forces of Bonaparte (1801). Rising through the military echelons he became a general, then a senior official—the title of kādshīf is also attached to his name. Having been the confidant of Muhammad ʿAli, he was to become that of his son Ibrahim. Their family was installed in Egypt from the beginning of the 19th century. The devotion of these foreigners to the Arabic language and the people of Egypt intrigued and delighted the Egyptians, whether foreigners to the Arabic language and the people of Egypt or not. And, in his[murta, the unique manuscript of which is in the collection of the Library of the Hungarian Academy of Science (Török. F. 57).
reviews, short stories which count among the first realist Egyptian publications to mark an epoch. His untimely death persuaded Mahmūd to engage repeatedly with the death which his brother had traced out and as a first step he published, one year after his death, an edition of his collected works in three volumes (1922).

However, the stories indicating that Mahmūd had really taken up the mantle of Muhammad seem to have been slow in coming. The first narrative to reflect his move towards realism, al-Shaykh Djamʿa, dates from 1921, but it was in 1925 that his Utṣā Shabḥātu yuṭālu bi-adjrihi “The coachman Shabha claims his due”, drew attention to him. The al-Fādīr review of avant-garde literature in which the text was published, saw its author as “the Egyptian Maupassant”, and the critics stressed, not necessarily as a compliment, the audacious nature of this little tableau of manners. One of them reckoned that Oriental society was still too hypocritical to allow itself to be stripped bare by a Zola.

This was the real departure. Henceforth, his production became more prolific and he began publishing compilations: two for the one year 1925, each containing a dozen short stories, and another appearing in the following year. These first three compilations had particular importance for him because about ten years later (1937) he published a selection from them under the title Wābaḥu bi-adjrihi “Shelter no. 13”, play, 1942); social questions (the condition of woman is the basis of Hawwāʾ al-Khālidīa “Eternal Eve”, play, 1945, and of Iḥā al-likd “Farewell, love”, novel, 1959); and historico-legendary evocations tending towards fantasy and humour (Kāyẖānu ṣī Khan al-Khālidī “Cleopatra in Khan al-Khālidī”, novel, 1946, and Ibn Dīnāl (“al-Hadījdījādī, play, 1951). There are, however, particular features: only full-length fiction gave him the opportunity to develop the kind of psychological analysis to which he had always aspired (Salwa ṣī mahubb al-rīh “Salwa to the four winds”, novel, 1944).

The fact remains that Mahmūd Taymūr was before all else a short story writer—in the course of his life he published a total of some thirty compilations. From the start, he aimed to produce an Egyptian oeuvre. Much attention is therefore given to the local colour in his writing, and it is taken as evidence of his patriotism. In fact, if he locates the majority of his tales in a context familiar to the Egyptians, he does so out of concern for authenticity and writes with such sobriety, with such mastery of ellipsis, that the predominant impression gained from his work is one of technical virtuosity. In addition his plots could be less banal than the plots and the characters that he presents. The futuwwa, that is the bad boy, leader of a gang of ruffians, is indeed a familiar type among the common folk of Egypt; making him a mahbūb is not consistent with natural logic, but bestowing upon him this title and the dignity which accompanies it by having him serve as a hairdresser to a group of pilgrims travelling by train to Mecca, is something which departs totally from traditional norms and reveals the mischievous attitude of the author (al-Hadījdī Shalābī, in the collection bearing this title, 1930). Realism requires thus! In the quest for the desired effect, the writer leaves nothing to chance. He begins with an existing situation, a character who may be of any kind but is easily recognisable and, without any unnecessary delay, he brings out the weakness of the character, the incident which, breaking the daily routine, will prepare the way for catastrophe. In other cases, pathology plays a part from the outset; inspired and possessed persons abound in his work, as well as beings beset by obsessive beliefs and those whom misery, frustration or sickness have unbalanced. But all of this would be incapable of holding the attention of the reader were it not for the interplay of artistic qualities: narration which is clear yet precise, judicious choice of eloquent detail or of striking formula, sense of suspense and, essential to all the preceding, firmness of writing.

The question of language was central, in fact, in the art and the literary career of Mahmūd Taymūr. Out of concern for realism, he opted first for the spoken language which he employed in his early stories and theatrical pieces. Taking part in a Congress of Orientalists held in 1932 in Leiden, he expressed the opinion that classical Arabic language should be simplified and relieved of certain cumbersome grammatical forms in order to meet the needs of hitherto unknown literary genres, e. c. novel and drama. This being the case, his recourse to dialect, the natural language of conversation, is clearly explicable. But subsequently he was to take a different view. No doubt he felt himself obliged to employ a more polished, more “academic” language when official recognition was accorded to him: in 1947 the Puʿād I Academy awarded him the short story prize for the first time. The corpus of his works written in the classical language, in 1950 he was elected a member of this Academy; and in 1952 he received the State Prize, which he shared with Tawfīk al-Hakīm.

It would, however, be a mistake to overstress this aspect and to forget that on his own account, for reasons of taste and also out of concern for efficacy and appeal, he had taken the side of the fāṣīḥa. That which he lost in Egyptian parochialism, he gained in universality, but above all he was capable of expressing himself in a language simultaneously pure and adapted to the objectives that he imposed upon himself: a narrative, living language, freed from the traditional rhetorical tinsel which would in fact be totally out of place. On the other hand, those expressive classical idioms which had been unjustly abandoned are restored and rehabilitated in his work.

This style which is both functional and mildly anachronistic gives to Taymūr’s stories their distinguishing mark, their peculiar flavour. Most often the phrase is brief, but the syntax and vocabulary recall and embellish the technique of the prose masters of antiquity.

It may be that he attached too much importance to these questions of language. Not only did he eschew dialect completely in his later works but he systematically set about correcting the earlier ones, or at least those of them closest to his heart. Dramatic
pieces and stories received their definitive version, revised and corrected to an extent that would satisfy the most rigorous academic standards. A lengthy text dating from 1934 (Abū 'Ali 'Āmil ārist), which had been revised twenty years later, becoming Abu ‘Ali al-fanndn (1954). Of course, the removal of dialect was not always the only reason for the revision, which could be influenced equally by considerations of composition (lengthy passages are abbreviated, the profound sense of history is modified, etc.). However, it is impossible not to regret this perfectionism which drove a great writer to the rewriting of works which had been published many years before. To a certain extent, these sculps are a credit to a craftsman anxious to produce fine work, but they also have the effect of preventing the artist from developing truly original creations. In the end, it is certainly true that the art of Taymūr, too cultivated, too polished, could no longer, at a given moment, respond to the curiosities and dissatisfactions of new generations, in Egypt and in other Arab countries. It has come about that his successors, many of them his disciples, denounce his romantic or theatrical style of writing but furthermore, question the realism and the rationalism of which he was a resolute partisan.

Bibliography:

MAHMUD YALAWAC, minister in Central Asia and China of the Mongol Khān in the 13th century A.D.

Barthold surmised (Turkestana, 296 n. 3) that Mahmūd Yalawac was identical with Mahmūd the Khārzamshī mentioned by Nasawi as one of the leaders of Cingis’s embassy of 1218 to the Khārazm-Shāh ‘Alā’ al-Dīn Muhammad [see Khārazm-Shāhs]. It is true that the Secret history of the Mongols (tr. E. Haenisch, Die Geheime Geschichte der Mongolen, Leipzig 1948, 132) refers to Mahmūd Yalawac and his son Mas’dūd Beg [q.v.] as Khārzamshīns (Kūrumgū) and that yulawal/yulawar means ‘envoy’ in Turkish (Clauson, Eynymological dictionary, 921: perhaps of Iranian origin?). He was clearly from the merchant class, and must have rendered services to the Mongols, for under the Great Khān Ogdey (1227-41) he achieved high office, being appointed over all the sedentary population of Transoxania and Mogholistan [q.v.] (i.e. the steppelands to the north of Transoxania) and ruling these from Khudjand [q.v.]. During his governorship, a serious popular revolt aimed against the Mongol overlords and the local nobility broke out in Bukhărā under the leadership of the “great” Wujūl, Fuzūl (1238), and it was only Mahmūd Yalawac’s interventions which saved the city from savage Mongol reprisals. Soon after this, he fell into dispute with Čaghatay, to whom part of Transoxania and Mogholistan had been apportioned in the partition of the spoils of the Battle of Ain Jalut. This conflict ended with the negotiation of the Treaty of Sarayn (1267). The wealth of the Mahmūdābād estate provided the basis on which the descendants of Nāwāb ‘Alī Khān were able to play leading roles in Indian and Muslim affairs under the British. Rādā’ī Amir Ḥasan Khān’s (d. 1903) activities were those of a cultivated landed gentleman. He followed literary pursuits, in particular, as a long-time member of the imperial Jangalak-Ḥusayn, when he was a great public benefactor in Awadh, support-
leading role in the League, as treasurer, chairman of the Working Committee and a major benefactor. In particular, he operated as the link between the League and Muslim youth; he was president of the All-India Muslim Students Federation and devoted himself especially to organising the student forces which played such a considerable role in the League's campaigns for support. But Amir Ahmad Khan did not follow League policy in all things. A deeply religious man, in the early 1940s he became involved in the Islamic Djanat ul-Umda and advocated, against Djinnah, that Pakistan should be a single state.

After the partition of India, Amir Ahmad Khan lived for a time in Irak and in Pakistan. He played little part in Pakistani politics, and rejected Ayyub Khan's demand that he refund the Muslim League on the grounds that Pakistan needed a 'party with socialist aims wedded to Islamic justice'; see Daew (Karachi) for 15 October 1973. From 1986 until his death he was Director of the Islamic Cultural Centre in London, where his principal achievements were to bring to fruition plans to complete the London Mosque and to establish an Islamic Science Foundation. His life was distinguished by his faith, his simplicity, his generosity and a high level of cultivation in Urdu, Arabic, Persian and English, a level of scholarship which had been the hallmark of his ancestors in the previous three generations.

**Mähpaykar.** [see kōsem].

**Mahr (A.), Hebrew mokar, Syriac mahra, 'bridal gift', originally 'purchase-money', synonymous with sādāk which properly means 'friendship', then 'present', a gift given voluntarily and not as a result of a contract, is in Muslim law the gift which the bridegroom has to give to the bride when the contract of marriage is made and which becomes the property of the wife.

1. Among the pagan Arabs, the mahr was an essential condition for a legal marriage, and only when a mahr had been given did a proper legal relationship arise. A marriage without a mahr was regarded as shameful and looked upon as concubinage. In the romance of Antar, the Arab women, who are being forced to marry without a mahr, indignantly reject such a marriage and brought about the tragic end of the daughters of the conquered without giving them a mahr.

In the pre-Islamic period, the mahr was handed over...
to the wa'if, i.e. the father, or brother or relative in whose guardianship (wal'd) the girl was. Here the original character of the marriage by purchase is more apparent. In those times the bride received none of the mahr. What was usually given to the woman at the betrothal was the sādāk; the mahr, being the purchase price of the bride, was given to the wa'if.

But in the period shortly before Muhammad, the mahr, or at least a part of it, seems already to be given to the woman. According to the Kur'an, this is already the prevailing custom. By this amalgamation of mahr and sādāk, the original significance of the mahr as the purchase price was weakened and became quite lost in the natural course of events. There can be no doubt that the mahr was originally the purchase price. But the transaction of purchasing, in course of long development, had become a mere form. The remains, however, as they survived in the law of marriage in Islam, still bear clear traces of a former marriage by purchase.

2. Muhammad took over the old Arab patriarchal ceremony of marriage as it stood and developed it in several points. The Kur'an no longer contains the conception of the purchase of the wife and the mahr as the price, but the mahr is in a way a reward, a legitimate compensation which the woman has to claim in all cases. The Kur'an thus demands a bridal gift to be given at the legal marriage, and it gives them whom ye have enjoyed their reward as a wedding-gift" (lit. farîda "allotment of property", IV, 24) and again: "And give the women their dowries voluntarily" (IV, 3); cf. also IV, 25, 34; V, 5; IX, 10.

The bridal gift is the property of the wife; it therefore remains her own if the marriage is dissolved. "And if ye wish to exchange one wife for another and have given one a talent, take nothing of it back" (IV, 20). Even if the man divorces the wife before he has cohabited with her, he must leave half the mahr with her (II, 236-7).

Up to the Muslim period, the wife was considered after the death of the husband as part of his estate; the heir simply continued the marriage of the deceased. Such levirate marriages are found in the Old Testament also. Muhammad abolished this custom, which still remained in his time, by sûra IV, 19: "O ye who are believers, it is not permitted to you to inherit women against their will". In his social reforms, Muhammad made the mahr into a settlement in the wife's favour.

3. There was an ample store of traditions about the mahr, and these pave the way for the theories laid down by the jurists in the fiqh books. From all the traditions, it is clear that the mahr was an essential part of the contract of marriage. According to a tradition in Bukhârî, the mahr is an essential condition for the legality of the marriage: "every marriage without mahr is null and void". Even if this tradition, so brief and to the point, is not genuine, a number of traditions point to the fact that the mahr was necessary for the marriage, even if it only consisted of some trifling thing. Thus in Ibn Mâdâ and al-Bukhârî, traditions are given according to which the Prophet permitted a marriage with only a pair of shoes as mahr and approved of a poor man, who did not even possess an iron ring, giving his wife instruction in the Kur'an as mahr.

A few hadîths endeavour to show that the mahr must be neither too high nor too low. From the traditions we also learn what mahr was given in particular cases in the Prophet's time: for example, the bridal gift of 'Abd al-Râhîm b. 'Awf was an ounce of gold, that of 'Abû Hurayra 10 ikûs and a dish, that of Sahîh b. Sa'd an iron ring.

In the hadîths we again frequently find the Kur'an regulation that in a divorce after cohabitation the woman has the right to the whole of the mahr. What was usually given to the woman at the betrothal was the sādāk; the mahr, being the purchase price of the bride, was given to the wa'if.

According to Muslim fiqh-books, marriage is a contract ('adâ) made between the bridegroom and the wa'if of the bride. An essential element in it is the mahr or sādāk, which the bridegroom binds himself to give to the bride. The marriage is null without a mahr. The jurists themselves are not quite agreed as to the nature of the mahr. Some regard it practically as purchase-money (e.g. Khalil: "the mahr is like the purchase-money") or as equivalent ('iswâd) to the possession of the woman and the right over her, so that it is like the price paid in a contract of sale; while other jurists see in the mahr a symbol, a mark of honour or a proper legal security of property for the woman.

All things can be given as mahr that are things (ma'n) in the legal sense and therefore are possible to deal in, that is, can be the object of an agreement. The mahr may also—but opinions differ on the point—consist in a pledge to do something or in doing something, e.g. instructing the woman in the Kur'an or allowing her to make the pilgrimage. The whole of the mahr can either be given at or shortly after the marriage or it may be paid in instalments. When the latter is the case, it is recommended to give the woman a half or two-thirds of the mahr immediately, and the rest afterwards. The woman may refuse to allow consummation of the marriage before a part is given.

Two kinds of mahr are distinguished:

a. Mahr musammâm, "specified mahr", the amount of which is exactly laid down in the wedding contract.
b. Mahr al-mîthîl 'mahr of the like', i.e. unspecified dowry, in which the amount is not exactly laid down, but the bridegroom gives a brid gift before consummation, which is exactly laid down in the wedding contract.

The mahr becomes the property of the wife and she has full right to dispose of it as she likes. In the case of any dispute afterwards as to whether certain things belonged to the mahr, or not, the madhâbs differ. The Shafi'is lays down no maximum. There is also no upper limit to the mahr: whatever is agreed upon in the contract must be paid. The mahr generally is adjusted to what other women of equal status (sister, daughter, aunt) have received. As regards the minimum for the amount of the mahr, limitations were introduced by the various law-schools; the Hanafis and Shafi'is insist upon 10 dirhams as a minimum and the Mâlikis three dirhams. The difference in the amount fixed depends on the economic conditions in the different countries where the madhab in question prevail.

If the man pronounces a divorce, the mahr must be paid in every case if cohabitation has taken place; but the bridegroom may withdraw from the marriage before it is consummated; in this case he is bound to give the woman half the mahr.

MAHRA, a tribe living in the south-eastern part of the Arabian peninsula, in a stretch of land along the coast of the Indian Ocean between Hadramawt and Ṣumān, and in the hinterland belonging to that region.

More accurately, the boundaries of Mahra-land run in the west from the coast along Wāḍī Maslīla, a continuation of Wāḍī Ḥadramawt, in the north-west along Wāḍī Rāma as far as Šanāw, from there east-north-east, and reach via Andawr the north-eastern coast at Ras Ḥāṣik, to the north of Ḥāṣik, the ancient Mahra settlement. These boundaries enclose also the territories of other tribes, namely of the Ṣāḥīra, the Kāra and the Bāṯāhira in Zufar. At the present time, Mahra-land comes within the People’s Democratic Republic of Yemen in the west and in the Sultanate of Ṣumān in the east. Until very recently, the Mahra of the Zufar province in the Sultanate of Ṣumān, living mainly on the highlands between the desert and the mountains, led a Bedouin life; but those living on the coast have always been sedentary. The present-day sixth governorate (muhāfazā) of South Yemen, with its chief town Kīnān (q.v.), corresponds more or less with the former Mahra sultanate, with the same centre.

The Mahra can be considered not only as a tribe but as a separate people, since they speak a language of their own, Mahrī (q.v.), and have until very recently retained a high degree of autonomy. That the Mahra are mentioned by classical Arabic authors is mainly due to this fact that they have their own language, not understood by anybody else (Ibn al-Mudjawir, 271, l. 17).

A member of the Mahra tribe is indicated in their proper name by mahrī or mehre, pl. mahē or mehe (A. Jahn, Mehri-Sprache, 130, l. 14); the corresponding feminine forms are mehriit (Hein, Mehri-Texte, 137, l. 2), plural mehreighton (Jahn, 210). They indicate Mahra-land as rakhē mahēr (cf. Jahn’s map, op. cit., 211).

According to Yākūt (Muṣqām, iv, 700, l. 8), the correct form is Mahara, not Mahra, but he stands alone in this opinion, which is moreover uncorroborated by any proof. Mahara is perhaps an incorrect reconstruction of an alleged plural Mahārat, a place name in the Nadīd of Mahra land (Muṣqām, iv, 697, l. 2). Ibn Durayd (Kītāb al-Iṣbāḥād, ed. A. M. Hārūn, 2nd ed. Bagdad 1979, 531 f.) gives in the name Mahra from Arabic mahrī “skilful, experienced.” Ibn al-Mudjawir (271, 11, 8-14) relates an aetiological story, according to which the Mahra are descendants of three hundred virgins who, having escaped a massacre in a place called al-Dāḥabīd, were given as mahrī (mahr) by the people of the surrounding mountains and then married by them.

The most important of the still-existing sub-tribes of the Mahra (their orthography not being always consistent in the sources) are: Bayt Ḫaḥāh, Bayt Samūdāt, Bayt Ḩuwar, Bayt Ṣaḥbānāt, Bāṭ Harāwī, Bāṭ Zayād, Bāṭ Bārā’īfī, Bāṭ Kāmīṣīt and Bayt Bahāf (see the charts and lists of the Mahra tribes in Dostal, Beduinen, 77 ff.; H. A. L. Kurtz, Ta’āyib al-qādir al-ismiya, Beirut 1922, 47-50; Ka’il al-mahī fi Ḥadramawt, Carter, Tribal structures, 46-8). W. Dostal (Beduinen, 34) estimates the number of their able-bodied, weapon-carrying men at 8,000. J. Carter (Tribal structures, 37) supposes that there are 5,000 members of this tribe in Ṣumān, and T. M. Johnstone (The Modern South Arabian languages, Malibu 1975, 2) is of the opinion that the individuals of all Mahra groups taken together amount to some 15,000. According to the Gazetteer of Arabia. A geographical and tribal history of the Arabian peninsula, ed. Sh. A. Scoville, i, Graz 1979, 80, the number of the Mahra on the mainland, the Bedouin included, amounted to 50,000 in the then Aden Protectorate at the time of the First World War. A census carried out in 1983 numbers the population of the sixth governorate of the People’s Democratic Republic of Yemen of the Mahra to 7,777; it takes into account that on the one side people from Ḥadramawt and elsewhere have immigrated into the country of the Mahra and that on the other hand members of the Mahra tribes have emigrated to other provinces and to the Gulf Emirates the total number of the Mahra, i.e. the people speaking Mahri, can be estimated at about 60,000 (A. L. Scoville, The Modern South Arabian Languages in the P.D.R. of Yemen. Proceedings of the Seminar for Arabian Studies, xv [1985], 51).

It cannot be maintained any longer that Mahra-land was already known to the ancient Greek writers, nor that Mamali, with the variant Mali, named by Theophrastus (Historia plantarum, ix, 4,2) as the fourth South Arabian land next to Saba’, Ḥadramawt and Kataba (q.v.), is probably a corruption of Mahra and shāhārī (Hein, M. R. 236, l. 22; Dostal, Be- duinen, 5, 3) estimates the number of the Mahra (their orthography not being always understood) at 60,000. If one proceeds of the Mahra, i.e. the people speaking Mahī, are apparently found in the Hadramite inscription RES 4877 from al-ʿUkla, a pre-Islamic stronghold to the west of the capital Ṣabā. Text, presumably dating from the beginning of the 3rd century A.D., runs as follows: (1) ghrmbr (2) w.tb/kh (3) r.mbrn, “Ṣabāhīr (or Ṣabāḥār), son of Wāţīlum, chief of the Mahrīt”. It is true that A. F. L. Beeston (The Philby collection of old South-Arabian inscriptions, in Le Museon, ii, [1938], 324) translates kbr/mbrn “as chief of the artificers”, and A. Jämme (The Al-Uqlah texts, Washington 1963, 50) as “leader of the specialised workers”. But in the inscriptions, khabīr almost always indicates the leader or the chief of a tribe, and is followed by the name of the tribe or by the nisba plural in the form ḥā’īn, ḥā’ītan, usual in ancient South Arabian, e.g. khrīyiḥm (RES 3913,1) “khabīr (of the tribe) of Fayhān”, khrīyfrūṣ (RES 3951, l. 1) khabīr (of the city-tribe) of Sirwāb”, khrīyiḥm (RES 4895, l. 1) “khabīr of the Mahī tribe of the Raymānītes”, khrīyhrm (Ja 816,2) “khabīr (of the tribe) of the Ṣaḥīrān”, etc.; the “leader of the Bedouin of the king of Saba’” (kbk’t rbn/mlk/ḥb’t. Ja
665, 1 f.) is indicated in the same way. Thus *mhrn is the nisba of an unattested * mhryn "Mahrite", i.e. Amhurian, or perhaps Amharan, since the place-name Bhih is occasionally later, is confirmed by inscription RES 4877. A further evidence for the country and the tribe of Mahra has been found in the Sabaean rockinscription from Wadi āʿAbadān from the middle of the fourth century A.D., in which military campaigns "towards the country of Mahra" (line 7: qḥl/mḥrt) and "against the Mahra" (line 21: ḳḥy/mḥrt) are mentioned (cf. the reproduction of the text in J. Pirenne, Deux prospections historiques au Sud-Yemen, in Raydān. Journal of Ancient Yemeni Antiquities and Epigraphy, iv [1981], 235). F. Hommel's assumption (Süd-arabisches Chronomathie, Munich 1893, 45) that the form Amhār is still alive in the name of Amhara people, who allegedly have migrated from Mahra land to Ethiopia, is wrong. Already A. Sprenger (Alle Geographie, 268) had already pointed out that the South Arabian Mahra-land it is clearly a nisba of a group of Mahra origin. An alleged true form mḥrt, found in the late Sabaean inscription RES 4069,5 from Niṣāb, has nothing to do with the Mahra; the passage should rather be read as wḥry/qḥly/wḥr/qylwkbwr/shbn/sybn, and translated as "and the administrators and the leaders of the Saybān tribe".

The Yemenite authors al-Ḥamdānī and Ibn al-Mudjādwir excepted, the classical Arabic geographers who localised Mahra-land in the region between Hadramawt and ʿUmrān (al-Īṣṭakhri, 12, 1: 20; al-Mukaddasī, 53, 11: 9-11), had only a superficial knowledge of it; the interior in particular was almost completely unknown to them. Al-Ḥamdānī (Ṣafā, 45, 11: 18 f.; see also Iklīl, i, 72, 1: 19) names al-Asʾā3 as the centre of the Mahra. C. de Landberg (Hadramōt, Leiden 1901, 138) wanted to correct this name into Aš-ʿĀl āhā, but there is nothing necessary for this, for the amount al-Asʾā3, apparently mentioned any more since the early Islamic period, is now verified as ḳḥy/Asʾāʾyān (Yanbuq, 47, 1: 7) in a late Sabaean inscription from Yanbūk in Hadramawt (M. A. Balāqīf, New light on the Yazanite dynasty, in Proceedings of the Seminar for Arabian Studies, ix [1979], 7; M. Bālāqīf et Chr. Robin, Inscriptions inédites de Yanbug, in Raydān. Journal of Ancient Yemeni Antiquities and Epigraphy ii [1979] 49 f.). According to E. Glaser (Die Abessinier in Arabien und Afrika, Munich 1895, 87), the co-ordinates given by al-Ḥamdānī for the position of al-Asʾā3 point to the region of Damkōt and Rās Darbat ʿĀlī, thus rather precisely to the middle of the coastal strand which was, moreover, at a later time still inhabited by the Mahra. This conclusion corresponds with al-Ḥamdānī's indication, given in another passage (Ṣafā, 87, 11: 21 f.), that al-Asʾā3 is a port. Elsewhere (Ṣafā, 127, 1: 4), al-Ḥamdānī counts Mahra among the coastal lands of the Arabian Sea. According to him, the Wādī al-Āḫkāf (for the term al-Āḥkāf [q. v.], see also L. Forrer, Südarabien nach al-Ḥamdānī's "Beschreibung der Arabischen Halbinsel", Leipzig 1942, 220, n. 4) flows for several days' journeys from the land of Ḥadramawt into Mahra-land (Ṣafā, 87, 1: 10), and likewise to the left of the great coast, which extends to the north of the Prophet Hud is to be found (Ṣafā, 87, 1: 8). Mahra-land is considered to belong to the farthest part of Yemen (Yākūt, Muṣaʿjam, i, 280, 11: 1 f.; ii, 510, 1: 13; etc.) and is named as one of its mihliḥāf (Yākūt, Muṣaʿjam, iv, 700, 11 f.). The steppe region between the coast in the south and the desert in the north is called Nāḍjd, as was already done by al-Ṭabarānī (Taḥrīr, i, 1980, 1: 12). Yākūt (Muṣaʿjam, iii, 681, 1: 11; iv, 697, 1: 2; etc.) and others; and from that region originates also the nāḍjud, a highly-appreciated kind of frankincense (A. Grohmann, Südarabien als Wirtschaftsgebiet, i, Vienna 1922, 137 f.). Al-Šihr is also mentioned as a main centre of Mahra-land (al-Īṣṭakhri, 25, 11: 10 f.; al-Khulālī, Mukāṭasār, 132, 1: 2). Muḥammad b. Ḥabīb (Kīṭāb al-Muḥabbār, ed. I. Lichtenstaedter, Haydarbād 1942, 266, 11: 4-6) counts al-Šihr in Mahra as one of the markets of the Arabs in pre-Islamic times; it is said to lie at the foot of the mountains in which the tomb of the Prophet Hud is found, and said further that no tide is levied on that market because the town does not belong to any kingdom. Al-Šihr is occasionally even identified with Mahra-land (Ibn Ḥaladīn, Mukāṭasār, 132, 1: 4 f.), as can also be concluded from Nashwān b. Saʿīd al-Ḥimyārī, Shams al-ʿalam, when he (under the root r-ṣ-y) defines al-Asʾā3 (in) as a place in al-Šihr, i.e. in Mahra-land. This is also the case when, for the year 694/1294-5, during the zenith of the power of the Rashīlīs [q. v.] under al-Qasim as-Sārī is said that the latter's dominion was already firmly established in the Yemen, in al-Šihr (i.e. in Mahra-land) and in Ḥadramawt (Yahyā b. al-Husayn, Ḍhayyāt al-ʿamānī fī al-khāṭr al-ṣuṣ-ṣuṣ, Cairo 1968, 477, 11: 6 f.). Thereafter, for long al-Šihr, once the residence of a Mahra sultan, did not belong any more to Mahra-land; it passed into the possession of the Kuʿayyī sultans of al-Šihr and Mukllā. Only families like the Al-ʿIṣrāyānī live there in isolation, testify to the former presence of the Mahra in al-Šihr.

The Mahra trace their genealogy back to their ancestor Mahra b. Ḥaydān b. ʿAmr b. al-Ḥāf. Already A. Sprenger (Alle Geographie, 266) recognized in these names some geographical and ethnographical names of places on the South Arabian coast, e.g. in Ibn al-Ḥāf the port of Bal-Ḥāf, lying to the west of Bir ʿAlī. Early Arabic authors (Ibn al-Hāf, Kusayr, 132, 1: 4 f.) correctly pointed out that these Arab groups and those who claim descent from Mahra exist until today. Of these two groups which...
differ genealogically, the one, whose members are considered to be "pure" Mahra, claim descent from the Banu Sharâwîh; the others who are said to be of Arabic origin, are brought together in the Banû Sâr. Each of these two great confederacies is sub-divided again into several patrilineal groups (see the tables of the classification of the Mahra tribes and their attribution to these two groups in Dostal, Beduinen, 77). The greater part of the Mahra coastal area is in the hands of the Banû Sâr, while the inland zone belongs to the Banû Sharâwîh, who have access to the coast only between Kishn and Dabot and possess a small enclave further north (for a general outline of the region where both of the Mahra confederacies are at present dwelling and roaming, see the map in Dostal, Beduinen, 125). This spread of the Mahra over two areas is perhaps reflected already in al-Tabarî (Ta^rnkh, i, 1980, 11. 9-1981, 1. 3), who mentions two groups of the Mahra under two different leaders, one dwelling in the plain around Djayrut (this form is also found in Ibn al-Mudjâwîr 260, 1. 9), the other in Na'dij, i.e. in the highland zone. According to Ibn al-Mudjâwîr (271, 11. 15 f.), the origin of the Mahra is to be sought in the remains of the people of ʿAd; when God destroyed the greater part of them, this group of people was saved and went to live in the mountains of Za'far and the islands of Sukutra (Socotra) and al-Masira. Ibn Khaldun (Mukhtasar, 132, 11. 11 f.) also says that the land, afterwards inhabited by the Mahra, in prehistoric times belonged to the ʿAd mentioned in the Qurʾân.

The first Khâbjând to settle in this area is said to have been Mâlik b. Ḥimyar, who was succeeded by his son Kuḍâʾa. The latter's possessions, however, became restricted to the land which later was named after his great-grandson Yaḥyâ Muḥâmmad, iv, 700. 1. 10; Ibn Khâljûn, Mukhtasar, 132, 11. 13-17). Ibn Khâljûn goes on to say that the Mahra have come to their later dwelling-places from Hadramawt or from the Kuḍâʾa, but this certainly does not correspond with reality. The derivation of the Mahra from the Khâbjân through Kuḍâʾa and Ḥimyar is a mere construction of Arabic genealogists which does not withstand examination. Immigration from further west is also out of the question. Although the Mahra do not have written historical traditions, yet in their oral transmission the memory survives of large parts of Uman having belonged in earlier times to the regions where they were living and roaming and of their being expelled from there by the Arabs. The pressure of their eastern neighbours must have caused the Mahra to withdraw to the west and brought about their great loss of fertile regions. W. Dostal (Beduinen, 184-8) supports this tradition of the Mahra by collating non-Arabic place-names in south-east Arabia ending in -â, -â, and -â. He also illustrates this tradition with the aid of a map showing the spread of Mahri place-names (Beduinen, 133, Pl. 19). Further criteria for Mahri place-names in this region are: the ending -â occurring as a variant of -â, the feminine plural endings -â- and -â, the relative frequency of place-names with the prefixes ya- and ya-, and finally the etymology which in many cases indicates a place-name as being clearly Mahri. The majority of these place-names, mostly names of wâdîs, lies in the interior. On the coast they are only found in the area which is traditionally Mahri. Their greatest density occurs between long. 51° and 55° and lat. 16° and 18°. Since more than half of these non-Arabic place-names lie in regions now inhabited by Arabic-speaking tribes, this finding shows at the same time the present limitations of the Mahri living space. Al-Hamdânî (Ṣîfâ, 52, 11. 5 ff.; Ikîlî, i, 73, 1. 15) still attests that the Banû Riyân, a group of the Mahra tribe of the Kamar, were settled in ʿUmân; other tribes, too, he remarks, have their dwelling places in the region of ʿUmân (Ikîlî, i, 73, 1. 5) or on the sea-coast of ʿUmân (Ikîlî, i, 73, 1. 4). Other groups, like the Banû Khânjizîr (Ṣîfâ, 51, 11. 25 ff.) and the Thughârâ (Ṣîfâ, 52, 11. 2 ff.) were entangled in warlike altercations with Arabs who pressed forward along the coast into Mahra-land. Al-Hamdânî (Ṣîfâ, 51, 11. 16 ff.) still includes in his description of the "Green Yemen" the territory of the Mahra tribes of the Ghayth, Kamar and Ṭâkîr. On the island of Sukutra [q.v.] (Socotra), the Mahra are also to be found living (al-Hamdânî, Ṣîfâ, 53, 1. 1), i.e. members of all Mahra tribes (Ikîlî, i, 74, 1. 9). Ibn Ruzayyûk attests that even in the year 884/1479-80, part of ʿUmân was in the possession of the Mahra, since in that year the Bâdji Ḳumîd compelled the departure of the Mahra from ʿUmân.

After 608/1211-12, the Mahra tribe of the Banû Zanna pushed forward into the eastern part of Hadramawt, where they exercised control over the town of Tarîm for some time after 673/1274-5. In 945/1538-9 serious danger was brought to the Mahra by the Banû Kâḥîr under sultan Baḍr b. Tuwayrîk. The latter occupied great parts of the Mahra territory, and in 952/1545-6 conquered even the Mahra port of Kishn, where they murdered almost all the members of the family of the sultan of the Banû ʿAfrâr, the makhâyîkh of the Mahra. But in 955/1548-9 sultan Ṣârîd b. ʿAbî Allâh of the Banû ʿAfrâr succeeded in reconquering the town of Kishn from the Banû Kâḥîr. He started from the island of Sukûtrâ, where the Mahra had constructed a fortress after the retreat of the Portuguese in 917/1511-12. Since the Kâḥîr had joined the Ottomans, the Mahra were supported by the Portuguese. In 1876 the Mahra sultan of Sukûtrâ and Kishn guaranteed not to surrender any of his possessions except to the British Government and in 1886 he agreed to a Treaty of Protectorate with Great Britain.

The Mahra also participated in the Islamic campaigns of conquest. Togethers with other South Arabians, they settled in ʿIraḳ and the Mahra had great numbers in Egypt. In Kûfâ and in Old Cairo they lived in their own quarters (cf. the Ḹâjitat Mahra of al-Fustâṭ in al-Kalâlahî, Ṣulh al-aṭâ, iii, 327, 1. 12). There were also communications between the coast of Mahra-land and the island of Sukûtrâ. The latter occupied great parts of the Mahra territory, and the Mahra may have had settlements. Thus on Vasco da Gama's first journey, the Mahri Ibn Mâdîjî [q.v.] guided the Portuguese as a pilot from Malindi to India. As well as Sulaymân Mahra [q.v.], he left behind nautical texts. In 923/1517 the Mâlûkî Sultan Barsbâh enlisted Mahra as soldiers for his undertaking in the Yemen (see L. O. Schuman, Political history of the Yemen at the beginning of the 16th century, Abû Bakhrâmah's account of the years 906-927 h. (1500-1522 A.D.) with annotations, Groningen 1960, 27 ff.). The Mahra are attested in Zayla' during the years 944-5/1537-9, and a group of about seventy Mahra with their chiefs (mahkaddams) are repeatedly mentioned in the Futâh al-Habashâ (see Serjeant, Portuguese, 81, n. 5). The Comoro Islands [see KUMR] allegedly owe their name to the Kamar or Moon mountains of Mahra-land (see L. O. Schuman, Political history of the Yemen at the beginning of the 16th century, 1960, 64). For Mahra immigrants to Somalia, see E. Cerulli, Un gruppo Mahra nella Somalia Italiana, in RSO, xi (1926-8), 25-6.

The Mahra are "all handsome people" (Ibn al-
Mahra

Mugjawiwr, 271, 1. 17) of brown complexion with black, often curly, hair. Because of these physical characteristics they have been considered as not belonging to the Mediterranean race but related rather to the Veddas in South India. Until circumcision, boys have their hair shaven at both sides, so that only a tuft remains in the middle of the head. Circumcision of boys takes place at the age of twelve or also, as was usual in earlier days, only immediately before the wedding. After circumcision the hair grows long, either tied into a knot or falling down loosely and only kept together with a long braid, either plaited or made of leather; growing a beard is forbidden. Sedentary Mahra wear an indigo-coloured loin cloth and a skirt, the Bedouin generally only a loin cloth, an extremity of which can be thrown over the shoulder. Boys' ornaments consist of amulets and occasionally also necklaces; men adorn themselves with a leather belt equipped with characteristic ornamentation and sometimes stitched with pearls. Many Bedouin also wear an earing in the right ear and an amulet above the right elbow. Tattooing scars are also found, and all men carry the curved dagger (qamhajiya), more as an ornament than as a weapon. Nowadays, rifle and cartridge-belt are carried as weapons; formerly they were used the spear and the throwing stick terminating almost in a point, together with a sword which, in the Mahra, is a kind of scimitar and in the Bedouin a shield and a spear used as a weapon. They greet each other with a three-fold kiss on the cheek, starting with the right cheek, then the left and the right again. Girls are circumcised immediately after birth. Mahra women wear the hair braided and go unveiled. Women's dress is preferably also indigo-coloured and has an open square or round neck. Women like to wear many silver ornaments like chains at the forehead, rings at nose, ears, fingers and ankles, and amulets (Ibn al-Mugjawiwr, 271, 1. 12, describes Mahra virgins as muskhalkalat mudmamladat "provided with amulets and ankle rings"), and occasionally wearing head or neck ornament hanging down to the belt, single parts of which are adorned with geometrical embellishments and cornellians (akht). At the neck, an amulet of leather, silver or gold is fastened to one of the ends of the amulets, which are plaited and forerat in order to wear a precious stone as ornament. The breast ornament is an indication of the social status of the wearer. Women also use face-painting.

The nomads among the Mahra make do with modest shelters. They live mainly in caves, seek refuge under protruding rocks or make a roof against the sun amongst trees and shrubs. Remarks that the Mahra in these dwelling-places resemble animals (Ibn al-Mugjawiwr, 272, 1. 2), and are like wild animals (swubjik) in those lands (Ibn Khaldun, Mukhtarar, 132, 1. 12), may allude to their modest way of life and their familiarity with the surrounding nature. In their land, the Mahra do not know the cultivation of date-palms or agriculture (al-Istakhri, 25, 1. 12); this information refers of course to the Bedouin and not to the sedentary Mahra who, in the western part of their land, at the edge of Wadi Masila, practice a well-developed farming and lay out palm plantations. The riches of the Mahra consist of camels and goats, while they live on meat, milk and a kind of small fish on which they also feed the animals (Ibn Khaldun, Mukhtarar, 132, 11. 3 ff.). This fish is the sardine-like 'ayd, found in great numbers along the coast and which, after having been dried, is given to the animals, especially when other food is lacking. Goats are still predominant among the Mahra, in contrast to the Bedouin, who have more sheep. Camels bred by the Mahra (sing. nabiyyaas, pl. maharâ, mahariis and mahariyyas) were considered from ancient times as a particularly good breed (al-Hamdani, Sifa 100, 1. 1 ff.). Among these were valued as noble the 'idite camels, named after 'idi (vocalisation according to al-Hamdani, Hid, 173, 1. 11), a Mahra tribe (Sifa, 201, 1. 14). Already in the biography of the Prophet (Ibn Hisam, Sira, ed. F. Wüstenfeld, 695, 1. 9) Mahra camels are mentioned; they were valued by the caliphs (al-Kazwini, 'Adgâh, i, 41, 11. 3 ff.) and repeatedly celebrated by the ancient poets (e.g. Abu Tamânâm, Dânân, ed. M. 'A. 'Azzâm, ii, 129, 1. 4 = Aghdan, xv, 106, 1. 16). They spread as far as North Africa, where the form mahâra (pl. mahârâ) made its way into French as mchâri "riding camel" (pl. mchârâ) from which term was derived mchâriste to indicate a member of the camel riders. Besides making use of their herds, the Mahra provide the transport of merchandise by procuring caravan service, convey pilgrims to the places of pilgrimage and supply local markets with camels. If they do not possess their own incense trees, a supplementary source of livelihood consists in employment as seasonal workers in Zufar at the time of the incense harvest in order to scrape the gum off the trees; The Karâ leave their incense trees to the Bedouin to take half of the harvest. The Mahra living on the coast are mostly fishermen; a few are also merchants and seafarers. With the rise of the oil industry in the Arab countries of the Gulf, many Mahras have departed thither as labourers.

Among the Mahra exists a patrilinear system of kinship; however, still-remaining traces of matrilineal point to an earlier matrilineal social structure. Monogamy is the prevailing form of marriage; if polygamy occurs, it is in fact mainly a multi-local polygamy based on uxorilocal marriage.

The Mahra settle their social and political affairs almost exclusively inside their tribe. The sultanate of the Banû 'Afrâr exercised authority only in name, and thus had only a limited influence on the political situation of the mainland, the more so because the sultan used to reside on Suku'tra, with another member of the 'Afrâr family acting as his representative in Kâjsân. The real power over the individual tribes is in the hands of their chiefs, the mukaddams, who have always enjoyed great esteem. Feuds exist between the Mahra and almost all of their neighbouring tribes (see the charts on inter-tribal relations in Dostal, Beduinen, 109); lasting hostility exists especially with the Manâhil. Friendly relations exist only with the Banû Khâjîr and the Banû Râgâhid, bringing about also marriages between members of these tribes and the Mahra.

Al-Hamdâni (Sifa, 87, 1. 11) relates that the Mahra visit at all times the tomb of the Prophet Hûd. Besides this pilgrimage place, the Mahra also venerate other holy places like the tomb of Bin 'Ali in Mirbât, of Shaykh 'Abî Sîr in Tâka or of Bin 'Arîbat in Raysût. Oath-taking and vows play an important rôle among them (see T. M. Johnstone, The Bedouin, 1. 2); it is usual to swear on the tombs of the saints and invoke divine judgement by way of ordeal by fire. They practise all kinds of charms, especially against malevolent djinn or against the evil eye. Ibn al-Mugjawiwr (271, 11. 17-272, 1. 1) even wanted to derive from sbr "witchcraft" the term Sahâra, another name for the Mahra which has not as yet been satisfactorily explained. He attributes (272, 1. 1) to the Mahra ignorance (gdâh) and reason ('uḏ) and some other features of the Mahra. Ibn Khaldun (Sifa, 87, 1. 11) continues (272, 1. 2) by saying that they benefit from God's blessings without giving praise and thanks, and
that they worship not Him but someone else. The first statement probably refers to the indifference in religious matters and to the non-performance of the prescribed worship, which can be observed especially among the nomadic Mahra. The last statement, on the other hand, may be attributed to the fact that the Mahri language does not know either the word Allāh or the word rabū, but speaks of God as bābī (literally "my Lord"), so that an Arab, not understanding this word might infer that they serve another deity. Ibn Khaldūn (Muḥammad, 192, 11. 12 ft.), however, rightly remarks that, so far as religious confession is concerned, the Mahra are ḫādirījīn, in fact Ibādīs [q.v.]. Information about the Mahra’s conversion to Islam is given by Ibn ʿAbd, Tabakāt, i/2, Leiden 1917, 83, 11. 13-26. After the Prophet’s death, Mahra-land also formed part of the areas the ridda movement; but ʿIrīm, one of Abū Bakr’s commanders, succeeded in reconquering Mahra-land for Islam (al-Tabari, Taʾrīkh, i, 1980, 1. 5-1982, 1. 2).

**Bibliography:** Apart from the works quoted in the text, only the more frequently quoted and most important sources are mentioned here: Tabarī, Taʾrīkh; Hamdānī, Sīrat ʿalāma al-ʿArab, i, ed. D. H. Müller, 1884; Hamdānī, al-ʾIlī, i/2, ed. O. Lōfgrén, Upsala 1965; ʾĪṣākhirī; Mukaddasī, Yākūt, Muṣāfīg al-buldhān; Ibn al-Muṣāfīr, Taʾrīkh al-Maḥri al-Maghribī, ed. O. MAHİR. The Mahri language, called by its speakers Mahrayat, is spoken by many thousands, both Bedouin and settled people, over a large area of South Arabia extending in a great half-circle from Mukallā in South Yemen to the small coastal towns of Zufar or Dhofar. In South Yemen, the speakers are Bedouin, merchants, fishermen and seamen, but many Mahra of the more prosperous classes are now definitively western dialect of Djibbali). The Mahra, who are mostly located in the desert area of Zufar behind the fertile part of the coastal towns of Shuwaymiyya and Shirābīyat, at or near where they are now mainly settled. It seems likely that they learnt their language from the invaders, unlike the Karā which would seem to have learnt their language from the original inhabitants of the fertile area they conquered. In the desert between the Zufar province and the Shirakiyya province of ʿūmān, in the area between Ḥaymā and the Ṣādī Ḥaḥayn, is the small tribe of the Ḥarāsī, apparently of Arab origin. Harsūsī, which is fairly easily understood by Mahra, shows signs of having been acquired by them on the borders of Zufar and South Yemen. In the same border area is the last of the groups speaking a Mahri-related language, namely Hoboyt. Hoboyt is spoken by a small number of people in little settlements on both sides of the border. It shares a few features with Harsūsī, like the use of the verb ʿašār, "I want", in Harsūsī and ʿom in Hoboyt, as against Mahri ʾaḥām and Ḥaḥārīm. Nadjī Mahri (NM) appears to be a more conservative dialect than the South Yemen dialect (SM). Thus NM retains the interdentals t, d, and d which, in (most dialects of SM are replaced by t, d, and t.

The Austrian expedition (SAE) publications give no indication that SM has a definite article, a passive voice, or conditional verbal forms. This does not conclusively prove that they do not occur in SM, however, since the SAE publications also give no indication that glottalised consonants occur in SM, though they do occur in SM texts recorded by the present writer.

The principal features of interest in the phonology of Mahri (M) are, firstly, the occurrence of the glottalised and the emphatic consonants, which are not against the series of emphatic/velarised consonants in Arabic), the occurrence of the laterals ī and ī which probably occurred in early pre-literary Arabic and finally (the virtual non-occurrence of the voiced pharyngal (Ar. ʾghr). The syllabification of M is also of considerable historical and comparative interest. In M all forms with a final ĕv (C) syllable (other than -CaC) have final stress. This stress results in a lengthening of the vowel of the final syllable where it was not already long, and the reduction to ĕ of the short (or lengthened) vowels of the non-final syllables. Thus consider katāb ("he wrote", from earlier *katāḥ(aj)), katāā ("the wrote" from *katābd), and katāā ("he wrote it", f., from *katāa-a-o). Non-final stress occurs in many earlier monosyllables. Thus bād, "seed" has become bāḏr, but in affixed forms it remains bāḏr-, as, e.g., abāḏrīkh, "his seed", where the a-element is a definite article. It is a puzzling feature of phonology that the vowel of the stressed syllable of nominal forms is not always of the same quality as that of the comparable verbal forms. Thus contrast saʿār, "he went", with sahbī, "cause"; and bāḏr, "seed" with bāḏr, "it got broken". Even if it is likely that the nouns lost their final vowels before the verbs (though some plural nouns like ḥādītun, "hands", still have a final nunciation which is elided on affixation), this does not throw much light on the problem. Fern.

The Mahra also continuously penetrate the šāhār, the fertile part of the Zufar mountain which gets the monsoon rains, not without some resistance from the Karā, so far as the Karā-speaking Mahri are concerned. Many of these immigrants lose their Mahri language also, and come to speak only Djibbali and Arabic. The western dialect is not confined entirely to South Yemen, and is spoken in the coastal area of Zufar nearest to South Yemen (where there is also a definably western dialect of Djibbālī). A number of non-Mahri groups within this area speak what may be defined as dialects of Mahri, or as languages closely related to Mahri. Within Zufar, a small group of people, the Batājīrīb, speak a language or dialect closely related to Mahri. Now fishermen, formerly of humble status, they were apparently driven from their homes in the fertile hinterland of the coastal towns of Shuwaymiyya and Shirābīyat, at or near where they are now mainly settled. It seems likely that they learnt their language from the invaders, unlike the Karā which would seem to have learnt their language from the original inhabitants of the fertile area they conquered. In the desert between the Zufar province and the Shirakiyya province of ʿūmān, in the area between Ḥaymā and the Ṣādī Ḥaḥayn, is the small tribe of the Ḥarāsī, apparently of Arab origin. Harsūsī, which is fairly easily understood by Mahra, shows signs of having been acquired by them on the borders of Zufar and South Yemen. In the same border area is the last of the groups speaking a Mahri-related language, namely Hoboyt. Hoboyt is spoken by a small number of people in little settlements on both sides of the border. It shares a few features with Harsūsī, like the use of the verb ʿašār, "I want", in Harsūsī and ʿom in Hoboyt, as against Mahri ʾaḥām and Ḥaḥārīm. Nadjī Mahri (NM) appears to be a more conservative dialect than the South Yemen dialect (SM). Thus NM retains the interdentals t, d, and d which, in (most dialects of SM are replaced by t, d, and t. The Austrian expedition (SAE) publications give no indication that SM has a definite article, a passive voice, or conditional verbal forms. This does not conclusively prove that they do not occur in SM, however, since the SAE publications also give no indication that glottalised consonants occur in SM, though they do occur in SM texts recorded by the present writer.

The principal features of interest in the phonology of Mahri (M) are, firstly, the occurrence of the glottalised and the emphatic consonants, which are not against the series of emphatic/velarised consonants in Arabic), the occurrence of the laterals ī and ī which probably occurred in early pre-literary Arabic and finally (the virtual non-occurrence of the voiced pharyngal (Ar. ʾghr). The syllabification of M is also of considerable historical and comparative interest. In M all forms with a final ĕv (C) syllable (other than -CaC) have final stress. This stress results in a lengthening of the vowel of the final syllable where it was not already long, and the reduction to ĕ of the short (or lengthened) vowels of the non-final syllables. Thus consider katāb ("he wrote", from earlier *katāḥ(aj)), katāā ("the wrote" from *katābd), and katāā ("he wrote it", f., from *katāa-a-o). Non-final stress occurs in many earlier monosyllables. Thus bād, "seed" has become bāḏr, but in affixed forms it remains bāḏr-, as, e.g., abāḏrīkh, "his seed", where the a-element is a definite article. It is a puzzling feature of phonology that the vowel of the stressed syllable of nominal forms is not always of the same quality as that of the comparable verbal forms. Thus contrast saʿār, "he went", with sahbī, "cause"; and bāḏr, "seed" with bāḏr, "it got broken". Even if it is likely that the nouns lost their final vowels before the verbs (though some plural nouns like ḥādītun, "hands", still have a final nunciation which is elided on affixation), this does not throw much light on the problem. Fern.
nouns, for example, may be characterised by an -et, -it, -dt, or -ut ending.

The noun in M is not inflected for case but has two genders, masc. and fem., and three numbers, sing., dual and pl. Some common nouns, such as hāy, "house" and nakhā, "day", are fem. in M (and in- deed, in all the Modern South Arabian languages).

The dual in M ends in -i, thus gaagi, "two men" and fakhtī, "[two] halves". It rarely occurs without a following numeral prō (masc.) or ṣawri (fem.), "two" and, unlike dual verb forms, can be considered to be obsolescent. Thus speakers clearly believe when they say "two boys" that they are saying gāgēn irū, and not gōgēnī prō.

Nouns have sound or broken plurals. Masc. nouns for the most part have broken plurals, while fem. nouns mostly have sound pls. in -ām, ām, -āt, etc. The noun in NM can be defined by the prefixation of a. This can, however, be affixed only to words with an initial voiced or glottalised consonant. Thus kāhtī, "a/the book", ʿadhīrī, "the seed", and āyādī, "the fish".

The verb in M has two main simple themes and six derived themes, namely:

Simple
CaGaC (a) and CiGaC (b)
Intensive-conative (a)CGaCaC
Causative
haCCaC
Reflexive
CaCaC (a) and aCaCaC (b)
Causative-reflexive aCaCaC (a) and laGeCaC (b)

The reflexive types (a) and (b) often overlap in their conjugation.

The verb has a perfective and an imperfective aspect. The imperf. indic. and subj. patterns are markedly different from Arabic. Thus consider kātīb (perf.) yakhtīb (indic.) yākhtīb (subj.) yākhtīn (cond.). Conditional forms occur relatively rarely, mainly in sentences involving hypothetical conditions. All dependent verbs are subj., and the subj. also functions as a jussive and occasionally as a kind of future. Imperative forms are subj. in syllable structure but lack the personal prefixes, so, e.g. kīxēkī, "write!".

The verb has the following persons: 3 m.s., 3 f.s., 2 m.s., 2 f.s., 1 c.s.; 3 m.d., 3 f.d., 2 c.d., 1 c.d.; 3 m.3.3, 2 m.3, 2 f.3, 2 f.1, 1 c.3. The verb has also verbal nouns, and active and passive participles. The active participle (a.e.g., m.s. kāḥīna, i.s. kāḥīta, etc.) functions as a future.

Mahrī (or at least NM) has a large vocabulary relatively little affected by Arabic, and there is a good deal of resistance to borrowings from Arabic. Lexical items may be considered to be for comparative purposes in a number of categories: words which have no cognates in literary or colloquial Arabic (as e.g., swsuwīli, "he sat"); words which have Ar. cognates but cannot, for phonological or morphological reasons, be borrowings (as e.g., ṣāfīr, Dhofar/Zafār); words which have the same radicals as the equivalent Ar. words (as e.g., ʿadīr, Dhofar/Ζaflār); words which have been borrowed and modified to become completely Mahrī in terms of phonology and morphology (such as, perhaps, ṣābīdī, "he began"); and borrowings from Ar. which have been left virtually unchange- ed (as e.g., mafṣū, "key"). There is a large area of the vocabulary, which is not possible to categorise with any degree of certainty. Since M and Ar. have lived side by side for many centuries, it is difficult to say in many cases which language has borrowed from the other. Thus suyār, "he went", is paralleled by sār in most Ar. dialects of the South. It is just as likely, however, that such Ar. dialects are influenced by Mahrī as that Mahrī has been influenced by Arabic.

Bibliography: All references up to his date of publication are collected in W. Leslau, Modern South Arabian languages—a bibliography, New York 1946; for later references, see E. Wagner, Syntax der Mehrī-Sprache, Berlin 1953. The most important of these earlier sources are the following (all published in Vienna) by the Austrian South Ar- abian Expedition (SAE) associates: (grammar) A. Jahn, Grammatik der Mehrī-Sprache in Südarabien, in SB AK. Wien, Phil.-Hist. Kl., Bd. 150, Abb. 6, 1903; M. Bittner, Studien zur Laut- und Formenlehre der Mehrī-Sprache in Südarabien, in SB AK. Wien, Phil.-Hist. Kl., Bd. 162, Abb. 5; Bd. 168, Abb. 2, 172, Abb. 5; Bd. 174, Abb. 4; Bd. 178, Abb. 2, 5, 1909-15; (texts) A. Jahn, SAE 3, 1902 (with vocabulary); W. Hein, SAE 9, 1909 (ed. D. H. Müller); D. H. Müller, SAE 7, 1907. For more recent work, see the following publications of T. M. Johnstone: Harṣīsī lexicon, Oxford 1977; A definite article in the Modern South Arabian languages, in BSOAS, xxxii/2 (1970); Dual forms in Mehrī and Harṣīsī, in BSOAS, xxxiii/3 (1970); Diminutive patterns in the Modern South Arabian languages, in JSS, xviii (1973); Folklore and folk-literature in Oman and Socotra, in Arabian Studies, i (1973); Contrasting articulations in the Modern South Arabian languages, in Hamito-Semitic, Leiden 1975; Oath-taking and vows in Oman, in AR. St., ii (1973); Knots and curses, in Ar. St., iii (1976); A.S. George of Dhofar, in Ar. St. (1977); Jibbālī lexicon, 1981; Mehrī lexicon, 1984.

MAHSATI (the most probable interpretation of the consonants msxy, for which other forms, like Mahisti, Mahsati or Mihhisti, have been proposed as well; cf. Meier, 43 ff.) a Persian female poet whose historical personality is difficult to ascertain. She must have lived at some time between the early 5th/11th and the middle of the 6th/12th century. The earliest sources situate her alternatively in the environment of Mahmūd of Ghazna, of the Saldījk Sultan Sandjar, or of a legendary king of Gandja in Adharbaydjan. The qualification dabīr or dabīra is often attached to her name, but it is uncertain whether she actually worked as a professional scribe, the function designated by this term locally; she was represented as a singer and a musician as well as a poet of the court, though not as a panegyrist. The poems attributed to her name are almost without excep- tion quatrains. Their dominating theme is the lover’s complaint about the absence, the lack of attention or the cruelty of his or her beloved. Several poems belong to the genre of abahabab in poetry in which the beloved is presented as a young craftsman. Mahsati has acquired a reputation as a writer of bawdy verse. Mystical and fatalistic thoughts, often expressed in Persian quatrains, are absent and the animism of the kalandarbayyāt can only seldom be found. The authenticity of these poems remains in each case ques- tionable. An original collection is not known to exist. The current dīvāns of Mahsati are modern compila- tions from many different sources.

Mahsati became already at an early date the heroine of romantic tales. The oldest specimen is contained in ʿĀṭār’s Ilāhī-nāma (Meier, 53-6; tr. J. A. Boyle, Manchester 1976, 218-20). A similar story, embellished by inserted quatrains, was used by ʿAbd Allāh Dāwhāri in a commentary on the kasīda-yi haǔdīya, a poem about alchemy, towards the end of the 7th/13th century. It is, however, not derived from ʿĀṭār’s story (Meier, 63-7). The Dāsān-i Amīr Ahmad- u Mahsati is a popular romance, built upon an ex- tensive cycle of quatrains, dealing with the love between two poets, of whom the former is sometimes referred

MAHRI — MAHSATI

85
to as "the son of the preacher of Gandja" (pur-i khatib-i Gandja). It is extant in two versions of different lengths (Meier, 123 and passim; E. E. Bertelt’s, Nizami i Fuzuli, 78, n. 12).

**MAHSUD, the name of a Pathan tribe on the north-west frontier of Pakistan, in British India the fiercest opponents there of British rule. The Mahsuds inhabit the heart of Waziristan around Kānīgurām and are shut off from Pakistan territory by the Bhittanni country. On all other sides they are flanked by Darwsh Khel Wazirs. It is now generally accepted that they left their original home in the Birlam hills of modern Afghanistan sometime towards the close of the 8th/14th century and gradually extending eastwards occupied the country in which they now reside. The tribe has three main branches: the Bahlōlzāy, Shāman Khel, and the ‘Alīzāy.

The Mahsuds have always been the scourge of the Bānnī and Dērdājāt borders. This was the case in the days of Sikh rule and, after the annexation of the Pan-djāb in 1849, they still continued to plunder and devastate the borders of British India. And the fact that their rocky mountain fastnesses command the Gōmāl and Toci, two of the five main passes connecting India with Afghanistan, compelled the British to resort to reprisals. On three occasions, in 1860, 1881 and 1894, the Mahsuds became so troublesome that punitive expeditions had to be undertaken against them. On the conclusion of the 1860 expedition, a temporary peace was patched up by which each of the tribes agreed to hold the country between British India and Pakistan in search of work. In 1897, this peace was broken by the formation of the Mahsud Hills, a temporary peace was patched up by which each of the Mahsud groups agreed to hold the country between British India and Afghanistan, and in 1898 the Mahsuds were rendered assistance in the survey of Afghanistan by exploiting the marauding proclivities of the tribesmen. From 1914 to 1917 the history of the Dērā Ismā‘īl Khān district was one long tale of rapine and outrage. Eventually, in 1917, troops marched into the Mahsud country, but were able to effect only a temporary settlement. British preoccupations elsewhere where delayed the day of retribution, and during 1919 and 1920, the wind-swept raghāz of Waziristan witnessed the severest fighting in the annals of the Indian frontier.

During the disturbances in Afghanistan following on the abdication of Āman Allāh (q. v. in Suppl.) and the brief assumption of power by the adventurer Bāčcha-yi Sākā (1928), Mahsuds and Wazirs joined in the returning Nādīr Khān in his march on Kābul, and were the spearhead of his successful bid for the throne. But they were disappointed at not receiving a licence to loot indiscriminately, and were subsequently stirred up by the partisans of Āman Allāh, so that in 1933 a Mahsud and Wazir lashkar crossed the Durand Line and besieged Matun in the Khost district till repulsed by Nādīr’s brother Hāǧīm Khān.

From 1936 onwards, the Mahsuds were further inflamed by the presence amongst them of the virulently anti-British “Fākīr of Ipal” (q. v. in Suppl.), Hāḏūḏī Miṟzā ‘Alī Khān, and in 1938 they and the Wazirs were stirred up by the “Shāmī Pir”, Sa‘īd al-Dīlānī from Syria, who established himself at Kānīgurām with the object of furthering a restoration in Afghanistan of Āman Allāh, until the Pir was bought off by a large subsidy from the Government of India. Mahsuds and Wazirs took part enthusiastically in the Kashmirī ʿāshad against India in 1948; since Partition, considerable numbers of Mahsuds have migrated down to the Indus valley and other parts of Pakistan in search of work.

Rose, Glossary of tribes and castes of the Punjab and North-West Frontier Province, iii, s.v. Wazīr; H. C. Wyllie, From the Black Mountain to Waziristan, 1912; reprisals. From December 1900 to March 1902, the Mahsuds were subjected to a stringent blockade, but it was only after the blockade had been varied by sudden punitive sallies into the Mahsud hills that they were forced to conciliate. During this period, there were two factions in the country, the one headed by the maliks, the other by their enemy, the Mullā Powinda (to whom also, in an effort at conciliation, a monthly allowance had been granted in 1900); and from 1902 onwards the Mullā’s influence was paramount. After 1908 the Mahsud question became acute again, and a series of raids into British territory were traced to him. On his death in 1913, his place was taken by Mullā ‘Abd al-Ḥākim, who continued the policy of attempting to preserve the independence of the Mahsud country between British India and Afghanistan by exploiting the marauding proclivities of the tribesmen. From 1914 to 1917 the history of the Dērā Ismā‘īl Khān district was one long tale of rapine and outrage. Eventually, in 1917, troops marched into the Mahsud country, but were able to effect only a temporary settlement. MAHSÚD — MAHYÁ

MAHSÚT (A.), "sensibilia". For the theories of sense-perception held by the principal falsafa of Islam, see HISS. In addition to these, it should be mentioned that Ibn Bāḍajīq is perhaps the philosopher who most closely follows Aristotle’s view on this subject, and that his Kitāb al-Nafs (Karachi n.d.), while undoubtedly an original work, may be regarded as almost a paraphrase of Aristotle’s De anima. In particular, he differs from other Islamic philosophers in not referring to "internal" and "external" senses or to akhwa al-mushāraka.

In falsafa, mahsisat are frequently contrasted with maškūlit, "intelligibilia". In tasawwuf, however, both are regarded as equally unreliable as means of arriving at the truth and are contrasted with dhawk. For a clear statement of this position, see al-Ghazālī, al-Munkidh min al-dalāl (where akhyāt is used rather than maškūlit). In spite of the Sūfīs’ avowed rejection of falsafa, such views as these may, to some degree, be considered to represent less a complete abandonment of it than a turning away from Aristotelianism towards Platoism (in neo-Platonic guise). That falsafa continued to exercise an influence may be seen from Djalal al-Din Ruml’s references in the Mathnawi to the "internal" and "external" senses and to the "common sense".

Bibliography: Given in the article and in HISS. (J. N. MATTOCK)

MĀHĪR, a small town of medieval India in the extreme north of the former Hyderabad State of British India. It is situated in lat. 19° 49′ N. and long. 77° 58′ E. just to the south of the Penganga river, a left-bank affluent of the Godavari, where it forms the boundary between the former regions of northern Hyderabad [see HYDARABĀD] and Berar [q. v.] in Central India.

In pre-Muslim times, Māhūr had the shrine of Šrī-Dattāreyā. In the middle years of the 8th/14th century, the territory up to Māhūr was conquered by the Deccani power of the Bahmanī [q. v.]. In 857/1453 Ahmad b. Muḥammad al-Kasīlānī conquered Māhūr and also Patna. The district being described in the District gazetteers. Nanded, Bombay 1971; Description Hyderabad, 1327 F./1917-18, 6-8; G. Yazdani, Hyderabad Archaeol. Report Calcutta 1909; G. Yazdani, ‘On the Mahur region after the year 1057/1647-8 are mentioned by Muḥammad al-Muḥibbī, Khulāsat al-aflat fi ‘ayn al-khan al-bādhī ‘āshar, Cairo 1284, i, 266, iii, 382 f. (see also ‘Abd al-Wahhāb al-Sha’rānī, al-Tabākāt al-sughr, Cairo 1970, 88 f. for data concerning al-Shūnī’s khīṣa, Shihāb al-Dīn al-Bukhārī, d. 960/1553).

By the year 1300, the district was placed within Maharashtra State, and is now in Nanded District and Kīnvat tašlāk. Māhūr village had in 1971 a population of 380.

Māhūr has an important fortress, which may have been in existence in pre-Bahmanid times. It stands on a steep hill 360 feet/120 m. above the valley of the Penganga, and is irregularly shaped since it occupies the edges of two adjacent spurs (the intermediate valley is converted into a large tank through the construction of a massive connecting wall); the hill is precipitous on the east, south and west, its northern angle being defended by multiple gateways. The main northern gateway (known as Činī Darwāza, from the panels of Bahmanid tilework on its façade) encloses a defended entry with guard rooms along each side, and the Kil‘adār’s residence is set in an upper storey.

MAHYĀ, a communal nightly liturgical ritual in which the recital of supplications for divine grace for the Prophet [see ṢĀLĀWĀT] is central.

Such sessions were originally introduced as a mystical method [see TĀRIKĀ] by Nūr al-Dīn al-Shūnī (d. 944/1537; cf. Brockelmann, II, 438, for the titles and additional details about the sālāwat composed by him), a shaykh of ‘Abd al-Wahhāb al-Sha’rānī [q. v.] at the mosque of Ahmad al-Badawī in Tantā and at al-Azhār mosque in Cairo in the year 897/1491-2 (‘Abd al-Wahhāb al-Sha’rānī, al-Tabākāt al-kubrā, Cairo 1954, ii, 172-3; cf. Nāждīn al-Dīn b. Muḥammad al-Ghazālī, al-Kawdākib al-sā’ira fi ‘ayn al-ma’ṣūr al-aqhd, Beirut 1945-59, ii, 216-19). The meetings were held after the magrib prayer on Thursday night until the adhān for the Friday prayer the following noon. Later, the mahīyā became an influence may be seen from Djālāl al-Dīn Ruml’s references in the Mathnawi to the "internal" and "external" senses and to the "common sense".

and became synonymous with dhikr [q.v.]; cf. Abu 'l-Fayd Muhammad Murtaḍa al-Zabīlī, Tadhār us-saḥāsir al-Karnāwī, Cairo 1306-7, x, 110.

*MAKHADUNYA* — the Ottoman Turkish name for Minaean folk who, to judge from Pliny's remark that they disappeared from the records.

In addition, the term *salwaśit* as part of the *hadra*, and the rise of al-Shaddīliyya [q.v. as an institution independent from the main stream of Islamic mysticism.

Before the middle of the 10th/16th century, the *mahṣā* had also become institutionalised in Mecca, as is testified by a faţūd given by Ibn Ḥadjar al-Yahmāni [q.v.], al-Fādawi al-ḥadīthis, Cairo 1305, 41; 89, for a description of the ritual. For the texts recited during the *hadra*, see also Husayn Amin al-Sayyād, al-Fuyūdī al-nurānīyya fi mahṣā al-tarīk al-Demirdāği, Cairo n.d., 12 ff. In Egypt, the increasing institutionalisation of Islamic mysticism, in particular in the 9th/15th century, in tāris̲, some of which, like the Şahādīliyya [q.v.], recited the *salwaśit* after the death of ʿAbd al-Wahhab al-Shaṭṭārī (d. 975/1565), who had been *ṣayḥ al-mahṣā* in al-Qāhmarī mosque (cf. al-Ghazzārī, ii, 217). No data on the *mahṣā* in this part of the Islamic world have come down to us.

In Damascus, the *mahṣā* was introduced by ʿAbd al-Kādir b. Muhammad b. Suwār (921-1015/1515-1605). The first *mahṣā* in this city was held in al-Buzūrī mosque in Radjāb 970/March 1565. Shortly afterwards, a weekly *mahṣā* was started in the Umayyad mosque (cf. al-Muḥibbī, i, 454; iii, 276; Muhammad Khalīl al-Murādī, Silh al-Durur fi ʿašr al-karn al-thānī al-taṣawwūr, Būlāk, 1301, i, 112 ff.; ii, 160; iii, 179; and al-Ghazzārī, ii, 218). In Damascus, as in Cairo, organisation and supervision of the *mahṣā* sessions was given in the following way which has however some afinities with the language of Sābā [q.v.]. The widespread nature of their trade is evidenced by Minaean inscriptions from the island of Delos and from the Egyptian Fayyūm, but apart from such scattered examples, all the texts in this language come from in and around their main centre Karnāw (Khirbet Maḥrīn) in the eastern part of the Southern Arabian Dāqiq, from the area of Yathīl (Barākīqah) a little south of there (both these places still show impressive town walls), and from their trading settlement at Dedan (al-ʿUlā in the northern Ḥīdżārā). But they certainly had other similar trading posts elsewhere, and a Katabanian language text from Timnā (in the Wādī Bayhān [see KATABAN] mentions a 'magistrate of the Minaeans in Timnā'.

In effect, the term Minaeans seems to have had a double application. There must have been an original Minaean folk who, to judge from Pliny's remark that 'they possessed palmgroves, but their main wealth lay in cattle', may perhaps most plausibly be sited in the steppe country north of Karnāw. But considered as a trading organisation, they were subdivided in a number of aḥāl or 'folks', of whom the most significant in the texts are the al-GBN. Earlier scholars did not hesitate to identify these with Pliny's Gebbanitae, and although in recent years there has been a tendency to equate them with the Katabanians, the earlier view still seems more probable, since Pliny's Gebbanitae (and also Strabo's Gabaloi) figure as principally concerned with the frankincense trade up the west coast of Arabia. The Minaean language texts all belong within the Ptolemaic period, and after Pliny (whose information may well be already a little out-of-date when he wrote), they disappear from the records. Evidently, therefore, their trading monopoly had broken up by about the turn of he Christian era, the west coast trade having been taken over by Nabataeans and other northern Arabian peoples, while the Minaeans seem to have sunk back into obscurity.

Given in the article.

(A. F. L. BEESTON)
Macedonia, a region which occupies the centre of the Balkan Peninsula. Despite its historically mixed population of Slavs, Ottoman Turks, Greeks, Albanians, Vlachs, Sephardic Jews and others, Macedonia forms a geographical unit. Its boundaries are sometimes disputed, but may be said to follow the line of peaks which stretches from the Šar Planina in the north to the Rhodope range and the river Mesta in the east, and to the Albanian mountains and the Pindus in the west. On the southern side it is naturally limited by the Gulf of Salonica. Macedonia was visited by the early Arab traveller Harīr ibn Yaḥyā, and is mentioned in the form *Makadunia* by the Abbasid geographer Ibn Khurradadhbih (257/870) and by the anonymous *Hudud al-ʿālam* (372/982).

1. Ottoman Macedonia. Immediately before the Ottoman conquest, Macedonia was loosely divided between the Byzantine and various local potentates. In 784/1383, during the reign of Murād I, Ottoman forces penetrated as far as Seres, and in 787/1385 captured Ḩīṭṭūp (Štip), Manastir, (Monastir, Bitola) and Pirlepe (Prilep). Uskiib (Skopje) fell in 794/1391. Selanik (Salonica) was briefly held by the Gulf of Salonica. Macedonia was visited by the early Arab traveller Harun b. Yahya, and is mentioned in the form *Makadunia* by the Abbasid geographer Ibn Khurradadhbih (257/870) and by the anonymous *Hudud al-ʿālam* (372/982).

Ibn Khurradadhbih (257/870) and by the anonymous *Hudud al-ʿālam* (372/982).

1. In Arabic

This maṣṣār mīnī from the root ḥ-w-l "to say", has
eycologically the sense of "statement", "ut-
tance", etc. It will be noted, however, that in a
typical Arabic page, the text from the classical period,
it is found only once with this "oral" sense (Ch. Vial,
Al-Ghīzb, quatre essais, ii, Cairo 1979, 132). On
the other hand, its usage in contemporary Arabic is
remarkably frequent, all the more so in that its sense is
ehenceforward almost exclusively related to the writ-
ten rather than the spoken text. The modern user
designates by the word maḳāla that which we call "article", and doubtless there would be nothing
further to add in this context were it not that the
history of the word impinges upon the recent history of
Arabic literature.

It being unnecessary to dwell in detail on an evolu-
tion which is now well-known, it will simply be recall-
ne that modern Arabic prose has been forged through
the intermediary of the press. It was a result of the
creation and development of Arab journals and
reviews at the end of the 19th century that the
affected and inflated language which had hitherto prevailed
rapidly gave way to a convenient and direct means of
expression. In avoiding the conventional attractions of
hackneyed rhythm and rhyme (sadf), the writer
simultaneously freed himself from the mould of en-
trenched ideas which had hitherto been imposed on
a variety of subjects. The liberation of the language was
accompanied to a certain extent by a liberation of
thought. This fundamental change was effected by
departure from the domain of the classical Arabic
humanities and by contact with European languages.
There were genuine grounds for fearing that a move-
iment of such magnitude might compromise the con-
nature of the Arabic language. There was much
concern that, by dint of inspiration from foreign press
agencies and the desire to imitate the style of Euro-
pean periodicals, the grammatical correctness of ar-
ticles appearing in the Arabic press would be severely
impaired. Authoritative voices—linguists, professors
and writers—were raised to engage in often impas-
sioned debate on the most common defects and on the
means of preventing the corruption of the Arabic
language. The development of education, the visceral
attachment of the Arabs to their language, the fre-
cent criticism brought to bear on the linguistic cor-
rectness of texts of all kinds, the painstaking work of
academies of the Arabic language [see MA'AM° (ỉlmî,
1.), all these elements have enabled "the language of
press" to maintain a thoroughly respectable stan-
card, even though—in Arabic as elsewhere—a
number of eminent individuals protest at the liberties
taken by the press, and more recently by radio and
television, with the rules of the language (cf. in par-
cular the arguments between linguists at the end of
the last and the beginning of the present century;
among them, the Lebanese Brāhīm al-Yāzīdī and his
Lugat al-ajḏūd, Cairo 1901).

But the maḳāla does not represent only the testing
bench or laboratory of that which, more elaborated
and better adapted, has become the contemporary
literary prose. It represents a mode of expression
regarded as special, and some would go as far to see
it as a whole literary genre in its own right. In the
brief account of the fate of the Turkish
population of Macedonia since 1913;
R. Grulich, Die türkische Volksgruppe in Jugoslawien,
in Materiala Turcica, i, Bochum 1975, the Yugoslav
Turkish periodicals Salar, Çevre, and Birlik may
also be consulted. (F. A. K. YASAMEER)

MAKĀLA (A.), article.

1. In Arabic

This maṣṣār mīnī from the root ḥ-w-l "to say", has
eycologically the sense of "statement", "ut-
tance", etc. It will be noted, however, that in a
typical Arabic page, the text from the classical period,
it is found only once with this "oral" sense (Ch. Vial,
genre in itself, since if it were so, it would risk confusion with the "diverse" category, those variae which defy classification by any reputable catalogue.

makalat al-adabiyya fi 'l-adab al-iraki al-adabiyya, Baghdad n.d.; Muhammad Yusuf Nadjin, Fann al-
makalat, Beirut 1957; 'Abd al-La'if Hamza, Adab al-

2. In Persian.

Makalat has been used in Persian to denote a collection of discourses, spoken or written, on a given subject (e.g. Cahar makalat by Nizami-yi 'Arudi, ed. M. Mu'in, 135; Khajani Muntazam, ed. M. Rawghaan, 174; Hamdili Makalat, ed. G. Ahani, 5, 17, 38; Baha Afdal's Writings, ed. Y. Mahlawi and M. Minowi, ii, 393; Dibwayihi of Tabarsi, ed. M. Kazwini, i, 32; and also the poems of Nasiir-i Khusrav and Sa'di). Makalat was used in reference to spoken discourses and sermons up to the late 19th century (see Muhammad-Hasan Timad al-Saltana, al-
Makalat wa 'l-dhikir, under the biography of Burhan al-
Wizgini of Gilan, 1306 A.H., 201 col. 1).

Makalat has also been used to designate a book's inner divisions, synonymously with such other terms as jad, had, nisht, or matlab. Nisht-i 'Arudi, op. cit., 19, writes that the book, therefore, comprises four makalat ..., in each makalat whatever was found befitting in the domain of philosophy was included." The title of his work, Cahar makala, was not bestowed upon it by its author. The book was found to contain four discourses, and so it became popularly known as Cahar makalat, and Haidri Khalifa appears to be the first person to have recorded down its title as such (see Kazf al-zanan, under Cahar makala).

The term makalat has been also used for the utterances, statements and dictations of Sufi shaykhs, the best-known of these being the Makalat-i Shams; to the same category also belongs the Makalati-i A'la by Daula Sinnani.

Makalat in contemporary Persian is synonymous with article in English and article or essay in French. It started with the practice of modern journalism in 19th century Iran, and was applied to almost any kind of writing produced for the printed page (even a news story, short story or play was often referred to as makala in place of nishiga or matlab), and the person who engaged in such writing would be called makalani-nisi or equally matlab-nisi (see Afdal al-Mulk Zandi, Afdal al-tawarikh, ed. M. Itthikjudiya and S. Sa'dwandiyan, Tehran 1361 A.H.).

The leading article of a newspaper, or its editorial, would be called sar-makala in Persian, and a series that would be carried over several issues would be makalati-i musalsal or silista makalat.

Scholarly papers, which usually get published in academic journals, are also referred to as makala (see Zarrin khi's Nadi-adah, i, 640), and a volume containing a collection of such papers would be called makalat or magdini'a makalat, e.g. the Makalati-i Tazkiyad or Makalat-i Kazusi. Sometimes the number of papers contained in such a volume will provide an appropriate title for it, e.g. Bist (20) makala-yi Kazwini, Bist makala-yi Tazkiyad, Chih (40) makala-yi Husayn Nakinterpret'ayin and Cand [several] makala-yi Nasr Allah Falsafi.

The practice of indexing published articles and papers does not go back a long time. For a listing of selected writings of the Iranian studies, Afghar's Fohrist-i makalati-i Forsi is available. Three
volumes have been published so far, containing references to some 16,000 makdâl that have appeared between 1915 and 1971 in Iran. The fourth volume, unpublished as yet, deals with the writings of the past decade. Some other fields for which indexes are already available are geography, social sciences, economics, and law.

3. In Turkey

In the majority of Turkish dictionaries of the 19th century, the term makâla figures with the primary sense of "discourse", of "monograph" or of "thing said or written regarding any given subject" (Shams al-Dîn Sâmî, Kâmaâs-i Türkî). In this period it is usually encountered, often in the plural (makâlât), in the titles of collected editions of the "sayings" or "writings" of a certain writer or eminent person. However, since the middle of the 19th century, with the development of the Turkish language press, it has appeared more and more frequently as a designation of an article published in a periodical, progressively displacing from current usage other words such as bend or bahâth.

Although a noun of Arabic origin, makâla has resisted quite well the various trends towards turkification of vocabulary which have characterised the history of the written language in the 20th century. At the present time, this term is still in current use in the sense of an article in a journal or review (its primary sense of "thing said" having been forgotten), even though the word yazî "writing") which some would seek to substitute for it is gradually gaining ground, in spite of its inaccuracy.

Specialists in Turkish literature readily present makâla as a specific literary genre, distinct from the essay (deneme) or the anecdotal account (fikra). It is thus, for example, that Cevdet Kudret defines it as a "writing composed with the object of exposing, defending or supporting a point of view on a certain subject" and states specifically that this type of work should not be confused with the essay (C. Kudret, Örnekleri edebiât bilgileri, Istanbul 1980, ii, 372). In practice, however, it seems very difficult to assign precise limits to the makâla genre, this term being applied in fact, in customary usage, to every kind of article, ranging from the editorial of a daily newspaper to the learned study published in a specialist review, and including the article of literary criticism (generally classed in the category of "essays"), the "paper" of the historian or the political pamphlet. While not constituting a major genre, the makâla is clearly a means of expression particularly valued by Turkish writers. The majority have written them while some, among the most eminent, have published nothing other than journalistic articles, promoting this type of production to the status of genuine artistic creation.

If the makâla has thus become the literary genre probably most widely practised in Turkey, this fact is to be explained in terms of the spectacular rise enjoyed by the periodical press in this country, beginning in the second half of the 19th century (see çarîa. iii).

The first Turkish language journals—the Taçkâm-i wakî', founded in 1832, and the ûçeride-yi hawâdih launched by the Englishman William Churchill in 1840—accorded only limited space for "articles", and essentially offered their readers short stories and official bulletins. However, with the appearance in 1860 of Taçkâm-i abadî, published by Ağîh Efendi in collaboration with Şâhîrât [q.v.], one of the most talented literary figures of the period, matters were to change in a radical manner. In fact, under the influence of Şihînâ and of all those writers who were soon to become active in the same field, the nascent Turkish press rapidly acquired the objective not only of informing the public but also of working for the reform of society, and the journalistic article, in particular the editorial (soon to be designated by the term bahâ makâla), henceforward became a licensed instrument of education.

In the Turkish periodicals of the 1860s and 1870s, the majority of the leading contemporary literary figures are encountered. Besides Şihînâ, who launched in 1861 his own journal, the Taçkâm-i efkâr, writers of renown including Ziyâ (Dîyâ') Paşa, Ali Şü'âwî, Nâmîk Kemâl, Şâms al-Dîn Sâmî and Ebat-i Zîyâ (Abû 'l-Dîyâ') Tewfîk, contributed to making the makâla one of the most flourishing genres. It was to a great extent through their articles, published in increasingly numerous intellectual journals, that ideas of reform began to spread at an accelerated pace. Neither political institutions, nor social structures, nor traditional culture escaped the criticism of these intellectuals of liberal tendency, most of whom belonged to the "Society of Young Ottomans" (Yêni Otömânîlîlar Djemîyyeti), which sought to transform Turkey into a modern country based on the model of the West, a state endowed with a constitutional regime, devoted towards new manners of thought, life and action.

During this period of genesis, the newspaper article did not constitute only a means for the propagation of ideas received from elsewhere. It also played the role of a spear-head in the elaboration of a new literary language, closer to spoken Turkish. Şihînâ and Dîyâ' Paşa were among the first advocates of this simplification of the written language. They were soon followed by Nâmîk Kemâl—who was not always capable of putting into practice his own precepts on the matter—Şâhîrât al-Dîn Sâmî and numerous others.

While the makâla genre thus flourished in the context of the intellectual press, there also came into being in Turkey in the same period of time, a specialised press—the periodical press—scientific reviews, women's magazines, professional organs, literary journals, etc.—in which there were to be found, alongside numerous translations, scholarly studies, articles of literary criticism and historical pieces comparable, in their professionalism, to writings of the same type promulgated by the Western press. Among these periodicals, one of the most notable was the Muğma'a-yi funun, founded in 1861 by Munif Paşa. This monthly, which was presented as the organ of the "Ottoman Society of Sciences" (Djemîyyeti-i ilmîye-yi Otömânîye [q.v.]) and which included articles dealing with such diverse disciplines as geography, history, geology, philosophy or natural sciences, was distinguished, during the few years of its existence, by the quality of its presentation and it played in Turkey of the mid-19th century a role similar to that of the Grande Encylopédie in France of the Enlightenment.

Conscious of the danger which could be posed by these periodicals, which were continually growing in number, the Ottoman government had, since 1864, enacted various measures aimed at limiting the freedom of the press. With the accession to power of Abd al-Hamîd II in 1876, the weight of bureaucratic interference was to become even more oppressive. But censorship, while preventing for several decades the publication of articles judged subversive, did not halt the development of Turkish journalistic production.
Indeed, on the contrary, as has been noted by Niyazi Berkes (The development of secularism in Turkey, Montreal 1964, 277), the prohibition, beginning at the end of the 1870s, of subjects of political nature, was largely balanced by the proliferation of writings on scientific or cultural themes, which led to the accelerated diffusion of new ideas and knowledge.

Ahmed Midhat Efendi is definitely the most representative publicist of the Hamidian period. Becoming a fervent supporter of Abd al-Hamid II, after having flirted for some time with the adversaries of absolutism, he was very careful to write nothing which could have been interpreted as a criticism of this régime. This did not prevent him publishing an innumerable number of articles on the most diverse subjects, using the press, and in particular his own journal, the Terijumdn-i hakikat, founded in 1878, as a veritable instrument of popular instruction.

The same encyclopaedic, somewhat disorderly curiosity is encountered in the case of Abu 'l-Dira Tewfik who, for almost thirty years, was practically the sole contributor to the Mejmula-z-i bakhsh, founded in 1878, as the best cultural periodicals of the reign of Abd al-Hamid.

Among other great names of the Turkish press in this period, it is appropriate to mention also Ahmed Ihsan Bey, founder of the Therueet-i finan, a scientific and literary magazine which brought together, until ca. 1900, the best writers of the time, notably the poet Tewfik Fikret and the essayist Djanab Shihab al-Din, thus opening the way to the development of a whole literary school, subject to diverse influences but especially interested in symbolism and realism as then practised in France.

This having been said, although makdals on scientific or cultural themes represented, in these last years of the 19th century, the essence of Turkish journalistic production, political literature was also being developed. In fact, while within Turkey the periodical press employed its best efforts to avoid the attention of the Hamidian censorship, abroad there was a proliferation of opposition journals, entirely devoted to anti-government diatribe. The Young Turk leader Ahmed Rida Bey, who in 1895 had founded Medjum'a-yi Abu 'l-Diyd, the sole contributor to the Committee for Union and Progress. According to the survey made by Ahmed Emin, makdals of all kinds (editorials, points of view) covered between 30 and 52% of the space of the six journals in circulation when the survey was conducted in 1913. The editorial alone occupied 11.74% of the space in Sabh, an independent pro-government journal, 11.20% in Tanzimatl, an organ of the left, 1017% in Yeri Gazette, favourable to the opposition and between 6 and 10% in Tanin, official organ of the government, Alemddr (opposition) and Ikddm (moderate). These by no means negligible percentages testify in fact to the fidelity of the Turkish publicists to the tradition of the preceding decades where the bahk makdala, the "leading article", constituted the essential and indispensable element of the newspaper, sometimes occupying as much as a quarter of the space available.

When this prolific production of articles is considered in total, the constant recurrence of certain themes cannot be other than striking. Among the questions of greatest interest to Turkish intellectuals in these years, the most prominent was the long-standing debate over the simplification and modernisation of the written language. The publication, in the review Gene Kalemier of Salonica, of a series of articles by Omer Seyf al-Din and Ali Djanab proposing the adoption of the spoken Turkish of Istanbul as the official language. "enlightened amateurs" such as Diva' Gökalp and Mustafa Şubeli, or to genuine specialists such as Alexander Israel Helphand, alias Parvus (one of the leading figures of German Social Democracy who lived in Turkey from 1910 to 1915), and Ahmet Ağaç, supported by Ottoman intellectuals including the novelist Khâlid Edib, the poet Djêlal Sâhir, the historian Körprülüâze Mehmed Fu'âd and the literary critic 'Ali Dânîb, skilfully exalted the prestigious past of the "Turkish race" and pleaded unceasingly for a reunification, if only cultural, of the peoples derived from the primal Central Asian stem. Among the periodicals contributing to this exploration of the literary and historical foundations of Turkish nationalism, also worthy of mention are the monthly Bilgi and the weekly Hâlaka Dûgûnu, both published by Djêlal Sâhir, and, in particular, the Ta'rikh-i Othamdni Endjumemin Medjmu'âsi, organ of the Ottoman Historical Society which, through the medium of the works of scholars such as Ahmed Refik and 'Abd al-Rahmân Şheref, the last official chronicle of the Imperial Court, was to give decisive encouragement to the development of a "national" Turkish historiography.

To the range of themes which caused the greatest amount of ink to flow in the Young Turk decade, it is appropriate to add, finally, the religious question. In this domain, the controversies were particularly impassioned. While Muslim periodicals such as Volkan, Beyân al-haqq or Sâbit ul-ulüjâtâd pressed for various forms of Islamic revival, advocating the teaching of the Kur'ân as the effective response to the evils of the age, certain nationalists and the "westernists" who had as their principal mouth-piece the review İljîshâd of the doctor 'Abd Allah Dûtêdat, published numerous articles which, if not overtly anti-religious, were at least insufficiently "rationalisation" of Islam and went so far as to demand a strict secularisation of Ottoman institutions which would free civil society from all religious domination.

The entry of the Ottoman Empire into war in 1914 did not bring about a fundamental change in the subject-matter of the makâlas published by Turkish men of letters. In fact, a large proportion of the work produced in the preceding years had already constituted a literature of propaganda, intended principally to equip public opinion with ideological weapons in readiness for the approaching conflict, signalled in advance by a succession of regular crises. However, with the outbreak of hostilities there was witnessed a sharp radicalisation of the points of view expressed in the periodical press. Learned controversies were replaced by slogans, the exaltation of the national identity was transformed into belligerence and the eulogy of "Turkish" cultural values became systematic the ideas propounded by the theorists of the Young Turk régime, leaving the opposition to theories of "national economy". It was also during the war years that Têkin Alp and some others put the finishing touches to theories of "national economy". It was also during the war years that Diva' Gökalp, who had become the foremost ideologue of the régime, promoted in the most excessive terms the cause of "Turkish". Naturally, the circumstances were hardly favourable to freedom of expression. Literary men were obliged to take into account not only the imperatives of the war but also the increasingly marked authoritarianism of the Committee for Union and Progress, whose capital could be blazoned forth in Anatolia, where Mustafa Kemal was leading the struggle for Turkish independence, and conversely, writings which would not be tolerated by the Anatolian government could be published without difficulty in the regions controlled by the Entente.

In Istanbul, a large number of journalists and writers took advantage of this situation to oppose systematically the ideas propagated by the nationalists, and to campaign with equally fervent propaganda against those who still supported the Committee of Union and Progress in opposition to Mustafa Kemal and his partisans. The most virulent among them was 'Ali Kemal Bey, editor-in-chief of Pesdîn-i Sâbitâ, whose editorials bore witness to a particularly incisive polemical talent. For their part, literary men who supported the nationalist movement undertook as their primary task to put a stop to defeatism, using their writings to stimulate Turkish patriotism. But some also pondered over the future of Turkey and indulged in speculation as to the form which would be taken by the future Turkish state. No reader of the journalism dating from the beginning of the War of Independence can fail to notice, in particular, to what an extent the nationalists were fascinated by the Soviet experience. In Yâhiî Gân, editorials favourite to the Soviets—most of them ow-ing to Yûnus Nâdî, the proprietor of the newspaper, or to Mahmûd Es'âd—could be counted by the score. Articles of similar type, though fewer in number, were also published by Hâkimiyet-i miliyye, the official organ of the Kemalist government. It is, however, ap- parent that this imitation of Russian natio-nary Russia was short-lived. At a very early stage, the ideologues of the national movement—prominent among whom was Mustafa Kemal himself, who did not hesitate to take to the pen to express his point of view—were putting forward concepts very similar to those championed some years previously by the theorists of the Young Turk régime, leaving the defence of the Soviets to genuine Communists such as Şefik Hüsnû and Şadi al-Dîn Dîlêl, the two leading contributors to the review Aydîhlâh. Undoubtedly the most remarkable phenomenon in these years was the emergence of a genre closely related to that of the makâla, the fikra, a kind of short news item generally of entertaining nature, combin-ing anecdote with comment on some matter of contemporary importance. The first major practitioner of this literary genre, Ahmed Râsim, has begun to publish his articles towards the end of the 19th cen-tury. Subsequently, numerous other writers, in par-ticular the poet Ahmed Hâkim and the journalist Huseyîn Dânîb Yafkân, made names for themselves as eminent authors of fikras. But it was especially after the First World War, with the appearance of new specialists such as Refik Khâlid Karay and Fâtih Rîfî Atay, that this type of news-item came to occupy a position of major importance in newspapers and reviews, possibly because the anecdotal tone which
was its distinguishing feature enabled it to discuss political questions in a manner unlikely to alarm the censors, possibly also because the public expressed an ever-increasing interest in this form of expression.

Extremely sensitive to the fluctuations of political circumstance, the Turkish periodical press was obliged once again to change its complexion in the mid-1920s, with the establishment in Turkey, shortly after the proclamation of the Republic, of a single-party régime. In fact, although this did not lead to the total disappearance of opposition newspapers and reviews, the monopoly exercised by Mustafa Kemal’s creation, the Republican People’s Party, over the conduct of public affairs was accompanied by a spectacular inflation—especially noticeable after 1930—in the press entrusted with the defence of the official line. This development of a republican press was made possible only by means of a vast mobilisation of intellectuals. Journalists, writers, historians, economists, sociologists, all were called upon to make their contribution to the building of the new Turkey. Those who responded to this appeal—and there were many of them—did so by producing for the Kemalist periodicals makalas remarkable, whatever the subject tackled, for the eagerness of their commitment.

It is probably in the monthly Kadro, published between 1932 and 1934, that there appeared the most remarkable articles of the period. Motivated by a relatively limited team of writers including in particular Yakup Kadri Karaosmanoğlu, Vedat Nedim Tür, Şevket Süreyya Aydemir, Ismail Huseyv and Burhan Asaf, this review was especially concerned with economic and social questions, and it contributed in a significant manner to the refinement of Kemalist theses in these domains. Writers involved with this magazine were responsible for the most convincing arguments in favour of the state control policy adopted by the régime in economic matters, from the beginning of the 1930s.

The articles published in Kadro, often relatively long and technical, were addressed to an educated public of bureaucrats and intellectuals. Makalas of a more accessible type were to be found for example in the numerous organs of the “People’s House” [see KHALKEVI], kinds of public forums established by the Republican People’s Party to propagate Kemalist values throughout the country. The reviews, of which the best was İlkü, the monthly magazine of the People’s House of Ankara, provided an impressive collection of works, generally modest in scale but sometimes of very high quality, concerning the folklore, the history, the arts and the social life of Turkey all of which had the aim, often in explicit manner, to stimulate the national pride of the population and to lay the foundations of a new culture compatible with republican ideas.

With the spread of universities, high schools and research institutions, Kemalist Turkey was also soon to be endowed with various specialised reviews, among which it is appropriate to mention in particular Türkçe Mecmuaıı, organ of the Institute of Turcology of the University of Istanbul, and Belleten, review of the Foundation for Turkish History. The scientific makalas published in these periodicals were generally of a quality comparable to that of articles of similar type produced in countries with a long university tradition. However, some writers willingly took account of the directives and principles of the régime, eager to construct from all their work hypotheses and theories capable of supporting them.

This said, even though writings inspired by official doctrines constituted until the end of the Second World War the major portion of the material appearing in the Turkish periodical press, dissidents were not deprived of the opportunity for self-expression, provided that they did not overstep certain limits. It was thus for example that one of the most talented journalists of the period, Peyami Safa, was responsible for a large number of subtly reactionary makalas and fikras of which some were even published in government journals such as Yunus Nadi’s Çinkırıyat and Ulus, the official organ of the Republican Party. Similarly, persons suspected of Communist sympathies such as Zafer İnci, Sertel, Sahahattin Ali, Aziz Nesin, Sadrettin Celal and numerous others, were able for many years to write in periodicals known for their progressive ideas—in particular the daily Tan and the monthly Yurt ve Dünya—without being unduly molested. It was only in 1945, in the wake of violent polemical struggle with Pan-Turkist organs, that they were obliged to put an end to their activities, some of them even being forced into exile.

After the Second World War, with the establishment of a pluralist régime and the emergence of new political parties, the various constituents of Turkish opinion were able to make their points of view known with greater ease than in the past, on condition however of exercising a degree of self-censorship. Only extremist factions, in particular all those considered to be Communist in character, as well as ultra-nationalist groups, found themselves deprived for rather more than a decade of freedom of expression. This was however gradually restored to them in the wake of the coup d’état of 1960 which inaugurated in Turkey a period characterised by a growing liberalisation of political life and ideological debate.

This was a climate eminently favourable to the development of the press, as the statistics demonstrate. In 1951, there was a total of 551 periodicals in Turkey; by the end of the 1970s, the number had risen to more than 1,400. In such circumstances, the makala genre could not but prosper.

The political makala in particular flourished remarkably, especially in the period beginning in the mid-1960s. Among the outstanding specialists in this genre, mention should be made of the left of Rıza Avcioglu, who in 1961 launched the weekly Yın, the first of a whole series of increasingly subversive periodicals which were to come into existence in succeeding years, as well as journalists of great talent including Çetin Altan, Abdi İpekçi and İhhamı Soysal. As for the conservative camp, besides Peyami Safa, who continued to produce extremely corrosive makalas until his death in 1961, worthy of mention, among many other polemists of great virulence, are the poet Necip Fazıl Kısakürek, founder of the Islamic and nationalist review Büyük Değilı, Ahmet Kabakli, author of a large number of news-items of fundamentalist tone published in various journals, and Nazli İlicak, editor-in-chief of the daily Terותan.

During the same period, literary criticism and the related genre of the essay (deneme) also developed in a remarkable manner. Nurullah Ataç, who died in 1957, had dominated the preceding decades with his refined sensibility and literary talent, leaving to posterity thousands of articles dispersed among scores of periodicals. Slightly younger than him, Suat Kemal Yetkin, Sahahattin Eyüboğlu, Azra Erhat and Tahir Alangau had also contributed to the enrichment of modern Turkish letters in these two domains. In their wake, with the proliferation of literary reviews from 1950 onwards, there appeared a host of new talents, of whom there is space here to mention only a few such as Asım Bezirici and Fethi Naci, very productive
MAKALA — MAKAM

literary critics; Mahmut Makal, the pioneer in Turkey of the essay on rural themes; Salah Ebrashi, who was responsible in particular for numerous theoretical writings on poetry; and most of all Atilla Ilhan, author of news-items of a very personal tone on problems of contemporary Turkish society.

Finally, it is appropriate to note the remarkable proliferation of works of academic type published in reviews intended for a limited audience. Until recently, only establishments of higher education had at their disposal organs capable of accommodating such production. Several reviews of wider circulations, designed with the aim of laying the results of scientific research before an educated public, have begun to appear since the mid-1970s, at the initiative of private individuals or associations. The most characteristic example which may be cited in this context is the quarterly Toplum ve Bilim, founded by Sencer Divit-çioğlu which, since its inception, has given a new impetus to works in the domain of economic and social history.

If the makala appears as a whole to be an ever-expanding genre, it should nevertheless be noted that, in the daily press, the tradition of the bash makala has tended, for its part, to disappear. An essential element of the newspaper in the 19th century and during the Young Turk period, from the end of the 1930s the tendency to adopt the formulae operated by the mass-circulation dailies: development of photographic reportage, expansion of space reserved for sport, for humorous cartoons, for entertainments, multiplication of short stories at the expense of serious articles. Such a fairly broad meaning of the word, compos-

If the bash makala is perhaps a result of the proliferation, in newspapers, of particular rubrics—fikra, news of foreign politics, economic news, etc.—enabling different members of the staff to express their point of view on matters of the moment. It is explained, above all, by the radical transformation experienced by the Turkish daily press after 1960. The appearance of non-political newspapers of mass-circulation—in 1982 Güneydin had a readership of more than 800,000 and Harriet approximately 600,000—and the competition provided by television have had a drastic effect on the ideological press which, to survive, has found itself in many cases obliged to adopt the formulae operated by the mass-circulation dailies: development of photographic reportage, expansion of space reserved for sport, for humorous cartoons, for entertainments, multiplication of short stories at the expense of serious articles. The most successful example of this adaptation to the new circumstances of journalism is provided by the conservative daily Terciman which in 1982 drew a readership of almost 400,000. However, as has been seen, these structural changes have not prevented the makala on political themes from prospering. The traditional bash makala has been replaced not only by the news-items and diverse ‘points of view’ published on the inside pages of daily newspapers, but also by the widespread production of weekly or bi-monthly periodicals of all shades of opinion, whose proliferation, in newspapers, of particular rubrics—fikra, news of foreign politics, economic news, etc.—enabling different members of the staff to express their point of view on matters of the moment. It is explained, above all, by the radical transformation experienced by the Turkish daily press after 1960. The appearance of non-political newspapers of mass-circulation—in 1982 Güneydin had a readership of more than 800,000 and Harriet approximately 600,000—and the competition provided by television have had a drastic effect on the ideological press which, to survive, has found itself in many cases obliged to adopt the formulae operated by the mass-circulation dailies: development of photographic reportage, expansion of space reserved for sport, for humorous cartoons, for entertainments, multiplication of short stories at the expense of serious articles. However, as has been seen, these structural changes have not prevented the makala on political themes from prospering. The traditional bash makala has been replaced not only by the news-items and diverse ‘points of view’ published on the inside pages of daily newspapers, but also by the widespread production of weekly or bi-monthly periodicals of all shades of opinion, whose proliferation has only been temporarily halted by the measures taken to restrict the freedom of the press in the aftermath of the military intervention of 1980.

one another at present the partisans of the makām-system and the partisans of the makām-form. The ambiguity arises from the fact that a makām-system being made musically concrete entails the illustration of an instrumental elaboration entrusted to an instrumentalist (this is the taksim), to the human voice without written music (this is the layāli), or in the form of a memorised or written elaboration entrusted to an instrumental group (taqāk or daqāq) or to an orchestra with soloists, singers and choral voices. In the latter case, the listener retains the written music or poetry and the form more than the system. In some countries, e.g. those of the Maghrib or Central Asia, as in Iran, Adharbaydjan or ‘Irāk, the makām is understood precisely through the agency of its forms or models transmitted on the instrument from master to pupil or entrusted to solo artists acquainted with the traditional répertoire (nauha in the Maghrib, makom in Central Asia, raddj in Iran, magom in Adharbaydjan or makām in ‘Irāk, for example).

Whatever may be the ascendency of human voices and the impact of words and poems on the Islamic populations, even if it remains at the central core of Islamic culture, the Arabo-Irano-Turkish makām appears in the history of musical language to be a relation which has evolved from the ancient musical mode, rethought, conceived and standardised on the fingerboard of the ‘ud through an association of genres (audnā). The understanding of the makām is thus inseparable, on the level of the analysis of modal structures, from a study of the language of the ‘ud, an instrument which has defined the scale of sounds and tested the types constituting the modes. The modal languages of Islam were developed under the finger (iṣba’, pl. asāb), on the finger-board (dastān) and along the scale-range of the ‘ud. This process of elaboration allowed each makām, from the time of its creation, to go beyond its own technical and intellectual conception and each system to be transmuted into a process and a form which would put into a concrete shape the “idea-material”, the “makām-‘ud” relationship. Hence the risk constituted by the representation of a makām or its modal structures on a musical stave in the 20th century.

For the study and evolution of the theoretical scale of sounds.—The first technical and modal problem of music within Islam seems to have been the combination of the autochthonous or empirical systems inherited from the Arabo-Irano-Turkish ‘ud, the theoretical scale of sounds.—The first characteristic apotome (2187/2048; 114 cents), a major tone (40/28 = 10/7; 617 cents), a short fifth (40/27) and a perfect fourth (4/3; 498 cents), an implicit tritone (40/28 = 10/7; 617 cents), a short fifth (40/27) and a super-“wolf’s-fifth” (40/26). But al-Farābī restricts his description to the fourth, and no evidence is available concerning the details of the diffusion of this system in proto-Islamic or early Islamic music.

In Baghdaḍ, in the 2nd-3rd/8th-9th centuries, the eminent and skilled classical soloists of the ‘ud, like Ishāk al-Mawṣili, seemed more inclined to employ the Pythagorean Hellenistic system. The latter was characterised by a limma (256/243; 90 cents), an implicit apotome (2187/2048; 114 cents), a major tone (9/8; 204 cents), a minor third (3/2; 294 cents), a perfect fourth (4/3; 498 cents), an implicit tritone subsequently described by al-Farābī with reference to the harp (729/512; 612 cents) and a perfect fifth (3/2; 702 cents).

The two systems were thus only compatible on the level of the limma and of the fourth. At the same time, Mansūr Zalzal, a virtuoso lutist, apparently reconciled the popular and learned traditions by giving official status to a para-Pythagorean system based on empirical and equidistant longitudinal divisions of the string of the ‘ud, following the Pythagorean fingering-degrees.

Zalzal thus recommended the use of the following complementary degrees: a “Persian” neutral second (162/149; 145 cents; 6,4 holders), a “Zalzalian” neutral second (54/49; 168 cents; 7,4 holders), a “Persian” minor third (81/68; 303 cents; 13,4 holders) and a “Zalzalian” neutral third (27/22; 355 cents).
cent; 15.7 holders.) Thus there came about, in regard to the fingerboard of the 'ud, the confrontation between the Hellenistic or universal acoustic systems and the specific or empirical Arabo-Iranian-Turkish musical systems.

The treatises of al-Kindi, al-Munadjidjun (3rd/9th century), al-Farabi, al-Isfahani, the Ikhwan al-Safa (4th/10th century), Ibn Sinā (5th/11th century) and many other scholars thus had as their object or desired aim to position on the finger-board of the 'ud a theoretical scale capable of standardising the intervals of these different systems.

The ideal solution seems to have been found in the 7th/13th century by the Systematists with Saft al-Din al-Urmawi and Kutb al-Din al-Shirazi, thanks to a commatic scale supporting the Pythagorean system and assimilating, by justifying them by longitudinal measures and mathematical calculations, the intervals of the Dākhiliyya and the neutral intervals. It all led in practice to the (theoretical) comma, the limma (4 commas), the apotome (5 commas), the major tone (8 commas), the major comma (9 commas) divided into two limmas and a comma, and their combinations, amongst these being a minor third (13 commas), a neutral third which became "natural" (17 commas), a major third (18 commas) and a perfect fourth (22 commas).

So, in general, Iran, Central Asia and the outer regions moved away from reference to the 'ud and returned to empirical systems. The Arab world was to experience the recession before adopting from the 18th century, and more precisely with Mikha'il Mughāka (19th century), under the influence of Europe, a theoretical scale dividing the octave into twenty-four-quarter-tones (rab). Only the Ottomans and the heirs of 'Abbāsîd elitism were able to perpetuate the commatic system of the Systematists.

In the 20th century, a comparative Arabo-Iranian-Turkish study entails the reconstitution of a theoretical scale of sounds confronting the three systems of contemporary Arab, Iranian and Turkish temperaments. In spite of divergences, the octave can be divided into twenty-four intervals defining twenty-five fingering-degrees or scale-fingeringst (daraaja, bekt, yeqdh, kardr-dugdh, yehdrd, makamid, hajdhrkdh). This theoretical scale can be deduced from the maxaqa (16 commas or 7 quarters, Cairo, Damascus) the intervals are measured in terms of the pitch (takaba) then of the height of reference chosen. Also the guide mark and key tone of the scale, segah and rast, can be aligned on a frequency, a pitch and then an equivalent Latin note which varies according to the countries, schools or, obviously, languages to be accompanied. The rast, key tone, can be a 4qc, a do (Mediterranean), a 2 (Turkey), a fa or a sol (Irāk, Iran) or even a la, and the whole scale is led by it like a mobile keyboard or a set of nāūs (oblique flutes) of various pitches.

This theoretical scale can be deduced from the historical and specific scale conceived it and is reducible to the modern 'ud which is its ideal standard. For this reason, it is influenced by "units" of fourths, and presents in the 20th century preferential degrees corresponding to the open strings of the 'ud with classical tuning, supposing that, from low to high, is a bass string: karâ-râst or karâ-dâgh, 1st string segah, 2nd string såhârân, 3rd. string dâghâ, 4th string nawaî, 5th string gârân. So it is not equalised like a piano scale.

This theoretical scale is only a range without an immediate melodic outcome. The twenty-five sounds disposable on the octave are not played in conjunction or simultaneously. A given modal structure uses normally only four degrees to the fourth or eight degrees to the octave in the rules of heptatonic diastation.

Value of the intervals and formation of the genres. Historically in the treatises and logically in analysis, the approach to the makamak entails, the unit of measure and theoretical scale of sounds being known, a study of the intervals and fingering-degrees which, in dividing the fourth or the fifth, seek to define the tri-, tetra- or pentachordal genres constituting the makâmât. The genre (dāmîn, balâr, 'ikdî, in Arabic, dörtî-bişî in Turkish) is thus the elementary unit of the genres. The Systematist structures in contemporary Arab, and Turkish treatises. In Iranian treatises it is not explicitly identified, but a modal analysis should reveal its presence.

The selection of a given genre brings a choice of fingering-degrees on the theoretical scale of sounds and also ordains a specific series of juxtaposed intervals. The value of these intervals is determined by the systems or temperaments adopted.

In the Arab countries and Iran, the intervals are measured in quarter-tones at the rate of twenty-four-quarters per octave. The chromatic quarter-tone is exceptional. The current melodic intervals are the semi-tone (2 qs.), the three-quarter-tone (3 qs.), the major tone (4 qs.), the maxim tone (3 qs.), the trihemitone (an augmented second of 6 qs.). The thirds are minor (6 qs.), neutral (7 qs.) or major (8 qs.). The fourths are perfect (10 qs.), the shortened fourth (6 qs.) of the sabâ genre should be noted as well as the augmented fourth (tritone of 12 qs.) of the nikriz, navathar and kurdi-atghar genres. The perfect fifths are 14 qs. The intervals are more flexible in Iran.

In Turkey and the academic schools (Aleppo, Mousal, Baghdad) the intervals are measured in Holderian commas at the rate of fifty-three commas per octave. The current intervals are the limma (4 commas), the apotome (5 cs.), the major tone (8 cs.), the major comma (9 cs.), the "trilimma" or trihemitone (augmented seconds of 12 or 13 cs.). The thirds are minor (12 cs.), minors (13-14 cs.), rarely neutrals (15-16 cs.), Zalzalian naturals (17 cs) or Pythagorian majors (18 cs.). The fourths are perfect (22 cs.), shortened (18) or augmented (26 cs.), in the genres mentioned above. The perfect fifths are of 31 commas.

The Arab, Iranian and Turkish treatises give the specific intervals historical names, of which the variants will not be mentioned here. The fingering-degrees or scale-fingeringst are not always designated by their Eastern names, and, under the influence of European notation, Latin names of the notes are frequently used by giving them adapted inflections. The rast, key tone, can be a sî, a do (Mediterranean), a nî (Turkey), a fa or a sol (Irâk, Iran) or even a la, and the whole scale is
bémol or koron. Raised a quarter-tone (made semi-sharp), it becomes nuss-déeze, kar-déeze or sori. The Turkish codes of inflection are clearly more rigid due to the nature of the system. There are regular new initiatives, amongst which is a code of the Colloque de Beyrouth (1972). One of the most recent (code arabisque, 1978) normalises the signs and transcribes all the commatic inflections.

Just as the theoretical scale of sounds is only a range, the quarter-tone and the comma are only units of measure and not melodic or chromatic intervals. Heptatonic diatonism theoretically escapes the problem of fingering-degrees or scaling-fingerings beyond eight to the octave, when there is a given modulation. Further, the conception of the genres on the finger-board of the ‘ud can only use the open string and four fingers, which reinforces the link between the fifth and the playing of a pentachord and does not stir the musician to imagine micro-intervals smaller than the limma which do not exist in the traditional genres. Here, moreover, the makâm owes more to the ‘uday than to the laboratory.

Nevertheless, some ‘micro-intervals’ are smaller than the semi-tone or the limma. In diatonism, they may be detected below the fingering-degree segâh of the rare genres awoy-arâd and sâz-kâr described by Erlanger (quarter-tone between rî dîèze and sì mi-sémèmol). There is also a leading note at the same level in the segâh genre, which is superimposed on diatonism. However, it would appear to be a matter of Turkish limmas, which, transposed in the Arabic quarter-tone system, are devalued. In chromatism, there are micro-intervals in the execution of the rare mukhâlif genre of 4râkî; but it is, in this case, an alternated overlapping of the sabâ and segâh genres on the same part of the scale. In this case, it is even possible to analyse a makâm Muhâlîf formed from the overlapping of the three Sabâ, Segâh and Huzam makâmâd mobilising twelve degrees per octave (cf. Arabesques record 5, Luthe en Irak traditionnel, ‘Ud Jamîl Bakîrî).

As the selection of a genre brings a choice of fingering-degrees and ordains a specific series of juxtaposed intervals, the genre is an elementary and invariable modal structure which should be identified on analysis in terms of the value of its intervals and in descending order of the system. Moreover, it is probably aided by characteristic melodic formulae of the genre and by an intuitive perception. However, apart from the variations of temperament from one country to another, the universal laws of music ‘temper’ the rigidity of the specific intervals.

Some fingering-degrees of the genre, in particular the two poles or extremities often inserted in an open string of the ‘ud, are rigorously fixed, except, for instance, in the Iranian 5-Trâkian Dâshî-Dâshî mode. Others, the intermediaries, can be mobile. This mobility is frequently linked to phenomena of ascending or descending gradient or enharmonic change, quite natural on instruments with a non-fretted finger-board such as the ‘ud or the violin, and more artificial on instruments such as the kânûn. It also responds to phenomena of attraction or repulsion validated in other kinds of music.

Also, such a fingering-degree or scaling-finger will be raised more in ascending than in descending. In spite of the fairly rigid connotation of the system applied in Turkey, the third fingering-degree segâh of the râst genre occurs at 17 commas of the finale in ascending and 16 in descending, also inflecting a Zarlînian third and a Zalzalian third. By contrast, if this segâh fingering-degree becomes the finale of the segâh genre it becomes a modal pole and it is fixed more especially as it is doubled with a leading note given the space of several commas.

It may be remarked that the mobile degrees are frequently linked, as historical treatises or musical practice confirm, with the index or median finger on the finger-board of the historical or modern 7’ud. In the modes of Iran, these mobile fingering-degrees, which the analysts do not associate with the role of the 7’ud, are called mutaghâbîyaj.

The establishment of a nomenclature of Arabo-Iranian-Turkish musical genres can only lead to a didactic compromise due to the complexity of the criteria allowing the specificity of a genre to be confirmed. However, the same term can designate different genres, or the same genre may be designated variously according to the countries. An Arabo-Turkish terminology will be normalised here.

Erlanger presents an Arabo-Turkish system marked by the academic tradition of Aleppo with a quarter-tone scale and enumerates seventeen genres. An Arabo-Turkish system will be presented here marked by the ‘ud school of Baghîdî with a commatic scale. A progression of structures will follow from the ‘Hellenic’ scale (tones and semi-tones) to the ‘Islamic’ scale (which includes also neutral seconds and thirds). The reverse approach would also be plausible.

Attention will be given to eight structures of the main genres by giving precise information on their characteristic interval: sahâgîr or sâgam-sâghîn (major); básâlîk (minor); kûrdî (minor second and third); hidjâzî (with trichromite-augmented second); bayâti and naswî tetra-chords or hûsînî and溢gâhîh pentachords (neutral second and minor third); sabâ (neutral second, minor third and diminished fourth); segâh and rîtîk (finale on a neutral fingering-degree with apomote and short neutral third), nîtî, an academic and classical genre (major second and neutral third).

Six structures will also be cited derived from the main genres by correlation, overlapping, combination, inflection: kûrdî-nâhîr (kûrdî hidjâzî correlation); nîkrîz and nânâlîr (basâlîk hidjâzî correlation); musîlîfîs (sabâ-segâh overlapping); huzam (segâh/hidjâzî combination); mûsâ’ar inflection of the segâh; and sawîl (hidjâzî/rîst interaction).

All these genres are compatible with the fifth and can be represented in the form of pentachords on a diagram illustrating the real value of the intervals and the preferred insertion on the scale of sounds, itself transposable. However, so as to facilitate reading, a scale of sounds is often chosen with a nîtis key tone in do (Mediterranean) and one may also remark the equivalence in Latin notes of the height of the fingering-degrees or scaling-fingerings by giving their inflections precisely.

Formation of the musical modes from the genres.—The mode (makâm in Arabic; dastghîb, avâz, naghma in Persian; makâm in Turkish) is formed by the combination of genres. However, musicologists who do not play the ‘ud, Iranian authors and numerous Western musicologists study the mode as a whole like a Greek mode or an Indian raga.

In popular traditions and archaic practices, a single tri-, tetra- or pentachordal genre can constitute a makâm of limited ambitus. In general, it is a genre more archaic than Hellenic such as the hidjâzî, the bayâti, the sabâ or the rîtî. A Bedouin’s improvisation on his rababa is often limited to a tetra-chord. But an educated artist can decide to play deliberately in the popular style and produce an astonishing result (e.g. Djamîl Bashîr interpreting the sahâgîr-7’ud on the
Two genres joined from low to high can form the "scale systems" (diwan asaš, sulam in Arabic; dici in Turkish) of a classical heptatonic makām bearing a tonic finale (asaš, maye, duruk), a witness-pivot (gūmūz, shāhūd, gāšūa), normally placed at the juncture of the two genres and corresponding most often to an open string of the 'ud, which, in fact, by structural and acoustic definition, is a preferential degree. Other degrees can be preferential or mobile according to the genres and modes played and in terms of what the ethnomusicologists call the hierarchy of degrees.

Musical treatises class makāmtāt in terms of the degree on which they are inserted and progress from low to high. Here it will be limited to a small number of heptatonic "scale systems", simple or compound according to the identical (or theoretically identical) or different genres from which they are formed. All the makāmāt cited point to Arabo-Turkish academic traditions and a certain number of these makāms seem to be of relatively recent creation from the time of the Ottoman Empire (18th-19th centuries).

The constituent genres will be mentioned from low to high with and by their arbitrary limitation to the main octave (diwan asaš).

1. The principal makāmāt formed by the combination of two identical genres are called simple, and often bear the same name as their constituent genre or the fingering-degree of insertion on the theoretical scale of sounds: Nahwān or Bāsālīk; minor; Bāsālīk tetrachord + Bāsālīk pentachord.

2. Some compound makāmāt are formed by joining two different genres constituting a heptatonic blend (tarkīb, murekkeb): Mādūn, Ḥusayni, Ḥuzam, Muṣṭādr; pentachord (pivot on 5th degree) + rāst tetrachord (pentachord + major tetrachord).

3. Some complex makāmāt are reducible to three different genres by their octave system (a theory not found in Turkey): Ṣuzūnd, nisā’ tetrachord + nisā’ pentachord + rāst tetrachord.

Seghā: seghā tetrachord + modulating rāst or bayātī tetrachord + rāst tetrachord.

Farāhfaż: overlapping of sahā, seghā and huza (chromatism).

The definition of the makām limited to the octave is only a didactic diagram, for only archaic improvisations are limited to the octave. The extension of the system beyond the octave can be made in various ways. In the most common case, the heptatonic structure is recommenced in the adjacent low and high octaves. In scholastic practice, the theory or science of the musician adds new structures to the high and low in the form of connected genres or modes. It also leads to the formation of makāmāt of a broad ambitus, of which many are described in treatises. Going beyond the register of the human voice, they apply to instruments covering three octaves such as the 'ud with six courses of strings, the kāmūn, the santur or the nay. In this way, the makām is freed from its antiquity.

On the occasion of an improvisation (takbīm), Arabic and Turkish traditions define for each makām a point of departure (mahad, zemín), a process of melodic movement (laafer, spy), stopping points (marākūz, asma karānum), specific melodic formulas such as the kaffa before returning to the finale (karād). Iranian traditions entail the unrolling of a certain number of melodic models (gūgūs) according to a fixed protocol in the official repertoire (nadiqa), with the periodic return of a conclusive formula-coda (jūriq) such as hāli: khabara.

Apart from the vertical association of genres and modes from low to high, horizontal associations in time allow for improvisation by modulating from a makām of reference. Genres and modes constituting the initial modal system are renewed in terms of the laws of Arabo-Turkish modulation (taawwun, gezık) by the substitution or evolution of structures engendering a succession of genres and modes at intermediate stages (mujān, mujān) and illustrating a rich procession of ten or twenty makāmāt before returning to the initial genre (e.g. "Reveries sur le makām Farahfaż").

Arabesques record 6, Luth en Iraq classique, 'Ud Jamil Ghānim"

At-makām al-irākī, based on the same process, is a typically Irākī genre whose poem is entrusted to a solo singer (makāmāt) and the accompaniment to an instrumental quartet (īdāshī) from the beginning (ubahri) to the finale (tālīm) (e.g. "Meditations sur des naghams traditionnels d'Iraq").

MAKĀM

Insertion, height in frequency, transposition, gradient, ethos. -- Makāmāt are not of a fixed height in frequency with reference to universal physical principles. But they have for preferential insertion that of their main genre, which is done more readily on certain fingering-degrees of the scale of sounds. Also the Shah 'Arābān, the Seghā are inserted on seghā: the Sūzūnd on sahād, the 'Aṣghār'ashāh on sahād, the Ṣūzūnd on dūgūz, the Saḥūra, Ḥuṣāz, Rāšt on rāst, the Kurdi, Ḥuṣāz, Bayātī, Nātā, Ḫuṣāz, 'Ushshāk, Šāhād, Shāhūd on dūgūz, Seghā, Huzām, Musta‘ar on sahād; etc.

As the height in frequency of the fingering-degrees or scaling-fingerings is in terms of the height in frequency of the theoretical scale of sounds and the latter varies from one country to another and one school to
another, it would be difficult to speak of absolute height, more especially as the European pitches, which are often cited in reference, have continued to rise since the 18th century. Recourse to the näy, sometimes evoked as a pitch, presents the same risk since, with the fixed fingering-degrees, the näy transposes the scale in terms of its size.

In the Mediterranean Arab countries, the näy is generally assimilated to a do₂ and played as such by trained musicians. In Turkey the scale has been deliberately fixed and the näy key tone, called sol and written sol by convention is a ṭé₂ in official institutions. In Ṣūfī and Ḥan, the näy is more readily a fa₂ or a sol₂. These heights suit baritone singers quite well. At all times, in practice, the instrumentalists choose their scale and the soloist singers impose theirs in terms of their vocal aptitudes.

The makâmá is can be transposed in various ways, in addition to transposition by total displacement of the tuning-pitch of the instrument or the theoretical scale of sounds. Transposition can be obtained on the näy by preserving the fingerings and changing the näy. On the kānān and the sanṭūr, the playing is displaced after the tuning-pitch has been refined. On the ūd all the fingering-degrees of a course of strings can be transferred to the next course, corresponding to a translation of a fourth without modification of the internal acoustic equilibrium of the makâm. Also a baydti on a dügdh (3rd open string) can be transposed on a nawaṭ (4th open string) or on an ṣaghīrdn (2nd open string) without breaking its structure, since the finale and the pivot (4th degree) remain inserted on the open strings. In some cases, the makâm transposed in this way takes on a new name.

In other cases, a musician displaces the finale in a longitudinal fashion on the string, which leads to a transposition with translation of all the fingering-degrees and a modification of the acoustic structure of the makâm. Such would be the case of a makâm Rāšt played on a sēgḥ finale, a particularly arduous performance which alters the acoustic role of the pivot (5th degree), usually on an open string (nawaṭ), and plays it on a fingering in the middle of a string.

Some makâmá have, observed on a stave, octave scale systems absolutely identical with those of other makâmá, the only difference being that the theoretical scale is different. Such is the case of makâmá Shadd-ʿArabdn (on yegḥ), Suzzidn (on šurchān), Ḥidżaz-kār (on rāšt), Turkish Zengule and Shūdān (on dügdh). Played on a kānān in the absence of a criterion of height, they could only be differentiated from one another by formulas, details of modulation or cadence. By contrast, on an ūd, they have their own acoustic equilibrium. The yegḥ finale (1st open string) of the Shadd-ʿArabdn is on the ūd a preferential and fundamental degree. On the other hand, the rāšt finale (on a fingering of minor third on ṣaghīrdn 2nd string) of the Ḥidżaz-kār, which is a very important key tone, is not an acoustically preferential degree. Consequently, a makâm Ḥidżaz-kār is not a transposed Shadd-ʿArabdn.

The question of the gradient of the makâmá has given rise to several controversies. Some makâmá, at the time of their improvised melodic evolution, deliberately display ascending melody, others no less deliberately descending melody. The musicologists of Turkey give precise information in their works as to the nature of the pitch to be given its value. At times, two makâmá of identical modal structure and identical insertion have different gradients. Also, the Turkish Baydti is descending and the Turkish Yegḥ is ascending; the Turkish Ḥidżaz ambivalent and the Ūzād ascending; the Turkish Ṣawd descending and the Turkish Ṭuhur descending. In Ṣūfī, two popular makâmá based on the modal structure of the Ṣawd are respectively the Ṣawd and the Ṣawd, usually ascending, and the Ṣawd, usually descending.

Historically, each genre and mode is supposed to correspond to a certain ethos (ríḥ) or a "modial sentiment", which conditions the inspiration of the artist, and the perception or sensation of his companions and audience, when he improvises. Each mode or genre even had in former times its preferred hour, at dawn (makâm Rāšt), at the end of the evening (makâm ismālī), if reference is made to the Anonymous treatise dedicated to the Ottoman sultan Mehmed II (9th/10th century). But in the 20th century, the holding of musical sessions in the evening and the influence of the media have upset the nyctemeral rīḥ as they have the sentimental rīḥ.

Nevertheless, the Rāšt is classical and academic, the Baydti has a rural and collective tendency and is well-suited to popular songs, the Ṣegḥ expresses lofty sentiments and is claimed by the mystics, the Ṣawd, linked to the fresh wind of dawn, expresses the weariness of the end of the night with a clear tendency to sadness and depression. It is all together strange, on the other hand, to the idea of waking up and is not an arousing makâm. The Ḥidżaz is a makâm able to evoke sadness without depression and it is remarkable to Western ears. In a certain measure, the calls to prayer maintain a kind of nyctemeral ethos of the makâmá, since they are supposed to change the makâm at each call.

Nomenclature and comparative approaches. — The number of real or fictitious makâmá is difficult to determine in the absence of a preconceived idea and due to the plurality of musical traditions perpetuated in the heart of Arabo-Iranian Turkmén Islam.

A Persian theoretician of the Sāsānian period, Bārbād, had elaborated a mystical and cosmogonous musical system describing seven ḥusrawasānī (modes), thirty ḥabīs (genres?) and three hundred and sixty ṭaṣbgāḥ (modulations?). This type of nomenclature as the basis of fatidical numbers has not disappeared and some contemporary musicologists retain seven notes and forty intervals to the octave so as to reach three hundred and sixty makâmá. In the 7th/13th century, ʿAbd al-Dīn described twelve ṣawād, six ʿaṣāṣāt, one mumakkab and two undetermined modes.

Apart from large mediaeval treatises which studied the scales, intervals, genres and modes conceived on the ūd, and which established the nomenclatures for the classification of the modes used, we should take account of the delicate art and patronage which encouraged musicians to create a new mode and present it to the prince amidst a circle of initiates or on the occasion of a collective feast. Also, throughout centuries, hundreds of makâmá have been described and it has been possible to elaborate thousands. However, the present current practice is limited to a few tens of simple or compound makâmá and a hundred transposed makâmá.

In the 20th century, Erlanger describes one hundred and nineteen Eastern makâmá and twenty-nine Tunisian makâmá belonging to the Hispano-Arabic tradition. S. al-Mahdī describes forty makâmá. Alexis Chotin notes the existence of twenty-four naḥāʾ of North Africa, corresponding to twenty-four modes. Hüseyin Sadeddin Arel describes a hundred Turkish makamlar. Nelly Caron and Dariouche Salvate describe twelve Iranian modes, seven being ṭaṣbg and five ṣawād. Jürgen Ehmer notes the existence of the system of six makomot in Central Asia, usually
characterised by their forms. Habib Hassan Touma evaluates the mukdm of Adharbaydjan as more than seventy. Among all these structures there exist similarities and divergences. 

As for the similarities with India, we can recognise the identity of structure between the Indian Bhairavi and the Kārdū. As for the Greek heritage, it must be remarked that classical musicians of the end of the 2nd/8th century such as Ishāk al-Mawṣili [q.v.] used exclusively the Pythagorean Hellenic scale. The rehabilitation of autochthonous structures in academic music seems to be undertaken with Mansūr Žalal and his neutral fingering-degrees. Since then, “Greek” and “local” structures coexist. Some musicologists of Islam do not fail to underscore the homology between “Islamic” and Greek genres: Ionian, Aeolian, Dorian and Phrygian. The process, nevertheless, suffers from the multiplicity of classifications of the Greek genres. Thus we have to remark the presence of a major and a minor and the similarities with the modes of Greek churches, namely Kāst-natural diatonic, Bayātī-minor chromatic, and Hidżāz-kār-major chromatic.

The similarities with the Greek modes arise equally from the European influences of the 19th century which provoked a paradoxical re-Hellenisation. After the ʿAbbasid period, which marked the flight of Arabo-Iranian musical syncretism, academic musical forms regressed among the Arabs and Iranians and were to discover a new brilliance at the court of the Ottomans. But from the 19th century onwards, imperial patronage and the taste of Istanbul were more and more influenced by Europe. A renaissance of the Niḥāvand (minor) took place and the “creation” of makdūm for grand occasions; with a very broad ambitus, and a “tempered” tendency such as the Nawāzār (neuter), Sudūm-yegāh (harmonic minor), Hidżāz-kār-kūrdi (Kurdwīl-Hidżāz-kār), Farazāzād and Sulṭānī-yağūn. It is these makdūms, along with so many others perpetuated at the Ottoman court, which were to be introduced in Egypt by ʿAbdīl al-Hammūlī so as to regenerate music which was at that time in a parlous condition, if the descriptions of Villoteau are to be believed.

The similarity between the modes of Islam and the modes of the Eastern churches is at times striking, despite divergences of form and style. It might as well be attributed to relics of the common ancient heritage claimed by both traditions, to a period of modal syncretism, or to the fruits of a coexistence which lasted more than ten centuries. The same question can be posed as regards the commatic chant of the churches whose territory was administered by the Ottomans, when the latter perpetuated the Byzantine artistic heritage and commatic system.

The problem of the musical modes perpetuated by the minorities reveals the same ambiguous similarities. As regards the Kurds, for example, it is well-known in Turkey, ʿIrāk and Iran that the Kurdish singers and instrumentists interpret more readily the Ḥusaynī or Dašt modes according to their own forms and styles. The form and style can also be ascribed to the mountainous environment as well as to precise ethnic criteria. But, if it is a matter of reconciling a citizenship or a race to the modes, it is noteworthy that the same Ḥusaynī or Dašt modes were perpetuated with the same structures and more classical forms or styles in Istanbul, Baghadād or Tehran.

Some modes, endowed with structures that can be found throughout the Arabo-Iranian-Turkish world, have taken a form, style and name which makes them characteristic of a region. But they are not linked especially strictly to a nation. Also, the Šār and Daštī modes (bayātī structure) or Afsārī (seghā structure) of Iran, perpetuated equally in Adharbaydjan, correspond respectively, as far as structure is concerned, to the Shīrī, Daštī and Afsārī makānāt of ʿIrāk, and it may be supposed that they derive from a common regional ancestral patrimony in these three countries.

A classical mode can present local variants. Also the Segāh, remarkable for its finale on a neutral fingering-degree, is articulated according to various patterns: in the 3rd degree, on a modulating nāṣīt/būsālīk tetrachord (in the Arab countries) or on the equivalent of a bayātī genre (in Iran), or, in the fifth degree, on a hīḍāz tetrachord (in Turkey). Another mode called makām Navaʾī/bāzāgū: Navaʾī/Nevād makāmī is also constituted: — a Bayātī tetrachord (hardly variable) inserted on the dīḡāh fingering-degree (3rd open string on the ʿsid) — a modulating variable pentachord inserted on the navaʾī fingering-degree (4th open string on the ʿsid) which may be

(a) a nāṣīt pentachord in Turkey (5th degree hardley mobile),
(b) a nāṣīt or būsālīk pentachord in the Arab countries (5th degree mobile), or
(c) a nāṣīt, būsālīk, Bayātī or hīḍāz pentachord in Iran (5th and 6th degrees mobile).

A comparative approach to the Arab, Iranian and Turkish modes would allow, by making an abstraction of nationalisms, separatisms or claims of paternity, the discovery of a large number of divergent structures under a common name or common structures under different names. However, ambiguities of terminology are involved. What is called a makām/Cathārghān among the Arabs and Turks is a major, while the Cathārghān of Iran corresponds to an Arabo-Turkish Hīḍāzākār. The major is called Māhār or Kūst-pandjghār in Iran, while the Arab Māhār is not a major. The makāmāt called Pandjghār and Shūr in ʿIrāk would be called Sūzānāk and Kandāghār in Turkey and Syria.

The fruitless efforts since the Congress of Arabic Music in Cairo in 1932 show that it is too late to establish normalized Arabo-Iranian-Turkish nomenclature and that it is illusory to want to fix the height of the neutral degrees, very high in Istanbul and very low in Cairo. Finally, the two recent Bagdad Congresses of Music in 1975 and 1978 have allowed us to ascertain that it is just as impossible to agree to a definition of the term makām in its musical sense.

Moreover, every amateur and every musicologist will persist in perceiving the makām in terms of his sensibility or formation: familiar melodic formulas, recollection of a cultural identity, expression of an ethnic music, modal system, heptatonic on a stave, modal protocol, form of improvisation, aesthetic vestige of the Golden Ages, obstacle to progress by harmonisation, communication of a state of soul, linguistic system of the ʿsid and specific language, etc.

**Bibliography:** There is a very full bibliography on the makām as understood by orientalist musicologists or ethnomusicologists, on masīk and the ʿsid in J. Elsner, *Zum Problem des Ma- quam*, in *Acta musicologica*, XLII/2 (1973), 208-30; H. G. Farmer, arts. มะศีก and ʿṢīd in

The makâm is a stone of small dimensions: 60 cm. wide by 90 cm. high (see the data recorded by al-`Âlîd, *Tâhût al-`âlîd*, fol. 67a; measured by al-`Âlîd anno 753 AH; and see al-Sindjârî, *op. cit.*, fol. 23a). It is now "closely surrounded by glass and bars set into a polygonal base, the whole structure, capped by a much narrower kind of 'helmet', being about three yards above ground level" (A. J. Wensinck-J. Jomier, art. *Ka‘ba*). In the early periods of Islam, the stone, encased in a wooden box, was placed on a high platform so as to prevent its being swept by a torrent. During the prayer led by the ruler or his deputy, the box used to be lifted and the makâm shown to the people attending the prayer; after the prayer, the box was again placed in the Ka‘ba (cf. al-Mukaddassî, 72). It was sad to see how al-Hâджdîjî tried with his leg to set up the makâm `Ibrâhîm back to its place after it had moved (see ‘Abd al-Râzzâk, *op. cit.*, v, 49, no. 8599).

In 160/777 the makâm was brought to the abode of al-Mahdî in Mecca when he performed the pilgrimage. In the next year, when the makâm was raised carelessly by one of its keepers, it fell down and cracked; it was repaired at the order of al-Mahdî and its upper and lower parts were braced with gold. Al-Mutawâwakkî in 241/853-5 improved the pedestal of the makâm, embellished the makâm itself with gold and ordered the building of a cupola over the makâm (cf. al-Sindjârî, *op. cit.*, fol. 120b). In 252/866 the makâm was stripped of its gold by the governor of Mecca `A`fîr b. al-Fâdî, the gold was then melted down for money, the pieces of metal placed in the Ka‘ba; the Prophet himself who later removed the stone from its original place (see al-Sindjârî, *op. cit.*, fol. 120a ult. - 120b, 121a; on Ismâ‘îl b. Yûsuf, see al-`Âlîd, *al-Yâlî al-`âlîdîn*, ed. Fu‘âd Sayyid, Cairo 1938/1963, iii, 311, no. 783). A thorough restoration of the makâm was carried out in 256/870 by the governor `A`fîr b. al-Hassan al-`Âlâhîmi (see on him al-`Âlîd, *op. cit.*, vi, 151, no. 2050). Al-`Âlîkî gives a detailed description of the stone in its place (cf. *Le Makâm* sion, lxxiv [1971], 477-91). When the stone was brought to the dâr al-imârîa, al-`Âlâhîmi noticed the inscription on it and tried to copy parts of it. R. Dozy reproduced the inscription and tried to decipher it (R. Dozy, *Die Inschriften zu Mekka*, Leipzig 1864, 155-61).

His reading and interpretation are implausible (Prof. J. Naveh’s opinion, communicated verbally). Lengthy and heated discussions took place among the scholars about the place of the makâm. The traditions about whether the stone was established in its place are divergent and even contradictory (see e.g. Ibn Abî `l-`âhîlî, *Sharî‘ Nâhîî al-balâ`gât*, ed. Muhammam Abu `l-`Âfîl `Ibrâhîm, Cairo 1964, xii, 160; al-Kudâ‘î, *Ta`rîkî*, Bodleian ms. Pacocke 270, fol. 58a; al-Hârizmî, *al-Mu`assânât*, ed. Hanâm al-Dîsîrî, 500; al-Sâlihî, *op. cit.*, fol. 38a-b; al-Mutã’âlî, *al-Haddî‘î*, ed. Muhibb al-Dîn al-Kha`bî, Cairo 1343, i, 298). These traditions were divided by al-Sindjârî into five groups. According to some reports, `Umar was the first who removed the stone. Others say that in the time of Abraham the stone was in the same place as it is now, but in the time of the Djâhiliyya it had been attached to the Ka‘ba and so it remained during the periods of the Prophet and of Abû Bakr and for some time during the caliphate of `Umar, who returned it to its proper place. A third series of traditions claims that the Prophet removed the stone from its original place (next to the Ka‘ba) and put it in its present location. A fourth tradition maintains that `Umar moved the stone to its present place and returned it to the same spot after it had been swept away by a torrent. Finally, some scholars say that the makâm has always been in the place in which it is nowadays; `Umar re-installed it to this place after it was swept away by a torrent (see al-Sindjârî, *op. cit.*, fol. 23a-b, 76b-78a). A tradition which contains new aspects of the location of the makâm is recorded by Ibn Kaţîrî. The stone was in the Ka‘ba; the Prophet took it out of the Ka‘ba and attached it to its wall (i.e. of the Ka‘ba). Then he said, "O people, this is the kiblîa" (Ibn Kaţîrî, *Tafsîr*, ii, 322). It is noteworthy that in this tradition there is no mention of `Umar, of his advice or of the changes carried out by him. It is quite plausible that the Prophet’s change had to be legitimised and duly justified. Muhibb al-Dîn al-`Âlîdî tries to explain this discrepancy by reporting that `Umar inquired after the death of the Prophet about the place in which Abraham put the stone. In the time of the Prophet, the stone was indeed attached to the wall of the Ka‘ba; but `Umar was aware of the Prophet’s will to follow the sunna of Abraham, and returned the makâm to its original place, the place in which it had been put by Abraham (al-`Âlîdî, *al-Kura*, 347; quoted by Abu `l-`Âlîdî ‘Abd al-Dawî, *Ahwâl Makka wa l-Maddîh*, fols. 86b-87a). A divergent report is recorded by al-Sindjârî on the authority of Ibn Surâkah. Between the door of the Ka‘ba and the place of Adam’s prayer (where God accepted his repentance) there were nine cubits; it was the place of makâm `Ibrâhîm and there the Prophet performed two rak‘as after finishing the salât and after receiving the revelation: "May the makâm `Ibrâhîm as a place of prayer…”’. It was the Prophet himself who later removed the stone to the place where it is nowadays, sc. at a distance of 20 cubits from the Ka‘ba (al-Sindjârî, *op. cit.*, fol. 77a). Instructive is the report of Ibn Djubayr. The ditch (hufrâ) at the door of the Ka‘ba (in which the water gathers when the Ka‘ba is washed) is the place of the makâm in the time of Abraham; the place is crowded by
believers who pray there; the stone was moved by the Prophet to the present place (see al-Riḥla, 55 inf. - 56; al-Sīndjārī, op. cit., fol. 78a). The change of the place of the makām and the possibility that the stone should be moved to another place of the haram led to a disturbing question: would it be incumbent upon the believer to pray, in such a case, in the new place (since the injunction clearly makes it necessary to take the makām as a place of prayer), or to stick to the original place? (See al-Sīndjārī, op. cit., 77b and also fol. 78a: the former makām occupied half of the ditch (ḫafra) at the biqʿa.

Some traditions related by al-Fākhī add certain peculiar details about the change carried out by ʿUmar. A report traced back to Saʿīd b. Ḏubayy says that Abraham placed the stone in front of the Kaʿba. ʿUmar removed the stone and placed it in its present place in order to make the circumambulation of the Kaʿba easier. When the Prophet was sent, he reinstated the makām in the place where it had been put by Abraham. ʿUmar asked where its location had been during the period of the Diḥayyya, and returned it to that place; hence the present place of the makām Ibrahim is the same as it was in the time of the Diḥayyya (see Ibn Bābawayh, Ilāt al-sharaʿa ʿtī, ed. Muhammad Sādīq Bah al-Turjīm, Nadhir 1385/1966, 423, bāb 160; quoted by al-Maġlisī, op. cit., xcix, 232, no. 1; cf. anon., untitled ms. Vatican Arab. 1750, fol. 32b).

Semantic evolution of the term. The semantic study of this vocable for the period previous to the creation of the genre is complicated by the fact that the term makām, which is frequently used, is common to two nouns, makāma and makāmī [q. v.]. Both are derived from the radical k-w-m, which implies the idea of "to rise, to stand in order to perform an action", but which is often weakened in that it simply marks the beginning of an action, whether the agent rises or not, and even loses its dynamic sense altogether, taking on the static sense of "to stay in a place". Makām occurs fourteen times in the Kūrā with the general sense of "abode, a place where one stays", more specifically in the beyond, but in one verse (XIX, 74/73), where it is used in conjunction with nadi, "tribal council", it must be referred to a meeting of important people; the same applies to a verse of Zuhayr b. Abī Sulmā (Cheikhū, Šaʿwāraʿ al-Nāyānīyya, 573, v. 6: makāma ... andyā). Otherwise, from the archaic period onward, makām naturally conveyed the sense of "situation, state", and, in a verse of Kaʿb b. Zuhayr (Bīnāt Suʿād, ed. and tr. R. Basset, Algiers 1910, v. 41), the makām of the poet, which is certainly dramatic, is judged terrifying (hāʾith) by the commentator. It is probable that an analysis of ancient poetry would supply more precise and illuminating examples, but it seems likely that by means of a transference of meaning, starting with a tragic situation, makām comes to signify, not maglisī "assembly" (as it is glossed by the editor, who confines himself to reproducing the dictionary definition), but "battle", similarly, in a verse of Abī Tamūmān in -dā (Bādī al-tamāmī fī sāḥr Disār Abī Tamūmān, ed. M.I. al-Aswād, Beirut 1347/1928, i, 222, v. 5), makāma (read as makʿāma by the editor, but glossed as "scene of warlike actions") is used in conjunction with muʿtarak and doubtless has the sense of "theatre of warlike valour". In other examples of this type it is the plural which is attested, and it is not known to which factor or which singular it corresponds. In any case, it is certainly in the sense of "battles, military actions" that this plural is to be best understood in a passage of the Kitāb al-Bukhārī of the al-Dīnjāzī (ed. Hājjīrī, 184, 1. 2; rectify accordingly the translation by Pellet, 289), where there is a case of Bedouins talking of battles of the pre-Islamic period (aysīm [q. e.]) and of makāmāt, acts of heroism.

In assemblies of important people, eloquence was a natural feature, and it is not surprising that, by means of another transference of meaning, makām should also refer to the topics discussed in the course of these meetings, then, by extension, to more or less edifying addresses delivered before a distinguished audience. This evolution is attested, in the 3rd/9th century by Ibn Ḥutayba [q. v.] who, in his ʿUyun al-akbar (ii, 333-43), gives the title Makāma al-ṣuhbāʾ ind al-ḥāṭifīz ʿaw tāʾ-ʾmulaʾk to a chapter in which he reproduces pious homilies designated, in the singular, by the term makām. Before him, the Muʿtaṣili Iskāfī (d. 240/854 [q. e.]) had written a Kitāb al-Makāmāt fi tafaḥ ʿAli, and, in the following century, al-Masʿūdī [q. v. ] (Murūj, iv, 441 = § 1744) speaks of homilies by ʿAli b. Abī Ṭalīb and (v, 421 = § 2175) of a sermon by ʿUmar b. ʿAbd al-ʿAzīz, delivered on the occasion of their makāmāt, where it is impossible to tell whether the corresponding singular is mukdmāt or makāmāt. Whatever the case may be, al-Hamādhānī was
perhaps thinking primarily of the latter interpretation, while retaining in the background the memory of the concept of feats of arms when he adopted the term makdmdt to designate a hitherto unknown genre, which he considered instructive, if not edifying, of Abu 'l-Fath al-Iskandari and the "sketches", the "sessions", in the course of which they are reported by 'Isa b. Hisham; then, this word came to be applied to a whole genre, and was ultimately confused often, as will be seen in due course, with risala [q. e.]. W. J. Prendergast (The Ma-
qamah of Badi' al-Zam'an—Hamadani, London-Madras 1915, repr. with introd. by C. E. Bosworth, London-Paris 1973, 11-14) has collected a number of objections to the references of makdmdt and makdmdt in poetry and prose pre-
re-dating Badi' al-Zam'an, but the most exhaustive research has been that of R. Blachère, Étude sémantique sur le nom maqāma, in Machry (1953), 646-52 (repr. in
Analecta, Damascus 1975, 61-7).

Birth of the genre. In the makdmdt described by Ibn 'Utayba, it is often a Bedouin or a person of rather shabby appearance, although extremely elo-
quent, who addresses an aristocratic audience. Before an audience of common people, an analogous role was performed by the kāsī [q. e.], who originally delivered edifying speeches but, as is well-known, in the course of time soon took on the dual function of story-teller and mountebank, whose activity was to a certain ex-
tent comparable to that of the makaddī [q. e.], the wandering beggar or vagrant who went from town to town and easily gathered around him an audience who rewarded him financially for the fascinating stories that he told. It seems probable that the first to introduce these colourful characters into Arabic literature was al-Dījāhz [q. e.], who devoted a long treatment to them in the Kitāb al-Brājikala2 and wrote at least two other pieces on the stratagems of thieves (Hyaal al-Brājika) and beggars (Hyaal al-Makaddīn) of which al-Bayhaki (Maqâm, ed.-tr. Pellat, Schwally, i, 521-3, 622-4) has preserved extracts which are unfortunately very short (see Pellat, Arabische Gesetzeswerke, Zürich-Stuttgart 1967 = The life and works of Jāhiz, London-Berkeley-Los Angeles 1969, texts xlii and xliii).
The interest taken by the aristocracy and men of letters, not only in the popular classes, but also in members of the "millet" is remarkably illustrated by the Kāsīdah sayyid 'Abd al-Dulaf al-Khazradji (4th/10th century) collected by Sahl b. Harun (Muqaddasī, ed. Z. Mubarak, in 1945, 15) criticise
the idea of the "session" as we know it was in the air—powerful evidence in support of this conclusion is sup-
plied by the silence of a compatriot of the latter, Ibn 'Arif (d. 606/1010, q. e.), who at the beginning of his Masā'il al-muqaddāsī (ed.-tr. Pellat, Algiers 1953, 5) declares that he himself has been inspired by the Kalila wa-Dìmna, by Sahl b. Hārun [q. e.], who also wrote about animals, and by Badi' al-Zamān, but makes no
mention of Ibn Durayd. In another context, in his account of the great rival of al-Hamadhanī, al-Khārazmī [q. e.], Abū Bākr (323-83/934-93), Brockellm (S. I, 150) adds, having listed the mas. of the Ra'is ul-ma'amasī of the author, "neben Maqaddasī, in deren 100er- und 100er
hundert Jahren zwischen 358 und 988/998 und 1008/1008 [q. e.]." It does not seem obligatory, in fact, to search desperately for a model whenever an innovation appears, since the most elementary justice demands that allowance be made for personal invention. Prendergast (op. laud., 20-1) poses the question as to whether Badi' al-Zamān owes anything to Greek or Byzantine models, but considers such influence totally improbable and

quence or wisdom is a commonplace of adab, and while the anecdotal literature discussed by Beeston has certainly exercised an influence, it has not been the only or even the main source of

As early as 1915, Prendergast (op. laud., 6) had drawn attention to and translated a subsequently well-
known passage of the Zahr al-adīd (ed. Z. Mubarak, Cairo 1344, i, 235; ed. Budjawai, Cairo 1972/1953, i, 261) of al-Husūrī (d. 413/1022 [q. e.]), who states that al-Hamadhanī imitated ("arada") the forty badīthīs of Ibn Durayd [q. e.] and composed four hundred "ses-

sions" on the theme of the kudya, the activity of the makaddīn. After Margoliouth had, in the first edition of the El (s.v. al-Hamadhanī), given credit to this passage, Z. Mubarak, in 1930, adopted the same point of view in al-Mukafat (xxvi, 412-20, 561-4) and reproduced it in his thesis on La prose arabe au IVe siècle (Paris 1931), while, in the same volume of the
Mukafat (588-90), 'Sādīq al-Rafī'ī refuted his arguments by emphasising the weakness of the source on which he relied. R. Blachère and P. Masmou (al-
Hamadhanī, choix de Maqâmāt, Paris 1957, 15) criticise the exploitation of the information supplied by al-
Husūrī and write that the only conclusion to be drawn from it is "that at the end of the 10th century or at the beginning of the 11th, a Muslim scholar discovered a link between the 'sessions' of Hamadhanī and the stories attributed to a philologist-poet of Iraq, Ibn Durayd"; as Prendergast had done, these authors observe that no work of this genre features in the list of Ibn Durayd's writings, and C. E. Bosworth, in his introduction to the reprinted edition of Prendergast, concludes that al-Husūrī's information is suspect. Powerful evidence in support of this conclusion is sup-
plied by the silence of a compatriot of the latter, Ibn 'Arif (d. 606/1010, q. e.), who at the beginning
of his Masā'il al-muqaddāsī (ed.-tr. Pellat, Algiers 1953, 5) declares that he himself has been inspired by the Kalila wa-Dìmna, by Sahl b. Hārun [q. e.], who also wrote about
animals, and by Badi' al-Zamān, but makes no
mention of Ibn Durayd. In another context, in his account of the great rival of al-Hamadhanī, al-Khārazmī [q. e.], Abū Bākr (323-83/934-93), Brockellm (S. I, 150) adds, having listed the mas. of the Ra'is ul-muqaddāsī of the author, "neben Maqaddasī, in deren 100er- und 100er
hundert Jahren zwischen 358 und 988/998 und 1008/1008 [q. e.]." It does not seem obligatory, in fact, to search desperately for a model whenever an innovation appears, since the most elementary justice demands that allowance be made for personal invention. Prendergast (op. laud., 20-1) poses the question as to whether Badi' al-
Zamān owes anything to Greek or Byzantine models, but considers such influence totally improbable and

In another context, in his account of the great rival of al-Hamadhanī, al-Khārazmī [q. e.], Abū Bākr
(323-83/934-93), Brockellm (S. I, 150) adds, having listed the mas. of the Ra'is ul-muqaddāsī of the author, "neben Maqaddasī, in deren 100er- und 100er
hundert Jahren zwischen 358 und 988/998 und 1008/1008 [q. e.]." It does not seem obligatory, in fact, to search desperately for a model whenever an innovation appears, since the most elementary justice demands that allowance be made for personal invention. Prendergast (op. laud., 20-1) poses the question as to whether Badi' al-
Zamān owes anything to Greek or Byzantine models, but considers such influence totally improbable and
concludes that "the same demons of difficulty, obscurity and pedantry entered the orators and poets of both nations in different periods". This assessment, the accuracy of which will become apparent in the course of the study of the evolution of the makāma, cannot, however, be fully applied to al-Hamadhānī. It is undeniable that this author was, in the framework of Arabic literature and Arab-Islamic society in general, subject to various influences, but he should be given credit for having succeeded, through a commendable work of synthesis, in setting in motion two principal characters charged with precise roles in particular a hero who symbolises a whole social category.

Structure of the original makāma. From the point of view of form, this genre is characterised, in the work of its initiator, by the almost invariable use of sadf [q.v.], of rhymed and rhythmic prose (sometimes blended with verse) which, in the 4th/10th century, tended to become the almost universal mode of literary expression, especially in the class of administrative secretaries to which al-Hamadhānī belonged, and was to remain so until the end of the 19th century. As regards the structure of an individual makāma, the fundamental characteristic is the existence of a hero (in this case Abu 'l-Fath al-Iskandari) whose adventures and eloquent speeches are related by a narrator (in this case Isā b. Hishām) to the person who speaks it and the first rāwī or fictitious. In a typical makāma, Kiliro adds (48), the order of events is as follows: arrival of the rāwī in a town, encounter with the disguised balāgī (the eloquent man = the hero), speech, reward, recognition, reproach, justification, parting. It need hardly be said that this general scheme does not apply invariably to all the makāmāt of al-Hamadhānī, still less to those of his successors. From the start, this literary form of the 9th century must be interpreted to cover a great variety of subjects: criticism of ancient and modern poets, of prose-writers like Ibn al-Muṣaffā and al-Dhīhī, of the Muṭazzī, exposure of the sexual slang and jargon of vagabonds, display of lexicographical knowledge, etc.; six makāmāt of Badi' al-Zamān celebrate the author's benefactor, Khašāl b. Ahmad, the ruler of Sūdiyyān, to whom Margoliouth (art. cit.) believes that the whole work may have been dedicated. It is not, however, certain that all these compositions were put together in a compilation constituted ne varietur. In fact, Ibn Sharaf (op. laud., 5) counts no more than twenty of them and adds that they were not all available to him, while al-Hamadhānī (Rasā'īl, Beirut 1890, 390, 516), quoted by al-Thāʾī al-Šāhī (Ya'mta, Damascus 1885, iv, 168) and al-Husrawī (see above), claims to have written four hundred of them, which is highly improbable; current editions contain fifty-one each (fifty-two in all), so that fifty may be reckoned the average number of makāmāt of Badi' al-Zamān in circulation in the Middle Ages; the figure of fifty was subsequently considered artificial to be a traditional characteristic and was respected by numerous imitators of al-Harīrī (see below), who had himself adopted it.

In summary, the term makāma appears to be characterised fundamentally by the almost exclusive use of rhymed prose (with the insertion of verse) and the presence of two imaginary persons, the hero and the narrator. As for its content, this appears to be a complex amalgam having recourse to numerous genres, especially in verbal acrobatics, the first manifestations of which are encountered in the works of the most eminent successor of Badi' al-Zamān, al-Harīrī (446-516/1054-1122 [q.v.]). The latter retains the structure created by his predecessor and presents a hero and a narrator, but many of his imitators were to dispense with the former character, if not with both. The diversity of themes dealt with in primitive makāmāt is the scene for the exploitation of the genre for the most varied of purposes and we shall see that if the objective of the genre is that of the authentic adab, seeking to instruct through entertainment, by means of a harmonious blending of the serious and the joking (al-qidd wa l-hazl [q.v.]), many makāmāt deviate from this purpose and in this respect follow the evolution of the adab which has a tendency either to neglect the qidd or to forget the last qadah.

Further, some compositions corresponding approximately to the exigencies of this genre are known by other names, such as ṣūda or ṣadīth, while some so-called makāmāt show none of the fundamental features of "sessions". What has happened is an evolution similar to that of the word ṣaḥākat, which after usually designating biographical works arranged according to generation (tābāda), is ultimately applied to those which follow alphabetical order. A confusion between riḍā and makāma is already visible in the Risālat al-Tawābi' of Ibn Shuhayd (382-426/992-1035 [q.v.]), who was well-acquainted with Badi' al-Zamān since he makes use of his ṣāḥīb, his inspiring spirit (ed. B. al-Bustāni, Beirut 1951, 172+). J. Vernet goes so far as to assert (Litteratura arab., Barcelona n.d., 114) that he was inspired by the Risāla of Badi' al-Zamān in the writing of his Risāla, which in effect contains two features of the "sessions", rhymed prose and the presence of a companion of the author, in this case a genie who questions the tawāri' of various representatives of Arabic literature. Other evidence is supplied at an early date by Ibn Sharaf (see above) who gives the title ṣadīth to his compositions, while one manuscript of the surviving fragment bears the title Ṣādir al-intikād and another, Ṣādir 'il al-intikād, the subject-matter comprises questions of literary criticism articulated by a scholar expressing his opinions of ancient and modern poets, somewhat in the style of al-Hamadhānī, but without an intermediary rāwī (see Ihsān Ḥabbās, Ta'liqd al-madāri jī al-adāb 'in al-ʿArab, Beirut 1391/1971, 460-9).

These two authors were writing in al-Andalus where, on the other hand, the word makāma was to be used "to designate any rhetorical exercise in rhymed verse, with or without an ingredient of poetry, whatever the theme inspiring it: congratulating a recently-appointed provincial judge, accompanying a basket of first-fruits sent as a gift, describing a landscape, recounting an incident of minimal importance or the perils of a journey, giving praise or blame or simply indulging in caprice, as an antidote to boredom. Any theme is considered suitable for a genre of composition, laden to the point of asphyxia with all the devices of language, erudition and pedan-
try and well-nigh indecipherable, is indiscriminately called risdla or makdma, without any account being taken of the theme (if indeed it has one...)" (F. de la Granja, Makdmdt al-Sarakustiyya, ii/2, 282) is a session which is preserved in Berlin (see Brockellmann, I, 95; Blachère and Masnou, op. laud., 39 and n. 1), but it cannot be said whether it is an imitation or an original work. Again in the 4th/10th century, 'Abd al-'Aziz al-Tráki was the author of a makdma on the resurrection (Brockellmann, I, 524).

Chronologically, it is here that one should place Ibn Shuhayd (see above) and Ibn Sharaf (see above) who confines himself to presenting his hadith in the form of the beginning of a dialogue followed by a long monologue of the scholar who takes the place of the hero and the tásí, one gains the impression that, for this learned Tunisian who made his home in Spain, the essential features of makdama are rhymed prose and the intervention of a fictional character who is an eloquent speaker (balígh). It is thus that many later authors interpret the scheme of Badí al-Zaman, when they do not eliminate the hero. In any case, the works of Ibn Shuhayd and of Ibn Sharaf, not to mention the Zahr al-kdth of the Harírî, testify to the rapid diffusion of the Makdmdt of al-Hamadhání in Ifríqiya and al-Andalus where, in the same century, a poet, Ibn Fattúb, is the author of a makdama on the poems of his time which was also presented in the form of a dialogue (Ibn Bassám Dhkhría, ii/2, 273-88; F. de la Granja, op. laud., 63-77), and where Ibn al-Sháhid [q.v.] made the account of a journey by a member of a group of travellers in a makdama (Dhkhría, ii/2, 104-95; F. de la Granja, 81-118) which exercised a certain influence on the genre as developed in Hebrew (see below). Ibn Bassám (Dhkhría, ii/2, 246-57) mentions another makdama by Abu Muhammad al-Kurtubi (443-83/1051-92; see R. Arie, Notes sur la maqáma andalous, in Hesért-Tamuda, ix/2 [1968], 204-5).

In the early 14th century, the physician Ibn Bu lán (d. after 460/1069) [q.v.] was the author of a Makdáma fi tadbir al-amrád (Brockellmann, S I, 885) which might well deserve examination. However, one of his most eminent imitators was Ibn Nákinya (410-83/1020-92 [q.v.]), nine of whose makdámá are available to us; this author renounces the oneness of the hero and introduces several narrators, but this plurality would amount to nothing more, according to Blachère and Masnou (39-40), "than a mark of respect paid to the model", Badí al-Zamán, to the extent that the possibility of varying the methods of narration has been understood (ed. İstanbul 1331; O. Rescher, Beitrag zur Maqámen-Literatur, iv, 123-52; tr. Cl. Huart, in J.A., 10th series, xii [1908], 435-54). Nevertheless, the most eminent successor of al-Hamadhání is incontestably al-Harírî (446-516/1054-1125 [q.v.]) who gave the genre its classic form, freezing it, so to speak, and diverting it from its actual function; according only a secondary interest to the content and placing his entire emphasis on the style which often takes on the nature of ponderous obscurity, al-Harírî’s ultimate aim is the preserving and teaching of the rarest vocabulary, to such an extent that some twenty philologists have commented on his makdámá and many of his imitators accompany their own compositions with lexico graphical commentaries. (In the same way, a

Maghribi author was to write 12 makdámá in dialectical Arabic in order to improve the language spoken in southern Algeria; see G. Faure-Biguet and G. Delphín, Les stances d’El-Aouall, testes arabs en dialekt mazigh el-Morbiel Qadibi al-Fali (M. le Mauvais sucré), in J.A., 11th ser., ii [1913], 285-310, iii [1914], 303-74, iv [1914], 307-78.) The success of al-Harírî’s Makdáma, which appealed to the taste of readers to such an extent that, after the Kur’án, children were made to memorise them, overshadowed those of alHamadhání, which were too easily intelligible, and prompted many later writers to imitate the rhetorical artifices invented by al-Harírî (see Prendergast, 22-5; Crussard, Études sur les stances de Harir, Paris 1925; Blachère and Masnou, 42-6) and to take such little interest in the substance that verbal richness remained in fact the principal, if not the only specific characteristic of this original and fertile literary genre in its principle.

In spite of the specialisation of the term which designates it, we still see al-Qházálí (d. 505/1111 [q.v.]) in his Makdáma al-ulamá bayna yaday al-khárífsa wa l-umárâ (ms. Berlin 8537/1 and al-Samání [d. 562/1167 [q.v.]) in his Makdáma al-ulamá bayna yaday al-umárâ (Hadjji Khalifa, no. 12702), of which the titles and content recall the chapter of Ibn Kutya mentioned above, returning to the previous notion of makdáma = "pious discourse"; the same applies to al-Zamákhashari (467-518/1074-1124 [q.v.]), who, while appearing to take his inspiration from al-Hamadhání and al-Harírî, composed fifty makdámá in which he addresses himself to a number of moral exhortations, also entitled Naqá‘ al-klíb; they would appear to testify to the repentance of the author who has decided, after an illness, to renounce profane literature (see Brockellmann, S I, 511; Blachère and Masnou, 40-1; ed. Cairo 1512, 1525; tr. Rescher, Beitrag, vi, 1913), but, unable to forget that he is also a philologist, he produces a commentary on his own compositions (Yákút, Udbá‘, xii, 193).

Two authors of the 6th/12th century are also credited with makdáma composed in imitation of al-Harírî: al-Hasan b. Sa‘fí, nicknamed Malik al-Nuhtú (498-568/1095-1173; see Yákút, Udbá‘, vii, 123-4; F. de la Granja, 82-4); and al-Suyúthí (d. 519/1124), who, according to F. de la Granja (ms. Berlin 8537/1) and al-Samání (d. 577/1182) of Bagdadh, who only work cited by Yákút (Udbá‘, ii, 282) is a Kitáb Makdáma.

The work of al-Harírî soon became known in Spain, where the most celebrated commentary on it, that of al-Shárí¡í (d. 619/1222 [q.v.]), was written. These makdámá were already being imitated there, apparently, by a slightly younger contemporary of their author, Ibn al-Aghtarkwí (d. 539/1143) in al-Makdáma al-Sawakúsitiyya, which numbering the henceforward traditional fifty, may perhaps, according to F. de la Granja (op. laud., p. xiii) the only Spanish ones which conform to the classical norms; in addition, the other title by which they are known, Kitáb al-Khamis makdama al-luzumiyya, could be an indication of the influence of al-Ma‘arrí and of his Luzumiyya (cf. LUZUM MÁ LA YALZÁM; A. M. al-Abáddí, in RIEEIM, ii/1-2 [1954], 161), two of them, which deal with literary criticism, have been the object of a study on the part of Isbán ‘Abbás (op. laud., 500-1), but the others would doubtless merit closer examination (on the ms., see Brockellmann, S I, 543).

It was also at the beginning of the 6th/12th century that the suzir Abí‘ Amír Ibn Arkám composed a makdama in praise of the Almoravid amir of Granada Tamím b. Yusuf b. Taqání (see R. Arie, art. cit., 206), judging by the fragment which has been preserved by al-Fath b. Khakán (Kala zd al-dá‘ýn, ed. H. D. Redlich, Ein Stamm der Araber aus deren Geschichte, I [1900], 316, 319; see also F. de la Granja, 82-4).
This composition in rhymed prose is related to the rahil of the kasida, which appears in it a fictitious person who engages the hero and a narrator, but he uses simpler language; he имени дает признания автору и приводит некоторые его произведения, которые могут быть интересны для историков и искусствоведов. 

While still dealing with al-Andalus, we may further mention in which the hero is questioned about a number of them to a fakih of Granada named Abū al-Rahmān b. Ahmad b. al-Ḳaṣīr (d. 576/1180; see al-Sa‘īdī,xxxvi [1953], 111-27). An author of Maghribi origin, Ahmad b. Yahyā al-Tilimsānī, also known as Ibn Abī Ḥāḍirāla (725-776 or 777/1325 to 1357-6), who spent most of his literary career in Cairo, was renowned in his day as a writer of makdama and a doctor who eulogises sixteen-al-Salih, presumably himself a chess enthusiast (see Brockelmann, II, 5-6, 1965). 

Too much attention should not be given to the Makdama fi kawaṣīf Baghdad fi l-strawal al-Ḳāiss, which did not survive. In the 8th/14th century, imitations seem to proliferate, often applying to religious or parenetic subjects. 

In the beginning of the 7th/13th century, attention may be drawn to the Makdama fi kawaṣīf Baghdad fi l-strawal al-Ḳāiss published by R. Arie (Notes, 207-14): Khatrat al-tayfi rihlat al-shitār wa l-strawal (a eulogy of Malaga), published by K. and M. al-Ḳāissī, 1952-53. An author of Maghribi origin, Ahmad b. Yahyā al-Tilimsānī, also known as Ibn Abī Ḥāḍirāla (725-776 or 777/1325 to 1357-6), who spent most of his literary career in Cairo, was renowned in his day as a writer of makdama and a doctor who eulogises sixteen-al-Salih, presumably himself a chess enthusiast (see Brockelmann, II, 5-6, 1965).

recall that the kādī 'l-ğämâa of Granada, al-Nubahî [q.v.], inserted in his Nuzhat al-Bâṣîr wa l-aḥârîn, in 781/1379, a commentary on his own Makâma makâliyya presented in the form of an erudite, obscure and passionless poetry, between a palm-tree and a fig-tree (see R. Arié, art. cit., 212-12). In Spain in the following century, in 844/1440, a similar calamy to that described by Ibn al-Wardi (see above) is described by Ibrâhîm Pascha, and added a commentary, the Ẓâd al-muṣṭâfîr (printed in Bagdâd in 1924; Brockelmann II, 373; S II, 501). Also encountered are the names of al-Šâhâl al-Makâliî (1007-90/1597-1679; S II, 395), ʿArîf (ed. 1123-1713; S II, 630), Baʿbîd al-ʿAlâwî who produced in 1128/1715 (S II, 601) an imitation of al-Ḥarîrî in which the Nâṣîr al-Ḥaṣîl (the victorious conqueror) recounts the fifty adventures, in India, of Abu ʿl-Ẓafâr al-Ḥindi (see Aḥârî, the "triumphant Indian vaga-bound") under the title al-Makâma al-ḥāziyya (lit. 1264), and al-Dâzjârî (1050-1150/1640-1710; S II, 586).

In Morocco, the genre is represented by Muhammad b. ʿIbas (d. 990/1582) and Muhammad al-Makâlàî (d. 1014/1613-2), whose Makâma bâzâriyya is a eulogy of Muhammad b. Abû Bakr al-Dâlî (d. 1021/1612 [see div. in Suppl.], the son of the founder of the Al-Ġâmî al-dâlîyya [see M. Lakhdar, La vie littéraire au Maroc sous la dynastie califâve (1073-1311/1664-1894), Rabat 1971, 42). Muhammad al-Masûlî (d. 1107-1166/1794-1774) describes this zâwîya and contrasts its destruction in al-Makâma al-fikriyya fi makhâsin al-ʿzawîya al-bâzâriyya, which is of classical structure, with hero and narrator (see Lakhdar, 156-8).

Nemoy (op. laud.) records a ms. (Yale L-182) of al-Makâma al-rûmîyya of al-Bârî (1099-1162/1688-1749 [q.v.]), which is part of his Târif al-ḥamûm wa-taṭfâgîr al-ğãmîm fi ṭ-riḥla ilâ bâlîd al-dâlî [see R. Y. Ebied and M. J. L. Young, Arabic literature in Europe, vol. iv (1711-1779), p. 148]; al-Safâdî (696-764/1296-1363 [q.v.]), a contemporary of the Cretan Ahmad b. Ibrahim al-Rasmî (1106-79/1791-1863), who wrote a probable imitation of the work of al-Bârî, in the same way that al-Ḥarîrî, in the two rûsâlas called al-ṭînîya wa-l-šiṣna, employed only words containing respectively a sâ in and a yôn, Abû Ṭâlib al-Iṣâkî (d. 1094/1684) wrote an apologia of al-Makâma al-isrâṣîrîyya wa-l-tâṣfaṣîyya in which pairs of words which differ only in diacritical points are placed beside each other (Brockelmann, II, 283). A display of erudition is the main characteristic of al-Ḥarîrî's al-ṭâhîṣîyya, which is a eulogy of Ibrahim b. Abû Bakr al-Husaynî al-Dilaîwî (d. 1174/1760) and his son Abu ʿl-Khayr Abû al-Râdhân (d. 1200/1786) use this form (Brockelmann, II, 374, 377, S II, 508) as a means of bringing together, in an entertaining fashion, a whole series of ancient and modern proverbs, the father, in Makâmû l-amûtâl al-ṣârîra (ca. 1324), and the son, in al-Makâmû l-amûtâl al-ṣârîra (ms. Berlin 8528/3).

In the same way that al-Ḥarîrî, in the two rûsâlas called al-ṭînîya wa-l-šiṣna, employed only words containing respectively a sîn and a yân, Abû Ṭâlib al-Iṣâkî (d. 1094/1684) wrote an apologia of al-Makâma al-isrâṣîrîyya wa-l-tâṣfaṣîyya in which pairs of words which differ only in diacritical points are placed beside each other (Brockelmann, II, 283). A display of erudition is the main characteristic of al-Ḥarîrî's al-ṭâhîṣîyya, which is a eulogy of Ibrahim b. Abû Bakr al-Husaynî al-Dilaîwî (d. 1174/1760) and his son Abu ʿl-Khayr Abû al-Râdhân (d. 1200/1786) use this form (Brockelmann, II, 374, 377, S II, 508) as a means of bringing together, in an entertaining fashion, a whole series of ancient and modern proverbs, the father, in Makâmû l-amûtâl al-ṣârîra (ca. 1324), and the son, in al-Makâmû l-amûtâl al-ṣârîra (ms. Berlin 8528/3).

In the same way that al-Ḥarîrî, in the two rûsâlas called al-ṭînîya wa-l-šiṣna, employed only words containing respectively a sîn and a yân, Abû Ṭâlib al-Iṣâkî (d. 1094/1684) wrote an apologia of al-Makâma al-isrâṣîrîyya wa-l-tâṣfaṣîyya in which pairs of words which differ only in diacritical points are placed beside each other (Brockelmann, II, 283). A display of erudition is the main characteristic of al-Ḥarîrî's al-ṭâhîṣîyya, which is a eulogy of Ibrahim b. Abû Bakr al-Husaynî al-Dilaîwî (d. 1174/1760) and his son Abu ʿl-Khayr Abû al-Râdhân (d. 1200/1786) use this form (Brockelmann, II, 374, 377, S II, 508) as a means of bringing together, in an entertaining fashion, a whole series of ancient and modern proverbs, the father, in Makâmû l-amûtâl al-ṣârîra (ca. 1324), and the son, in al-Makâmû l-amûtâl al-ṣârîra (ms. Berlin 8528/3).

In the same way that al-Ḥarîrî, in the two rûsâlas called al-ṭînîya wa-l-šiṣna, employed only words containing respectively a sîn and a yân, Abû Ṭâlib al-Iṣâkî (d. 1094/1684) wrote an apologia of al-Makâma al-isrâṣîrîyya wa-l-tâṣfaṣîyya in which pairs of words which differ only in diacritical points are placed beside each other (Brockelmann, II, 283). A display of erudition is the main characteristic of al-Ḥarîrî's al-ṭâhîṣîyya, which is a eulogy of Ibrahim b. Berlin 8528/3).
al-'Azíz al-Gízání at Tunis in 1972 and called al-Bdhiyya (on the founder of the zawiya al-Bdhiyya... (ibid., iv, 335), al-Shafi'I (S II, 908), Ibn Rayyan (S II, 909), Ibrahim b. IqI b.

Encyclopaedia of Islam, VI 8

Madjma al-bahrayn, [34x-20]YAZIDJI], who, with his Arabic literature, it was the best means of stimulating the task of reviving this genre in accordance with the classical norms, believing that, as a genre exclusive to 123-9); (op. laud., [q.v.]), Ibrahim (1872-1932 who also aspired, although with less success, to present a satirical portrait of society in the form of a long makama (see H. Pères, in B. Ét. Or., x [1943-4], 13 ff.; Kotsarev, op. laud., 104-7). The Wadjdl, published in Cairo in 1910, contain eighteen "sessions" which have not attracted much interest (but see the Tunisian review al-Makdmdt, xxxi ff.). Finally, it is possible that other writers of the first half of the 20th century have composed as rhetorical exercises or for a specific purpose, makham which have not come to the attention of literary critics and historians. This applies notably to Amín al-Rhibáni (1876-1940 [q.v.]), whose RihdnIyydt contain (ed. 1956, ii, 83-6) Makdma al-kabhdgIyya, where the narrator is a mothgrub ("udhdha) searching for an attractive book in a library.

The above list cannot be regarded as exhaustive; it is based essentially on the article Makama by Brockelmann in EP and his Geschichte der arabischen Literatur, the material of which has already been exploited by Blachere and Masnou (op. laud., 123-9); our intention has been to complete this inventory by means of less ancient works but, in order to achieve a more satisfactory result, it would be necessary to go through recently published or still unedited biographical works, as well as catalogues of manuscript collections, and to carry out research in certain libraries whose riches have not been explored. As our list has been compiled in approximately chronological order, no mention has been made of a dozen or so fairly late authors whose dates have not been precisely located. Blachere and Masnou mention the following: al-SukkarI (Brockelmann, S II, 906), al-KhánimI (S II, 908), al-Há'írI (Rescher, Beitrag, iv, 328), al-Sghání (ibid., iv, 334), al-ShírI (ibid., ii, 908), Ibn Rayyán (S II, 909), Ibrahim b. 'AmI b.

Brockelmann also mentions al-DjázárI (S II, 758, III, 379), al-HámpI (S III, 338) and 'Abd Alláh Pashá FikrI (d. 1307/1890 [q.v.]), whose works (al-'Ajl al-fikrIyya, Bulletin 1915) contain a number of makham including al-Makdmdt al-fikrIyya fi l-mamdhkI al-bdIyya which has been published separately in Cairo in 1289 (Brockelmann, II, 475, S II, 722). Some Makdmdt by Mahmúd Rashíd EfendI were edited in Cairo in 1913 (S III, 85). In 1907, in Cairo, Muhammad TawfIk al-BakrI published a collection of makham, Saharíd al-lAItaIa, a number of which were chosen by 'Uthmán ShákIr and included, in 1927, in his work entitled al-lAItaIa fi 'l-adhdh.

It is not our intention to dwell here on the Hadith Isá b. HýjIám al-ImwlyáhI (1868-1930 [q.v.]) of which the first edition in book form dates from 1907; this "novel", which is both the first major achievement of 20th century Arabic literature and the swan-song of classical literature, has been the object of a number of studies, the list of which is to be found in G. Widner, Beiträge zur neueren literatur, iv, 237 ff., s.v. al-Makdma. In 1913 appears a handsome edition of 20th century have composed, as rhetorical exercises or for a specific purpose, makham which have not come to the attention of literary critics and historians. This applies notably to Amín al-Rhibáni (1876-1940 [q.v.]), whose RihdnIyydt contain (ed. 1956, ii, 83-6) Makdma al-kabhdgIyya, where the narrator is a mothgrub ("udhdha) searching for an attractive book in a library. Some other works which helped to attract the public, for didactic purposes, a successful imitation of al-Harin; in his work, which nevertheless contains sixty makham (instead of the fateful number of fifty) accompanied by his own commentary, the hero and the narrator meet sometimes in the town, but other times in the desert, a traditional setting for eloquent speech (see also Blachere and Masnou, 49-50).
MAKAMA

Ahmad b. al-Hādī (S II, 909), al-ANTIṣ̄a (Rescher, iv, 116), al-Munayyir (S II, 1101), al-Husayn (Rescher, iv, 311), al-Raʃīd (Rescher, iv, 399), al-Umāri al-Mawṣili (Rescher, iv, 199).

In general, however, it seems certain that the most significant representatives of the genre have not escaped scrutiny, giving rise to the works enumerated in the bibliographies of the notices devoted to them by the present Encyclopaedia. But alongside those authors whose makdāna are known only by a sometimes misleading title or by a brief mention in one or other of the bibliographical works, there are a number whose surviving works deserve, if not an edition, at least a fairly thorough examination, in order to allow for a more confident judgment. The general observations which follow are therefore still fragmentary.

Of the characteristics of primitive makdama, all the authors have essentially retained the use of rhymed prose, more or less rhythmic and mingled with verse, and, taking the example of al-Hamadhānī and especially of al-Ḥarīrī, a vocabulary obscure to the point of being sometimes impenetrable; furthermore, sajadi, which sometimes goes to acrobatic extremes, is all the less likely to make use of simple language since the object of many of the authors is to make a display of their verbal dexterity. Quite apart from this common feature, the presence of two characters is not always retained or, if it is, so that the narrator and the hero are the same person in a large number of makdāna, where this device is still retained.

From a theoretical point of view, the “savan”, which belongs to adab is, by this definition, certainly designed to entertain, but also to instruct, since it is inconceivable that, originally, prose literature could have lacked any purpose. While the didactic function was to be served by means of the educational adventures ing content, it was soon the form which fulfilled this role to the detriment of the essence, through the accumulation, scarcely bearable today for the average reader, of rare and unnecessary words, through a disagreeable pedantry and an impenetrable obscurity. The first objective, for its part, was to be realised, as in the case of adab, by a mixture of the serious and the joking, by the interesting quality of the adventures rather than the theatrical element introduced by the two imaginary characters. Now, just as the rīsāla, being a convenient means of display on the part of authors full of false modesty, tended to be nothing more than a rhetorical exercise, in the same way the makdama, while supplying authors with an opportunity safely to express personal opinions in fictitious guise, enabled many others simply to make a show of their lexicographical expertise, at the same time, however, aiming at a certain aestheticism, one is tempted to say, at art for art’s sake. This tendency is an expression of the love of Arabic-speakers for fine verbal style, and one gains the impression that an exquisite form sometimes conceals nothing more than a total vacuum. It is, however, not impossible that at least some of the compositions which appear most hollow lend themselves to different interpretations at a level which has yet to be ascertained.

The authors of manuals on the history of Arabic literature, when tackling the subject of makdama, rightly cite al-Hamadhānī and al-Ḥarīrī as those whose works are considered the first milestone on the path followed by this original genre; subsequently, they maintain their silence and, for the next seven centuries are unaware of one author worthy of mention as an eminent representative of the “ sessions”, which is surprising. There are a number of unfortunate declines; more detailed studies will perhaps enable one to correct this severe judgment, but the fact remains that, in the absence of evidence to the contrary, it is necessary to wait until the 19th century to find, in the Makdama al-Balakhi, a third significant milestone, although the new lease of life given to the makdama by this author did not inspire any notable works, perhaps because his object was far too didactic. In any case, the fourth and final milestone was planted by al-Muwaylihī, whose Ḥaddīth liḍī b. Ḥyānam is sometimes described as a novel. But at this time rhymed prose had already begun to lose its appeal, and the educated public turned for entertainment, either in the original, or in translation, to foreign works which inspired modern Arabic literature to the detriment of a henceforward discredited genre.

The theatrical element contained in classical makdama has not been satisfactorily exploited, for we do not see many playwrights drawing from them their inspiration and staging some of them. Alī al-Raṣī (Some aspects of modern Arabic drama, in R.C. Oste (ed.), Studies in modern Arabic literature, Warmminster 1975, 1272 ff.) thinks that the shadow-plays of Ibn Dānāyīl [q.v.] are linked to Arabic literature through the makdama and points out that the Moroccan al-Ṭayyib al-Ṣidīkhī has based himself on the famous Madīra [q.v.] and other sections of al-Hamadhānī to write plays which have met a great success; but this is always an isolated case, so that the narrator and the hero are the same person in a large number of makdāna, where this device is still retained.

In Persia, particularly highly esteemed were the twenty-four “sessions” which Ḥamid al-Dīn Balkhī (d. 559/1156) composed in 551/1156 in imitation of the two great Arabic authors (Ḥādīdī Khalīfī, no. 12716; lith. Tehran and Cawnpore); some of them consist of debates between a young man and an old, a Sunni and a Shiʿī, a doctor and an astronomer; others contain descriptions of summer and autumn, love and death, a zarĀḥ, and mystical discussions, but the sense is always sacrificed to the form (see H. Massē, Du genre “Débat”, 143-4). The example of Ḥamīd al-Dīn does not seem to have been much followed; nevertheless, the journalist Adīb al-Māmālik (d. 1917) composed a series of makdama (Browne, iv, 349). In Spain, Yehūdā ben Shlōmō Ḥarāzi (1165-1225 A.D.) first translated al-Ḥarīrī into Hebrew (in 502/1205), then composed fifty makdāna which he entitled Sefer Tabkemāni; in these “sessions” the style of the model is imitated by means of a very skilful use of Biblical quotations; as for the content, it has been noted that Ḥarāzi was inspired by a makdama of Ibn al-Shāhid which we have mentioned above (see S. M. Stern, in Tarbiz, xvii [1946], 198-202; J. Schirmann, ibid., xxii [1952], 198-202; J. Razahhī, ibid., xxvi [1957], 424-59; the work had been the object of partial translations into German, by Kraft (in Literaturblatt des Orientis, iii [1940], 196-8, xiv, 213-5) and L. Dukes (Eenhansulien, etc., Vienna 1873, 92-4), before being published by P. de Lagarde, under the title Iudas Harizii Macamae (Göttingen 1881, 2nd ed. Hanover 1924).

A contemporary of Ḥarāzi, Jacob ben Eleazar of Toledo (beginning of the 13th century A.D.) for his part composed a Makdama which is a sequel to the last, with a narrator, but no hero; this work has been studied by J. Schirmann, Les contes rimés de Jacob ben
MAKAMA — MAKAN B. KAKI

Eleazar de Tolede (in Etudes d'orientalisme ... Lévi-Provençal, ii, 285-97). In addition, J. M. Millás Valliercosa mentions, in La poesía sagrada hebraico-española (Barcelona 1948, 133-4, 136-7, 144) other Jewish poets in Spain whose works could be compared to makāmā.

The archbishop of Nisinian, ʿEbedeyrahū ʿAbdul-Ḥaʃīḏū (d. 1318 A.D.) composed in 1290-1, in imitation of al-Ḥarīrī, fifty ‘sessions’ in Syriac verse of religious and edifying content, divided into two parts designated under the names Enoc and Elias; he himself explained, in a commentary written in 1316, the extremely artificial language abounding with acrostics and verses which can be read indifferently from right to left or from left to right (see Chabot, Litérature syriaque, Paris 1934, 141); the first half of these ‘sessions’ was published by Gabriel Cardahi in Beirut, in 1899, under the title Paradaisa dha Edhen seu Paradissus Edom carmina autore Mar Ebedes Sobiensis.

Apparently there is no makāmā composed or translated into Latin or Romance during the Middle Ages, but it is quite clear that the hero of the picaresque novel, the picaro, closely resembles in many ways the characters of Abu l-ฟาṭḥ al-İskandarl or Abu Ṣayd al-Sarāḏī, and the diffusion in Spain of the work of al-Hamadhānī, and later and more significantly that of al-Ḥarīrī, suggests a direct or indirect influence of the makāmā. The works which have been undertaken in this area (in particular by Menéndez Pelayo, Orígenes de la novela, 1943, i, 65 ff. ; A. González Palencia, Del Lazarillo a Quevedo, Madrid 1946, 3-9) appear as so far inconclusive. On the other hand, A. Rumeau (Notes au Lazarillo, in Langue néo-latinæ, no. 172 (May 1965), 3-12) has shown that the central episode, La casa lorigga y oscura, of the Lazarillo de Tormes is closely related to an anecdote mentioned by al-Baghīṣī (Mustafar, tr. Rat, ii, 670), but already figuring in the work of al-Bayḥakī, who probably borrowed it from al-Ḏāḥīṯ; thus it is likely that the long road travelled from the faṭā to the nukaddi of the latter to the picaro passes through the makāmā. This question, related to that of the influence of the 1001 Nights, has been recently discussed in an extensive thesis by M. Tarchouna, Les margitans dans les recits picaresques (Paris 1983). Several ‘maitrise’ theses deal with al-Hariri, fifty ‘sessions’ in Syriac verse of the same name, composed in 1290-1, in imitation of the Hariri; the first half of these was published by Gabriel Cardahi in Beirut, in 1899, under the title Paradaisa dha Edhen seu Paradissus Edom carmina autore Mar Ebedes Sobiensis.

The house of Kaki were local rulers of Așkwâr in Râkûnîk, the eastern part of Gīlân in the Caspian coastlands. Makan rose to prominence in Tabaristan in the service of the ‘Alid princes there, and as the ‘Alids themselves dissolved into internecine rivalries, he became the contender with a fellow-commander, Asfâr b. ʿṢhirîyâ [see Asfâr b. ʿṢirawayh] for control over the Caspian lands. Makan allied with the Ḥasanid al-Ṯâlîd al-Ṣaghîr al-Ḥasan b. al-Ḳâsim [q.v. in Suppl.] against the latter’s rival Djaʿfar b. al-Ḥasan b. al-ʿUṯrîqî and his supporter Asfâr, but was worsted in battle in 316/928 by the rule of the ‘Alids in Tabaristan, and Makan had temporarily to flee in to Daylam. His fortunes nevertheless revived, and by 318/930 he was master of Tabaristan, Gūrgān and even of Niṣāḥūr in Khūrāsān, and had repelled an attack by Asfâr’s supplanter Mardwājîd b. Zîyâr [q.v.], master of Ray (319/931).

Mardwājîd’s clan could not be stemmed by Makan, who lost Tabaristan and had to retire to Sarāmîn territory in Khūrāsān, receiving from the amīr Nāṣr b. Ahmad [q.v.] the governorship of Kirmān. However, when Mardwājîd was assassinated in 323/935 by his slave troops (according to Gardizī, at Makan’s instigation), Makan returned from the east to the Caspian region, established himself as governor of Gūrgān for the ‘Alids, and allied with another local leader, Mardwājîd’s brother Wusqâmīr, founder of the subsequent Ziyârī dynasty [q.v.]. With Wusqâmīr’s support, he threw off the control of Būḥārā, but the amīr sent him against him an army under Abū ʿAlī Ahmad b. Muḥṭadī Câghînâ. Makan was dislodged from the town of Gūrgān and compelled to fall back on Ray; however, he was able to remain in the eastern part of the town called Iškâhâbâd on the Dângmân road, the forces of Wusqâmīr and Makan were defeated on 21 Rabi’ i 329/25 December 940. Makan was killed and his head sent first to Būḥārâ and then to the caliph in Baghdād.

Mākān’s career is typical of several Daylamī commanders in the early stages of the ‘Daylamī intermezzo’ of Persian history, when the decline of caliphal power in northern Persia allowed various local interests to vie for power there; but in the long run, it was the Būyīds who were able to establish the most enduring domination (ʿAlī b. Bûya, the later Imām al-Dawlâ [q.v.]), seems to have taken an important step forward in his career by joining Mākān’s army as a commander, perhaps in ca. 316/928, but left Mākān when the latter was temporarily eclipsed by Mardwājîd, see above). Collateral relatives of Mākān, the family of his cousin al-Ḥasan b. Frûzān, continued to rule locally in Daylam till the end of the century.

Makassar, since 1972 renamed “Ujung Pandang” with reference to one of its oldest quarters around the harbour, is the capital of the Indonesian Province of Sulawesi Selatan (South Celebes). It has 434,168 inhabitants, among them 332,618 Muslims. After World War II, Makassar was the capital of the Dutch-sponsored East Indonesian State (until 1950). It still remains the dominant cultural, administrative, economic and traffic centre in East Indonesia, its population comprising notable minorities of Torajas, Minangkabaus, Ambonese, Tampuers, etc.

Its name “Makassar” originates from the people living in its hinterland, stretching over the most southern part of the south-western peninsula of Sulawesi. The population of the island of Selayar, to the south, is usually also counted among the Makassars, although their dialect shows a number of differences from genuine Makassarese. Their neighbours to the north are the Buginese, who are closely related to the Makassars in their customs, manners, and language. At the present, there are about 1,250,000 people living in the predominantly Makassarese-speaking kabupaten (regencies) of Gowa, Takalar, Jene Ponto, Bantaeng, Maros, and Pangkajene (here mixed with Buginese).

Originally, as H. J. Friedericy had pointed out by examining the old Bugis-Makassarese epic La Galigo, Makassarese society was divided into three main groups: the ana’ karaeng, or family of the king, the to deceng, or free people, and the ata, or slaves, who were either captives, those who could not repay their debts, or who had acted against the adat (customary law). Since the beginning of the 20th century, slavery has been abolished. An outstanding feature of the character of the Makassars (and Bugineses) is called sar’. Laws and regulations are divided into two parts: the rules of adat are broken; it usually leads to revenge.

Little is known about the history of Makassar in pre-Islamic times. In the middle of the 14th century, the area was under the rule of the Javanese kingdom of Majapahit. According to the chronicles of Gowa and Tallo’, which are the names of the two ancient Makassarese kingdoms, Gowa originally consisted of an alliance of nine small districts, each under a noble; after the government had passed into the hands of one man and the kingdom had expanded, to include for example the lands of what was later Tallo’, Gowa is said, after the death of the sixth king (the first one described as an ordinary mortal), to have been divided between his two sons; the one became ruler of Gowa and the other of Tallo’. Both kingdoms usually had close relations and were known to the Europeans as the “kingdom of the Makassars”. About the year 1512, one year after the conquest of Malacca by the Portuguese, “Malays” were given permission to settle in Makassar and to build a mosque in their quarter. Also, in other ports on the west coast of South Sulawesi, Muslim traders began to settle. Those in Pangkajene were resisting tendencies among the family of the local ruler to adopt the Christian belief. But on the whole, during the 16th century, the Makassars and their rulers were still adhering to their traditional religion, and an even-handed policy was pursued towards the Muslim traders, most of whom originated from Johore, Malacca, Patani, Bantam, and Tallo’, who thus were forced to convert to Islam. The karaeng of Tallo’, Tu Njasuru’ (first half of the 16th century) is said to have travelled to Malacca and Johore for trade reasons. During the reign of Tu Njajo as karaeng of Gowa (1565-1590), the ulam of Ternate, Bâb Allah, visited Makassar about 1580. Besides trying to solve their political disputes, Bâb Allah, a fervent enemy of the Portuguese who had murdered his father, urged the karaeng to adopt Islam. It seems doubtful that he had any success, and it was not until 9 Djumâd I 1014/22 September 1605 that the young karaeng of Tallo’, Mallingkaang Daeng Nyoni, who at the same time acted as patih (prime minister) of Gowa, publicly confessed the Islamic shahâda. Later he was known as Sultan ‘Abd Allah Awwal al-Islâm. The karaeng of Gowa, I Mangu’ rangi Daeng Nara’bîa, soon followed his example and adopted the name Sultan ‘Alâ al-Dîn. On 18 Radjab 1016/16 November 1607, the islamisation of the two Makassarese kingdoms was officially declared to be completed. This was followed by successful wars against the Buginese neighbours, who thus were forced to convert to Islam too. One of the most celebrated teachers of Islam at that time was the miraculous Dato’ riBandang, a mystic from Kota Tengah in the Minangkabau, who is said to have been a pupil of Sunan Giri in Java. Other outstanding teachers were Dato’ riTiro and Dato’ Patimang. Their tombs became centres of worship.

In the first half of the 17th century, the kingdom of Makassar extended very much, so that it brought under its suzerainty almost the whole of Sulawesi, Buton, Flores, Sumbawa, Lombok and the east coast of Kalimantan. In 1609, the Dutch East India Company was granted permission to establish a factory, but disputes about the trade with the Moluccas gave cause to repeated warfare and treaties which reduced the sovereignty of the Makassarese kings, and led to the expulsion of the Portuguese and later, in 1667, of the British as well. A treaty dictated by Admiral C. Speelman in 1667, which was reconfirmed in 1669, gave the right to the Dutch to settle there permanently. These wars are the topic of the Sja'ir Perang Mangkasa³.

Although the main port in South Sulawesi was (and is) Makassar, the most skilled sailors and shipmakers, however, were not the Makassars but the Buginese, especially those from Wajo, who formed in Makassar—like in some other major ports, e.g. in East Kalimantan—their own community supervised by the matau. The third matau, Amannna Gappa, assisted by two of his colleagues from other ports, compiled in about 1676 a code of trade and navigation law which reflects at the same time their understanding of the cosmic order, together with Islamic and traditional elements.

Both the Makassars and likewise the Buginese are usually considered as strong, and sometimes fanatical confessors of Islam. Generally speaking, most of the legal duties of Islam are conscientiously observed. But this does not prevent them from maintaining, at the same time, pre-Islamic religious convictions, and a number of “mystical movements” are still in ex-
istence or are even gaining in strength, especially among the villagers, but also among the Muslims in the eastern countries, there remained through the Middle Ages (and also later) a marked difference between the Persian and

or Association of Mushalla Indonesia Mutahhidin, which was published since 1906 for some measures of length and surface area, see MISAHA.

which was imposed in his empire a uniform system of weights and measures, and introduced a much heavier pound than the Roman libra of 327.45 g, neither Muhammad nor 'Umar made such a reform; and as later rulers could not claim canonical character for their systems of weights and measures, their bewildering diversity was in the Muslim countries even greater than in mediaeval Europe, where Charlemagne's system remained as a firm basis. The weights and measures which were used in the countries conquered by the Muslims were however not altogether different, as projecting original conquerors had introduced their metrological systems in other countries and, secondly, a mutual influence shaped them to a certain extent. For the needs of the fiscal administration [see BAYT AL-MAL and DIWAN] and the market supervision [see HUBB], every governor and finance director of the provinces of the caliphal empire had to enforce what the caliph decreed concerning weights and measures. But rulers who had in mind to establish a truly new regime fixed new weights and measures, just as they built up an administration different from that of their predecessors. The 'Ayyubid prince 'Adud al-Dawla, al-Mandr in its orientation. A branch of the modernist Muhammadiyah movement was established in 1929.

In 1950, Makassar became the starting point of the 'Darul-Islam' rebellion led by Kahar Muzakkar. In 1963 came the establishment of the I'titan Masjid and Mushalla Indonesia Mutahhidin, or Association of Central and Southeast Sulawesi, in the Moluccas and in Irian Jaya.

MAKAYIL (A.), *measures of capacity* (sing. mizān; var. mawzil, sing. mizān), and MAWZIL (A.) *weights* (sing. mizān). On the measures of length and surface area, see MIṣĀBA.

1. In the Arabic, Persian and Turkish lands. In the history of Oriental metrology, the spread of Islam meant no abrupt break. Whereas Charlemagne imposed in his empire a uniform system of weights and measures and introduced a much heavier pound than the Roman libra of 327.45 g, neither Muhammad nor 'Umar made such a reform; and as later rulers could not claim canonical character for their systems of weights and measures, their bewildering diversity was in the Muslim countries even greater than in mediaeval Europe, where Charlemagne's system remained as a firm basis. The weights and measures which were used in the countries conquered by the Muslims were however not altogether different, as projecting original conquerors had introduced their metrological systems in other countries and, secondly, a mutual influence shaped them to a certain extent. For the needs of the fiscal administration [see BAYT AL-MAL and DIWAN] and the market supervision [see HUBB], every governor and finance director of the provinces of the caliphal empire had to enforce what the caliph decreed concerning weights and measures. But rulers who had in mind to establish a truly new regime fixed new weights and measures, just as they built up an administration different from that of their predecessors. The 'Ayyubid prince 'Adud al-Dawla, the Fātimids, the II-Khan Ghāzān and the Turcoman Uzun Hasan introduced new metrological systems.

For the study of Muslim weights one has recourse to the accounts in literary sources, the analysis of glass weights which served as standards and, hardly, to data in European sources, such as Merchants' Guides. But despite the relatively rich information, research in Muslim metrology has not resulted in generally-accepted conclusions. From the accounts of the Muslim authors and the archaeological findings, different values have been calculated. The data in the European sources mostly point to smaller ones, which cannot be considered as mistaken.

The names of the weights and measures of capacity point to their origins: the rafī, the most common weight, is an Araamic form of the Greek λίτρον; the kintār (100 rafīs) is obviously the Latin centenarius; and the kafiz is the Persian name of a measure of capacity. When the Arabs conquered the lands of the Near East, all these names were already used for different weights and measures. The mudā, a measure of capacity, was in ʿIrāk (about) 1.05 litres, in Syria of 3.673 litres, and in Egypt of 2.5 litres. The diversity of the weights and measures called by the same name was a phenomenon common to all Muslim countries. Almost every district had its own weights and measures, and in some countries those used in the capitals were different from those of the countryside. This is what the Arabic geographers tell about ʿIrāk and its capital Rāvīn, about Khūzistān and its capital al-Ahwāz and about Aleppo (Halab) and its province. Further different weights were used for various commodities: in many provinces meat was weighed by a rafī different from that of other articles. In all provinces of Upper Egypt there was a rafī for meat and bread and another for other commodities. In many countries there were particular rafīs for pepper, silk, etc. For grain, one used in all Arab countries measures of capacity; for liquids one had other measures of this kind. One learns, however, from the sources that in course of time there was a trend in several countries to use for liquids (e.g. olive oil) weights, and secondly, there was a tendency to replace weights (and measures of capacity) by bigger ones. Despite the mutual influence between the metrological systems of the Near Eastern countries, there remained through the Middle Ages (and also later) a marked difference between the Persian and
Arab countries (although there was some overlapping). The mutual influence and the age-old mediaeval Merchants' Guides point to a smaller so 10 weight dirhams that of 150 dirhams, i.e. 463 g, used for spices.

just as 10 silver dirham was the mithkdl. The mithkdl was also divided into mustard grains each. The writers usually give the value of a (real) weight in this unity was not equal everywhere. For in Central calculations. Decourdemanche concluded that it was of 3.0989 g, and this later value was taken by Sauvaire as basis for his in 1845 concluded that it was of 3.0884 g, whereas a commission appointed by the Egyptian government was equal to 3.0884 g, whereas the Damascenus rail was in the Mamlik period still equal to 1.85 kg, but the Italian Merchants' Guides make it 600 light Venetian pounds, i.e. 1.8072 kg. The rail of the northern provinces of Syria was in the 7th/13th and 8th/14th centuries, according to the Arabic sources it was of 2.22 kg, which was considered as the canonical. Thus a metrological theory was elaborated. Every weight was supposed to consist of a certain number of weight dirhams (to be distinguished from the weight of the coin called by the same name). The French scholars who came with Bonaparte to Egypt found that this dirham was equal to 3.0884 g, whereas a commission appointed by the Egyptian government in 1845 concluded that it was of 3.0884 g, and this latter value was taken by Sauvaire as basis for his calculations. Decourdemanche concluded that it was 3.148 g, and Hinz 3.125 g. But the Egyptian government established in 1924 that it is 3.12 g, and both the glass weights of the caliphal period and the data in the late mediaeval Merchants' Guides point to a smaller value. In addition, mediaeval Muslim writers say that this unity was not equal everywhere. For in Central Syria it was, according to them, lighter than in other Near Eastern countries. Another standard weight unity was the mithkdl. Just as 10 silver dirham was the mithkdl of Damascus, it was equal to 440 g, whereas the mithkdl of the Damascenus rail was reckoned at 164/5 kirdts. According to the Arabic sources, the mithkdl of Damascus was in the Middle Ages equal to 3.0884 g, whereas the Damascenus rail was of 2.1688 g. In the 11th-13th/17th-19th centuries the rail of Aleppo was slightly heavier and weighed 2.28 kg. Even in Palestine every district had its own rail; that of Jerusalem (also used in Nablus) was in the Middle Ages of 2.47 kg and in the 19th century of 2.78 kg.

Grain was measured in southern Syria and in Palestine by the ghirâra, a measure of capacity which was however of different size in every province. The ghirâra of Damascus was equal to 731/2 mudds, containing 2.84 kg of wheat each, or to 3 Egyptian ir-dabbâh. So it contained 208.74 kg of wheat. But in Jerusalem, the ghirâra contained, at least at the end of the Middle Ages, three times as much, sc. 626.22 kg of wheat, and in Qâzza 313.1 kg. In northern Syria one used for weighing grains the makkâk. Even this was a name given to different measures. The makkâk of Aleppo and Tripoli contained 83.5 kg of wheat and that of Hamât 92.77 kg, according to Ibn Faqî Allah al-'^Umarî and al-Kalkashândî. But in the period of the Crusades, the makkâk was smaller. Ibn al-'^Adîn recounts that the makkâk of Aleppo was in the 6th/12th century half of the makkâk of his own day, so that it must then have been of about 40 kg of wheat. Once more one becomes aware of a characteristic trend of the development of weights and measures in the mediaeval Near East: that there was a tendency to use heavier and bigger ones. In the 19th century one used in Syria the kayî of 28.18 kg of wheat.

Judging from the glass weights found in Egypt, the standard rail in Umayyad times was in that country equal to 440 g, whereas the 'Abbâsids introduced a lighter rail, weighing 390-400 g. But in the 'Abbâsids Egypt also a "big rail" (rail khabîr) of 493 g was used. Under the Fâtimids, several rails were used. According to the Arabic writers of that period and shortly afterwards, such as Elijya of Nisibîn, writing in the first half of the 5th/11th century, al-Mâghâzî of the late 6th/12th century and Ibn Mâmmâtî, at the beginning of the 7th/13th century, and a later text referring to a happening in the early 5th/11th century, they were the following (rail dividing the weight of 8 dirhams, i.e. 444.9 g, used for weighing bread, meat and other articles; that of 150 dirhams, i.e. 463 g, used for spices
(and therefore called fulfuli, pepper ratl) and also for cotton; the ratl laythi of 200 dirhams, i.e. 964 g, used under the rule of the Ayūhids, reckoned at 720 (later 700) light Venetian pounds, i.e. 216.885 g. Weights in ʿIrāk, where the old Persian tradition prevailed, were altogether different from those used in Syria and in Egypt, although some had the same name. The ratl of Baghdād which was equal to 401.674 g (according to others, to 397.26 g) (130 or 128 4/7 dirhams respectively) was considered as the “canonical” ratl of the Muslims, because it was used from the days of the first caliphs. Al-Muqaddasi recounts that this ratl was also used in Upper Mesopotamia. But a short time later, Eliya of Nisibin says that in his native town one had a ratl of 926.49 g (210 mittāḥils) and he mentions also a ratl of Balad as being twice as much, i.e. 1.8529 kg. His contemporary Naṣīr-i Khusrāw mentions the ratl of Mayyāfārīkīn which was equal to 1.483 kg. The measures of capacity which were used in Egypt for a long time under the Ayyubids, one began to weigh olive oil by the kīnār (ratl) ġarvī, as is borne out by an account of Ibn Mammātī.

For great quantities of various commodities, one used some kinds of “loads”. The kīmml was reckoned at 600 “Egyptian ratls”, i.e. 266 kg, but as far as spices were concerned it consisted of 500 ratls only, i.e. 222.45 kg. This latter unity is that which the Italian traders called the spīrta and reckoned at 720 (later 700) light Venetian pounds, i.e. 216.885 g.

exaggeration. In Rayy, the capital of Djibal, one had a rail of 300 dirhams, i.e. 926.94 g. This rail was also used in some provinces of Adharbâyjân, as in those of Khûrân and Urmîya. But outside Rayy, one used in Djibal a rail which was the double of the Ravy one, and in other provinces of Adharbâyjân one used the rail of Baghdad. The rail of Ardabil weighed, according to al-Îstakhî, 1,040 dirhams, i.e. 3,213 kg, and according to al-Mukaddasî 1,200 dirhams, i.e. 3.7 kg. In Shiraz one weighed bread and meat by the rail of Baghâdâd, whereas other commodities were weighed by the same rail as that used in Ardabil (eight times as much as that of Baghâdâd). The standard weight for small quantities of dry (and even liquid commodities) was in most provinces of Persia the mana (also called manâd), which had spread widely in western Persia. But even mana was a name given to different weights. In the province of Khûzistân, outside the town of al-Ahwaz, it was equal to 4 rails of Baghâdâd, so that it weighed 1.6 kg. In the neighbouring province of Pârs, one used in some towns, like Arradjan, a mana of 1.2 kg (equal to 3 Baghâdâd rails) and in others one of 926.94 g. In Isfâhân one used a mana of 400 dirhams, i.e. 1,253 kg, and in Fâsâ one of 300 dirhams, i.e. 926.94 g. The mana of Rayy was of 1,853 kg, and that of other towns of Djibal 1.235 kg, and in Fasa one of 300 dirhams, i.e. 926.94 g. This rail was indeed fixed at exactly 3 kg. In 1926 the same standard weight in the whole kingdom of the Il-Khâns, which was the double of the Rayy one, was also the standard weight of the provinces of Asia Minor. According to the reports of the Arabic authors by law, and in 1935 the metric system was introduced, weighing 288 kg, and at present a kharwâr of 297 kg is widespread (although others are used). In the Muslim regions of Asia Minor one used, according to Elyia of Nîsîbîn, in the 5th/11th century a rail which was equal to 317.69 g, but later authors say that the rail vûmî weighed 120 dirhams, i.e. 370.776 kg. Ibn Fadl Allâh al-Îmârî, who wrote in the first half of the 8th/14th century, mentions the different rails of several provinces of Asia Minor. According to him, one used in some (as in those of Antîlya, Aksarây and Karâ Haşar) a rail of 1.779 kg; in Bursa a rail of 9.64 kg; and in Kântâmûrî a rail of 7.118 kg. As to the rail of Siwâs, the contemporary Pegolotti says that it was of 4.8 kg, whereas one learns from an Arabic source that it was of 4.618 kg. In the 18th century Istanbul had a rail of 2.8 kg, and Konya had in the 19th century a rail of 481 g. Beside these different rails, one used everywhere in the Ottoman empire another weight, the âkka, which was equal to 1.283 kg. For grain, one used in the Middle Ages in the Turkish provinces of Asia Minor measures of capacity, which in some cases were equal to the Egyptian mudd. Ibn Fadl Allâh al-Îmârî lists them and says also that in Bursa one used a mudd which was bigger by a quarter. In the Ottoman period the mudd contained 513 kg of wheat (being of 666.4 l). In North Africa the rail of Baghâdâd, being considered as the canonical, was the most common as long as the Æbbâsîds exercised suzerainty there. The Fâtimids, however, introduced a heavier rail, which had been previously used for weighing pepper. It was reckoned at 140 dirhams, i.e. it was equal to 432,572 g, according to the detailed account of al-Mukaddasî. Ibn Hawkâl, who probably describes conditions prevailing at the beginning of their rule, says that meat was weighed in al-Kayrawân by a rail of 128 dirhams, i.e. 393.49 g, whereas other commodities were weighed by a rail of 4.5 kg. Elyia of Nîsîbîn gives for the common Maghribi rail of 137 1/4 dirhams, thereby confirming the account of al-Mukaddasî. Ibn Hawkâl’s report about a heavy rail of al-Kayrawân refers certainly to that used in this town, according to the later al-Bakrî, for figs, nuts and other victuals, and this was 10 times heavier than the pepper rail. The latter author gives also some data about the weights used in various other provinces of the Maghribi, in the post-Fâtimid period there. According to him, one used in Tenes, Melïla and Nakrî, a rail of 330 dirhams, i.e. 1.019 kg, whereas meat was both in Tenes and in other towns weighed by much heavier rails. Ibn Bââsîa makes two statements about the common Maghribi rail: in one he says that it was equal to a quarter of a Damascene rail, that is 463.47 g, and in another he says that it was 1/4 of an Egyptian rail, i.e. 356.164 g. From Pegolotti, one learns that one used in the first half of the 8th/14th century in Tunis a rail of 490.7 g. For grains, one had in the Maghribi various mudds. According to al-Bakrî, there was used in Fàs a small mudd of 4.311, but in most places bigger units were used. Al-Mukaddasî says that in al-Kayrawân a mudd was used which equaled 201 l, and al-Bakrî reports that the people of Tâhût had a mudd of 243 l (or a rational mudd of 28.5 l), whereas other provinces, such as in Tunisia in the 19th century the külse of 10.08 l and the matsu, twice its weight. In Muslim Spain, a rail of 503.66 g was com-
monly used. But for weighing meat, one had a raf" four times as heavy. For grain, one used a kafiz ... Firishta [q.vv.]. Ibn Battuta (iii, 290, tr. Gibb, iii, 695), describing the famine of 734/1334, refers to the Dihll weighing by a 4 containing 2 1/2 i.e. 1.12 kg; rails, rath was equal to 12 the kulla rail ...ery difficulties in interpreting references before the 19th century. An attempt was made by the East India Company in 1833 to standardise the weights system in Regulation VII, “A regulation for altering the weight of the Furruckabad [i.e. Farrukhabad] rupee and for assimilating it to the legal currency of the Madras and Bombay Presidencies; for adjusting the weight of the Company’s sicca rupee, and for fixing a standard unit of weight for India”. This provided for the following scale:

<table>
<thead>
<tr>
<th>Scale</th>
<th>Weight</th>
</tr>
</thead>
<tbody>
<tr>
<td>8 ratti</td>
<td>= 1 māghā</td>
</tr>
<tr>
<td>12 māghā</td>
<td>= 1 tōlā</td>
</tr>
<tr>
<td>80 tōlā</td>
<td>= 1 sēr</td>
</tr>
<tr>
<td>40 sēr</td>
<td>= 1 man</td>
</tr>
</tbody>
</table>

The sēr was further divided into 10 4 16 chālān (just as the rupee was divisible into 16 ānā “annas”, the ānā being originally not a coin but merely a money of account, “sixteenth share”). The central unit here, the tōlā, was fixed at 180 grains, i.e. 11.6638 gm.; thus the “official seer”, sēr, was fixed at 2.057 lbs.av. = 0.93 kg., and the “official maund”, man, at 82.286 lbs.av. = 37.32 kg. The Indian weights and measures act, Act. XI of 1870, provided for the extension of this system, throughout British India, and provided for a future redefinition of the sēr as precisely equal to the standard kilogram, although with the death of Lord Mayo, the proposer of the Act, this scheme did not materialise at the time, and the above system of weights remained in force until the official introduction of the metric system after Indian independence (persisting unofficially in country districts up to the present day). The anglice form “maund” derives from man through Port. mão, possibly influenced by an old Eng. “maund”, a hamper of eight bales, etc.; see OED, s.v. Maund. (s.v.)

This relative scale was general throughout north and central India and Bengal, although the values of)” and man were very variable; the situation is further complicated by the presence side by side of a kācā and a pakē sēr and man almost everywhere (cf. medieaval Europe: “Brabantian servus” is a serv approximately 75 lb. Some, but not all, of these estimates correspond to the Muslim historians: e.g. Diva Ala of 5 (Taikh-i Firuz Shahi, 316 ff.) the interprets in the above system of weights and measures by Eliya, archbishop of Nisibin, in JRAS (1877), 291 ff.; R. Brunsvich, Mesures de capacité de la Tunisie médiévale, in RAfort, 1935/3-4, 86-90; idem; in AIEO Alger (1973), 74-87; W. Hinz, Islamische Masse und Gewichte, Leiden 1955. tracing the history of Muslim cemeteries. Works of fikr refer only to prohibitions concerning tombstones (kabr, pl. kab'ar [p. o.]) and the visiting of burial-places (ziyara [p. a.]). At the most, a few occasional references may be gleaned from these sources: Ibn Ba'tha and Ibn Kudama recall, for example, the dictum of the Prophet forbidding prayer in cemeteries (cf. H. Laoust, La profession de foi d'Ibn Ba'tha, Damascus 1958, 80, 149, and idem, Le precie de droit d'Ibn Qudama, Beirut 1950, 21). Ibn Taymiyya notes that the cemeteries of Christians and Jews must not be located in proximity to those of the faithful (cf. idem, Essai sur les doctrines sociales et politiques d'Ibn Taymiyya, Cairo 1939, 372). For more substantial information, it is necessary to consult works of topography, guides to pilgrimage and the accounts of travellers. Even here, it very often happens that such information is dispersed and responds only partially to the requirements of the historian. Thus in his topography of the city of Damascus, Ibn 'Asakir devotes a whole chapter to the cemeteries, but he is primarily concerned with locating the tombs of the revered individuals who are buried there. While he identifies the site of the first cemetery of Damascus, that of Bâb Tûmâ (currently Shaykh RasÈån) where the Muslims killed at the time of the conquest of the city were buried, it is only by chance that he mentions those of al-Bâb al-Saghîr and al-Farâdis, in referring to the tombs of the Companions of the Prophet (cf. Ta'Vmek ma'mud Dimashkî, ii, ed. S. Munadîjî, Damascus 1954, 188-200, tr. N. ElâisÈéjî, La Description de Damas, Damascus 1959, 303-16). His aim is not to describe the history of the cemeteries, their creation, development and abandonment, but to give a topography of the tombs.

It is in the same manner that the authors of topographical works of the two holy cities—Mecca and Medina—describe the cemeteries. They recount the traditions relating to their origin, but are concerned above all with the topographical landmarks of tombs of the members of the family of the Prophet whose names are listed. They accord the same treatment to the Sahâba and the Tabi'in (cf. al-Azrâkî, Mâlta* al-sa'dayn, Dimashk, 1959, 303-16; al-MaknÎI, Khitat wa-md djd^a fi-hd min al-dthdr, Damascus 1965, 209-13; al-Bâb, Kthi, 1977, 5; lmmal al-alkhâr fi madnat al-mukhârâh, Cairo n.d., 147-62).

Somewhat different is the account given by al-Makrîzî in the chapter of the K'hâıt devoted to the cemeteries of Cairo. He locates them, tells the story of the acquisition of the site of the Kârâfà at the time of the conquest, and gives a brief account of its development and extension. But the greater part of the chapter deals with the localisation of the tombs—mosques, palaces, ribâts, musalsâs—dispersed throughout that vast expanse at the feet of the hill of al-Mu'âttâm known as the "city of the dead" (cf. al-Makrîzî, al-Mawdî'iz qa ta'l-is'trâb bi-dhâr al-khâ yat qa ta'l-is'târ, Beirut n.d., ii, 442-3, 451-3).

By adding to the information supplied by topographical works that which may be gleaned from the accounts of travellers, it is possible to identify the privileged sites where Muslim cemeteries were established; in general, according to a comprehensible urban logic, they are laid out on the exterior of the ramparts, close to the gates of the town: for example, in the case of Damascus, the cemeteries of Shaykh RasÈån near Bâb Tûmâ, of al-Bâb al-Saghîr, of Bâb Kaysàn, of Dâdhdî near Bâb al-Farâdis, of al-Sûfiyya near Bâb al-Djâbiyya, etc. (cf. Kh. Moaz and S. Orî, Inscriptions arabes de Damas, les sites funéraires. 1. Le cimetière de l'Ekhtâr, Sérop, Damascus 1977, 9-13); in the case of Mecca, the cemetery of al-Hadjîn, close to Bâb Ma'sî (cf. al-Azrâkî, op. cit., ii, 3, 81; Ibn Bat-

The slopes or foot of mountains imbued with an atmosphere of sanctity are also propitious sites for cemeteries. The cemeteries of the Karāfā in Cairo, at the feet of the Dzābal al-Muṣṭaṭṭam, are the best examples of this. Also worthy of mention in this context are the cemeteries of al-Ḥaqlūn in Mecca, on the hill of the same name (cf. above), and that of Szalihsiyya in Damascus, at the foot of Mount Ḥāṣiyūn (q.v.).

While the perspective in which cemeteries are described in the works of Arabic topography does not fully respond to all the requirements of the historian, it does, on the other hand, identify well the relations existing between the cemetery and the town, ambivalent relations which reflect the difficulties of representing pagans in interactions with members of the community, difficulties similar to those already mentioned in the context of tombs (cf. Y. Rāghib, Les premiers monuments funéreaux de l’Islam, in Annales Islamologiques, ix [1970], 21-2). In fact, in the view of some of the fakāhā, the cemetery is an impure case. It will be recalled that Ibn Ḫudaymāna and Ibn Ṣāḥib (op. cit., 80, 149) include it in the list of places unsuited to prayer, in the same manner as public baths, enclosures where camels shed excrement, abattoirs and rubbish dumps. However, for the majority of authors and the consensus of believers, the cemetery is a holy place, seeing that it contains the tombs of individuals venerated in Islam: members of the Prophet’s family, the Sahāba or Companions, the Tabīʿīn or successors, awliyāʾ and jālibūn. Ibn Bāṭṭuṭa and al-Makrīzī, referring to the mosque of the Prophet’s family, the Sahāba and the Tabīʿīn, say that the same atmosphere of sanctity is to be found in the Moslem cemeteries of the Prophet’s family, the Sahāba and the Tabīʿīn. In Baghdād, in the cemeteries of Bāb al-Ḥarb, a number of Hanbalis are buried in the shadow of the tomb of Ibn Ḥanbal, and Ḥanāfīs about that of Abū Ḥanīfah (cf. Makdisī, op. cit., 258, 259, n. 1, 446, n. 2, 447, 448, 453, n. 1, 388). At Karbālā, Shiʿīs were buried in the cemetery which developed around the tomb of the imām Abū Ḥusayn and, in the small Syrian town of Buṣrā (q.v.), they established their own cemetery around the maqṣūdīyīn of Abū al-Ḥādrī (q.v.).

At the present day, Muslim cemeteries display an extremely varied typology. A vast extent of spaces, with barely perceptible tombs, where the dead lie in anonymity conformed to the most rigorous injunctions of the fakāhā, or a city where the visitor becomes lost in the labyrinth of streets fringed with the façades of false buildings, behind which shelter tombs and funeral monuments, a veritable “city of the dead”, desert necropolises gathered together in the hollows of dunes and fields of flowers from which funeral steps emerge, cemeteries built into the walls of cities or dispersed in palm-forests or groves of cork-oak—all of these constitute the cemeteries of Islam.

2. In North Africa

The most common terms used to designate a cemetery in the languages and dialects of the Maghrib are the plural forms mākūbār and khor l-ma’mūrāna and roja (in Moroccon and Algerian Arabic); and Ḧabbanā (Tunisian and Algerian Arabic); the Berber form included-ātābīr or ātāhān (Kabyle); sammār, issnādī, timdīlīn (Middle, High and Anti-Atlas Mts.), izmarān (Rīf), etc.

The cemeteries of North African towns and villages may be both extra and intra muros. Thus Fās, for example, has at least ten important graveyard sites. These include the Bāb Futūh, which is separated by a small valley and stream into two halves: the so-called al-Kābīb “the cupolas” (because of its numerous mausoleums for holy men) to the west, and Siddi Ḥarázam to the east. The whole of the cemetery overlooks the madīna of Fās from the south. At the
same time, there are within the city walls immense graveyards, such as Bab al-Hamra and Sidi 'Ali al-Meṣâli in R. Le Tourneau, *Pit avant le profanateur*, Casablanca 1949, 114, 135 and index, 538). The various sites may differ in social composition and rank, and within any given cemetery there may exist a diversity of types of graves and elaborations of these.

In some tribal localities, there is a tendency for particular lineage groups to have their graves within a particular plot (cf. D. M. Hart, *The Aith Warqaghargh of the Moroccan Rif*, Tucson 1976, 144). It may be the case, in regard to some towns of the region, that urban growth "is hindered particularly by the stiff collar of cemeteries which modern Islamic towns have had the greatest difficulty in breaking through" (X. de Planhol, *The world of Islam*, Ithaca, N.Y. 1959 (original French ed. Paris 1957), 11), but this is not everywhere so; there are examples, at least in Tunisia, of cemeteries having been moved in order to facilitate urban expansion; elsewhere, formerly external sites have now become, because of expansion, part of city centres.

Some writers have noted a striking contrast between the cemeteries of Europe and those of the Islamic shores of the Mediterranean: that the former are enclosed, sad places, whilst the latter are open spaces, favoured especially by women and children, and used for visiting, for strolling about and for picnic nics. It seems that in the Muslim towns of the Mediterranean lands, attitudes towards death and the dead imply certain specific rights and duties that are absent in Christian Europe; cf. J.-P. Charay, *La vie musulmane en Algérie d’après la jurisprudence de la première moitié du XXe siècle*, Paris 1965, 237; Hart, *op. cit.*, 147.

In the far west of Islam, during mediaeval times, judging on the basis of 8th/12th century Seville, the 'ulama were concerned about the maintenance of cemeteries both from the physical and the moral points of view. The ḥāḍir 'Abdīn remarks upon the tendency to construct buildings within cemeteries and to use these buildings and the space around them for purposes considered illicit or indecent (E. Lévi-Provençal, *Séville musulmane au début du XVIe*, Paris 1947, 57-8). Some dynasties constructed elaborate necropoles for their dead, e.g. Chebbi (q.v.), built by the Marinid sultans Abu Sa'id and Abu I-Hasan between 710/1310 and 739/1339 on the site of the ancient Roman city of Sala (see H. Basset and Lévi-Provençal, *Chélia, une nécropole méridionale*, in *Hespéris*, ii [1922], 1-92, 255-316, 385-425), and the Sa'diān tombs of Marrakesh, mostly built during the reign of Ahmad al-Mansūr (986-1012/1578-1603) (see G. Deverdun, *Marrakesch des origines à 1912*, Rabat 1959, 381 ff.).

A number of customs and rituals are associated with cemeteries in the Maghrib. Most of these include ceremonial visits and meals, usually accompanied by prayers at gravesides. Thus in Fās, at least until World War II, the family of a deceased person on the day after the death sent a meal to the grave to be distributed to the poor assembled there (wādū 'l-kbār "the supper of the grave"). Generally, various individuals or groups (family, men, women) visit graves on specific occasions, such as 'Āshura day, on 26 Ramadan, and on 'Arafa, the day before the Greater Festival. In most urban centres, the obligatory outdoor place of prayer, musallā, is in the major cemetery. There the chief religious rite of the Greater and Lesser Festivals, the morning worship of the first day, takes place, and on the Greater Festival, the imām, in the capacity of the head of the local community, is carried out by the kadī (see E. Westermarck, *Ritual and belief in Moroc-

...
bricks as material for tombs (Geuffroy, Erste Theil der Hoffhaltung Des Türkischen Keysers ... ed. Hoeniger, Basel 1596, i. p. cli). The use of this transient material, if in fact not limited to isolated cases, could explain the small number of tombs which have survived from this period. This might then support the hypothesis according to which the funerary art of the later Ottoman period began to develop in the 10th-11th/16th-17th centuries only.

One of the characteristics of the Ottoman gravestones—unparalleled in this form—is their thronesque shape, with a representation on top of some kind of headgear. Such a representation is reserved for tombs of men, but it is not the only form used. (Only further investigation can confirm the assertion, repeatedly put forward, that the form of the upper part of tombs for women, widespread since the 11th/18th century, can indeed be traced to an old Turkish, nomadic headgear.) The headgear on tombs of men—in a comparable form and frequency not to be found in any other region of the Islamic world—can be proved to have been in existence since ca. 900/1494-5. The oldest example in Istanbul is the tomb of a Dervish Mehmed in Eyüp (918/1512-3). In the next 200 years, hardly any social differentiation can be detected in the form of the headgear, since only a small number of turban forms appear which cannot be clearly associated with a particular social group.

Since the 11th/18th century, it became customary in Istanbul to represent, on gravestones of men, a headgear which was specific for a certain social class, or to express the social affiliation in another way (representations in relief of headgear and other distinctive marks). In the same way in which the graves of dervishes began to show the turbans of the various tarıkas, and not the headgear in general use, the form of the turban started to indicate the differentiation between the various professional and social groups in other areas of society. Besides, one finds other representations in relief which indicate to which group the deceased belonged: insignia of bûlûk and ğemâ 'at for Janissaries, rossettes (gül) of the various tarıkas, especially for women from ca. 1250/1834-5, and yet other infrequently, images of utensils and instruments.

For about a century, this strong differentiation marks the image of Ottoman gravestones. The introduction of the fez from 1829 onwards leads, again, to a general levelling and standardisation. (In other parts of the empire this development appears with some delay; e.g. in Bosnia, turban forms, which in the capital had fallen into disuse at the beginning of the 18th century, were still used towards the end of the 19th century.) Besides the fez, turbans remained in use, but in Istanbul they were, since about 1850, almost exclusively reserved for 'ulumâ' and dervishes. Finally, the Atatürk reforms, especially the reform of the script and the legislation on headgear, mark the end of the tradition of Ottoman graves.

As in other fields of Ottoman art, an ever-increasing degree of European influence upon grave ornamentation can be detected from the second half of the 18th century onwards. Before that period, gravestones had hardly been decorated, but now vegetational motifs, both of traditionally oriental (cypresses, etc.) and of western origin (flower-baskets, cornucopias, etc.) were spreading more and more. By the roundabout way of Europe, older Islamic motifs, like the arabesque, were rediscovered for tombstone art towards the end of the 19th century. In general, the development of ornamentation of tombstones went parallel to that of representative and architectural art.

Whereas tomb inscriptions in Arabic can be found for the early period, Ottoman became the dominant language in the 10th/16th century. With regard to their contents, these inscriptions underwent but very few alterations: they follow a formula which corresponds largely to that of Ottoman documents (see Kraclitz, Osmanische Urkunden in türkischer Sprache, Vienna 1921, 12 ff., adapted to gravestones by Prokosch, Osmanische Inschriften auf Gräbern bei der Moschee des Kanabay-Klosters in Topfane-Istanbul, Istanbul 1976, 3-4):

1. invocatio: mostly kâve 'l-bâkî, or another of the 99 names of God [see AL-ÂSMA' ÂL-ḤUSâNā].
2. benedictio: merhâm ve maghâfir, occasionally more elaborate.
3. inscriptio: statements about the deceased. Apart from the name, details on his origin, relationship and profession, may be given here.
4. request for prayer: mostly râhûlân or rûhûnâ fâtîhâ.
5. date.

Such concise and rather uniform inscriptions were standard during a long period, even if particular components occasionally are expressed more elaborately. From the 18th century onwards, poetical expressions on the transtitoriness of temporal existence are often inserted between the invocatio and the benedictio, in which reference is almost always made to the same limited and reiterated répétitions of this kind. In the same period, chronograms are more and more used, especially for dervishes. In later times, there is a clear tendency towards more elaborate inscriptions. Instead of the original 5-6 lines of concise text, there often appear 15-20 lines which, however, do not provide more factual information.

Traditional Ottoman Islamic society did not allow the inscription andere of tombs, or their re-use; burial-places had to remain for ever. Yet the loss of many tombstones, and above all of most of the (uninscribed) foot-end stones might be attributed to their being used again by Ottoman masons. Since the middle of the 19th century, the construction of roads for traffic and new buildings has become another source for destruction of cemeteries, and consequently of tombstones, a problem which has still not been solved. However, at present most of the permanent losses cannot be imputed to such interferences (in which, as a rule, at least part of the tombstones are erected again at some other places), but to the hardly supervised re-use of historical cemeteries.

4. In Iran [see Suppl.]

5. India

The word makbara is used in India for both graveyard and mausoleum, although kabristân is also heard for the former; kahâr, may, besides the grave itself, signify a monumental tomb, especially of the simpler variety; dargâh is used especially for the tomb of a shirine of a pir, where there may be also such associated buildings (mevâqeh, mehman-îgâhâ, etc.; in Kashmir a pir's tomb is usually called ziyârat, and the related mazâr may also be used, especially for the smaller wayside shrine; râwa is commonly used for a
monumental tomb within an enclosure, not necessarily of a pir. The solitary grave is rare; the individual grave becomes a focus for other sepulchres. In this way many family graveyards especially have come into being—"family" in the case of a pir being held to include murids. There is a tendency in some regions for graveyards of the Muslim community to be situated to the south of habitations, possibly an extension of the Hindū association of the south as the "quarter of Yama", the god of death: in the Lodī period the entire region of Dihli south of Farīdābād and Purānā Kī's down to the Kutb complex was used mostly as a vast necropolis. Khuldābād, near Daulatabad, was originally called simply Rawda and was a necropolis village. Community graveyards may be enclosed by a low boundary wall, but protection is generally careless and graves and walls may fall into early ruin. Some enclosures are known to be family graveyards, where the standard of upkeep is higher; there may be an imposing entrance to the east and a tall and substantial wall to the west, with arched openings or depressions which serve to indicate the kibla; some of the Kadhuk Shāhīs (Yamamoto [q.v.] has suggested that some of these may have been intended as sleep places) have substantial mausoleums in addition to simple graves. In the Kadam Shārīf tomb and mosque of similar proportions and sumptuous decoration standing on a marble and there is an inscribed marble headstone; individual mausoleums may also be provided with such a separate structure on the kibla side, or the enclosure wall may be modified in such a way as to incorporate one: e.g. the tomb of Sikandar Lodī in Dihli has three arches and a raised platform in the west enclosure wall which presumably formed a khanātī mosque. A mausoleum very often has openings on three sides with the west wall solid to incorporate an internal mīrāb (the tombs of the Barīd Shāhīs [q. v.], however, are regularly open on all four sides). The larger mausoleums may be provided with a full-scale mosque, either replacing or in addition to an internal mīrāb; Bigdāpur [q.v.] provides many excellent examples, of which the Ibrahīm Rawda is the finest example with tomb and mosque of similar proportions and sumptuous decoration standing on a common platform in an elaborate enclosure; the Tādī Maball [see MAHALL] has not only a superb mosque on the kibla side but an identical building on the east essentially for the symmetry of the plan but incidentally also to serve as a mihrāb-dārma. (The conversel arrangement, wherein a single tomb is subsidiary to a mosque, is common, especially when both have the same founder.) Some major mausolea, however, are without any indication of the kibla at all: e.g. Humāyūn's tomb at Dihli (plan at Vol. ii, p. 262 above) has neither internal mīrāb nor external mosque or other structure (the building on the west, where a mosque might be expected, is in fact the main gateway); although the enclosure wall on the south-east has a range of exterior arches which formed the kibla wall of the earlier "Nilā gunbad". At some graveyards there is a special mortuary provided for the ghassdls to work in; outstanding examples at the graveyard of Afdal Khān's wives at Bigdāpur, and the tombs of the Kutb Shāhī kings at Golkonda. Some form of wall is of course a common adjunct; a bā'ālī [q.v. ] is commonly found included in a Cīghtī dargāh complex, and occasionally elsewhere (e.g. within the fortified enclosure of the tomb of the "Sayyid" sultan Mubārak Shāh at Kollā Mubārapur, Dihli). There has been no study of the typology of gravestones (i.e. the stone or brick structures above ground level, the tā'īlid) in India as a whole, although many types with regional variation can be recognised. Dā'far Shārīf [q.v.], referring primarily to the Deccan, says that on a man's tomb, above the (commonly) three diminishing rectangular slabs, a top member is placed "resembling the hump on a camel's back, or the back of a fish", and adds that in north India tombs of men and women are distinguished by a small stone pence (kalamād) raised on the flat upper surface; but in both types the tomb itself will be seen side by side in Dihli graveyards. The tombs of women are generally flat above the diminishing rectangular slabs, and more frequently in north India than in the Deccan may display a flat takhtī, in form like a child's slate, where those of men have the kalamād (the explanation commonly given is that only males are literate and so can carry a pence, whereas women have to have everything written for them!); in south India in particular a woman's tomb may have instead a basin-like hollow on the upper surface. The woman's tomb, given the same date and provenance, is lower than the man's. In the case of the larger mausoleums, it applies to the cenotaph tā'īlid as much as to the kalamād of the actual grave. There is a range of types for men and women's tombs, a mere stepped surround with the inscription, a string bed (kalamddn) with rope lashings which would have been used as the bier. A cirdghddn, which frapramn (the circular frame on which the corpse was burnt, may be placed at the head of or alongside any tomb; the actual
grave may, in the case of the illustrious, be covered with a pall kept in place by ornamental weights (mir-i farāj). The tomb of a pir may be marked also by a white (or green in the case of a sayyid) triangular flag (mir-i āqīl) and a horseman carrying a spear, sometimes led by an attendant. Similar carvings (or paintings on wood) are reported in Crooke's ed. of Dīja'far Shari'ī (ref. below) from Afghanistan, Kurdistan, and the Orakzay Pathāns; this ethnological aspect stands in need of further investigation.

A curious class of tomb, sparsely but widely distributed, is that of the "nine-yard saints", nām gaz pir, usually ascribed to warrior saints of the earliest days of izb. Many of these have the reputation of miraculously extending their length over the ages. (Miracles are reported at other tombs: lumps of silver in the pavement of the dargah of Muntadib al-Dir "Zar Bakhlū" at Khuldābād are said to be the remains of silver trees which grew after the saint's death, which were broken off for the upkeep of the shrine; hairs from the Prophet's beard at the same place are said to increase in number yearly.) Many tombs have the reputation of curing various ailments through the thaumaturgic power of a pir persisting; e.g. women still tie ribbons on the lattice screens on the tomb of Sallām Cishti at Fathpur Sikrī as a cure for barrenness. (The virtue is not confined to Muslims: I have seen an obviously Hindu woman making oblations at the tomb of the Ẓādī brothers at Bigāpur.)

Tombs may bear inscriptions (and inscribed tombs, though not for any but the simplest treatment here; further information is provided in the articles HIND. vii. Architecture, tombs, MUGHAL. Architecture, and on the various regional dynasties. The simplest type, that is it provides a covered place over the tawilī, is the ṭhartī [see MIZALLA], a single dome supported on pillars; those covering a square or octagonal area are the commonest, although the hexagonal plan is known. From the use of the umbrellas in both Buddhist and Hindu funerary practices, there is possibly here a persistence of an eschatological idea (but the Hindu use of the ṭhartī to mark the site of a cremation, so common with the Rājpūts rulers at e.g. Udaypur and Dwarkpur, is a borrowing back from Islamic forms). Even with this simplest type there is the possibility of the common principle that a funeral building (or its site; cf. the tomb of Tūgbūl Shāh mentioned above) might be intended for a different purpose during the owner's lifetime. An elaboration is to support a square roof on twelve pillars, thereby furnishing three openings on each side as well as making possible a larger area (this type of building, bādarā, is also of wide secular use for plenties). Filling in the openings with stone screens (dālī), leaving an entrance on each side, is frequently practised, although as noticed above the western side is often closed to provide an indication of kibla; Tomb 2 at Thānlēr [g. v.; see plan of tombs] is a bādarā whose sides have been filled in with purpose-cut masonry. An extension of this type is characteristic of Gujrat, whereby both an inner chamber and a surrounding veranda are provided with screened walls; after the Mughal conquest of Gujratī tombs of this type are found in north India, e.g. those of Muḥammad Qāwālī at Gwāliyar, Sallīm Cishti at Sīkār, etc. When a tomb is given greater prominence by being raised on a plinth, the sepulchral chamber may be placed at earth level in a tahkāna, with a cenotaph tawilī immediately above it on an upper floor; but where this applies to the principal inhumation at a large mausoleum, it is not practised for later and subsidiary burials, and is not held to be required for burials within a raised mosque pahn. The preponderant form of the mausoleum is a square chamber surmounted by a dome; an idiosyncratic type occurs in the royal Bahmani tombs (Haft Gumbad) at Gulbāgā [g. v.], where two square domed chambers are conjoined on a single plinth (the sultan in one chamber, his immediate family adjoining); but the octagonal form [see MUTIAMMAN] is also known from the 9th/14th century (popular for royal tombs of the "Sayyid" and Lodi dynasties. Tombs of pīrs at Multān and Uzāb [g. v.], nobles of the Sūr dynasty [see especially Ḥusayn Sūrī], and not infrequently in Mughal times); in the earliest monumental tomb, that of Nāṣir al-Dīn Māhmūd ("Sultan Ghārī") at Dihlī, the plinth of the structure accommodates a vaulted octagonal sepulchral chamber. In two of the Sūr tombs at Sāsārām [g. v.] the mausoleum stands in the middle of an artificial lake, approached by a gateway and causeway; the idea recurs in the Mughal period with fine but anonymous examples at...
I'timádpur, near Ágrá, and Nárñaw [q. v.], where the idea of a pleasure for use in the lifetime of the subject seems patent. Mughal mausolea introduce new plans: the oblong, the square or oblong with chamfered corners to produce a "Baghdádi octagon" (e.g. the Táj Mahal), a square chamber with engaged corner rooms (e.g. Humáyún's tomb, tomb of ʿAbd al-Rájiḥ Kháňgháñán), or engaged corner turrets (e.g. tomb of Sa’dád Dýang). They may also incorporate independent symmetrically disposed minarets (see MÁNARA, 2, India), and may stand within a formal garden (see BÚSTAN, and further references in MÁ, 12). The wooden tombs of Kháshúmir do not fall into any of the above categories, and are described under ZIYÁRA.

Wetzell, Islamische Grabbauten in Indien in der Zeit der Soldatenkaiser, Leipzig 1918, provides a typological framework for the study of monumental tombs of the Delhi sultanate, in rich in plans and sections. T. Yamamoto, M. Aro and T. Tsukinowa, Delhi: architectural remains of the Delhi sultanate period, i, Tokyo 1967, describe (in Japanese) and illustrate 142 monumental tombs and 72 graveyards of Dílí, excellent photographs; idem, ii, Tokyo 1968, analyse in depth several of the same monumental tombs. Some good illustrations of "Nizám al-Din's graveyard" at Cándéri in R. Náth, The art of Chándéri, Delhi 1979. Much of the information above is based on a personal photographic collection, which will eventually be housed in Victoria and Albert Museum, London. (J. Búrtón-Págè)

**MÁKBÚL IBRÁHÍM PÁSHA, [see IBRÁHÍM PÁSHA.**

**MÁKDISHÚ, the capital of the Somaíí Républic, independent since 1960, comprising the former Italian Somalia and British Somaliland, lies in lat. 2° N. on the East African shore of the Indian Ocean.**

Although it is not specifically mentioned in the Periplus of the Erythraean Sea (ca. A.D. 106), this Alexandrine report attests the presence of Arab and Egyptian traders on the coast. The principal exports were cinchona and frankincense, tortoise-shell and "slaves of the better sort, which are brought to Egypt in increasing numbers." Recent excavations at Rás Háífún by H. N. Chittick, as yet unpublished, disclosed Egyptian pottery of Roman Imperial date, probably 2nd to 3rd century A.D. Apart from some ruins of uncertain date that are possibly South Arabian, Mákdishú is stated by a 16th century Chórónica dos Reys de Quíloa, preserved in a summary form by João de Barros, to have been founded by "the first people of the coast who came to the land of Sofála [q. v.] in quest of gold." This date is uncertain, but it was at some time between the 10th and 12th centuries A.D., when the Sofála gold trade became the monopoly of Kišva (Port. Quíloa) [see KÍLWA]. It is not to be thought that there was any single immigration of Arabs; rather, they came in trickles, and from different regions of the Arabian peninsula; the most remarkable one came from al-Áhsá on the Gulf, probably during the struggles of the caliphate with the Kármásháíns. Probably at the same time, Persian groups emigrated to Mákdishú, for inscriptions found in the town refer to Persian sūr, Shíráz and Néyshábúr dwelling there during the Middle Ages. The foreign merchants, however, found themselves obliged to unite politically against the nomadic, Somaíí, tribes that surrounded Mákdishú, and against invaders from the sea. In the 10th century A.D. a federation was formed of 39 clans: 12 from the Mükri tribe; 12 from the Díd’á risí tribe; 6 from the Aṣkábi, 6 from the Ismá’ílíi and 3 from the Aflatíi. Under conditions of internal peace, trade developed; and the Mükri clan, after acquiring a religious supremacy and adopting the nísha of al-Kábšáni, formed a kind of dynasty of sálama and obtained from the other tribes the privilege that the kádi of the federation should be elected only from among themselves. It is not known at what period Islam became established, but the earliest known dated inscription in Arabic in Somalia is an epitaph at Baráwa of 496/1105.

In the second half of the 7th/12th century, Aḥú Bakr b. Fákhr al-Dín established in Mákdishú an hereditary sultanate with the aid of the Mükri clans, to whom the new ruler recognised again the privilege of giving the kádi to the town. In 722/1322-3 the ruler was Aḥú Bakr b. Muhammád; in that year he struck dated billon coins in his name, but without title. During the reign of Aḥú Bakr b. Urmá al-Hámid, the town was visited by Ibn Baṭtaṣá, who describes the town in his Ríba. The relationship of this sultan with his predecessors is not known, but he was probably from the family of Aḥú Bakr b. Fákhr al-Dín; and under this dynasty Mákdishú reached, in the 8th/14th and 9th/15th centuries, the highest degree of prosperity. Its name is quoted in the Maḥáfa Mílát, a work by the Ethiopian ruler Záre’a Yáš’kob, who refers to a battle fought against him at Gömut, or Goimit, in Dawaró by the Muslims on 25 December 1445. To these centuries are to be ascribed, in addition to the billon coins issued by Aḥú Bakr b. Muhammád, the undated copper issues of ten rulers whose names are commemorated on their coins, but whose sequence even is not known. They are linked by a similarity of script, weight, type and appearance, and certain of the issues share with contemporary Kišva issues a reverse legend contrived to rhyme with the obverse. To this period belongs also the foundation of the three principal mosques in Mákdishú, all dated by inscriptions, the Friday Mosque in 636/1238, that of Arba’ Rukún in 667/1268, and that of Fákhr al-Dín in Sha’bán 667/April-May 1269. Their handsome proportions witness to the prosperity of the times there.

In the 10th/16th century, the Fákhr al-Dín dynasty was succeeded by that of Muḥáfír. It is possible that one copper issue refers to a ruler of this dynasty. In the region of the Wébí Shábéllá, the true commercial hinterland of Mákdishú, the Aḫdurán (Sómáíí), who had constituted there another sultanate which was friendly with and allied to Mákdishú, were defeated by the nomadic Háwiya (Sómáíí), who thus conquered the territory. In this way, Mákdishú was separated by the nomads from the interior, and began to decline from its prosperity, a process which was hastened by Portuguese colonial enterprise in the Indian Ocean and later by the Italians and the British. When Vašco da Gama returned from his first voyage to India in 1499, he attacked Mákdishú, but without success; and similarly in 1507 Da Cunha failed to occupy it. In 1532 Aḥú Bakr b. Gáma, son of Vašco, came there to buy a ship. In 1585 Mákdishú surrendered to the Ottoman amir ʿAli Bey, who came down the coast in that year with two galleys as far as
Mombasa; all along the coast, the suzerainty of the Ottoman Sultan was recognised. In 1587, however, the Portuguese re-asserted their authority with a strong fleet, but no attempt was made to attack Makdishu. The vials of their wrath fell on Faza, where large numbers of people were slaughtered and 10,000 palm trees destroyed. Ali Bey returned with five ships in 1589, but, although the coast again declared for the Ottomans, he was himself defeated and captured in Mombasa harbour, from which he was deported to Lisbon. Although this was the end of Ottoman attacks on the eastern African coast, a new copper coins were issued by no less than eleven rulers. All these bear a title of 

In 1700 a British squadron of men-of-war halted before Makdishu for several days, but without landing. After the 'Umāni Arabs had taken Mombasa from the Portuguese in 1698 Makdishu and other towns on the Sōmāli coast were occupied at uncertain dates, but after a while their troops were ordered back to 'Umān. The sultanate of Makdishu continued to decline, and the town was divided into two quarters, Hamar-Wen and Shangani, by civil wars. Little by little the Sōmāli penetrated into the ancient Arabian town, and the clan of Makdishu changed their Arabic spelling of the name, which became the rēr Shēkh, the Dijīf/ät al Shangani, the 'Affīli the Gudmanā, and even the Mukri (Kahtāni) changed their name to rēr Fākhī. In the 12th/18th century the Darandollā nomads, excited by exaggerated traditions of urban wealth, attacked and conquered the town. The Darandollā chief, who had the title of imām, set himself up in the Shangani quarter, and once attacked for the Karīmāni's forces of electing the kāfīd was recognised. In 1823 Sayyid Sa'īd of 'Umān attempted to assert his authority over Makdishu, and arrested two of the notables. It was not until 1843 that he was able to appoint a governor. He chose a Sōmāli, but the new governor shortly retired inland to his own people. When Charles Guillaud visited Makdishu in 1846, he found only "an old Arab" who presided over the customs house. Guillain's fourth volume, an annual rent of 160,000 rupees, in 1892.

Established over Makdishu, only to be ceded to Italy, in 1895; A. Negre, A propos de Mogadiscio au moyen âge, in Annales de l'Unite du Benin, ii (Nov.-Dec. 1975), 175-200, repr. in Annales de l'Unite d'Abidjan, Série 1, vol. v (1977), 5-38.

E. CERULLI [G. S. FREEMAN-GRENVILLE]...
9. The tip (ɗawalak) of the tongue: the sounds pro-
nounced at the tip of the tongue (rā) (mīm), and nūn.
10. The lips (ṣīdīk): the labials fā, bā, and mīm.

In the second classification, less detailed than the first,
Makhdūm enumerates them in the opposite way, i.e.,
from the lips to the throat, but with only six ar-
ticulatory zones:
1. The lips: fā, bā, and mīm.
2. The tip of the tongue and the extremity (sāraf) of the
palate (qāf): rā, mīm, and nūn.
3. The back (zahr) of the tongue and the zone going
from the interior (khālīn) of the middle incisors
(hamza) to the palate: ɗād, ɗād, and ɗād.
4. The back part of the mouth, between the root
(‘akada) of the tongue and the uvula: ɗīm, kāf, and
kāf.
5. The throat: ɗūn, hā, kāf, and ɗūn.
6. The back part of the throat: hamsa.

It will be noted that, in this scheme of classification,
the place of emission of the ɗūn is placed with that of
kāf which might suppose a realisation as ɗīm, and that
of waw, yā, and ɗīl is not given with preci-
sion, whilst that of the hamsa is placed in the throat.

The second description of the points of articulation of
the phonemes of Arabic is provided for us by
Sībawayhi (d. ca. 180/796 [q.v.]) in his Kitāb
(ed. H. Dērenbourg, Paris 1889, ii, 452-3). In this,
Sībawayhi enumerates, going from the throat towards
the lips, 16 places of emission of the sounds:
1. The back part of the throat: hamsa, hā, and ɗīl.
2. Its middle part (awsal): ɗūn and hā.
3. Its fore part: ɗūn and kāf.
4. The back part of the tongue and palate (hawak): kāf.
5. A little lower (asfal) than the place (mawdi)
of the kāf: kāf.
6. The middle part of the tongue and the middle part
of the palate: ɗīm, ɗīn, and yā.
7. The beginning of the edge (kāffu) of the tongue
and its molars (adrās): ɗād.
8. The edge of the tongue, from its forward part
to its extremity, and the palate, a little bit below the
pre-molar (dabāk), the canine tooth (nāb) and the
incisors (nāb and ɗās): lām.
9. The tip of the tongue and a little bit below the
middle incisors: nūn.
10. The same position, but a little further towards the
inner part of the back of the tongue: rā.
11. The tip of the tongue and the bases (usūl)
of the middle incisors: tā, dāl, and tā.
12. The tip of the tongue and a little bit above the
middle incisors: ɗād, sīn, and sād.
13. The tip of the tongue and the tips of the middle
incisors: zā, ḍhāl, and ḍhā.
14. The inside of the lower lip and the tips of the up-
per middle incisors: fā.
15. The two lips: hā, nūn, and waw.
16. The nasal cavities (khvajām): nun realised lightly
(khafṣā).

The most important difference between the descrip-
tion of al-Khalīl and that of Sībawayhi lies in the fact
that al-Khalīl indicates the place of emission of waw
and yā realised as long vowels (a and y), whereas
Sībawayhi indicates these places of emission realised
as consonants (w and y).

It was Sībawayhi’s description which was to prevail
for all the later grammarians, in whose works it
is found cited en bloc, sometimes with a few variations.
Thus al-Muharrad (K. al-Mukaddab, Cairo 1963, i,
192-3) separates the place of emission of ɗūn from that
of ɗīm and names the place of emission of ɗād by a
word which denotes the corner of the mouth (ṣīdīk).

One should finally note that the makhdūrd al-hurūf
have been the subject of a very interesting study by a
Moroccan scholar, Muḥammad b. ‘Abd al-Salām al-
Fātī (1717-95), in his commentary on the Lamiyya of
Abū ‘l-KĀsim al-Shāhī (K. al-Muktadab, Cairo 1963, i,
xxviii (1949), 225-85; idem, La conception phonétique des Arabes, in ZDMG, cvii (1958), 74-105;
idem, Traité de philologie arabe, i, Beruit 1969, 51-70;

d’après l’enseignement d’al-Halīl, in Arabica, xxiv

MAKHDUM-I DJAHANIYAN. [see ιdğal
bukamr].

MAKHMUD KULI “FIRAKI”, perhaps rather
Makhtum Kuli (local forms Magtimkuli and Fragi), a
prominent 18th century Turkmen poet
(1733?-1782). Much of the information about this
poet is obscure, and sources are unreliable. Among
the 10,000 lines ascribed to him, a substantial amount
must certainly be considered spurious, invalidating
their informative value. Moreover, it is unclear
whether the events alluded to have a real historical
significance or are merely literary devices. Hence it is
uncertain whether he was really born in the Gürgen
River region, studied at the Shīrghāz and Kūkīlās
madrasa in Khiwa and Bukhārā respectively, worked
for a time as a silversmith and a cobbler, bewailed a
brother, who had disappeared into captivity in Persia
(where he himself had suffered too), lost an infant son
and was separated from his love. However, there is a
personal flavour in the relevant descriptions. Such
uncertainties are often met with when discussing ma-
jor Turkmen poets.

It does however seem that he was a son of Dawlat
Muhammad “Azādī”, that he travelled widely, and
that he was well versed in classical Persian and
Turkish letters as well as in the folklore of Central
Asia. Iran and Khiwa. His lyrical and didactic (not epic,—
though Yassāwi-like elements spring to the eye—not
strictly religious) poetry remained widely appreciated,
not only among his compatriots but in the whole of
Central Asia.

MAKHDUM AL-MULK, a Mughal religious leader, whose real name was MAWLANA ‘abd ALLAH. He was the son of Shuykh Shams al-Din of Sultanpur. His ancestors had emigrated from Multan and settled at Sulтанpur near Lahore. The pupil of Mawlana ‘Abd al-Kadir Sirhindi, he became one of the foremost religious scholars and functionaries of his day. A committed SunnI, he never became a knowledgeable traditio

Khanan (d. 968/1560) exalted his position very much by giving him the sub-division of Thakawala which yielded an annual income of one lakh of rupees, while Akbar gave him the title of Makhdum al-Mulk, by which designation he has become known to posterity. When the Emperor introduced his religious innovations and tried to convert people to his "Divine Faith" [see DIN-I ILAHI], however, Makhdum al-Mulk opposed him. Akbar became very angry. He ordered Makhdum al-Mulk to go on a pilgrimage to Mecca and Medina. Setting out in 987/1579, he completed the enforced canonical journey within two years' time. On his return from the Hidjaz, Makhdum al-Mulk died or was poisoned in 990/1582 in Ahmadabad. He was the author of the following books, none of which are now extant: (1)‘Imam al-anbiya, a work on the sinlessness of prophets (cf. Bada’uni, iii, 70); (2) Minhad al-din, a life of the Prophet (cf. Ma’arif al-umara, ii, 252); (3)‘Asyia Shara‘ Mullah, a gloss on DjamT’s commentary on Ibn al-Hadjib’s Rukn-imawd, (invocatory prayers) and Awrdd (prac-
tions of sada). Numerous are the compila-
tions of awrad (invocatory prayers) and ishtas (prac-
tical directives) attributed to Sharaf al-Din, but his most comprehensive work was a sharh (commentary) on the Safi catechism, the Addb al-muridin of Abb ‘Nasir Subrawardi (d. 1561). The literary and spiritual tradition of Sharaf al-Din was continued by several notable Firdawsl saints who were his successors, beginning with Muzaaffer Shams Balkhi (d. 830/1424). The attainments of this regionally delimited silsila were lauded throughout Hindustan; its major shaikh was found recognition in the most popular pan-Indian tdkhirus, e.g., ‘Abd al-Hakḳ Dihlawi’s Akhbar al-akhydr and Ghulam Sarwar Lahori’s Khazinat al-asfiq. Bibliography: Sharaf al-Din Makhdum al-Mulk, a Mughal religious
erald on his return from the Hidjaz, Makhdum al-

meditation on God. When he re-emerged at Bihār Sharif (ca. 60 miles from Patna city) in the 1320s, he was acknowledged as a spiritual preceptor and guide of extraordinary power. From the Khazinat al-asfiq. The several writings of Sharaf al-Din reveal him to be a knowledgeable traditionist as well as a skilled dialectician, and they reflect different Sufi categories and concepts. He is best known for one of his collections of letters, Maktabat-i sad. He has also been credited with three other episodical volumes: Ruq-k-i jaww ‘id, Maktabat-i dā sad, and Maktabat-i bīst-i huqrāt. Several are the compila-
tions of awrad (invocatory prayers) and ishtas (prac-
tical directives) attributed to Sharaf al-Din, but his most comprehensive work was a sharh (commentary) on the Sāfi catechism, the Addb al-muridin of Abb ‘Nasir Subrawardi (d. 1561). The literary and spiritual tradition of Sharaf al-Din was continued by several notable Firdawsl saints who were his successors, beginning with Muzaaffer Shams Balkhi (d. 830/1424). Notes from a distant flute: the extant literature of pre-Mughal Indian Sufism, Tehran 1972, 72-77; S. A. A. Rizvi, A history of Sufism in India, i, Delhi 1978, 298-40. (B. LAWRENCE) MAIKHFI, the much-disputed pen-name of Zib al-Nisā’ Begum, eldest child of the Mughul emperor Awrangzib (1068-1118/1658-1707). She was born in 1638 at Dawlatabad in the Deccan. Her mother, Dilara Banû Begum (d. 1657), was the daughter of Shahnawaz Khan (d. 1659), a dignitary of Shahjahan’s reign. For her early education she was assigned to Háfíza Maryam, a learned lady who was the mother of one of Awrangzib’s trusted nobles, ‘Inayat Allâh Khán (d. 1139/1726-7). Under Háfíza Maryam’s guidance, Zib al-Nisâ’ memorised the Kur’ân, for which Awrangzib rewarded her with a purse of 10,000 gold pieces. Later, she studied under some of the best scholars of the time, foremost among them being Muhammad Sa’d al-Azhâr (d. 1116/1708-9), a poet and man of learning who came to India from Persia during the early part of Awrangzib’s reign. Her accomplishments included mastery of Arabic and Persian languages as well as skill in calligraphic writing. She was a great lover of books, and is said to have collected a library which was unrivalled in its time. Many writers and scholars benefited from her generous patronage, and some of them composed books bearing her name. Significant among such writings was Safi al-Din Ardabili’s Zib al- tafsîrî, which was a Persian translation of Fakhri-
Din Razi’s exegesis of the Kur’ân. Zib al-Nisa remained unmarried throughout her life. It is reported that she was involved in a love intrigue with ʿākil Khân, a nobleman of Awrangzîb’s court, but this is pure fiction invented by some 19th-century Urdu writers. She incurred Awrangzîb’s wrath for complicity with her brother, Akbar, in his unsuccessful rebellion against the emperor. In 1681 she was imprisoned in the Sâlimgah fort at Dihll, where she spent the remaining years of her life until her death in 1702. Whether or not Zib al-Nisa’s love poem is a disputed question. A collection of verse published in her name under the title of Dîwân-i Makhrî has been subjected to critical scrutiny, and is regarded as the work of someone other than Zib al-Nisa². Sporadic verses attributed to her indicate that she was a promising poet, favouring a lyrical style. Makhlad, Banû, a family of famous Cor- dovan jurists who, from father to son, during ten generations, distinguished themselves in the study of fîkh. The eponymous ancestor of the family was Makhlad b. Yazîd, who was kâdî of the province of Reyvob (the kâta in the south-west of Spain, the capital of which was Malaga), in the reign of the amîr ʿAbd al-Rahmân II, in the first half of the 3rd/9th century. His son, Abû ʿAbd al-Rahmân Bâkî b. Makhlad [q.v.], was by far the most famous member of the family, and his direct descendants devoted their intellectual activity mainly to commenting on the masterpieces of their celebrated ancestor. A list of these scholars, with bibliographical references, is supplied in a little monograph devoted to the family of the Banû Makhlad by Rafael de Ureña y Smenjau, Familias de jurísculos: Las Benimajlad de Córdoba, in Homenaje a D. Francisco Cor- dora, Saragossa 1904, 251-8. Bibliography: Add to the Bibli. of Bâkî b. Makhlad: Manuela Marín, Basîn ibn Majlîl y la introducción del estudio del hadîth en al-Andalus, in al-Qantara, i (1980), 165-208; W. Werkmeister, Quellenuntersuchungen zum Kitâb al-ʿIqd al-farîd, Berlin 1983, 267-70 and index. (E. Lévi-Provençal)
and was buried at the side of his father and his uncle al-Tayyib close to the mausoleum of the SufT Djawhar al-Adan (6th/12th century, cf. Ta'rikh Thaqaf al-Adan, ii, 29 (f)). Having studied under both father, his uncle and ʿAbd Allāh b. Ahmad Bā Surūmī al-Shirī (d. 943/1536-7) he was kādi in Shībīr twice, became a great authority (ʿumada) on fākh, and was consulted from all parts of the Yaman and Hadramawt. As will be seen from the list of his writings, he was not only a fākh and theologian, but pursued a special interest of astronomy and chronology. He also wrote some poetry (ardjiz).

Bibliography: O. Lofgren, from khuzna, “to shut up, to preserve, to hoard”. The word is believed to have been first used in North Africa as an official term in the 2nd/8th century applied to an iron chest in which Ibrahim b. al-A ḡlab, amīr of Ifriqiya, kept the sums of money raised by taxation and intended for the ʿAbbāsid caliph of Baghdad. At first this term, which in Morocco is synonymous with the government, was applied only to the financial department, the Treasury. It may be said that the term makhzan (pronounced makḥzan) meant the Moroccan government, and everything more or less connected with it, at first merely the place where the sums raised by taxation were kept, intended to be paid into the treasury of the Muslim community, the bāyi al-māl [q.v.]. Later, when the sums thus raised were kept for use in the countries in which they were collected, and they became, as it were, the private treasuries of the communities in which they were collected, the word makhzan was used to mean the separate local treasuries and a certain amount of confusion arose between the makhzan and the bāyi al-māl.

We do find in Spain the expression ʿabd al-makhzan, but it still means slaves of the treasury rather than slaves of the government, and in al-Andalus, later it seems that in Morocco, in proportion as the state became separated from the rest of the Muslim community after being successively under the Ḥumayyids of Damascus, the ʿAbbāsids of Baghdad, the Ḥumayyids of Spain and the Fāṭimids of Egypt, that makhzan came to be used for the government itself.

To sum up, the word makhzan, after being used for the place where the sums intended for the bāyi al-māl of the Islamic empire were kept, was used for the local treasury of the Muslim community of Morocco, when it took shape under the great Berber dynasties; later, with the Shārifīs, the word was applied not only to the treasury but to the whole organisation more or less administrative in nature which lives on the treasury, that is to say the whole government of Morocco. In tracing through history the changes of meaning of the word makhzan, one comes to the conclusion that not only is the institution to which it is applied not religious in character but, on the contrary, in law, the term māẖrēḏā had two meanings. Certain judicial districts in the Ottoman Empire were referred to as makhzan, mektubiyet, [see mevel bayet]. The name derived from a common attribute of the judges appointed to these districts. All were judges ‘going out’ to their first appointment after teaching in schools, madrasa [q.v.]. The judges who had completed this appointment and were awaiting assignment to a higher ranking judicial district were called makhzandu mawāṣīsī.

In inheritance law, in 1864, al-falak was the term for the denominator which was used to divide an inheritance among heirs. We do find in Spain the expression ʿabd al-makhzan, but it still means slaves of the treasury rather than slaves of the government, and in al-Andalus, later it seems that in Morocco, in proportion as the state became separated from the rest of the Muslim community after being successively under the Ḥumayyids of Damascus, the ʿAbbāsids of Baghdad, the Ḥumayyids of Spain and the Fāṭimids of Egypt, that makhzan came to be used for the government itself.

To sum up, the word makhzan, after being used for the place where the sums intended for the bāyi al-māl of the Islamic empire were kept, was used for the local treasury of the Muslim community of Morocco, when it took shape under the great Berber dynasties; later, with the Shārifīs, the word was applied not only to the treasury but to the whole organisation more or less administrative in nature which lives on the treasury, that is to say the whole government of Morocco. In tracing through history the changes of meaning of the word makhzan, one comes to the conclusion that not only is the institution to which it is applied not religious in character but, on the contrary, in law, the term māẖrēḏā had two meanings. Certain judicial districts in the Ottoman Empire were referred to as makhzan, mektubiyet [see mevel bayet]. The name derived from a common attribute of the judges appointed to these districts. All were judges ‘going out’ to their first appointment after teaching in schools, madrasa [q.v.]. The judges who had completed this appointment and were awaiting assignment to a higher ranking judicial district were called makhzandu mawāṣīsī.

To sum up, the word makhzan, after being used for the place where the sums intended for the bāyi al-māl of the Islamic empire were kept, was used for the local treasury of the Muslim community of Morocco, when it took shape under the great Berber dynasties; later, with the Shārifīs, the word was applied not only to the treasury but to the whole organisation more or less administrative in nature which lives on the treasury, that is to say the whole government of Morocco. In tracing through history the changes of meaning of the word makhzan, one comes to the conclusion that not only is the institution to which it is applied not religious in character but, on the contrary,
it represents the combined usurpations of powers, originally religious, by laymen, at the expense of which ... ajaysh a sum for replacing them (from ndba "to act as a substitute").

From this time onwards, Morocco assumed the appearance of a proper makhzan with its military tribes; ministers, its crown officials of high and low degree, its governors to whom were soon added the innumerable groups of palace officials which will be mentioned below.

The frequent intercourse between the Sa'dids and the Turks, who had come to settle in Algeria at the beginning of the 10th/11th century, brought to the court of Morocco a certain amount of eastern ceremonial, a certain amount of luxury and even a certain degree of pomp in the life of the sovereign and in that of his entourage and of all the individuals employed in the makhzan.

The increasing official relations of Morocco with European powers, the exchange of ambassadors, the commercial agreements and the ransoming of Christian slaves, largely contributed to give this Makhzan more and more the appearance of a regular government. The jealousies of the powers, their desire to maintain their garrisons in Morocco and the need to have a regular government to deal with them further strengthened the makhzan both at home and abroad and enabled the sultan Mawlay al-Hasan to conduct for nearly twenty years this policy of equilibrium between the powers on one side, and the tribes on the other, who kept till his death the empire of Morocco in existence, built up of very diverse elements, of which the makhzan formed the facade.

The very humble, almost humiliating, attitude imposed on the European ambassadors at official receptions increased the prestige of the sultan and the makhzan in the eyes of the tribes. The envoy of the Christian power, surrounded by the presents which he brought, appeared on foot in a court of the palace and seemed to have come to pay tribute to the commander of the Muslims, who was on horseback. All the theatrical side was developed to strike the imagination of the makhzan with much care, and it succeeded in creating an illusion of the real efficiency of this organisation in the eyes of both tribes and powers.

Under the Berber dynasties, the Almohads, the Marinids and the Banū Watṭāṣ, the military tribes, the gāzī (gish) were almost all Arab; under the Sa'dids they were entirely Arab; to the Djaḥsh and Banū Ḥilāl Arabs were added the Ma'ālik Arabs of the Sūs. On the other hand the Sa'dids had removed from the registers of the gāzī a certain number of the Arab tribes who then paid in money the kharāḍt for the abūs lands of the Muslim community which they occupied. These tribes, in contrast to the gāzī, were called tribes of the nāsha'd, that is to say, according to the etymology proposed for the word, they were under the tutelage of the makhzan (from nā'ib "tutor" or "substitute" for a father), or rather, they paid the tribes of the gāzī a sum for replacing them (from nāba "to act as a substitute").

From this time onwards, Morocco assumed the ap-
peformance which it had when France established her protectorate there. The frontier, settled with the Turks in the east, had hardly been altered by the occupation of Algeria by France and the territory of Morocco was divided into two parts: 1. bilād al-makhzan or conquered territory; 2. bilād al-siba [q.v.] or land of schism; the latter was almost exclusively occupied by Berbers.

The bilād al-makhzan, which represented official Morocco, was formed of territories belonging to the akhla of the Muslim community, liable to the akhla and occupied by Arab tribes, some ghīb, other nā'ba. The Berber tribes of the bilād al-siba not only refused to allow the authority of the makhzan to penetrate among them, but even had a tendency to go back to the plains from which they had gradually been pushed into the mountains. One of the main endeavours of the present dynasty, the ʿAlāwīs of Tafīlalt, which succeeded the Saʿīdīs in the 11th/17th century, has been to oppose this movement of expansion of the Berber tribes. This is why Mawlay Ismāʿīl, the most illustrious sultan of this dynasty, built 70 kāyban on the frontier of the bilād al-makhzan to keep down the Berbers. Hence we have this policy of equilibrium and intrigues which has just been mentioned and which up to about the 20th century was the work of the makhzan.

Makhzan, gradually formed in course of centuries by the possibilities and exigencies of domestic policy as well as by the demands of foreign policy, seems to have attained its most complete development in the reign of Mawlay al-Ḥasan, the last great independent sultan of Morocco (1873-94). The government of Mawlay al-Ḥasan consisted in the first place of the sultan himself, at once hereditary and also, if not exactly elected, at least nominated by the ʿulamaʾ and notables of each town and tribes from among the sons, brothers, nephews and even the cousins of the late ruler. This proclamation is called baʿya. It is, in general, he who takes control of the treasury and of the troops when the moment comes to assume the right of succession. It sometimes happens that the late sovereign has nominated his successors, but this does not constitute an obligation on the electors to obey it. There is then no rule of succession to the throne.

Formerly there was only one vizier, the grand vizier (al-ṣadr al-ʿaṣrām); the grand vizierate, a kind of Ministry of the Interior was divided into three sections, each managed by a secretary (kāṭib).

1. From the Strait of Gibraltar to the Wād Bū Regreg.
2. From Bū Regreg to the Sahara.
3. The Tafīlalt.

In the reign of ʿAlī Muhammad (1859-73), the more frequent and intimate relations with Europe and more particularly the working of the protectorate, made it necessary to found a special office for foreign relations, and a waṣīr al-bahr, literally Minister of the Sea, was appointed. This did not mean minister for the navy, but for all that came by sea, i.e. Europeans. This minister had a representative in Tangier, the nāʿib al-sūlān, who was the intermediary between European representatives and the central makhzan.

His task was to deal with European complaints and claims from perpetual settlements and to play off against one another the protégés of the European powers. The Saʿīdīs were certainly increasing in number and frequently formed an obstacle to the traditional arbitrary rule of the makhzan. The régime of the consular protectorate, settled and regulated in 1880 by the Convention of Madrid, had also resulted in discouraging the makhzan from extending its authority over new territory.

The exercise of this authority was in fact automatically followed by the exercise of the right of protection and, from the point of view of resistance to European penetration, the makhzan had everything to gain by keeping in an apparent political independence the greater part of the territory in order to escape the influence which threatened in time to turn Morocco into a regular international protectorate.

By a conciliatory policy and cautious dealing with the local chiefs, the ṣāḥib of the aṣyān and the Sharīfīs families, the makhzan was able to exert even in the remotest districts a real influence and never ceased to carry on perpetual intrigues in order to divide the tribes against one another. It maintained its religious prestige by the hope of preparation for the holy war which was one day to drive out the infidels, and sought to penetrate by spreading the Arabic language and the teaching of the Kurʾān and gradually substituting the institutions of Islam by those of Islam, so that the authorities would be able to deal with the Berbers and not with a foreign element, for Berber customs. In a word, it continued the conquest of the country by trying to complete its Islamisation and making Islam permeate its customs.

In the reign of Mawlay al-Ḥasan, the makhzan consisted of the grand vizier, the waṣīr al-bahr, minister of foreign affairs, the ʿatal—afterwards called minister of war—the amīn al-ʿumandīn, foreign minister of finance—the kāṭib al-fāṣid, secretary for complaints, who became minister of justice by combining his duties with that of the kāṭib ʿl-kudt, Kāṭib of Kādīs. These high officials had the offices (ḥānīka, pl. ḥānīk) in the masgūwar at the Palace.

The offices were under the galleries which were built round a large courtyard. At the top of the masgūwar was the office of the grand vizier, beside which was that of the kāṭib al-mashwar, a kind of captain of the guard, who also made presentations to the sultan. The kāʾid al-mashwar was in command of the police of the masgūwar and he had under his command the troops of the ghīb, the masgūwarīya, masgūwarīya as well as all the bodies of servants outside the palace (ḥanāṭī, sīn. ḥanāṭa); the muṣālī (mūlū al-rūs, grand-master of the stables, and the ṣāḥib al-hāfẓa, who had charge of the sultan’s encampments (ṣāḥib [q.v.]).

In addition to these ḥānīkās of the masgūwar, mention must be made of an individual who could play a more considerable part in the government than his actual office would lead one to expect. This is the ḥādīqī [q.v.], whose ḥānīka was situated between the masgūwar and the palace proper; he had charge of the interior arrangements of the sultan’s household. Under his orders were the various groups of domestic servants (ḥanāṭī al-dākhīlīn), masgūwarī al-ṣūlān, who looked after the washing arrangements, muṣālī al-fāṣid, who attended to the beds, etc.; he also commanded the eunuchs and even was responsible for the discipline of the sultan’s women, through the sirāfīs or mistresses of the palace. The ḥādīqī is often called grand chamberlain, although he does not exactly correspond to this office.

Around these offices gravitated a world of secretaries of different ranks, of officers of the ghīb, then the kāʾid al-rākā, who was in theory in command of 500 horsemen, the kāʾid al-mīʿa, who commanded
100, down to a simple mukaddam. All this horde of officials, badly paid when paid at all, lived on the financial, who was later known as the minister of the imamlık, was levied on the non-?F? tribes by the grand vizier, which was sufficient in the old order of things which it had itself contributed to create and maintain, was forced, if it was not to disappear at once, to undergo fundamental modifications from the moment this state of things had rendered necessary the establishment of a protectorate. The vizierate of foreign affairs and that of war were then handed over to the Resident-General, and that of finance to the Director-General of Finance, who administered the revenue of the empire like those of a regularly-organised state. The director-generalships of agriculture and education, which were regular ministries held by French officials, as were the management of the postal service, telegraph and telephone, and the board of health.

Two new vizierates had been created, that of the regal domains (al-amîlak) and that of the abâbîs. The vizierate of the amîlak was soon suppressed and the domains were henceforward administered by a branch of the finance department. The vizierate of the abâbî was under that of the Sharifian affairs. This organisation represented the principle of protectorate in the Moroccan government itself, in order to realise “the organisation of a reformed Sharifian makhzan” in keeping with the treaty. (E. Michaux-Bellaire)

Bibliography: 1. On the evolution of the meaning of the word makhzan: E. Lévi-Provençal, Documents inédits d'histoire almohade, Paris 1928, Arabic text, 71 and glossary, and esp. Dozy, Supplément, s.v. šīr, n., and the bibl. cited there. For the sense of the term in Algeria, see F. Pharaon, Notes sur les tribus de la Subdivision de Médéa, in RA (1856-7), 393; in ibid. (1873), 196 ff.; N. Robin, Note sur l’organisation militaire et administrative des Turcs dans la Grande Kabylie, in ibid. (1873), 196 ff.; E. Mangin, Notes sur l’histoire de Laghouat, in ibid. (1895), 190 ff.

2. On the history of this institution: (a) Arabic works: Kitâb al-Baydak, in Lévi-Provençal, op. cit.; Ibn Abi Zar‘, Kitâb, lith. Fâs 1305; Ibn Baṭṭûta, Riḥâs; Ibn Ḥâlidûn, Makaddima; Ifrînî, Nuzhat al-bâdî, Arabic text, lith. Fâs 1307, tr. O. Nothing was done for public health, and one could not give the name of hospitals to the few mawāsit which were found in certain towns, where a few miserable creatures lived in filth, receiving from the abâbîs and the charity of the public barely enough to prevent them dying of hunger and without, of course, receiving any medical assistance.

On the repeated representation of the Powers, the sultan had ultimately delegated his powers to the members of the diplomatic corps in Tangier, which had been able to form a public health committee in order to be able to refuse admission if necessary to infected vessels. In spite of its defects, the makhzan constituted a real force; it formed a solid bloc in the centre of surrounding anarchy which it was interested in maintaining, in order to be able to exploit it more easily on the one hand and on the other to prevent the preservation in the country of any united order which might become a danger to it. In brief, we may say that the makhzan in Morocco was an instrument of arbitrary government, which worked quite well in the social disorder of the country, and thanks to this disorder, we may add, it worked for its own profit and was in a way like a foreign element in a conquered country. It was a regular caste with its own traditions, way of living, of dressing, of furnishing, of feeding, with its own language, al-ḥagha al-makhzanîyya, i.e. the language of the vizier without the sultan or the public treasury getting any benefit from it.

The grand vizier also appointed the nâdir (< nāzīr) officials who, from the reign of Mawlay ʿAbd al-Rahmān, had been attached to the local nāzīrîn of the abâbîs of the mosques and sanctuaries. The financial staff, umanî, who controlled the customs, the properties of the makhzan (al-amîlak), the market-fairs (market-dues and tolls, etc., called mulâsî, pl. of maksî), the controller of the bayt al-mdîl, Rahmann, had been attached to the local makhzaniyya, which is a correct Arabic intermediate system of equal favour, purchased arms and munitions from the different powers and kept them in the warehouses, and the board of health. The expenses of the education service were limited to the maintenance of a fact in the social disorder of the country, and thanks to this disorder, it worked for its own benefit and was in a way like a foreign element in a conquered country. It was a regular caste with its own traditions, way of living, of dressing, of furnishing, of feeding, with its own language, al-ḥagha al-makhzanîyya, i.e. the language of the vizier without the sultan or the public treasury getting any benefit from it.

This organisation was completely centralised, i.e. its only object was to bring all the resources of the country into the coffers of the state and of its agents; but no provision was made for utilising these resources in the public interest. No budget was drawn up, no public works, no railways, no navy, no commerce and no post was provided for. Military expenses were confined to the maintenance of a regiment commanded by an English officer, of a French mission of military instruction, of a factory of arms at Fâs directed by Italian officers and of the building at Rabat of a fort by a German engineer. Everything and augmented by the gifts made by the sultan on the occasion of feasts (silâ).

mu^rib, extract published and tr. Houdas, Le...
Descendants of al-Mughira b. 'Abd Allâh b. Umar b. Makhzûm

8 or 9 sons

Abû Rahîm
Abû Rabi’â
Abû Musaylima
Abû Bakr
Abû al-Rahmân
Hâshim
al-Walid
Nantama
Ibrikhâm
Muhammad
Umm Hâshim

Following the conquest of Mecca, Makhzûm were incorporated into the new order. Two of their number, al-Hâshim b. Hîsham b. al-Mughira and Sa’d b. Yarbû, were among those whose hearts were reconciled (al-mu’âllafa kulubuhum: Watt, Medina, 74), presumably in their capacity as leaders of the Banu ‘l-Mughira and the cadet branches respectively (Mu’arrîdî, 74, also names a second person from the cadet branches in this connection). Ikrima received a pardon, returned from the Yemen, played a conspicuous part in the suppression of the rûdâ (q. v.) in 11/632-3 (see al-Tâbarî, index, the Yemen was among the places to which this activity took him, but Mu’arrîdî seems to be alone in holding the view (69) that Abû Bakr appointed him over the Yemen), and was subsequently mortally wounded in battle against the Byzantines in Syria (at either al-Adnînayn [q. v.] or al-Yarmûk [q. v.]: al-Mus'ab, 303, 310; Ibn Sa’îd, v, 329; Ibn Durayd, 93; al-Baladhuri, Ansâb, ms., ii, 526; al-Tâbarî, i, 2100-1, iii, 2307). The continuing Makhzûm link with the Yemen also becomes apparent with the appointments there of al-Muhadjir b. Abî Umayya b. al-Mughira and ‘Abd Allâh b. Abî Rabi’â b. al-Mughira; there is disagreement in the sources about points of detail, but it would seem that al-Muhadjir was appointed as governor of San‘â by the Prophet in 10/631 but did not go there, was reappointed by Abû Bakr, went there, and was still there at the time of Abû Bakr’s death in 13/634 (Mu’arrîdî, 71; Ibn Durayd, 62, who incorrectly calls him al-Muhadjir b. ‘Abd Allâh b. Abî Umayya; al-Tâbarî, i, 1750, 2013, 2315, iii, 2357). Even more confused are the reports relating to ‘Abd Allâh b. Abî Rabi’â, who is one of those named in the earlier context of Makhzûm trade in the Yemen. He was appointed over al-Djanad and its mikhâl by the Prophet (Aghânî, i, 32), over all or part of the Yemen by Abû Bakr (al-Baladhuri, Ansâb, ms., ii, 531), and over the Yemen by Umar (al-Mus’ab, 317; Ibn Sa’îd, v, 328, Khâlîfî b. Khayyât, Ta’rikh, ed. Zakkar, 154; Ibn Hazm, 146); he was governor of al-Djanad at the time of ‘Umar’s death (al-Tâbarî, i, 2798; Aghânî, i, 32) in 23/634 and at the time of the death of Ummân (al-Tâbarî, i, 3057 Add.) in 35/656.

Two other Makhzûms who were particularly active in this period were Khâlîfî b. al-Walid b. al-Mughira [q. v.], who had earlier played a vigorous part in the Meccan military opposition to him, Khâlîfî participated in the conquest of Mecca; and Ikrima fled to the Yemen.

two more of the sons of al-Mughira, together with four of their sons (P. Crone, Meccan trade (forthcoming), ch. v).

The emergence of Muhammad as Prophet in the second decade of the 7th century A.D. met with strenuous opposition on the part of the Makhzûm leader of the time, Abû Djihal b. Hîsham b. al-Mughira [q. v.: he it was who in particular brought into effect the boycott of the Banû Hâshim in ca. 616-18 (Watt, Mecca, 117 ff.). In addition, his uncle, the hukam [q. v.: Ibn Habîb, 460; al-Fâsl, ed. Wüstenfeld, in Die Chroniken der Stadt Mekka, ii, 143] al-Walid b. al-Mughira, was one of the “deriders” (al-mustahzibûn) against whom verses in the Meccan suras of the Kur’ân are said to have been directed (Watt, 176, and cf. 93). al-Muhadjir was appointed as governor of San‘â by the Prophet shortly after the hujjra at the battle of Badr [q. v.: where the Meccan force which went to the assistance of the threatened caravan was led by Abû Djihal. The Makhzûm losses were heavy: seven or eight of al-Mughira’s twenty-five or so grandsons were killed on the Meccan side at Badr (among them Abû Djihal himself), together with a similar number and proportion of the same generation of the cadet branches of Makhzûm, and others were taken captive (for details, see Ibn al-Kalbî, tables ii, 22-3 and Register; al-Musâb, 299-346; Watt, Mecca, 176-7); the three Makhzûms who fought on the Prophet’s side at Badr, viz. al-‘Arqam b. Abû Manâf, Abû Salama b. Abû al-Asad, and Şamâs b. ‘Uttmân, were all from the cadet branches of Makhzûm, not from the Banu ‘l-Mughira (Mu’arrîdî, 73-4; Watt, Mecca, 176, and cf. 93). Losses of an order such as this inevitably weakened the position of Makhzûm at Mecca, and in particular vis-à-vis Abû Sufyân [q. v.]; there is disagreement in the reports relating to this activity took him, but Mu’arrîdî seems to be alone in holding the view (69) that Abû Bakr appointed him over the Yemen), and was subsequently mortally wounded in battle against the Byzantines in Syria (at either al-Adnînayn [q. v.] or al-Yarmûk [q. v.: al-Mus’ab, 303, 310; Ibn Sa’îd, v, 329; Ibn Durayd, 93; al-Baladhuri, Ansâb, ms., ii, 526; al-Tâbarî, i, 2100-1, iii, 2307). The continuing Makhzûm link with the Yemen also becomes apparent with the appointments there of al-Muhadjir b. Abî Umayya b. al-Mughira and ‘Abd Allâh b. Abî Rabi’â b. al-Mughira; there is disagreement in the sources about points of detail, but it would seem that al-Muhadjir was appointed as governor of San‘â by the Prophet in 10/631 but did not go there, was reappointed by Abû Bakr, went there, and was still there at the time of Abû Bakr’s death in 13/634 (Mu’arrîdî, 71; Ibn Durayd, 62, who incorrectly calls him al-Muhadjir b. ‘Abd Allâh b. Abî Umayya; al-Tâbarî, i, 1750, 2013, 2315, iii, 2357). Even more confused are the reports relating to ‘Abd Allâh b. Abî Rabi’â, who is one of those named in the earlier context of Makhzûm trade in the Yemen. He was appointed over al-Djanad and its mikhâl by the Prophet (Aghânî, i, 32), over all or part of the Yemen by Abû Bakr (al-Baladhuri, Ansâb, ms., ii, 531), and over the Yemen by Umar (al-Mus’ab, 317; Ibn Sa’îd, v, 328, Khâlîfî b. Khayyât, Ta’rikh, ed. Zakkar, 154; Ibn Hazm, 146); he was governor of al-Djanad at the time of ‘Umar’s death (al-Tâbarî, i, 2798; Aghânî, i, 32) in 23/634 and at the time of the death of Ummân (al-Tâbarî, i, 3057 Add.) in 35/656.

Two other Makhzûms who were particularly active in this period were Khâlîfî b. al-Walid b. al-Mughira [q. v.], who had earlier played a vigorous part in the Meccan military opposition to him, Khâlîfî participated in the conquest of Mecca; and Ikrima fled to the Yemen.
Harith also took part in the conquest of Syria and later migrated there with 70 of his ahl bayt, ... as potential successor to Muawiya) and Ibn Uthal himself was killed in vengeance by Abd al-Rahman's nephew Khalid b.

Khalid's line lies above all in his own accomplishments and that the line came to an end in the time of (their ancestor) al-Walid b. al-Hadjdjadj). of these ladies, while it may not have been typical, does at least give us an indication of how large such a settlement could be (al-Muṣ̄ab, 306-8). In the following generation, the ten recorded marriages involving the six daughters of al-Mughira b. Abd al-Rahman are also instructive: one with a Mahzūmi (an ibn `am) three with Marwānids (including one of Abd al-Malik's sons) and five with other Kurāshis (descendants of Abū Bakr, Umar, Uthman, al-Abbās and Taḥala respectively); the tenth of these marriages, that of Umm al-Banin bint al-Mughira b. Abd al-Rahman to al-Hadidjāḥ b. Yusuf [q.v.] (al-Muṣ̄ab, 310), represents the earliest indication of a Mahzūmiyya being given in marriage to a non-Kurāshi (the two other examples of this phenomenon given by al-Muṣ̄ab (309, 310) involve sons of al-Hadidjāḥ).

A second branch of the Banu `l-Mughira to which attention should be paid is that of al-Walid b. al-Mughira, particularly in the lines of his sons Khalīd, Hāshim and al-Walid. The distinction of Khalīd's line lies above all in his own accomplishments and those of his son Abd al-Rahman [q.v.], who was governor of Bins and the Džažara for Muawiya and achieved renown as the leader of campaigns against the Byzantines. Al-Muṣ̄ab states quite categorically that the line came to an end in the time of (their agnate relative) Ayyūb b. Salama (328), i.e. by the end of the Umayyad period or conceivably just after; all forty or so of Khalīd's male descendants died in a plague in Syria (Ibn Hazm, 140). The line of Hāshim b. al-Walid is of interest because his grandson Hāshim b. Ismaːīl, in addition to being Abd al-Malik's governor of Medina, was also the father of Abd al-Malik's wife Umm Hāshim (Muʾaːrrijid, 71; al-Muṣ̄ab, 328; al-Baladhūrī, Anūsah, ms., ii, 541; Ibn Hazm, 148; Umm Hāshim); Ibn Hazm, Unmābāt al-kulāfā', ed. al-Munāqṣ̄idād, 17: her name was either `Ayya or Fāṭima). When her son Hāshim became caliph, he appointed his maternal uncle al-Hāshim b. Muhammad, the sons of Hāshim b. Ismaːīl, to terms of office as governors of Medina; they later ran foul of his successor, al-Walid b. Yazīd, and were tortured to death on his instructions by the governor of `Irāk, Yūsuf b. Umar [q.v.] (al-Muṣ̄ab, 329; al-Baladhūrī, Anūsah, ms., ii, 541 (Muhammad was governor of Mecca and then of Medina)). As far as the line of al-Walid b. al-Walid is concerned, its interest lies primarily in the fact that it produced Umm Salama bint Yaʿkūb b. Salama, who married the future first Abbāsid caliph, Abu ʾl-Abbās; their daughter Rayya married the caliph al-Mahdī and bore him two sons (Muʾaːrrijid, 72; al-Muṣ̄ab, 330; al-Baladhūrī, Anūsah, iii, ed. al-Dūrī, 161, 180; Ibn Hazm, 148).

Although there were some Mahzūmiyya in Syria (at least under Umayyad rule) one line bore the name Mahzūmī (mainly Basra) in the course of the Umayyad period, the main concentration of Mahzūmī was in the Hijāz, at Mecca and Medina. The Mahzūmī of Medina appear to have come into conflict with Uṯmān on account of his maltreatment of the Companion Anmār b. Yāsir [q.v.] (al-Masʿūdī, Muṣ̄af, iv, 266, 299 = §§ 1591, 1602), who was a maṣūlī of the family of Abū Bakr (al-Muṣ̄ab, 309, 310, al-Baladhūrī, Anūsah, iii, 176; al-Talhibārī, iii, 2388). In the events following the murder of Uṯmān, some Mahzūmī support for Talha [q.v.] and al-Zubayr [q.v.] is indicated by the Mahzūmi casualties (Khaifa, 209) at the battle of the Camel (al-Djamal [q.v.]). In the ensuing confrontation between ʿAli and Muawiya, Muʿāwiyah had the support of Abd al-Rahman b. Khalīd, who distinguished himself at the battle of Siffin [q.v.], where he bore the standard of the Syrian army (Lammens, Etudes, 5); and the Mahzūmī of the Hijāz may be presumed to have preferred Muʿāwiyah to ʿAli. The presence on ʿAli's side of Djaḍa b. Hubayra, who was from one of the cadre branches of Mahzūmī, is explained by the identities of his mother and his wife: her mother was a daughter of Abū Taibī and his wife was a daughter of ʿAli (Muʾaːrrijid, 75; al-Muṣ̄ab, 39, 45, 344, 345; Ibn Hazm, 141). Less easy to explain is the pro-Hāshimite stance of Khalīd's son al-Muhādjar, who was killed on ʿAli's side at Siffin (Ibn Habīb, 450; al-Baladhūrī, Anūsah, ms., ii, 543; Ṭāhūrī, xv, 13).

If we are to judge by the pattern emerging from the marriages reported by al-Muṣ̄ab and Zubayrī, however, it would seem that Muʿāwiyah's ultimate victory was not particularly to the advantage of Mahzūmī. Their links by marriage were stronger with the Zubayrids and the descendants of Uṯmān and al-Hakam than with the Sufyānids. Moreover, relations between Muʿāwiyah and Mahzūmī deteriorated when Abd al-Rahman b. Khalīd was (at least allegedly) poisoned in 466/666 by Muʿāwiyah's physician Ibn Uṭālī (reportedly on account of his growing popularity as potential successor to Muʿāwiyah) and Ibn Uṭālī himself was killed in vengeance by Abd al-Rahmān's nephew Khalīd b.
Mecca and Medina in the time of al-Mansur and al-Hadi, Muhammad al-Awa’s b. ‘Abd al-Rahman (from the Banu ‘Hisham b. al-Mughira) served as kadi of Mecca in the time of al-Mahdi (al-Mus‘ab, 315; Ibn Hazm, 146; al-Baladhuri, Ansab, ms., ii, 531 says in the time of Aba Dja’far, and Hisham b. ‘Abd al-Malik al-Ashjar (from the Banu Hisham b. al-Mughira) served as kadi of Medina in the time of the caliph Harun al-Rashid (al-Mus‘ab, 309; Ibn Hazm, 145). There are in addition indications that in the early Abbasid period Makhzumi links with Alids, notably Hasanids, became closer (al-Mus‘ab, 52-3, 56, 63); in particular, the mother of Idriss b. ‘Abd Allah [g.v.), who founded the Idrisid dynasty in the Maghrib in the end of the 8th century A.D., was ‘Atika bint ‘Abd al-Malik b. al-Harith b. Khalid b. al-Ashi (from the Banu Hisham b. al-Mughira: al-Mus‘ab, 54, 315).

The bulk of the wealth and assets of Makhzumi may be presumed to have been in the Hijaz: they owned much land and property in and around Mecca (al-Azraqi, ed. Wüstenfeld, in Die Chroniken der Stadt Mecca, i, 468-72 for details), as well as the tax office, nearly all Copts. He performed these duties for a long time in Alexandria, and it is plain that he had access forswear allegiance to Yazid (al-Mus‘ab, 327; Ibn Habib, 449 ff.; al-Baladhuri, ms., ii, 542; Aghdni, xv, 13; al-Tabari, ii, 82-3) seems to be alone in attributing the murder of Ibn Uthal to Khalid b. Abd al-Rahman—

The sources tell us little of Makhzum thereafter until the end of the Umayyad caliphate. There is indication that, during the caliphates of al-Mansur and al-Mahdi, special mention should be made of Makhzumi’s cousin, the great jurist and hadith scholar, Ibn Abi ‘l-Hadil, author of an important, long-forgotten fiscal treatise, al-Minhadji fi 4im khirad Misr, a large part of which was recently discovered in the acephalous ms. Add. 23,483 in the British Museum. Al-Makhzumi belonged to a great family dating back to the origins of Islam. He was a monk, the sole subsequent Makhzumi appointee to the office of kadi in Medina awarded by Ibn Umar b. ‘Abd al-Rahman b. al-Harith b. Khalid, to the post (al-Mus‘ab, 305-6) does prompt the question of whether Makhzumi may have had a stake in the business of provisioning more generally. There is not a great deal of evidence of Makhzumi’s economic involvement elsewhere: ‘Amr b. Hurayth, who was from one of the cadet branches, prospered greatly in al-Kūfa from early on (al-Mus‘ab, 333; Ibn Durayd, 61); and Muhammad b. Umar b. ‘Abd al-Rahman b. al-Harith, who took the head of the rebel Yazid b. al-Mu‘allab [g.v.] to the caliph Yazid b. ‘Abd al-Malik, was rewarded for his pains with the rebel’s dār (sc. at al-Baṣra) and some of his estates (al-Baladhuri, Ansab, ms., ii, 528). Insufficient evidence also prevents much being said about the nature of Makhzumi links with the Yemen after ‘Abd Allah b. Abi Rabia: the sole subsequent Makhzumi appointee to the office of kadi in Medina was a minister of ‘Abd al-Malik’s immediate successors; al-Walid dismissed ‘Abd Allah b. al-Musayyab b. ‘Abd al-Malik b. al-Harith b. Khalid b. al-Ashi from his post at Medina, and the sources tell us little of Makhzum thereafter until the caliph Hisham appointed his maternal uncles as governors of Medina in the 720s to 740s; their demise at the hands of Yusuf b. ‘Umar shortly preceded the end of the Umayyad caliphate. It is apparent that, as the Hijaz became more and more a political backwater after the defeat of the Zubayrids, the role of Makhzumi became increasingly restricted to one of being merely a local agent. Individual Makhzumis crop up in the sources mainly in the context of religious learning and the application of Islamic law: In addition to Abū Bakr b. ‘Abd al-Rahman (see above), special mention should be made of the fakih Sa‘id b. al-Musayyab [g.v.], who was from one of the cadet branches of Makhzumi; a list of Makhzumis who transmitted hadith is given by al-Tabari (iii, 2393-8); ‘Abd al-Aziz b. ‘Abd al-Malik b. ‘Abd al-Malik b. ‘Abd Allah b. ‘Abd al-Rahman b. ‘Abd Allah b. ‘Abd al-Malik b. al-Harith b. Khalid b. ‘Abd Allah b. ‘Abd Allah [g.v.], who founded the Idrisid dynasty in the Maghrib in the end of the 8th century A.D., was ‘Atika bint ‘Abd al-Malik b. al-Harith b. Khalid b. al-Ashi (from the Banu Hisham b. al-Mughira: al-Mus‘ab, 54, 315).
quired a concrete experience of the work, which his illustrious contemporary, Ibn Mammâti [q.v.] did not possess. Although the two works have similar documentary sources for some points and present almost the same form of administration (that of the later Fâtîmids prolonged under Saladin), they differ profoundly: the Kawdânîn al-dawânîh presents a clear, methodical account, without technical details which would be difficult for the senior civil servant to understand, of the fiscal régime of Egypt; the Minhâdî is concerned, with the concrete activities performed by the employees of the tax office. For us, its most remarkable originality lies in the minute description it gives of the customs and commercial administration of the Mediterranean ports frequented by Italian merchants; it provides despite the lacunas of the manuscript and the mediocrity of the style, something which no other work gives us in any corresponding measure. There is also an important chapter on the army, a very short one on the currency, the īrāz, etc.

The author of the present article has devoted to the contents of the Minhâdî, especially in JESHO for 1962, 1963, 1965 and 1972, a series of articles now gathered together in his Makzûmiyyât (Leiden 1978) and hopes to produce in the near future the complete Arabic text. The manuscript, however, comprises in its first part some historical developments and traditions which, having been considered for state reasons to be of no importance, were not transmitted to the next generation; in the second part, the nomenclature is much too extensive, and the nomenclature is much too extensive, and the nomenclature is much too extensive. However, they are far too numerous, and the nomenclature is much too extensive, and the nomenclature is much too extensive, and the nomenclature is much too extensive.
that the Ma‘kil settled in the pre-Saharan areas of Morocco, where they began to dominate the local populations without, however, playing a political role wide enough to be termed national. But on the accession of the Marinids (660-823/1269-1420 [q.v.]), the situation was modified. Shortly after the unsuccessful siege (660-1261/2) of Sidjilmassa [q.v.] by a Marinid prince, the inhabitants of the town, which had fallen into the hands of the Ma‘kil clan of the Munabbat, appealed to the ‘Abd al-Wäldids (7th-10th/13-16th centuries [q.v.]) of Tiemenç (‘Berrès, ii, 278-9), who led the Marinids ‘Abd al-Hakîb b. ‘Abd al-‘Haqîk (656-8/1258-86) to come to seize it in 672/1274 (‘Berrères, iv, 68-9) and to massacre the population. Various clans of the Ma‘kil, such as the Shabbanät and the Qhuribán, on the direct route from Tafrilat to Fez, before spreading, at the beginning of the 11th/17th century, in the region of Seffrou, bringing in their wake the tribes of Berber descent (see G. S. Colin, Origine arabe des grands mouvements de populations berbères dans le Moyen-Atlas, in Hespéris, 1938/2-3, 265-8). And it is probably at the end of the 9th/15th century that the Zer (Zārîr), who are authentic Ma‘kil (al-Ifrînî, Na‘tha, Fr. tr. Houdas, 329), moved northwards across the mountainous massifs of the High and Middle Atlas. Leo Africanus (i, 249-50) mentions them near Kénitra, and they then desolated the valleys of the Bou Regreg and its tributaries to come to settle to the south of Rabat, where they are still to be found (see V. Loubignac, Textes arabes des Zer, PIHEM, xlv, Paris 1953).

Leo Africanus also recalls (ii, 426-7) that in the same period the Ma‘kil were the masters of Sidjilmassa and that they controlled the traffic, levying a toll; but, even if they did not attack caravans, their presence made the traditional routes from the Maghrib to the Sudan impracticable, so that travellers had to make detours. At the end of the 9th/15th century, they were powerful enough in the south-west of Morocco to participate in the agreements reached in 904/1499 between the Berbers and Castile (D. Jacques-Meunie, Maroc Saharien, i, 317). Subsequently, their attitude towards the Portuguese regarding the position of Santiago Cruz of the Cap de Gué (see GADIR) seems to have been conditioned by their relations with the Sa‘dîds (961-1064/1554-1654 [q.v.]). In fact, in the period which witnessed the birth of the movement which was to result in the foundation of this dynasty, the Berbers of Sous, exhausted by the oppression that the Arabs had inflicted upon them, supported the action of these more or less genuine sharifs whom they continued to uphold, whereas the clan of the Shabbanät of the plain of Sous and the western High Atlas were, it seems, the only one to rally to the Sa‘dîds, whose famous sultan Ahmad al-Mansûr (986-1012/1578-1603 [q.v.]) married a wife from this family.

The Ma‘kil who remained in the region of Guercif towards the end of the Sa‘dîd dynasty gathered in 1051/1641-2 around the 4Alawid Mawlay Muhammad b. al-Sharîf (1050-75/1640-64), who seized Ouida and pressed his advantage as far as the south of Algeria, but his followers abandoned him in 1074/1664 and recognised his brother Mawlay al-Raqqîd (1073-82/1664-72 [q.v.]) whom they proclaimed in Ouida. These events were not able to limit the activity of other Ma‘kil, who continued for their part to trouble public order. It was also in 1069/1659 that Karrûm al-Hâdîj occupied Marrakech and, ten years later, Mawlay al-Raqqîd found the Shabbanät masters of the capital of the South (see G. Deverdun, Marrakech des origines à 1912, Rabat 1959-66, i, 460). The brother and successor of this latter sultan, Mawlay Isma‘îl (1082-1139/1672-1727 [q.v.]) added to his army some Ma‘kil from the oases to form the gîdh (gêdî) of Udaya, but he treated other members of the tribe harshly (see al-Zayyâni, Turjûmûn, Fr. tr. Houdas, 35), the Ablâh (= ‘Amârîn and Munabbât of the Dha‘wi Mansûr from the region of Sidjilmassa); after his death, these clans recovered their old power. It would be difficult today to trace the descendants of the various groups of Ma‘kil, more especially as the names which designated them changed frequently in the course of centuries. Furthermore, it seems that some members of this confederation were distinguished in the religious or literary sphere, but...
The adjective Ma'kil does not appear to be used, and it would be necessary to search in the lists—without any assurance of success—for those members of the tribe corresponding to the numerous families cited by Ibn al-Khalid. We will restrict ourselves to remarking that the Tha'allibis of Algeria, who produced a renowned theologian (788-873/1386-1468 [q.v.]), probably belonged to the Ma'kil, occupy a prominent position till our own day. Ibn 'Askar (Dawhat al-nāṣırī, ed. Hadži), Rabat 1396/1976, 101) notes that the fakih and saint by the name of 'Umar al-Husayni who died in the years 491/1097-8, was not khālit Husayn min 'Arab al-Ma'kil (more precisely, from the Dhawī Mansūr); such a note is however isolated. It is also not impossible that the Ma'kil may be have been part in the spread of the popular poetry known in Morocco by the name of māhūn [see māhūn].

It is evident from the brief account that precedes that different groups of this tribe were scattered over a territory which, within the present Moroccan frontiers, forms a crescent going from the Mediterranean to the Atlantic Ocean, crossing the High and Middle Atlas and turning its convex side towards the desert. But the vast territory occupied by these Arabs is not continuous, to such an extent that, being intimately mixed with Berber populations, they scarcely have the feeling of belonging to a homogeneous ethnic group. This is due to the constant policy of the authorities established in the capital to suppress energetically any sign of subdivision and to prevent these Arabs—although employed at times as auxiliaries—from moving northwards to settle in more fertile regions, which they nevertheless succeeded at times in doing, when the central power showed signs of weakness.

Biography: Among the Arabic sources, the richest is the Kāthib al-thālib of Ibn Khaldūn of which only the French translation of de Sieve is cited, entitled Histoire des Berbères, 2nd ed., Paris 1925-34, 1956). From Ibn 'Idhārī (7th-8th/13th-14th centuries), whose Bayān (vol. iii) published by A. Huici Mirandà in Tetuan in 1963 has been used by the latter in the preparation of his Hisoria politica del imparo amnade, Tétuán 1956, the Arab historians of the Maghrib and especially of Morocco (notably al-Ifrīrī/Ifriqi, Nuzhat al-bādī, Fr. tr. O. Houdas, Paris 1888-9, Ibn Abī Zaf, Rawd al-kirtās, Rabat 1972, and al-Nāṣirī, Istiglāl, Casablanca 1954-6) were led by force of circumstances to cite the Ma'kil. The same applies to even the authors of general histories such as Ch.-A. Julican, Histoire de l'Afrique du Nord, 2nd ed., Paris 1982, index, s.v. Arabes Maqā'il and Maqīl (with an extensive bibliography); the other works of the latter author, notably Citées anciennes de Mauritanie and Hesperis, contain useful information. See also F. de La Chapelle, Esquisse d'une histoire du Sahara occidental, in Hesperis xiv/1-2 (1930), 35-95, esp. 65-70. Finally, one should cite an unpublished thesis submitted in Paris in 1984 by M. Kabyl and entitled Société, pouvoir et religion au Maroc, des Mérinides aux Wattāsides (XIV-XVII siècles), index. (Cn. PALL.)

This history, al-Magmū' al-mubārak, generally known by the simple title of History, is a universal chronicle covering the period from the origins of the world to the accession of Baybars (658/1260). It is divided into two major sections: the first concerning pre-Islamic history as far as the eleventh year of Herachus; the second, Islamic history to the year 658.

(1) Pre-Islamic section. It is today difficult, if not impossible, to determine the originality of the History of al-Ma'kil, for two reasons: on the one hand, the manuscripts have not been classified; on the other, the similar work of his contemporary Ibn al-Rāhīb [q.v. in Suppl.], which al-Ma'kil frequently quotes, has not yet been edited. G. Viet, who undertook an edition of the history, has given some indications as to the manuscript transmission of the earlier section, in J. Maister, Histoire des Patriarches d'Afrique, Paris 1923, 219-22, n. 2. He identified two distinct groups of manuscripts, one transmitting the original text of al-Ma'kil, the other, which he calls the vulgate, being an edition adapted according to the model of Eutychius/Sa'id b. al-Birīk (it was a manuscript of this vulgate which was utilised by al-Ma'kilī, e.g. B.N. ar. 4729).

In addition, al-Ma'kil makes frequent textual quotations from Ibn al-Rāhīb. Before the researches of A. Sidarūs, Ibn al-Rāhīb's Leben und Werk, Freiburg-i.-Br. 1972, the latter's 'Universal history' was known on-
ly in the form of an abbreviated edition which has misled more than one historian (L. Cheikho, *Fenix ibn Badh chronicon orientale*, in *CSCO*, s.v., Louvain 1903). But there is now available a complete manuscript of the *K. al-Tawārīkh*, a work dating from 1257, and the forthcoming publication of this text will no doubt make it possible to assess how much of al-Makîn’s work is to be considered original.

Whatever may prove to be the case, the al-Makîn presents universal history in the form of biographies; to the year 596 B.C., it is naturally enough the biblical account which provides the format, the biographical series beginning with Adam; after the destruction of the Temple of Solomon he traces the ancient dynasties of Asia, then those of Alexander, the Romans, the Byzantines.

The final section of the work of al-Makîn, the part contemporary with his own life, is more detailed and of vastly superior originality and interest. By an unfortunate chance, Erpenius, who edited the work in the 17th century, stopped short at the year 525/1130, with the result that the final section has remained virtually unknown until the present day and its publication by Cl. Cahen (in *BEO*, xv [1955]; cf. *Arabica*, vi, 198-9, and *al-Makîn et Ibn Wâsîl*, in *Hispano-Arabica*... *Fr. Poppe*, i, Madrid 1974, 158-67).

A characteristic apparently common to all Arabic historiography, Christian or Muslim, is that authors of both persuasions write in almost the same manner and indulge in mutual plagiarism. As has been observed, al-Makîn follows a Muslim predecessor and is utilised in his turn by *Shâhî* b. *Allâ*. The only difference is that the Christian supplements the Hegirian chronology with a Christian chronology (in this case the Era of the Martyrs) and includes in his account episodes of ecclesiastical history (which were to be borrowed by al-Makrîzî). Certain copyists continue his list of patriarchs as far as the year 720/1320. It is not known whether al-Makîn utilised the history of the patriarchs compiled by Severus b. al-Mukaffâ and his successors.

The final section of the work of al-Makîn, the part contemporary with his own life, is totally undeserving of the pejorative judgment of it expressed on the authority by Renaudot (*Hist. Patriarch. Aex.*, Paris 1713, 10); it is intellectually comparable with the works of the major historians of the period, with a particularly sensitive interest in military administration, reflecting the professional career of the author. Most important of all, the principal historians of this time, even though they deal with Egypt, are of Syrian nationality; together with the Muslims Ibn Muyassar, whose treatment of the Ayyûbids is accessible to us only through al-Nuwayrî’s version, al-Makîn is the only Egyptian historian of his generation. His work was continued by al-Mufaddî b. Abî ‘l-Fâdî b., who was of the same family but who makes no mention of him.

Also published, but erroneously, under the name of al-Makîn was a doctoral study, *al-Hâdî*, ed. Tairud Basili, Cairo, Maison Cope (cf. *Abtracta Isl.*, 1966 no. 831).

**Bibliography:** Given in the article; supplementary details concerning the early section are given by M. Plessner in *ET*, s.v.

(CL. CAHEN and R. G. COQUIN)

**MAKKA** (in English normally “Mecca”; in French “La Mecque”), the most sacred city of Islam, where the Prophet Muhammad was born and lived for about 50 years, and where the Ka’ba [q. v.] is situated.

1. The Pre-Islamic and Early Islamic Periods

**Geographical description.**—Mecca is located in the Hijâz about 72 km. inland from the Red Sea port of Jedda (*Quidda* [q. v.]), in lat. 21° 27’ N. and long. 39° 49’ E. It is now the capital of the province (manâtik idârîyya) of Makka in Su‘ûdî Arabia, and has a normal population of between 200,000 and 300,000, which may be increased by one-and-a-half or two millions at the time of the *Hadj* or annual pilgrimage.

Mecca lies in a kind of corridor between two ranges of bare steep hills, with an area in the centre rather lower than the rest. The whole corridor is the *waḍî* or the *baṭî Makka*, “the hollow of Mecca”, and the lower part is al-Baṭîh, which was doubtless the original settlement and where the Ka’ba stands. Originally some of the houses were close to the Ka’ba, but apparently there was always a free space round it, and in the mountain chain of the Sarat to the *waḍî*: southwards it constitutes the present mosque. Into the Baṭîh converging a number of side-valleys, each known as a *shîb*, and often occupied by a single clan. The outer and higher area of settlement was known as the *za’wârîh*. The situation of Mecca was advantageous for trade. Important routes led northwards to Syria (Gaza and Damascus), north-eastwards through a gap in the mountain chain of the Sarat to *Târîkh*: southwards to the Yemen; and westwards to the Red Sea, where there were sailings from Shu‘ayba (and later from *Quidda*) to Abyssinia and other places. Rainfall is scant and irregular. There may be none for four years. When it does come, it may be violent and a *sâqî* or torrent may pour down each *shîb* towards the *Haram* or sacred area round the Ka’ba. There are accounts of the flooding of the Haram from time to time. The supply of water depended on wells, of which at Zamzam beside the Ka’ba was the most famous. One of the leading men of Mecca was always charged with the *sikâyâ*, that is, with the duty of seeing there was sufficient water for the pilgrims taking part in the *Hadj*. Needless to say, there was no agriculture in the neighbourhood of Mecca. The climate of Mecca was described by the geographer al-Mukaddamî as “suffocating heat, deadly winds, clouds of flies”. The summer was noted for *ramdâ* *Makka*, “the burning of Mecca”, and the wealthy families sent their children to be brought up in the desert for a time.

**Pre-Islamic Mecca.**—Mecca had been a sacred site from very ancient times. It was apparently known to Ptolemy as *Makroba*. The Qur’ân has the name Makka in XLVIII, 24, and the alternative name Bakka in III, 96/90. It also (II, 125-7/119-21) speaks of the building of the Ka’ba by Abraham and Ishmael, but this is generally not accepted by occidental scholars, since it cannot be connected with what is otherwise known of Abraham. According to Arabian
legend, it was for long controlled by the tribe of Ḏjrum [q.v.], and then passed to Ḫuzā‘a’ [q.v.], though certain provisos of the Meccan system in a subordinate position. The term ‘system’ is appropriate since Mecca was a financial centre, and not a mere focus of trade. By about 600 A.D., the leading men were skilled in the manipulation of credit and interested in possibilities of investment along the routes they travelled, such as the mines in the territory of the tribe of Sulaym. It may be noted that one or two women were also trading on their own account and employing men as their agents; such were Khadīja [q.v.], Asmā’ bint Mukhrirra, mother of Abu Dajjal, and Hind, wife of Abu Sufyān. Among the goods carried were leather, ingots of gold and silver, gold dust (tibr), perfumes and spices, the two latter from South Arabia or India. From Syria they conveyed the products of Mediterranean industry, such as cotton, linen and silk fabrics, and also arms, cereals and oil. Some of these goods would be sold to nomadic tribesmen, others would be sold in markets at the further end of the trade route. Henri Lammens spoke of Mecca as a ‘merchant republic’, and this description fits up to a point, but the underlying political concepts were those of Arabia, not of Greece or Italy. Almost the only organ of government, apart from clan assemblies, was the mala‘ or ‘senate’. This was in fact a meeting of the chiefs and leading men of various clans, but had no executive powers. Any punitive measures could be taken only by the chief of the offender’s clan, since otherwise the lex talionis [see ḥiṣā] would be invoked. There was no president or doge, but sometimes a chief of the offender’s clan, but had no executive powers. Any punitive measures could be taken only by the chief of the offender’s clan, since otherwise the lex talionis [see ḥiṣā] would be invoked. There was no president or doge, but sometimes a chief of the offender’s clan, since otherwise the lex talionis [see ḥiṣā] would be invoked. There was no president or doge, but sometimes a chief of the offender’s clan, since otherwise the lex talionis [see ḥiṣā] would be invoked. There was no president or doge, but sometimes a chief of the offender’s clan, since otherwise the lex talionis [see ḥiṣā] would be invoked. There was no president or doge, but sometimes a chief of the offender’s clan, since otherwise the lex talionis [see ḥiṣā] would be invoked. There was no president or doge, but sometimes a chief of the offender’s clan, since otherwise the lex talionis [see ḥiṣā] would be invoked.
main neutral. Some years after the war of the Fidjar,
a man of the clan of Asad called Uthman b. al-
Hudayr entered into negotiations with the Byzan-
tines and told his fellow-Meccans that he could get
favourable trade terms for them if they accepted him
as their leader; though he was denounced by a men
of his clan as aiming at kingship, the rejection of his pro-
position was doubtless also due to the need of avoid
too close an association with the Byzantines.

In addition to the mala,' there were certain trad-
tional offices or functions, usually attached to specific
families. The sikāya or superintendence of the water-
supply, especially for pilgrims, has already been men-
tioned. The rifḍa was the provisioning of pilgrims;
the liṣat was the carrying of the standard in war; the
nast was the privilege of deciding when an intercalary
month should be inserted to keep the lunar calendar
in line with the solar year; and there were several
others.

The culture and religion of the Meccans were essen-
tially the same as those of their nomadic neighbours.
They applied the lex talionis in much the same way,
and had similar ideas about the relations of a chief or
sayyid to the full members of his clan or tribe, namely,
that he was only primus inter pares. They likewise gave
a central place to the conception of honour [see 'naq],[
though in detail Meccan ideas of honour may have
been modified by the ideas of wealth and power. Like
most nomadic Arabs, the majority of Meccans were
pagans, acknowledging many gods, but probably
having little faith in these and being mainly
materialistic in outlook. The Kurʾān, however, in a
number of passages, describes pagans who, besides
the minor deities, acknowledging Allāh as a "high
god" or supreme god, and especially his function of
creating. This form of belief is known to have been
predominant among the Semitic peoples of a whole
wide region (cf. J. Teixidor, The pagan god, Princeton
1977). In addition, besides Byzantine visitors or tem-
porary residents, one or two Meccans seem to have
become Christians, such as ʿUthmān b. al-
Hudayrī, and others are said to have been attracted to
Christianity [see Dār al-Ḥaq]. One or two, whose
business contacts were with 'Irāq, had some interest
in Persian culture.

Mecca and the beginnings of Islam.—
Although the Kurʾān mentions had from the first a
universal potential, it was originally addressed to
Meccans. The attraction of the message for many
Meccans was due to its relevance to the moral, social
and spiritual malaise which had developed in Mecca
as a result of the great increase in wealth. It is thus not
accidental that Mecca still remains the focus of the
religion of Islam. The career of Muhammad and the
early history of the religion which he proclaimed will
be found in the article MUHAMMAD. Here the relation
of these events to the town of Mecca will be briefly
noted.

Muhammad was born in Mecca into the clan of
Hašim about 570 A.D. This clan may have been more
important earlier, but was not now among the
very wealthy clans, and played a prominent part in
the Hilf al-Fudhil, which was directed against
monopolistic practices. Because Muhammad was a
posthumous child and his grandfather died when he
was about eight, he was excluded by Arabian custom
from inheriting anything from either. Most of his near
kinsmen were engaged in trade, and Muhammad ac-
companied his uncle Abū Taibī on trading journeys
to Syria. Then he was employed as a steward by the
woman merchant Khadija and subsequently married
her. This was about 595, and thereafter he seems to
have continued to trade with her capital and in part-
nership with one of her relatives. It was no doubt his
personal experience of these consequences of being an
orphan which made Muhammad specially aware of the
problems facing Meccan society; and it was about 610, after he had long meditated on these matters,
that the Kurʾānic revelation began to come to him.

The Kurʾān may be said to see the source of the
troubles of Mecca as the materialism of many Mec-
cans and their failure to believe in God and the Last
Day. In particular, it attacked the great merchants for
their undue reliance on wealth and their misuse of it
by neglecting the traditional duties of the leading men
to care for the poor and unfortunate. At the same
time, the Kurʾān summoned all men to believe in
God's power and goodness, including his position as
final Judge, and to worship him. In the years up to
614 or 613 many people responded to this summons,
including sons and younger brothers of the great mer-
chants. By 614 some of these great merchants,
especially younger ones like Abū Dājahl, had come to
feel their position threatened by Muhammad, since
his claim to receive messages from God and the
number of people attracted by his preaching might
eventually give him great political authority. A move-
ment of opposition to the new religion then appeared.
The great merchants among other prosperous kinds to Muhammad and his followers to get them to
abandon their beliefs, or at least to compromise. Some
of his followers, persecuted by their own families,
gave up to Abyssinia for a time. Muhammad himself
was able to continue preaching so long as he had the
protection of his clan. About 619, however, his uncle Abū Taibī died and was succeeded as head of the clan by
another uncle, Abū Lahab, who was in partnership
with some of the great merchants and found a pretext
for denying clan protection to Muhammad. In 622,
therefore, Muhammad accepted an invitation to go to
Medina where a great many people were ready to ac-
cept him as a prophet. His move from Mecca to
Medina was the Hidjra or emigration.

The greater part of the period between the
Hidjra and Muhammad's death was dedicated to the strug-
gle between Muhammad's supporters and the great
merchants of Mecca. After some fruitless Muslim raz-
zias against Meccan caravans, the Meccans were pro-
voked by the capture of a small caravan under their
noses, as it were, at Nakhlā early in 624. Because of
this they sent a relatively large force to protect a very
wealthy caravan returning from Syria in March 624;
and this expedition ended disastrously for them in the
battle of Badr, where they lost many of their leading
men by death or capture, including the leader of the
expedition, Abū Dājahl. Meccan affairs were guided by
Abū Sufyān for the next three years. His attempt
in 625 to avenge the defeat of Badr led to his having
the better of the fighting at Ujdūd in the oasis of
Medina, but he failed to disturb Muhammad's posi-
tion there. His next attempt in 627, with numerous
allies, was a more ignominious failure through
Muhammad's adoption of the khondak or trench and
the break-up of the alliance. Abū Sufyān then seems
to have worked for peace and reconciliation with the
Muslims, while other men still hoped to retrieve the
fortunes of Mecca, and, for example, forcibly
prevented Muhammad and 1,600 Muslims from
making the pilgrimage in 628. Nevertheless, they
made the treaty of al-Hudaybiyya [q.v.] with him as
with an equal. A breach of the terms of this treaty by
Meccan allies led to a great Muslim expedition
against Mecca with some 10,000 men. The town was
surrendered almost without a blow, and all the Mec-
cans, except a handful who were guilty of specific of-
fences against Muhammad or some Muslim, were
assured their lives and property would be safe if they
behaved honourably. For some time, Muhammad
had been aiming at reconciling the Meccans rather
than crushing them by force. When, a week or two
after the capture or death, it was learnt that there was
a large concentration of nomads to the east of Mecca,
some 2,000 Meccans took to the field with Muham-
mad and helped him to gain the victory of Hunayn
[q. v.]. Some of the pagan Meccans became Muslims
almost at once, others only after a longer period.
A young Muslim of a Meccan family was left as
governor of Mecca and it was made clear that Medina
would remain the capital. The Ka'ba had for many
years been the kibla [q. v.] or direction towards which
all Muslims turned in prayer. At the death it was purged
of idols and became a centre of Islamic worship, while
the Black Stone was retained as an object to be
reverenced. The annual Ḥajj [q. v.] was retained as an
Islamic ceremony, and this also gave special im-
portance to Mecca in Islamic eyes. Its commercial ac-
tivity appears to have dwindled away, perhaps largely
because many of the leading men moved to Medina
and subsequently found their administrative abilities
fully employed in organising an empire. After the cap-
ture of Irāk, the trade between the Indian Ocean and
the Mediterranean seems to have resumed the old
route by the Euphrates valley.
Mecca from 632 to 750.—Not much is heard
about Mecca under the first four caliphs. 'Umar and
'Uthmān were concerned with the danger of flooding
and brought Christian engineers to build barrages in
the high-living quarters. They also constructed dykes
and embankments to protect the area round the
Ka'ba. The first Umayyad caliph, Muḥammad ibn
Abū Sufyān, though mostly living in Damascus,
took an interest in his native town. He had new
buildings erected, developed agriculture in the sur-
rounding district, and improved the water-supply by
digging wells and building storage dams. The work
of flood prevention continued under the Umayyads.
In an attempt to control the sa'y, a new channel was dug
for it and barriers were erected at different levels.
Despite these improvements, the problem was not ful-
lly solved, since the Bahthā was a basin with no outlet.
In the course of operations, buildings on the bank of the
sa'y and adjoining the Ka'ba were taken down, and
the appearance of Mecca was thus considerably altered.
Mecca had again some political importance as the seat
of the rival caliph 'Abd Allāh b. al-Zubayr [q. v.]. The
succession to Muḥammad ibn Yazīd in 611/680
was disliked by many members of Kuraysh, and Ibn
al-Zubayr took advantage of such feelings to build up
a party of supporters in Mecca, and eventually had
himself proclaimed caliph there. For a time he con-
trolled most of Arabia and Irāq, but the Umayyad
'Abd al-Malik gradually consolidated his power, and
in 73/692 his general al-Hadījī al-Hardān defeated and killed
Ibn al-Zubayr, thus ending his bid for power and
restoring to Umayyad rule Mecca and the other
regions acknowledging the Zubayrids. In 63/682,
when Ibn al-Zubayr was deep in intrigue but had not yet
secured his caliphate, an Umayyad army was sent to Mecca, and during its passage there the
Ka'ba was partly destroyed by fire, probably through the
carelessness of a supporter of Ibn al-Zubayr.
Subsequently, the latter had the Ka'ba rebuilt, in-
cluding the Ḥijr within it; but this change was
reversed by al-Hadījī al-Hardān. The caliph al-Walid I is
credited with the construction of galleries circling the
vast courtyard round the Ka'ba, thus giving the mos-
que (al-mas'djid al-haram) its distinctive form.
In the period of the decline of the Umayyads, in 130/747
Mecca was briefly occupied by Abū Hamza, a
Khāridjī rebel from the Yemen, but he was soon
surprised and killed by an army sent by the caliph
Marwān II. For most of the Umayyad period, Mecca
had a sub-governor responsible to the governor of the
Hijāz who resided at Medina. It attracted wealthy
people who did not want to be involved in politics
and became a place of pleasure and ease with many poets
and musicians. There were also some religious
scholars, but fewer than at Medina.

From the 'Abbāsid to the modern period
i. Mecca under the 'Abbāsids down to
the foundation of the Sharifate
(132-530/750-961).
Although the political centre of gravity in Islam
now lay in Baghdad, this period at first presents the
same picture as under Umayyad rule. The Harām
may be as a rule governed by 'Abbāsid princes or in-
dividuals closely connected with them (Die Chroniken
der Stadt Mekka, ed. Wusténdorf, ii, 181 ff). Sometimes
Mecca and Tā'if were under one ruler, who was at the same time leader of the
Ḥajjī, while Medina had a separate governor of its own.
Arabia had, however, from the 1st century A.H.
contained a number of 'Alid groups, who, as was their
'. Century A.H. was a basin with no outlet.
At the death it was purged of idols and became a centre of Islamic worship, while
the Black Stone was retained as an object to be
reverenced. The annual Ḥajj was retained as an
Islamc ceremony, and this also gave special im-
portance to Mecca in Islamic eyes. Its commercial ac-
tivity appears to have dwindled away, perhaps largely
because many of the leading men moved to Medina
and subsequently their administrative abilities
fully employed in organising an empire. After the cap-
ture of Irāk, the trade between the Indian Ocean and
the Mediterranean seems to have resumed the old
route by the Euphrates valley.
Mecca from 632 to 750.—Not much is heard
about Mecca under the first four caliphs. 'Umar and
'Uthmān were concerned with the danger of flooding
and brought Christian engineers to build barrages in
the high-living quarters. They also constructed dykes
and embankments to protect the area round the
Ka'ba. The first Umayyad caliph, Muḥammad ibn
Abū Sufyān, though mostly living in Damascus,
took an interest in his native town. He had new
buildings erected, developed agriculture in the sur-
rounding district, and improved the water-supply by
digging wells and building storage dams. The work
of flood prevention continued under the Umayyads.
In an attempt to control the sa'y, a new channel was dug
for it and barriers were erected at different levels.
Despite these improvements, the problem was not ful-
lly solved, since the Bahthā was a basin with no outlet.
In the course of operations, buildings on the bank of the
sa'y and adjoining the Ka'ba were taken down, and
the appearance of Mecca was thus considerably altered.
For a brief period after the death of Muḥammad ibn
Abū Sufyān, Mecca had again some political importance as the seat
of the rival caliph 'Abd Allāh b. al-Zubayr [q. v.]. The
succession to Muḥammad ibn Yazīd in 611/680
was disliked by many members of Kuraysh, and Ibn
al-Zubayr took advantage of such feelings to build up
a party of supporters in Mecca, and eventually had
himself proclaimed caliph there. For a time he con-
trolled most of Arabia and Irāq, but the Umayyad
'Abd al-Malik gradually consolidated his power, and
in 73/692 his general al-Hadījī al-Hardān defeated and killed
Ibn al-Zubayr, thus ending his bid for power and
restoring to Umayyad rule Mecca and the other
regions acknowledging the Zubayrids. In 63/682,
when Ibn al-Zubayr was deep in intrigue but had not yet
secured his caliphate, an Umayyad army was sent to Mecca, and during its passage there the
Ka'ba was partly destroyed by fire, probably through the
carelessness of a supporter of Ibn al-Zubayr.
Subsequently, the latter had the Ka'ba rebuilt, in-
cluding the Ḥijr within it; but this change was
reversed by al-Hadījī al-Hardān. The caliph al-Walid I is
disatisfaction in rioting. This attitude was all too frequently stimulated by political conditions.

In the reign of al-Mamun (198-218/817-33) it was again 'Alids, Husayn al-Asfahānī and Ibrāhīm b. Mūsā, who extended their rule over Medina, Mecca and the Yemen (al-Tabarī, iii, 981 ff.; Chron. Mecca, ii, 238), ravaged Western Arabia and plundered the treasures of the Ka'bah. How strong 'Alid influence already was at this time is evident from the fact that al-Mamun appointed two 'Alids as governors of Mecca (al-
Tabarī, iii, 1039, Chron. Mecca, ii, 191 ff.).

With the decline of the 'Abbāsid caliphate after the death of al-Mamun, a period of anarchy began in the holy land of Islam, which was frequently accompanied by scarcity or famine. It became the regular custom for a number of rulers to be represented at the Ḥudūdī the plain of 'Arafat and to have their flags unfurled; the holy city was rarely spared fighting on these occasions. The safety of the pilgrim caravans was considerably affected; it was very often 'Alids who distinguished themselves in plundering the pilgrims.

The 'Alid cause received an important reinforcement at this time by the foundation of a Hasanid dynasty in Tabaristan (al-Tabarī, iii, 1523-33, 1583 ff., 1682-5, 1693 ff., 1840, 1880, 1884 ff., 1940). In Mecca the repercussion of this event was felt in the appearance of two Hasanids (Chron. Mecca, i, 343; ii, 133). One of these was Abu '1-Futuh (384-432/994-1039) son of al-Ma'mun, which was probably induced to do this by al-Hākim's heretical innovations in Egypt. The latter, however, was soon able to reduce the new caliph's sphere of influence so much that he had hurriedly to return to Mecca where in the meanwhile one of his relatives had usurped the power.

He was forced to make terms with al-Hākim in order to be able to expel his relative.

With his son Shukr (432-53/1039-61) the dynasty of the Mūsāwīs, i.e. the descendants of Mūsā b. 'Abd Allāh b. Mūsā b. 'Abd Allāh b. Hashan b. Hasan b. 'Ali b. Abī Tālib, came to an end. He died without leaving male heirs, which caused a struggle within the family of the Hasānids with the usual evil results for Mecca. When the family of the Banū Ṣa'bā 'Abd al-Salām) went so far as to confiscate for their private use all precious metals in the house of Allāh, the ruler of Yemen, al-Ṣa'dībī (Chron. Mecca, ii, 208, 210 ff.; Ibn al-Athīr, ix, 233, 317). He was probably

The reign of his successors is also marked by the appearance of the Karmatians [see KARMATI], who entered the holy city of Mecca. In 384/994 Mecca refused homage to the Fatimid caliph. Soon afterwards, the caliph began to intervene and restored order and security in the town. This intervention by an outsider appeared more intolerable to the Hasānids than fighting among themselves. They therefore proposed to al-Ṣa'dībī that he should install one of their number as ruler and leave the town.

He chose the appointed Abu Ḥāshim Muhammād (455-87/1063-94) as Grand Sharīf. With him begins the dynasty of the:

b. hāwāshim (455-989/1063-1200), which takes its name from Abū Ḥāshim Muḥammad, a brother of the first Sharīf Da'far; the two brothers were descendants in the fourth generation from Mūsā ii, the ancestor of the Mūsāwīs.

During the early years of his reign, Abu Ḥāshim had to wage a continual struggle with the Sulaymān branch, who thought themselves humiliated by his appointment. These Sulaymānīs were descended from Sulaymān, a brother of the above-mentioned Mūsā ii.

The reign of Abu Ḥāshim is further noteworthy for the shameless way in which he offered the suzerainty, i.e. the mention in the ḥudūb as well as the change of official rite which is indicated by the wording of the adjān, to the highest bidder i.e. the Fatimid caliph or the Saltuk sultan (Chron. Mecca, ii, 253; Ibn al-Athīr, x, 67). It was very unwelcome to the Meccans that imports from Egypt stopped as soon as the official mention of the Fatimid in the ḥudūb gave way to that of the caliph. The change was repeated several times with the result that the Saltuk, tired of this comedy, sent several bodies of Turkomans to Mecca.

The feeling between saltan and Sharīf also inflicted great misery on pilgrims coming from Ṭrāk. As the leadership of the pilgrim caravans from this country had gradually been transferred from the 'Alids to Turkish officials and soldiers, Abū Ḥāshim did not hesitate occasionally to fall upon the pilgrims and plunder them (Chron. Mecca, ii, 254; Ibn al-Athīr, x, 133).

The reign of his successors is also marked by covetousness and plundering. The Spanish pilgrim Ibn Djabayr, who visited Mecca in 578/1183 and 580/1185, gives hair-raising examples of this. Even
then, however, the Hawashim were no longer absolutely their own masters, as over ten years before, the Ayyūbid dynasty had not only succeeded to the Fatimids in Egypt but was trying to get the whole of nearer Asia into their power.

The Ayyūbid ruler Salāḥ al-Dīn (Saladin)'s brother, who passed through Mecca on his way to South Arabia, abandoned his intention of abolishing the Sharifs, but the place of honour on the Ḥādhil belonged to the Ayyūbids and their names were mentioned in the ḥādhil after those of the ʿAbbasīd caliph and the Sharīf (Ibn Ḏubayr, 75, 95). The same Ayyūbid in 582/1186 also did away with the Shīʿī (here Ṣayfī, for the Sharifs had hitherto been Ṣaydīs) form of the ḥadhil in verse, as he did in his will in prose (see Snouck Hurgronje, iii, 214), had coins struck in Salāḥ al-Dīn's name and put the fear of the law into the hearts of the Sharīf's bodyguard, who had not shrunk from crimes of robbery and murder, by severely punishing their misdeeds. A further result of Ayyūbid suzerainty was that the Shāḥī rite became the predominant one.

But even the mighty Salāḥ al-Dīn could only make improvements in Mecca. He could abolish or check the worst abuses, but the general state of affairs remained as before.

iii. The rule of Katāda and his descendants down to the Wаḥḥābī period (ca. 596-1202/1200-1788).

Meanwhile, a revolution was being prepared which was destined to have more far-reaching consequences than any of its predecessors. Katāda, a descendant of the same Mūsā (see above) from whom the Mūsāwls and the Hawashim were descended, had gradually extended his influence from Yanbu' to Mecca and had gathered a considerable following in the town. According to some sources, his son Ḥanūzala made all preparations for the decisive blow on the holy city; according to others, Katāda seized the town on 27 Rajāb when the whole population was away performing a lesser ʿumra in memory of the completion of the building of the Ka'ba by ʿAbd Allāh b. al-Zubayr, which was celebrated on this day along with the festival of Muhammad's ascension to heaven. However it came about, Katāda's seizure of the town meant the coming of an able and strong-willed ruler, the ancestor of all later Sharifs. He steadfastly followed his one ambition to make his territory an independent principality. Everything was in his favour; that he did not achieve his aim was a result of the fact that the Ḥijāz was once again at the intersection of many rival lines of political interest.

Katāda began by ruining his chances with the great powers; he ill-treated the son of the Ayyūbid al-Mulk al-ʿAdil (540-615/1151-1218 [see al-Ṣālīḥ]) in brutal fashion (Chron. Mekka, ii, 263). He roused the ire of the caliph by his attitude to pilgrims from ʿIrāq. He was able, however, to appease the latter and the emir he sent to Baghdād returned with gifts from the caliph. The caliph also invited him to visit Baghdād. According to some historians, however, the Sharīf turned home again before he actually reached Baghdād. On this occasion, he is said to have expressed his policy of the "splendid isolation" of the Ḥijāz in verse, as he did in his will in prose (see Snouck Hurgronje, Qādāḥ's policy of splendid isolation, cited in Bāhirī, viii, 817). On the other hand, Katāda is said to have vigorously supported an Ṣāmīm of Ḥasanid descent in founding a kingdom in the Yemen. After the reconquest of this region by a grandson of al-ʿAdil, the Ayyūbids of Egypt, Syria, and South Arabia were mentioned in the Ḥadhil in Mecca along with the caliph and Sharīf.

Katāda's life ended in a massacre which his son Ḥasan carried out in his family to rid himself of possible rivals (Chron. Mekka, ii, 215, 263 ff.; Ibn al-ʿAdīr, xii, 262 ff.). The Ayyūbid prince Maḥmūd, however, soon put a limit to his ambition and had Mecca governed by his generals. On his death, however, power again passed into the hands of the Sharifs, whose territory was allowed a certain degree of independence by the rulers of the Yemen as a bulwark against Egypt.

About the middle of the 7th/13th century, the world of Islam assumes a new aspect as the result of the advent of persons and happenings of great importance. In 656/1258 the taking of Baghdād by the Mongol Khān Ĥūlegū put an end to the caliphate. The pilgrim caravan from ʿIrāq was no longer of any political significance. In Egypt, power passed from the Ayyūbids to the Mamlūks; Sultan Baybars [q.v.]} (658-76/1261-77) was soon the most powerful ruler in the lands of Islam. He was able to leave the government of Mecca in the hands of the Sharīf, because the latter, Abū Numāyy, was an energetic individual who ruled with firmness during the second half of the 7th/13th century (652-700/1254-1301). His long reign firmly established the power of the descendants of Katāda.

Nevertheless, the first half century after his death was almost entirely filled with fighting between different claimants to the throne. ʿAḏḏān's reign also (747-76/1346-75) was filled with political unrest, so much so that the Mamlūk Sultan is said on one occasion to have sworn to exterminate all the Sharifs. ʿAḏḏān introduced a political innovation by appointing his son and future successor Aḥmād co-regent in 762/1361, by which step he hoped to avoid a fratricidal struggle before or after his death.

A second measure of ʿAḏḏān's also deserves mention, namely the harsh treatment of the muʿākilūn and imām of the Zayidis; this shows that the reigning Sharifs had gone over to the predominant rite of al-Shāḥī and forsaken the Zaydi creed of their forefathers.

Among the sons and successors of ʿAḏḏān, special mention may be made of Ḥasan (798-829/1396-1426) because he endeavoured to extend his sway over the whole of the Ḥijāz and to guard his own financial interests carefully, at the same time being able to avoid giving his Egyptian suzerain cause to interfere.

But from 828/1425 onwards, he and his successors had to submit to a regular system of control as regards the allotment of the customs.

From the time of Ḥasan, in addition to the bodyguard of personal servants and freedmen, we find a regular army of mercenaries mentioned which was passed from one ruler to another. But the mode of life of the Sharifs, unlike that of other Oriental rulers, remained simple and in harmony with their Arabian surroundings. As a vassal of the Egyptian sultan, the Sharīf received from him every year his taḥqīʾ [q.v.] and a robe of honour. On the ceremonies associated with the accession of the Sharifs, see Snouck Hurgronje, Mekka, i, 97-8.

Of the three sons of Ḥasan who disputed the position in their father's lifetime, Barākāt [i] (7) was chosen by the sultan as co-regent; twenty years later, he succeeded his father and was able with slight interruptions to hold sway till his death in 859/1455. He had to submit to the sultan, sending a permanent garrison of 50 Turkish horsemen under an ṣāmīr to Mecca. This ṣāmīr may be regarded as the precursor of the later governors, who sometimes attained positions of considerable influence under Turkish suzerainty.

Mecca enjoyed a period of prosperity under
Barakát's son Muhammad (Chron. Mekka, ii, 341 ff.; iii, 230 ff.), whose reign (859-902/1455-97) coincided with that of Ka'ib ibn Ḥayy [q.v.] in Egypt. The latter had left a fine memorial in the many buildings he erected in Mecca.

Under Muhammad's son Barakát II (902-31/1455-1525), who displayed great ability and bravery in the usual struggle with his relatives, without getting the support he desired from Egypt (Chron. Mekka, ii, 342 ff.; iii, 244 ff.), the political situation in Islam was fundamentally altered by the Ottoman Sultan Selim's conquest of Egypt in 923/1517.

Although henceforth Constantinople had the importance for Mecca that Baghdad once had, there was little real understanding between Turks and Arabs, Mecca at first experienced a period of peace under the Sharífs Muhammad Abú Numayy (951-73/1525-66) and Hāsan (973-1009/1566-1601). Under Ottoman protection, the territory of the Sharífs was extended as far as Khaybar in the north, to Hali in the south and in the east into Najd. Dependence on Egypt still existed at the same time; when the government in Constantinople was a strong one, it was less perceptible, and vice-versa. This dependence was not only political but had also a material and religious side. The Hidjáz was dependent on corn from Egypt. The foundations of a religious and educational nature now found powerful patrons in the Sultans of Turkey.

A darker side of the Ottoman suzerainty was its intervention in the administration of justice. Since the Sharífs had adopted the Shafi'i madhhab, the Shafi'i kadi was the chief judge; this office had also remained for centuries in one family. Now the highest bidder for the office was sent every year from Istanbul to Mecca; the Meccans of course had to pay the price with interest.

With Hāsan's death, a new period of confusion and civil war began for Mecca. In the language of the historians, this circumstance makes itself apparent in the increasing use of the term Dhalli... for different groups of the descendants of Abú Numayy who dispossessed the supremacy, often having their own territory, sometimes asserting a certain degree of independence from the Grand Sharíf, while preserving a system of reciprocal protection which saved the whole family from disaster (Snouck Hurgronje, Mekka, i, 112 ff.).

The struggle for supremacy, interspersed with disputes with the officials of the sultanate, centred in the 11th/17th century mainly around the 'Abádíla, the Dhawi Zayd and the Dhawi Barakát.

Zayd (1040-76/1631-66) was an energetic individual who would not tolerate everything the Turkish officials did. But he was unable to oppose successfully a measure which deserves mention on account of its general importance. The ill-feeling between the Sunni Turks and the Shi'í Persians had been extended to Mecca as a result of an order by Sultan Murád IV to expel all Persians from the holy city and not to permit them to make the pilgrimage in future. Neither the Sharífs nor the upper classes in Mecca had any reason to be pleased with this measure; it only served the mob as a pretext to plunder well-to-do Persians. As soon as the Turkish governor had ordered them to go, the Sharífs however gave permission as before to the Shi'í to take part in the pilgrimage and to remain in the town. The Sharífs likewise favoured the Zaydis, who had also been frequently forbidden Mecca by the Turks.

The further history of Mecca down to the coming of the Wahhabís is a rather monotonous struggle of the Sharífi families among themselves (Dhawi Zayd, Dhawi Barakát, Dhawi Mas'àd) and with the Ottoman officials in the town itself or in Djuđda.

iv. The Sharífate from the Wahhabí period to its end. The Kingdom.

Although the Wahhabís [q.v.] had already made their influence perceptible under his predecessors, it was Gháilib (1788-1813) who was the first to see the movement sweeping towards his territory like a flood; but he left no stone unturned to avert the danger. He sent his armies north, east and south; his brothers and brothers-in-law all took the field; the leaders of the Syrian and Egyptian pilgrim caravans were appealed to at every pilgrimage for help, but without success. During the period of the French occupation of Egypt (1798-1801), he made a rapprochement with the French there, hoping to ensure the continuance of the corn imports from Egypt upon which the Hidjáz relied and to reduce Turkish influence there (see M. Aibir, Relations between the government of India and the Sharíf of Mecca during the French invasion of Egypt, 1798-1801, in JRAS [1965], 35-42). In 1799 Gháilib made a treaty with the amir of Dar'iyá, by which the boundaries of their territories were laid down, with the stipulation that the Wahhabís should be allowed access to the holy territory. The Hidjáz thus preserved its independence; however, and in 1803 the army of the amir Suṣí b. 'Abd al-'Azíz approached the holy city. After Gháilib had withdrawn to Djuđda, in April Suṣí entered Mecca, the inhabitants of which had announced their conversion. All kubbás were destroyed, all tobacco pipes and musical instruments burned, and the adhibin purged of praises of the Prophet.

In July, Gháilib returned to Mecca but gradually he became shut in there by enemies as with a wall. In August, the actual siege began and with it a period of famine and plague. In February of the following year, Gháilib had to submit to acknowledging Wahhabí suzerainty while retaining his own position.

The Sublime Porte had during all these happenings displayed no sign of life. It was only after the Wahhabís in 1802 sent back the pilgrim caravans from Syria and Egypt with their mahámls [q.v.], that Muhammad 'Ali [q.v.] was given instructions to deal with the Hidjáz as soon as he was finished with Egypt. It was not till 1813 that he took Mecca and there met Gháilib who made cautious advances to him. Gháilib, however, soon fell into the trap set for him by Muhammad 'Ali and his son Tunus. He was exiled to Salonika, where he lived till his death in 1816.

In the meanwhile, Muhammad 'Ali had installed Gháilib's nephew Yábyá b. Sarúr (1813-27) as Sharíf. Thus ended the first period of Wahhabí rule over Mecca, and the Hidjáz once more became dependent on Egypt. In Mecca, Muhammad 'Ali was honourably remembered because he restored the pious foundations which had fallen into ruins, revived the consignments of corn, and allotted stipends to those who had distinguished themselves in sacred lore or in other ways.

In 1827, Muhammad 'Ali had again to interfere in the domestic affairs of the Sharífs. When Yábyá had made his position untenable by the vengeance he took on one of his relatives, the viceroy deposed the Dhalli Zayd and installed one of the 'Abádíla, Muhammad, usually called Muhammad b. 'Awín (1827-51). He had first of all to go through the traditional struggle with his relatives. Trouble between him and Muhammad 'Ali's deputy resulted in both being removed to Cairo in 1836.
Here the Sharif remained till 1840 when by the treaty between Muhammad ʿAli and the Porte the Hijāz was again placed directly under the Porte. Muhammad b. ʿAwn returned to his home and rank. Ottoman suzerainty was now incorporated in the person of the wali of Djudda. Friction was inevitable between him and Muhammad b. ʿAwn; the latter's friendship with Muhammad ʿAli now proved of use to him. He earned the gratitude of the Turks for his expeditions against the Wahhābi chief ʿAyyāl in al-Riyād and against the ʿAṣīr tribes. His raids on the territory of Yemen also prepared the way for Ottoman rule over it.

In the meanwhile, the head of the Dhāwī Zayd, ʿAbd al-Muḥṭarīl (1851-56), had made good use of his friendship with the grand vizier and brought about the deposition of the ʿAbādīla in favour of the Dhāwī Zayd. ʿAbd al-Muḥṭarīl, however, did not succeed in keeping on good terms with one of the two pashas with whom he had successively to deal. In 1853 it was decided in Istanbul to cancel his appointment and to recall Muhammad b. ʿAwn. ʿAbd al-Muḥṭarīl at first refused to recognise the genuineness of the order, and he was supported by the Turkophile feeling just provoked by the prohibition of slavery. Finally, however, he had to give way to Muhammad b. ʿAwn, who in 1856 entered upon the Sharifate for the second time also. He remained in power barely two years. Between his death in March 1858 and the arrival of his successor ʿAbd Allāh in October of the same year, there took place the murder of the Christians in Dji-dāda (15 June) and the atonement for it (cf. Djudda, and Snouck Hurrj., Een rector der mekkaansche universiteit, in Bijdragen t. d. Taal-, Land- en Volkenkunde van Nld.-India, 5e volgr., deel ii, 381 ff., 399 ff.).

The rule of ʿAbd Allāh (1858-77), who was much liked by his subjects, was marked by peace at home and events of far-reaching importance abroad. The opening of the Suez Canal (1869) meant on the one hand the liberation of the Hijāz from Egypt, on the other, however, more direct connection with Istanbul. The installation of telegraphic connections between the Hijāz and the rest of the world had a similar importance for commerce. The reunion of Yemen by the Turks was calculated to strengthen the impression that Arabia was now Turkish territory for ever.

The brief reign of his popular elder brother Husayn (1877-80) ended with the assassination of the Sharīf by an Afghan. The fact that the aged ʿAbd al-Muḥṭarīl (see above) was sent by the Dhāwī Zayd from Istanbul as his successor (1880-82) gave rise to an obvious suspicion.

Although the plebs saw something of a saint in this old man, his rule was soon felt to be so oppressive that the notables petitioned for his deposition (Snouck Hurrj., Mekka, i, 204 ff.). As a result in 1881, the energetic ʿOṯmān Nūrī ʿAṣwāḥ was sent with troops to the Hijāz as commander of the garrison with the task of preparing for the restoration of the ʿAbādīla. ʿAbd al-Muḥṭarīl was outwitted and taken prisoner; he was kept under guard is one of his own houses in Mecca till his death in 1886.

ʿOṯmān ʿAṣwāḥ, who was appointed wali in July 1882, hoped to see his friend ʿAbd Allāh, one of the ʿAbādīla, installed as Grand Sharīf alongside of him. ʿAwn al-Rafīʿ (1882-1905) was, however, appointed (portrait in Snouck Hurrj., Bilden aus Mekka). As the wali was an individual of great energy, who had ever done much for the public good and ʿAwn, although very retiring, was by no means insignificant, but was indeed somewhat tyrannical, trouble between them was inevitable, especially as they had the same powers on many points, e.g. the administration of justice and supervision of the safety of the pilgrim routes. After a good deal of friction, ʿOṯmān was dismissed in 1886. His successor was Dji-dāda ʿAṣwāḥ, who only held office for a short period and was succeeded by ʿAṣwāḥ ʿAṣwāḥ. Only Ahmad Rāṭīb could keep his place alongside of ʿAwn, and that by shutting his eyes to many things and being satisfied with certain material advantages. After ʿAwn's death, ʿAbd Allāh was chosen as his successor. He died, however, before he could start on the journey from Istanbul to Mecca. ʿAwn's actual successor was therefore his nephew ʿAwn (1905-8). In 1908 he and Ahmad Rāṭīb both lost their positions with the Turkish Revolution.

With Husayn (1908-1916-1924 [see Husayn b. ʿAli]), also a nephew of ʿAwn's, the last Sharīf came to power as the nominee of the young Turks in Istanbul. But for the Great War, his Sharīfate would probably have run the usual course. The fact that Turkey was now completely involved in the war induced him to declare himself independent in 1916. He endeavoured to extend his power as far as possible, first as liberator (munkidh) of the Arabs, then (22 June 1916) as king of the Hijāz or king of Arabia and finally as caliph. Very soon however, it became apparent that the ruler of Najd, ʿAbd al-ʿAzīz ʿAlī Suʿūd, like his Wahhābi forefathers, was destined to have a free hand in Arabia. On 29 September 1924 his troops took al-Tāʾif, and in October, Mecca. King Husayn fled first to ʿAkkā and from there in May 1925 to Cyprus. His son ʿAwn retired to Djudda. Ibn Suʿūd besieged this town and Medina for a year, avoiding bloodshed and complications with European powers. Both towns surrendered in December 1925.

We owe descriptions of social life in Mecca during the last decades of the pre-modern period to two Europeans, the Briton Sir Richard Burton, who as the dervish-physician Mirzā ʿAbd Allāh visited Mecca in 1853 at the time of the pilgrimage, and the Dutchman Snouck Hurrj., who lived in Mecca for some months during 1884-5 with the express aim of acquiring a knowledge of the daily life of the Meccans, but also with a special interest, as a Dutchman, in the Djāwā or Indonesians who went as pilgrims to Mecca and who often stayed there as muḥājirūn. The institution of the pilgrimage and the ceremonies connected with the various holy sites in or near the city dominated Meccan life, many of its citizens having specific roles concerning the religious rites and being organised in special guilds, such as the zamāmīyyān who distributed water from the well of Zamzam in the courtyard of the Kaʿba; the Bedouin muḥājirūn or camel brokers, who arranged transport between Djudda, Mecca, al-Tāʾif and Medina; and above all, the mutawwifūn or guides for the intending pilgrims and their conductors through the various rites (mandāk) of the Hajj (q.v.). These mutawwifūn had their connections with particular ethnic groups or geographical regions of the Islamic world (there were, in Snouck Hurrj., time, 180 guides plus hangers-on who were concerned with the Dji-dāda pilgrims alone), and their agents (uṣul-kāṭ) in Djudd would take charge of the pilgrims as soon as they disembarked. Such groups as these, together with the townspeople in general who would let out their houses or rooms, were geared to the exploitation of the pilgrims, and it was only in the rest of the year that tradesmen, scholars, lawyers, etc., could really pursue their other vocations.

At this time also, the slave trade was still of considerable importance. There were a few white Circas-
sians (Cerkes [q. v.]), but much more important for hard manual labour like building and quarrying were the black negro slaves (sudan), and, for domestic service, the somewhat lighter-skinned so-called Abyssinians (hubish). Despite the prohibitions of slave-trading imposed in their own colonial territories and on the high seas, Snouck Hurgrone further observed some slaves from British India and the Dutch East Indies, and the Mecca slave market was a flourishing one.

(A. J. Wensing - [C. E. Bosworth])

3. The Modern City

Politics and administration. ‘Ali b. al-Husayn b. ‘Ali, was declared king of al-Hijâz on 5 Rabî’ 1/1344/4 October 1924 following the abdication of his father the previous day, but the odds against his stabilising a collapsing situation were insurmountable. He therefore ordered his troops out of the capital on 14 Rabî’ 1/13 October 1924 to take up new positions in Bahra about half-way between Makka and Qiddâ. The next morning, the city was looted, not by the Ikhwan (Wahhâbîs) but by local Bedouin who found it unguarded. ‘Abd al-’Azîz b. ‘Abd al-Rahmân Al Su’ûd, the sultan of Najd and its Dependencies, was in al-Riyadh and had ordered Khâlid b. Lu’ayy to place Ibn Biqîd not to enter Makka for his own arrival, for fear of further savagery in Islam’s holiest city. However, when Khâlid and Ibn Biqîd found that the enemy had fled, they decided to move. On 17 Rabî’ 1/16 October, by which time the Bedouin had left, Ibn Biqîd ordered four Ikhwan from Ghâzaght to enter the shuttered city without weapons and wearing khâmîs clothing. As they traversed the deserted streets, they read a proclamation annecling the city and guaranteeing the safety of its inhabitants. Slowly the citizenry began to re-emerge. On the following day, Khâlid and Sulûn led their forces, all muhûmmân, into the holy city to the Haram, where the ‘umra was performed. There was some sporadic destruction of water pipes, tobacco supplies, Sharîﬁan property and domed tombs, and the Ikhwan delivered sermons. Among the revered antiquities destroyed was the reputed birthplace of the Prophet and two houses revered as those of Khâdîja and of Abu Bakr. But on the whole, good order was kept. As a Su’ûd official observed, the Ikhwan entered Makka saying “Lâ ilâha illâ Allah” and “Allahu Akbar”, not fighting and killing. Khâlid b. Lu’ayy was ‘elected’ amir and promulgated himself as the Sharîﬁan reception room to receive the submission of the civil and religious notables.

The amîr of Makka served unaided for a month-and-a-half, and had to confront both domestic and international problems almost at once. On 6 Rabî’ 2/1343/4 November 1924, the consuls resident in Qiddâ (British, Dutch, French, Iranian and Italian), who no doubt anticipated an immediate Su’ûd official intervention, the city would not find those who believe in God and the last day of the ummîs ... or the mushrikûn ... As God said (LVIII, 22) in his Holy Book... ‘Thou wilt not find those who believe in God and the last day loving those who resist God and His Prophet even though they be their fathers, sons, brothers or kin’ ... If you look at our own situation and consider our actions you will see that this is our way of defending Islam.” He enclosed a copy of ‘Abd al-’Azîz’s pro-
clamation to the people of Djudda and Makka suggesting an international conference on the future of al-Hijāz and meanwhile assuring security for all. The Hijāzis already pitted their steadfastness out against the forces and since al-Husayn had gone and since King 'Ali and the Party accepted the same kind of Islam that Sultan 'Abd al-'Azīz believed in, there was no reason to continue fighting. They asked to send delegations to Makka so that a truce could be signed pending the decision of the international conference. Khalīfīd gave them no encouragement; he wrote on 22 Rabī‘ II/20 November, “God has already purified the Holy Haram by ridding it of Husayn... We shall oppose all those who continue to support ‘Ali.” Muhammad al-Tawīl, who was the real power in the Hijāz National Party, nevertheless, requested permission to send a delegation; Khalīfīd agreed, and the delegation went to Makka the next day. Any lingering doubt as to Wahhābī intentions was removed by the ultimatum which Khalīfīd gave his visitors. They could arrest ‘Ali, get him out of the country, or join the Wahhābīs in seizing Djudda.

Sultan ‘Abd al-'Azīz had left al-Riyād with an army of 5,000 sedentarists on 13 Rabī‘ II/1343 November 1924 for Makka and arrived there in remarkably fast time on 8 Jumādā I/5 December. Upon his departure from al-Riyād he had issued a proclamation (in Wahhāba, Qizira, 253) on his purposes in going to Makka. He also, in the presence of three close advisors, Dr. ‘Abd Allāh al-Damlūdji (from al-Mawsīl), Shaykh ‘Abd Allāh Al-Saylūmān (from ‘Unayza in al-Kaṣīm, Najd), and Shaykh Ḥāfīz Wahhāba (of Egyptian origin) to study out the situation in Makka and to assist in reassuring the population. Shaykh Ḥāfīz reports (Kamsun, 63 ff.) that he delivered a number of speeches to ulama, merchants and government employees in various meetings. He stressed that ‘Abd al-'Azīz would reform corruption, end the isolation of al-Hijāz from the mainstream of the Muslim world and put the administration of the country, and especially of the Haramayn, on a sound basis. These speeches probably helped; in any case, just before ‘Abd al-'Azīz’s arrival, Shaykh Ḥāfīz received a letter from the director of the Egyptian āṣāb, ‘Abd Allāh Al-Sayy, congratulating him on the details of the event.

Sultan ‘Abd al-'Azīz himself reached al-Ṭārif on 6 Qumādā I/13 December, changed into ihrām, entered the city and then, by the Bāb al-Salām, entered the sacred mosque. No member of his house had prayed there since 1227/81812. Ibn Su‘ūd eschewed the Sharīfīi palaces and instead set up his camp outside the city in al-‘Abhāda, where for two weeks he received all and sundry. Universal report is that his humility, his unpretentiousness, his sincere apologies for what had happened at al-Ṭārif and his rejection of sycophancy (to those who tried to kiss his hand he said that his custom was only to shake hands) combined to win local hearts. The proclamation that he had issued on 12 Qumādā I 1343/9 December when he entered the city had already made a favourable impression (text in Wahhāba, Qizira, 254-5). Article 4 was as follows: “Every member of the ulama in these regions and each employee of al-Haram al-Ṣarīr or maṭāwīf with a clear title shall be entitled to his previous entitlement. We will neither add to it nor subtract anything from it, with the exception of a man against whom people bring proof of unsuitability for a post, for unlike the past situation, such practices will be forbidden. To whomever has a clear previous claim on it, we will give his right and take nothing from him.”

Having established some rapport with the citizens of Makka, Sultan ‘Abd al-'Azīz now took command of his forward troops located at al-Raṣālama about 4 km. east of Bahāra. The governance of the city rested still with the Djuddan officials and the civil administration of the city over to ‘Abd Allāh al-Damlūdji and to Ḥāfīz Wahhāba on a kind of rotating basis. He then decided he would rather have al-Damlūdji close at hand and left the administration of Makka divided so that Khalīfīd b. Lu’ayy handed al-‘Awān and military affairs and Shaykh Ḥāfīz civil matters. Soon thereafter the administration was further elaborated. The municipality was turned over to a Makkan, Shaykh Ḥāfīz Ahmad al-Subāḥi, and an embryonic consultative council was established under the chairmanship of Shaykh ‘Abd al-Kādir al-Ṣayyibī, the keeper of the key of the Ka‘ba. This simple council was the kernel of the later Madīż al-Ṣuwān. This administrative set-up continued until the capture of Djudda a year later.

The dual amirate was not harmonious. Shaykh Ḥāfīz reports perpetual conflicts between himself and Khalīfīd. It was, he says, a conflict between Bedouin and sedentary mentalities. ‘He wanted to confiscate all the houses and seize their contents because their owners had fled. Since they had only fled out of fright, I tried and in many cases succeeded in preserving them; in other cases I failed.” Smoking was a perpetual source of trouble. Ibn Su‘ūd’s Wine House and the use of force on offenders; Ḥāfīz, kindness. One of the ironies was that although smoking had been banned, cigarettes were taxed.

There were other problems. King ‘Ali, attempts at reconciliation having failed, stopped all supplies going from Djudda to Makka. Since 300-400 camel loads a day were needed, the situation became very strained. ‘Abd al-Kādir al-Ṣayyibī wrote to King ‘Ali as follows: “How far do your deeds differ from the statement of God. What is the reason for stopping our food? We are not responsible for the Nejdī Army entering Mecka; you are, for the following reasons (i) you did not settle differences with the Sultan of Nejd, (ii) when the Nejd army entered Ta‘if we asked you to evacuate our families and belongings, but you refused. You promised to protect us but you ran away. When you came to Ta‘if we asked you again not to leave but we went on protecting ourselves... and again you ran away... we would like to ask your Highness if the neighbours of the House of God are animals. We beg your Highness to leave us Jeddah.” (quotation from Baker, 214-15). ‘Ali sent one of his dilapidated aircraft to drop a leaflet in reply saying that he had left in order to prevent a repetition of the events in al-Ṭārif. ‘Abd al-'Azīz’s response to him was more concrete. He sent the Khwānī to capture Rābīgh and al-Lith thus (a) giving them something to do; (b) breaking the blockade; and (c) cutting the communications between Djudda and al-Madīnah.

In fact, the situation in Makka improved while that in Djudda slowly deteriorated. Not only did Makkans begin to return home, but native Djuddawīs themselves began to arrive in Makka. The superior administration in Makka was a noticeable factor. In April an interesting visitor arrived, Comrade Karim Khān Hakimoff, the Soviet consul in Djudda. He had been granted permission by King ‘Ali to mediate and arrived with his Iranian colleague. They were of course received by ‘Abd al-'Azīz. Reportedly, Hakimoff characterised the hostilities as resulting from imperialist plots, but he did get permission for Fu‘ād al-Ma‘āsh, King ‘Ali’s foreign minister, to come and negotiate. On 2 May, ‘Abd al-'Azīz met with al-Khāṭīb at a coffee shop midway between the
warring lines. The sultan never wavered: the former King al-Husayn now in al-`Akaba was still really nothing but the approaching pilgrims and the great press of Mekkans and Bedouins. In the midst of them was one of the Haram preachers, dressed in a couple of towels and bestriding a beautiful horse, whom he thought some 25-30,000 were Najdis. They camped apart, and Rutter notes that they took no notice of the tobacco that was on sale everywhere. "It is the smoking ... which is unlawful, not the selling of it." At `Arafat, while returning toward his tent from a visit to King `Ali, Ibn Su'd noted that "there was a lot of Masdjid `Abd al-Ihrām and Masjīd `Arafāt." Rutter and his companions "passed the burly figure of Ibn Su'd, dressed in a couple of towels and bestriding a beautiful Nejd horse which looked rather like a little animated rocking horse under his long form. He was attended by four mounted guards carrying rifles." Another of Rutter's vivid descriptions is that of the break-up of the pilgrim throng at `Arafāt: "Far out on the northern side of the plain rode the scattered hosts of the Nejd Ikhān—dim masses of hosting camelry, obscurely seen in the falling dusk. Here and there in the midst of the spreading multitude, a green standard, born aloft, suddenly flashed out from the dust-cloud, only to disappear the next moment behind the obscuring screen, which rose in spreading billows of sand. There was also a cloud of smoke, a cloud of black smoke; and in the midst of the spreading multitude, a green flag flew. Rutter met with `Abd al-`Azīz a personal mission was received by the sultan at al-Shumaysi on the edge of the sacred territory, Sir Gilbert Clayton, who was negotiating with `Abd al-`Azīz at his camp in Bahra, noted in his diary for 22 Rabi` 1/21 October the arrival of an Iranian delegation. Led by Mīrzā `Alī Akbar Khān Bahāmān, the Iranian minister in Egypt, and Mīrzā Ḥabīb Khān Huwayda, the consul-general in Iran in Palestine, its function was to investigate alleged Wahhābī desecration and destruction of shrines in Makka and al-Madīna. `Abd al-`Azīz received them most cordially and sent them on to Makka by car. The sultan said he welcomed the investigation because the charges were false. Incidentally, Clayton indicated in his diary (19 October 1925) his belief that Ibn Su'd could have captured Dqudda whenever he wanted, but that he was going slowly because _inter alia_, he wanted "to gauge more fully the effect which his attack on the Holy Places and his capture of Mecca has had on the whole Moslem nation, not only in the general sense, but in the particular sense of the Wahhābīs in Egypt." In any case, by the middle of November 1925, large numbers of Wahhābīs began to arrive in groups ranging from half-a-dozen to several hundred. The wadi from Diabal al-Nūr to the city was crowded with them and many were sent on to the front. Clearly, the sultan was preparing to storm Dqudda, but it turned out not to be necessary. Al-Madīna surrendered on 19 Dīqūmād I 1344/5 December 1925, followed two weeks later by Dqudda. On 20 Dīqūmād II 1344/5 January 1926, certain notables in Dqudda formally approached the sultan of Nadīj to ask him if he would also become king of al-Hijāz, hoping by this device to maintain the integrity of al-Hijāz. When they had left, `Abd al-`Azīz convened the ulama and other notables. They approved. On 22 Dīqūmād II 1344/7 January in Makka, Ibn Su'd read out a formal statement of his intentions pointing out that there had been almost no response to his appeal for a conference to discuss the problem of al-Hijāz. "So, as I find that the Islamic World is not concerned about this important matter, I have granted them [the people of the Hijāz] the freedom to decide what they will." The wishes of the "people" manifested themselves the same evening in the form of a petition confirming their support for `Abd al-`Azīz: "We acknowledge you, Sultan Abdulaziz, as king of Hejaz in accordance with the Holy Book and the Sunna of the Prophet and that Hejaz will be for the Hejazeen ... Mecca will be the capital and we shall be under your protection." (Baker, 230). Rutter was present in the Great Mosque for the mahāya'a: "Upon a Friday [23 Dīqūmād II/8 January] after the midday prayer, I mounted the crumbling stone steps of the school el Madrasat el Fakhrīya, which stands beside the Bāb Ibrāhīm, in order to visit an acquaintance who was employed as a schoolmaster there. As we sat sipping tea beside a window looking into the Haram, we were surprised to observe a sudden rush of people toward Bāb es-Safā. They were evidently attracted by something which was happening near that gate. Rising, we descended the steps and passed into the Haram. Making our way toward Bāb es-Safā, we came upon a great press of Mekkans and Bedouins. In the midst of them was one of the Haram preachers.
MAKKA

155

(probably Abd al-Malik Murad) perched upon a little wooden platform or pulpit, apparently addressing the multitude. Elsewhere, a number of guards, at some distance, were able to see Ibn Sa‘ūd sitting in a prepared place near the gate. The preacher was addressing to the Sultan a speech of adulation. Presently, he made an end, and then several of the Ashraf, the Shaybi, and other prominent Makkans in turn, took the Sultan’s hand and acknowledged him King of the Hijāz. Ibn Sa‘ud received these advances with his usual cordial smile, and upon the conclusion of the ceremony he rose, and accompanied by his armed guards, made his way slowly through the crowd towards the Kaaba and proceeded to perform the towāf. Having completed this, and prayed two prostrations in the Makām Ibrāhīm, he left the Mosque and went to the Hamīdīyya where he held a general reception. Suddenly one of the old guns in the Fort of Jiyād [Adżyad], boomed and was immediately followed by another on Jebel Hindi. The troops of the garrison were saluting the new king. A hundred and one times the peace of the city was broken. Rutter reports some hostile reactions to the elevation of al-Su‘ūdi, as some Makkans dubbed their king, but contrasts most favourably the honest treatment received by pilgrims under the new dispensation.

After the hostilities over, the new king of the Hijāz remained in his new capital, Makka, and addressed himself to these major issues: the Hadjdiyya of 1344/1926, the Islamic conference which he had previously announced and which was scheduled in conjunction with it, and the administration of the kingdom. The Hadjdiyya that summer attracted 191,000, approximately an eight-fold increase over the previous year, but the Holy City was also the scene of the rather serious mahmal [q. v.] affair. The Egyptian mahmal arrived in the usual way with the kiswa [q. v.], with the retinue of civilians and soldiers including their flags and bugles, and with contributions of cash and kind much of which represented weird [q. v.] income dedicated to the Haram from Egypt. The Egyptian amir al-Hadjdiyya was Mahmūd ‘Azmī Pasha. The whole procedure was almost programmed for trouble, given the cultural differences of the Egyptians involved and especially the religious sensitivities of the Ikhānī. As Lacey (202) observed: “The glorious shoulder-borne litter smacked to them of idolatry [and] its retinue of armed guards piqued their pride...” In the event, the Ka‘ba was dressed in its new Egyptian kiswa without incident, and the ceremonies were proceeding normally, but on the eve of 5 Dhu ‘l-Hijja (some report the day of 10 Dhu ‘l-Hijja) the situation exploded. One report is that the spark was some music (= probably bugling) played by the Egyptian soldiers. Other reports indicate that the Nadjdī Bedouin simply saw the mahmal and began to shout out that it was an idol. Whatever the precise trigger event was, in the crowded mass of pilgrims between Muna and Safa, a number of pilgrims were killed and 100 wounded; 40 camels were also killed; but the carnage could easily have been much worse. Just as the Ikhānī were preparing a massive assault on the Egyptians, King ‘Abd al-‘Azīz rode up and at considerable personal risk managed to separate the two groups and to cool the hot blood. Once order was restored, the king ordered his son Fayṣal to guard the Egyptians with a detachment of Su‘ūdi troops until the end of the ceremonies. When the Hadjdiyya had ended, he ordered Mughārī b. Su‘ūd b. Djawīl to escort the Egyptians to Qiddoda with a detachment of Su‘ūdi troops, as follows: (Dīr. al-‘Ilm al-Mālikī, Kiṣwah, 237, cf. H. al-‘Ilm al-Mālikī, Kiṣwah, 16 Dhu ‘l-Hijja 1344) from ‘Abd Allāh Āl Sulaymān in Makka to Hāfiz Wahba, then serving as the king’s envoy in Cairo, makes clear, the departure of the Egyptians from Makka was scarcely willing, but the king was going to have them out, willing or not. As Lacey had summarised it (loc. cit.), “the Mahmal never trooped again in glory through the streets of Mecca”; but the incident further soured Egypto-Su‘ūdi relations to the degree that diplomatic relations were not established between the two countries as long as King Fu‘ād reigned in Cairo.

Since the fall of the city to his arms, King ‘Abd al-‘Azīz had repeatedly proclaimed his intention to convene an Islamic conference in Makka to which delegates from all Muslim countries and communities would be invited. The stated idea was to discuss the governance of Islam’s holiest sites and ceremonies, but the basic motivation was to put to rest the fears of Muslims beyond Arabia over the capability of a Su‘ūdi-Nadjdī-Wahhabī régime to care for the Harām. Initially, the conference probably attained its goal, but the results were passive not active. Egypt had declined to attend, and the mahmal had been received with distinguishing. The Egyptian delegates and attend debated with great freedom a wide variety of religious subjects but to no very particular point. On the underlying political issue, it was crystal-clear that ‘Abd al-‘Azīz was going to run the country and there was no indication of any incapacity on his part. That issue was settled without being raised.

The series of ad hoc administrative arrangements made by the king during and after the conquest now gave way to more permanent arrangements. It should be remembered that until the unification of the “dual kingdom” (on 25 Rabī‘a 1345/29 January 1927) King ‘Abd al-‘Azīz had been proclaimed king of Nadjīd (and its Dependencies) as the Kingdom of Su‘ūdi Arabia in 1932, and even beyond that time, al-Hijāz and especially its capital Makka received most of the government’s attention. It is not always easy to separate what applied: (a) to Makka as a city, (b) to al-Hijāz as a separate entity including Makka, and (c) to both the Kingdom of al-Hijāz and the Kingdom of Nadjīd, equally including Makka. The evolution of advisory or quasi-legislative councils was as follows. Immediately after the Su‘ūdi occupation of Makka (7 Dhumādār I 1343/19 December 1924), ‘Abd al-‘Azīz convened a partly elected, partly appointed body of notables called al-Majlis al-Abīl (the national council). It was elected and then it was re-elected on 11 Muharram 1344/1 August 1925. Representation was on the basis of town quarters, and included prominent merchants and ulema, but in addition, the king appointed a number equal to the elected members and also appointed the presiding officer; indeed, no elected member could take his seat without ‘Abd al-‘Azīz’s approval. After the second election, this group came to be known as Majlis al-‘Ashāra (consultative council). After the Islamic conference ended, this arrangement was significantly changed. A national (Hijāzī) council—a kind of constituent assembly—with 30 Makkan members was convened to study an organic statute (al-Tawīlim al-AsSayiyā li-l-‘Ummālika l-‘Ilmālā) known as al-Diwan al-‘Unāmiyya (the general assembly), it accepted on 21 Safar 1345/11 December 1925 Ibn Sa‘ūd’s draft of the organic statute which specified that Makka was the capital of the kingdom, that administration of the kingdom was “in the hand of King ‘Abd al-‘Azīz,”
and that a na'im (deputy general, viceroy) would be appointed on behalf of the king. Faysal b. 'Abd al-'Aziz, the king's second living son, was appointed na'im. Under his chairmanship and in accordance with the statute, a new Madžlis al-Shârâ' of 13 members (five from Makka), this time all appointed, was convened. Various administrative and budgetary matters were routinely discussed by it. (For the rapid evolution of the Madžlis al-Shârâ', see Nallino, 33-5, 235-6 and M.T. Sâdîk, 21-47.) The Madžlis al-Shârâ' had the power to limit its real powers were, did play a major role as a sounding board in al-Hijâz for various government policies. It has never been dissolved and even under the very much changed situation caused by oil price increases in 1973, it apparently still meets ceremonially from time to time.

One should also note that the Madžlis al-Shârâ', meeting in Makka on 16 Muḥarram 1352/11 May 1933, recognized the king's oldest living son, Su'ud b. 'Abd al-'Aziz, as heir designate (wali al-'ašâb). The prince himself was not present, and Faysal b. 'Abd al-'Aziz received the bay'a on his behalf. The decree was read aloud in the Harrâm and the ministers, notables and ordinary people filed by to present their congratulations. The organic statute also established arrangements for local government and national departments; all of the latter were in Makka. Nor did this situation change radically with the proclamation of the Unified Kingdom of Saudi Arabia in 1351/1932. As late as 1952, the Minister of Health and Interior (H.R.H. Prince 'Abd Allâh b. Faysal b. 'Abd al-'Aziz) and the ministry officials were in Makka as was the Ministry of Finance under 'Abd Allâh Āl Sulaymân Āl Ḥamdân and the Directorates General of Education, P.T.T., Public Security, awlîâ', and other central government agencies. It may be noted here that Faysal was named Minister of Foreign Affairs in 1349/1930, but also that his father continued to make all important decisions in all matters as long as he was vigorous.

Initial branches (originally called ašrâm, sing. kism) of the new government, each under a director (mudîr) were: ašlî'î a-affairs, internal affairs, foreign affairs, financial affairs, supervision of public services and the police force. Courts, awlîâ', and mosques, including the Makkan Harrâm, were under the ašlî'î branch; municipal matters were under internal affairs. It should also be noted that a Madžlis committee composed of the heads of all departments concerned with pilgrimage matters plus members nominated by the king was formed under the chairmanship of the viceroy. Finally, one may note that the titles of departments, their heads and the loci of responsibility all evolved over time. For example, in 1350/1932 a Council of Agents (Madžlis al-Wukâlah) was announced, and for the first time the germ of the idea of ministerial responsibility was introduced.

Makka was one of only five cities in the Hijâz that had had a municipality in Ottoman and Hashimite times. The municipality was re-established by the Su'ud regime in 1343/1926 with its own organizational structure. Three years later, its powers and responsibilities were increased and its name was changed to Āmînât al-'Āsîma. According to Hamza, the underlying idea of the king was to turn purely local matters over to local people. Further organizational adjustments were made in 1357/1938. The budget was in reality under the control of the king and his deputy general, but formally it was under the purview of the Madžlis al-Shârâ'. Once the budget was approved, the municipality apparently enjoyed a certain independence in administering it. It was able to levy local fees (waṣâm). Figures are very incomplete, but in 1345/1926-7 the municipal budget totaled SR 158,800 and in 1360/1949-50 SR 4,034,000. Municipality responsibilities included city administration, cleaning, lighting, supervision of establishments, roads, installation of awnings, condemnation and destruction of properties, land registration, price regulation (for necessities), cleanliness of food preparers, slaughter houses, weights and measures, supervision of elections of guilds of industries and trades and of their activities, supervision of burial procedures, kindness to animals and fines. No other municipality in the land had such broad responsibilities.

The one area where Najdís played an important role in the Makkan scene after the conquest was in organised religion. As early as Diwânadâ Il 1343/January 1925, conferences between the Wahhâbí ulama of Najd and the local ulema of Makka were going forward with minimal difficulty. Shortly after the conquest, 'Abd al-'Azîz transferred 'Abd Allâh b. Bûlayhîd (1284-1359/1867 to 1940-1) from the kadhî of Hâshîl to that of Makka, where he remained for about two years. He was succeeded by 'Abd Allâh b. Hassan b. Husayn b. 'Allî b. Husayn b. Muhammad b. 'Abd al-Wâhâb. Philby, writing around 1369/1950, referred to him as the "archbishop of Mecca" and Ramaco, Royal Family... still refers to him with this same title. 'Abd Allâh b. Su'ud was appointed in 1371/July 1952. Yet care was taken not to alienate the local ulema. For example, when the Hijâzí Hay'at al-Ahmâr bi'l-Mudîrîrq wa'l-Nahy an al-Munkar was established in 1345/1926, 'Abd Allâh al-Shaybânî was made chairman of the committee. The function of the Hay'a was in general to supervise morals, encourage prayer, control mezuzins and imâns of mosques, and report infractions of the shari'a (details in Nallino, 110-2.) In general, the influence of the ulema was high and they were deferred to. The king could not dispose of shari'a questions on his own and regularly referred them to either a kadhî or to the full "bench" of the Makkan or Riyâdí ulema. The king's direct influence over this largely autonomous group was through the power of appointment, but he was of course influential indirectly.

Makka was one of only three cities in al-Hijâz that had had police at the time of the Su'udî takeover; however, since King 'Allî had taken them all to Dquladà as part of his military forces, none were immediately available. According to Rutter, a squad of powerful black slaves belonging to 'Abd al-'Azîz kept order. Makka was also the seat of police administration. A police academy was started in 1353/1933-4 and, at that time at least, the police supervised the orphanage and an old persons' home which had 44 residents. In 1953-5, a new government building was constructed in Djarawal as the main headquarters for the police, and in 1385/1965-6 a police emergency squad was established which responded to the emergency telephone number of 99. In the first decades after the conquest, police were almost all recruited from Asîr (g.v.) and Najd. By the mid-1930s, they wore European-style uniforms and numbered 33 officers and 896 other ranks. As long as it was necessary, the police force also included a special squad called Kalam Taftîsh al-Râkîb (section for the inspection of slaves). Executions were usually carried out on Fridays after the noon prayer between the Hamidiya (government) house and the southern corner of the Harrâm. Philby, Jubilees, 118-20) details a triple execution in 1931 over which Faysal presided from a window in the madžlis of al-Hamidiya, where a group of notables had also gathered. There was a large crowd of commoners in
the street. When the beheadings were over, the police tied the corpses “each with its head by its side” to the railings of the building until sundown. The lowest was the summary court (mahkamat al-musir al-musta'qila) presided over by a single kadi with jurisdiction over petty civil cases and criminal cases not involving execution or loss of limb. The higher court (mahkamat al-qadi, al-susup) had a kadi as president plus two of his colleagues. In cases involving loss of limb or execution, the sentence had to be pronounced by the full court. The appeals court sat only in Makka and was presided over by a president and four other ulama. It functioned as a court of appeals (criminal cases) and of cassation (civil cases). Appeals have to be filed within 20 days and if the court refuses to take the case, the verdict of the lower court stands.

The president, who was Shaykh 'Abd Allah b. Hasan Al al-Shaykh, also administers the whole system and supervises all courts and kadi's. There has also been, since 1350-1/1932, an inspector of courts. Notaries (sing. kāthī al-'udūd) were instituted in 1347/1928-9, and Hamza reports that in Makka at the time he was writing the incumbent was 'Urābi Sidjini.

Immediately after the conquest, the government overprinted “Sultanate of Najdji and al-Hijāz” on the Hāżlimī stamps, but Su 'udī ones were soon in use and the Su 'udī government joined the International Postal Union of Berne in 1345-6/1927. In 1357-8/1939 Makka’s post office was one of only four (the others being at Ḍūqqada, al-Madīna and Yānu'Bi) in the country that could handle all operations specified by the international conventions including the telegraph. There was a daily service to Ḍūqqada and al-Tā'if and a twice-weekly service to al-Madīna.

In 1384/1964-5, Makka’s post office, which was handling in that year's hajj 350,000 letters daily, became a postal centre independent of Ḍūqqada. Rent control was imposed at the time of the conquest and was still in force as late as 1374-5. There was a customs office in the city which, like its counterpart in al-Madīna, was presumably a branch of the main office in Ḍūqqada. Wafq administration in Makka reported directly to the viceroy. Early directors of the Directorate of Aukāf were Muhammad Sa'id Abu 'l-Khayr (1343/1924-8) and Majdī al-Kurdi (1347/1929-31). By a royal decree of 27 Dhu '1- Ḥijād 1354/21 March 1936 the Makkan Directorate of Aukāf was changed into a directorate general to which the other aukāf directorates of al-Hijāz would report. Sayyid 'Abd al-Walāḥ Nā'īb al-Haram was appointed director general.

As far as fire fighting is concerned, Rutter (228) describes a reasonably effective volunteer system in use before modern systems were adopted. He comments that in case of fire “the neighbours regard it as a point of honour to render all the assistance in their power, and official notice of the occurrence is taken by the police, some of whom also turn out and help.” The first student mission sent abroad to train in fire fighting and life-saving methods was some time before 1367/1947-8.

One may at this point reasonably inquire as to whether Makkan acceptance of Su 'udī hegemony in the pre-oil period. Leaving aside ḏīhāwān discontent at the regime and some slight separatist sentiments in Makka and discounting near-by tribal unhappiness (“taxing” pilgrims was no longer possible), there was general acceptance of the régime and great pleasure at the total security and basic fairness. There was also some unhappiness which doubtless increased with the very strong circumstances of the geopolitics of general world-wide depression. In 1345-6/1927 Husayn Hādir al-Dabābah, whose father had been Minister of Finance both under King al-Husayn and under King 'Ali and who himself headed a business house, established in Makka an anti-Su 'udī “Hijāz liberation organisation” called Anđumuni Ḥibz al-Abār. Its basic platform opposed any monarch in al-Hijāz. Husayn was exiled in 1346-7/1928, but he probably left behind a clandestine cell of his party which also maintained an open operation in Egypt. We get another glimpse of anti-Su 'udī feeling in Makka in 1354-5/1936 from the report of a Muslim Indian employee of the British legation in Ḍūqqada named Iḥsān Allāh. According to him, dissatisfaction was widespread, older conservative merchants and ulama wished for an Egyptian takeover with British support, whereas middle-aged merchants and government officials simply viewed the government as backward, a “set of old fools”; younger businessmen, army officers, and pilots longed for an Atatürk [q.v.] or a Mussolini. Iḥsān notes, however, that there was no action and that the preferred way to seek relief was by working for Hijāz interests through the Muṣliha intelligence reports. These were notoriously unreliable, but it would have been surprising had there not been some level of discontent. With the coming of oil, separatist feelings doubtless disappeared, and Makka participated to the full in the extraordinary development that the Kingdom enjoyed as a whole. The extraordinary events of 1400/1979 were the only dramatic break in the standard rhythms of the city’s life.

Seizure of the Haram. Not since the followers of Hamdān Karmat [q.v.] seized Makka and carried the Black Stone back to their headquarters in al-ʿAhsā’ [q.v.] had there been such an astonishing event as that which unfolded in the Ḍūqqada at dawn on Tuesday, 1 Ṣuhrār 1440/20 November 1979. It was of worldwide interest not only because of its intrinsic importance for one of the world’s major religions, but also against the background of the Soviet-American global rivalry, of the recent revolution in Iran, and of the general religious fervour surging through the Muslim world.

The events can be quickly told. The Haram may have had 50,000 people in it, which is not many for a structure designed to accommodate 300,000. It had more than usual at that hour because the day was the first of the new Islamic century and thus deserved some special observance. The imām, Shaykh Muḥammad b. Subayyyīl, had gone to the microphone to lead the prayer, but he was then pushed aside. Several dozens of men produced rifles from their robes; firing broke out, the worshippers ran, and the armed men moved quickly to seal the 29 gates. Many people were wounded in these first exchanges, and a number were killed. Meanwhile two men, subsequently identified as Ḏūḥaymīn (“little glowerer”) b. Muḥammad al-'Utabī and Muḥammad b. 'Abd Allāh al-Kaḥṭānī, were at the microphone proclaiming that the latter was the Ṭaḥā. The rebels, a number of whose grandfathers had been killed while fighting as ḏīhāwān against 'Abd al-'Azīz in 1347-8/1929, who considered themselves neo-ḳūhāwī, and who numbered in all some 230 including women and children, let the worshippers pass and then gathered at the Haram, the holy sanctuary, with the hostages. With apparent presence of mind, Shaykh Muḥammad had removed his clerical garb and made
His way to a telephone in his office according to some reports—a public phone according to others—and notified the chief of the security service that something was happening. He managed to slip out with the other worshippers. At the beginning of the ensuing siege, the rebels used the powerful public address system, which had speakers in the 90 m. high minarets and which was designed to be heard in the streets and plazas outside the mosque, to proclaim their message that the Mahdi was going to usher in justice throughout earth and that the Mahdi and his men had to seek shelter and protection in al-Haram al-Sharif because they were everywhere persecuted. They had no recourse except the Haram. Attacks on the House of Su‘iđ and its alleged policies and practices were virulent; the rebels opposed working women, television, football, consumption of alcohol, royal trips to European and other pleasure spots, royal involvement in business, and the encouragement of foreigners who came to Arabia and corrupted Islamic morality.

Details of names and business contracts were specified. The amir of Makka came in for particular attack. Meanwhile, Su‘iđ Arabia was alive with rumours, some officially encouraged, to the effect that the Djuhaymān was a homosexual, that he was a drug addict, a drunkard, etc.

The report of the Su‘iđ government was hesitant at first but never in doubt. Prince Fahd b. Abd al-Azīz, the heir designate, was out of the country at the time. Prince ‘Abd Allah b. ‘Abd al-Ma‘ālī was second in line to the throne and was on vacation in Morocco. The king, Khālid b. Abd al-Azīz, was awakened at seven in the morning and informed of what had happened. He immediately ordered that all communication with the outside world be cut. The ensuing communications blackout was so total that it was reported that even Prince Fahd had been unable to find out what was going on. In Makka a police car, which may have been the first concrete reaction, drove toward the mosque to investigate. It was promptly fired on and left. Later the amir drove up to try to assess the situation, only to have his driver shot in the head. The men inside were evidently well armed and roused. By mid-afternoon, the 600-man special security force was in Makka and national guard, police, and army units were being airlifted in from Tabūk [q. v.] in the north and the ‘Azīzīyyah [q. v.] in the south. Prince Sulṭān b. ‘Abd al-Azīz, the minister of defence; Prince Nā‘af b. ‘Abd al-Azīz, the minister of interior; and Prince Turqī b. Fayṣal b. ‘Abd al-Azīz, the chief of external intelligence, all arrived in Makka. In al-Riyāḑ, the king had simultaneously called together the senior ulema in order to get a fatwā authorising the use of force in the Haram, since force there is by definition forbidden. The fatwā approving the action was apparently issued immediately but not published for several days. Authority was found in the aya of the Kur‘ān: ‘Do not fight them near the Holy Mosque until they fight you inside it, and if they fight you, you must kill them, for that is the punishment of the unbelievers’ (II, 149).

By Tuesday evening the siege was on, and the rebels had no way to escape, despite the fact that they had secretly and ingeniously cached large supplies of weaponry, ammunition and food in the mosque. Electricity and all other services to the mosque were cut, but Djuhaymān’s snipers covered the open ground around the mosque. Horrified by what was going on, some national guardsmen (mudhābidān) wanted to storm the mosque, but the king had ordered that casualties be minimised. The situation was extremely delicate, for Prince Sulṭān could hardly order heavy weaponry to destroy the mosque and Bayt Allāh. Ultimately, Prince Sulṭān suggested on the mas‘ād which justs out from the mosque enclosure like an open thumb from a closed fist (see plan). According to some, an “artillery barrage” was laid down, but when the troops advanced, they suffered heavy losses and accomplished little. There was considerable confusion on the government side and some lack of coordination among the various services. At one point, two soldiers reportedly ran firing into the courtyard in order to be shot down and die as martyrs. Others were reported to have been unhappy at being called on to fight in the mosque. Since the national guardsmen were tribal, and it had become known that the leaders of the insurrection were tribal, suspicion of the national guardsmen arose. Sulṭān tried another approach involving a disastrous helicopter attack into the courtyard. It failed; the soldiers were wonched down in daylight, and most died. When government soldiers died, the rebels are said to have exclaimed amr Allāh (“at the order of God”), when one of their own died, therefore they shot or burned off his face—a job the women mostly performed—to conceal his identity. In a very difficult situation, friendly governments including the American, French and Pakistani were asked for diplomatic help. (See “The Day and the Night” (Holder and Johns, 324.) By Friday, 4 Muharram/23 November, however, the superiority of the government forces began to tell. Using tear gas, they forced an entrance into the mosque including the second storey, and they drove the rebel marksmen from two of the minarets. Once inside, government forces were able to rake Djuhaymān’s people, and despite a desperate pillar-to-pillar defence backed by barricades of mattresses, carpets and anything else that could be found, the rebels were gradually pushed down toward the maze-like complex of basement rooms. By Monday, 7 Muharram/26 November the government had gained control of everything above ground. But the fighting continued in nightmarish conditions below ground even though the number of the rebels was by then much reduced. By Wednesday the courtyard had been searched, carpeted and cleaned to broadcast prayers live on TV and to begin to calm down the city and the country.

Below ground, difficult fighting continued. The rebels were few and their supplies soon scant, but accompanied in some cases by their women and children they fought desperately. Gas, flooding, and burning tires were all tried in an effort to flush them out—without success. The fate of Muhammad b. ‘Abd Allāh al-Kahtānī is not clear. Some reports indicate that he was killed early in the fighting; others that, in the depths of despair, Djuhaymān had shot him. With many wounded, the hour of the rebels had come. At an hour-and-a-half after midnight on Wednesday 16 Muharram/5 December Djuhaymān led his people out. “It is said that as they emerged, many weeping and too tired to stand, muttering constantly, spat on and reviled, one of the band turned to a National Guardsman and asked: ‘What of the army of the north?’” (Holder and Johns, 526.) But many had to be individually overpowered. Djuhaymān is reported to have been kicked and struggling even as his arms were pinned. Su‘iđ TV covered this scene, and Djuhaymān “stared defiantly at the cameras, thrusting forward his matted beard, his eyes fierce and piercing like a cornered beast of prey.” (Lacey, 487.)

The investigation and trial of the rebels did not take long. On Wednesday a.m., 21 Safar 1400/9 January
1980 (not following the Friday noon prayer as was customary) in eight different Saudi cities amongst which they had been divided, 63 of the rebels were beheaded. Their citizenship was as follows: Su'ūdīs 41, Egyptians 10, South Yamanis 6, Kuwaytis 3, North Yamanis 1, Sudanese 1 and 'Irākis 1. Twenty-three women and thirteen children had surrendered along with their men. The women were given two years in prison and the children were turned over to welfare centres. The authorities found no evidence of foreign involvement. In addition, 19 who had supplied arms were jailed, while another 38 so accused were freed. The government casualty count listed 127 troops killed and 461 wounded, rebel dead as 117, and dead worshippers as 12 or more (all killed the first morning). Popular reaction to these extraordinary events was uniformly hostile to the rebels as defilers of God and his house. The only reported approval is by other members of the 'Utyaya tribe, who reportedly admired the fact that Qubayyān had in no way buckled under during interrogation.

Population and Society. Consistent population figures for Makka are not easy to find. Those that follow are perhaps suggestive:

<table>
<thead>

Given the fact that Makka has for centuries been the centre for a pilgrimage that was often slow and tortuous, and given the desire of the pious to live and die near Bayt Allah, it is natural and has been observed by many that the population is a highly mixed one. Faces from Java, the Indian sub-continent and sub-Saharan Africa are noticeable everywhere. Almost every cast of feature on the face of the earth can be found. And the process continues; Nyrop (140) estimated that 20% of the population consisted of foreign nationals in the early 1960s—a figure which is particularly remarkable when one reflects that the non-Muslim foreigners who flocked to other Arabian cities in that era were absent from Makka. In a way, this has constituted an important benefit for Makka because the city is the continual recipient of new blood.

Outsiders have frequently complained about the dreads of needy families and also helps victims of accidents and calamities. It proved to be a model for similar funds in other cities in Su'ūdī Arabia. Actual Makkan manners and customs seem unexceptionable (as the comments above about cooperative neighbourly firefighting suggest), and Rutter, who gives many interesting details of life in Makka just after the Wahhabī conquest, specifically states that the city is not as immoral as it is pictured and that for example, Makkans use foul language much less than do Egyptians.

Marriages were arranged by the prospective bridegroom's father or other relative, who negotiated with the prospective bride's parents. Both normally give their consent. Once the dowry and other details have been agreed, the bridegroom's mother or other female relative, who usually gives the consent, prepares a feast to which the groom and his friends are invited. Two witnesses are required, but there is usually a crowd. After instruction by the šaykh, the girl's father takes the groom's hand and states that he is giving him his daughter in marriage for a dowry of the agreed amount. The groom accepts this contract and the parties are at that point married. No women are present. Neither party has seen the other unless accidently or as children. Consummation, if the individuals are old enough, is usually about a month later at the bride's house. The same night, she is escorted quietly by her family to the groom's house, and the whole procedure ends the evening after that
with a party at the groom’s house to which relatives of both families male and female are invited. The sexes are, however, still segregated on this occasion. In Hurair’s day the women were polygynous and many slave concubines, but little divorce. He thought Makkan women, for whom silver was the commonest jewelry, were generally fairer than the men and notes that many women could play the lute and drum. They also smoked a great deal. Prostitution was never seen by him. A week after the birth of a child, the father invites his and his wife’s relatives for the ceremony naming the infant. Again, the women are upstairs and the men down. When all have assembled, the father goes up and brings the child down on a cushion and places it on the floor while saying things like ma shah Allah [q.v.]—but not too vigorously lest devils be attracted. The father arranges the child so that his head is toward the Ka’ba and his feet away from it. The father kneels, says al-adhān bi-Allah min al-Shayān al-ragālīn, then bends over the child’s head with his mouth close to the right ear of the infant and repeats the adhān [q.v.] three times. He then says: “I name thee so-and-so.” “The child is now a Muslim. The guests repeat the name, invoke God’s blessing, and each puts a coin under the pillow. Another person then rings an iron pestle against a brass mortar. This is the signal to the women upstairs that the child has been named. They respond with ululations (trilling) of joy. With that, the father picks the infant up, the guests kiss it on the cheek, and the father takes it back upstairs to the women. He redescends with a tray full of sweets. On the 40th day after birth, every child is taken to the Haram and placed for a moment on the threshold of the Ka’ba. Other aspects of child rearing, at least up to Rutter’s time, included the use of foster mothers by the wealthy and the ahgār’s turning their male children over to Bedouin foster mothers for the three-fold purpose of developing their independent spirit, learning the “pure” language of the desert and creating an indissoluble alliance with the tribe. Up to the age of four, clothes worn are scanty and sketchy. Starting at five, boys go to kutūbās [q.v.] and girls are veiled. Boys are circumcised at six or seven, and female circumcision is also practised. Rutter characterises children as generally submissive and respectful. Rutter thought that life expectancy was not great because of the lack of movement of air during the heat of the long summer and because of the high humidity during the wet season (November-February). Death is marked by brief keening, after which the women friends of the family come to comfort the bereaved women. The body is washed, then carried on a bier without a coffin and placed on the pavement of the matāfī in front of the door of the Ka’ba. The mourners stand, and one repeats the burial prayers. The bier is then lifted, taken out the appropriately named Djama’-iz Gate to the Ma‘li Cemetery north of the Haram. Mourners and even passers-by rapidly rotate in carrying the bier. Burial is in shallow graves, and the shrouds have commonly been soaked in Zamzam water. After the burial, male friends pay a brief visit of condolence to the males of the deceased’s family. There are often Kur’ān readings on the 7th and 40th days after death. As to recreation, there was little sport, but impromptu wrestling and foot races sometimes occurred. Singing, the lute, the reed pipe and drums were popular both in homes and in the open air coffee houses just outside of town, but all music was done in the evenings. Numa’r of the Mekkans,” wrote Rutter (375), “is the great quadrangle of the Haram. Here friends meet by accident or appointment, sit and talk of religious or secular matters, read, sleep, perform the towāf in company, have their letters written (those of them who are illiterate) by the public writers who sit near Bāb es-Salām, or feed the sacred pigeons.” There are, incidentally, many pigeons and they enjoyed a beneficial wa‘f for the supply of the grain. They had drinking troughs and two officials to serve them, one to dispense their grain and the other to fill the water troughs. Popular belief is that no bird ever perches on the roof of the Ka’ba. Rutter himself says that in his month of sleeping on a roof overlooking the Ka’ba, even when the courtyard and the makāmān of the birds were covered with birds, the roof of the Ka’ba was bare. Another popular belief concerns those who fall asleep in the Haram. Should their feet point toward the Ka’ba, they are sharply turned around to conform with custom. There were other pleasures. One of the greatest was repairing to the outdoor, half-picnic, half-tea or coffee house sites out of town. Rutter describes one in a ravine at the southeast edge of Adiyād where a small stream of clear water often flows. Many groups would go there with samovars and waterpipes (dhibās). At sunset, after performing ablutions in the stream, all would pray. There was a singer, some of whose lays were religious, others, amorous. Along with these latter went clapping and dancing. In the Ahl al-Ṣahābiyya, male and female may have been served and pederasty practiced. Incidentally, he comments that King al-Husayn had already stopped the open drinking and prostitution of Ottoman times. Rutter also provides (291-4) an interesting account of a visit to the oasis and farms of al-Husayniyya about 20 km southeast of the city (and see Nallino’s reference (202) to similar visits to al-Santūsyya, 20 km northeast of the capital). He also paints a picture of how Makkans spend a week or two on the upland (2,000 m) plain of al-Hada overlooking the escarpment to the west of al-Ta‘if. The largest house there belonged to the Ka’ba key-keeper, al-Shaybī. Religious occasions also formed part of the rhythm of participation in the life of the city. Twice yearly in Rājāb and Dhul-‘Ka‘da there occurs the ritual of washing the Ka’ba and washing the qur’ān, which was also performed on special occasions to constitute major festivals. All the important people and important visiting pilgrims attend and a big crowd gathers. Al-Shaybī provides the water in a large bottle and brooms which the dignitaries use for the purpose. There are some distinctly un-Islamic folk practices, such as people washing themselves in the used washing water and actually also drinking it. During Ramadān, there is much recitation of the Kur’ān. One hears it as one walks down the street. Purely secular “clubs” also existed in the form of coffee houses which provided tea, light food and dhibās. One of their characteristics is the high (about 1 m) wood-framed platforms about two m. long with rush-work surface. Characteristically, the mat work is done by Sudanese. These high mats are used as chairs, on which three or four can sit, or used as beds. The cafés have linen available if the latter use is required. These establishments are open day and night. Al-Kurdi indicates that there were two Ottoman-era hamāmāns [q.v.], but that the first, which had been near Bāb al-Umar, was torn down to make way for the mosque expansion and the second, in al-Kašshiyya quarter, was closed—a victim no doubt of private residential bathrooms and showers. Finally, some mention must be made of slaves. King ‘Abd al-‘Azīz had agreed as early as 1345/1927 to cooperate with the British government in suppressing the international slave trade, but slavery as such
MAKKA
was not outlawed in Su c udl Arabia until 1382/1962.
In 1365/1946 Hafiz Wahba described it (Djazira, 32-3)
as a reasonably flourishing institution. Makka was the
largest slave market in Arabia—possibly because it
was secure from prying non-Muslim eyes. Meccans
trained male slaves (sing. cabd) and female slaves
(sing, d^driyd] well for household duties, and Wahba
quotes prices as being £60 for a male and £120 for a
female. Ethiopians were considered the best because
they were more loyal and more sincere in their work.
He indicates that they worked mostly in domestic
chores or in gardens, but that Bedouin chiefs also acquired them as bodyguards. Djariyas he notes were
also used for other things. Manumission is an act of
piety, and Shaykh Hafiz says that hardly a master
died who did not free some of his slaves and leave
them a legacy. Apparently non-slave servants were
very difficult to find, and Shaykh Hafiz opined that a
sudden prohibition of slavery would cause a revolution. He also notes that the trade was declining.
The coming of the Suc udl regime also had an important impact on the top of the social structure in
that the privileged position formerly held by the shartfs
was eliminated. Merchants, ulema and mutawwifun
stood high on the local social scale, with pride of place
perhaps going to the Shayba family.
Because of the cosmopolitan nature of the population, city quarters seem not to have had quite the
same degree of near water-tight ethnic or religious
compactness that is found in some other cities, but
quarters did and do exist. Some generalised comments applying mostly to the pre-oil period follow.
Djarwal, an extensive mixed area northwest of the
Haram, was the site of many offices and the garages of
motor transport companies. It is also the quarter in
which Philby lived, the quarter where c Abd Allah Al
Sulayman, the Minister of Finance under King cAbd
al- c Aziz, had his palace, and the quarter in which immigrants from west and central Africa used to live—
mostly in hovels. Writing in the early 1960s, al-Kurdl
indicates (ii, 264) that the Djarwal and al-Misfala
quarters had heavy concentrations of bidonvilles inhabited by poor Sudanese and Pakistanis. Their shanty dwellings were, however, being replaced by
modern buildings. Al-Shubayka, to the west and a little south of the Haram, was, pre-World War II, mainly populated by Central Asian, Indian and East
Indian mutawwifun. Adjyad, southeast of the Haram,
was the old Ottoman quarter sometimes called
"government quarter." It continued in Su c udi times
to contain a number of important institutions, including the first modern hospital, the Egyptian takiyya,
the Ministry of Foreign Affairs, the Ministry of
Finance, the public security office, al-Ma^had al-^Ilmi
al-Sucudi, the Kiswat al-Kacba factory), the Egyptian
Bank and the Directorate of Education. Adjyad is
dominated by an imposing looking Ottoman fort,
Kalcat Adjyad, which is perched on the heights to the
south of it. The quarter is said to have the best climate
and the best views in the city. It was also the location
of most of the better older houses and hotels. Pre-oil
city quarters numbered 15 in all, as follows: Suk alLayl, Shicb CA1T, Shi c b c Amir, al-Sulaymaniyya, alMu c abada, Djarwal, al-Naka, al-Falk, al-Karara, alShamiyya, Adjyad, al-Kashashiyya, al-Shubayka,
Harat al-Bab and al-Misfala. There are also eleven
modern outlying quarters: al- c Utaybiyya, alHindawiyya, al- c Aziziyya (earlier known as Hawd alBakar), al-Shishsha, al-Rawda, al-Khanisa, al-Zahir,
al-Tanbudawi, al-Rasifa, al-Mish c aliyya and alNuzha. Some of these are dubbed hayy\ others, hdra;
and the last three mahalla. Each quarter has an cumda
as its administrative head.
Encyclopaedia of Islam, VI

161

The importance and centrality of the Haram dictated that areas immediately adjacent to it were of
high importance and prestige, at least as long as the
pilgrim business was the main source of revenue.
Thus before the extension of the mosque, there were
a number of suks which surrounded it or nearly so.
These included al-Suwayka just north of the northern
corner which was the drapery and perfume bazaar;
Suk al-cAb!d the slave market; al-Suk al-Saghlr ca.
100 m southeast of Bab Ibrahim, which was in the
main water course and often washed out in floods;
Suk al-Habb the grain market some 700 m north of
the mosque; and finally the fruit market, also to the
north, which was simply called al-Halaka, the market.
Al-Masc a formerly was paved and covered during the
early days of cAbd al-cAz!z' reign, but it was still a
public street with book and stationery stores at the
southern (al-Safa) end and stalls selling items for
pilgrims along the rest of it. Another transient
demographic feature that may be noticed is that in
pre-oil days, the camps used by pilgrims were on the
outskirts of the city nearest the direction from which
they came, i.e., those coming from Syria camped
north of the city, etc.
With the broader economic and transportation
possibilities available since World War II (and
especially after the oil price increases of 1973 and
beyond) and with the number of pilgrims swelling to
almost two million (with attendant traffic and other
problems), centre city has probably become less
desirable.
The p h y s i c a l C i t y . Constrained as it is by the
wadi courses and low mountains of its location, the
size and physical appearance of Makka has changed
dramatically in the six decades since the Wahhabis
most recently captured it. It should be borne in mind
that the Haram is in the widest part of the central,
south-flowing wadi and that main streets follow wadi
valleys. Before the most recent enormous enlargement
of the mosque structure, a noticeable feature was what
Philby called "oratory houses." These surrounded
the entire periphery and abutted on the mosque itself.
They had first floor balconies on the roof of the mosque's surrounding colonnade and were more or less
considered an integral part of the mosque. Since the
inhabitants of these houses could pray at home while
observing the Prophet's injuction that whoever lives
near the mosque should pray in it, they were in high
demand at high rentals. On the other hand, the
residents were said to have run up rather large
hospitality bills! In the pre-oil era, Makkan buildings
were mostly built of local dark grey granite, but by
and large they gave no great impression of grandeur.
The larger ran to about four storeys. Even before
modernisation, major streets in Makka were fairly
wide. King al-Husayn had electrified the Haram during his brief reign, but probably it was not until after
the second World War that streets were lighted electrically. Previously they were lighted, on special occasions only, by oil lamps attached to the corners of
houses. Al-Husayn's palace had been located northeast of the Haram in al-Ghazza, but when King cAbd
al-cAz!z built his own palace, he chose a site well to the
north in al-Mu c abada, where incidentally, the pre-oil
wireless station was also built in the immediate vicinity of the king's palace. At the present time
(1405/1985) this tradition continues, for the amlrate,
the municipality secretariat, its technical units and the
main courthouse are all located at that site. Expansion
of the city in the period before there were adequate
roads tended to be along the Djudda road.
Modernisation in the oil era has brought completely
different architectural approaches and materials, and
11


Fig. 1. Makka in the 1980s: built-up areas. After Fārisī.

much of the old has been swept away. Air conditioners are everywhere, cement and reinforced concrete reign, and buildings of up to 13 or more storeys high are everywhere visible. City planning in Suʿūdī Arabia has become pervasive, and the master plan studies and designs for Makka were projected to be ready for implementation in 1976. Given the pilgrimage, traffic circulation had to be a major part of the plan. Key features of the traffic plan were: a series of broad open plazas around the Haram, a major north-south road which essentially followed the main wadi bottom, a set of four concentric ring roads (none of which had been completed by 1402-3/1982-3), and a remarkable complex of roads leading to Muna, Muzdalifa, and ʿArafat. Especially to be noted is the extensive tunnelling under Makka’s rocky crags for a number of these roads, not excluding a major "pedestrian way" for pilgrims which goes due east from al-Safā before bending southwest toward ʿArafat. About one kilometer of the "pedestrian way" is a tunnel (Nafak al-Sadd) under Djabal Abi Kubays, the north-south running mountain east of the Haram. In addition to the roads themselves—all built to international standards with clover-leaf intersections, overpasses and the like—there are vast systematic parking areas, helicopter pads and other facilities. Makka may have some areas left without modern amenities such as running water and electricity, but essentially it is a modern city with all the assets and problems that modern implies. The growth in the area of the built-up section of Makka can only be roughly estimated, but according to Rutter’s map (facing p. 117), the maximum length of the built-up section on the north-south axis was about 3 km; on the east-west axis it was about 2¾ km. Fārisī’s map (1402-3/1982-3) indicates a north-south axis of about 8 km and an east-west of just under 5½ km. This massive growth does not include very extensive new built up areas such as al-Faysaliyya and al-ʿAziziyya—the latter reaching all the way to Muzdalifa.

Economy. The economy of Makka consists of only two basic factors, commerce and industry concerned with the local market, and the pilgrimage. Agriculture is essentially non-existent in Makka. Food was imported: fruit from al-Ṭaʾif, vegetables largely from the Wādi Fāṣima and a few other oases.
makka

such as al-Husaynīya. They included egg plant, radishes, tomatoes, vegetable marrows, spinach, Egyptian clover (bisrat) for fodder and hibiscus. Makka itself had to content itself with a few date trees (birsim) for fodder and hibiscus.

The importance of the Ḥudūdī for the economy of Makka through most of the city’s history is simple. As Rutter has put it, “[Makkans] have no means of earning a living but by serving the hajjis.” Fifty years later, D. Long confirms that “the Hajj constitutes the largest single period of commercial activity during the year,” and that no one in the country is unaffected thereby. Indeed, once al-Hijāz had been conquered, Ḥudūdī income was supposed to finance Najdī in addition to the Holy Land. The money came in different ways. A direct tax, instituted by Ḥāfīz Aḥmad Aḥmad between 1345-6/1927, was seven gold rupees ($16.80). In addition there was a kind of service charge embodied “landing and service fee,” which amounted to $1.5 ($7.20) in the early thirties. As late as 1972, this charge, now called “fee for general services” was SR 63 ($11.88). There were also taxes on external motor transport, for example SR 7.5 (36.00) on the round trip car hire fare between Makka and al-Madina in the 1920s, reduced to SR 6.00 (28.00) in 1951. In addition to direct levies, the government received indirect income from licence fees charged those who served the pilgrims, from customs duties on goods imported for re-sale to pilgrims and from other indirect levies. As D. Long (much followed in this section) has noted, when the world-wide depression struck, King Ḥāfīz Aḥmad al-Azīz, despite his successful efforts to eliminate gross exploitation of the pilgrims, was forced to impose fees on the pilgrims in order to maintain the solvency of the government. Later, oil income essentially eliminated government dependence on pilgrim fees, and in 1371/1952 the king abolished the head tax altogether. That the government continued to be sensitive to the public relation aspects of any fees at all, is made clear by the official Ḥudūdī instructions for 1972 (quoted by Long) to the effect that such charges only cover the actual costs of necessary services. For Makka, the Ḥudūdī has of course continued to be a major source of cash income. On the other hand, from a national Su‘ūdī viewpoint, servicing the pilgrims became a major expenditure category far exceeding
the income generated, though one should note that in recent years the national airline, Saudia, derived some 12% of its revenue from Hadjī-generated customers. D. Long has also made detailed estimates (101-5) of the effect of the Hadjī on the private sector in Džudda, al-Madīna and especially Makka. Roughly, he estimates that in 1972 pilgrims paid the guilds (mustaṣṣawウィnīn, wukalad′ and zamāzīma) a total of $7.9 million in fees, a figure which excludes gratuities. Lodging during the late 1960s cost each pilgrim an average of $60, for a total housing income of $40 million. The transportation syndicate’s income based on fares paid by land and air pilgrims for internal transportation is estimated at $11 million. All these estimates are for gross income. Net income is difficult to calculate, especially because fixed costs of capital items, such as accommodation at Mūnā and ʿArafāt which is only filled for a few days a year, are normally not counted. Makkān merchants continue to see the two months of pilgrimage business as more or less their whole year’s business, and as in the case of holiday expenditures in other countries the merchants raise their prices, despite government attempts to protect the pilgrims. Animals for ritual slaughter approximately double in value. The foreign provenance of pilgrim-specific goods continued in later years. Cheap ($1 to $10 each), European-manufactured prayer rugs sell a million or more each year, but it may be noted that in the 1970s prayer beads were manufactured by a local Makkān plastics factory. In more general categories, Swiss and Japanese watches move briskly; most textiles still come from Asia, though expensive ones may be from Europe; United States products predominate among cosmetics, better quality canned foods and drugs; wheat is almost exclusively American; whilst China has predominated in cheap fountain pens, parasols and cheaper canned goods. One final point is that many non-Suʿūdī pilgrims who can afford them purchase luxury consumer items which are either heavily taxed or unavailable in their own countries. Foreign exchange trading also constitutes a brisk business for the Makkān banks—all nationalised by about 1400/1979-80. Long notices another economic factor, that more and more foreign pilgrims have come in the sixties, seventies and early eighties, but the shift in mode of travel has been equally dramatic as the chart below shows:

<table>

The dramatic increase in numbers and equally dramatic shift to air travel have meant that the average length of stay has decreased from two to three, or even more, months to an average stay of only a few weeks. Purchases of food and rentals for lodging have declined proportionately with the decrease in time, and in addition, because of baggage limitations on air travel, gift items have tended toward the watch and away from bulky items. Sales to pilgrims as a proportion of total sales by Meccan merchants have also declined. Long (based on Džudda information) estimates that the decline from 35% in 1381/1961 to about 25% in 1391/1971—still highly significant. Based on an estimate of per capita expenditures of ca. $230, Long estimates that gross sales by Suʿūdī merchants to foreign pilgrims aggregated $35 million from the Hadjī. If one adds Suʿūdī pilgrims, the figure rises to $90 million. His estimate of Hadjī income from all sources for the 1391/1971 Hadjī was ca. $213 million. It is not easy to know the proportion of this total which went to Makka and Makkans, but the number has to be quite significant locally when one considers the size of the city and the concentrated nature of the business.
MAKKA 165

the roofs of the Makām Ibrāhīm and of al-Makām al-Hanafi. The Zamzam building was much beautified, the stoners of the Ka'ba were pointed, and Bāb Ibrāhīm was widened and beautified. Moreover, determined to do something to protect worshippers from the fierce sun, 4Abd al-'Azīz, for the 1346 Hādji, ordered 4Abd Allāh Al Sulaymān to erect all around the inside of the cloister a massive wooden frame to which heavy canvas was fixed as an awning. Once the pilgrims had left, this canopy was removed. But apparently there were some serious structural problems, for in 1354/1935-6 a more general study was undertaken. The order for this created a special four-man committee (4Abd Allāh b. 4Abd al-Kadr al-Shaybi of the Madīlis al-Shirā, chairman, Sulaymān Azhar, Assistant Director of awkāf; Hāghim b. Sulaymān, Administrator of the Haram (nāb al-Haram); and 4Alli Multi of the Makka municipality). Its mission was to carry out a general survey and then make recommendations for repairs and restoration. The committee recommendations (details in Bāsālāmā, 285) included such things as disassembling walls and rebuilding them, using cement for mortar. Costs for this work, which began in Ramadān, were split between the Directorate of awkāf and King 4Abd al-'Azīz.

The electrification of the mosque had been instituted under the Hāghimite al-Husayn, but was steadily improved under 4Abd al-'Azīz with generous outside support. In 1346/1927-8 Hādji 4Dāwūd Atba (?) of Rangoon donated a 300 kilowatt generator, and as a result the king was able to increase the number of bulbs from al-Husayn's 300 to 1,000. In 1349/1930-1 new generating equipment was acquired so that "a reader could read his book by electric lights anywhere in the mosque" (Bāsālāmā, 257). In addition, large free-standing, brass electric candelabra mounted on reinforced concrete columns 3 m high were placed in the mosque and six other brass candelabra were mounted on al-Hutaym, the semi-circular wall enclosing the Ḥadjar Ismā'īl. An even larger contribution was made in 1353/1934-5 by Qaṣīm Nawāb Bahādur Dr. al-Hādji Sir Muḥammad Muzammil Allah Khan (1865-1938) of Bhikhupur, India, who presented much more elaborate equipment to the mosque. It consisted of a 52 h.p. engine, a 220 volt, 34 kilowatt generator and required that the mosque engineer (Ismā'īl al-Dḥāhib) go to India in order to familiarise himself with it. He stayed there several months and, interestingly, returned with additional contributions in kind (elaborate candelabra put on the gates, on the makdms, and on the Zamzam dome) from Muslim philanthropists in Čawnpore, Lucknow and Karachi. Toward the end of 1354/1935-6, all was in working order and "the Maṭīf was as though in sunlight." Microphones and loudspeakers were first used in the mosque in 1366/1948-9.

Attention should now be turned to several specific features of the mosque area.

Al-Masā⃣. — Firstly, it may be noted that the Hāghimite al-Husayn was the first person in Islamic history to improve physically the running place, in effect a street at that time, between al-Safā and al-Marwa when in 1339/1920-1 he ordered 4Abd al-Wahhāb al-Kazzāz to erect a cover over it. A steel structure with wooden roof was built to the general benefit of all. This continued in use for many years, with some later improvements made by the municipality (then directed by 4Abdāb b. Kattān) at the order of King 4Abd al-'Azīz. The king also undertook another major improvement early in his reign (1345/1926-7) when he ordered al-Masā⃣, which was rough

ground, to be paved. To oversee the work, a high-
level unit was constituted within the administration of the Aminat al-'Aqsa, that is, the municipality. It was presided over by Abdul Wah-
hab b. Ahmad, the Naib al-Haram, and included his former assistant Muhammad Surur al-Sabbân, later Director (Minister) of Finance, along with the ubiqui-
tous ʿAbd Allâh Al Sulaymân (as the king’s representative), several members of the Maqâlis al-
Shârâ‘ and some technical people. The decision was reached to use square granite stones mortared with lime. Initial expenses were to be covered by the Aminat al-‘Aqsa and subsequent ones from the na-
tional treasury (bayt al-mâl). Once protruding living rock had been levelled, the work began ceremonially with a large gathering that saw H. R. H. Prince Faysal b. ʿAbd al-‘Azîz lay the “corner stone” and heard invocations from the khâtib of the mosque. This enterprise, completed before the Hajj of 1345, resulted in the first paved street in the history of the city.

Zâmâm. — In the early repairs carried out under the Dihlawî’s direction, the king paid special attention to the well of Zamam and the two-chambered building above it. Two new sabîlts [q.v.] were con-
structed, one of six taps near Bûb Kubbât Zamâm, the other of three near the Hajrât al-Aghâwar, in ad-
dition, the older Ottoman sabîl was renovated. All this was supervised by a local architect with fine calligraphic inscriptions including the phrase “Imâm [sic] ʿAbd al-‘Azîz b. ʿAbd al-Rahmân al-Suîd [sic] built this sabîl.”

Khiswa. — With the outbreak of World War I, the kiswa came as it had for many years previously from Egypt. When the Ottoman Empire entered the war on the side of Germany, the authorities in Makka as-
sumed that British-controlled Egypt would no longer send the kiswa and so they ordered one to be made in Istanbul. It was a particularly fine one and was dispatch-
ated by train to al-Madîna, thence to be taken to Makka. In the event, the Egyptian government did send the kiswa, bearing the embroidered name of Hus-
sayn Kâmil, sultan of Egypt as well as that of Sultan Muhammad Râshîd. The Istanbul-manufactured kiswa remained in al-Madîna, and the Cairo-manufactured one (with the Egyptian guard, the wheat ra-
tion, medical mission, zama (traditional funds for-
warded from Egypt), alms, oblivion and kiswa back from Makka to Djudda. With only a very short time left before the hajj, al-Husayn cabled to the amîr of al-
Madîna immediately to forward the Ottoman kiswa stored there to Râbîg (q.v.). Simultaneously, he dispatched the steamship Rashîd to proceed from Djudda to Râbîg. All worked well, and the Ottoman kiswa reached Makka in time to be “dressed” on the Ka‘ba by the deadline date of 10 Dhu ’l-Hijja. Subsequently, al-Husayn ordered a kiswa woven in al-‘Trak, lest the dispute with Egypt not be settled by the 1342/1923 hajj; however, in that year the Egyp-
tian kiswa arrived and was used as usual. When the hajj of 1343/1924 approached, ʿAbd al-‘Azîz ruled Makka, and relations with Egypt had become so bad that Egypt did not send the kiswa. Luckily, the king had a fall-back position, namely, the kiswa that King Azîz b. Muhammad b. Ahmad, this time to have sent the kiswa bearing the embroidered name of Hu-

happen came on 5 Muḥarram 1375/24 August 1955 when it was announced that all the equipment and machinery which had been used on the now completed enlargement in al-Madinah would be moved to Makka. A month later (6 Safar/24 September) a royal decree established: (1) a Higher Committee chaired by Fāysal b. ʿAbd al-ʿAzīz, the heir designate, to supervise the planning; (2) an executive committee to supervise implementation; and (3) a committee to assess values of expropriated property. Later, the first two were merged into a higher executive committee with King Suʿūd b. ʿAbd al-ʿAzīz as chairman and the minister of finance as vice chairman. The basic concept of the final design was little short of inspired, and may be considered an extension of the design concept developed for the enlargement of the mosque in al-Madinah. It consisted of two ideas: (1) to maintain the old mosque intact and surround it by the new construction; and (2) to incorporate al-Masāʾa fully into the mosque complex.

Work began in Rabīʿ I 1375/November 1955 with road diversions, cutting of cables and pipes, land clearing and other diversionary work, and was concentrated in the Adhāyād and al-Masāʾa areas. A foundation-stone ceremony was held five- and-a-half months later in front of Bāb Umm Hānī with the king and several dignitaries in attendance, and this marked the beginning of construction. Incidentally, by ḥadīth time, pilgrims were able to perform the sawʿy undisturbed by hawkers and traffic for the very first time. Work concentrated in Stage I on the southeastern side of the mosque and also on the al-Masāʾa "thumb." This latter, completed, is 394.5 m long. The ground floor is 12 m high and the second story, 6 m. The road that now passes by the mosque, with a special lane for the handicapped and ensures one-way traffic in each direction. There is no basement under al-Masāʾa, but a full one under the rest of the new construction. A particular problem was the floods which sweep south down the wadi systems, around both sides of the mosque (but especially on the east).

To deal with this problem an underground conduit 5 m wide and 4.6 m deep was run under the road now known as Shāriʿ al-Masqūd al-Harām (formerly Shāriʿ al-Mašāl) starting in al-Kaḥāshāyya quarter then under the area of al-Safā, and under Shāriʿ al-Hīḏrā where, well south of the mosque, it resurfaces in the Misfala quarter. Among the buildings removed in this phase of the work were those of the old general post, the Ministry of Education and the Egyptian takṣija; in addition, there was some other non-mosque construction carried out as a part of the whole project, including a three-story building near al-Safā to house government offices and the mosque-project offices and just northwest of al-Marwa a group of buildings with office and apartments on the upper floors. In Stage II, work continued in a counter-clockwise direction. Special note may be made of the demolition of the cells along the Bāb al-Salām and Bāb Adhāyād façades, where the zamāzima used to store water for pilgrims, and the construction of replacement cells under the old ones. Not as lucky were the madrasas adjoining the mosque on the Adhāyād façade; they were simply demolished. Public fountains were also built on the new exterior façades as the work progressed. In Stage III, the southwest and northwest arcades and façades were built. The work was completed in 1398/1978.

All walls of the new construction are covered with local marble. The marble came from quarries in Wādī Fāṭima, Madrakā and Farsān. The quarries were developed by Muhammad b. Lādūn, who had also started a marble dressing factory in 1950 in preparation for the enlargement of the mosque in al-Madinah. He identified the quarries by asking local Bedouin to bring him samples and then by purchasing the most promising land from the government. The equipment in the factory was all Italian, and a force of nine Italian marble specialists directed and trained a total work force of 294 Suʿūdīs and others on a three-shift, round-the-clock basis. According to the Italian technicians, the marble is much harder than the famous Italian Carrara marble. Another feature of the marble operations was the production of "artificial marble." Remnant pieces and chips of marble from the main operation were sent to a crushing plant in Dūddā, where they were ground into carefully graded pellets. To these were added waste from the cutting operations. This material was then mixed with a binding agent and poured into a variety of moulds of decorative panels. There were 800 different moulds "the patterns for which were created by a master of the art from Carrara." The mosque project as a whole called for processing 250,000 m² of marble.

Some over-all statistics and other information on the new structure follow:

1. Areas of old building

| Area of new building, including al-Masāʾa | 131,041 m² |
| Total | 160,168 m² |

2. The building can accommodate an estimated 300,000 worshippers with a clear view of the Kaʿba.

3. The old gate names were retained for the new gates except for the new Bāb al-Malik Suʿūd (probably subsequently renamed Bāb al-Malik).

4. There are six main stairways and seven subsidiary ones. Stairs leading directly form the street have gentle slopes in order to make it easier for elderly pilgrims.

5. There are seven minarets, 90 m high each. (The old minarets are one feature that did not survive; they also numbered seven.)

6. By Radjab 182/December 1962, demolition of 768 houses and 928 stores and shops had been carried out against indemnities of SR 239,615,300.

7. The work force in 1382/1962 was:

- 6 architect-engineers
- 208 administrative employees
- 150 skilled workers
- 50 unskilled workers (maximum) 3,000

8. The total cost of the mosque expansion is estimated at $155 million.

9. The width of the streets around the new mosque is 30 m, with large plazas in front of the main gates. There is one final aspect of the mosque enlargement and renovation that deserves mention, sc. Zamzām. In 1383/1963-4, the building that had long covered it was torn down and the space was levelled. Access to the well is now below ground down an ample sloping marble staircase; there is no above-ground structure whatsoever.

Like other shrines, al-Masqūd al-Harām has its servants and its administration. In late Ottoman days the administration was headed by the wāli of Makka who was, therefore, the nominal šaykh al-Haram, and it depended financially on the naqib (wakil) in Istanbul. The operational head was the naqib al-Haram (deputy of the Haram) who was appointed by the sultan. The ʿAbāsimte contribution was to institute a special security force whose assignment was to watch out for thieves and corruption and also to provide needed ser-
vices such as "lost and found." Once he assumed power, King 'Abd al-'Aziz appointed the nā'th al-Haram, and he also established a three-man administrative council (Majlīs Idrās al-Haram al-Sharīf) over which the nā'th presided. Financially, since income ceased coming from many wakfs after the Su'ūdī takeover, King 'Abd al-'Aziz ordered the financing of all services to come from the public treasury. He also initially doubled the salaries of those who served. His own wakf department had support of the Haram building as one of its main charges. According to Rutter, below the nā'th came the "opener of God's House" (sādim), who, since pre-Islamic times had always been from the Shayba (nībha: Shaybī) family. Not the least of the perquisites of the sādim was the right to cut the kiswa up after the Ḥaḍḍ and to sell the small pieces to pilgrims as religious tokens. Incidentally, a member of the Banū Shayba could not become nā'th al-Haram. Below the "opener" were two or three lieutenants who supervised the numerous lesser personnages and the actual workers. All, according to Rutter, took special pride in this work. Rutter's estimate is that the total work force declined to 400 during the Wahhabi invasion but that in better times it rose to as many as 800. This latter figure or, colloquially, tawdshiya, (pi. agds) notes that the place was either Africans or of African origin and are teachers, 50 muezzins, plus hundreds of sweepers, laborers, providers of water and other needs, 30 drawers (zamazamī, pl. zamazamīn). The Majfī, the circular inner area around the Ka'ba, was in the care of 50 black eunuchs who also doubled as mosque police. They were either Africans or of African origin and are called aghs or, colloquially, twadhī (pl. twadhīyā, sc. eunuchs). Their chief ranked directly below the Shaybī. They wore distinctive clothes and were diligent in instantly removing any litter. The rationale or three lieutenants who supervised the numerous lieutenants for having eunuchs was that, if women became involved in any incident in the mosque or had to be ejected, the aghs could deal with them without impropriety. They apparently had large incomes (especially from awkfī in al-Basra) and maintained expensive establishments including "wives" and slave girls as well as slave boys. They all lived in al-Haqla where they could deal with them without impropriety. The middle-class Makkans also invariably rise when addressed by an Agha, and treat him in every way as a superior' (Rutter, 251). Others give a lower estimate for the numbers of mosque employees. Hamza (Bilād, 217) writing in 1355/1936-7 numbers as follows: meuezzins 14, eunuchs 41, supervisors 80, water drawers 10, sweepers 20 and doormen 30. His list does not include teachers or preachers. Al-Kurdi (iv, 249), writing in the 1960s, notes that there are 26 eunuchs including their shaybī and their nāfīb. He also notes that the aghs have their own internal organisation (nizām) and that amongst themselves they use special nicknames.

There are, naturally enough, numerous religious sites in Makka other than al-Masjid al-Haram. Brief remarks: 1. Mawlid al-Nabī (the Prophet's birth-place), located in the Shi'b 'Ali ravine near Sūk al-Layl. First the dome and minaret and later the whole structure were torn down by the Wuhḥābīs. The place is still pointed out. 2. Mawlid Sayyidatnā Fāṭima (the birthplace of our Lady Fāṭima). Same remarks. 3. Masjid al-Arkām b. al-Arkām. The home of a Companion of the Prophet and reputed site of 'Umar's ac-

ceptance of Islam. Destroyed during the recent expansion of al-Haram, its location is now a parking lot east of al-Mas'ā. 4. In Rutter's time the small mosques marking the houses of other Companions had mostly already been destroyed. 5. Cemetery of al-Mašā. It is located about 1 km due north of al-Haram. In it are buried Amina, the Prophet's mother; Khadhīja, his first wife; 'Abd Manāf, his great-great grandfather; 'Abd al-Muṭṭalib, his grandfather and guardian; and hosts of Muslims, famous and unknown, from the earliest days until the present. In the first flush of the occupation, Wuhḥābī zealots destroyed the small domes which covered some of the most famous sites, and those guardians who had sought alms from pious visitors were faced with other work. As in the case of al-Baḳī' cemetery in al-Madīna, bodies decompose quickly (six months) in al-Mašā, and there is 'continuous' burial in the same place. 6. Masjid al-Qīm (also called Masjid al-Bay'a' and Masjid al-Haras). It is on Sharī al-Haram next to al-Mašā cemetery and marks the reposed place (see Kur'ān, XLVI, 29) where a party of gīsīn, having heard the Prophet chanting the Kur'ān were converted to Islam. An older Ottoman building was replaced by a modern mosque in 1399/1978-9. 7. Ġhār Hīrā'. Site of the first revelation (XCIV, 1-3), the cave of Hīrā' is near the top of the mountain from which the Prophet received the first revelation. The mountain is more commonly called Djabal al-Nūr today. It lies about 5.2 km northeast of al-Haram al-Sharīf—a steep climb to the top. The Wuhḥābīs pulled down the dome which earlier had ornamented it. 8. Ġhār Thawar. Seven km south-southeast of al-Masjid al-Haram lies the cave on the top of Djabal Thawar in which the Prophet took refuge with Abū Bakr at the beginning of the hajj; a difficult ascent. al-Tānīm. Seven km north of al-Masjid al-Haram on Sharī al-Tānīm which turns into Tarīk al-Madīna. This is the limit of the sacred area in this direction, and it is the place where Makkans often go to don the ihram when they want to perform the 'umra. They go there not because it is necessary for them but because it is the place where the Prophet, returning from al-Madīna, and was a permanent picnic spot, al-Tānīm in the 1980s has become a suburban quarter. There is a small mosque called Masjidī al-Umra. 11. Masjidī al-Khayf. A mosque in Munā in which (at least formerly) were several large vaults which were opened for the reception of bodies in plague years. It is especially meritorious for prayer on the 11 th of Dāḥā and has been rebuilt and enlarged by the Su'ūdīs. The new mosque has many columns, splendid carpets and a permanent imām. 12. Masjidī Ibrāhīm or, more commonly today, Masjidī Bilāl. Formerly outside the city on the slope of Djabal 'Abī Kūbās 250 m due east of the Kāba; now a built-up area. 13. Masjidī al-Namira. Also known as Masjidī Ibrāhīm al-Khālīf and as Masjidī 'Arafa. It is located almost 2 km west of Djabal al-Raḥma in the plain of 'Arafa and takes its name from a low mountain about 2 km further west. 14. Al-Kurdi estimates (iv, 269) that in all there are 150 mosques in Makka, but he adds that Friday prayers are only allowed to be performed in 15 of them (not counting al-Haram) in 1375/1955-6. This relaxation of the traditional restriction on performing the Friday noon prayers only in al-Haram was in response to the growth of the city and the disruption of al-Masjid al-Haram by the new construction there. The 15 mosques (with their locations) are as follows: Masjidī (thereafter, M.) al-Qīm (al-Sulaymān)ī, M. al-Djumayya (al-Mu'ābāda), M. al-Amīra Hassa (al-Hudjīn), M. Hamdān al-Farāh (al-'Utaybiyya),
War II, during which the camel gave way to the motor vehicle; the increasing Su'di regulation of what D. Long has called the Hajdj service industry; and the Hajdj in the era of mass air transport.

1. The Hajdj in the era of camel and car. In general, what must be emphasised is that the security which the Su'udian brought to the Hajdj transformed the pilgrimage. No longer were pilgrims subjected to capricious "taxes" or thinly veiled threats of much worse were they passed through tribal areas. No longer was the exploitive tendencies of merchants, transporters, mutawweef and officials allowed to run unchecked and unheeded. The policy was to make the pilgrimage as dignified and comfortable a spiritual experience as possible. King 'Abd al-'Aziz turned his attention to the improvement of the lot of the pilgrims as he first entered Makka. It has been already noted that, when the king entered the city, his initial decree confirmed all mutawweefin "with a clear title" in their positions. The organic statute of 1345/1926 established a committee, Lajnat Idras al-Hadjdj (committee on administering the Hajdj), to assist the viceroy, Faysal b. 'Abd al-'Aziz, in supervising the pilgrimage. The committee was to include the heads of all government departments in charge of the pilgrimage, a number of qualified notables, which latter category was probably intended to include senior members of the mutawweef organisation. The committee was vested with investigatory powers, and all aspects of the pilgrimage were within its purview. But the king remained the final authority, as Article 16 makes clear: "All regulations made by the Pilgrimage Committee should be endorsed by the Agent-General [viceroy] after they have been sanctioned by His Majesty the King:" (quoted in Long, 55).

Philby reports (Pilgrim, 20 ff.) in some detail on the 1349/1931 pilgrimage. The king personally supervised matters like an officer in his command post. The royal party itself travelled in 300 automobiles, but it was not until 1352/1934 that ordinary citizens were allowed on as passengers to go to the Arafat. Houses in Minä were being rented for £40 for the four or five days of the Hajdj, but again note that they were used for only some of the 350 days of the lunar year. The government discouraged various extravagant practices and did not allow access to the summit of Djabal al-Rahama; guards were posted about half-way up. Exactly at sunset on 9 Dhu '1-Hijja, the return to Makka begins, and on arrival at Muzdalifah the worshippers find a city which had not been there when the pilgrims passed through on the previous day. The pilgrimage is attended by various kinds of difficulties, for the regime which is responsible, not excluding political difficulties. Philby notes (Jubilee, 160) that during the 1349/1931 Hajdj, the king felt it necessary discreetly to stop Amän Alläh Khan [q. v. in Suppl.], the former king of Afghanistan, from making political propaganda for his cause with Afghan pilgrims. 'Abd al-'Aziz's policy was that any Muslim was welcome, but that the occasion was for religious not political purposes. A different, attempted political use of the pilgrimage occurred during the 1353/1935. As the king and his eldest son Suûd were performing the taawil al-fidha (circumambulation of the Ka'ba) on 10 Dhu '1-Ka'da, three Yamanis, hopefully wanting to revenge themselves injured in the Su'udian-Yaman war the previous year, fell on King 'Abd al-'Aziz and on Suûd b. 'Abd al-'Aziz with daggers. Both received light wounds, but the assailants were shot dead.

The pilgrimage is also a socio-political affair, and
King 'Abd al-'Aziz and his successors have extended their hospitality generously and advantageously. 'Abbas Hamada, who was a delegate from al-Ahram and whose account of his pilgrimage in 1354/1936 contains many interesting observations, vividly retells his reception by the king. He and others were invited to a royal dinner on the night of 6 Dhu '1-Hijija. They gathered in front of the Ministry of Foreign Affairs to wait for cars to take them to al-Mu'abada palace. A little before sunset, the group left. Paraphrasing and skipping, his account reads (70-3):

"We were let off in front of a great palace built like a strong military fort outside Makka to the northeast in al-Mu'abada. Opposite the palace lies Djabal Durud, on the summit of which was a fort. When I entered the outside door, I found the royal guard on Durud, on the summit of which was a fort. When I entered the outer door, I found the royal guard on both sides armed to the teeth wearing splendid Arab dress. Most of them were slaves of the king. I walked until I entered a large reception hall furnished with splendid oriental carpets. When all the visitors had assembled, excellent Arabian coffee was passed around several times. During this stage, the chief of the diwan was going around and greeting people warmly. When the muezzin called out sunset prayer time, we hastened to the mosque inside the palace. After praying, we climbed to the upper floor where superb Arab food was spread out for the guests. It combined the best of Eastern and Western European. H. R. H. Prince Su'ud b. 'Abd al-'Aziz, the heir designate, sat at one table; Prince Faysal b. 'Abd al-'Aziz, at another; and the chief of the royal diwan at a third. After the meal, we went into an area reserved for receptions and then to the main royal reception hall where King 'Abd al-'Aziz ibn al-Su'ud was surrounded by ulema, princes, ministers and Eastern leaders who had come to Makka for the pilgrimage. When all had gathered, 'Abd al-'Aziz delivered an Islamic sermon. His talk reminded me of the Orthodox caliphs. When he finished, various speakers and poets rose to praise him. I got up and gave my speech [text, which is not without interest, at pp. 71-3]. We all left full of thanks, praise, and loyalty." 

Nor was that dinner the only time Hamada was entertained, for a week later he was invited to lunch at the royal palace. A little before sunset, the group left. (For the guild of adilâ, see art. AL-MADINA; for the now defunct guild of camel brokers, makharîdân, sing. makharidâ; "dispatcher"). The task of the makharidân is to assist the pilgrim while in Makka, by supplying his material needs and in performing the rites of the pilgrimage. In the year immediately following the Su'ud conquest, the makharidân functioned much as they had in previous times. They delegated many of their responsibilities to assistants, who were called sabT (boy) if apprentices and daT (guide; unrelated to the diwan of al-Madinah) if experienced. In Rutter's time was to keep a register of each pilgrim who died, along with a list of their attitudes. Malaysians, for example, like to be housed near the Masjid al-Haram and are willing to pay handsomely for the privilege. Thus a mutawwif with a house there will rent it to a mutawwif of Malaysians and put his own group in cheaper quarters. Rutter notes (149) that particular national groups have their own attitudes. The guild of adilâ, for example, like to be housed near the Masjid al-Haram and are willing to pay handsomely for the privilege. Thus a mutawwif with a house there will rent it to a mutawwif of Malaysians and put his own group in cheaper quarters. Rutter's own mutawwif was the model for this generalisation. Aside from his own living quarters, he had rented his house to a mutawwif of Malaysians for a three-month period for £30 per year. Incidentally, Rutter reports that in the previous year 1342/1924 his mutawwif had had 1,000 clients whereas in the starving year of 1343/1925 he had only one. Rutter gives the important part of the mutawwif's work was to keep a register of each pilgrim who died, along with a list of his or her effects. Twenty-seven of this mutawwif's 1,000 clients had died during the 1342/1924 pilgrimage. Most had been destitute or had possessed only a pound or two. The mutawwif were organised according to the areas from which their clients came, and frequently the mutawwif was originally from the same area. Thus he spoke the language and knew the characteristics of his customers who in turn would, if warranted, report favourably on him when they returned home.
formed sub-guilds (Long’s term, 30) which rigidly excluded other mutawwifun. These sub-guilds were called ʿaddaʿi (sing. ʿaddaʿa), and each was headed by a ʿadday al-mutawwifun. The title of the over-all guild leader was ʿadday al-mutawwifun. He both represented the guild to the authorities and also had the responsibility of seeing that government regulations were applied. The normal pool for admitting new members was those proven assistants who were members of the family of a mutawwif. ‘In cases of an interloper, however, the mutawwifun would rise to a man to prevent him from becoming established. The few outsiders who persisted were called jarrārī (those who drag [someone] along) and dealt primarily with Hājjīs too poor to hire the services of a bona fide mutawwif’ (Long, 30).

The final decision on admissibility lay with the ʿadday al-mutawwifun. Some mutawwifun were large operators, with recruiters who travelled annually to the country or countries of specialisation; others were much smaller. Long (31) estimates that in the mid-1930s, there may have been 500 mutawwifun who, with helpers and apprentices, would have totalled ‘several thousand.’ The mutawwifun were compensated for their work in a variety of ways, although it should be noted that in theory there was no charge for guiding the pilgrim in the actual performance of his duties. In fact, there were no set fees and the pilgrims were expected to pay a guiding agreement according to their means. Should a pilgrim be too poor to pay, a mutawwif would help him with the rites without pay; however, according to Rutter (446), ‘such an act is rarely done out of kindness. It is done in order to sustain the delusion that rites performed without the guidance of a mutawwif are valueless in the sight of Allah—for such is the impious connection advanced by the fraternity of guides for their own financial advantage.’ Yet such a flexible system doubtless cut both ways, especially for the apprentices and guides, and some at least worked hard for little. Additional sources of income were rentals, commissions for referring clients to various associated merchants, zamāzima, coffee shops, etc. It should also be realised that the government got a ‘cut’ of mutawwif income by issuing licenses (sing. takrir) to the mutawwifun. In theory, these licenses had issued good for life, but prior to the Suʿūdī take-over, revalidation fees of various sorts had caused the system to break down. The zamāzima are basically organised in the same way as the mutawwifun. Membership is hereditary, members employ young helpers, they have their own ʿadday, and they also specialise by the country or area of their clients’ origin. As indicated above, they normally have client-sharing relationships with the ʿaddaʿa of mutawwifun, specialising in the same linguistic or national group as themselves. Many are bi- or multilingual. The basic function of the zamāzima is to distribute the sacred water of Zamzam to those who desire it, whether in the mosque precincts or at home, where it was delivered twice a day to those who ordered it. Naturally, business was much greater during the Ḥaddīj. Selling water in containers to be taken home by a pilgrim was also a most important part of their business. Although in principle anyone could draw his own water, the practice was hardly encouraged by the zamāzima, and in addition, they performed a considerable service during the long hot periods by cooling the otherwise warm water in porous earthenware jars. The members of the guild of the ʿadday ʿInwakūlā of ʿAṣwad have formal relationships with the Makkan mutawwifun for whom they do it in fact work as agents.

Regulation of the guilds began shortly after the oc-
with a similar organisation. Hamza’s estimate then is for a total of 1,400 Makkan guildsmen, not counting
‘Arafat and Minā. For this purpose a second card is issued showing the site of his tent in ‘Arafat and
Minā. According to the regulation, “cards shall in-
clude the number of the plot, place, square, and street.” In
addition, the mutawwif must erect signs giving the
same information “so that the Hajjis may see clearly
their places in ‘Arafat and Minā” (Long, 41-2); and 5.
to assist the pilgrim in arranging his ongoing travel.
Three days before departing from Makka, the
pilgrim’s name “is submitted to the Hajj Ministry for
inclusion on a departure list and for checking reserva-
tions and tickets. Passports, tickets, and reservations
are then returned to the Hajji” (Long, 42). The zam-
zami had under the 1965 regulations two respon-
sibilities: 1. to supply pilgrims with Zamzam water
within al-Masāijd al-Ḥarmūn and twice a day in their
rooms; and 2. to help them during prayers, i.e.,
to supply water for ablutions. All guildsmen are respon-
sible for carrying out set procedures to help lost
pilgrims, to report suspected disease to health officials
and to deal with death. Finally, the government has
to regulate the quality of the guildsmen’s
helps. Long indicates (45-6) that the royal decree of
1965 “states that every employee must be of good
conduct, physically fit, of suitable age to perform his
required services, and competent and licensed for that
service. It further stipulates that: ‘The mutawwif...and
zamzami, for their part must take the necessary
steps to supervise the said persons during their work
and guarantee good performance. Each is to be sup-
plied with a card containing all the [required] infor-
mation including the name of his employer.’”

3. The Hadjij in the era of air travel. The pilgrimage
entered its latest phase in the wake of World War II
with the simultaneous appearance of air travel and of
air-conditioned hotels. The number of pilgrims who
were able to undertake the pilgrimage increased dra-
"atically. To meet the increased demand, the
Muslim government liberalised the fees and increased
income. The first pilgrimage flights were in chartered ex-military transports; in the
1980s, almost all pilgrims came by “wide-bodied”
jets, and the number have increased dramatically as
noted above. One might start this section on the post-
war period by reporting that the direct tax imposed by
the king in 1345/1927 was lifted in 1371/1952, by
which year oil income had exceeded Hadjij income.
The circumstances were as follows. ’Abd al-’Aziz, just
a year before his death, was heard to say: “The goal
of my life is to lift the Hadjij fees from the Muslims.”
One of his oldest advisors, Shaykh Yusuf Yasīn, who
was present, said: “The king almost immediately
turned to me and said, ‘Telegraph Ibn Sulaymān
[’Abd Allāh Al Sulaymān, Minister of Finance] to
abolish the pilgrims’ fees.’ So I wired him in the
king’s name as directed. He replied to the king, ‘O
Long of Life: Thirty million riyals—from what shall I
compensate them in the budget?’ ‘’Abd al-’Aziz
replied to him: ‘Dabbir nafsaka (“solve your own pro-
blems!”)’” The fees were abolished forthwith. (See
al-Zirikli, 1416.) Other positive moves followed. By
1376/1956-7, the Ministry of Health had built a large
modern hospital in Minā, including specialised sun-
stroke facilities, even though the town really existed
only a few days a year. Al-Kurdi describes (ii, 194) the
government’s provision of shaded rest areas and ice
water taps along the way between Minā and ‘Arafat
(in addition to the numerous coffee houses which
serve fruit and other food as well as drinks). There
were also important administrative changes. In
1383/1964 following Faysal’s accession to the
throne, direct supervision of the Hadjij was reli-
quished by the new king and devolved upon the amir
of Makka. For the pilgrimage of 1385/1966, the old
committee was superseded by a new Supreme Hadjij
Committee (Lagūnī al-Hadjij al-’Ulyā). “Chaired by
the amir, its members include the mayors of Jiddah and Makka; the senior representatives in the Hijaz; the representatives of the local police, customs, quarantine, and other offices" (Long, p. 56). All policy on the ever-more complicated Hajj operation was set, under the over-all supervision of the king, by this committee. Another new aspect of the Hajj is the growth of hotels. The city now boasts not less than 25 hotels, and several of them belong to major international chains; many meet international standards. To give a small insight into the way things have changed in the latest phase, it is enough to mention that at ʿArafat there are lost children's tents stocked with toys to divert them until their parents claim them. It is also pertinent to note that in 1974, the kiswa factory employed 80 craftsmen who wove 2,500 feet of material on hand looms. The finished cloth weighs about 5,000 lbs.

The annual traffic problem may be the most challenging in the world. An excellent picture is provided by the following extended quotation: "In order to get some idea of the magnitude of the traffic problem at ʿArafat during the nafrakh, one might picture about twelve [major] football games all getting out at the same time, with all the fans heading for the same place; only, in the case of the Hajj, there is a multitude of different languages, types of vehicles, and many foreign drivers not familiar with the road system. In order to cope with this situation, special cadres of traffic police are trained for the Hajj and are given extra assistance by the Saudi army. In recent years such modern devices as closed circuit television have also been installed to help guide the traffic flow. Moreover, Hajjis traveling overland are required to use designated routes on entering al-Madinah, Makka, Muzdalifah, and Minā; the vehicles must be parked in designated places until the Hajjis are scheduled to depart. While in these cities and at ʿArafat the Hajjis must utilize Saudi transportation (for which they have paid anyway).

Despite all these measures the traffic situation can still be quite hazardous. In 1968 a multimotor traffic jam developed during the nafrakh, and some Hajjis were delayed as much as twenty hours trying to get from ʿArafat to Muzdalifah. Making matters worse, an exceptionally large number of Saudis attended the Hajj because of the special religious significance of Standing Day falling on Friday and because of the extension of the highway system throughout the kingdom. Not subject to the parking regulations for non-Saudi Hajjis, many took their private autos to ʿArafat. In addition many Turkish buses, which had been allowed to drive to ʿArafat because they contained sleeping and eating facilities, broke down during the long tie-ups, further contributing to the traffic jam. Sixteen new, black-and-white-checked police cars especially marked for the purpose, were wrecked as they sought to cross lanes of moving or stalled traffic. In the post-Hajj evaluation by the Supreme Hajj Committee, traffic control was a major topic, and since then no such major tie-ups have been reported" (Long, 64). It is clear that, in totally changed circumstances, pilgrimage to the Bayt Allah in Makka is a continuing, vital process not only for Muslims around the world but most especially for Makka al-Mukarrama.

Education and cultural life. Formal education, traditional or modern, was little developed in Makka in late Ottoman and Ḥājjīmīme times. The first major attempt to improve the situation had been made by the distinguished public-spirited Djudda merchant, Muhammad ʿAlī Zaynayl Rūdā, who founded the Madrasat al-Falah in Makka in 1330/1911-12 as he had done at a school of the same name in Djudda in 1326/1908-9. He is reported to have spent $400,000 of his own money on these two schools before the world depression of 1929 forced him to curtail his support, at which point ʿAbd al-ʿAzīz assigned a share of the Djudda customs' duties to support the institutions. These two schools, the best in the land, had enormous influence through their graduates, even though they followed the archaic principles of excessive reliance on memorisation with little emphasis on independent thought. There were also in pre-Ḥājjīmīme days some Indian religious institutes, and of course, Islamic sciences were taught in al-Madrasa al-Rūyāa as well as agricultural and military schools. By the time of the Suʿūdī occupation, the city counted one public elementary (ibtidāʿī) and 5 public preparatory (taḥdirī) schools. Private schools in addition to al-Falah included 20 Kur̲ān schools (kutāb) and perhaps 5 other private schools. Rutter noted that a good deal of study went on among the pilgrims and opined that the Makkans were better educated than the contemporary Egyptians. Hamāda, writing a decade later, agrees about the first point, for he says that during his pilgrimage hundreds of pilgrims gathered nightly to hear the lesson given by the imām, Shaykh Muhammad ʿAbū Sabīḥ ʿAbd al-Ẓāhir. He taught tafsīr [q.v.] according to Ibn Kathīr [q.v.], but Hamāda complains that his lecture wandered, often to the question of intercession with God—a sensitive point for the Wahhābīs—and wishes that he would concentrate on subjects of more interest to his listeners. He also comments that the majority of the population were illiterate and opines that the highest diploma awarded by the Falāh school, the ṣimīyya, was equivalent to the ibtidāʿīyya of al-Azhar in Cairo.

In any case, King ʿĀbd al-ʿAzīz moved rapidly in the field of education as in other areas. In 1344-5/1926 he established al-Maʿād al-ʿImām al-Suʿūdī (Science Institute). In 1348-50 a modernist institute in mathematics, science and physical sciences, including language and linguistics, as also for social, natural and physical sciences as well as physical education. In 1356-7/1938, the Maʿād was divided into four departments, ʿaqrāʿa, calligraphy, teacher training, and secondary instruction. The faculty was largely Egyptian, and by 1935 was giving instruction in the English language. In addition, by that time the government had established other schools, the Khayrīyya, ʿAzīziyya, Suʿūdīyya and Faysālīyya, in addition to starting student missions abroad. These developments were praised by Hamāda. Another development in the growth of education in Makka was the establishment in 1352/1932 of the Dār al-Ḥadīth (the hadīth academy) by Imām Muhammad ʿAbū Sabīḥ ʿAbd al-Ẓāhir. Ḥadīth was the only subject taught, and that at a relatively low level. Based on Hamza's summary (220-2), Makka schools in about 1354/1935 were as shown in the table overleaf. Thus, based on a population of perhaps 80,000, there were some 5,000 students enrolled in schools. Many of the teachers were "foreigners," Egyptians, Southeast Asians, Muslims from British India and Central Asians, but then many in the population as a whole were people of non-Arabian origin. Students in many of these schools were received students based on the financial capability of the several schools.

Educational facilities continued to expand, especially after oil income began to flow on a significant scale...
after World War II. Secondary school education developed as follows. The first school to become a regular secondary school was the ‘Aziziyya, which had been upgraded to that status in 1355-6/1937. By 1363-4/1944, the number had grown to four with total enrollments of 368. Nine years later, there were 12 secondary schools with 1,617 students, and by 1381-2/1962 there were 18 with 2,770 pupils. The first institution of higher learning was established in 1370/1949-50, namely, the Kulliyat al-Shari‘a (shari‘a college), which subsequently became the Faculty of Shari‘a of King ‘Abd al-‘Aziz University, most faculties of which are in Djudda. According to Thomas’s survey (published 1968) the Faculty of Shari‘a was comprised of departments of Shari‘a; Arabic language and literature; and history and Islamic civilisation. The undergraduate programme lasts four years and grants a bachelor’s degree. Master’s degrees and doctorates are also granted. (For curricular details, see Thomas, 68-70.) A College of Education followed in 1370-1/1951. Its departments in the mid-60s were: education and psychology; geography; English; mathematics; and physics. It only granted the bachelor’s degree in the 1960s, but planned to develop masters’ and doctoral programs. (For curricular details, see Thomas, 74-7.) In 1981 the university faculties in Makka were constituted into a separate university called Djami‘at Umm al-Kura, which included four faculties; Shari‘a and Islamic studies; science; Arabic language; and education, to which last there was also attached a centre for the English language. In 1379-80/1960 another higher institution was created, the police academy, which required a secondary school certificate for admission. By 1386/1966-7 there was also in existence Ma‘had al-Nur (the Institute of Light), a school for the blind and deaf, which counted 87 students. It may also be noted that an intermediate vocational school teaching auto mechanics, shop, electronics, printing and book binding had opened.

An official survey of the academic year 1386-7/1966-7 (from Kingdom of Su‘üd’i Arabia, Ministry of Finance, passim) reveals the picture for institutions which are part of the Ministry of Education shown on the facing page. There is little information available on female education. According to Hamada, girls in the 1930s only attended kuttab‘s taught by fakhs and after the first few years had to continue study at home. He also comments on the generally low level of women’s knowledge and deprecates the use of female diviners (sing, ‘arrifa) for medical purposes. But Hamada also notes that even in his day, young men were seeking more educated wives, and he calls on the government to support female education and in particular to replace the fakhs with “enlightened” teachers. The chart above indicates that, although female education has expanded a great deal, it has continued to lag behind male.

In the 1970s and the 1980s, educational expansion has continued on a large scale. One estimate—possibly high—is that in 1402/1982 there were 15 secondary schools in Makka.

Educational administration of Makkan institutions followed general trends in the country. The Department of Education was established in 1344/1926 under the direction of Sālih Ṣafā‘a, and regulations for it were issued by the government of al-Hidżaz in Muḥarram 1346/July 1927. ‘Intā‘ ala‘, these gave the department its own policy board (ma‘dī‘īs). The budget was £5,665. In Muḥarram 1357/March 1938 a vice-regal decree (amr sdm) was issued which thoroughly reorganised the department now called Mudiriyat al-Mu‘ā rif al-‘Amma. All education except military fell under its aegis. Four departments were established: policy board, secretariat, inspectorate, and instruc-

nctional office (details in Nallino, 44-7). These new regulations brought private education under full government control. They specified that the principal had to be a Su'udî citizen and that preference in hiring teachers should also go to citizens. Foreign nationals had to be approved by the Department of Education. In curricular terms, those private schools which received government support were required to teach Su'udî science to any one of the four recognisable madhdabs. In the religious institutions, kadim [e.g.] was forbidden and ijtihâd was limited to the Hanbali madhhab. Little budgetary information on the schools of Makka is available. Directors of the department were as follows: Sâlih Şläta, Muhammad Kâmil al-Kâşâb (of Damascus, who served only briefly), Mâjdâl al-Kurdi, Hâizr Wahba (in addition to his other duties; his deputy, who ran the department, was Ibrahim al-Shirî, a graduate of Dar al-Ulûm in Cairo), Muhammad Amîn Fûda (1424-1929/1289-9 to 1934-3), Tâhir al-Dabbagh (until 1378/1959), Muhammad b. 'Abd al-Azîz al-Mâini (of Nadjî origin). It may be mentioned that when independent, fully-formed ministries were established at the end of 1347/1927-8, the districts were divided into a Ministry of Education. Subsequently, the ministry was divided into a Ministry of Education (Wizârat al-Ma'ârif, under Dr. 'Abd al-Âzîz al-Khuwayjîr from approximately 1351/1931 to the present, 1405/1925) and a Ministry of Higher Education (Wizârat al-Talîm al-Mîslîli, under Shaykh Hasan b. 'Abd Allâh b. Hasan al-Shâykh from approximately 1975 to the present).

The most important library in Makka is the Haram Library (Maktabat al-Haram) as it became known in 1357/1938. The basis of the collection was 3,653 volumes donated by Sultan 'Abd al-Medjîd. These were placed under a dome behind the Zamzam building, but were badly damaged during the flood of 1278/1861-2. The sultan then ordered the construction of a madrasa/library next to the Egyptian takiyya (by the southern corner of the Haram), but died before its completion. In 1290/1871-2 the dome above Báb al-Durayba was used to house the remains of the damaged library. New accretions began; Shâfrî 'Abd al-Muttaib b. Ghalib (d. 1303/1886) donated waqf books, to which were added those of Shaykh Sâlih Ijîrdî, and still other volumes brought from different mosques and ribâts. In 1336/1917-8 another addition was made by waqf from Shaykh 'Abd al-Hakk al-Hindi. A more important accretion occurred in 1346/1927-8 under the new Su'udî régime when the 1,362-volume library of Muhammad Rûghûd Pasha al-Shirîwâni (d. 1292/1875-6), a former Ottoman waqf of al-Hijâz, was added to the growing collection. By 1380/1963 the collection was officially estimated as 200,000 volumes used in the course of the year by 100,000 readers. The main public library, founded in 1350/1931-2, contained 500,000 volumes and was used by 400,000 people per year. Other libraries include: 1. The Dhiblî library results from a combination of the library of Shaykh 'Abd al-Sattar al-Dhiblî (1286-1355/1868-70 to 1936-7) composed of 1714 volumes with that of Shaykh 'Abd al-Wahhâb al-Dhiblî which in fact had been collected by Shaykh 'Abd al-Djaïbûr (i?, the Dhiblî). It is said to have many choice items. 2. The Ma'djîdiyya library was assembled by Shaykh Muhammad Mâjid al-Kurdi, sometime director of the Department of Education, and consists of 7,000 volumes of rare printed works and manuscripts. Shaykh Mâjid not only acquired the books but systematically organised and indexed them. After al-Kurdi's death, 'Abd al-Kattân purchased the library from al-Kurdi's children and set it up in the building that he had built. Although al-Kattân died in 1370/1950, the library was moved to the building and was attached to the waqf libraries of the Ministry of Hajj and Awkâf. 3. Another library reputed to contain manuscripts and rare printed works is that of Shaykh Hasan b. 'Abd al-Shukûr, a "Javan" Shaykh. 4. Other libraries are those of 'Abd Allâh b. Muhammad Gâzi , al-Madrasa al-Sawlîtiyya, Madrasat al-Falâbû, Sulaymân b. 'Abd al-Rahîm al-Sânî (d. 1389/1969), Muhammad Ibrahim al-Qazzawî (brother of the poet laureate), Muhammad Surûr al-Sabbûn, al-'Amûdî, Ibrahim Fûda, Ahmad 'Abd al-Qâhirî Attar, and the late distinguished writer 'Abd al-Kudsiis al-Annâsî (Section on libraries basically from al-Ziriklî, iii, 1035-7.)

Presses and publishing in Makka have been rather restricted. The first press was brought to the city ca.
Newspapers and magazines published in Makka in modern times...
MAKKA

one or two incidental aspects of cultural life in the city. Bookstores were formerly clustered around the Haram near its gates. When the enlargement of the mosque took place, they were forced to move and relocate in scattered directions. Of 12 listed by al-Kurdi (ii, 138, 148), four belonged to the Al Bāz and three to the Al Faddā families, but al-Kurdi reports that only two were sought by scholars and students. The first was Maktabat al-Haram al-Makki, which was, he opines, founded "a number of centuries ago" by an Ottoman sultan. Originally it was located facing Masjām "in a room above a small dome," but when the Ottoman mosque renovation (?) by Sultan ʿAbd al-Medjīd took place, it was relocated inside the mosque at Bāb al-Duraybah. When the Suʿūdi expansion took place, the store was once again moved to a special place near Bāb al-Salām. The second, Maktabat Makka al-Mukarrama, he describes as newly-established. Information on the time spent in remembering calligraphy is not commonly given. Muhammad Tāhir al-Kurdi, whose history has often been cited in this article, started the calligraphy for a Kurʾān in 1362/1943-4. He published it, as Masāf Makka al-Mukarrama in 1369/1949-50. Some mention should also be made of the wakf-established ṭabāt of Makka, best defined perhaps as hospices. Some were for students; others for the poor and the wayfarer. They were, according to al-Kurdi (ii, 149), "numerous," and not a few were for women. Established for the most part by wakfs, they usually provided students with single rooms. They were generally located adjacent to or in the immediate vicinity of the Haram. Then the Suʿūdi régimes pulled everything down around the mosque to make way for the enlargement, the ṭabāt of course went. Some were paid compensation compensation compensation compensation and hence rebuilt elsewhere; others were not, and hence have disappeared forever. Al-Kurdi remembers six of the latter, and claims that none was less than 400 years old. (For details of the Italo-Muslim hospice in Makka, al-Ribdāt al-Qalāt al-Isldmi, see Nallino, 109-10.)

Makka has not failed to produce its share of modern writers, some of whom were primarily poets, others prose authors. Many had other work, often in publishing, journalism and printing. Many of the names that follow (based on Nallino, 132-7), who based his work in turn on ʿAbd al-Makṣūd and Balkhayr al-Wāḥy al-sahra* (b. Makka 1323/1905), have appeared earlier in this article: 1. Ahmad Ibrāhīm al-Ghazzawī (b. Makka 1318/1900-1). A poet, he studied at the al-Sawlatiyya and al-Falah schools and held public positions both under the Ḥākimī and the Suʿūdi régimes. A member of the Maqdis al-Shirāzī in 1936. Was designated "poet of the king" (gāʾir al-malik; poet laureate, in Philby's words) in 1932. (For a sample of his verse see al-Zirikli, ii, 675-6.) 2. Ahmad SībāʾI b. Makka 1323/1905-6). Traveled abroad and studied two years at the Coptic High School in Alexandria. On his return, he taught in schools and then became the director of the radio station in 1334/1915-6. His Taʾrīkh Makka ("History of Makka"), the most judicious, comprehensive history of the city, was first published in 1372/1953. The sixth edition appeared in 1404/1984, a year after he was judged first in the state prize of honour (gāʾir al-dawla al-takdīmī). 3. Amin b. ʿĀkīl (b. Makka 1329/1911). Amin studied at al-Falāḥ and then moved with his family to Mukalla in South Yemen, where he continued to study. He also was in Lahij for a year-and-a-half and then returned to Makka and completed his studies at al-Falāḥ. In 1351/1932, along with a group of Ḥājījīs, he was briefly exiled in al-Riyād on political grounds. His middle was prose. 4. Husayn Khaznadār (b. Makka 1317/1916-17). He studied at al-Ḥāshiyriyya school and finished his studies at al-Falāḥ: a poet. 5. Husayn Sarḥān (b. Makka 1334/1913-16). A member of al-Rūsān section of the ʿUṭayba tribe, he also studied at al-Falāḥ and was a poet. 6. Husayn Sarrābī (b. Makka 1330-1/1912-13). Primary studies at al-Falāḥ, secondary in Jordan, he received his B.A. from the American University of Beirut in 1936; a poet. 7. ʿAbd al-Wahhāb ʿAṣi (b. Makka 1323/1905). He studied at al-Falāḥ and then at al-ʿĀzīz. A poet and prose writer of some note, he was also editor-in-chief of Sawt al-Ḥājījīs. In 1932 he was imprisoned for political reasons and exiled in Najd for two months. On his return, he joined the Ministry of Finance and in time became head of the correspondence section. 8. ʿAbd Allāh ʿUmar Bālkhāyir (b. al-Ḥādrāmawt 1333/1914-15). He soon moved with his father to Makka, studied at al-Falāḥ and then at the American University of Beirut. Co-author of Wāḥy al-sahra* (with Muhammad Saʿīd [b. ʿAbd al-Makṣūd; Cairo, 1355[1936]-7), an anthology of prose and poetry by then living Ḥājījīs authors, this talented young man was diverted from writing into government service. He became the translator from English of world-wide radio reporting for King ʿAbd al-ʿĀzīz during World War II and rose to be Minister of Information under King ʿAbd al-ʿĀzīz. 9. ʿAbd al-ʿĀzīz. When the latter was deposed, Shaykh ʿAbd Allāh retired and in the 1980s has begun to write again. 9. ʿUmar ʿArab (b. Makka 1319/1901-2). Upon completing his studies, ʿArab taught in South Yemen and subsequently at al-Maʿḥād al-Suʿūdī al-Ḥilmi. Prose was his forte. 10. ʿAbd al-Salām ʿUmar (b. Makka 1327/1909-10) studied at al-Falāḥ and also taught there until he took a post with the Ministry of Finance in the correspondence department, to which a number of writers—given the very high levels of illiteracy in the country—gravitated. ʿAbd al-Salām wrote prose. 11. ʿUmar ʿArab (b. Makka 1318/1900). Having studied in a kutāb and then at al-Falāḥ, he taught at al-Falāḥ school in Djuḍda, became secretary of the municipal council of Makka, was then appointed to be Minister of Information under King ʿAbd al-ʿĀzīz during World War II and rose to be Minister of Information under King ʿAbd al-ʿĀzīz. 12. Muhammad b. Surūr al-Sabbān (b. al-Kunfudhā 1316/1899) moved with his family first to Djuḍda then to Makka, where he enrolled in al-Khayyāt school. At first he became a merchant and then, under the Ḥākimīs, accountant of the Makkan municipal government. He retained this post under the Suʿūdi régime. He was imprisoned on political grounds but released after the fall of Djuḍda to ʿAbd al-ʿĀzīz. Thereafter, he became assistant to the head (amin) of the municipality of Makka, but in 1346/1927 he was incarcerated in al-Riyād for more than a year. After his release, he became head of the correspondence department in the Ministry of Finance, of which he ultimately became the minister. He was the author of Adab al-Ḥājījīs (Cairo 1344/1925-6), an anthology of Ḥājījīs authors. 13. Muhammad Saʿīd al-ʿAmūdī (b. Makka 1323/1905-6), attended a kutāb and al-Falāḥ school. After a stint in commerce, he was employed by the ʿAyn Zubayda authority. After several other posts, he became head of the correspondence department of the Department of Posts and Telegrams. He was also editor of Sawt al-Ḥājījīs. Al-ʿAmūdī wrote both prose and poetry. 14. Muhammad Ḥasan Fākī (b. Makka 1316/1904) attended a kutāb and al-ʿĀzīz school in Djuḍda and that of Makka. He taught at the latter for three years, and he also became editor of Sawt al-Ḥājījīs. This poet and prose author was also chief of

12
the contracts' department in the Ministry of Finance. 15. Muhammad Hasan Kutubi (b. Makka 1329/1911) studied at al-Falah and was a member of the mission that Muhammad 1Ali Zayn al-Rijđ sent at his own expense to Bombay, India, for the study of religious science. After receiving his diploma there, Kutubi returned and he also became director of Sawt al-Hidżāz. In addition, he taught courses for prospective kāfaṣ at al-Ma'had al-Imām al-Su'ūdī and later became director of public schools in al-Taif. 16. Muhammad Tāhir b. Abd al-Kādir b. Mahmūd al-Kurdi (b. Makka ca. 1323/1904-5). Al-Kurdi attended al-Falah Makka school, and after graduation entered al-Azhār in 1340/1921-2. That trip was the first of many to Egypt. He was a member of the executive committee on replacing the roof of the Ka’ba and on enlarging the Great Mosque. His works number more than 40, not all of which have been published. Among the published works are Makām 1Ibrāhim 1ayasy '1-Sulām (Cairo 1367/1947-8), Maṣāhif Makka al-Makāramā (1369/1949-50), Ta’rīkh al-Kurān wa-gharābī 'isma wa-hukmihi, al-Tafsir al-Makki, a book (title unknown) on calligraphy, and al-Ta’rīkh al-Kawim li-Makka wa-Bayt Allāh al-Kurīm, 4 vols. (Makka 1385/1965); a third volume is promised. His work is traditional in conception, but scrupulous and comprehensive.

Health care. Because of the Hajdj and its attendant problems, health facilities in Makka are of more than passing importance. In the late Ottoman and Hashimite periods, there were two "hospitals" one in Adjyad and the other in al-Madā’. They had about five doctors between them, and al-Kurdi reports (ii, 225) that the equipment was satisfactory. These doctors were all foreign—Indians, Indonesians, Algerians, etc. There was one non-profess pharmacy near al-Marwa and other shops which sold drugs on a casual basis. In a general way, observers noted that the combination of primitive sanitary facilities, low standards of personal hygiene and an oppressively hot climate were unhealthy, although Ruter said that vermin were almost non-existent as a result of the heat and summer dryness. Mosquitoes were apparently common enough but non-malaria bearing. Shortly after ‘Abd al-‘Aziz reached Makka, he deputed his personal physician, Dr. Mahmūd Hamdī Hamdūa, to re-establish the medical services, and among his first acts was the appointment of doctors to the Department of Health and the reopening of the Adiyād hospital. The hospital reportedly (Hamza, 200) had 275 beds and its facilities included an operating room, X-ray department, microscope room, pharmacy, obstetrics department and an outpatient clinic. It may be pointed out that it had become normal over the years for countries with large Muslim populations, and hence many pilgrims, to dispatch medical teams to Makka at Hajj time. In 1345/1927 the regulations for the health department (Muḥāfaẓat al-Ṣihha al-‘Imma) were established, and by the mid-1930s the spectrum of medical facilities in addition to the Adiyād hospital included the following:

1. a mental hospital.
2. a contagious disease hospital.
3. a brand new hospital in al-Shuḥāda’ section with completely up-to-date equipment.
4. the Egyptian hospital in Dār al-Takīyya al-Misrīyya—the official Egyptian presence in Makka.
5. an emergency aid society (Qan‘ah wa-l-hal-lā‘) founded 1355/1936, which held a conference on hygiene and first aid and which owned its own ambulances and motor cycles. In its first year it treated 922 victims of misfortunes, almost all of them in its own facilities. The king, heri designate, and viceroy all contributed to this society, and it was authorised to levy a special 1/4 piastre stamp on top of the regular postage for the support of its activities. This society probably came into existence because of needs arising from the 1934 Su’ūdī war against the Yaman. It grew into the Red Crescent society of the whole country (Philby, Pilgrim, 39); 6. a school for midwives. Philby estimated that during the pilgrimage of 1349/1931, there were 40 deaths out of total pilgrims numbering 100,000, and in 1352/1934, 15 deaths out of 80,000 pilgrims. In the post-World War II period, there was predictably a great increase in facilities, and to the above list must be added: 7. The Dr. Ahmad Zāhir hospital with 400 beds and 16 doctors. 8. an obstetrical hospital. 9. an eye hospital. 10. a bāhirzāra (schisotomiasis) control station (1975). 11. a venereal disease control demonstration centre. As noted earlier, various governments send medical missions to Makka during the Hajj season. Hamādā reported (69) that in the 1930s, the Egyptian mission consisted of two units, one in Ḥarāt al-Bāb near Djarwal, the other in the permanent Egyptian mission building (al-Takīyya al-Misrīyya), which used to face al-Masqūd al-Haḍām before it was torn down to make way for the mosque enlargement. The latter unit was in addition to the permanent Egyptian medical service in the same building. In 1355-6/1937, the countries sending missions to Egypt, Indonesia, the Dutch East Indies, Algeria, Afghanistan and the USSR. They contributed a total of ten doctors plus pharmacists, assistants and supplies to the available medical services. During the same period, Hamza noted (200) that at Hajj time there were a total of 13 government hospitals and clinics spread between Makka and ‘Arāfāt. Physicians, nurses and orderlies were hired on a temporary basis to man them. Reading from Fārisī’s map, one finds that the latest indications are as follows: there were six hospitals, seven clinics (mustawaṣṣ) and three medical centres (markaz tibbī) in Makka proper and ten dispensaries in Miina, one hospital in Muzdalifā, and one medical centre in ‘Arafa. These latter doubly function only during the Hajj.

Communications. By 1985 Makka, like other Su’ūdī cities, was possessed of the most modern telephone, telex, radio and TV communications. Its roads were of the most modern design, and it was linked to the rest of the country by first-class highways, many of them divided and of limited access. Since Djaruda, which has one of the world’s largest and most modern airports, is only some 60 km away and since a major airport at Makka would be difficult, both because of the terrain and because of the problem of non-Muslims being in proximity to the haram area, there is no important airport in Makka. It may, however, be noted that a Djaruda-Makka service had been authorised in 1936 to Misr Air (now Egypt Air). It was cancelled following an accident in 1938. In a similar vein, a railroad project from Djaruda to Makka was authorised by a royal decree in 1351/1933 with a concession granted to ‘Abd al-Kādir al-Djilānī. It was revoked 18 months later because of his failure to carry it out.

The modernisation of communications has been dramatically rapid. Rutter describes (455) how in 1925 camel caravans for al-Madinah assembled in an open space called Shaykh Mahmūd on the western edge of Djarwal; a camel in Djarwal in 1985 would be about as common as a horse in Paris. The use of cars spread very rapidly after the Su’ūdīs’ conquest and the development of the Djaruda-Makka road was a natural early priority because of the pilgrimage traffic. It
was first asphalted in the period just before the outbreak of World War II.

Telecommunications were early emphasised by King Abd al-Aziz because they represented a means of control as well as a convenience. In King al-Husayn’s time, there had been about 20 telephones in the city—all reserved for high officials and probably only functional within the city. By 1936, subscribers in Makka had grown to 450 (slightly over half of all those in Su‘udi Arabia), and lines had been extended to Qudadda and al-Tabyrinth (but not al-Riyad or al-Madina). Hamza also reports (230-1) that, in addition to the regular telephones, there were “automatic” (?) telephones which were used by officials. Of this type, 50 were in Makka. After World War II, the first telephone training mission (10 persons) was sent abroad in 1367/1947-8. By 1383/1963-6, Makka had 5,000 telephones but service was still through operators. Dial phones were introduced soon after this, and within a dozen years there was fully automatic direct-dial service anywhere in the world.

There had been limited radio communication within the Hijāz under the Hāshimites. In 1348/1929, using Philby as an intermediary (for details see Jubilee, 173-4; Days, 286-9; Su‘udi Arabia, 316-17), the king contracted with the Marconi company for wireless stations, and the first of these was in Makka. That of Makka was of 25 kw power (as was al-Riyad), and by the spring of 1932 the network was fully functional. Soon after World War II, by contract with the German Siemens company, this network was greatly expanded and improved. Radio communication has been used at various key points in directing the pilgrimage since about 1370/1950. Public radio broadcasts were initiated on yaum al-wukuf ("standing day") during the pilgrimage in 1368/1949 with jubilee, 172) as the opening words. Initial power was only 3 kw, but with the creation of the Directorate General of Broadcasting, Press and Publications (by a decree of 1374/1955) under ‘Abd Allah ‘Umar Bālkhyār, there was rapid improvement. Within less than a year, power had increased to 10 kw, and it was boosted in 1377/1957 to 50 kw, making Radio Makka one of the most powerful in the Near East at that time.

Later, power was increased still more to 450 kw. In keeping with Wahhābī tradition, music was initially kept off the air, but it was gradually introduced. TV in Makka began service in 1386/1966-7 and has since become a pervasive part of life there as everywhere else in the world.

Water supply. Before oil-induced modernisation, the water supply of Makka came from two basic sources. The first was local wells. The water of these, of which Zamzam is one, was generally brackish, and they were located in houses. The second was fresh or sweet water most of which came from ‘Ayn Zubayda by man-made underground channels of the kanawdt [see kanawdt] type. Locally, the system is called manawat. A very sporadic third source was rainfall which, although it brought the threat of destructive floods, was eagerly collected in every way possible. Water distribution was by hand. A man carried two 20 litre petrol tins (tanakā) attached to the ends of a stout pole on his shoulders to the individual houses of those who could afford such service. Philby noted (Forty years, 172) that in the 1930s, 8 gallons cost one penny. His monthly bill seldom exceeded five shillings. The mass of the people went individually to get their own water at one of the small reservoirs or cisterns (bāzān). Of these in Rutter’s time, there were seven in the city and one each in Minā, Muzdaliqā and ‘Arafā. The water for all of these came from ‘Ayn Zubayda.

The immediate source of the ‘Ayn Zubayda water is the mountains (Djabal Sa‘d and Djabal Kabkāb) which lie a few kilometers east of Djabal al-Haram or about 20 km east southeast of Makka. The most important source is a spring in the mountains, ‘Ayn Hunayn, which according to Rutter is a two-hour walk from the Wādī Na‘mān plain. Several other small springs are led to the beginning of the subterranean aqueduct which starts at the foot of the mountain. The aqueduct is attributed to Zubayda (q. v.), the wife of Hārūn al-Rashīd, but in all probability it far predates her, and she should be credited with improvement of the system rather than creation of it. Like other kanawāt, the ‘Ayn Zubayda system is characterised by access wells (jātākhāt) at intervals of about one km which are marked by circular erections around them. King ‘Abd al-Aziz did not lack interest in the water supply system, and made personal financial contributions from time to time. Philby reports (Jubilee, 116-17) an expedition of autumn 1930 when he and his party drove out to inspect work in progress at one of the access wells which was being cleaned. A thorough cleaning of the whole system had been ordered because flow had been declining as a result of inadequate maintenance in the prior, disturbed years. A pit some 30 m deep had been dug ‘at the bottom of which the top [of the] pit’s rim is washed out by new manholes which are being seen.” Philby theorised that the valley silt had built up at a rate of about 3 m a century. In any case, the new pit was surfaced with masonry and the channel between it and the next pit thoroughly cleaned. When the whole process was completed, the flow of water in Makka increased greatly, although Philby notes that the growth of private gardens in the suburbs was putting pressure on supplies. The ‘Ayn Zubayda system (as well as other lesser ones) was so important to the city that a separate ‘Ayn Zubayda administrative authority had been created. Its budget came from the government and fell under the purview of the Madīsī al-Sharā‘ī. In addition, pilgrims often made pious contributions to the upkeep of the system. Hamāda notes (77) that supervision of it had to be increased during pilgrimage season because flow was greater at those times. Later, power was increased still more to 450 kw. In keeping with Wahhābī tradition, music was initially kept off the air, but it was gradually introduced. TV in Makka began service in 1386/1966-7 and has since become a pervasive part of life there as everywhere else in the world.

Floods in Makka have been a danger since earliest times. Al-Kurdi counts a total of 89 historic ones, including several in the Su‘udi period. The most severe was in 1360/1942 which it rained for several hours. Water reached the sill of the Ka‘ba’s door, and prayers and tawwaf were cancelled. The streets of the city were filled with mud, and there was severe damage to stocks in stores. Tombs in al-Mal‘ālā were washed out and houses were destroyed (al-Kurdi, ii, 200). Philby also reports (Su‘udi Arabia, 320) a flood in 1950 which reached a depth of seven feet in the mosque. Soon thereafter the improved modern technologies and cannot find any research on the construction of dams, one on the Wādī Ibrāhīm, which is the main source of floods, the other across the Wādī al-Zāhir, which threatens the northern and western sections. These dams were helpful, and the great underground conduit built in connection with the mosque enlarge-
ment may have permanently ameliorated the problem of floods.

Bibliography: Fundamental works on Su`udî Arabi including Makka in the 1920s, 30s, and 40s are those of F. Hamza, C. Nallino, H. St. J. B. Philby, and H. Wahba. Rutter, The Holy cities of Arabia, London and New York 1930 (most important source on Makka in immediate wake of Su`u`û`i take-over); Muhammad Sa`îd `Abd al-Mâskûd and `Abd Allâh `Umar al-Ša`îlî, Wâhî al-`aţsâdîr, Cairo 1354/1936 (important for literature, uncors.-

Since Muslims over the centuries have faced the world.

Introduction.

In Kur`ân, II, 144, Muslims are enjoined to face the sacred precincts in Mecca during their prayers. The Ka`bâ was adopted by Muhammad as a physical focus of the new Muslim community, and the direction of prayer, kiblah, was to serve as the sacred direction in Islam until the present day.

Since Muslims over the centuries have faced the Ka`bâ during prayer, mosques are oriented so that the prayer wall faces the Ka`bâ. The mînah or prayer-niche in the mosque indicates the kiblah, or local direction of Mecca. Islamic tradition further prescribes that certain acts such as burial of the dead, recitation of the Kur`ân, announcing the call to prayer, and the ritual slaughter of animals for food, are performed in the kiblah, whereas expectation and bodily functions should be performed in the perpendicular direction. Thus for close to fourteen centuries,
Muslims have been spiritually and physically oriented towards the Ka'ba and the holy city of Mecca in their daily lives, and the kibla or sacred direction is of fundamental importance in Islam [see KA'BA and KIBLA, i. Ritual and legal aspects].

A statement attributed to the Prophet asserts that the Ka'ba is the kibla for people in the sacred mosque which surrounds the Ka'ba, the Mosque is the kibla for the people in the sacred precincts (haram) of the city of Mecca and its environs, and the sacred precincts are the kibla for people in the whole world. To 'Aisha and 'Ali b. Abi Talib, as well as to other early authorities, is attributed the assertion that Mecca is the centre of the world. The early Islamic traditions with Mecca as the centre and navel of the world constitute an integral part of Islamic cosmography over the centuries (see Wensinck, Navel of the earth, 36), although they do not feature in the most popular treatise on the subject from the late mediaeval period, namely, that of al-Suyūṭī [q.v.]; see Heinen, Islamic cosmology.

From the 3rd/9th century onwards, schemes were devised in which the world was divided into sectors (dhībā or hadd) about the Ka'ba. This sacred geography had several manifestations, but the different schemes proposed shared a common feature, described by al-Makrizī, "The Ka'ba with respect to the inhabited parts of the world is like the centre of a circle with respect to the circle itself. All regions face the Ka'ba, surrounding it as a circle surrounds its centre, and each region faces a particular part of the Ka'ba" (Khīṣāt, i, 257-8).

Islamic sacred geography was quite separate and distinct from the mainstream Islamic tradition of modern cartography. It was, however, closely associated with Islam. The term kibla, and the associated verb istakbala for standing in the kibla, appear to derive from the name of the east wind, the kabāl. These terms correspond to the situation where one is standing with the north wind (al-gamāl) on one's left (ghamāl) and the Yemen on one's right (jamān); see Chehlood, Pre-eminence of the right, 248-53; King, Astronomical alignments, 307-9.

In other such traditions recorded in the Islamic sources, the limits of the directions from which the winds blow were defined in terms of the rising and setting of such stars and star-groups as Canopus, the Pleiades, and the stars of the handle of the Plough (which in tropical latitudes do rise and set), or in terms of cardinal directions of wind-marshalling (al-marsha, namely, south, east, north and west) or the cardinal winds themselves.

It appears that in the time of the Prophet, the four corners of the Ka'ba were already named according to the geographical regions which they faced and which the Meccans knew from their trading ventures: namely, Syria, 'Irāk, Yemen, and the West. As we shall see, a division of the world into four regions about the Ka'ba is attested in one of the earliest sources for sacred geography, the early authority of Ibn 'Abbas (roughly equal) sectors. Each of these eight-sector schemes were indeed proposed. However, in some schemes, the sectors were associated with segments of the perimeter of the Ka'ba, the walls being divided by such features as the waterspout (miṣāb) on the north-western wall and the door on the north-eastern wall (see Fig. 1).

The directions of sunrise and sunset at midsummer, midwinter and the equinoxes, together with the north and south points, define eight (unequal) sectors of the horizon, and, together with the directions perpendicular to the solstitial directions, define 12 (roughly equal) sectors. Each of these eight- and 12-sector schemes was used in the sacred geography of Islam.

The determination of the sacred direction

The article KIBLA, ii. Astronomical aspects, ignores the means which were used in popular practice for determining the sacred direction, since at the time when it was written, these had not yet been investigated. It is appropriate to consider them before turning to the topic of sacred geography per se.

From the 3rd/9th century onwards, Muslim astronomers working in the tradition of classical astronomy devised methods to compute the kibla for any locality from the available geographical data. For them, the kibla was the direction of the great circle joining the locality to Mecca, measured as an angle to the local meridian. The determination of the kibla according to this definition is a non-trivial problem of mathematical geography, whose solution involves the application of complicated trigonometrical formulae or geometrical constructions. Lists of kibla values for different localities and tables displaying the kibla for each
degree of longitude and latitude difference from Mecca were available. Details of this activity are given in kibla. ii. Astronomical aspects. However, mathematical methods were not available to the Muslims before the late 2nd/8th and early 3rd/9th centuries. And what is more important, even in later centuries, the kibla was not generally found by computation anyway.

In some circles, the practice of the Prophet in Medina was imitated: he had prayed southwards towards Mecca, and there were those who were content to follow his example and pray towards the south wherever they were, be it in Andalusia or Central Asia. Others followed the practice of the first generations of Muslims who laid out the first mosques in different parts of the new Islamic commonwealth. Some of these mosques were converted from earlier religious edifices, the orientation of which was considered acceptable for the kibla; such was the case, for example, in Jerusalem and Damascus, where the kibla adopted was roughly due south.

Other early mosques were laid out in directions defined by astronomical horizon phenomena, such as the risings and settings of the sun at the equinoxes or solstices and of various prominent stars or star groups; such was the case, for example, in Egypt and Central Asia, where the earliest mosques were aligned towards winter sunrise and winter sunset, respectively. The directions known as kiblat al-sahāba, the “kibla of the Companions”, remained popular over the centuries, their acceptability ensured by the Prophetic dictum: “My Companions are like stars to be guided by: whenever you follow their example you will be rightly guided”.

Astronomical alignments were used for the kibla because the first generations of Muslims who were familiar with the Ka’ba knew that when they stood in front of the edifice, they were facing a particular astronomical direction. In order to face the appropriate part of the Ka’ba which was associated with their ultimate geographical location, they used the same astronomically-defined direction for the kibla as they would have been standing directly in front of that particular segment of the perimeter of the Ka’ba. This notion of the kibla is, of course, quite different from that used by the astronomers. Such simple methods for finding the kibla by astronomical horizon phenomena (called dalā‘ī) are outlined both in legal texts and in treatises dealing with folk astronomy. In the mediaeval sources, we also find kibla directions expressed in terms of wind directions: as noted above, several wind schemes, defined in terms of solar or stellar risings and settings, were part of the folk astronomy and meteorology of pre-Islamic Arabia.

The non-mathematical tradition of folk astronomy practiced by Muslims in the mediaeval period was based solely on observable phenomena, such as the risings and settings of celestial bodies and their passages across the sky, and also involved the association of meteorological phenomena, such as the winds, with phenomena in the sky [see ANWAZ, MANAZIL, MATLA‘ and MA‘]. Adapted primarily from pre-Islamic Arabia, folk astronomy flourished alongside mathematical astronomy over the centuries, but was far more widely known and practised. Even the legal scholars accepted it because of Kurzan, XVI, 16, “… and by the stars [men] shall be guided”. There were four main applications of this traditional astronomical folklore: (1) the regulation of the Muslim lunar calendar; (2) the determination of the times of the five daily prayers, which are astronomically defined; (3) finding the kibla by non-mathematical procedures; and (4) the organisation of agricultural activities in the solar calendar (see King, Ethnoastronomy, and Varisco, Agricultural almanacs).

Historical evidence of clashes between the two traditions is rare. Al-Biruni made some disparaging remarks about those who sought to find the kibla by means of the winds and the lunar mansions (Kitab Tahdid nihaydt al-amdkin, tr. J. Ali as The determination of the coordinates of cities, Beirut 1967, 12 [slightly modified]: “When [some people] were asked to determine the direction of the kibla, they became perplexed because the solution of the problem was beyond their scientific powers. You see that they have been discussing completely irrelevant phenomena such as the directions from which the winds blow and the risings of the lunar mansions”.

But the legal scholars made equally disparaging and far more historically significant remarks about the scientists. According to the 7th/13th century Yemeni legal scholar al-Asbahi (ms. Cairo Dar al-Kutub, mkdò 984, 1, fol. 6a-b): “The astronomers have taken their knowledge from Euclid, [the authors of] the Sindhind, Aristotle and other philosophers, and all of them were infidels”.

It is quite apparent from the orientations of mediaeval mosques that astronomers were seldom consulted in their construction. Indeed, from the available architectural and also textual evidence, it is clear that in mediaeval times several different and often widely-divergent kiblas were accepted in specific cities and regions. Among the legal scholars there were those who favoured facing the Ka’ba directly (SYM AL-KA’BA), usually with some traditionally acceptable astronomical alignment such as winter sunrise, and others who said that facing the general direction of the Ka’ba (DQI HAT AL-KA’BA) was sufficient (see Pl. 1).
Thus, for example, there were legal scholars in mediaeval Cordova who maintained that the entire south-eastern quadrant could serve as the kibla (see King, Qibla in Cordova, 372, 374).

Islamic sacred geography

The earliest known Ka'ba-centred geographical scheme is recorded in the Kitāb al-Masāliḳ wa 'l-Mannālīḳ, ed. de Goeje, 5, of the 3rd/9th century scholar Ibn Khurradadhbih [q. v.]. Even if the scheme is not original to him, there is no reason to suppose that it is any later than his time. In this scheme, represented in Fig. 2, the region between North-West Africa and Northern Syria is associated with the north-west wall of the Ka'ba and has a kibla which varies from east to south. The region between Armenia and Kashmir is associated with the north-east wall of the Ka'ba and has a kibla which varies from south to west. A third region, India, Tibet and China, is associated with the Black Stone in the eastern corner of the Ka'ba, and, for this reason, is stated to have a kibla a little north of west. A fourth region, the Yemen, is associated with the southern corner of the Ka'ba and has a kibla of due north.

Fig. 2. A simple scheme of sacred geography in the published text of the Kitāb al-Masāliḳ of Ibn Khurradadhbih.

The 4th/10th century legal scholar Ibn al-Kāṣṣ wrote a treatise entitled Dala'il al-kibla which is unfortunately not extant in its entirety. The Beirut ms. is lost, and the Istanbul and Cairo mss. (Veľuďudin 2455,2 and Dār al-Kutub, miṣrāṭ 1201) are quite different in content. In the Istanbul copy, Ibn al-Kāṣṣ states that the world is centred on the Ka'ba and then presents a traditional Ptolemaic survey of the seven climates [see 181.13]. In the Cairo copy, he surveys the different stars and star-groups used for finding the kibla.

The principal scholar involved in the development of sacred geography was Muḥammad b. Surākhī al-'Aṣrī, a Yemeni fakih who studied in Basra and died in the Yemen in 410/1019. Little is known about this individual, and none of his works are known to survive in their original form. However, from quotations in later works, it appears that he devised a total of three distinct schemes, with eight, 11 and 12 sectors around the Ka'ba. In each scheme, several prescriptions for finding the kibla in each region are outlined. Ibn Surākhī explains in words and without recourse to any diagrams how one should stand with respect to the risings or settings of some four stars and the four winds; the actual direction which these prescriptions are intended to help one face is not specifically stated. Thus, for example, people in ʿIrāk and Iran should face the north-east wall of the Ka'ba, and to achieve this one should stand so that the stars of the Plough rise behind one's right ear, the lunar mansion al-Hanā'a rises directly behind one's back, the Pole Star is at one's right shoulder, the East wind blows at one's left shoulder, and the West wind blows at one's right cheek, and so on (see Table 1). Ibn Surākhī did not actually point out that the kibla in ʿIrāk was toward winter sunset.

Ibn Surākhī's eight-sector scheme is known from the writings of one Ibn Rahlī, a legal scholar of Mecca in the 5th/11th century, who wrote a treatise on folk astronomy (extant in the unique Berlin ms. Ahlwardt 5664; see especially fols. 23a-25b). Several significant regions of the Muslim world were omitted from this scheme. A similar but more refined eight-sector scheme is proposed by the 7th/13th century Libyan philologist Ibn al-Aḍdāṭā [q. v.] (Kitāb al-Aṣmān, . . ., ed. I. Hassen, 120-35). Here eight sectors are neatly associated with the four walls and the four corners of the Ka'ba, and the kiblas in each region are defined in terms of the cardinal directions and sunrise and sunset at the solstices. A cruder scheme based on the same notion is proposed by the 6th/12th century Egyptian legal scholar al-Dimyātī (ms. Damascus, Zāhiryya 5579, fol. 14a). He represents the Ka'ba by a circle and associates each of the eight regions around the Ka'ba with a wind (see Pl. 2).

Yet another eight-sector scheme is presented in an anonymous treatise preserved in a 12th/18th century Ottoman Egyptian manuscript (Cairo, Tal'at, maqāmāt, 811.6, fols. 59a-61a (see Pl. 3). From internal evidence, it is clear that this scheme, in which the kiblas are actually defined in terms of the stars which rise or set behind one's back when one is standing in the kibla and in terms of the Pole Star, was already at least five centuries old when it was copied in this manuscript. For example, various 7th/13th century Yemeni astronomical sources contain 12-sector schemes based on precisely the same eight kibla directions. In the eight-sector scheme, Palestine had been omitted and two regions were associated with two entire walls of the Ka'ba. The individual who first developed this particular 12-sector scheme added a sector for Palestine and three more for segments of those two walls.

Ibn Surākhī's 11-sector scheme is known from an 8th/14th (?) century Egyptian treatise (ms. Milan Ambrosiana, II.75 (A73), 20, fols. 174a-177b), and in it he has simply added three sectors to his eight-sector scheme and modified the prescriptions for finding the kibla. His 12-sector scheme is yet more refined. It was used by al-Dimyātī in his Kitāb al-Tahjīf fi ma'rāfāt dala'il al-kibla (ms. Oxford, Bodleian Marsh 592, fols. 97b-101b, and 126a-28a), who complained that Ibn Surākhī had placed Damascus and Medina in the same sector, and so he himself presented a 13-sector scheme, subdividing the sector for Syria and the Hijāż. Ibn Surākhī's 12-sector scheme was also used by the 7th/13th century Yemeni astronomer al-Farsī in his treatise on folk astronomy. The unique copy of this work (ms. Milan Ambrosiana X73 sup.) includes diagrams of Ibn Surākhī's 12-sector scheme and the different 12-sector scheme discussed above (see Pl. 4).

Several sources contain schemes in which the prescriptions for finding the kibla in each region of the world are based only on the Pole Star (al-Dhulayy or al-Kufi). Although the earliest known scheme of this kind dates from the 6th/12th century, others must have been in circulation prior to this time, since al-Biruni (Tahdid, tr. Ali, 13, modified) wrote: "Of the majority of people [who write about the kibla in non-mathematical terms], none are closer to the truth than those who use (i'tabatul bi') the Pole Star known as al-Dhulayy. By means of its fixed position, the direction of a person travelling can be specified approximately."

The most detailed scheme of this kind is recorded by the 7th/13th century Egyptian legal scholar Shihab al-Din al-Karaft [q.v.] in his Dhalikhra, ed. Cairo, 1, 489-508; in this, some nine regions of the world are identified and instructions for finding the kibla are given as follows: "[The inhabitants of] Sind and India stand with [the Pole star] at their [right] cheeks and they face due west, etc." See Fig. 3 for a simplified version of this kind of scheme.

Fig. 3. A simple scheme for using the Pole Star to face Mecca recorded in a late Ottoman Egyptian text, typical of much earlier prescription for finding the kibla.

At least one of the 12-sector schemes mentioned above must have been in circulation outside the Yemen before the 7th/13th century, because it was copied by the geographer Yahya al-Bakhtari, tr. Jwaideh, 51), who worked in Syria in ca. 600/1200.

The instructions for finding the kibla are omitted from his diagram. A similar diagram is presented in al-Kazwini’s Athar al-bilad, 76, (see Fig. 4), and the same scheme is described in words in al-Kalkashandi, Subh, iv, 251-5. Another such simple 12-sector scheme occurs in the cosmography Kharidat al-‘ajlih of the 9th/15th century Syrian writer Ibn al-Wardi [q.v.], a work which was exceedingly popular in later centuries. In some copies of this, a diagram of an eight-sector scheme is presented. In others, diagrams of 18-, 34-, 35-, or 36-sectors schemes occur. In one manuscript of a Turkish translation of his treatise (ms. Istanbul Topkapi, Turkish 1390 = Bagdat 179), there is a diagram of a scheme with 72 sectors. In the published edition of the Arabic text (Cairo 1863, 70-1), extremely corrupt versions of both the 12- and the eight-sector schemes are included.

These simple diagrams were often much abused by ignorant copyists, and even in elegantly copied manuscripts we find the corners of the Ka’ba mislabelled and the localities around the Ka’ba confused. In some copies of the works of al-Kazwini and Ibn al-Wardi containing the 12-sector scheme, Medina occurs in more than one sector. In other copies, one of these two sectors has been suppressed and only 11 sectors appear around the Ka’ba (see Pl. 5).

Yet another scheme occurs in the navigational atlas of the 10th/16th century Tunisian scholar ‘Alfi al-Sharafi al-Safakusi (see Pl. 6). There are 40 mihrabs around the Ka’ba, represented by a square with its corners facing in the cardinal directions, and also by the fact that the scheme is superimposed upon a 32-division wind-rose, a device used by Arab sailors to find directions at sea by the risings and settings of the stars. Even though al-Safakusi had compiled maps of the Mediterranean coast, the order and arrangement of localities around the Ka’ba in his diagram in each of the available copies (ms. Paris, B.N. ar. 2273 and Oxford, Bodleian Marsh 294) are rather inaccurate. Again, no kibla indications are presented.

Mainly through the writings of al-Kazwini and Ibn al-Wardi, these simplified 12-sector schemes were copied right up to the 19th century. By then, their original compiler had long been forgotten, and Muslim scholars interested in the sciences were starting to use Western geographical concepts and coordinates anyway. In most regions of the Islamic world, traditional kibla directions which had been used over the centuries were abandoned for a new direction computed for the locality in question using modern geographical coordinates.

The orientation of Islamic religious architecture

A variety of different kibla values was used in each of the major centres of Islamic civilisation (see King, Sacred direction). In any one locality, there were kiblas advocated by religious tradition, including both cardinal directions and astronomical alignments advocated in texts on folk astronomy or legal texts, as well as the directions computed by the astronomers (by both accurate and approximate mathematical procedures). This situation explains the diversity of mosque orientations in any given region of the Islamic world. However, since very few medieval mosques have been surveyed properly for their orientations, it is not yet possible to classify them, and for the present
In Cordova, for example, as we know from a 6th/12th century treatise on the astrolabe, some mosques were laid out towards winter sunrise (roughly 30° S. of E.), because it was thought that this would make their kibla walls parallel to the north-west wall of the Ka'ba. The Grand Mosque there faces a direction perpendicular to summer sunrise (roughly 30° E. of S.), for the very same reason: this explains why it faces the deserts of Arabia rather than the deserts of Arabia. In fact, the axis of the Mosque is “parallel” to the main axis of the Ka'ba.

In Samarkand, as we know from a 5th/11th century legal treatise, the main mosque was oriented towards winter sunset, in order that it should face the north-east wall of the Ka'ba. Other mosques in Samarkand were built facing due west because the road to Mecca left Samarkand towards the west, and yet others were built facing due south because the Prophet, when he was in Medina, had said that the kibla was due south, and some religious authorities interpreted this as being universally valid.

Similar situations could be cited for other mediaeval cities. In some of these, the kibla, or rather, the various different directions accepted for the kibla, have played an important role in the development of the entire city in mediaeval times. Investigations of the orientations of Islamic cities are still in an early phase. However, the city of Cairo represents a particularly interesting case of a city oriented towards the Ka'ba.

The first mosque in Egypt was built in Fustat in the 1st/7th century facing due east, and then a few years later was altered to face winter sunrise (about 27° S. of E.). The first direction was probably chosen to ensure that the Mosque faced the Western Corner of the Ka'ba, the second to ensure that it faced the north-western wall, but these reasons are not mentioned in the historical sources. When the new city of al-Qahirah was founded in the 4th/10th century, it was built with a roughly orthogonal street plan alongside the Pharaonic canal linking the Nile with the Red Sea. Now, quite fortuitously, it happened that the canal was perpendicular to the direction of winter sunrise. Thus the entire city was oriented in the “kibla of the Companions”. The Fātimids who built al-Qahirah erected the first mosques in the new city (the Mosque of al-Ḥakim and the Azhar Mosque) in the kibla of the astronomy, which at 25° S. of E. was 10° south of the kibla of the Companions. Thus their mosques were skew to the street plan.

The Mamluks built their mosques and madrasas in such a way that the exteriors were in line with the street plan and the interiors skew to the exteriors and in line with the kibla of the astronomers. When they laid out the “City of the Dead” outside Cairo, they aligned the street and the mausolea with the kibla of the astronomers, which in the other main area of greater Cairo known as al-Qarâfa, both the streets and the mosques follow a southerly kibla orientation. Al-Maqrīzī discussed the problem of the different orientations of mosques in Egypt, but without reference to the street plan of Cairo. Now that the methods used in mediaeval times for finding the kibla are understood, the orientation of mediaeval Islamic religious architecture in particular and cities in general is a subject which calls for further investigation.

Concluding remarks

This purely Islamic development of a sacred geography featuring the world centred on the Ka'ba, provided a simple practical means for Muslims to face the Ka'ba in prayer. For the pious, to whom the “science of the ancients” was anathema, this tradition constituted an acceptable alternative to the mathematical kibla determinations of the astronomers. As noted above, it was actually approved of by the legal scholars, not least because of Korâ an XVI, 16. The number and variety of the texts in which this sacred geography is attested indicate that it was widely known from the 4th/10th century onwards, if not among the scientific community. The broad spectra of kibla values accepted at different times in different places attest to the multiplicity of ways used by Muslims to face the Ka'ba over the centuries, and all of this activity was inspired by the belief that the Ka'ba, as the centre of the world and the focus of Muslim worship, was a physical pointer to the presence of God.

On the possibility of a kibla towards the east before the adoption of the kibla towards the Ka'ba, see W. Barthold, Die Orientierung der ersten muham- madanischen Moscheen, in Istanbuls, xviii (1929), 245-50, and King, Astronomical alignments, 30, for this tradition.

The orientation of Islamic religious architecture, see King, op. cit., and on the situations in Cordova, Cairo and Samarkand, see three sundials from Islamic Andalusia, Appx. A: Some medieval values of the Qibla at Cordova, in Jnsl. for the Hist. of Arabic Science, ii (1978), 370-87; Architecture and astronomy:
the ventilators of medieval Cairo and their secrets, in JAOS, civ (1984), 97-133; Al-Bazdawion the Qibla in Transoxiana, in JHAS, vii (1983), 3-38. In 1983, a treatise on the problems associated with the kibla in early Islamic Iran by the 5th/11th century legal scholar and mathematician 'Abd al-Kahir al-Baghdadi was published in Msila [see MASILA].

Of his principal ancestors, Muhammad b. Ahmad al-Makkari had been chief kadi of Fas and one of the teachers of the famous Liain al-Din Ibn al-Khatib [q.v.], who on 15 Rabii 1 A.H. 1010/13 October 1601 gave him an ijazat (text in al-Makkari's Rawda, 305:12) authorising him to teach the Muwatta, the two Sahih of al-Bukhari and Muslim, the Shaf'ite of the Kadi 'Iyad and his own works, to the spreading of which he must have contributed greatly (see M. A. Zouber, Ahmad b. Shahin; in this last city too, his daughter and a wife (to whom he gave, in the above-mentioned version of this monumental work still remains to be published at Leiden from 1855 to 1861 under the title of Analecutes sur l'histoire et la litterature des Arabes d'Espagne, by R. Doey, G. Dugat, I. Krehl and W. Wright. In 1840, D. Pascual de Gayangos mentioned above, a complete Arabic text of the Nafh al-tib was first printed at Bulak in 1279, at Cairo in 1302 and 1304 in 4 volumes, then at Cairo in 1367/1949 in 10 volumes and finally, by 'Ihsan 'Abbâs at Beirut in 1968 (8 volumes). Although various texts given by al-Makkari have been translated, in addition to the work of D. Pascual de Gayangos mentioned above, a complete version of this monumental work still remains to be done.

Another important work of this author is the Azhar al-riyad fi akhbr 'Iyad, a long monograph on the Kadi 'Iyad (476-544/1083-1149 [q.v.]), which is enriched by numerous pieces of information on scholars of Morocco and al-Andalus, and by citations from otherwise lost works. Of this work, the autograph ms. (incomplete) is in the Royal Library in Rabat (no. 784), and there is a good ms. in the General Library of Rabat (no. 229 K); this has been the object of an edition begun in Tunis (1322/1904), and then 3 volumes have been published in Cairo in 1359-61/1939-42; the vols. iv and v at al-Muhammadiyya in 1977-80. A third work by al-Makkari, the Rawdat al-asl al-7'irat al-anafs fi akhbr man labkhib min al-3'am al- hadaratayn Marrakush wa-Fas, contains biographies of scholars and other Moroccan personalities, together, like the preceding two works, various other texts, in

In spite of his long stay in the East, it was in Morocco that al-Makkari collected the essential materials for his work as the historian and biographer of Muslim Spain, especially at Marrakush, in the library of Sa'dian Sultans (now preserved in part in the Bibliothèque nationale de France, see Lévi-Provencal, Les manuscrits arabes de l'Escorial, iii, Paris 1928, pp. viii-x). Indeed, his masterpiece, written at Cairo in 1038/1629 to the suggestion of Ibn Shâhîn, is a long monograph on Muslim Spain and on the famous encyclopaedist of Granada, Liain al-Din Ibn al-Khatib, Nafl al-tib min khitab al-ulama wa-shfi'a waziratih Liain al-Din Ibn al-Khatib, an immense compilation of historical and literary information, poems, letters and quotations very often taken from works now lost. It is this that gives the Nafl al-tib an inestimable value and puts it in the first rank for our sources of Muslim Spain from the conquest to the last days of the Reconquista.

The Nafl al-tib consists of two quite distinct parts, a monograph on the history and literature of Muslim Spain and the monograph on Ibn al-Khatib. The first part is divided as follows: 1. Physical geography of al-Andalus. 2. Conquest of al-Andalus by the Arabs, period of the governors. 3. History of the Umayyad caliphs and of the petty dynasts (Mu'âakk al-su'ud). 4. Description of Cordova, its history and its monuments. 5. Spanish Arabs who made the journey to the East during the days of Ibn al-Khatib; an immense compilation of historical and literary information, poems, letters and quotations very often taken from works now lost. It is this that gives the Nafl al-tib an inestimable value and puts it in the first rank for our sources of Muslim Spain from the conquest to the last days of the Reconquista.

The second part contains: 1. Origin and biography of the ancestors of Ibn al-Khatib. 2. Biography of Ibn al-Khatib. 3. Biographies of his teachers. 4. Letters in rhymed prose of the chancellors of Granada and of Fas, sent or received by Ibn al-Khatib (makhdubat). 5. Selection of his work in prose and verse. 5. Analytical list of his works.

The first part was published at Leiden from 1855 to 1861 under the title of Analecutes sur l'histoire et la litterature des Arabes d'Espagne, by R. Doey, G. Dugat, I. Krehl and W. Wright. In 1840, D. Pascual de Gayangos published in English, at London, under the title The history of the Muhammadan dynasties in Spain, a version adapted from the part of the first half which deals with the history of Muslim Spain. The complete Arabic text of the Nafl al-tib was first printed at Bulâk in 1279, at Cairo in 1302 and 1304 in 4 volumes, then at Cairo in 1367/1949 in 10 volumes and finally, by 'Ihsan 'Abbâs at Beirut in 1968 (8 volumes). Although various texts given by al-Makkari have been translated, in addition to the work of D. Pascual de Gayangos mentioned above, a complete version of this monumental work still remains to be done.

Another important work of this author is the Azhar al-riyad fi akhbr 'Iyad, a long monograph on the Kadi 'Iyad (476-544/1083-1149 [q.v.]), which is enriched by numerous pieces of information on scholars of Morocco and al-Andalus, and by citations from otherwise lost works. Of this work, the autograph ms. (incomplete) is in the Royal Library in Rabat (no. 784), and there is a good ms. in the General Library of Rabat (no. 229 K); this has been the object of an edition begun in Tunis (1322/1904), and then 3 volumes have been published in Cairo in 1359-61/1939-42; the vols. iv and v at al-Muhammadiyya in 1977-80.

A third work by al-Makkari, the Rawdat al-asl al-7'irat al-anafs fi akhbr man labkhib min al-3'am al- hadratayn Marrakush wa-Fas, contains biographies of scholars and other Moroccan personalities, together, like the preceding two works, various other texts, in
Fig. 1. Aerial view of Ḥarāfīū during the Ḥaḍḍj. (Photograph by courtesy of the Embassy of the Kingdom of Saudi Arabia, The Hague).

Fig. 3. Aerial view of Minā during the *hajj*. (Photograph by courtesy of the Embassy of the Kingdom of Saudi Arabia, The Hague).
Fig. 4. Interior of the Mas'd. (Photograph by courtesy of the Embassy of the Kingdom of Saoudi Arabia, The Hague).
1. Diagrams in the unique manuscript of the *Tahdhib* of al-Dimyāṭī displaying the notions of 'ayn al-Ka'ba, facing the Ka'ba head on, and ḍiḥat al-Ka'ba, facing the general direction of the Ka'ba, that is, anywhere within the field of vision (ca. 90°) of a person facing the Ka'ba head on. Taken from ms. Oxford Bodleian Marsh 592, fols. 23b-24a.

2. An illustration of al-Dimyāṭī’s eight-sector kibla scheme in the unique copy of his shorter treatise on the kibla. The directions of the kibla are defined in each sector in terms of the Pole Star. Taken from ms. Damascus Zāhiriyya 5579, fol. 14a.
3. Two illustrations from an anonymous treatise on the kibla and the Ka'ba of uncertain provenance. On the left is a latitude and longitude grid with various localities marked, as well as the Ka'ba, shown in the upper left corner, inclined to the meridian. (No such diagram is contained in any scientific treatise from the medieval Islamic period.) On the right is an eight-sector kibla scheme not attested in any other known source. The main kibla indicators used in each sector are the risings or settings of prominent stars which should be directly behind the person facing the kibla: this suggests that they were determined by someone standing with his back to the appropriate part of the Ka'ba looking towards those regions. Taken from ms. Cairo Tal' at madīna 811, fols. 59b-60a.
Two 12-sector diagrams occurring at the end of the unique complete copy of a treatise on folk astronomy by the 7th/13th century Yemeni scholar Muhammad b. Abi Bakr al-Farisi. The one on the left corresponds roughly to the scheme described in the text of al-Farisi's treatise. Notice that the scheme is surrounded by a schematic representation of the Sacred Mosque. The one on the right is developed from the eight-sector scheme of Ibn Surāka. Taken from ms. Milan Ambrosiana Griffini 37, unfoliated.
5. On these flyleaves of an Ottoman Turkish copy of a 10th/16th century Syrian zīdīj are preserved four different schemes of sacred geography. Two are represented graphically, and two others by ordered lists of localities (upper left and upper right). In addition, there is (lower right) a diagram for locating the so-called ridāj al-ghayb, intermediaries between God and man, belief in whom was widespread amongst Sūfis in Ottoman times. Taken from ms. Paris B.N. ar. 2520.
6. A defective diagram of a 12-sector scheme (simplified from that of Ibn Surākā) in an elegantly copied manuscript of Ibn al-Wardī’s Cosmography. As in some diagrams of this kind in various copies of al-Kazwīnī’s Āthār al-bilād, there are only 11 sectors: presumably at some stage in the transmission someone noticed that, because of copyists’ errors in some copies of the text, Medina occurred in two sectors. The one omitted here is the one in which Medina had been entered by mistake. Taken from ms. Istanbul Topkapi Ahmet III 3020, fol. 52b.
7. The 40-sector scheme of al-Ṣafākūsī, superimposed on a 32-division windrose. The order of the localities around the Ka'ba differs somewhat in the two extant copies of this chart. Taken from ms. Paris B.N. ar. 2278, fol. 2b.
particular, idjazas received by or conferred by the author (ed. Rabat 1383/1964).
As well as these historical and biographical compilations, al-Makkari is said to have left behind a commentary on the Mukaddima of Ibn Khaldun (Hadjjii Ka'as, 110, 113). He will be mentioned here those which are extant and most distinguished scholars in the science of Kur'an reading (kirda [q.v.] and especially the theory and art of recitation (taqwid [q.v.]) in the Muslim West.
It is largely due to him that the new development in Kur'an reading scholarship which is connected with the Baghdadi Imams (al-Kur'an, Ibn Muqaffah (d. 324/936 [q.v.]) spread so soon via Aleppo and Cairo to Spain. Makkari started his studies in Cairo at the age of thirteen, and accomplished most of his learning there during the years 368-74/978-84, 377-9/987-8 and 382-9/992-3, concentrating on philology, kirda [q.v.] and taqwid [q.v.], and frequenting at an advanced stage such illustrious authorities as the commentator Abû Bakr al-Udflfi (304-88/916-98, GAS, i, 46) and Abu 'l-Tayyib 'Abd al-Mun'im b. Ghazala al-Albâli (d. 389/999). The latter had studied with Ibn Muqaffah's pupil Ibn Khâlawayh (q.v.) during Sayf al-Dawla's reign in Aleppo (see Hâlab, III, 86a) and became famous for his works on kirda (GAS, i, 15). Makkari also studied with Abu 'l-Tayyib's son Tâhir b. Ghazala (d. 399/1008), the same scholar, who was to become the teacher of Makkari's 17 years younger Maghribi colleague, Abû 'Amir al-Dâni (q.v.), who came to Cairo some years later. It is in Tâhir's teaching and his K. al-Tadhkira fi 'l-kirda (GAS, i, 16) that were to become the foundations of two influential kirda-works by each of Makkari (K. al-Tabsira, K. al-Tabshir, K. al-Kalâgh [q.v.]) and al-Dânî (K. al-Tayyib, K. al-Dâmi' [q.v.]). During Makkari's short residence at home in Cairo in 374-77/984-7, he studied with two outstanding Kayrawāni scholars: the legal scholar and traditionist al-Kâbîsî (d. 409/1011 [q.v.]) and the law professor Ibn Abî Zayd (d. 386/996 [q.v.]). In 387/998 he set off for his last journey to the east. Staying three years in Mecca, frequenting Meccan scholars and performing the hadj several times, he wrote in 389/999 his K. Mushkil gharb al-Kur'an, a summary of which is probably extant in a unique ms. (ed. Yusûf 'Abd al-Rahmân al-Muqaffah, Beirut 1981); its authenticity is, however, doubted by Abû Abî Farhâd (see his preface to note Marâghî's edition). On his way back to al-Kuraywân via Cairo, two other works were completed: (1) K. Mushkil ibn-Kur'an, written in 390/1001 in Jerusalem (16 ms. extant, Brockelmann, i, 515, S, i, 719, and cf. introd. to the critical edition by Yaşîn M. al-Sawwâs, Damascus n.d., 2 vols.; further edition by Hâtîm S. al-Dâmîn, Baghdây ca. 1970); and (2) K. al-Tâhirah, originally meant as a mere introduction to be memorised by beginners, which was later elaborated by Makkari and published in 424/1038 as K. al-Kalâgh an udâjîh al-kirda-ibâd (4 ms., ed. Muhyî al-Dîn Râmânî, Damascus, 2 vols.; Hâtîm S. al-Dâmîn, Baghdây ca. 1970). This longer version not only gives the fuller insâds for the readings but also grammatical justifications (isâfîn) for them, following closely the method first adopted by Abû Abî Fârîsî (d. 377/987 [q.v.]), whose K. al-Hudjâbâ, which was well known to Makkari, constitutes a complete Kur'an commentary discussing the readings presented by Ibn Muqaffah in his K. al-Sâbâ'a, see GDQ, iii, 116-43.
Makkari did not remain long in his home town, but — for reasons unknown to us — left al-Kuraywân for al-Andalus in 393/1003 and established himself as a teacher of Kur'an reading (musnûn) at Cordova at the Masjid al-Nukhayla in the 'Aštâr quarter. He soon won a wide reputation for his learning, and was appointed between 397/1007 and 399/1009 by al-Muzaffar 'Abd al-Malîk b. Abî 'Amir (see 3Amîrîs)
as mukra to the Mosque of the Zahira quarter, newly established by the Amirids. After the fall of Muhammad b. Higham al-Mahdi (399/1009) to teach at the Friday Mosque of Cordova. There he continued to teach until the end of the civil war, when the vizier Abu 'l-Hazm b. Djahwar [see DJAHWARIS] appointed him imam and preacher to the same mosque (after 425/1031), which office he held until his death on 2 Muharram 437/21 July 1045.

At Cordova, most of his works (numbering over 80, on various topics such as philosophy, history, and mostly on kir'a) were written. Two of the extant taqweed records have played a major role in the development of the kir'a's disciplines, al-Ri'ta ya li-taqweed al-kir'a wa-lafs al-tilawa (preserved in 9 mss., ed. Ahmed Farhät, Damascus 1973) is considered as one of the earliest systematic treatises on taqweed. His Sharh kali' al-wala' wa-mu'jam wu la-yad fi-l-qad'a (4 mss., ed. Ahmed Farhät, Damascus 1978) treats the rhetorical qualities of the three particles monographically and is a useful source for the study of kur'an rhetoric. A work unique of its kind is his K. al-lba'na fi ma'u'ni l-kir'a (4 mss., ed. Muhuyi al-Din Ramdan, Damascus 1979), previous edition by Abu-Farhät Shahabi, Cairo 1960) discussing problems arising from the existence of several mutually incompatible readings. Whereas his comprehensive Kur'an commentary al-Hidaya seems to be lost, his monograph on the special taqsiir problem of the abrogated verses is extant: al-IIdah li-nasik al-Kur'an wa-mu'jam (4 mss., ed. Ahmed Farhät, Riyadh 1976). Makkī's work has in later generations been overshadowed by that of his younger colleague al-Danni and the later scholastic commentators resting upon al-Danni's writings. Yet some of Makkī's treatises have exercised even a direct influence on later scholars, see Pretzl, in GIL, iii, 214. Some of his work has come to light again only in recent years, and has still to be studied as to its intrinsic value and its impact on later developments.

Biographical sources: Ibn Bashkuwal, K. al-Sīla fi ta'īrīgh 'ummat al-Analus, Cairo 1966, ii, 631-3; Abu Barakat al-Anhārī, Nuzhāt al-abākh fi tabākāt al-adhāl, ed. I. al-Samarra'ī, Baghdad 1970, 238; al-Dabbī, Bughyat al-mulamis fi ta'īrīgh ridgāl ahl al-Analus, Cairo 1967, 469; Yākūt al-Rūmī, Muṣām a al-adhāl, ed. Margoliouth, London 1925, ii, 173-5; al-Kīfī, Isbāh al-nuṣūrā', al-Ahmād ibn al- nutritious, though some real mortar joints in white plaster can also be found) to create a vertical emphasis, a horizontal one, or both. Other monuments, however, are in carved ashlar of yellow, grey or red sandstone slabs on a rubble core, which in many cases has cumbled with disastrous effect; some of this stone is local, from Qandhārī, and the rest imported from Qaybūtāna and Gufjarāt. The brick buildings are set on stone bases to withstand the rise of moisture charged with destructive salt. The glazed are generally white, cobalt, and turquoise; though the tiles designs may be stereotypical, the technical standard of the dense red brickwork is very high, and the true joints can hardly be seen. Glazed brick in chevron patterns is also used to face some domes internally, as may be seen in one of the earlier buildings on the hill, the tomb of Farhāt Khan's sister (898/1492).

The mausoleum of Djam Nizam al-Din Nīndū (915/1509) at the northernmost end of the site illustrates the recently Hindu origin of the Qajīpūr Sammās; square in plan, its four stone walls are decorated entirely with Hindu carving, except for a frieze of Kur'ānic inscriptions in beautiful qalīlī. The architectural and sculptural elements are articulated by twelve other horizontal bands of motifs, one gāhiya, alternating with plain stone. This is set off by the heavily-worked carving on the rear of the mihrāb, surrounded by a corbelled balcony with arched openings. The incomplete nature of this work shows that it has been borrowed from a Hindu temple, complete with a miniature sikhāra, though some panels are Islamic. The interior is dominated by the use of squinch arches, in tiers of first eight, then sixteen, to carry the missing dome. Both their scale and the corbelled technique are reminiscent of Ilutmish's tomb at Dihīlī (ca. 632/1235), though the ornamentation is again limited to flat bands, friezes and rossettes like tilework. Two āthār pavilions nearby, each on eight columns, also incorporate Hindu work, with corbelled domes, monolithic banded pillars, and kalsā finsals (late 15th century).

The tomb of Sultan Ibrāhīm (966/1558), son of 1īsā Khān Tarkhān I, is an octagonal brick structure surrounding a square cell inside with a carefully-proportioned Persian dome on a cylindrical drum above. Each of the faces houses a recess within a pointed arch outside, those at the cardinal sides being taller, and containing a door with a window above in the flat itākh wall, while those at the angles form five-faceted niches. It may have been derived from the tomb of Mullā Ḥasan at Sulṭāniyyā (q.v.) (ca. 936/1530), though it lacks double storeys at the
angles, and its proportions are more compact. Traces of turquoise tiling can be seen on the dome, though its septal reinforcements remain. Outside, recessed panels house blank arches with rosettes in relief, and arched mihrab screens alternately, under bold string courses which rise around the ajalis of the entrance. It is Iranian in its restraint. The mausoleum of the apparently paranoid Mirzâ Muhammad Bâki Târkhân (d. 993/1585), which follows the same pattern, still has merlons over the courses which rise around the ajalis
of the doorway to the south. The walls, outside and in, are of unglazed red brick with blue strips in the joints. Glazed bricks make a chevron pattern inside the dome, with bands of tiles below. The mausoleum of the Bâki Beg, the last independent Târkhan ruler, died while in submission to Akbar’s court, he too was buried at Makli, in the southernmost great tomb, in 1009/1601. Set in a once similar stone enclosure, with fine Kûrânic epigraphs around the gate, which has four rosettes set boldly in the tympanum, and over the mihrab elaborated with a faceted recess, flanked by miniature lotus posts and superimposed aedicules, the mausoleum itself is a domed octagon, whose alternating courses of venetian red and turquoise brick, with both joints picked out in white, reflect the alternately broad and narrow coursing of the yellow sandstone. The plan differs from Sultan Ibrâhîm’s tomb only in that the panels housing the angle arches are recessed. The outer dome has fallen, though its sepulchral reinforcements remain. The inner one is still carried on two tiers of tilework, and on the walls below is a tiled dado, which once had a counterpart outside. The three ajânâs and the tympanum of the doorway to the south house geometric ajâlis, surmounted by panels of Kûrânic inscription in white on cobalt.

The building housing the tomb of Djan Bâbâ (d. 1017/1608), with others from 964/1557 onwards, is by contrast a rectangular pavilion originally covered by three domes, of which the central one remains. The brown stone enclosure wall is heavily carved with both relief and incised work, with blank arcing carried fully developed polychromes and rosettes. The rich mihrab, with mukarnas vaulting, is housed in a carefully-conceived two storied backing.

The mausoleum of 1sâ Khân Târkhân II (d. 1054/1644) combines a square domed central cell with surrounding verandahs in two stories, two rows of ten square columns being on each face. The middle two columns in the outer row rise free of the gallery behind, like those of the Djanî Masjid at Ahmadâbâd, to support triple arches with lotus-buds on the intrados, below a remarkable rising parapet which is effectively a pîdishak for each face. The main dome, surmounted by a mahâpada finial, is surmounted by a series of crescent-shaped crenelations in each bay; it has, unusually, eight facets. The buff Kâthisâvâ sandstone surfaces of walls, pillars and lintels are wrough with carving of both types which in its swelling intricacy recalls that of Fathpur Sikri (1585-87) [q.v.]. The monolithic pillars of the upper level have scrolled bracket capitals of an Indian type, but those below have tapering honeycombs of a western Islamic kind. The building is at the centre of a large court with high stone walls, arcaded within, and with a massive iwân in the middle of each side once crowned by a smooth squinched vault. Hindu influence is evident in the ajânâh balconies projecting either side of these, and in the rows of niches forming the plinth. The work is reported to have been built in the Nawârî lifetime of Mirza Muhammad Bâki Târkhân (1048/1638), again a square cell rising into a dome, with an iwân on each cardinal face outside, but here the corners are built as heavy cylindrical towers containing spiral stairs, and the dome, slightly bulbous above a recessed springing, is apparently the first of its kind in Northern India: it is close to that of the Musjid-i Shâh at Maskhad (855/1451) in shape, and was once sheathed in light blue tile. The walls, outside and in, are of unglazed red brick with blue strips in the joints. Glazed bricks make a chevron pattern inside the dome, with bands of tiles below. The cenotaph and headstone carry especially fine carving. Another bulbous dome, with more pronounced shoulders, roofs the open tomb of Tughrul Beg (1090/1679), surrounded by mukarnas, and above twelve carved square pillars. Honeycomb capitals support a trabeated octagon below the arches of an Islamic zone of transition, and chevron vaulting.

**Bibliography:** The available material is uneven. For tilework, see H. Cousens, *Portfolio of illustrations of Sind tiles*, London 1906. His description of Makli in his *Antiquities of Sind, Calcutta 1929*, repr. Oxford and Karachi 1975, contains first-hand analyses of inscriptions and chronograms. See also *Makli*, xi (P. A. Andrews)
Yam territory he took Badr, situated at an altitude of 6,600 feet in waddi Badr, which later became the MakramTs' fortress near the town and left a garrison there. The MakramTs now became more active in Yaman.

The earliest known member of the family, ʿ safi al-Dīn Muḥammad b. al-Fahd al-Makrami, is said to have been the first of them to settle in the town of Badr in the Wadī Hibatnā in northern Nadjran, which later remained the usual residence of the Makramīs. When Sulaymān b. Hasan, founder of the Sulaymānī community, died in 1109-1160 (1697-1747)asserted his authority over the Ismāʿili community in Yaman. The Makramīs thereafter continued to interfere, by force and diplomacy, in the affairs of the Al Khayrāt dynasty until its fall ca. 1285/1868. They were aided by the fact that the Al Khayrāt were usually forced to employ Yaman mercenaries as the backbone of their army.

The power of the Makramīs reached a peak under Hibat Allah b. Ismaʿil and his son successor Diyar b. Ismaʿil who fashioned the strategy of conquering a mountain fortress in Saʿīf (before 1164/1751) and holding it against all attacks of the Zaydī imām and of the adventurer Abū ʿUlamā al-Madhāri. He forced the amīr Muḥammad al-Khayrāt into an alliance. According to modern Hadramī authors, he invaded Hadramawt, for the first time in 1170/1757, and proceeded to uproot the Zaydīs there and to abolish tribal law and customs. The Makramīs over Hadramawt appears to have lasted for some time, perhaps still during the reign of his brother Hasan (see R. B. Serjeant, Hūd and other pre-Islamic prophets of Hadramawt, in Le Mouton, ivi [1954], 132, repr. in idem, Studies in Arabian history and civilization. London 1981, with addendum, p. i). In 1178/1764 he invaded Nadjīf and inflicted a crushing defeat on the Wahhabīs at al-Haʾir. He pushed on further, approaching al-Riyād, but then agreed to a settlement and withdrew, spurning the offer of an alliance and joint anti-Wahhabi action by ʿUrayrī, the ruler of Al-Ahsāʿ. The Wahhabi chronicles seem to be mistaken in identifying the leader of the campaign as Hasan b. Hibat Allah. They, as well as Niebuhr, describe the leader as the lord of Nadjīf. Yet it is certain that Hasan did not succeed his brother until before the latter's death six years later. Ismaʿil is also the author of an esoteric Ismāʿili commentary on the Kurʾān, Misād al-taṣnim (ed. R. Strothmann, Göttingen 1944-55), of answers to questions by Hasan b. Sāmān and of other works (listed by Strothmann, op. cit., introd. 39). His brother and successor Hasan b. Hibat Allah (1184-9/1770-5) after his accession reaffirmed the Makramīs' domination in the territories of Muhammad al-Khayrāt, who had tried to assert his independence, by defeating him and occupying the town of Harad for two months. In 1189/1775 he led a second campaign against the Wahhabīs to al-Ḥāʾir and Dūrmā. The Wahhabi defence proved more effective this time, and Hasan, struck by illness, decided to retreat and died on the way back. In 1202/1788 "the lord of Nadjīf", presumably the 36th dāʾīʿ Abū ʿAli b. Ismaʿil b. Shakīb ʿAlī (1195-1225/1781-1810), joined forces with some of the tribes of the al-Dawārīt in order to prevent the Wahhabīs from taking possession of this region neighbouring Nadjīf, but was forced to retreat unsuccessfully. In 1220/1805 Saʿūd b. ʿAbd al-ʿAzīz sent a numerous Wahhabi army to conquer Nadjīf. After an unsuccessful assault on Badr, the Wahhabīs retreated having lost a fort near the town and left a garrison there.

The Makramīs now became more active in Yaman.
In 1237/1822 they seized Zabid for six months, and in 1241/1825-6 they sacked al-Hudayda. In 1241/1825-6 they sacked al-Hudayda. In 1277/1860 he seized al-Hayma and held it against all Zaydi efforts to expel him. Other conquests were of less duration. According to Manzioni (El Yemen, Rome 1884, 177-8), he entered into an anti-Ottoman alliance with the Sultan Ismā'il of Egypt, cut the Ottoman trade between the Hudsonaya and San'a', and raided the Ottoman provinces of al-Hudayda and al-Lubayya. In 1289/1872 the Ottoman Ahmad Mukhtar Pasha set out from the Hudayda to conquer Haraz. The dā'ī surrendered in the mountain fortress of 'Attāra after having received a promise of safety. When the Pasha was informed of the heretical doctrines contained in the captured Ismā'ili books, he ordered the dā'ī, his sons and other leading Makramis to be sent to the Porte. The dā'ī died on the way in al-Hudayda, perhaps murdered, and his son Ahmad perished at sea. Thereafter, the Makrami dā'īs again resided in Badr. They reached a modus vivendi with the Ottomans in Yaman and declared an invitation of the Sayyid Muhammad b. 'Ali al-Idrisi, ruler of 'Asir, to join an anti-Ottoman alliance, fearing Ottoman reprisals against their possessions in Haraz.

In 1532/1933, after the failure of prolonged Sa'ūdī-Yamanī negotiations concerning the status of Najdrān, the army of Imām Yāḥya Hamid al-Dīn seized Badr. The 45th dā'ī, 'Ali b. Muhsin Al Shībānī (1331-5/1913-36), probably a descendant of Hasan b. Isma'īl, fled to Abba in Sa'ūdī territory. The Yamanī army destroyed the houses of the Makramī dā'īs and desecrated the tombs of their ancestors. Strong local reaction forced it to withdraw and paved the way for the Sa'ūdī takeover of Najdrān, which was sealed by the Sa'ūdī-Yamanī treaty of May 1934. 'Ali b. Muhsin was allowed to return to Badr, and all members of the family in Najdrān, said to have numbered 145, were given a small pension by the Sa'ūdī government in lieu of the contributions which they had rendered in the mountain fortress of Haraz. The army of Sayyid Muhammad b. Nāṣir Al-→Bahārī entered Najdrān and镯. Sealed by the Sa'ūdī government in lieu of the contributions which they had rendered in the mountain fortress of Haraz.

MAKRAN, the coastal region of southern Balūcistān, extending roughly from the Somnani Bay in the East to the eastern fringes of the region of Baghārdā (see BAGMARD in Suppl.) in the west. The modern borders of the Makran thus bisect the mediaeval Makran. The east-west running Siyāhān range of mountains, just to the north of the Makrānī and Rakhshān valleys, may be regarded as Makrān's northern boundary. In British Indian times, this range formed the boundary between the southwestern part of the Kalat native state [see KILAR] and the Makrānī one [q. v.]; the easternmost part of Makran extends within the other, native state of Las Bāla [q. v.]. At this time, the part of Makrān within British India was often called Kēc Makrān to distinguish it from Persī Makrān.

The topography of Makrān comprises essentially east-west running parallel ranges of mountains; the coastal range, going up to 3,180 ft.; the central Makrān range, going up to 7,500 ft.; and the Siyāhān range, going up to 6,700 ft. Between these lie the narrow Kēc valley and the wider Rakhshān-Makrānī one, where some agricultural activity, chiefly dates, cereals and rice, can be practised by irrigation. Considerable fishing is possible from the coastalland itself, otherwise arid, but this region possesses few major harbours, except for Pasni and Gwādar [q. v. in Suppl.] in what is now Pakistani Balūcistān, and Ga'bahār (now an important base of the British and Indian Navy, with free access to the Indian Ocean) and Dāshī in what is now Persian Makrān. The only inland town of significance in Pakistani Makrān is Turbat, in the Kēc valley; the main towns of inland Persian Makrān are Nīshābār, Bampūr [q. v.] and the modern administrative centre of Persian Balūcistān, Irāngār (the mediaeval Fahrajī). Climatically, the coasts are in part affected by the southwestern monsoon, but the inland parts are extremely hot and arid. Makrān as a whole can never have supported more than an exiguous population.

The etymology of the name Makrān has been much discussed, but the popular Persian etymology from makh→kharin “fish eaters”, echoing the Greek description of the inhabitants of the coastlands as ἰδροφόφαγοι, cannot of course be credited. More likely it is a corruption of the name Magan, which is known in texts of the Sumerian and old Akkadian period as a territory somewhere in or beyond the lower Persian Gulf region having trade connections with Mesopotamia. Recently, J. Hansman has proposed the identification of the ancient Magan with modern western, substantially Persian, Makrān, and the other region of Melukhkha, described as being beyond Magan according to the ancient Mesopotamian texts, with modern Pakistani Makrān (A Peripat of Magan and Melukha, in BSOS, xxxvii [1973], 554-87). Magan would therefore be the Maka of the Old Persian inscriptions (described as a satrapy of Darius, and here apparently covering the whole of Makrān or Balūcistān), and the Makarēnē, seemingly so-called in the Seleucid period and certainly called thus in Byzantine Greek sources; but a derivation from Magan does not explain the intrusive r of Makrān. By the time of Alexander the Great, eastern Makrān was known to the Greeks as Gedrosia and its people as Gedrosii (a name possibly Iranian in origin, hence younger than the ancient one Melukhkha); the conqueror travelled through here on his way back from the Indus valley in 325 B.C., turning northwesterns and inland, probably from near Gwādar, to the Bampūr valley and thus by the Siyāhān depression, whilst his general Nearchus sailed along the Makrān coast to Charax at the head of the Gulf. In Parthian usage we have the
MAKRAN — AL-MAKRIZI

form Makuran (Mkwrn in the Shapur inscription of the Kacba-yi Zaradusht) and in Pahlavi the form Makulun (Muwlun) in the Kārār inscription of Naksh-i Rustam (P. Gignoux, Glossaire des inscriptions persanes et parasites, Corpus inscriptionum Iranicarum, Suppl. Series, i, London 1972, 28, 57), echoed in early Islamic times in the Makurān/Mukurān of Arabic poetry (e.g. al-Hakam b. 'Amr al-Taghlibi, in al-Tabarānī, i, 2708, and Ašḥā Hamdān, Divān, ed. Geyer, 328). In general, however, eastern Makrān must have remained until the Muslim invasions within the cultural and political sphere of India, and later, under the influence of the Brahmin kingdom of Sind.

Arab raiders reputedly entered Makrān from Kirmān during 'Umar's caliphate, but were deterred by the appalling desolation and inhospitableness of the terrain (sentiments subsequently further expressed by Aśgā Hamdān in his verses, see loc. cit.). In Mu'āwiya's caliphate, Ziyād b. Abīthī, governor of the east, sent thither Siyān b. Salāma b. al-Mubābīk al-Huqail, who succeeded in a garrience there, according to another tradition, Makrān was invaded by Ḥakīm b. Dābāla al-'Abī (al-Baladūrī, Fistsh, 433-4; Yākūt, Bulūdīn, ed. Beirut, v, 179-80). From here, raids were directed northwards into Kīkān in the region known to the Arabs at the time as Tūrān (q. v. in ḤF), which came to contain the mediaeval Islamic town of Kusdār (q. v.), and Makrān also formed the springboard for Muhammad b. Kasim al-Thakafī's invasion of Sind (q. v.) in 92/711.

The mediaeval Islamic geographers describe Makrān as a region of scant population and few amenities, its main product being sugar-cane syrup (fasīd, see ḤF art. Sukkar). The Hubūd al-ʿālam (ca. 372/982), tr. 123, § 27, comm. 373, reckons Makrān as part of Sind. It names Tīz, in the Ċabhābar bay, as Makrān's chief port, together with inland towns which were centres of trading like Kīz or Kīdī (modern Kī), the seat of the king of Makrān, and Rāsk, Panībdhūr, etc.; Tīz is described by al-Mukaddasī, 478, as a flourishing port with fine ribās, and Panībdhūr as the kāsha or chief-lieu of the region. The local ruler of Makrān whose seat was at Kīz must have been from the family mentioned in connection with the history of a thoroughgoing invasion of the region by Miskwāyih, in Tadžīrī al-amām, ii, 299-9, tr. v, 320-1, 'Abdū al-Dawlah's general 'Abī b. ʿĀli had penetrated to Tīz and western Makrān in 360/970 as part of the operations to subdue the disturbed province of Kirmān, and had brought all these regions under Ḫūyīd allegiance (cf. Bosworth, The Banu Ḫiyās of Kirmān (320/779/932-60), in Iran and Islam, in memory of the late Vladimir Minorsky, ed. idem, Edinburgh 1971, 117-18). With the subsequent rise of the Ḫuznawīds (q. v.), the local ruler of Makrān, named by Bayhākī as Maḍān, submitted to Sebūtīn and Muḥāmmed. After 417/1026, his son ʿĀlī likewise acknowledged the Ḫuznawīzī suzerainty, but Sultan Muḥāmmed's son Maṣʿūd during 421-2/1030-1 sent an army into Makrān which placed ʿAbī's brother Abu ʿAlī-Askar on the throne there; clearly, Makrān was at this time a loosely-tributary state of the Ḫuznawīzī empire on the same sort of footing as the Ẓiyārids of Gurgān and Ẓabārūstān or the Ṣaffārīds of Sīstān before the imposition of the Ḫuznawīzī direct rule in 393/1003 (M. Naṣīmī, The life and times of Sultan Muḥāmmed of Ghazna, Cambridge 1931, 79-80; R. Gelpke, Sultan Maṣʿūd I. von Gōzna. Die drei ersten Jahre seiner Herrschaft (941/1050-4/1052), Munich 1957, 314). During the next centuries Makrān appears little on the general scene of eastern Islamic history. At times, outside empires, like those of the Ǧhorīds and Khwāẓar-Šāhs (q.v.) and the āmīrs of the Il-Khānids after the death of Abū Sa'id (Ibn Bāṭūṭa, ii, 124; ʿAmīr Maḥdī Dīnār), exercised some measure of suzerainty there, but local potentates must have held all internal power. Marco Polo found Makrān coast on his way home in 1299, describing it as Kəsmacoran (= Kīdī Makrān) and as the last of the provinces of India, under a separate ruler of its own (Sir Henry Yule, The book of Ser Marco Polo the Venetian, London 1871, ii, 334-5; cf. P. Pelliot, Notes on Marco Polo, ii, 759-60). It was during these centuries that Makrān was largely colonised by Balūṭ tribes, Makrān being predominantly Balūṭ-speaking today. The region's history may now be followed in the EP art. Balūcīstān and the EP arts. Kīlāt and Lās Bēlā.

MAKRĪN b. MUHAMMAD b. ḤUZZITHūRI [see AL-BUṢŪTIRĪ, b. MUḤAMMAD AL-BUGHTURI]

AL-MUḤAMMAD b. ṢĀḤIB AL-KIRMANI [see AL-MAKRĪZĪ].—TAKI AL-DīN ABU ʿL-FĀʾĪBM AHMAD b. ʿALĪ b. ʿABD AL-KĀDIR [766-845/1364-1442], Egyptian historian. His father (d. 779/1378 at the age of fifty), a daughter of the wealthy philologist and jurist Ibn al-Saʿīgh (d. 776/1375). He was born in Cairo, apparently in 765/1363-4. The nisba Makrizī refers to a quarter in Bālabakk where his paternal family came from. His paternal grandfather, ʿAbī al-Kādir b. Muhammad (ca. 677-733/1278-1332, see Ibn Ḥadjar, Durar, i, 391 f.) was a Hawai, his maternal grandfather, who influenced his early upbringing, a Hanafī. His father was a Shāffi, and he himself opted for Šāfī'īsm in early manhood; he also developed (non-juridical) Zāhirī tendencies (cf. I. Goldzieder, Die Zāhiriten, Leipzig 1884, 196-202). He received the thorough education of a youth born into a well-to-do scholarly family, studying with famous scholars and eventually being able to boast of '600 šaykhās.' Like his father, but with greater success initially, he exercised a variety of administrative and scholarly functions, such as those of writer of taudūtī's, deputy judge, muhāṣib (for terms lasting only a few months each in 801, 802, and 807), preacher in the Mosque of ʿAmr and the Madrasa of al-Ḥasan, imām and chief administrative of the Mosque of al-Ḥākim, and professor of hadīth in the Muʿayyadiyā. In Damascus, where he spent about ten years beginning in 810/1408, he held teaching positions at the Ġagrafiyyā and Ikbāliyyā, and was chief financial administrator of the Kalānīsyya and the great Nūrī Hospital, although this last position was reserved by law for the Shāffi judge of Damascus. He had actually been offered that judgeship by al-Nāṣir b. Barkūk, but had refused. While in Syria, he appears to have decided to give up an unsatisfactory public career and devote himself full-time to historical scholarship (instead of part-time as he had done before). He did so after his return to Egypt. He spent a number of years in Mecca and died in Cairo in early February 1442. The last of his children had died already in 826/1423 (Salek, iv, 2, 651). A new, Nāṣir al-Dīn Muḥammad b. Muhammad (801-67/1399-1462), survived him (al-Sakhāwī, Dauq, ix, 150).

The germs of his determination to become an

Encyclopaedia of Islam, VI 13
historian were perhaps planted by Ibn Khaldun, with whom he appears to have been on familiar terms; according to Dauë, ii, 24, he once predicted on the basis of Ibn Khaldun's horoscope that the latter would again be appointed to office. With his fellow historians, such as al-'Ayni [q.e.] and Ibn Hadjar, he seems to have had professional, and perhaps also personal, difficulties, although relations remained outwardly proper. Ibn Hadjar's devoted student al-Sakhawi displays an outspokenly negative attitude toward him. His contemporaries were sometimes critical of his scholarship, cf., e.g., Ibn Taghribirdi, Niju'm, ed. Popper, vi, 756, tr., part iv, 143, anno 841. Yet his works were not only numerous and often planned on the grand scale, but they also proved to be of lasting importance.

For older editions, translations, and studies, most of them still useful for scholarship, see Brockelmann (below, Bibliography), whose bibliographical references are not repeated here. Best known is al-Maṣʿūs ṣa'īd 'an l-ṭabāk wa l-aḏrāk, son of one-half of the ed. Bulāk 1270, repr. Beirut, ca. 1970; English translation by K. Stowasser in progress. It deals with the topography of Fustat and Cairo as well as with Alexandria and Egyptian history in general. According to the critical Ibn Hadjar (al-Sakhawi), al-Makrizi used much of the material assembled earlier by al-Awhadi (761-811/1359-1408). He made no mention of that in the Ḥikāt (in the way in which, for instance, Ibn Kuṭlūbghā acknowledged that he had used al-Makrizi's notes for his Tādī al-tarāṣīm, but elsewhere he spoke of his indebtedness to al-Awhadi (see Dauë), i, 358 f.). The accusation of plagiarism seems too harsh. The preservation of older sources now apparently lost is one of the Khiṭaṭ's greatest merits.

Among his many other works are a history of the Fāṭimidīm (Jāmāl al-ḥunāfī, ed. Djamāl al-Dīn al-Shayyāl, Cairo 1367/1948, 1387/1967; ed. A. Hilmy, Cairo, 1971-3, see C. Cahen and M. Adda, in Arabic, xxii [1975], 302-20) and a history of the Ayyūbīds and Māmulīūkīs (Dār al-sūn, ed. and tr. by G. C. Anawati, see MIDEO, xiii [1974], 150). He also published brief treatises on minerals (al-Maṣābīd wa l-sānīyā) and bees (Bahr, or Dīhr al-naḥl, ed. al-Shayyāl, Cairo 1946). A general work on geography, entitled Dāmī al-azhār min al-ṣawq al-miṭrī, has not yet been sufficiently studied, see Ibn 'Abīd al-Munīm al-Hīmāyari, at the end.

Bibliography: Ibn Hadjar, Ḥikāt, ii, 14, 19, 56, 62, 67; Dauë, iii, 11-36, tr., part v, 182. Still later biographical notes, such as the one in Ibn Ṭūās, ed. M. Mostafa, ii, 231 f. (Bibl. Isl. 36), contain no new information. Further, Brockelmann, ii, 75-76, 673, S.II, 36-8, also EP, ed. C. Cahen; Dārūs wa l-Makrīzī, Cairo 1391/1971 (lectures given in 1966 by six scholars). (F. Rosenthal)

MAKRUH (A.) "reprehensible action, action approved of", one of the five juridical qualifications (ākhām [q.e.] of human actions according to the Sharī'a [q.e.].

MAKS, toll, customs duty is a loanword in Arabic and goes back to the Aramaic maks, cf. Hebrew mekei and Assyr. mrisu; from it is formed a verb māk-s i, II, III and maksā, collector of customs. According to the Arabic tradition preserved in Ibn Sāda, even in the Dāhiliyya there were market-dues called maks, so that the word must have entered Arabic very early. It is found in Arabic papryi towards the end of the 1st century A.H.

C. H. Becker dealt with the history of the maks, especially in Egypt, and we follow him here. The old law books use maks in the sense of 'shrī', the tenth levied by the merchants, more properly the equivalent of an excise duty than of a custom. They still show some opposition to the maks, then it give due legal force, but the word continued to have unpleasant association, cf. the hadīq: inna sāḥib al-maks fi l-nār "the tax-collector will go to hell". Goldziher has suggested that the Jewish view of the publican may have had some influence here. There are six traditions about maks in the Kithāb al-Amaqal by Abū 'Ubayd al-Kāsim b. Sallām (Cairo 1533, nos. 1624-9, Brockelmann, S.I, 166), and al-Suyūṭī wrote a Risāla fi dhāmm al-maks (Brockelmann, II, 152, no. 174).

The institution of the customs duty was adopted by Islam about the beginning of the Umayyad period or shortly before it. While theological theory demanded a single customs area in Islam, the old frontiers remained in existence by land and water, and Egypt, Syria and Mesopotamia were separate customs areas. The amount of the duty in the canon law was settled not so much by the value of the goods as by the person, i.e. the religion of the individual paying it; but in practice, attention was paid to the article and there were preferential duties, and no attention was paid to the position of the goods in respect of Islam. The laws of taxation were very complicated and graduated; the

work on certain aspects of the biography of the Prophet (Imāma al-aswād, ed. Maḥmūd Shākir, Cairo 1941), a biography of Tamīm al-Dārī (Dauë al-ṣabīr, ed. M. A. 'Aṣghūr, Cairo 1372/1952), a treatise on caliph and rulers who performed the pilgrimage (al-Dhahab al-masbūk, ed. al-Shayyāl, Cairo 1935), a discussion of the preferred position of the Prophet's family (Maṣ'īf rādātī bi-l-ḥāshār fi l-khākī al-sāma' lān adhām, ed. M. A. 'Aṣghūr, Cairo 1973), attest to his religious interests, as does a work on dogmatics not yet studied (Tādī al-tārīḫī, fi l-tālīf 'an fī l-targīb wa l-tālīf, ed. M. A. 'Abīd al-Munīm, Beirut, 1935), a discussion of his later studies, see e.g. D. P. Little, xix [1974], 252-68), also on the Ayyūbīds (Dawār al-sūn, Cairo 1971, see idem in JESHO, ix [1962], 1-90). A

The institution of the customs duty was adopted by Islam about the beginning of the Umayyad period or shortly before it. While theological theory demanded a single customs area in Islam, the old frontiers remained in existence by land and water, and Egypt, Syria and Mesopotamia were separate customs areas. The amount of the duty in the canon law was settled not so much by the value of the goods as by the person, i.e. the religion of the individual paying it; but in practice, attention was paid to the article and there were preferential duties, and no attention was paid to the position of the goods in respect of Islam. The laws of taxation were very complicated and graduated; the
duties rose in course of time from the tenth ('ushr) to the fifth (khums).

The Egyptian mahs was levied on caravans and small dues, which became known as mukās, especially the mukās mukusiyya. The latter introduced not only an increase in the ground-tax but also a large number of smaller taxes which were called ma‘ātun and marṣīfī and included among the kihālī, the taxes to be paid according to lunar years. Such artifices (known as mukās from the Fatimid period and latter as mazām, hāmāt, radd, musama'ah, and mardūk) were destined to develop in time into the main form of oppressive the people and to become one of the principal causes of the economic decline in Egypt, until under the Mamluks a limit was reached where hardly anything was left untaxed and mukās were even granted as fiefs and "misfortune became general" (see 'ammat al-balwa). The small taxes, however, (but not the monopolies) were repeatedly abolished by reforming rulers, indeed 'ibāl al-mukās (other terms are radd, musama'ah, radd, ma’dwin) even formed part of the style and title of such rulers. Thus it is recorded of Ahmad b. Tulun that he abolished some duties, and later of Salāh al-Dīn, Baybars, Kallawīn and his sons Khalīl and Nāṣr Muhammad, of al-Ashraf Shāh-Bān, Barqūk and Djamak. Al-Makrīzī gives a long list of mukās abolished by Salāh al-Dīn, and al-Kalākhandī gives copies of the texts of musama'ah, which are decrees of the Mamluks sultans abolishing taxes or granting exemption from dues which were sent to the governors and read from the māndars and sometimes contain very full details, while shorter decrees were probably carved on stone and are given among the fragments published by van Berchem. It would of course be wrong to deduce from such abolutions of taxes that the government was a particularly good one, while on the other hand, the continually-recurring extort of the same taxes shows that the abuses had been restored in the interval. Al-Makrīzī, Khīti, i, 111, concludes with the well-known jibe at the Copts: "even now there are mukās, which are in the control of the vizier, but bring nothing to the state but only to the Copts, who do exactly as they like with them to their great advantage".

A group which particularly suffered from the mukās were the pilgrims to Mecca from the Maghrib. The Spanish traveller Ibn Qubayr [q.v.], who as a pilgrim passed by Egypt in 1183, saw at Alexandria, 'Ayyūbī and Dūqda many proofs of mukās and waṣa‘īf mukusiyya. He wrote a poem about them and sent it to Salāḥ al-Dīn, whom he admired. But he noted tāmkīs and darība mukusiyya even in Syria and Sicily. About that time, al-Makhzūmī wrote his Minḥāj, with lists of mukās and other duties (khums, wāqī, kaf, matīq). Among the great variety of dues, which were of course not all levied at the same place and at the same time, were the following: kihālī taxes on houses, baths, ovens, wells and gardens; harbour dues in al-Dīrāz and Cairo at "the corn-quay" (sābī al-ghalla) and at the arsenal (sinā‘a), also levied separately on each passenger; market-dues for goods and caravans (bāqī‘īs) also called for horses, camels, mules, cattle, sheep, poultry and slaves; meat, fish, salt, sugar, pepper, oil, vinegar, turnips, wool, silk, linen and cotton; wood, earthware, coal, halfa grass, straw and henna; wine and oil-presses, tanned goods; brokerage (samara) charges on the sale of wool, dates and linen. There were taxes on markets, drinking-houses and brothels, which were euphemistically called ru‘ām al-ulāyā. Warders deprive prisoners of everything they have; indeed, this right is sold to the highest bidder; officers consume the fiels of their soldiers; peasants pay their lords forced labour (wa'ammat al-balwa). The author of the poem al-Makhzūmī, who preceded the most famous versifier in this field, Ibn Durayd (died 321/933), also cites many officials (shādī, muhtasib, mubdshirun etc.) and included among the shaddīs, muhtasīb, mubdshirun and many officials (shādī, muhtasib, muṣāḥirun and wa‘alād) also accept them; when a campaign is begun, the merchants pay a special war-tax and a third of inheritances falls to the state; when news of victories is received and when the Nile rises, levies are made; the dhimmīs, in addition to the pay-tax, have to contribute to the maintenance of the army; pilgrims to the Holy Sepulchre pay a tax in Jerusalem; separate special taxes are levied to maintain the embankments, the Nilometer etc.

Outside of Egypt we occasionally hear of the mukās as toll or market-duty, e.g. in Dūqda and in North Africa (cf. Dozy, Suppl., ii, 606). Ibn al-Hādi‘īdī, Makkīlī, i, 67, mentions a muṣāḥah mutāmīl, but does not use the word mukās in this sense.

The text of the poem calls for some remarks. In its present state, it numbers 249 and even 25 verses of 6 ≤ in Ibn Sālim’s ed. of the Dīwān of Ibn Durayd (Tunis 1973, 115-37), while al-Baghdadī (loc. cit.) counts only 239, so that it must be considered that several verses have been interpolated. In fact, al-Suyūṭī (Bughya, 32) asserted that the original maṭla’ opened with a conditional particle, then a protasis without an apodosis, followed by a feminine, of which it was not known to what it related; it is Kamāl al-Dīn Ibn al-Anbārī (died 577/1181) [see AL-ANBARI] who allegedly composed a prologue of ten verses, of which the last may have been retained as a true maṭla’. Independently of probable additions, the plan of this poem composed in praise of the Mikālūs [g. r.] appeared barely coherent: at the beginning, there is the topic of the beloved, the separation, the cruel destiny of the poet, then comes the relation of a pilgrimage containing a certain number of toponyms in 3; the personal glorification, followed by the panegyric of the Mikālūs (vv. 96-110), but the beloved appears again later on, possibly justifying the nostalgia expressed in the MTikālūs, returning to the beloved (vv. 503-66), laments and commentaries (E. Levi-Provengal, 460; Brockelmann, II, 758). The BN in Paris also possesses one of Hasan b. Habīb (Vajda, 459) and another of Muhammad b. Ahmad al-Hawwārī (ibid.; Brockelmann, II, 15). Hamdūn b. al-Hājjī (1174-1232/1760-1817) has also left us a Maksura on prosody and rhymes (E. Lévi-Provençal, Manuscrits arabes de Rabat, 292 (5), 497 (11); Lakhdar, Vie littéraire, 282).

(CH. PELLAT)
government service and military studies. Later, in 1859, the Mekteb-i mulkiyye was founded as a military college for the male members of Muslim ʿAlī's family and some of others. In 1833, a Maktab al-mukimmāt al-harbiyya was set up in Cairo and closed down after three years, probably purveying for munitions or serving as military workshops. In 1836, a Maktab al-muḥāsaba was set up to train the accountants which were so badly needed. In the Khedive Ismāʿīl's days, the general sense of "school" for maktab seems to have become so prevalent in Egypt that the term maktabaḥīṣya, i.e. "national schools" or "local schools", as were called the primary schools founded between 1868 and 1879 in Cairo, her suburbs and the provincial centres, was accepted unquestioningly. From there, the usage seems to have spread into other Arab lands, although maktab continued too to be widely used as synonymous with kutṭāb. In our days, in Turkey, a primary school is called iḳ mektep and the next stage, the "middle school", or ṭṛ aṣf mektep. In Malaysia, it has recently been used for "Institute", as in Maktab Pergeruan Ilm Kha ("Specialised Teachers' Training Institute") in Kuala Lumpur. Maktab was also the title of a journal, published since 1307 A.H., in Istanbul, in Turkish, first as a weekly, then twice a month, for the benefit of modern Persian usage, in addition to its basic meaning of "school", maktab has acquired also the connotation of an "instructive manual", as in Maktab-i Īlām ("A manual of instruction into Islam", 2 vols., Tehran 1334; see 1343), Mekteb-i Ṣulṭānīyye ("A manual of instruction in Șīrāz", annual, i. 1378-1383), or even Maktab-i ʿ ع ("A manual of love", title of a play by ʿAll ʿAsghar Shārīf, Tehran 1313). Otherwise, during the 20th century, maktab has increasingly come to mean, in Arabic, "bureau" or "department", generally in the official sense, such as Maktab al-ḥukm ("Bureau of research") and Maktab al-dāʾim ("Permanent bureau") or Maktab al-sāḥba ("Office of Health"). In modern Turkey, maktab is used in the Arab world for this institution. In Iran kutṭāb-khāna is used (the entry-word for the article in EI), and in modern Turkey kütüphane. Other equivalents are ḵūznāt al-kutub and dār al-kutub.

With the zeal for literary pursuits and the ever increasing composition of books, after the period of conquests, men of literary tastes accumulated handsome private collections of books and from the example of the Kūfān philologist ʿAbū ʾAmr al-Ḡaybīnī we can reasonably assume that it was a custom for authors to deposit copies of their works for reference in the mosque of their town or quarter. The libraries of the Umayyads contained books on all the principal branches of knowledge cultivated at that time. Librarians were appointed to take charge of them, and translators may have worked in them or, at least, have deposited their works in them.

Yousef Eche, by dint of reading most of the relevant Arabic literature, manuscript or printed, on history and geography, belles-lettres in prose or poetry, ʿfāk and ʿawāf, has assembled all available information on public and semi-public libraries in ʿIrāq, Syria and Egypt during the mediaeval period (up to the death of Hūlegū). Hence there is no need to look further than this valuable compendium for the history of libraries in the Arab world during these centuries. The first public libraries formed a fundamental part of the history of the first academies known as bāy al-ḥikma (q.v.). That established by Muʿāwiyah contained collections of hadīṯ and works such as that of ʿAbī b. Ṣhariyya, composed at the order of the caliph. This was inherited by his grandson, Ḵālid b. Yāzīd (q.v.), who devoted his life to the study of Greek sciences, particularly alchemy and medicine. We are told that he caused such books to be translated, and when an epidemic occurred at the beginning of the reign of ʿUmar b.
'Abd al-'Aziz, he commanded the books to be fetched out of the library (khizāna) to be made available for the people. The bayt al-hikma underwent its greatest development in the time of the 'Abbasid caliph al-Ma'āmun in Baghdis. To make this library as comprehensive as possible he had valuable Greek manuscripts purchased in the Byzantine empire and translated by a number of competent scholars into Arabic. This library contained books in all the sciences cultivated by the Arabs. After the transfer of the caliphate from Baghdis to Sāmarrā under al-Mu'taʃim, successor of al-Ma'āmun, the bayt al-hikma lost its academic character and was known solely as khizāna al-Ma'āmun. Visited by scholars up to the end of the 4th/10th century, it is not mentioned by writers after that time, and is thought either to have been incorporated into the library of one of the caliphs or to have been dispersed by the Saljuqs. It is known, however, that some of its books carrying the emblem of al-Ma'āmun were presented to Ibn Abi Usaybi'a [q.v.] at the time of his compiling the Tabaḳāt al-aʃība. The period of the bayt al-hikma was followed by that of the dār al-ṣilm [q.v.], an institution of semi-official character, established in the style of a public library with its own building for the purposes of disseminating sectarian propaganda and teaching the name and science. These were set up in Baghdad, Mawsil, Baṣra, Rām-Hurmuz and elsewhere; that in Baṣra, founded by Ibn Sawwār, being said to be the first ever established by waḳf. All of these are described in detail by Eche, and some by Mackensen (see Bibli.). The dār al-ṣilm engendered the madrasa [q.v.], and so the library is the father of the Arab university. Other celebrated libraries were those attached to the Nizāmiyya, and the Muntasiriyah madrasas in Baghdis, where there existed also many others attached to madrasas, mosques, riḥāṣ and mausoleums. Eche describes more than twenty of these, most of which were destroyed by Hulegii in 656/1258, as were those of other cities in ʿIrāk. Similar libraries were founded in Damascus, Aleppo and other cities in Syria, and in Egypt. The library collected by the Fātimid caliph al-Ḥākim [q.v.] in Cairo contained untold literary treasures and we learn that in the year 435/1043-4 the waẓir Abu ʿl-Kāsim ʿAbbās al-Dājrārī gave instructions for a catalogue of the books to be made and the bindings to be renewed, and he appointed Abū ʿl-Ḥaḍar al-Kudārī and Ibn ʿIṣām al-Warrāq to superintend the work. This library remained intact till the death of the last Fātimid caliph al-Ṣājīd, when Ṣāḥīb al-Dīn ordered it to be dissolved and the Kādi ʿl-Fāḍil [q.v.] acquired most of the books and deposited them in the library of the Fāḍiliyya madrasa which he founded, where they were soon neglected, and by the time of al-Kalḵāṣandi most of them had disappeared. This library is stated to have contained 6,500 volumes on the exact sciences alone, such as mathematics, astronomy, etc., and among its treasures was a globe of copper stated to have been constructed by Ptolemy and bearing an inscription stating that it had been acquired by Khaḍī b. Yaʿzīd b. Muʿāwiya. The Spanish Umayyad caliphs at Cordova possessed a library which achieved great renown. Al-Ḥakam II [q.v.] devoted his life to it, employing agents to collect books from all Islamic lands. It is said to have contained some 400,000 volumes, described in a catalogue of 44 volumes, each containing 40 leaves. Disastrously, it was plundered and largely destroyed in the time of his successors. After the conquest of Granada by the Catholic kings, in order to facilitate the conversion of the Moriscos, the order was given that all books in their possession should be handed over to the authorities for examination by experts, so that all useful works of philosophy, medicine and history might be retained and all others destroyed. Cardinal Cisneros, however, decreed that all books in Arabic should be burnt in a public square in Granada. We are frequently told of valuable private libraries which were placed at the disposal of learned men, as e.g. in the biographies of al-Suli [q.v.] we read of his large collection of books which were tastefully bound in red and yellow leather. Al-Safādī [q.v.] records in the biography of Ghars al-Nīmat al-Sābī that he founded in Baghdis a library of about 300 volumes for the use of students and that this library was shamelessly robbed by the librarian who had been placed in charge. In Persia, libraries allegedly existed at the time of the Achaemenids, as we hear from Ibn Nadim, but these were destroyed by Alexander the Great. In the 'Abbasid period libraries are recorded at Rām-Hurmuz (founded by Ibn Sawwār), Rayy and Isfahān (plundered by the Ghaznawid troops in 420/1029 and removed to Ghazna, but later destroyed there by the Qurṭid Sulṭān ʿAlī al-Dīn Ḥusayn). In Ṣirāz, the celebrated library founded by ʿAḍud al-Dawla contained 4,000 books written up to that time, all branches of learning (al-Maḳṭāz, 449, tr. in Pinto [see Bibli.], 278). When early in the 7th/13th century the Mongols swept over Persia we read that in addition to the loss of human life and the destruction of other valuable property untold quantities of priceless books were wantonly destroyed. Although some of the sultans of the Ilkhan patronised scholars and were keen friends of learning, no mention of a library from that period has as yet been found. The earliest of which we hear is, however, that of the saint Niẓām al-Dīn Awīlī, a contemporary of the Khalīfah and Tughluḳid sultans. Many of the Mughal emperors and their courtiers were dedicated bibliophiles and possessed private collections of great value, and fostered the development of the patronised scholar. This was dispersed after the traumatic events of the 1857-8 Indian Mutiny, and some of its valuable manuscripts came to the India Office Library and the Royal Asiatic Society; but many remain in various libraries of India and Pakistan. Sezgin records 46 libraries in India and 8 in Pakistan which have published catalogues of their Islamic manuscripts, among them the Bānkīpur [q.v.] Library at Patna (6,000 manuscripts), the Buḥār collection in the National Library at Calcutta (485 Persian and 465 Arabic manuscripts), and the Rāmpur State Library (10,500 manuscripts in Arabic, Persian and various Indian languages). After the conquest of Constantinople, Mehmed II Fāṭih [q.v.] assembled the manuscripts in Greek, Latin and other languages which had survived the holocaust into the library which he founded in the Eski Saray, which now forms part of his palace, the Topkapi Saray. Ahmed III [q.v.] established no fewer than five libraries in Istanbul, including his Enderūn-i Hûmâyûn Kütûbkhânesî, of which the poet Ndrîm [q.v.] was appointed curator. He also prohibited the export of rare manuscripts. Most of the libraries formerly attached to mosques in the capital have now been transferred to the Sûylemanie Public Library. In Istanbul alone there were said to be in 1959 over 135,000 manuscripts, many of them known only to scholars through the very inadequate defters published in the late Ottoman period.
Most countries in the Middle East now possess a national library performing the functions of such libraries everywhere, including, it may be, the publication of the national bibliographies (see auchterlonie, Librariae [see Bibl.], 245-9). Public, university, special and school libraries have been set up, schools of librarianship inaugurated, and library associations founded.

Arrangements, administration and use of libraries. In the 4th/10th century there were already buildings devoted solely to libraries and erected especially for this purpose. For example, Sahrib. Ardashir, the vizier of Bahá al-Dawla [q. v. in Suppl.], built in 381/991 in Bagdad in the Karkh quarter a Dar al-kutub, which contained over 10,000 volumes (Ibn al-Aghir, i, 246; Yákút, i, 799). The geographer al-Mukaddasí (449) found in Shiráz a huge library which had been built by the Búyíd Ajud al-Dawla (338-72/949-82). This library was a separate building and consisted of a great hall, a long vaulted room and along the side-rooms were cases of carved wood three ells high and three broad, with doors which were let down from the top. The books lay on shelves one above the other. The cases used in the Fâtimid library in Cairo were somewhat different (al-Makrizi, Khatir, Cairo 1270, i, 409); the bookcases (ruff) were divided by partitions into separate compartments (hâdiz) each of which was closed by a door with hinges and locks. Open cases, which also were divided into small compartments, are illustrated in a miniature by Yahyá b. Mahamid of the year 634/1237 in the Paris manuscript of al-Hariri, ms. arabic, 5847), which shows a library in Basra (Blochet, Les enumérateurs des manuscrits orientaux, Paris 1926, Pl. 10).

Unlike our custom, we find the books lying one above the other in the small compartments, as is still usual in the East. This explains the oriental custom (which is only occasionally found in the West) of writing a short title of the works on the upper and lower edge.

The books were systematically arranged, classified according to the various branches of knowledge. Copies of the Kur'ân had usually a special place in libraries, for example, they were kept on a higher level than the others. The various books were often present in several copies; this made it possible not only to lend the same work to several readers, but the scholar was also enabled to read corrupt passages at once in a manuscript by referring to another copy. The Fâtimid library of Cairo, for example, had thirty copies of the Kitâb al-Ayn of al-Khallí, twenty copies of the Ta'rikh of al-Tabarí and, if the figure is not wrong, actually a hundred copies of the Djamára of Ibn Durayd.

The waqfyya drafted when the books were deposited normally served as the catalogue. Occasionally we hear of a special catalogue (fihrist [q. v.]) being compiled by the librarian. These catalogues sometimes ran filling 44 of 20 leaves each (Ibn Khaldun, Tadhrij, iv, 146). In the Fâtimid library, to the door of each bookcase was affixed a list of the books contained therein.

Libraries usually had a director (jâhid) and one or more librarians (khâzin) according to the size of the institution, also copyists (nâshir) and attendants (farâ'id). We find that some of the most celebrated scholars were librarians; thus the historian Ibn Miskawaih was librarian to the vizier Abu 'l-Fadl b. al-'Amid in Rayy (Ibn Miskawaih, Ta'rikh al-umam, ed. Amedroz and Margoliouth, Oxford 1921, text, ii, 224, tr. v, 237); al-Shâbûnî (d. 390/1000), the author of the Kitâb al-Diyârî, was librarian of the Fâtimid library in Cairo under al-'Azîz (Ibn Khallîkân, Râjî'at, 327).

The books were acquired partly by purchase and partly by the copyists attached to the libraries copying manuscripts. Al-Makrizi has preserved for us the budget of a library (ii, 459); according to this, the caliph al-Hâkim (386-411/996-1020) spent 207 dinârs a year on the Dar al-Imân founded by him. This was allotted as follows:

Libraries were open to everyone free of charge. Paper, ink and reed-pens were supplied by the authorities. Some private libraries even provided for the maintenance of scholars who had come from a long distance. A deposit had usually to be made if books were taken outside the library buildings; at least Yâkút (iv, 509-10) praises the liberality of the libraries in Marw, where he always had two hundred and more volumes to the value of two hundred dinârs in his house without a deposit. Instructive in this connection also is the waqf document of 21 Safar 799/24 November 1396) by which Ibn Khâlûdân bestowed his Kitâb al-Ibar on the library of the Djamâ al-Kârawiyyin in Fas; according to it, this manuscript was only to be lent to trustworthy, reliable men for two months at the most in return for a substantial deposit, for this period was long enough to copy or study the borrowed work. The director of the library was to take care that this rule was observed (Lèvi-Provençal, in JA, cciii [1923], 164).

But at the same time we find in Muslim lands purely private libraries. One example was the library of the Madrasa al-Mahmúdiyya founded in Cairo in 797/1395. By the will of the founder, the Ustadar Djamal al-Dîn Mahmúd b. 'Ali (d. 799/1397), no book was to leave the rooms of the madrasa. The manuscripts of the Ta'rikh al-umam of Ibn Miskawayh (Gibb Mem. Ser., vii/6) published in facsimile by Caetani belonged to this library; in the waqf document on the first page of this manuscript, dated 15 Shâbân 797/5 June 1395) it is written: "The above-named donor makes the condition that neither the whole work nor a single volume of it shall be lent from the library, either against a deposit or without one".

Nevertheless by the year 826/1423 when the books were checked, it was found that 400 volumes (exactly a tenth of the total) were missing, whereupon the then director of the mosque was dismissed (cf. Ibn Hâdîr, 'Askâliânî, in Quatremère, Memoire [see Bibl.], 64, 70; al-Makrizî, Kataê, ii, 395).

If we think of the above statements, which are true even of the 4th/10th century, it can safely be asserted that Muslim libraries were in every respect centuries in advance of those of the west; there was a general need for public libraries felt in Muslim lands much earlier than in the west.

Bibliography: 1. General. Quatremère, Memoire sur le goût des livres chez les Orientaux, in JA, Ser. 3, vi (1838), 35-78; and the supplementary
notes by Hammer-Purgstall in JA, Ser. 4, xi (1848), 187-98; Mez, *Renaissance des Isldms*, Heidelberg ... The streams that flow into the Araxes on the right bank are as follows: 1. in the northwest the lower Kara-su, [44x673]200 MAKTABA — MAKU

**AL-MAKTÜL** [see al-suhrawardi].

**MÁKU**, a former khanate in the Persian province of Ardharbâyjân, and now the name of a town and of modern administrative units around it (see below).

Máku occupies the north-western extremity of Persia and forms a salient between Turkey (the old sandık of Bâyazîd, modern vilayet of Ağrı) and Soviet Transcaucasia. In the west the frontier with Turkey follows the heights which continue the line of the Zagros in the direction of Ararat. The frontier then crosses a plain stretching to the south of this mountain (valley of the Sar-lu) and runs over the saddle between Great and Little Ararat. Down to 1920 Great Ararat formed the frontier between Russia and Turkey, while Little Ararat was divided between Russia and Persia. Since 1920 Great Ararat has been completely surrounded by Turkish territory, while Little Ararat is divided between Turkey and Persia. The Turco-Persian frontier at the present day comes down to the Araxes. The Lower Kâra-çu and the Araxes (to its confluence with its right bank tributary, the Khor-dây) form the frontier between Máku and the autonomous territory of Nakhchewan which forms part of the Armenian SSR. The third side of the triangle i.e. the inner boundary between the Khânate and the Persian province of Köhî [q.v.] is somewhat vague. When the prestige of its khan was at its greatest, its lands stretched to the districts of Çay-paşa, Çâlîrdar (Kara-Ayni) and Allâdî. The little khânate of Avâdjl (90 villages belonging to the Ayrumlu Khân) on the Bâyazîd-Çâlîrdar-Köhî road formed a little enclave of close to the Turco-Persian frontier.

The region of Máku consists of a series of heights and fertile valleys. In the centre between the valley of the Zângîmar and that of the Agh-dây rises the isolated mass of Sokkar. At the foot of the Little Ararat along the frontier chain and on the slopes of Sokkar there are excellent pastures.

The lands of Máku are very well-watered. The streams that flow into the Araxes on the right bank are as follows: 1. in the northwest the lower Kâra-çu,
which runs almost parallel to the Araxes and receives on the right bank the waters from Dambat (a high plateau to the south-east of Little Ararat where in 1905 Minorsky discovered the ruins of the ancient town which local Armenian tradition identifies with Arghakawan, cf. Moses of Chorene, iii, 27, and ibid., i, 30); 2. the mountain-torrents Yllandarasi and Sarli-cay; 3. the river Zangimar (Zangibár, Máku-cay) which consists of three main branches, one coming from the khanate of Awadji, the other, the Tighnit, from the south-east corner of the plain of Çalldrán from the vicinity of the village of Tighnit (Armenian name tsmt = "muddy"); and the third from the central canton of Bábádji. The combined waters run through the defile in which lies the town of Máku and water the rich district of Zangibasar ("watered by the Zangimár"). Here the Zangimár receives on its right bank the waters from the central massif of Sokkar (this tributary seems to have been once known as the Kaban), and on the left bank the Sarli-su (different from the above mentioned Sarli-su) which rises in Turkish territory in the north of Bâyazid and flows a considerable distance parallel to the central course of the Zangimár. 4. The Ágh-cay, the sources of which are on the eastern face of the chain which separates Turkey from Persia and on the southern face of the transverse chain (Alágáin) which separates Ágh-cay from the trends of the main massif of the range, its tributary irrigate the canton of Sögmán-áwá, flow into the fertile plain of Çayápára and flow into the Kotur-cay which waters the plain of Köhó. Below this confluence, the Ágh-cay receives on its right bank the waters of the district of Áland which rise near the Turco-Persian frontier to the south of the sources of the Ágh-cay and the north of those of the Kotur-cay. The town of Máku is situated in long. 44° 30' and lat. 39° 18' at an altitude of 1,294 m./4,245 feet. Its site, 170 miles from Tabriz and on the main Tabriz-Erzerum road, is very striking. It lies in the short gorge through which the Zangimár here runs. The cliffs rise perpendicularly on the right bank. The cliffs on the left bank rise to a height of 600 feet above the river. The little town lies in an amphitheatre on the slope of the town at the foot of the rocks, are the ruins of ancient fortifications and a spring. Then the mountain wall rises almost perpendicularly, and at a height of 180 to 200 feet leans forward. There is therefore an incredible mass of rock suspended over the town. (According to Monteith's estimate, the dimensions of the cavern thus formed are: height 600 feet, depth of the cavern 800 feet (?), breadth 1,200 feet, thickness at the top of the arch 200 feet.) It is only for a brief period daily that the sun penetrates into this gigantic cave. Just above is a cave which used to be hoisted up by a rope. (The only European who has been inside it is A. Ivanovski.)

The town of Máku in ca. 1900 was 6,670, comprising Turkish-speaking Shífs. The population of Máku consists of Turks and Kurds. The former, who are in the majority, occupy villages along the rivers of the khanate. They are the remains of the Turkoman tribes of Bayat, Pornak etc. The canton at the foot of the Sokkar is called Karaköyunlu. The people (about 900 houses in the earlier decades of this century, grouped into 26 villages) belong to the Ahl-i Hakk [q. v.] faith (RMM, xl, 66) which is indirect but interesting evidence of the character of the heresy of which the Turkoman dynasty of the Kara-Köyunlu was accused (Münebedjim-baši, iii, 153). The old eminity between the Turkoman tribes survives in the general name applied by the Kara-Köyunlu to their Shífs, the "Twelver" neighbours: they call them Ak-Köyunlu (Grodzky, 9).

The Kurds of the khanate are semi-nomads. The Djaláli (cf. on their supposed ancestors, Álam-ára, 539, under the years 1017-18) occupy the slopes of Ararat, and in summer betake themselves to the pastures along the Turco-Persian frontier. Many sections of them lead a troglodyte life in the caves of the Dambat (Grodzky).

The little village of Djabbarlu is inhabited by Yazidis [q.v.].

Ancient History. The oldest monuments of Máku go back to the period of the Urartian (Vannic) kingdom. The chamber carved in the rock near Sangar (on the Máku-Bázírgán-Bâyazid road) is one of a number of similar constructions in Bâyazid and in the country west of Urmia (Minorsky, Kela-îgin, in ZVOIRAÖ, xxiv, 171; S. Matheson, Persia, an archaeological guide, London 1972, 81-5). A Vannic inscription known as that of "Máku" seems to come from Bástam on the Ágh-cay (district of Çay-para). It is of king Kusa II, son of Argisht (ca. 560-645 B.C.; cf. Sayce, A new Vannic Inscription, in JRSÄ [1912], 107-15; N. Y. Marr, Nadût Ruûli II iz Maku, in ZVOIRAÖ, xxv [1921], 1-54). The inscription is important as showing that the power of the kings of Ván extended to the region of Köhó.

Máku later formed part of Armenia. It corresponds to the canton of Artaz of the province of Vaspurakan (Armenian 7th century Geography). According to Moses of Chorene, the district was at first known as Shawarshan, but was given the name of Artaz in memory of the old home of the Alán whom Artashés transplanted hither (cf. Ardoz in Ossetia). The name Shawarshan may be explained from the rule of the Arturuni kings among whom the name Shawargh (Xšawayštín Špār) which is a Mod. Pers. Siýawušt was frequent (cf. Marquart, Erdnásahr, 4, 177). The suggestion of this scholar that Artaz is connected with the older "Ačagà etc., Strabo, xi, 14, 3, is untenable because Azara is above Artaxata, which again is above the land of Artaz = Máku. The Amatuni kings who later established themselves north of the Araxes must also have ruled in Artaz, for the diocese of Máku is called Amatunecagtan (Adontz).

The name Máku and Hac'hem (= Hasun) north of Máku are mentioned in the History of Thomas Arsruni written in the 10th century, in the passage (ii, § 3) describing the frontier of the lands ceded by the Sásání Khusrâw to the emperor Maurice in 591
(Brosset, Coll. d’hist. arm., St. Petersburg 1874, i, 78). On the many Armenian monuments in the land of Mäku, cf. the work of Minorsky on the antiquities of the Khánate; cf. also Hübschmann, Die älteren Ortsnamen, 1904, 344, and Adontz, Armenia i epokhu Justini-
niana, St. Petersburg 1908, index.

According to a legend recorded by Moses of Chorene (i, 30; ii, 49), Tigranes, having defeated the Mede (in Arm. Mar) Azdahak, settled his descendants all around Masis (Ararat). Neither the Arab historians (al-Tabarl, Ibn al-Athlr) nor geographers (allahu mustawft, however, presupposes a different histori

Allah MustawfT, however, presupposes a different corner of Armenia, although the name looks very old. It would be tempting to explain Mäku as Mâh + kûh - “Mountain of the Medes” (Pers. mâh and Arm. mûr go back to the old Iranian Mâda). The form Mäkûya (*Mäkûya*) which is found in Hamd Allâh Mustawf, however, presupposes a different final element.

**History under Islam.** Hamd Allâh Mustawfî (Nuzhat al-kulûb, ed. Le Strange, 89) in his first work (740/1340) to mention Mäku among the cantons of the tûman of Nakçhûwan: it is a castle in the cleft of a rock and at the foot lies a village which stands in the shade till midway. In this place lives the Christian chief priest (kashish) whom they call Mar-Hâsîyâ (this reading is preferable to Mar-Khasîd). The former was soon taken by the Ottomans and at the foot of the mountain (pdy-i kûh) and the other on the preservation of which Persia had former-

The result is not known, but Persia’s possession of Mäku recognised in 1049/1639 does not seem to have again been seriously disputed by Turkey.

The family which ruled Mäku from 1747 to 1923 belonged to the Bayat tribe, the clan settled around the Sokkar (on the Bayat, cf. Köprüzü-zade Mehmed Fu’âd, Oğuz etnolojisinne dâvâ tâvârîh notaslar, in Türkiye Müşteri-i Uslul [Istanbul 1925], 16-23). According to oral tradition, Ahmad Sultan Bayat was in Khurâsân in the service of Nâdir Shah. After the latter’s assassination, he seized one of his wives and a part of his treasure and returned to Mäku. Very little is known about him or his son Husayn Khân (Monteith’s host?) who died in 1835. It is possible that under the Zand dynasty and at the beginning of the Kâdîs, the real authority in the region north-west of Adharbaydjan belonged to the family of Dumbeli Khâns [cf. Ta’rîh, the special history of the Dumbeli Khâns of Khol] and at that time the head of the house was in Khol (cf. Ta’rîh, the special history of the Dumbeli Khâns of Khol) and at the same time recalled the MahmudT Beg who was their representative there. In 1057/1647 the Kurf beg of Shûshîh (a stronghold on the borders of Persia) rebelled against the Turks. The Persians, while protest-

Contra to the tenor of the inscription, Ewliyâ Çelebi, ii, 357-9, claims that it was the Ottomans who, after the peace of 1049/1639, destroyed Mäku and at the same time recalled the Mahmûd Beg who was their representative there. In 1057/1647 the Kurf beg of Shûshîh (a stronghold on the borders of Persia) rebelled against the Turks. The Persians, while protest-

In the Persian Society, 1913,
Les Categories d'Aristote dans leurs versions syro-arabes, and has no connexion with the Syriac version of James Yahya b. Hunayn is himself credited with having translated the Greek. It certainly has no connexion with the Syriac version of James of Edessa (ed., with Ishak's Arabic version, K. Geor, Les Categories d'Aristote dans leurs versions syro-arabes, Beirut 1948). Ishak's version is stylish and, on the whole, clear and accurate. It survives in a recension by al-Hasan b. Suwâr (d. ca. 408/1017), based on Yahya b. 'Adî's copy and furnished with an introduction and critical notes. In these, Ibn Suwâr makes use of a large amount of earlier material, including a commentary by Ibn 'Adî.

The controversy in the classical world concerning the authenticity of the work appears not to have survived its transmission to the Islamic world. Ibn Suwâr mentions it, no doubt drawing on his Greek sources, but he accepts the work as genuine, as do the other commentators.

Many commentaries on the work were made. Among those mentioned by the bibliographers but not, as far as we know, extant are works by Abû Bishr Mârât, Tâhîbî b. Kurra, Dâjîrî b. Hayyân (attrib.), Abu I-Kâsim b. al-'Abbâd, and 'Abd al-La'îf al-Bâghdâdî. Epitomes are also attributed to Ibn Bahrîz (a pupil of Mâjîlî and a patron of Hunayn), al-Kindî, Abû Abu '1-Kasîm b. al-Kindî, Abû al-Tayyib (d. 286/900), and Muhammad b. Zakariyyâ al-Râzî. Surviving works based on the Categories include a paraphrase by al-Fârâbî (ed. D. M. Dunlop, Al-Farabi's paraphrase of the Categories of Aristotle, in IQ, iv [1958], 168-77, v [1959], 21-54), a large section of Ibn Sinâ's al-Shîja (al-Manîkî 2 - al-Makulât), ed. G. Anawati et alii, Cairo 1959), a commentary by Abu l-Faraj b. al-Tayyib [see Ibn al-Tayyib] (d. 434/1043) (preserved in Cairo ms. Bibl. Eg. 7772, anon, paraph. India Office ms. Or. 3832), notes by Ibn Bâdîjâq [q. v.] on al-Fârâbî's paraphrase (preserved in Escorial ms. 612), and Ibn Rûshd's Compendium (in Hebrew tr.) and Middle Commentary (ed. M. Bouyges, Avrordes: Taîkîh kitab al-magoulat, Beirut 1932). The work or, at any rate, the subject with which it deals is also, of course, referred to, if at no great length, in other Islamic philosophical works, e.g. the Rassîl 'Iswân al-Shîja and al-Ghazzâlî's Miycâr al-ilm.

It might well be thought that the Categories received more attention from the earlier Islamic philosophers than it merited, particularly in view of the difficulty of determining precisely what it is about. This question is still disputed; I. Madkour (introd. to ed. of al-Shîja, 2 cited above) characterises it as "... à la fois une recherche sur la substance et les accidents et un essai de déterminer exhaustivement le nombre des genres suprêmes; par là, elle se rattache à la fois à la métaphysique et à la logique." Others maintain, more simply and perhaps more plausibly, that it is merely an early attempt by Aristotle to list all the predicates that can be attached to a given man, and that it is therefore indisputably an adjunct, if a minor one, to the study of logic. The choice of al-Makulât as the translation of the title may perhaps indicate that Ishak himself inclined to the latter view (kâla ... 'ala ... "to predicate ... of ... "). It may be that the digressions in the work itself, the mass of commentary, in Greek, Syriac and Arabic, that it attracted, and the inclusion of a similar treatment of the categories in Metaphysics δ (where, according to Ross, it is clearly out of place) combined to obscure the significance of the title. Whether most of the Islamic commentators really considered it to be an integral part of the Organon, or their respect for Aristotle forced them to retain it as such, is not clear. Ibn Sinâ is the only philosopher to give an independent opinion on the nature of the Categories.

and the value of the work. He takes its object to be to assert—not to prove—that ten things are al-mufradd) can be applied. One of these is substance in connection with the theory of definition, and in al-Ighârât he omits all mention of them.

Ibn Rughd does not tell us his opinion of the work or indicate whether he made his commentary on it for its own sake or out of loyalty to Aristotle. After him, at all events, it would seem that Ibn Sina's assessment of its worth commanded general assent, for it makes few further appearances.

**MAKURRA** [see Nûsba].

**MAL (A.), means in the old language possession, property, referring among the Bedouins particularly to camels, but also to estates and money, and in any case to concrete things. The word is formed from mâl and li and means properly anything that belongs to any one. As a noun it is of course treated as a med. w stem from which a verb is then formed. The meaning "money", the word is used in the expression mâl jibi 'dumb property' in contrast to mâl naff, 'speaking property', applied to slaves and cattle. The full formation of the concept appears in the introduction to the *Idgâra tid makhsûs al-idgâra* of Abu 'l-Fadl Dâj'far b. 'Ali al-Dimashkî (Carly 1318/1900-1, 2 ff.), studied and for the most part translated by H. Ritter, in *I. VII,* (1916), 1-91. There and in the *Mafdiâl al-ulâm* (see Bibl.), 39, the different classes of property are enumerated. As mâl includes property in its different aspects, the word can also mean "taxes".

The acquisition, conservation and disposal of property is one of the four main sections of domestic economy (tadbîr al-manâzil), the second part of practical philosophy, which is divided into ethics, economics and politics, just as it entered Islam with the rest of Hellenistic science. As the Politics of Aristotle, the first book of which deals with economy, was not translated into Arabic, the Muslims had to be content with the only translated work on economics, compos-

ed by the Neo-Pythagorean Ps.-Bryson, which has had a deciding influence on the whole economic literature of Islam. The text, the Greek original of which is lost, was first edited by L. Cheikh, in *Machriq*, xix (1921) and has been recently published with the Hebrew and Latin versions and a German translation by M. Plessner. The interesting chapter on mâl in it was further expanded by Muslim authors of the school of the Ps.-Bryson, particularly from religious literature. A standard work is the *Akhldk-i nairi* of al-Tust [q.v.], of which the economic section has been translated and translated by Plessner. The view of the origin of money which Aristotle holds in the *Nicomachian Ethics* reached Islam direct, besides coming through the Ps.-Bryson; it is first found in the *Tahdhib al-akhldk* of Miskawayh, e.g. Cairo 1322, 1904-5, 38 (cf. also *Namus* and Dhamar).

The word mâl very early became a technical term in arithmetic. It is first found in exercises in dividing inheritances applied to the property of the testator which is to be divided. We later find the word used regularly for the unknown quantity in an equation; in this meaning it was afterwards replaced by *dayy* [q.v.]. Used for the unknown in quadratic equations, it became the word for the square of a number. The fourth power is called mâl mâl, the fifth mâl mâl mâl mâl, the square of the cube. The history of this change of meaning has been elucidated by J. Rüster, *Zur ältesten arabischen Algebra und Rechenkunst*, in *SB A. Hist. Phil.-hist. Kl.* (1917), no. 2, esp. ch. vi, cf. also index s.v. Mâl. **Bibliography**: Brockelmann, Grundriss, i; H. Ritter, *Ein arabisches Handbuch der Handelswissenschaft, in I.*, vii (1916), 1-91 (cf. esp. the passages quoted on p. 45, no. 3, from the Arab lexiconographers, the Lâ and Dozy, s.s.); M. Plessner, *Der akribies des Neuplatonikers "Bryson"* und sein Einfluss auf die islamische Wissenschaft, 1928; Marx, *Die Einführung der aristotelischen Ethik in die arabische Philosophie, in Verhandlungen des XII. Intern. Orientalsistentkongresses*, 290 ff.; on the meaning in algebra, cf. the references given in Ruska, *op. cit.*; al-Khârazmî, *Mafdiâl al-ulâm*, ed. van Vloten, 1895; 1953; 1959; 1968 (the latter passage tr. by Wiedemann, *Beiträge zur Geschichte der Naturwissenschaften*, xiv = *SBPMS ErL*, xl [1908]). (M. Plesner)

**MÂL AL-BAY’À (A.), also hâk al-bayû’, rasûm al-bayû’ and pilat al-bayû’, a term used for the payments made to the *djând* at the time of the swearing of the oath of allegiance (bayû’ [q.v.]) to a new ruler.

The practice was unknown among the Umayyads and early ‘Abbasids, and the first example seems to be the payments made to the *djând* in Baghdad following the death of al-Mahdi in 169/785, when each man was given eighteen months’ or two years’ salary (rizk) after they had caused disturbances. It is not clear, however, that this was directly related to the bayû’s, and it may have been settlement of arrears of pay. Nonetheless, this seems to have become a precedent, and extra *sâli* [q.v.] was paid at the time of Hârûn’s accession the next year. After the death of Hârûn in 193/809, al-Amin’s supporters in Baghdad paid two years’ rizk to the army, while in Marw his brother al-Ma’mûn paid one year’s salary at the time of the bayû’s. By this time, such payments seem to have been regarded as standard practice, and the harmful effects were soon apparent; when Ibrahim b. al-Mahdi was proclaimed caliph in Baghdad in 291/895, opposition to the Ma’mûn, he promised six months’ *sâli*, but was unable to pay the full amount, hence drafts were given
to the troops so that they could collect payment in kind from the surrounding country. There is no mention of payment at the accessions of al-Mu'tasim (218/833-834/882) or al-Wathiq (227/842), but whether this meant that the practice was in abeyance or that it had become routine is impossible to tell. On the accession of al-Mutawakkil (232/847), eight months’ salary was paid, and some, but by no means all, of his successors followed the practice. Under al-Muktafir, the size of the army became glaringly obvious. The troops in Baghda‘d received māl li‘l-bay’a at the time of his accession, while those escorting the hajdjī riwayst rode when they did not receive māl li‘l-bay’a. al-Muktafir’s clearly felt was the due. After the abortive revolt of Ibn al-Mu‘azz in the next year, the gwād were given a second payment for renewing the oath. In 317/929 a revolt was launched with the object of deposing al-Muktafir and making al-Kāhir caliph, but the attempt collapsed when the leaders were unable to supply the year’s nizād demanded by the army as a reward. The re-establishment of al-Muktafir meant that māl al-bay’a was required for the third time in his caliphate, and this led to the selling off of state lands at very low prices in an effort to satisfy the troops. The accession of al-Kāhir in 320/932 meant a further payment.

Thereafter, the practice seems to have become less regular; at the accession of al-Muktadir in 329/940, the Turkish amīr ‘al-mul‘aṣ Baghda‘dī [q.v.] reduced payments and restricted them to his own followers. Payments were sometimes made under the Būyids, as at the accession of Bāhā’ al-Dawla [q.v. in Suppl.] in 379/989, when rasm al-bay’a was paid, and the army also extorted it on the accession, in suspicious circumstances, of the ‘Abbasid caliph al-Kādir in 381/991. Under the later Būyids, extra payments continued to be demanded, and sometimes made, at accessions and other times of crisis, but the decline of the system of regular salaries, and the bankruptcy of the state, meant that the practice was irregular.

Bibliography: See descriptions of accessions in Tabārī, iii; Miskawayh, Taḏjīrī‘, ed. Amedroz; Rūḏhrāwī, Dhayl Taḏjīrī‘, ed. Amedroz; Ibn al-ʿAlī‘īr, and nā‘am. (H. Kennedy)

MAL-I AMIR [See SARHABDĪ].

MAL-I IRSALIYYE [See IRSALIYYE].

MALABAR, the name first given by Arab and Persian mariners in mediaeval times to a pepper-producing coastal region of the south-western Indian Deccan approximately conterminous with the modern state of Kerala. The name “Malabar” is probably derived from a combination of the Dravidian term mala = “mountain” and the Persian bār = “country” (Logan, i, 1), though the affix bar may alternatively be derived from the Arabic bar = “a continent”, or the Sanskrit vāra = “a slope” (Hobson-Jobson, 539; cf. Madras glossary, 460). The name Malabar is not generally employed by the indigenous inhabitants of the region, who have traditionally preferred the Dravidian Maḷiśgalaṃ = “the hill country”, or the more classical Keraḷa, a name thought to be derived from the former Chēra kingdom of the Indian Deccan (Logan, i, 224; see also Menon, op. cit., passim).

According to Hobson-Jobson, the substantive part of the name Malabar, variously appearing as Malai, Male, Malāi, etc., is to be found “in the earlier post-classical notices of India, whilst in the great Temple-Inscription at Tanjore we find the region in question called Malai-nada”. The affix bār would seem to appear for the first time (in the form Manbar) in al-Idrisi’s mid-6th/12th century geographical study

Nuzhat al-nasīğāt fi ḥikrīr al-afāk (Nainar, 19), whilst Yākūt includes the name Malībār in his 7th/13th century geographical dictionary, the Ma‘ṣğal al-buldān (Nainar, 19; cf. Miller, 18). In its original usage, the name Malabar was applied by the Arabs to the whole coast of the south-western Deccan from Mt. D’éli in the north to Cape Comorin in the south. Although originally an exclusively Arabo-Persian designation, the name Malabar soon attained widespread international currency, being employed by John of Montecorvino in 683/1293 (Yule, Cathay, i, 215) and by Marco Polo in 698/1298 (Bk. ii, ch. 25). The name Malabar also occurs in Ming Chinese sources, both in the rather obscure form Ma-li-mo employed in Chau Ju-kua’s 7th/13th century Chu-fan-chi (Hirth and Rockhill, 88, 90) and in the immediately recognizable form Ma-lo-pa listed in Feng Ch’eng-chün’s Hsi-yü ti-ming.

Although the name Malabar was adopted by the Portuguese and applied by them to the whole region of modern Kerala, from the beginning of the British period the name was applied to an increasingly restricted area, being employed to designate that part of the south-western Deccan which came under direct British rule. This area, which covered the northern third of present-day Kerala, became the administrative district of Malabar, a part of the Madras Presidency situated between 10° and 12°30’ north latitude. This district, which included the important ports of Kannur (Cannanore) [q.v.] and Kozhikode (Calicut), as well as the important Māppila Muslim centre of Ponnani. After the incorporation of Malabar within the modern Indian state of Kerala in 1956, the old Malabar district was divided into three smaller districts: Kozhikode, Kannur and Palghat. In 1969 a fourth district, Malappuram, was carved out of these three (Miller, 18). Under the British, Minicoy Island and the Laccadives [q.v.] were attached to Malabar for administrative purposes, though when Malabar was incorporated within Kerala in 1956, the Laccadive, Minicoy and Amin-divi Islands were reorganised in the separate Indian Union Territory of Lakshadweep.

Arab contact with the Malabar region pre-date the Islamic era by many centuries, and the foundations of the present Māppila Muslim community of South India were laid within a few years of the hidjra, certainly well before Muhammad b. Kāsim’s conquest of Sind in 93-5/711-13 (Miller, 39-43; Ahmad, 77; Logan, i, 231-43; Cherrern, op. cit., passim); Malabar is therefore the site of the earliest Muslim community to have been established on the South Asian continent.

Today South India’s Māppila community numbers some five millions and extends beyond the frontiers of Kerala into Tamil Nadu and Karnataka. Māppila communities are also to be found in Bangalore, Madras and Bombay as well as overseas in Arabia, Sri Lanka, Malaysia and Burma. The former district of Malabar remains, however, the Māppila homeland par excellence; thus according to Census of India figures for 1921, out of a total population of 2,039,333 there were 1,004,327 Muslims living in the Malabar district, 93.60% of whom were Sunniś. Nearly all the Malabari Muslims are Māppilas, but there is also a sizeable Lābbai [q.v.] community, and there are lesser numbers of Pathans and Arabs. According to the 1971 Census of India, there were 4,162,718 Māppilas in Kerala state, of whom 2,765,747 lived in the four administrative districts (Kozhikode, Kannur, Palghat and Malappuram) which correspond approximately to the former Malabar District. (In 1971 the total population of this same region was 8,012,759, of
whom 4,789,198 were Hindus; Miller, 315.) Today the administrative region of Malabar no longer exists, but the name is still widely applied to coastal Kerala, Arabo-Persian meaning, that is, the whole littoral of the south-western Indian Deccan between Mt. D'Elia in the north and Cape Comorin in the south. The common anglicised form is Malacca, but the official spelling now used in Manchester, Malacca State and is 152 km. from the Malaysian capitals. Together with Central Malacca and China, Srivijaya flourished and became a noted Portuguese and Dutch buildings. The common anglicised form is Malacca, but the official spelling now used in Malaysia is Melaka. Giving its name to the Malacca Straits separating the Malaya peninsula from Indonesia, Malacca is the administrative centre of Malacca State and is 152 km. from the Malaysian capital of Kuala Lumpur. The town is distinguished from other Malay cities by its 19th century Chinese Malay shop houses and old Portuguese and Dutch buildings. Together with Central Malacca district, it currently numbers about 250,630 inhabitants. Relatively quiet today, Malacca was in the 9th/10th century the bustling heart of the most powerful kingdom in Malay history, the Malacca Sultanate, which played a key role in the expansion of Islam as well as by references in Chinese sources. It is believed that a prosperous trading kingdom, which the Chinese called San-fo-chi (reconstructed as Srivijaya) rose in southeastern Sumatra in the 1st/7th century. Acting as a entrepot to serve the trade between India and China, Srivijaya flourished and became a noted trading centre for Buddhist studies. At the height of its power it claimed overlordship over the interior and east coast of Sumatra, the Malay peninsula, and the islands of the Riau-Lingga archipelago and the South China Sea. By the 6th/7th century, Srivijaya appears to have been weakening as neighbouring kingdoms challenged its commercial hegemony and sought to take advantage of new opportunities for trade with China. Attacks by Chola India in 415-16/1025 and recurring hostilities with Java further undermined its position. From 772-3/1371, Java claimed suzerainty in southeastern Sumatra, but around 792-3/1390 a Palembang prince apparently attempted to assert his independence. Shortly afterwards, he was ousted by an invading Javanese army. When a Chinese fleet visited Palembang early in the 9th/10th century, it was still an important port, but was under the control of a Chinese prince chief. Two major sources contain the Malay legend of a Palembang prince who left Sumatra, founding a dynasty which ultimately ruled in Malacca. The first is the Sepah Melayu, a Malacca court text, of which the oldest extant version dates from the 11th/17th century but which was probably based on earlier recensions since lost. The second is the Suma oriental, a work by a Portuguese apothecary, Tomé Pires, sent to Malacca in 914-15/1509 by the Portuguese to investigate trading conditions there. Though the two sources differ in detail, the core of the legend is similar. According to the Sepah Melayu, a descendant of Alexander the Great (in Malay, Iskandar Zul-karnain) appeared miraculously on a hill in Palembang named Bukit Si Guntang. A covenant was concluded between him and the local chieftain in which he promised that he and his descendants would govern the people justly in return for their loyalty. With the title Sri Tri Buana, he was then made ruler. Subsequently, seeking a suitable site for a city, Sri Tri Buana came to an island which he renamed Singapore after glimpsing a strange beast which he took to be a lion (singa) there. During the succeeding four reigns, Singapore developed into a great trading city, but the fourth and fifth rulers flouted Sri Tri Buana’s earlier covenant, unjustly punishing their subjects. In retribution, Singapore was attacked not only by giant swordfish but by Javanese armies. The ruler, Iskandar Shah, fled up the coast to Muar, but was twice forced to relocate his settlement. Finally, he came to a place called Bentaram which he deemed auspicious after he saw one of its hounds kicked by a courageous mule deer. Because he was standing under a melaka tree (Phyllanthus emblica; Tetramerista glabra) he decided to call the place Melaka.

The broad outlines of Pires’ version are similar. According to the Suma oriental, a Palembang prince entitled Paramesvara would not acknowledge his subservience to Java and proclaimed his independence. The Javanese attacked and Paramesvara fled to Singapore with a following which included thirty orang laut, proto-Malay sea people whose habitat developed so quickly, scholars have been drawn by Malay traditions which attribute its founding to a prince from a mighty kingdom situated in Palembang in southeast Sumatra. The town is distinguished from other Malay cities by its 19th century Chinese Malay shop houses and old Portuguese and Dutch buildings. Together with Central Malacca district, it currently numbers about 250,630 inhabitants. Relatively quiet today, Malacca was in the 9th/10th century the bustling heart of the most powerful kingdom in Malay history, the Malacca Sultanate, which played a key role in the expansion of Islam through the Archipelago. The broad outlines of Pires’ version are similar. According to the Suma oriental, a Palembang prince entitled Paramesvara would not acknowledge his subservience to Java and proclaimed his independence. The Javanese attacked and Paramesvara fled to Singapore with a following which included thirty orang laut, proto-Malay sea people whose habitat
was the coasts and offshore islands of Sumatra and the peninsula. In Singapore, Paramesvara killed the local chief, a vassal of the Thai kingdom of Ayudhya, and established himself instead. When the Thais attacked five years later, Paramesvara fled to Muar where he settled, while the orang laut moved about 8 km. further north to the mouth of the Malacca River. Discovering an attractive area up-river (Bertam), they persuaded Paramesvara to establish his residence there. Paramesvara gave the port at the estuary the name Malacca, which according to Pires' version means 'hidden fugitive', although no satisfactory derivation is known. Another suggested derivation given in the Sejarah Melayu is the Arabic malakat (written ملاكات in Malay and ملاكات or ملاك in early Arab trading manuals) = ‘possession’, which the text interprets to mean ‘a place where merchants gather’.

The Malacca dynasty. The precise chronology of the first five rulers varies according to the source, and gravestones have established the reign dates of only some of the later rulers. The following is the currently accepted list of the Malacca dynasty:

- Paramesvara (died 816/1413-14)
- Megat Iskandar Shah (817/1414 - 826/1423-4)
- Sri Maharaja Sultan Muhammad Shah (827/1424 - 847/1444?)
- Raja Ibrahim, Sri Paramesvara Dewa Shah (848-9/1445? - 850/1446?)
- Raja Kasim, Sultan Muzafar Shah (850/1446 - 863-4/1459?)
- Raja Abdullah, Sultan Mansur Shah (863-4/1459? - 882/1477)
- Sultan Alauddin Riyat Shah (882/1477 - 893/1488)
- Sultan Mahmud Shah (893/1488-934-5/1528)

After 917/1511, when Malacca was captured by the Portuguese, the dynasty ruled from capitals in the Riau archipelago and peninsular Johor. The last direct descendant was murdered in 1111/1699.

Malacca as an international entrepôt. In order to appreciate the reasons for Malacca’s place in the expansion of Islam, it is necessary to understand its emergence as an entrepôt. It has been said that Malacca was founded, rather than grew into, a trading city. Its life blood was always commerce, for Malacca was sufficiently important to receive a mission from the Chinese Emperor. During the course of the 9th/15th century, it eclipsed its rivals, notably the ports of Pasai and Aru on Sumatra’s northeast coast, which had long since participated in international trade. Tomé Pires commented, “There is no doubt that Malacca is of such importance and profit that it seems to me it has no equal in the world.”

If the Malay origins of Malacca are accepted, it can be argued that a primary reason for its rapid rise was the fact that its founders brought with them the prestige, administrative traditions and commercial experience of the formerly great port of Srivijaya. However, there were more tangible factors in Malacca’s success as an entrepôt. It was strategically placed on the narrow Straits through which shipping between China and India passed and where the dominant monsoonal wind systems met. Ports in the Straits region had a guaranteed clientele because seaborne trading patterns followed the cycle of the monsoon winds. Ships from India and the western lands arrived at various periods between March and January, while traders from China and the east came between November and March and those from the western archipelago between May and September. For some shipping, there was an enforced wait before they could return home as the monsoon changed direction or gained force; other traders, taking advantage of different wind systems, needed to wait only a short period before they left. Malacca proved ideally suited as a stapling port where goods could be stored, ships reprovisioned and cargoes sold and purchased quickly. It had an attractive harbour with approaches free from shoals and mangrove swamps and, because it lay in the lee of Sumatra, was more sheltered from storms than Pasai. By tropical standards, the climate was pleasant; there were good stands of timber for masts in the jungles nearby; and to the northeast of the settlement was a supply of potable water. Malacca was also well-placed as a collecting point for local jungle and marine products which were valued in India and China. A portage route linked the upper Malacca River with the gold mines of inland Pahang, and numerous rivers that disembogue on both sides of the Straits facilitated the transport of goods between the coast and interior. Finally, the hill to the east of the settlement (Malacca or St. Paul’s Hill) was a natural vantage point where lookouts could be posted to warn against any impending attack.

Diplomatic initiatives by the first rulers further contributed to Malacca’s commercial success. The patronage of China, the greatest Asian power at the time, was assiduously cultivated. When a large Chinese mission arrived in 806/1404, Malacca responded by sending envoys back to the imperial court. As the emperor’s favour, Paramesvara was granted an elevated title and Malacca became the first foreign nation to receive the Yung Lo Emperor’s
personal inscription. Between 806-7/1404 and 838-8/1435, twenty missions were sent from Malacca to China, several of which were headed by the ruler himself. By offering the appropriate tribute and fulfilling its obligations to its Chinese overlord, the new settlement retained China’s favour and protection in the initial stages of its development. For their part, the Ming Emperors obtained as a vassal an important commercial centre which could act as a base for the Chinese naval fleets that periodically sailed to the Indian Ocean. Although the Imperial court withdrew from active involvement in overseas affairs after 837-8/1434, junk trade with Malacca continued. Nor were the close ties of the past forgotten. Sultan Muzafar, Sultan Mansur and Sultan Mahmud requested investiture by China and it was to China that the last Malacca ruler looked for assistance when the Portuguese attacked in 916-17/1511.

The new settlement also reached if not friendship then at least a modus vivendi with its two powerful neighbours, the Thai kingdom of Ayudhya and Majapahit in Java. Founded in 751-2/1351, Ayudhya continued to claim suzerainty over the entire peninsula, and Majapahit too exercised a vague overlordship in the southern peninsula. Accordingly, until the latter part of the 9th/15th century, Malacca rulers acknowledged themselves to be Ayudhya’s vassals. In return, Malacca supplied troops and his suppliers of foodstuffs and other goods, as well as valued trading privileges. When Ayudhya attempted to impose its control there in 809-10/1406, 822/1419 and 834-5/1431, Malacca was able to appeal to its patron China, who ordered the Thais to desist. The relationship with Majapahit, on the other hand, was more harmonious. Malacca continued to accept vassal status till the end of the century, and ties with Majapahit were fostered through regular missions. There were also the close ties of the past forgotten. Sultan Muzafar, Sultan Mansur and Sultan Mahmud acknowledged themselves to be Ayudhya’s vassals. In return, Malacca received supplies of food and people as much as valued trading privileges. When Ayudhya attempted to impose its control there in 809-10/1406, 822/1419 and 834-5/1431, Malacca was able to appeal to its patron China, who ordered the Thais to desist. The relationship with Majapahit, on the other hand, was more harmonious. Malacca continued to accept vassal status till the end of the century, and ties with Majapahit were fostered through regular missions.

The relationship with Majapahit, on the other hand, was more harmonious. Malacca continued to accept vassal status till the end of the century, and ties with Majapahit were fostered through regular missions.

A prime factor in Malacca’s success was the quality of its administration. High priority was given to security within the town and to the protection of foreign merchants and their goods. One very practical measure was the construction of underground warehouses so that stored goods would be less vulnerable to theft and fire. An early Chinese account mentions men patrolling the streets ringing bells, and both Malay and Portuguese sources describe the active part taken by rulers themselves in supervising the enforcement of law. By the middle of the 9th/15th century, a body of laws had been codified regulating punishments and attempting to control abuses such as bribery, especially of judges. A separate maritime code set out the powers of a ship’s captain when at sea and his relationship with the captain and crew of the vessel he was carrying. The fact that foreigners in Malacca had ready access to a legal authority in cases of dispute must have been a great attraction to traders.

Commercial transactions were aided by an efficient administrative system shaped to the needs of the mercantile community. Four Shabbandars or harbour masters were appointed, each representing a group of trading nations. One was for the Gujaratis alone, since they were the most numerous (estimated at 1,000 by Pires); another was for other Indians and for traders from Pegu and Pasai; another for those from Java, the Moluccas, Banda, Palembang, Borneo and the Philippines; the fourth was for traders from Champa, China and the Ryukyu Islands (probably including Japan). Each Shabbandar had the responsibility of welcoming individual traders, assigning them warehouses, overseeing the affairs of his particular group, maintaining a check on weights, measures and coinage, adjudicating disputes between ships’ captains and merchants, and generally supervising the market place.

Customs duties were also carefully regulated. In general, these were paid in accordance with the value of the cargo, with additional gifts presented to the ruler and leading ministers. Though the bulk of Malacca’s revenue came from these duties, they were somewhat lower than those of its chief rivals. The Chinese, furthermore, were exempt from any gift-offering. For large ships, a flat rate of 6% of the total value was levied, eliminating the need for further gifts. To minimise the possibility of extortion or corruption, a consortium of Malacca merchants under the supervision of the Temenggung often bought up the entire cargo of these larger vessels. Each merchant then received a proportion of the cargo equivalent to the amount he had contributed. This proved a speedy and efficient method of clearing cargoes, enabling captains to buy up new supplies and prepare for their homeward journey with the appropriate monsoon. The smaller Malay traders of Malacca acted as middlemen, by selling or bartering the goods in front of their houses, in licensed stalls erected on the bridge over the Malacca River, or in the market place itself. They also carried cargoes by boat to other areas in the region. According to Pires, no less than 84 groups of foreigners, especially Indians, who took up residence on the southern side, impressive buildings were related to the Malacca dynasty through marriage, and some of the highest ministers traced their descent from orang laut. It was the practice to provide the sea people (orang laut, i.e., coastal dwellers) with rewards for their services, and their number was increased to 2,000. By the second reign, the population had swollen to 6,000 and it continued to grow as Malacca’s trade expanded. Peoples from the ar-
the archipelago. Because of the middleman role of Malays, and because their language was easily learnt from the eastern archipelago as well as a distribution point for Indian textiles. This dual role was vital in its commercial success, giving it a great advantage over nearby ports and ensuring its dominance in the Straits region. By the beginning of the 10th/16th century, Pires valued Malacca's trade at 2.4 million cruzados annually, well over half that of Seville, one of Europe's major commercial cities.

Statecraft in Malacca. The prestige which came to Malacca was linked not only to its wealth but to the development of a court culture. A fundamental part of this culture was the formulation of a concept of statecraft that reinforced the status of the dynasty and of Malacca itself. At the apex of the kingdom was the ruler, whose exalted lineage was traced to Sri Tri Buana in Palembang. The legend of the contract made by Sri Tri Buana with the Palembang chief stressed that a terrible retribution would be meted out to any subject guilty of derhaka or disloyalty to the ruler. Although the latter was enjoined to treat all his subjects with respect, the punishment of a wicked king must be left to Allah Almighty. But when a ruler governed justly and wisely, the kingdom would flourish, for the prosperity of the state found its ultimate source in the king. Divine powers were inherent in him, in pre-Islamic times perhaps subsumed in the Sanskrit word sakti or old Malay andeka but later denoted by the Arabic term daulat.

Despite the king's theoretical sanctity and total authority, there were checks against arbitrary rule. It was customary for all state decisions to be based on muafakat or consultation between the ruler and his ministers. The interaction between the two is well expressed by the Sejarah Melayu, which compares the ruler to the fire and the ministers to the firewood "and fire needs wood to produce a flame". Since the ministers were responsible for the daily functioning of the kingdom, they wielded great power. The most important was the Bendahara, originally of commoner and perhaps orang laut birth, but whose line in time became intimately linked with the royal house through intermarriage. Following him came the Penghulu Bendahari, the head of all Shahbandars, who controlled state revenues as well as royal servants and scribes. The Temenggung, originally third in line but later regarded as Bendahara designate, was chief of police and chief magistrate. Finally, the Laksamana headed the military administration and was commander of the ruler's bodyguard and the fleets of orang laut.

Below them were many other nobles, although the numbers are unknown. Some noble positions were created as royal favours, but many others were inherited. The nobles shared in the process of government through collective decision-making in a large assembly where consensus was highly valued. Because of their commercial interests, these men were often extremely wealthy and could call on a large following. Indeed, the greatest challenge a ruler could face was a coterie of hostile ministers and nobles. It is not surprising, therefore, that by the mid-9th/15th century Malacca's great achievements in statecraft had been translated into laws which spelt out special royal prerogatives in dress and ceremonial and the severe penalties for any who flouted this rigid summitey code. In extreme cases, such as the use of words forbidden to any but the king, the offender would be put to death.

While these notions of kingship did not originate in Malacca, it was there that they were fully developed and most clearly articulated. Malacca's great achievement was to redefine a court culture which was then consciously imitated throughout other parts of the Malay-speaking world. Despite local variations, the style of dress, literature and dance, social norms and courtly language were similar throughout the peninsula and most clearly articulated. Malacca's great achievement was to redefine a court culture which was then consciously imitated throughout other parts of the Malay-speaking world. Despite local variations, the style of dress, literature and dance, social norms and courtly language were similar throughout the peninsula and east-coast Sumatra, with considerable influence in Borneo and parts of the eastern archipelago. The fact that this highly-respected dynasty also adopted Islam was not only an important ingredient in its own prestige, but was also fundamental to the spread of Islam in the Malay-Indonesian archipelago.

Islam in Malacca. Arab and Indian Muslim traders had been in the archipelago for several centuries, but Islam did not begin to attract converts in significant numbers until after the 7th/13th century (for the coming of Islam, see MALAY PENINSULA and INDONESIA). By 929-3/1292 the town of Perlak and by 696/1297 Samudra-Pasai on the north-eastern coast of Sumatra had Muslim rulers, but on the peninsula the earliest evidence of an Islamic king is the Trengganu Stone from the east coast. It has a partly illegible kahgra which makes it hard to date. While we have no evidence as to the date of the first Islamic ruler, the first reference occurs in the Bendahara Melayu, 789/1387. Various dates for the conversion of the Malacca ruler, ranging from 811-12/1409 to 839/40, have been suggested, but the precise year is still speculative. While the Islamic name of Iskandar is attributed to Malacca's founder by the Sejarah Melayu, it is unlikely that the first ruler was himself Muslim. Pires attributes the conversion to the second ruler, whom he calls Iskandar. Since his dynastic list omits one king, it is more probable that the conversion he describes can be identified with the third ruler, Sultan Muhammad Shah, whom the Sejarah Melayu depicts as the first royal convert. The second, and conceivably the first ruler, may have assumed the name Iskandar and the Persian title of Shah to enhance their status, but Muhammad is a more appropriate name for a newly-converted king.

The Sejarah Melayu presents the conversion of the third ruler as an act of divine revelation. The Prophet, appearing to him in a dream, instructs him to recite the confession of faith, gives him the new name Muhammad, and tells him of the imminent arrival of a teacher from Jeddah. When the king awakes, he finds that he has been miraculously circumcised and that he is able to recite the creed. That afternoon a religious teacher arrives as his dream had foretold and, convinced by this event, both the ruler and his court embrace Islam.

The precise reasons for the ruler's conversion are still debated. According to Pires' account, the second Malacca ruler was aware that the commercial vitality of Malacca's rival, Muslim Pasai, was largely due to its patronage by Indian Muslim cloth merchants. He therefore took active steps to emulate Pasai's success and himself attract Muslims to Malacca. Muslim traders were granted commercial privileges; residences and mosques were built for them and they were welcomed at court. Pasai, assuming the prestigious role of proselytiser, encouraged this development by sending teachers to Malacca. Pires goes on to say that under the influence of both Pasai and prominent Muslim merchants, the second ruler at the age of 72 adopted Islam and married the King of Pasai's daughter.

Pasai's example and Malacca's desire to attract
merchants must have been persuasive in Malaccan court circles. Arguments in favour of taking definitive measures to secure Muslim trade would have been purely the result of commercial considerations. In the reign of the third ruler can be found in other parts of the Islamic heartlands, and in at least one case the position of Imam, Kadi, or judge in the Islamic religious hierarchy, although there are passing references to Imam, Kadi, and Khatib. It seems that the major religious official, who also played a prominent role in court in property disputes. Kadi. He had far greater authority than did the kadi or judge in the Islamic heartlands, and in at least one case the position passed from father to son. Other religious officials, especially the ruler's own teacher, similarly gained influence in court circles and Malacca's administration because of their assumed piety and superior knowledge.

The high point of royal encouragement of Islam came during the reign of Sultan Mansur, who built a great new mosque for Malacca and made preparations to make the pilgrimage. He died before this could be accomplished, but his son, Sultan Alauddin, said to be devoted to mosque affairs, also announced his intention of going to Mecca. Though he too abandoned his goal, the projects assumed greater significance when it is realised that until the late 19th century no Malay kings had made the hajj.

In the development of Malacca's court culture, Islam's great strength was its willingness, within certain limits, to tolerate many non-Islamic beliefs and traditions. An examination of Malacca's laws (Undang-Undang Melaka) shows that Islam made continuing compromises with existing practices, particularly in regard to criminal punishments and sexual offences. These laws, though drawn up by Islamic jurists and modified over several reigns, often include two penalties for the same crime, one following custom (adat) and the other said to be that of "the

Within Malacca, Islam helped to strengthen the dominance of the court. By the time Islam was formally adopted in Malacca, the influence of Persian notions of kingship, stressing the monarch's sacral nature and elevating him to a place high above ordinary mortals, had spread through much of the Islamic world. The Malacca ruler became part of this tradition. Already regarded as semi-divine, he was now able to assume other new and imposing titles. Coins from Malacca proclaim the ruler as Sultan and Shah, raising him above all other princes in the region who, with the exception of Pasai, bore the simpler title raja. He was also "Helper of the World and of the Religion" (Nāṣir al-dunya wa l-din), "Allah's Shadow Upon the Earth" (Zill Allah fi l- Islam), to whom obedience was due as a religious obligation. In the words of the Sejarah Melaka, "When you do your duty to the Prophet and Allah, with whom a good king is joined, then it is as though you are doing your duty to Allah himself".

There have been suggestions that the Hinduised tult of Sultan Muhammad's successor imply a short-lived rejection of Islam. In general, however, the promotion of Islam in Malacca was very much a matter of undertaking, with the rulers themselves actively encouraging proselytisation. In the reign of Sultan Mansur, marriages between Muslims and infidels were arranged to attract new converts, and apostasy was forbidden. The daily prayers were made obligatory for Muslims, and to a considerable extent the legal system began to favour Muslims, especially as witnesses and in property disputes. The adoption of Islam became increasingly necessary in order to maintain high positions in the court; while able non-Muslims could still rise, they usually eventually converted to the new faith. Nothing is known of the Islamic religious hierarchy, although there are passing references to Imam, Kadi, and Khatib.

Little is known of the nature of Islam in Malacca. The main source for information about its theological content has been the Sejarah Melaka, but although the text contains scattered references to Islam, these cannot be considered as particularly revealing. The reshaping of the royal genealogy to incorporate Alexander the Great (Iskandar Zul-karnain), regarded as a great Muslim warrior-conqueror, the rule of India, conveys more about Malay attitudes to ancestry than to religion. The Islamic invocation at the conclusion of each chapter and the death-bed testimonies of various rulers are purely formulaic phrases. Stories similar to that describing the miraculous conversion of the third ruler can be found in other parts of the Indonesian world and are hardly unique.

Some of the stories were created by post-Reformation references to mysticism, but the Sejarah Melaka itself does not demonstrate any deep knowledge of Sufi thought. The great Persian theologian and mystic, al-Ghazali (d. 505/1111 [q. v.]), mentioned simply as an example of a very learned man; similarly, the episodes which describe the exchange of missions between Malacca and Pasai, apparently over questions of doctrinal interest, may be equally related to the Malay love of riddles and the rivalry between the two courts. In one of these episodes, a teacher from Mecca is sent from Malacca by Sultan Mansur to Pasai to have his book on mysticism, Dart manzum, either authenticated or explained. In another, Sultan Mansur poses to the Pasai court the question of whether those in heaven or hell abide there forever, from which it has been inferred that the work of the late 8th/14th century and early 9th/15th century mystic 'Abd al-Karim al-Djilji (d. 820/1417 [q. v.]) was known in Malacca. Sultan Mahmud later sent a further mission to Pasai to resolve an apparent contradiction between two statements concerning the nature of unbelieft. But while the deliberately undisclosed answer may possibly imply a mystic response, the debate over what distinguished an infidel from an unbeliever was of general concern to Muslims in these early stages of Islamicisation.

Available sources do no more than suggest that Islamic teaching in Malacca was tinged with mysticism. Historical evidence is more revealing about Malacca's prestige as a thriving Muslim centre in the 9th/15th century and about the contribution of Islam to the shaping of Malay culture.

Within Malacca, Islam helped to strengthen the dominance of the court. By the time Islam was formally adopted in Malacca, the influence of Persian notions of kingship, stressing the monarch's sacral nature and elevating him to a place high above ordinary mortals, had spread through much of the Islamic world. The Malacca ruler became part of this tradition. Already regarded as semi-divine, he was now able to assume other new and imposing titles. He was also "Helper of the World and of the Religion" (Nāṣir al-dunya wa l-din), "Allah's Shadow Upon the Earth" (Zill Allah fi l- Islam), to whom obedience was due as a religious obligation. In the words of the Sejarah Melaka, "When you do your duty to the Prophet and Allah, with whom a good king is joined, then it is as though you are doing your duty to Allah himself". There have been suggestions that the Hinduised tult of Sultan Muhammad's successor imply a short-lived rejection of Islam. In general, however, the promotion of Islam in Malacca was very much a matter of undertaking, with the rulers themselves actively encouraging proselytisation. In the reign of Sultan Mansur, marriages between Muslims and infidels were arranged to attract new converts, and apostasy was forbidden. The daily prayers were made obligatory for Muslims, and to a considerable extent the legal system began to favour Muslims, especially as witnesses and in property disputes. The adoption of Islam became increasingly necessary in order to maintain high positions in the court; while able non-Muslims could still rise, they usually eventually converted to the new faith. Nothing is known of the Islamic religious hierarchy, although there are passing references to Imam, Kadi, and Khatib. It seems that the major religious official, who also played a prominent role in court in property disputes. Kadi. He had far greater authority than did the kadi or judge in the Islamic heartlands, and in at least one case the position passed from father to son. Other religious officials, especially the ruler's own teacher, similarly gained influence in court circles and Malacca's administration because of their assumed piety and superior knowledge.

The high point of royal encouragement of Islam came during the reign of Sultan Mansur, who built a great new mosque for Malacca and made preparations to make the pilgrimage. He died before this could be accomplished, but his son, Sultan Alauddin, said to be devoted to mosque affairs, also announced his intention of going to Mecca. Though he too abandoned his goal, the projects assumed greater significance when it is realised that until the late 19th century no Malay kings had made the hajj.

In the development of Malacca's court culture, Islam's great strength was its willingness, within certain limits, to tolerate many non-Islamic beliefs and traditions. An examination of Malacca's laws (Undang-Undang Melaka) shows that Islam made continuing compromises with existing practices, particularly in regard to criminal punishments and sexual offences. These laws, though drawn up by Islamic jurists and modified over several reigns, often include two penalties for the same crime, one following custom (adat) and the other said to be that of "the
law of Allah”. In fact, the so-called “law of Allah” was often adapted from shari'a law to conform with local conditions. This fusion of Islam and Malaccan custom was not always acceptable. An Arab sailor-author whose account is dated 866/1462 considered that, in Islamic terms, Malacca had no culture; he was critical of the marriage between Muslims and infidels, and the fact that divorce was not regarded as a religious act; he also condemned the failure to observe Islamic restrictions against certain foods, especially the eating of dogs and drinking of wine. The *Sparuh Melayu* hints at the continuing tension between Malays and foreign Muslims who looked down on a society they might well consider morally and spiritually lax. One incident describes how a Malacca noble, coming to his religious class intoxicated, accuses his teacher of being in Malacca purely for financial gain; another noble defends the subtext of Malay pronunciation in comparison with that of Arabic.

From an orthodox point of view, Malacca Malays might not have been deeply versed in Islamic theology or punctilious observers of strict *ghara'a* law. On the other hand, even when the faith was only newly-established in Malacca, the sources contain no hint that Muslims from eastern Asia questioned its orthodoxy. Ma Huan, a Chinese Muslim interpreter whose account may relate to any period between 812-13/1409 and 853/1451, notes simply that “the king of the country and all the people follow the Muslim faith, fasting, doing penance and chanting litanies”. By the second half of the 9th/15th century, Malacca was regarded as a focal point for Islamic scholarship, with religious teachers attracted by the patronage of the court and the possibility of supporting themselves by taking on pupils. Islam also became a lingua franca. In the southern Philippines, Borneo and Java, legends link royal conversion to teachers arriving from Malacca or to local figures who received instruction there. The explication and dispersal of Islamic beliefs was facilitated because Malay was already established as a regional *lingua franca*. Furthermore, the process of Islamicisation was fostered by the later Malacca rulers, who regarded themselves and were perceived as the champions of Islam in the region. Sultan Muzafar was said to have actively encouraged princes in the northern coastal ports of Java to adopt Islam, and one Javanese non-Muslim ruler was driven to complain to the Portuguese about Malacca’s *Muslim* fervour. While Malacca laid down the basis for much of Malay culture, Islam itself became so associated with Malay that, in places such as Borneo, to embrace Islam was much to the example of the prosperous and successful dynasty. But the statement clearly has found in Malacca. Sultan Muzafar did, however, defeat the rulers of Kampar and Indragiri on the east coast of Sumatra, forcing them to become Muslim and gaining access to the pepper and gold of the Sumatran interior. His son Sultan Mansur extended suzerainty over Perak, gained after wars with Kedah, Ayudhya’s vassal. His control was strengthened along the east coast of Sumatra, where Siak was defeated and Mansur’s daughter married to its ruler. Mansur’s sister, who married the ruler of Minangkabau, also brought her husband to accept Islam. The next ruler, Sultan Alaudinn, incorporating the entire Riau-Lingga archipelago in his territory, and to ensure his hold over the empire, travelled the kings of Pahang, Kampar and Indragiri at the Malacca court, where he was said to have instanced their belief on Malacca.

Islam must have provided the last ruler of Malacca, Mahmud, with a rallying point around which to mobilise his subjects in campaigns against the Buddhist Thais. During his reign Malacca attacked Kelantan, a Thai vassal in the northern Peninsula, and in 902-3/1497 moved as far north as Ligor. A Thai prince of Patani agreed to accept Melaka’s suzerainty and adopt Islam, while the ruler of Kedah also revoked Thai overlordship. When Mahmud formally renounced any Thai claims to suzerainty in the region, relations with Ayudhya were broken off. In 905-6/1499 the *Thais* attacked Malacca again and possibly made further inroads into the Siamese territories prior to the first arrival of the Portuguese in 941-5/1509. But by this stage, Malacca’s hold over the central and southern peninsula was so strong that Ayudhya was only able to impose overlordship over the most northerly Malay states.

During the 9th/15th century, the nexus between flourishing international trade and a thriving religious environment, characteristic of major maritime ports in the archipelago, is well-exemplified in Malacca. Islam became an integral part of the court culture of Malacca which, admired and emulated throughout the Malay world, also laid the basis for the evolution of modern Malay society. While Malacca played a vital role in the Islamicisation process, Islam was equally important in contributing to Malacca’s special place in Malay history. Perhaps the measure of Malacca’s prestige is expressed most vividly by the last ruler, Sultan Mahmud, who claimed that Malacca was so great that it could be made into Mecca itself. Although implications of Sufi teaching on the importance of the *haj* have been read into this, it is as easy to see it simply as the boast of a proud, wealthy and successful dynasty. But the statement clearly created a dilemma for orthodox Muslims, and according to later Malay arguments it was Sultan Mahmud’s notion that the people of Aru, though converted before Malacca, practised a form of Islam inferior to that found in Malacca. Sultan Muzafar did, however, defeat the rulers of Kampar and Indragiri on the east coast of Sumatra, forcing them to become Muslim and gaining access to the pepper and gold of the Sumatran interior. His son Sultan Mansur extended suzerainty over Perak, gained after wars with Kedah, Ayudhya’s vassal. His control was strengthened along the east coast of Sumatra, where Siak was defeated and Mansur’s daughter married to its ruler. Mansur’s sister, who married the ruler of Minangkabau, also brought her husband to accept Islam. The next ruler, Sultan Alaudinn, incorporating the entire Riau-Lingga archipelago in his territory, and to ensure his hold over the empire, travelled the kings of Pahang, Kampar and Indragiri at the Malacca court, where he was said to have instanced their belief on Malacca.

Islam must have provided the last ruler of Malacca, Mahmud, with a rallying point around which to mobilise his subjects in campaigns against the Buddhist Thais. During his reign Malacca attacked Kelantan, a Thai vassal in the northern Peninsula, and in 902-3/1497 moved as far north as Ligor. A Thai prince of Patani agreed to accept Melaka’s suzerainty and adopt Islam, while the ruler of Kedah also revoked Thai overlordship. When Mahmud formally renounced any Thai claims to suzerainty in the region, relations with Ayudhya were broken off. In 905-6/1499 the Thais attacked Malacca again and possibly made further inroads into the Siamese territories prior to the first arrival of the Portuguese in 941-5/1509. But by this stage, Malacca’s hold over the central and southern peninsula was so strong that Ayudhya was only able to impose overlordship over the most northerly Malay states.

During the 9th/15th century, the nexus between flourishing international trade and a thriving religious environment, characteristic of major maritime ports in the archipelago, is well-exemplified in Malacca. Islam became an integral part of the court culture of Malacca which, admired and emulated throughout the Malay world, also laid the basis for the evolution of modern Malay society. While Malacca played a vital role in the Islamicisation process, Islam was equally important in contributing to Malacca’s special place in Malay history. Perhaps the measure of Malacca’s prestige is expressed most vividly by the last ruler, Sultan Mahmud, who claimed that Malacca was so great that it could be made into Mecca itself. Although implications of Sufi teaching on the importance of the *haj* have been read into this, it is as easy to see it simply as the boast of a proud, wealthy and successful dynasty. But the statement clearly created a dilemma for orthodox Muslims, and according to later Malay arguments it was Sultan Mahmud’s notion that the people of Aru, though converted before Malacca, practised a form of Islam inferior to that found in Malacca. Sultan Muzafar did, however, defeat the rulers of Kampar and Indragiri on the east coast of Sumatra, forcing them to become Muslim and gaining access to the pepper and gold of the Sumatran interior. His son Sultan Mansur extended suzerainty over Perak, gained after wars with Kedah, Ayudhya’s vassal. His control was strengthened along the east coast of Sumatra, where Siak was defeated and Mansur’s daughter married to its ruler. Mansur’s sister, who married the ruler of Minangkabau, also brought her husband to accept Islam. The next ruler, Sultan Alaudinn, incorporating the entire Riau-Lingga archipelago in his territory, and to ensure his hold over the empire, travelled the kings of Pahang, Kampar and Indragiri at the Malacca court, where he was said to have instanced their belief on Malacca.

Islam must have provided the last ruler of Malacca, Mahmud, with a rallying point around which to mobilise his subjects in campaigns against the Buddhist Thais. During his reign Malacca attacked Kelantan, a Thai vassal in the northern Peninsula, and in 902-3/1497 moved as far north as Ligor. A Thai prince of Patani agreed to accept Melaka’s suzerainty and adopt Islam, while the ruler of Kedah also revoked Thai overlordship. When Mahmud formally renounced any Thai claims to suzerainty in the region, relations with Ayudhya were broken off. In 905-6/1499 the Thais attacked Malacca again and possibly made further inroads into the Siamese territories prior to the first arrival of the Portuguese in 941-5/1509. But by this stage, Malacca’s hold over the central and southern peninsula was so strong that Ayudhya was only able to impose overlordship over the most northerly Malay states.
attacked by a Portuguese fleet under the command of Afonso de Albuquerque. The Portuguese aim was to establish a port for their expanding Asian trade, to gain access to and command of eastern spices, and to strike a major blow at Christianity's great rival, Islam. Internal dissensions in Malacca, and Portuguese military superiority, led to the flight of Sultan Mahmud with 3,000 men and the fall of the city itself on 21 Dżumáda I 917/10 August 1511. There can be little doubt that at the time both Malays and Portuguese felt the religious nature of the conflict to be as compelling as the commercial one. Several Portuguese take-hostage in Malacca in 914-15/1509 were circumcised and forcibly converted by Sultan Mahmud's orders. His refusal to negotiate with Albuquerque two years later was attributed to the influence of Muslim merchants, especially those from India who had previously experienced conflict with the Portuguese. Albuquerque for his part saw "Moors" as Portugal's implacable enemies, both on commercial and spiritual grounds, and gave orders that any Malay captured should be put to death. The Hindu merchants of Malacca regarded the Christian Portuguese as a natural ally against their Muslim rivals and gave Albuquerque valued assistance both before and after Malacca's fall.

In the aftermath of the attack, Malacca was sacked and mosques and royal graves destroyed to provide stone for the great fortress, La Formosa, built on the site of Sultan Mansur's great mosque. A Portuguese governor and administration was appointed, Hindus were placed in high positions and relations with neighbouring non-Muslim rulers were cultivated. In time, a modus vivendi was reached with other Muslim states whose economy had come to be closely linked with Malacca's. But despite sustained efforts, the Portuguese were never successful in reviving Malacca's former commercial supremacy. While it remained an important entrepot, foreign merchants complained of high duties and official corruption, and Muslim traders preferred to patronise Islamic Atjeh. Furthermore, Portuguese Malacca faced the continuing hostility of the Malacca dynasty's heirs. Setting up a new capital in the Riau-Lingga archipelago, they made repeated attacks on Malacca in an effort to recapture the city. When the Dutch appeared in the area in the early 11th/17th century, the Malacca dynasty, now based in peninsular Johor, were more than ready to assist the Dutch East India Company (VOC) in a siege of Malacca, perhaps hoping that they might thereby return. However, after Malacca's fall to Dutch forces in Shawwal 1050/January 1641, it became simply one more port in the vast VOC trading network. Unlike the Portuguese, the Dutch never saw Malacca as an important commercial centre. Its major function was to act as a strategic guard post on the Malacca Straits, with commercial traffic focussed on Batavia, the VOC capital.

Under the Dutch administration, the Malay population (including Malay speakers from elsewhere in the archipelago) slowly increased to more than 5,000 and the Malay rulers did frequent Malacca, but not in great numbers, being always the object of Dutch suspicion. But Islam fared better under the Protestant VOC than under the Roman Catholic Portuguese. The VOC did not encourage missionary activities among Muslims, and in many ways was more concerned about Catholicism. However, without a Malay court to act as a religious sponsor, and without the links to the Muslim world provided by a cosmopolitan trading port, Malacca made no further significant contribution to the development of Malay Islam. In 1795, during the Napoleonic Wars, it was taken over by the British to prevent its capture by the French. Under the British, the famous fort was destroyed to forestall its use by hostile forces in the future. Malacca reverted briefly to the Dutch in 1818 but in 1824, by the terms of the Anglo-Dutch Treaty, was returned to the British in exchange for Benkulen (west Sumatra). In 1826 it was incorporated into the Straits Settlements, but was always subservient commercially to Penang and Singapore, which became renowned centres for Islamic study. In 1867 the Straits Settlements were transferred from the Government of India and brought directly under the Colonial Office. During the colonial period (1874 until 1957), Malacca was under the control of a British Resident responsible to the Governor in Singapore. It became part of the independent Federation of Malta in 1957.

MALACCA [sec mala‘i]

MALA‘I (a. pl. of mala‘i), appears in a number of sources, in a figurative sense, as the equivalent of musical instruments; it is sometimes replaced by ala‘ al-labhe or linked with the word laba‘ which means “game, pastime, amusement”, as e.g. in certain works called ki‘dah al-labhe wa ‘l-mala‘i. According to the L, the verb laba‘ denotes an action aimed at amusing and at securing farab, the emotion of joy or sadness; this further term, closely associated with music and its power, gives birth to another appellation dlat al-tarab. Dozy, in his Supplement, ii, 554, lists several terms which come from the same root and are connected with the same idea: mulhi “musician, instrumental player, minstrel, balladeer whose profession is to amuse the masses”; the feminine mulhiya would mean “dancer”, according to Quatremère, but Dozy remarks “I believe rather that this musical instrument, more probably, we have arbâh al-mala‘i: ‘musicians’ and ala‘ al-mala‘i “musical instruments”. We have thus already three equivalent terms denoting the same idea.

These few explanations of the usage of the term mala‘i underline very clearly the association of the designated object with the idea of game, pastime, diversion and amusement, a point which leads us to examine certain questions of principle. Does this obvious connection with games and diversion indicate a certain ideological and conceptual attitude which could be at the very origin of the term in its relationship with music? Is it therefore possible that the term was adopted at a given moment and in particular circumstances? Was it, together with its variants, the sole term used to designate the musical facts to which it corresponds? Are the various principles given by Dozy exceptional ones, or do they rather indicate that the term mala‘i is a wider one and extends beyond the idea of musical instruments to denote, e.g., music in general, and above all, the art-forms of music? Is there perhaps a more restricted sense denoting e.g., a particular category of instruments? As we shall see, it seems that mala‘i is a term with manifold usages.

A study of the sources on music reveals to us a very significant state of affairs. On one side, the term mala‘i, either alone or linked with laba‘, appears in the title of 7 or 8 works which, accordingly, set forth systematically the facts concerning it. On the other, mala‘i appears in the chapters and passages devoted to music which form part of works belonging to certain categories of writings, but is almost absent from treatises with a speculative character. These last, which examine closely the mathematical, theoretical and philosophical aspects of music, like those of al-Kindi, al-Fârâbi, Ibn Sinâ, etc., use other terms to denote the musical instruments or the other concepts covered by mala‘i, such as ala‘ pure and simple, or ala‘ al-mala‘i, ala‘ al-jubâr and ala‘ al-qinnâ. The Epistle of the Ikhwan al-Safa, which is on the borderline between the opposing categories, uses on one occasion at the beginning of the treatise the term in the combination sinâ‘at al-mala‘i (instrumental art or music instrumentals), but in the definition of music and its aims twice repeated we read “mâs‘âkî is qinnâ, the mäskhâr is the musician and the mäskhâr are musical instruments, ala‘ al-qinnâ”. Amongst the rare exceptions in the speculative treatises, one may cite a case of a late, anonymous treatise calledMu‘jzat al-anghâm wa ‘l-hunûk wa ‘l-tarab fi ‘l-ithnâ‘ yâhâr wa ‘l-sîtâ “Knowledge about the melodies and modes and the happy emotions caused by the 12 and 6 modes” (ms. Top Kapu Sarayi A. 2130, pp. 2-47), where it says “The search for farab has led to the invention of mala‘i (musical instruments) by the philosophers”.

It is interesting to note that seven out of the eight treatises completely devoted to mala‘i saw the light in the 3rd/9th century; the eighth one, the Dhamm al-mala‘îb wa ‘l-mala‘i by Ibn al-Kayyâl (d. 938/1532), is conceived in the same spirit and bears almost the same title as one of the seven others, Ibn Abî ‘l-Dunây’s Dhamm al-mala‘î (author d. 281/894). Like this last, Ibn al-Kayyâl brings together games and music in his treatise (ms. Chester Beatty 3419, fols. 1-7a), of which the first two-thirds are devoted to games and the last third to music, dancing and musical instruments, whose origin is attributed to Satan. Given that the theologian and jurist Ibn Abî ‘l-Dunây’s Dhamm al-mala‘î is the oldest extant work of this kind, it is plausible to suggest that it was indeed he who established the model of the systematic and expanded connection of “music and musical instruments” with “games, pastimes and amusement”.

Ibn Abî ‘l-Dunây in fact attacks violently music, which he regards as a diversion from the life of devotion and piety; his attack covers all kinds of musical activity, including the instruments linked up with games and other types of pleasure. This treatise accordingly became a source of inspiration for later generations of theologians and jurists who opposed music. Discussion concerning mala‘i in either a wide sense, embracing the art-forms of music and all instruments, or a more restrained sense crops up again whenever it is a question of sama‘ (q.v.); in the numerous passages about the problem of mala‘i, we find attitudes varying from total prohibition to total admissibility of music, dancing and all instruments. Hence in certain cases, the term mala‘i acquires a very wide sense, embracing the art-forms of music and the dance; in others, it is restricted to instruments given by the jurist as forbidden in- struments of amusement,学问 and piety; his attack covers all kinds of musical instruments; amongst the rare exceptions in the different treatises, see Shiloah, The theory of music in Arabic writings, 50-2), discusses the case of several instruments, such as the daf (tambourine) and the ghabâba and yârsâ (flutes), then he deals separately with the mala‘i, which are identified with mawsî’i (a generic term for stringed instruments). In this case, one must understand that mala‘i denoting the forbidden instruments for amusement correspond essentially with stringed instruments, those par excellence of art-form music. The Mâlikî jurist Ibn al-Hâdîj (d. 737/1336) confirms in some measure this remark in his Madkhal al-šarî‘ al-darîfî, where he states that ghanîa, listening to slave musicians, to the šid, the jâbûr and other instruments of amusement (mala‘i) is to be condemned. An attitude similar to al-Adîwî’s turns up again in the treatise of Ibn al-Kaysarâni, Fi djawâd al-sama‘î, in which the author begins also by putting forward the idea that certain instruments are allowable, but then devotes a passage to mawzûmûr and mala‘i, which are absolutely forbidden. The jurist al-Shamî (d. 993/1585) in his Nıṣâb al-dhisâb writes that if the šid, the jâbûr and the sama are publicly on view, it is the mahbûs’s duty to destroy them. Finally, in this type of writings, the term mala‘i or ala‘ al-labhe is taken, according to the attitude of the various authors, at times as the equivalent of all the concepts concerning art-form
music and the dance and at times as designating certain instruments which are universally condemned.

In the general schema of the literature on samā‘, there are other points of view about the term and concept of malāhī. Al-Nāhilusi (d. 1143/1731) in his Īdāb al-dalālāt fī samā‘ al-ālāt (ed. Damascus 1302/1884) puts forward the idea that the word labw, by which one describes the instruments (malāhī or ālāt al-labw), does not necessarily indicate that musical instruments are invariably used with the aim of amusement. This qualification and the prohibition which follows from it are justifiable when the end sought is mere amusement. But when they contribute to the spiritual elevation of the Sūfī, this idea of distraction and amusement is no longer valid, since an instrument as such is not to be condemned because of its shape or the harmonious sounds which it makes; thus listening to the beautiful sounds made by birds is not forbidden. We find exactly the same attitude again, set forth in more or less the same terms, in the work of al-Nabulusi’s pupil al-Sarakhsi (d. 1312/1905). Said al-Majdūlī (d. 775), Rāfī al-majdūli fī ḥukm ilabāh samā‘ al-ālāt bi ‘l-mujahmāt al-tāsyihāt (ms. Berlin, We 1811, fols. 1-29).

With this refutation, which reduces to some extent the pejorative sense of malāhī and which rejects the ideological attitude which associates them wholly with maleficient effects, we can pass on to the class of writings which presents the point of view of literary exponents and which is seen in the works of the 3rd/9th century devoted to malāhī. Amongst these, some are unfortunately lost, and we only have the titles in bibliographical works. Ibn al-Kīfī, in his T. al-Ḥukamā‘, mentions a treatise by al-Sarakhsi (d. 286/899), whose complete title is Kitāb al-Lahw wa ‘l-malāhī fī ‘l-ghnām wa ‘l-majdūlām wa ‘l-majdūlasa. Ibn Abī Usaybi’a, in his ‘Uyun al-‘inbā‘, gives an abridged title for the same work, K. al-Lahw wa ‘l-malāhī, and Hājjī Khālīfah refers merely to a K. al-Lahw; in the light of the practices of al-Sarakhsi’s time, it may be that we have here more than one work. Amongst the lost treatises on music of Thābit b. Kurra (d. 288/901), a Kitāb al-Lahw wa ‘l-malāhī is mentioned in the previously-cited work of Ibn al-Kīfī. Finally, in the Fihrist, Ibn al-Nadim cites a lost work of Muhammad b. Yahya b. Abī Mansūr al-Mawṣiḥī (3rd/9th century) which had the title Kitāb al-Ud wa ‘l-malāhī.

We come now to two final works of the 3rd/9th century which dealt with malāhī and which are, at the same time, the oldest treatises on music which have come down to us. The first, the Kitāb al-Malāhī, is that of the famous grammarian of the Kūfān school al-Mu‘āfiḍd al-B. Salama (d. ca. 592/905 [q.v.]). The work is essentially apologetic, and takes up the defence of two causes set forth in the introduction in the following order:

(1) Refutation of the opinion, probably that of the Shu‘ubiyah [q.v.], according to which the Arabs did not know the ‘ud and the other malāhī and the Arabic language did not possess the technical terms for the different parts of the instrument and for other musical features; and (2) demonstration of the fact that music and musical instruments were not illicit. The author begins with the second proof, to which he devotes a few lines only, adding some pieces of evidence in favour of music and musical instruments. The greater part of the treatise is thus devoted to the first proof, in which the attitude of the grammarian becomes clear. He comments upon a large number of Arabic terms relating to instruments and to music which he has gleaned from classical Arabic poetry. The method of presentation starts off from the origin of each instrument considered, most frequently, in the style of the aswād [q.v.] literature. The ‘ṣud, regarded as the king of instruments, comes first; in this connection, the author quotes Ḥālam Ibn al-Kullī for the legend of its invention by Lamēch [see Lamēch]. After having mentioned other Biblical inventors of instruments (Tzila, daughter of Lot, etc.), he moves on to details of terminology, supporting each piece of commentary by references to poetry. Thus he passes under review the different names for the ‘ṣud, sc. kirān, mizāhar, harbat and mawṣūl, the term for ‘string’, sc. watar, μαθάδ, and šar‘ā‘; the special name for the ‘ṣud’s four strings, sc. zir, μαθάδ, μαθάδ and bamm; its frets (daikā‘) are called in Arabic šāhī, the Arabic equivalents of the tunbār, a lute with a long neck and plucked strings, sc. īdirrīd and al-wāsīn; and the names of the ten different kinds of wind instruments, sc. mūzār, mizāwār, zamānār, nāy, kusayb, mughṭak, yarā‘, sanbak and hanubka. Still on the lexicographical level, at the end of the treatise the author adds the first forms of singing developed in the pre-Islamic period, sc. badī‘, nāb, ṣnadd and ḥasāf. In addition to its lexicographic importance, the work has a special interest for musicology in its aspect of organology (i.e. the science dealing with musical instruments). This interest extends in fact to all the categories of the literature on malāhī, and provides information to the scholar about a large number of instruments since fallen into disuse. Thus al-Shalālī (5th/11th century) mentions in his Kitāb al-Imā‘a ‘l-w-nfisī fī mas‘alat samā‘ al-ṣamā‘ 28 different instruments, and the total number to be gleaned from this literature amounts to several dozen.

To the same period as al-Mu‘afядd b. Salama’s work belongs that of the geographer Ibn Khurradādhbih (3rd/9th century [q.v.]), his Kitāb al-Lahw wa ‘l-malāhī. Despite certain similarities to the preceding work, this latter one is much more complex and sophisticated. In the same fashion as the Kitāb al-Malāhī, it opens with a section refuting the opinions of those who prohibit music and gives the story of the invention of the ‘ṣud by Lamēch as well as the stories of other inventors of musical instruments in Biblical times, but Ibn Khurradādhbih slants his work towards wider and more universal horizons. His interest is indeed more centred on cultural and historical than lexicographical questions. In furtherance of these, he touches on the music of other peoples, in particular, on that of the Persians and Greeks; and he pictures the musical world on a wide scale, dealing with the power of music and its different effects. From his glimpse at world music, he passes to its development among the Arabs, and then devotes the greater part of the work to a series of biographies of all the famous musicians from the beginnings of Islam to his own time. As a result, the term malāhī has here a wider sense and becomes the equivalent of “music”. Hence it is not by chance that al-Mas‘ūdī (d. 345/956 [q.v.]) has cited, in the form of a dialogue in his Murūjd al-dhahab (see BIBL.) the essential part of Ibn Khurradādhbih’s work. Al-Mas‘ūdī related indeed that the caliph al-Mu‘tamid, who was a fervid lover of music, asked Ibn Khurradādhbih to compose for him a treatise on the origins and evolution of music; the discourse which Ibn Khurradādhbih sets forth in response to the caliph’s request follows almost word-for-word the first part of the K. al-Lahw wa ‘l-malāhī as far as the point where the long series of biographies begins.

These two works are the beginning and the end of this category of writings on the malāhī. They make the opening of a genre of writings on music which borrows from that aswād literature which has anecdotal and
edifying works which do not however use the word *mālahī* any longer in their title. Nevertheless, the term was to remain for a long while in use sporadically. It is often to be found in the *Kitāb al-Āghārī* as e.g. in the passage concerning the caliph al-Mu'tamid cited above, in which it is said that he had a passion for *mālahī*. Moreover, in regard to the caliph Yazīd (60-4/680-3), the same source states that “he was the first to introduce *mālahī* (musical instruments) and singers at court”.

In conclusion, we are inclined to admit that the term *mālahī* came into current usage of the 3rd/9th century above all with the sense of musical instruments. Within the circles of those religious authorities opposed to music, their association with amusement is seized upon and stress laid on this pejorative connotation, which at times enables these authorities to attack what they regard as the negative side of music and its emotive power. It is accordingly in this sense that the term *mālahī* is perpetuated in the corresponding literature. In the circles of literary adepts, the sense of amusement is taken up as the equivalent of *farāb*, the dominating and much sought-after effect of music in that period. Its substitution takes place at the moment when the theoretical writings on music become formed, without the influence of Greek treatises translated into Arabic, i.e. towards the beginning of the 9th/10th century. The term disappears fairly rapidly from this literature, because the philosophers and theorists inveigled against the identification of music with playing, pastimes and amusement; hence they had no interest in utilising a term which denoted the very thing which they wished to avoid.

**MALĀHI (a.)**, pl. of *malīma* [q. v.], which is the subject of the article below mainly devoted to the *Malīmah Dānṣūdī* and its several versions culminating in an apocalyptic current, at first in connection with the announcing of the approach of the Mahdī [q. v.] and then oriented towards the predictions concerning the fate of different dynasties. These oracles gave birth to the elaborating of so-called *malāḥīm* (or *ḥīdāyān*) works, which have been already spoken of in the article *ṭalāfīr* and the subject is only raised again here in order to note the use of the term in the sense of predictions of a historical character (see e.g. al-Maṣāʿūdī, Murādī, i, 8, ii, 335 = §§ 6, 756) and to highlight the fact that Ibn Khaldūn enumerates several of these writings in a section about the beginnings of states and of nations which he places in the last pages of ch. 3 of Book 1 of the *Muqaddima* (Ar. text, ii, 193 ff., tr. of Slane, ii, 226 ff., tr. Rosenthal, ii, 200 ff.). There follows here a list of the texts of which he acquired knowledge, mainly in the Maghrib, but some also in the Orient:

— A *kasīda* of Ibn Murānā on the Lamūrī, i.e. the Almoravids, who seized Cēta [see SÀTAR] in 476/1083-4;
— A *kasīda* of 500 verses or 1,000 verses called *al-Tabhāb* and concerning the Almohads;
— A *maḥāb* ‘amusing piece’ or ‘playing thing’ of about 500 verses given in *zafāl* [q. v.] form, attributed to a Jew and also concerning the Almohads;
— A *kasīda* on the Hafsids of Tunis attributed to Ibn al-ʿAbbār [q. v.], but belonging to a person of the same name who was a tailor;
— Another *malīma* on the Hafsids;
— A *muṣāt* attributed to a certain Hawshānī and written in dialect Arabic in such an hermetic style that it would need an allegorical commentary.

In the Orient, Ibn Khaldūn acquired knowledge of a *malīmāt* attributed to Ibn al-ʿArabi [q. v.], the *Ṣuyyāt al-bādh* [see O. Yahia, *Histoir e et classification de l’œuvre d’ Ibn Arabi*, Damascus 1964, no. 708; T. Fahd, in Al-Qaṣīr, above], as well as several others attributed to Ibn Sinān, to Ibn Abī ʿl-ʿAbk [see Goldziher, in *ZDMG*, lxxiv (1921)] or, on the Turks, to the Sūfī al-Bāṣṭarbākī.

One should note that the works consulted by Ibn Khaldūn in the Maghrib are all in verse (classical or dialectical), that they were widespread in his own time and that he himself attached no credence to any of them.

**Bibliography:** In addition to references given in the article, see A. Kovalenko, Magee et Islam, Geneva 1981, index, and the Biblioth. al-Qaṣīr and *Malīmah* (Ed.)

**MALĀHIMA (a.)** angels (Persian “angel” — frights).

1. In the Kurān and in Sunni Islam.

The form *malāhīma* is the broken plural in Arabic of a word going back to early North-West Semitic (there is no cognate in Akkadian). Ugar. mlk ‘messenger’. Aram. mlṭ ‘messenger’ and O.T. Hebr. mlāḏ ‘messenger’, the root in Arabic being referred by the lexicographers and commentators to a root ml-ṭ or even l-ṭ (see LA, xii, 272-4, 370-1; al-Ṭabarī, Taṣīfī, i, 150; Lane, *Lexicon*, i, 81c), which they consider original to Arabic. A. Jelfery, *The foreign vocabulary of the Qurān*, 269-70, following e.g. K. Ahrens, *Christliche im Koran*, in ZDMG, lxxiv (1930), 24, thought it fairly certain that the proximate source of the word in Arabic was nevertheless the Ethiopic mlṭ, pl. mlṭēk, the usual equivalent in that language for Grk. ἄγγελος ‘messenger > angel’; the word was presumably a loanword from Ethiopic into Aramaic or Hebrew. Since it is so frequently used in the Korān, Muhammad’s audience was obviously familiar with it, and it must have been a pre-Islamic borrowing. The singular in Arabic is normally mlṭ without hamza, and so always in the Kurān; although LA in two places (xii, 274,8; 371,5) quotes the same verse as a proof that mlṭ does occur, but as an exceptional form (ḥālāmāḏ). Both singular and plural in Arabic are used only in the sense “angel”. In the Kurān it occurs twice in the dual (malṭēk, II, 96; VII, 19); of the two angels Hārūt and Mārūt [q. v., and sura], and of Adam and Eve being tempted in the
Garden to believe that they may become angels. The plural occurs very often in the Kur'an (in Flugel's _Compendium_ under i-ku, 171) but the singular only 12 times (Flugel, under m-ka, 183). These are the people demanding revelation by an angel rather than a human being (bashar, VI, 8, 9, 50; XI, 15, 33; XVII, 97; XXV, 8); women think Joseph an angel for his beauty rather than a human being (bashar, XII, 31); an angel's intercession (isra'a', LIII, 26) does not avail; twice as collective for angels, beside the 'arq (LXIX, 17), and in rows and rows (LXXXIX, 25). In XCVII, 11, "the angel of death" (malak al-maw'ut) occurs but not by name; see 'izara'ul, and references in tradition in Wensinck, _Handbook of Early Muhammadan Tradition_, 22b. Djibrib, the angel of revelation, is named three times (II, 91, 92; LXVI, 4); cf. traditions on him in Muslim, Constantinople 1333, i, 109-11 and other references in Wensinck, 59. In Kur'an XXVI, 193-5, Djibrib unnamed, is called "the Faithful Spirit" (ar-ruh al-'amir); he brings down the revelation to the kalb of Muhammad in a clear Arabic tongue. There are other descriptions of him, still unnamed, in LIII, 5-18 and LXXXI, 19-25, as appearing plainly to Muhammad in revelation. He, as "our Spirit" (ribahana), was sent to Maryam (XIX, 17). He is called the "Holy Spirit" (ruh al-khdus) in XVI, 104 and Allah aided Isra'il with the name (II, 84, 245, 309). This was confirmed (II, 92) as an angle of the same rank as Djibrib; see a long and apparently true story of how his naming came about in al-Baydawi (ed. Fleischer, i, 18, 18 ff.); in traditions he, with Djibrib, appears to Muhammad and instructs him; he does not laugh (Wensinck, 152b); Muhammad called the two his waizirs of the angels. To Isra'il [p. e.], the angel with the trumpet of resurrection, there is no reference either in the Kur'an or in canonical traditions, but very much in eschatological legend. In Kur'an XLIII, 47, the tortured in hell call to the keeper of hell, "O Malik!" and in XCVII, 18, the guards of hell are called al-Zabaniya, an otherwise unused word, meaning apparently, "violent thrusters" (LA, xviii, 53; the number of these, LXXIV, 30, is nineteen, and they are accepted specifically as to be angels, apparently to guard against the idea that they are devils; they are called "rough, violent" (ghazas shiddd). Another class of angels are those who are "Brought Near" to Allah, al-mukarrabun (IV, 170); these praise Allah day and night without ceasing (XXI, 20); al-Baydawi calls them also al-salaatuwayn (on Kur'an II, 28; ed. Fleischer, i, 47, 23), and al-karrushayn (salam; al-ruh) on Kur'an IV, 170 (ed. Fleischer, i, 243, 25) as those that are around the 'arq. The same term, mukarrab, is used of Isra'il (III, 40) as he is in the company of the angels nearest Allah; cf. 'izara'ul for his semi-angelic character. At the beginning of the Sira of the Angels (XXV) there is a significant description: "making the angels messengers (rasuln), with wings two and three and four: He increases in the creation what He wills", this has had much effect on later descriptions and pictures. They are guardians (hafsiz) over mankind, cognisant of what man does and writing it down (katsibin; LXXXII, 10-12), in XXI, 94 the writing down is ascribed to Allah himself. In LXX, 4; LXXVIII, 38; XCIV, 4, there occurs the very puzzling phrase "the angels and al-ruh". Al-Baydawi on the first two passages shows how perplexing the distinction was found (ed. Fleischer, ii, 356,5, 303,4): "the ruh is an angel set over the spirits (ar-ruh); or he is the whole genus of spirits; or Djibrib; or a creation (khulik) mightier than the angels", cf. too, al-Kazwini's _Aqida, ed. Wustenfeld, 56. For spirits and the conception 'spirit' in Islam, see Ruh. In the Kur'an there is no reference to the two angels, Munkar and Nakir, who visit the dead man in his grave, on the night after his burial, and catechise him as to his Faith. Thereafter, if he is an unbeliever, his grave becomes a preliminary hell, and if he is a believer, it becomes a preliminary purgatory from which he may pass at the Last Day into paradise; it may even, if he is a saint, be a preliminary paradise. This is called technically the Questioning (isu'ul) of Munkar and Nakir and, also, the Punishment of the grave (al-fazak al-bahr [p. o.]). This doctrine, similar to the Last Judgement of Christian theology, is one that is accepted by those who believe the same (to be believed on oral testimony) and is based on the implicit meaning of Kur'anic passages (XIV, 32; XL, ii, 49; LXXI, 25) and upon explicit traditions (al-Taftazani's commentary on al-Nasafi's _A'ka''id, Cairo 1321, 109; the _Musaddif_ of al-Ighi with commentary on al-Djurjani, Bllk 1266, 590 ff.). There is a still fuller account and discussion by the Hanhabi theologian Ibn Kayyim al-Dawziya (Brockelmann, ii, 106, no. 23) in his _Kitab al-Ruh_, Haydarab'd 1324, 62-144, §§ vi-xiv.

The angels are also called the heavenly host, or multitude (al-mala' al-al-im), LXXXVII, 8, XXXVIII, 69) and guard the walls of heaven against the "listening" of the djinn and shaytans. See further on this under Shaitan.

The Kur'an lays stress on the absolute submission and obedience of the angels to Allah "To Him belong the creation what He wills"; this has had much effect on the conception of the angels in the imagination of the people; and in the accounts of how the angels are distinguished as to their obedience (al-Taftazani's commentary on al-Nasafi's _A'ka''id, Cairo 1321, 109; the _Musaddif_ of al-Ighi with commentary on al-Djurjani, Bllk 1266, 590 ff.). There is a still fuller account and discussion by the Hanhabi theologian Ibn Kayyim al-Dawziya (Brockelmann, ii, 106, no. 23) in his _Kitab al-Ruh_, Haydarab'd 1324, 62-144, §§ vi-xiv.

The angels are also called the heavenly host, or multitude (al-mala' al-al-im); LXXXVII, 8, XXXVIII, 69) and guard the walls of heaven against the "listening" of the djinn and shaytans. See further on this under Shaitan.

The Kur'an lays stress on the absolute submission and obedience of the angels to Allah "To Him belong the creation what He wills"; this has had much effect on the conception of the angels in the imagination of the people; and in the accounts of how the angels are distinguished as to their obedience (al-Taftazani's commentary on al-Nasafi's _A'ka'?id, Cairo 1321, 109; the _Musaddif_ of al-Ighi with commentary on al-Djurjani, Bllk 1266, 590 ff.). There is a still fuller account and discussion by the Hanhabi theologian Ibn Kayyim al-Dawziya (Brockelmann, ii, 106, no. 23) in his _Kitab al-Ruh_, Haydarab'd 1324, 62-144, §§ vi-xiv.

formed of a madridj of fire and Adam of that which was described to you" (Muslim, Constantinople 1333, vii, 226; al-Baydawi, i, 52,4). Another difficulty in the doctrine of the impeccability of the angels is the Qur'anic statement as to Härūt and Mārūt referred to above. These two angels are supposed to have yielded to sexual temptation, to be confined in a pit near Babil and there to teach magic to men. But, it is answered, (a) the Qur'ān says nothing of their fall; (b) teaching magic is not practising magic; (c) they always first warn those who come to them, "We are only a temptation (fitnā), so do not be disposed of" (Qur'ān, ii, 96); cf. further, al-Tafṣāzānī on the 'Askā'id of al-Nasafi, Cairo 1321, 133.

In al-Baydawi on Qur'ān, ii, 32, there is a long discussion of the angelic nature (ed. Fleischer, i, 51, 20 to 52,8) which, however, runs out in the despairing statement that knowledge on the point is with Allāh alone (al-šim 'inda 'l-lāh). Perhaps Ibn Isā was of the djinn as to his actions (fitnā) but of the angels as to species (nās). Also, Ibn 'Abbās has a tradition that there was a variety (darb) of angels that propagated their kind (this has always been regarded as an essential characteristic of the djinn and of the shayāns as opposed to the angels) and who were called al-djinn; and Ibn Isā was one of these. Or, that he was aālnāwānī brought up among the angels and identified with them. Or, that the djinn were among those commanded to prostrate themselves to Adam. Or, that some of the angels were not impeccable, although that was their characteristic in general, just as some men, e.g. the prophets, are guarded against sin but most are not. Further, perhaps a variety of the angels are not essentially different from the shayāns but differ only in accidents and qualities as men are virtuous or evil, while the djinn unite both, and Ibn Isā was of this variety. The tradition from 'Abbās is no answer to this explanation, for light and fire in it are not to be taken too precisely; they are used as in a proverb, and light is of the nature of fire and fire of light, they pass into another; fire can be purified into light and light obscured to fire. So al-Baydawi.

With this should be compared the scholastic discussion of the djinn with the commentators of al-Djurjānī, Bālāk 1266, 576. In it the objector to the 'īsma of the angels has two grounds: (a) their urging upon Allāh that he should not create Adam showed defects (slander, pride, malice, finding fault with Allāh) in their moral character; (b) that Ibn Isā was rebellious, as above. These grounds are then answered scholastically. Then various Qur'ānic texts, as above, on the submission and obedience of the angels are quoted. But it is pointed out that these texts cannot prove that all of them, at all times, are kept free from all sins. The point, therefore, cannot be absolutely decided. Individual exceptions under varying circumstances may have occurred, just as, the shayāns as a class were created for evil (khulāka 'i l-sharr), there is a definite tradition (Shahr al-Māturīdī on al-Fālqi al-skālī ascribed to Abū Hanīfa, Ḥaydarābād 1321, 25) of one Muslim shayān, a great-grandson of Ibn Isā, who appeared to Muhammad and was taught by him certain sūras of the Qur'ān.

The story of Hārūt and Mārūt suggests that the angels possess sex, although they may not propagate their kind. But "they are not to be described with either masculinity or femininity" ('Askā'id ed. of al-Nasafi, Cairo 1321, 133). Al-Tafṣāzānī and the other commentators in this edition explain that there is no angel or djinn that dies (akhlūq) on the earth. But, it is said by restorers (ālak), it should, therefore, be left undecided and that, apparently, was the course followed by al-Idāji and al-Djurjānī. They may have sex and not use it. In that respect, man, who has in himself the possibility of sin and must himself rule his appetites of lust (shahāt), is the higher among the angels (al-fafūs), has a higher possibility of excellency from the angels (al-Baydawi on ii, 28, ed. Fleischer, i, 48, 28).

This leads to the second question as to the angels which scholastic theology has considered, the relative excellency of angels and men, and especially, of angels and prophets. This is stated shortly by al-Nasafi, 147: (a) "The Messengers (rasuul) of mankind (al-baghair) are more excellent than the angels of the angels; (b) the Messengers of the angels are more excellent than the generality of mankind; and (c) the generality of mankind are more excellent than the generality of the angels". Al-Tafṣāzānī develops the theme that there is general and indeed necessary agreement on the excellency of the messengers of the angels over mankind in general, but that the other two statements (a and c) will bear argument. He urges (a) the prostrating of the angels to Adam; (b) they are brought and taught all the names of things (Qur'ān, 29); (c) that Allāh "chose" (isfāf) Adam and Nūh and the family of Ibrāhīm and the family of Iṣrā'īl over all created things (al-lī-şāmin, III, 30); and (d) that mankind achieves excellencies and perfections of knowledge and action in spite of the hindrances of lust and anger. But the Mu'tazilīs and the "philosophers" (al-falasīf) and some Ash'arīs held the superior excellency of the angels. They urged (a) that they were spirits, stripped of materiality (arwaḥ mudjarrada), complete actually, free of even the beginnings of evils and defects, like lust and anger, and from the obscurities of form and matter (zulmāt al-hāyāt wa 'l-rū'a), capable of doing wonderful things, knowing events (ka'awdn), past and to come, without error. The answer is that this description is based on philosophical and not Muslim principles. (b) That the prophets learn from the angels, as in Qur'ān, XXVI, 193; LI, 5. The answer is that the prophets learn from Allāh and that the angels are only intermediaries. (c) That there are multiplied cases both in Qur'ān and in tradition where mention of the angels precedes that of the messengers. The answer is that their precedence in existence or because their existence is more concealed (akhfa) and, therefore, faith in them must be emphasised. (d) In Qur'ān, IV, 170, 'al-masīh does not disdain to be an 'abd to Allāh nor do the angels' must mean, because of linguistic usage, that the angels are more excellent than 'Īsā. The answer is that the point is not simple excellency but to combat the Christian position that 'Īsā is not an 'abd but a son to Allāh. In the Masūkīf, 572-8, there is a similar but much fuller discussion which involves a philosophical consideration of the endowment—mental, physical, spiritual—of all living creatures from inanimate spirits to the lower animals (al-bahītum).

In the 'Aḏḏīb al-makhbūkat of al-Kazwīnī, ed. Wüstenfeld, 55-63, there is an objective description of the angels in all their classes, in which the statements of Qur'ān and Sunna are adjusted to the Aristotelian-Neoplatonic universe with its spheres (al-affāk), in accordance with al-Kazwīnī's general aim to give a picture of the created universe in its details and wonders. Yet apparently, while the angels possess the quality of "life" (hayāt) and are the inhabitants of the heavens and of the heavenly spheres (rukkān al-sama'awāt), they are not to be reckoned among the animals (al-bahitum). Al-Darrājī includes mankind and the djinn, even the diabolic (mutaḥātayyana) djīn, such as the ghīl, in his Hayāt al-bahītum but not the angels. Equally
acute and scholastic with the discussion in the Mawḏık, and more spiritual than that by al-Kazwīn, is al-Ghazalī’s treatment of the mystery of the angelic nature in some of his specialist smaller treatises. For him, it is part of the general question of the nature of the spirit to which his smaller Madnūn is devoted. See, too, the larger Madnūn, Cairo 1303, in Ruhn, ii, 23 and the translation by W. H. T. Gairdner of his Mīṣkāt al-anwār, London, Royal Asiatic Society, 1924 passim. Muslim literature also takes account of non-Muslim ideas on the angels, such as those of “philosophers”, Christians, dualists, idolaters. These will be found given briefly by B. Bayyīsī in B. Bayyīsī, ii, 28, ed. Fleischer, i, 47, 18, and in more detail in al-Tahānawī, Dict. of techn. terms, 1337 ff.

2. In Shi‘ism. In Imāmī Shi‘ism, angels are closely associated with the Imāms. Imāmī doctrine consistently upheld the dogma that the Imāms, just like the prophets, were more excellent before God than the angels with whom they shared in divine protection from sin and error (ṣima), and leading theologians, like the Shawkī al-Muflīd, wrote treatises in support of it. The Imāms are, however, guided and aided by angels. According to a well-known Imāmī tradition, the Imāms could only hear the voices of the angels but could not see them, in contrast to the messenger prophets (rasūl), who could see angels while awake and would converse with them, and to ordinary prophets who could hear and see them in their sleep. This was countered, however, by other traditions which affirmed that the Imāms also see the angels, and the restriction was held to apply only at the time of their receiving divine instruction through the angel. According to a tradition attributed to the Imām Zā‘far, the angels regularly come to the Imāms, tread on their beds, attend their tables, come forth to them from every plant in its season, shake their wings above the children of the Imāms, prevent beasts from reaching them and join them in every prayer. Angels will, according to Imāmī belief, appear in the sky at the advent of the Twelfth Imām and will call out his name; Gabriel and Michael will rally the faithful according to their rank in the hierarchy of angels that adds to the Islamic angels of death, Munkar and Nakir, who question and torment the dead in their tomb, a positive counterpart, Mubāshṣir and Bāshir, who are sent to the saniest dead to comfort them. According to some, they are the same pair as Munkar and Nakir and merely change their function, while according to others they are a different pair. In Ismā‘ili-Shī‘ism, the hierarchy of ranks (budr) of the spiritual world are sometimes described as angels. In particular, the triad of Djadi, Fath and Khayāl, which mediates between the Universal Intellect and Soul and the prophets and Imāms in the physical world, are commonly identified with the archangels Džbrā’il, Mikâ’îl and Isrâ’îl. In an early Ismā‘īlī cosmogony, seven Cherubim (kārūṣyā) are named and described as having been created out of the light between the first two principles of the spiritual world. After them a group of twelve “spiritual beings (rāḥānyā)” was created to form their counterpart. In later Tāyibī Ismā‘īlīsm, the third to ninth Intellects of the spiritual world are called the seven Cherubim. Ismā‘īlī doctrine, however, also recognises angels of a more conventional character. They are described as being all of a single substance, with only their names varying in accordance with their functions. Some inhabit the spiritual world, others the heavens, and still others the physical world in order to preserve all its regions. They are seen only by prophets and those who rise spiritually to become like prophets.

developed a ten-point programme for the improvement of the conditions of women.

In her ideas on emancipation, she was certainly influenced by the writings of Kâsim Amin [q. e.], though her goals usually remained more moderate and for her concern with proper Islamic norms was strong. She defended the veil, but was bitterly opposed to polygamy. She attributed great importance to the proper education of women in such subjects as hygiene, household economics, child-rearing, first aid, etc., i.e., to the provision of an education which would prepare the woman for her role as mother and household manager. In this she addressed herself especially to upper-class women, whose idleness in seclusion and ignorance she perceived as the major cause for the weakness of their social position, and whose style of life she contrasted with a somewhat romanticised view of the active life of rural and nomadic woman. Although she propagated the possibility of higher education for women, she did not envisage an independent professional life for women, and opposed any suggestion of their participation in public life and politics. Concurring with the general trend of the emancipation movement for women at the time, she did not postulate the legal and social equality of women with men.

Bibliography: For a collection of her essays, addresses, and lectures, see Majdî al-Din Nasîf (ed.), Ahdâ Bâhiyat al-Bâdiya, Cairo 1962, and Bâhiyat al-Bâdiya, al-Nisâ ?yyât, Cairo 1328/1910, which includes all her articles published in al-Dajirat. The popular Ridâ Kahasil, Ahdâm al-nisâ‘ fi ‘ldâm ym al-arâb wa ‘ld-?ydat, Damascus 1959, v., 74-101, and Rawhiyya al-Kallalîn, ?Râhiyat arâhiyatî, Cairo 1964, 37-57, have comprehensive biographies on her, the latter work discussing especially her poetic works. For a general analysis of her role, see T. Philipp, Feminism and nationalism in Egypt, in N. Kebede and L. Beck (eds.), Women in the Muslim world, Cambridge, Mass. 1978. (T. Philipp)

MALAKA, Arabic form of the name of Málaga (in ancient times Malaca), which is today a major city of southern Spain, on the Mediterranean coast between Algâciras and Almâeria, and regional centre of the province of the same name. It is situated in the centre of a bay and lies at the foot of a hill known as Gibralfaro (?Djahal Farûh). The town is divided from north to south by a ravine which, at times of heavy rainfall, carries the waters of the Guadalmedina (?Wâdî ‘l-Madîna). To the west stretches the Hoya of Málaga, a fertile plain formerly covered with various crops and especially tropical fruits, but today severely damaged by the enormous tourist development of the region.

The geographers of al-Andalus, of the Maghrib and even of the Orient, provide lavish descriptions of Málaga in which they stress the outstanding qualities of the town just as much as the products of its soil. Its port, always a centre of intense traffic, was visited by numerous traders from all countries and especially from the mercantile republics of Italy, the Genoese in particular. The arsenal (?dar al-?nsâ‘), the name of which is preserved in that of al-Mansûra, drew the attention of the Genoese admiral Camillo Greco in October 1494. The town, in the Islamic period and particularly from the 5th/11th century onward, was magnificent and possessed remarkable buildings; there were two densely-populated quarters, that of Fuenteclara or Fantanella (Funtanalla) in the upper city and that of the fish merchants (al-Tayyâin) in the lower city, attractive public baths (hammâinî) and well-stocked markets. According to al-Hîmyârî (Rawd, text 178, tr. 214), five gates were let into the wall, of which two, to the south, overlook the sea; to the east, or rather to the west, was the Bâb al-Wâdî; the north gate, according to the same author, was called Bâb al-Khawka; the kâdî of Málaga Ibn ?Askâr (d. 636/1239) mentions the fifth, the Bâb al-Riyâh or "gate of the winds". The fortifications of the town in the time of Ibn al-Khârisnî, comprising a fortress, double walls, a ditch, bastions, towers set out at short intervals and well-defended gates, rendered Málaga an impregnable stronghold. The same Ibn al-Qârisnî (Mu?âfârât Mâlakâ wa-Sâ‘l), in Muqaddamât bi ilâd al-Maghrîb wa ‘l-Andalus, ed. A. M. ?Abdî, Alexandria 1968, 57-66; tr. E. Garcia ?Omez, El parangon de la civilisation y los Saltn, in al-and., ii [1934], 190-1) stresses the attractive appearance and the elegance of its population, the liveliness of its streets, markets and suburbs, as well as the beauty of its buildings and palaces and the size of its country houses.
The Vega, now known as the Hoya of Malaga, was cultivated in its entirety. The texts stress the abundance of fruits, especially delicious figs, almonds and raisins. The figs of Málaga (tín sayyuf) were much in demand on the markets and, when dried, were exported to Egypt, Syria, Irak and even India. The Málaga region was densely planted with fig-trees, vineyards, groves of almonds, olives and pomegranates, without counting other crops and the timber plantations. The wine was excellent with the result that, rightly or wrongly, it became proverbial, as is described by al-Shakwani in his Rūjula (ed. E. García Gómez, El regla del Islam español, Madrid 1934, 111). Ibn al-Khatib draws attention to the fact that Málaga enjoyed the benefits of the sea, which offers abundance and variety of fish, and of the land, so fertile that it produces lavish crops which not only allow it to be self-sufficient but also provide, through surpluses and the harvests from the common lands, considerable revenues. It is also appropriate to take into account the development, from the 5th/11th century onward, of the textile industry, in particular the manufacture of silk of different colours with a fringe of gold (ushghy) known in Europe by the names, among others, of algúixi, albèti, alevècii and osti, and the making of muslin for bonnets and turbans. The industry of leather and precious stones, used in the manufacture of sword scabbards, belts, shoulder-straps, and less important in the iron industry, producing especially knives and chisels is also to be noted; there was also the manufacture of glazed and gilded ceramics which, of unique type, were exported product. In the markets of the town, baskets were woven from both osiers and esparto grass. The curing of fish, anchovies in particular, was characteristic of Málaga. The tending of bees and silk-worms were also well developed industries; silk had become one of the most highly-prized export products.

Málaga possessed a considerable number of mosques. One of the first must have been that which, situated inside the fortress, was constructed at the initiative of the traditionist from Himg, Mu'awiyah b. Šalih (d. 150/765). The Great Mosque, which occupied the present site of the cathedral, in the centre of the former madina, had five naves according to the author of al-Rawd al-miṣr. The courtyard of this mosque was planted with orange and palm trees. The fortress was built or rebuilt by the Zirid Badis after he captured Málaga in 449/1057; it was reinforced in the 8th/14th centuries by the Nasrids, because for them the town constituted a vital strategic point. There were, it is known, at least five cemeteries; the largest was situated to the north-east, outside the gate of the Fontanella; there were also those of the Musallá and of the Rawda of the Banū Yahya, according to L. Torres Balbás (Ciudades hispano-musulmanas, i. 277). On the banks of the Gibralfaro, in the 9th/14th century, there lay, not far from the Jewish quarter, to the east of the town, the cemetery of the Jewish community; this then numbered just over 1,500 persons.

Concerning the social and economic life of Málaga, especially in the 7th/13th century, information is available from an exceptional document, the treatise on ḥisba by al-Sakati, which offers a vivid and expressive account of customs, weights and measures, corporations, the price of foodstuffs, etc. The description of Málaga, like that of other towns in the region, offered by Ibn al-Khatib in his Misr al-diqgirs (ed. M. Kamal Shabhána, Rabat 1956-1957, 87-92, and ed. A. M. al-Abbádi, in Mushadhdat Lišan al-Dín Ibn al-Khatib, 76-8) permits the formation of a close impression of the reality of life in Málaga in the later centuries of its Islamic history.

In the politico-administrative division of al-Andalus, Málaga, perhaps on the fall of the caliphate, came to be the regional centre of the kūra of Rayya (some read Rayyu) in place of Archidona (Arghidhūna or Ardijdhūna). The limits of the kūra are, exceptionally, indicated for the beginning of the 5th/11th century by the 8th/14th century author who was a native of Málaga, al-Nabūḥi, in his K. al-Markabah al-'ulāya, Cairo 1948, 82: the region included Alhama (al-Hammā) of Granada: to the west, the limit was formed by the Montemayor (Munt Mayyur, previously Hisn al-Wād) near Marbella; to the north by the Rio Genil (Wād Shannīl) alongside the Benamej (Hīṣ Bani Bahšīl) and the Castillo of Anzur (al-Ranisūl); the limit subsequently passed through the territory of Aljûnūs (al-Khûnūs), of Gilena (Karyat Ḩijāyāna), near Estapa (Ištabba) as far as the limit (hāwa) of Morón (Mawwarū). Among the strongholds and towns of the kūra were Marbella, Fuengorola (Suhayl), Cátarma, Iznájar, Comares, Vélez Málaga, Cóin, Alhama and Antequera and, for some time, probably also Estepa (cf. J. Vallvé, De nuevo sobre Bobastro, in al-And., xxi [1965], 139-74).

The perimeter of Málaga enclosed an area of some 34 hectares at the end of the 5th/11th century, which allows a calculation of the population, in these years, at 20,000 inhabitants, mostly residing in homes of 50 to 100 m², although some exceeded 150 m² or were smaller than 40). During the same century, according to Ibn Hazm in his Dhikhrar ansāb al-ʿArab (cf. Elías Terés, Linajes árabes en al-Andalus, in al-And., xxii [1957], index) a number of Arab tribes settled in the region of Málaga, among them Aghārīs, Lakhmīs, Nahdīs and Kayyīs descended from Ḥimyar, (ḥābiḥ) Umayyads, and Berbers of diverse origin (Lamāyya, Maghārib, Nafīza, among others of the race of the Sanbāḥa and the Zanāna), all of these on a broad base mostly Hispano-Christian and Hispano-Muslim, with a considerably smaller Hispano-Jewish element.

Málaga and its kūra knew almost eight centuries of Islamic history from the moment when, according to certain sources, an army sent from Ecija by Tārik, in 92/711, took the town, then an episcopal see and one of the most important ports of the peninsula in the Roman period. However, Ibn ʿAskar, who seems to take his information from Ibn Huyayn (cf. J. Vallvé, Una fuente importante de la historia de al-Andalus. La "Historia" de Ibn ʿAskar, in al-And., xxxi [1966], 244-5) presents in some detail a version according to which it was ʿAbd al-ʿAlāʾ, son of Mūsā b. Nusayr, who besieged the town and took it by storm, without thereby discounting the obliging wa-yūkāl which indicates that it was Tārik who sent the army to the conquest of Málaga. In the time of the waʾīf Abu ʿI-Khattār, in 125/742, the Syrian ḍānd of Jordan (al-Urdun) became established in the kūra. In the last decade of the period of the waʾīfs, the territory of Málaga experienced the effects of rivalries between Khalīb and Kayyīs who were seeking power, and the Syrians. Among these pretenders was Yahyā b. Hurayth, an Arab of the Qudham, who had to be content to govern the province of Rayya, but for only a short time, since he was soon to be stripped of power by Yūsuf al-Fihri, appointed in 131/747 waʾīf of al-Andalus.

Málaga gave a warm welcome to ʿAbd al-Rahmān I al-Dājibil and supported him after his landing at Almuñécar and his journey across the kūra of Iblīra. Until the second half of the 3rd/9th century, the chronicles record no event of importance, apart from the fact that, for an expedition against Djiiltīkiya, the kūra of Málaga supplied 2,600 horsemen to the imposing army which was formed with contributions from
other provinces. In the period of al-Mundhir, and at
the outbreak of the civil wars which marked the
major crisis of the amirate, Málaga and other regions
of southern al-Andalus found themselves involved in
the series of rebellions which ensued and of which the
leading protagonist was the muwazzad Umar b. Haf-
ṣūn, who established his operational base and the cen-
tre of his revolt in the territory of Málaga, where he
could rely on the decisive aid of the city chieftains and
of strong fortresses. This action obliged the authorities
in Cordova to send troops in order to defeat and
punish the rebels. One of the most important of these
expeditions dispatched in the time of the amīr ʿAbd
Allāh was that of 291/904 which, commanded by
Abān, brother of the amīr, routed the forces of Ibn
Hafsūn near Antequera. Some years later, the same
Abān marched against Málaga, laid siege to the city,
set fire to the suburbs and overran part of the
neighbouring littoral. A fresh expedition was sent
against the rebels of Málaga in 297/910 and achieved
a result favourable to the troops of the amīr. In the first
years of the reign of ʿAbd al-Raḥmān III, various
campaigns were undertaken in the region with the ob-
ject of putting an end to the rebellion of Umar b.
Hafsūn, who had found support there especially from
the people of Spanish origin, both Christians and
Moriscos. On the other hand, Beldā, which was
directed by ʿAbd al-Raḥmān III himself in 306/919,
crowned with success. Once Málaga had been subdued, all the strongholds of the kūra met the same
fate, as a result of repeated expeditions, and once the
territory had been pacified, the kūra of Rayya ex-
perienced a long period of prosperity which was to last
throughout the caliphate, until the turbulent years of the
third/fourth century.

In the first third of the 5th/11th century, at the be-
inning of the period of the Mulūk al-tawdīf (in fact as
early as the time of the fitna), Málaga declared itself
independent under the government of the Ham-
mūdīds [g.v.], recognised as caliphs by the majority of
Berbers of southern al-Andalus. Under the caliphate
of ʿAllī b. Hammūd, proclaimed in Cordova in 427/1036, who, arriving from Ceuta had disembarked
at Málaga, the town began to play a national role in
the affairs of al-Andalus. It was in fact the refuge of
al-Kāsim b. Hammūd when he was forced to leave
Cordova in 412/1021 and, in 413/1023, of his nephew
Yaḥyā b. ʿAllī, who sustained his rebellion in Málaga
and was recognised as caliph by the people of Seville
and by the neighbouring Berber chieftains. Some time
later, al-Kāsim, besieged in Xīrīs and taken prisoner
by his nephew, was incarcerated in Málaga, where he
was strangled on the orders of ʿIbrāhīm b. ʿAllī b. Ham-
mūd in 427/1036. In fact, Málaga was transformed
into another taifa kingdom and was the rival of Seville,
where the kāfār al-Kāsim b. ʿAbdāb employed a fraud
consisting of displaying and having recognised a dou-
ble of Highām II of Muʿayyad. Yaḥyā, son of ʿIbrāhīm,
was proclaimed in Málaga on the death of his father
in 431/1039 and was recognised by the people of the
town, but at the price of estrangement from another
Hammūdīd prince, Ḥasan, based in Ceuta. Con-
fronted by action undertaken by troops loyal to the
latter, Yaḥyā surrendered and abdicated in favour of
Ḥasan, who was proclaimed four months later, having taken power (432/1040), and was recognised
as rightful caliph by the troops of Seville and by the
neighbouring Berber chieftains. In 434/1043 the Ham-
mūdīd ʿIbrāhīm II was in charge of the political af-
airs of Málaga, but the inhabitants turned against him and he
was forced to seek refuge in Bobastro, where he ap-
pealed to ʿAbdīs for assistance in regaining his throne.

When his enterprise failed, in spite of the support that
he received, he withdrew to Ceuta. Power then fell to
Muḥammad b. ʿIbrāhīm b. ʿAllī b. Ḥammūd who,
adopted, like his predecessors, the title of caliph. He
reorganised public administration but, proving cruel
and bloodthirsty, he was deposed, and Muḥammad b.
al-Kāsim, governor of Algérics, was appointed in his
place.

The history of Málaga under the later Hammūdīs
remains fairly obscure, and there is evidence that the
situation was fairly precarious and showing symptoms
of weakness and instability, since Bādis of Granada
took steps to annex Málaga and its entire region to his
own possessions and achieved this in 448/1056, ac-
cording to al-Nubāḥi, who follows the account of Ibn
Askar, or in 449/1057-8, according to al-Makkařī
and other sources. Bādis, as has been said previously,
then built or reconstructed the old fortress and en-
trusted the government of Málaga to his own Bulug-
gin. The successor to the latter, Tamīm, showed
hostility to his brother ʿAbd Allāh, the Zirīd of
Granada, and, around 474/1082, he appealed un-
successfully to Yūsūf b. Tashfin for aid against the latter.
In 483/1090, Tamīm was deposed by Yūsuf, and
Málaga was henceforward ruled by Almoravid
kuwsād, but no significant information is available
until the time of Ibn ʿAbd Allāh b. Abī Hafs, who was
proclaimed in Malaga on the death of his father
al-Kasim b. Hammud when he was forced to leave
Ceuta and was incorporated into the Nasrid kingdom of Granada. The Banū Ashkilla, the kinsmen of Muḥammad b. ʿAbī Naṣr, who governed the town, consolidated themselves there, rebelled against the latter and of-
ffered allegiance to Alfonso X of Castile who was at
war with Granada. In 665/1267, Málaga was besieged
without success for three months by the Granadan; in
Dhu l-Hijjah 674/June 1273, Muḥammad II also at-
tacked the town without success, and subsequently the
Banū Ashkilla, who had obtained the favour of the
Marīnīds and recognised them as sovereigns, handed
over the town to them on 6 Shawwal 676/2 March
1278. Six years later, the Marīnīd sultan renounced
his claim to Málaga and other places in favour of
Muḥammad II al-Fakīh of Granada. Henceforward,
a Nāṣīrī governor was appointed over the town. The
plague of 1348 claimed some hundred victims each
day, with the result that the inhabitants panicked and
abandoned the town. In the later years of the crisis of
the Nāṣīrī kingdom, from 1455 onwards and in the
time of the sultans Saʿd and of Muḥammad XI,
Málaga found itself embroiled in dynastic quarrels
and civil war, while its plain was subjected to reprisals
on the part of the Castilians. In the course of the
campaign between 1485 and 1488 and, more especially in
that which began in the spring of 1487 against Vélez-
Málaga, the old capital of the Hammūdīs, after
three-and-a-half months of siege, its chieftain then
being ʿAbdīs al-Ṭaḥṣīl, fell on 27 Shawwāl 892/18
August 1487 to the might of the armies of the Catholic
Kings.

MALAM (pl. malama), a Hausa term derived from the Arabic mu‘allâm with the meaning “teacher”, formerly used to designate a man versed in the Arabic language and Islamic sciences to whatever extent. The tasks of a maldma were many and whatever extent. The tasks of a maldma in the Arabic language and Islamic sciences to whatever extent. The tasks of a maldma would devote himself mainly to teaching the Kurgan, preparing talismans (Hausa: al-sayyid), from the Arabic al-shaykh, or mu^allim, would devote himself mainly to teaching the Arabic language and Islamic sciences to whatever extent. The tasks of a maldma would devote himself mainly to teaching the Kurgan, preparing talismans (Hausa: al-sayyid), or from the Arabic al-shaykh, or mu^allim, a personal name. Combined with the word malam, however, in the phrase sheha malami, it is used as an epithet for a distinguished exponent of the Islamic sciences.

Malamatya Among the black communities of Algiers where the Hausa hort (possess) cult has been influential, the term malam is used as a title in the diyar of Sidi Bilâl. The malam is in charge of musical arrangements during ceremonies at the dâr and officiates at minor sacrifices outside it.

MALAMATIYYA, an Islamic mystical tradition which probably originated in 3rd/9th century Nishâpûr.

1. IN THE CENTRAL ISLAMIC LANDS

The foundation of this tradition has been attributed to Hamdûn al-‘Aṣîqar (d. 271/884-5 [q.v. and see further on him below, section 2]). One of the main sources for the study of its doctrine is the Risâlât al-Malâmâtîyya by ‘Abd al-Rahmân Muhammad b. al-Husayn al-Sulami (330-412/941-1021). This treatise (see Bibl.) contains a number of sayings by early authorities concerning the malâmâtîyya and an enumeration of the principles (usûd) of Malâmâtîyya teaching. This teaching is not a closely reasoned internally consistent system, but rather a number of tenets which centre around the basic Malâmâtîyya doctrine that all outward appearance of piety or religiosity, including good deeds, is ostentation. The most important of these tenets are: 1. the display of *‘ibâha* [q.v.]; 2. the display of a *hâl* [q.v.] is *shirk* [q.v.]; 3. in all *ahwâl* [q.v.]; 4. a man must struggle against finding satisfaction in doing good, since every action and every pious deed which he looks upon with appreciation is worthless. In accordance with these tenets, the Malâmâtîyya has to struggle continuously against his desire for divine reward and for approval by man. This explains the requirements: 1. not to say prayers (dâ’â’î) except (under special conditions) for those in distress; 2. not to dress differently from others and/or isolate oneself from the world, but to dress like everybody else and to live a normal life in conformity with the requirements of society; 3. to take up a despised profession and to refuse a prestigious one; and 4. to conceal one’s poverty (if revealed, one enters the state of neediness and will attract attention). The required struggle against the desire for the approval of men in conjunction with the concern to hide his hâl may bring the Malâmâtîyya to show only his bad qualities. In doing so, he may make himself an object of blame (Ar. malam, malâmà, from the root lâmâ “to blame”).

The Malâmâtîyya attitude is older than Islam. R. Reitzenstein, Hellenistische Wanderschriften, Leipzig 1906, 65 ff., was drawn upon by I. Goldziher, Vorlesungen über den Islam, Heidelberg 1925, 167-8, Eng. tr. Introduction to Islamic theology and law, Princeton 1981, 149-50, who traced back the essence of Malâmâtîyya thought to the ancient Greek philosophical school of the Cynics, while M. Mâré, Les mystiques musulmans, Paris 1963, 72-7, has shown that the Malâmâtîyya trend to hide one’s virtuous actions, in order not to divulge one’s saintly state, was to be found among the early Syrian Christians. Most
contemporary Muslim authors (see Bibli.) on al-Malamatiyya are in unanimous agreement that this tradition is not Islamic, neither in its spirit nor in its theory.

In the 4th/10th century, the Malamatiyya tradition reached Baghda and Mecca in the persons of Abu 'Umar al-Zadidjaj, Abu 'l-Hasan b. Bandar, Abu 'l-Hasan b. Sahih al-Bushangbji, Abu Ya'qub al-Nahrajiitrii and Muhammad b. Ahmad al-Farraj (cf. 'Abd al-Kadir Mahmud, al-Palajfa al-Suhfiya fi 'l-Islam, Cairo 1967, 415). In later centuries, the Malamati orientation frequently took the form of an explicit invitation of reproach and rejection by intensional repulsive behaviour. Sometimes, such behaviour became the hallmark and proof of sanctity.

Intentional and systematic transgression of the norms and values of society is particularly practised by the Kaldandariyya [q.v.], which have been looked upon (e.g. by A. Le Chatelier, Les conférences maxulmanes du Hedjaz, Paris 1887, 235 f.) as the continuation of the Malamati tradition within the framework of a more or less regular jurtka. This idea of continuity must be discarded, however. Fundamental differences exist between Malamati and Kaldandari thinking and practice, as has already been pointed out by Shihab al-Kassar, after whom the early Malamats were some-

2. IN IRAN AND THE EASTERN LANDS

The concept of blame that underlies the designation Malamatiyya (both in the sense of self-reproach and of exposing oneself to reproach by others) derives from Kur'an, V, 34 ("they struggle in the path of God and fear not the blame of any blamer"). A verse referring to the Prophet and his Companions, whom the Malamats indeed claimed as the first of their number (Hudjwiit, Kafig al-mahdjub, Leningrad 1926, repr. Tehran 1399/1979, 78). But as a historically identifiable group, the Malamatiyya first appeared in Iran in the 3rd/9th century, and since they remained confined to Iran, at least in their original form, it is permissible to define the Malamatiyya as an Iranian or, more narrowly, as a Khurasanian form of spirituality. As noted in the preceding section, the major figure of the Malamatiyya was Abu Salih Hamdun al-Kassar, after whom the early Malamats were sometimes known as al-Hamduniyya or al-Kasariyya. Born in Nishapur where he spent most of his life and gathered his following, he was himself a student of Abu 'l-Hasan Sâlim al-Bârûstî (for whose putative spiritual descent see Cavit Sunar, Melâmiik ve Bektaşîi, Ankara 1975, 9). Al-Bârûstî was a critic of the effusive and public devotions of the Karrâmiyya sect [q.v.] in Nishapur, and insofar as the emergence of the Malamatiyya may be taken as a reaction against contemporaneous trends, it is in the Karrâmiyya rather than the Sûfii that the counterpoint to the Malamatis should be sought. Shunning fame for piety and the comconitant danger of hypocrisy, Hamdun al-Kassar and his associates believed it necessary to conceal all acts of superrogatory worship and declared public appearances to be a matter of indifference; the pleasure of God and the pleasure of men were irreconcilable opposed goals. The appellate self was their exclusive object of blame (cf. the expression "reproachful soul"—al-nâfîs al-tasawwuw wa-al-mthalîl). Abû 'Umar b. Muhammad al-Suhrawardî, in his al-Nafahdt al-rabbdniyya, Beirut n.d., 268-70; Ibrahim Hîlîl, al-Tasawwuw al-Islami bayn al-dîn wa l-falajf, Cairo 1979, 11-14. In addition to these works and the works mentioned in the article, see A. J. Arberry, Sufism, an account of the mystics of Islam, London 1956, 70; 74; H. Ritter, Philologia XV, Farduddin 'Attur, in Orispi, xii (1959), 14 ff.; M.S. Seale, The ethics of Malâmâtiyya Sufism and the Sermon on the Mount, in Mîr, ivii (1969), 12-23 (contains an abridged translation of al-Sulaml's enumeration of Malâmât, 3. Nominalism and Intellectualism).
the musical sessions of the Sufis known as sama' [q. v.] and even of vocal—and hence audible—dhikr [q. v.]... Out of other figures sometimes designated as Malamats have been claimed by the Sufis as their own; this is the case notably with Abū 'Uṯmān al-Hirī. In addition, Malamati features are to be found in persons who have no direct relation with the Malamatī circle of Nishāpūr, especially in Bāyazīd Bīšāmī [see Abū Yazīd al-Bīšāmī], who, on several occasions claimed popular acclaim into blame by apparent violations of the Sharī'a. It is evident, then, that the demarcation between Malamatis and Sufis was not always sharp. Hamdūn al-Kassār himself met with Sahīl al-Tustārī and al-Dζunyādī [q. v.] while on a visit to Baghdād and earned their approval, surely an indication of compatibility between the Malamatīyya and the 'sōber' school of Irākī Sūfīsm.

Nonetheless, the shunning of all outward indications of one's inward state was a clear point of difference from the Sufis, one implying criticism of them. In return, the Sufis politely condemned the unceasing Malamātī preoccupation with the wretchedness of the nafs, which seemed to them a form of implicit ontological dualism, setting the soul up as a reality confronting God. Echoing earlier writers, Jāhīdī referred to the Malamātīs as "Though this group is precious and their state is noble, the veil of creaturely existence has not been fully lifted from them" (Abū al-Raḥmān Džāmī, Naftahāt al-unūs, ed. Māhdis Tawḥīdpūr, Tehrān 1336/1957, 9). Likewise, the preoccupation with reproach of the nafs seemed to some Sufis to bar the Malamātīs from all progress beyond the station (maḵām) of sincerity of devotion (iḥlās); al-Suhrawārdī said that while the Sufī has "lost awareness of iḥlās because of iḥlās ... the Malamātī is fixed at the station of iḥlās" (Aḵwārī al-maʿāṣīrī, in supplementary volume to al-Ghazālī, Ḥyā' ulūm al-dīn, Beirut n. d., 71).

A close relationship appears to have existed between the first Malamātīs and the practitioners of ṣawwaw (q. v.) the members of the craft guilds. Like them, the craft guilds were part of the bazaar and followed various callings, rejecting the work-denying interpretation of tawakkul made by certain Sufis. Both Hamdūn al-Kassār and Abū Hafs al-Hāddār are on record as offering definitions of ṣawwaw, and it is significant that al-Sulamī—who had no father—treated malāma and ṣawwaw as twin concepts in his writing. Ahmad Khīḍrāwī was identified by al-Kuḥīyārī as a fātāl and by Ḥudūrī as a malāmātī; this, too, must indicate an overlapping between the two affiliations. After the disappearance of the Malamātiyya in their original form, the craft guilds and organs of ṣawwaw seem to have become one of the chief repositories of Malamātī influence, with their emphasis on self-effacing probity and practical devotion.

Although no prominent individuals are identified as Malamātī after the 4th/10th century, the original Malamātiyya may have survived in Ḵᵛurāsān for considerably longer. In the 6th/12th century, al-Suhravārdī wrote in his Aḵwārī al-maʿāṣīrī, 71, "There is still a group of them (sc. of Malamātīs) in Ḵᵛurāsān; they have their elders who expound their fundamental principles and make known to them the conditions of their states. I have seen people that follow the same path in Irāk but they are not known by this name". Early on, however, the name Malamātī had been usurped by ascetics who actually sought the blame of others, instead of simply being ready to accept it; instead of hidden piety, liber-
tached itself to a heretical offshoot of the Bayramiyya [q.v.]. An account of the original split between the orthodox and the heretical branches of the Bayramiyya survives only as a legend recorded first in the 10th/16th century. According to this, 6 Ömer the Cutler (d. 880/1475-6), a dervish who had followed first Shâykh Hâmid (d. 815/1412-13) and then Hâmid's disciple, Hâdîdi Bayrâm [q.v.], refused to join the disciples of Hâdîdi Bayrâm's appointed successor, Ak Shams al-Dîn [q.v.] in performing dhikr [q.v.], or to kiss Ak Shams al-Dîn's hand. Thereupon, Ak Shams al-Dîn threatened to divest Ömer of the distinguishing cloak (êkîra) and headgear (tâfî) of the new order. Ömer's retort was to invite Ak Shams al-Dîn and his followers to his house, where he lit a fire in the courtyard. He then walked through the fire, which burned off his headgear and cloak but left his body unscathed. After this Ömer's followers—the Malamatiyya-yi Bayramiyya—wore no distinguishing garments (Mahmud of Califà, Ka'tâb, quoted in A. Gölpınarlı, Melâkîkât, melâkîkât, Istanbul 1941, 41; 'Âtâ'î [q.v.], Dibây-i ıskhâk 'îk, Istanbul 1268/1851-2, 65). The real reason why the Malamatiyya wore no distinguishing clothing must, in fact, have been because their heretical beliefs led to occasional persecutions, and their survival could depend on concealing their identities from the authorities. To wear identifiable clothing would invite investigation. However, the sect continued to absorb new adherents right down to the 13th/19th century, by which time it had long since become an orthodox Sûfi group, accepting the authority of the Şâhâna [q.v.] (J. P. Brown, The derwishes, London 1868, repr. 1968, 61. On the orthodoxy of the later Malamatiyya, see Brown's translation of a nishâa by La'înu'd-Dîn 'Abd al-Bâkî, in op. cit., 232 ff.). The legend of Ömer's dispute with Ak Shams al-Dîn suggests that their rivalry was personal. This seems probable since, although Hâdîdi Bayrâm had nominated him as his successor or khâtî [q.v.], Ak Shams al-Dîn had been one of the last to join the group, so displacing candidates of "forty years" standing. His nomination no doubt aroused jealousy. However, the essential split was doctrinal, and it was doctrinal differences that caused it to be permanent. For example, there are no surviving 9th/15th century Malâmî writings to give an account of the original doctrines and affiliations of the sect. Links with Badr al-Dîn of Simawne [q.v.] and the early Şâfawiyya [q.v.], through Ömer's and Hâdîdi Bayrâm's connection with Shâykh Hâmid have been suggested (H. J. Kissling, Zur Geschichte des Derwischordens der Bajramijje, in Süd-Ost Forschungen, xx [1956], 237-68). The writings of 10th/16th and 11th/17th century Malâmî shâykhs, however, clearly reveal the sect's doctrines and permit speculation as to its 9th/15th century origins. These show that the sect espoused Şâ'ism of a Hallâджian type, striving not, as orthodox Şûîs, for fânâ' fi'lîlah—the total loss of individual identity in God—but believing in the manifestation of God in the individual member of the sect. "Know that the Mirror of Man is the outward form of the Merciful God", in the words of Ahmed the Cameleer (d. 952/1545-6), or "The kibla is Man", in the words of "The Hidden" İdrîs (d. 1024/1615) (quoted by A. Gölpınarlı, op. cit., 59, 127). The orthodx ü Reşîm, with some justification, regarded this form of Şâ'ism as leading to a disavowal of the Şâhâna, the true source of divine authority, since its adepts believe the divine authority to be within themselves. This disavowal, the ü, belief in a divine face in the human face: "Today, O heart, look at the beauty of the Beloved's face", and in a ghazal [q.v.], "The Hidden" İdrîs, there is a reference to the indisputably Şûî concept of "The Seven Lines" of the face as a visible form of the fîthâ [q.v.], which in turn represents the Sum of the Universe (i.e. God plus what is beside God): "The Seven Lines are the 'Mother of the Book' (i.e. the fîthâ). They are the visible testimony from God. Oghlan Shâykh also makes the Şûî equation between the "Name" (ism) and the "Named" (mussânmâ): "You whose name is Man gives news of the Named". Furthermore, one of his ghazals is a nazîra of one by the Hallâджi martyr Nesîmî [q.v.] (d. 820/1417). These Şûî echoes occur in poems of the 10th/16th and early 11th/17th centuries, but it is possible that the doctrines themselves date from the earliest days of the sect in the first half of the 9th/15th century, since this was the period when the disciples of Fadî Allah [q.v.] were actively preaching Şûî doctrines in Anatolia and Syria (see H. Ritter, Die Anfänge der Şûî-sekte, in Orients, vii [1954], 1-54; Ibn Hadjar al-Asqâlanî [q.v.], Inbdîl-ghumr, Cairo 1973, 136; for the Şûî influence in Edirne in 848/1444, see F. Decroly, Les Amuratc à Amuratc, in Orients, iii [1950], 229-65). Ömer the Cutler and his followers may well have absorbed their doctrines.

A distinguishing feature of malâmî writings is their exhortation to believers to conceal their beliefs from the "ignorant", meaning non-members of the sect. In this they resemble the original Malamatiyya; but concealment of belief had the immediate practical purpose of preventing persecution by the Ottoman authorities. They also maintained that "although there can be no place like Man for the manifestation of God's essence" (Oghlan Shâykh, quoted by A. Gölpınarlı, op. cit., 52), God can be manifest only in a "believer" that is, a member of the sect. Non-believers are mere "animals".

The Malamatiyya began as a sect in central Anatolia and appear not to have spread beyond this region until the first quarter of the 10th/16th century. Ömer's kâtî, Benyâmín or Ibn Yâmîn (d. 926/1520) came from Ayâsh near Ankara [q.v.]. His successor, Pir 'Ali Dede (d. 935/1528-9) was a native of Aksaray [q.v.], where he is also buried. The Malâmî shâykhusm al-Dîn, a kâtî of Ahmed the Cameleer, came from the region of Ankara (Aşkî, op. cit., 70). In 960/1553 he was imprisoned and executed in the citadel of that town. He still had followers in the nearby region of Haymana, whom the Ottoman government investigated in 975/1568 (Muhâmmeme defter, text in
A. Refik, *On altinci asirda Rafizilik ve Bektasilik*, Istanbul 1932, 24-5). By the time of Husam al-Din's end, however, the sect had spread far beyond the region of its origin.

The expansion began in 934/1528 when Ismâîl, the son of Pîr 'Ali Dede, known as Oghlan Shaykh, began to preach in Istanbul. For a year he preached and performed ceremonies, apparently in mosques, attracting many followers, including soldiers (*'Atâ'î*, op. cit., 79). These were probably *kapûkûlî* troops stationed in the capital. In 935/1529, after numerous warnings and condemning *fatâwâ* [*q.v.*], the authorities executed him on the At Meydanâ, with the sanction of a *fatâwâ* from Kemal Paşa-zaâde [*q.v.*].

The underlying question in the trial of Oghlan Shaykh was whether or not he accepted the authority of the *shâârâ*, and of course its officially appointed interpreters, the Ottoman *sâlamâ?.* However, the examination centered specifically around the question of whether he and his followers regarded the gurjar doctrine which constituted their *dhikr* as *iðhâm* [*q.v.*], obligatory worship, or simply as a permissible (*muðâbâ*) religious ceremony. To regard it as *muðâbâ* did not occur the death-penalty: it merely branded its practitioners as “dissolutes”, to be corrected by flogging (ta^zîr). However, to regard it as *iðhâm* (ta^zîr). However, to regard it as *iðhâm* (ta^zîr).

Since the term *iðhâm* refers specifically to the forms of obligatory worship laid down by the *ssâhî*, to claim any other form of worship as *iðhâm* is to arrogate to oneself the authority which properly belongs to the *shâârâ*, the revealed command of God. This Oghlan Shaykh did, and, furthermore, defended his position with quotations from the *Kurâ* and *Hadîth* [*q.v.*] (*John Rylands Library, xxii, 228). It may have been Ahmad the Cameleer who established the sect in his native region. Its itinerant profession would also have given him the opportunity to proelytise in different areas. A later *shâârâ*,* "The Hidden" Idris, also travelled a great deal, making frequent trips as a merchant to "Belgrade (Belgrad), Plovdiv (Filibe), Sofia, Edirne and Gallipoli (Gelibolu)" (*'Atâ'î*, op. cit., 602). It is likely that travelling *shâârâ* such as these both spread the sect and maintained contact between members in different regions. By whatever means it spread, it is clear that by about 1560 Malami doctrines had reached and had become deep-rooted in Bosnia. There is no obvious reason why this should have been so, but it is worth noting that pre-Ottoman Bosnia had been a centre of dualist Christianity, with remnants of the Bogomil sect surviving into the Ottoman period, showing that Bosnia had long been receptive to heterodox forms of religion.

The Malami *shâârâ* Hamza, a *sâlamâ?* of Husâm al-Din, was a Bosnian by birth. His public preaching in Istanbul led to his execution there in 968/1561 and to an investigation of his followers in Bosnia, of whom “many were arrested and executed” (*'Atâ'î*, op. cit., 70-1). *'Atâ'î*’s report (loc. cit.) that a *râflâjî* [*q.v.*] committed suicide in grief at his execution suggests that he, like Oghlan Shaykh, had a following among the *kapûkûlî* troops.

The execution of Hamza, like the execution of Oghlan Shaykh, had the effect of creating a new martyry, and this added further to the *shâârâ’s* reputation, so that a *shâârâ* could be known as the Hamzawîs until the last days of the sect (*Brown, loc. cit.*). Nor did the persecutions in Bosnia after his death eliminate his followers in the area. In 981/1573, the year of similar investigations in Thrace, the Imperial *Dâvân* received reports about “disciples of the heretic Hamza, who was previously arrested and executed” and ordered the *sandik* beyes of Hercegovina (Hersek [*q.v.*]), Bosnia and Pozega, and the beylerbey of Buda (Budin [*q.v.*]) to arrest and imprison them while awaiting further instructions (*Muhimme defter*, xii, 194). The authorities’ efforts seem again to have been ineffective, since in 990/1582, the *kâfis* of Zvornik, Gracanica and Tuzla in Bosnia again investigated a group belonging to the “sect of Hamza, who was executed when his heresy was proven” (*Muhimme defteri*, xlviii, 151). At the same time, the government clearly continued to treat with suspicion adherents of the sect in the capital. At an unspecified date, it issued a *fermân* for the arrest of “The Hidden” Idris, after the “great *shâârâ* of the city”, Siwâsi Efendi and ‘Omer Efendi, had publicly denounced him for heresy. Idris, however, avoided arrest by using his name Hâdîdji ‘Ali Beg in public, rather than his *sââmî* [*q.v.*] of Idris, and by spending most of his time in the seclusion of his own house (*'Atâ'î*, op. cit., 602; Kâbît Çelebi [*q.v.*]), and was a “disciple of Oghlan Shaykh’s father” (*Muhimme defteri*, text in A. Refik, *op. cit.*, 17). This frequent re-occurrence of Oghlan Shaykh’s name suggests that his martyrdom advanced the fortunes of the Malâmâtîyya.

Oghlan Shaykh brought Malâmâ doctrines to the capital. It is possible that Ahmed the Cameleer, a native of Hayrabolu in Thrace, where he is also buried (*'Atâ'î*, op. cit., 65), carried them into Europe. In 980-1/1572-3, the Imperial *Dâvân* ordered the *kâfis* of Hayrabolu and the *kâfis* of the neighbouring districts of Rodosçu (Tekirdağ) and Burgos (Lîle Burgaaz) to examine suspects in certain villages who were adherents of the martyred Malâmî Hamza (*Muhimme defteri*, text in A. Refik, *op. cit.*, 33-4; *Muhimme defteri*, xxii, 228).
Fedhleke, Istanbul 1286/1869-70, i, 373-4, after Ata'ī. The sect's last martyr was a certain Behšīr Ṭāgha who, together with "forty" disciples, was executed in Istanbul in 1073/1662-3. He apparently had a number of Ḥurūfīs in his following (A. Gölpınarlı, op. cit., 128, 158-60, after Laźizade ʿAbd al-Bākī, Siārīzarīyā).

There are, however, indications that, by the time of Behšīr Ṭāgha, the Malāmātīyyā had largely changed, or were changing their character to become an orthodox turīkā [q.v.]. The Bosnian Malāmī Ṣhaykh Ṣaheyn-i Lāmekānī (d. 1035/1625) (Farabī Celebi, op. cit., i, 71), for example, while still defending the sect's gyrating dance with the same hadīth as Qoghlān Ṣhaykh had used, apparently upheld the primacy of the Shari`a: "[The believer] should be a Ḥanāfī, a Sunni and pious ..." (quoted by A. Gölpınarlı, op. cit., 82). By the time of Laźizade (d. 1165/1751-2), the sect appears to have accepted without question the authority of the Shari`a. The report that the vizier Fīrūz Pasha [q.v.] (d. 1004/1595) became a disciple or murid of Ḥuseyn-i Lāmekānī is perhaps significant; as members of the Ottoman ruling establishment began to join the sect, it would, by definition, become orthodox.

The organisation and membership of the sect remains as obscure as the Malāmī themselves obviously intended it to be. It is not clear, for example, whether one kutb [q.v.], who could claim the allegiance of the entire sect. This was probably the case until the death of Benyāmīn (926/1520), when the order was confined to central Anatolia. 'Ata'ī (op. cit., 65), however, gives him three khālitā: his son Shaykh Ibrāhīm, Abū Leylī Shaykh Sūleymān and the influential Pir 'Ali of Akszaray. He then lists three khālitā of Pir 'Ali: Ahmed the CAMELEER, Pir Ahmed of Edirne (d. 1000/1591-2) and Shaykh Yaḥya the ḥalāfa (d. 989/1581-2). The last two appear to have been too young to have been Pir 'Ali's personal disciples, but the number of apparently very long-lived Malāmī shaykhī whom he lists, and other peculiarities, cast doubt upon 'Ata'ī's chronology. Among Pir 'Ali's successors, one should also mention his son Ismāʿīl Qoghlān Shaykh. Ahmed the CAMELEER's khālitā Hūseyn-i Lāmekānī (d. 1010/1601-2) and the "Hidden" Idrūs, Hūseyn-i Lāmekānī was a khālīf of the most influential khālīfs down to 1024/1615 seem to have been 'Omer—Benyāmīn—Pir 'Ali and his son—Ahmed-Ḥusām al-Dīn—Hamza—Hasan—Idris. However, another branch descended from Ahmed the CAMELEER: 'Alī al-Dīn of Vize (d. 970/1562-3) (for verses attributed to this shaykh, see A. Gölpınarlı, Türk tıskıven sırı antolojisi, İstanbul 1972, 119-31) and his khālīf Ghadanfer Dede, who won acquittal in his trial for heresy. His successors were, in turn, Bālī Efendı of Vize, his son Hasan and Emir Efendı of Kāsim Pasha.

The number of khālitās whom 'Ata'ī records after the death of Benyāmīn points to the success and spread of the sect from the time of Pir 'Ali. However, it is by no means certain that his list represents any kind of recognised succession or hierarchy within the order itself. The apparent confusion within the line of succession suggests that, as the sect spread over a wide area after 926/1520, it became less cohesive, with various khālīfs acquiring fame and a personal following not universally recognised by all members. It is possible, for example, that the following of 'Alī al-Dīn, Qoghlān Shaykh and Ghadanfer Dede did not extend beyond the region of Vize. The difficulty of communication within a widely-dispersed and under-ground order must have caused fragmentation, and the order probably had no recognised and formal hierarchy.

Information on the Malāmī leaders is inadequate, that on their followers is even more so. The recorded professions of the shaykhī suggests that it was largely a movement of artisans, although the verses and other writings of some of them suggest that they had received an education wider than a simple craft-training. The founder, 'Omer was a cutler, Shaykh Yaḥya the ḥalāfa, Ahmed the CAMELEER, and Hasan was a tailor who was "both director of a workshop, and in charge of guiding the people of the tıskıven" ('Ata'ī, op. cit., 169). Ghadanfer Dede was a tanner, and "The Hidden" Idris made a fortune as a merchant, but had begun his career as an apprentice to his uncle, who was a tailor to the Grand Vizier Rüstem Pasha [q.v.] ('Ata'ī, op. cit., 602). The list of Bosnian suspects in 990/1582 (Mühimme defteri, loc. cit.) refers to two of them as knife-grinders (darkāts), and to one of them as khalīfa, a title which, in this context, probably refers to that position in a craft-gilt (kafīla). However, Qoghlān Shaykh and Hamza seem also to have numbered kāfīlku troops among their followers, and the 981/1573 investigations in Thrace suggest that it had spread beyond the towns to the villages of the area.

The doctrines of the sect, which could lead its members to claim a source of divine authority outside the Shari`a, imply that they also disavowed the authority of the Ottoman dynasty which claimed, as a source for its legitimacy, to "prepare the path for the precepts of the Manifest Shari`a". The clearest statement of opposition to the dynasty occurs in a poem by Ahmed the CAMELEER, which he almost certainly composed during the reign of Sūleymān I [q.v.]: "If I could find the most minute message from your ruby lips / I would not buy the Kingdom of Solomon (Turkish: Sūleymān) for the smallest coin" (quoted by A. Gölpınarlı, op. cit., 59).

There is further evidence from the 990/1582 investigations in Bosnia. Part of the accusation against the group was simply that they had "declared lawful that which is harām" and "associated with women outside the permitted degrees" (Mühimme defteri, loc. cit.). These accusations, while quite possibly true, are simply stereotyped phrases found in most indictments of heretics. However, the additional accusation that one of them claimed to be "the Sultan who had succeeded Sultan Hamza", while others claimed to be "vixers", a "kādī" and a "defterdar" [q.v.], does suggest that this group, at least, did regard itself as self-governing and beyond the authority of the Ottoman state, whose titles and organisation it mimicked. While any evidence produced in a heresy hunt is suspect, this piece does seem credible in that it does not fit into the stereotyped pattern of orthodox accusations.

**MALANG** (etymology uncertain: not Pandjābī, possibly Persian; in Urdu, malang, masc. = "salt worker", fem. = "loose, wanton woman"), a term used in Muslim India, including in the Pandjāb but also in the Deccan, to denote wandering devizers of the Kalandari, br-sharī or antinomian type [see KALANDAR, KALANDARIYYA]. Dīmar Sharīf [q.v.] at one place of his Kānīn-i Islâm puzzlingly names their founder as Dgalāl al-Dīn Buhkārī, Maqṣūd-i Dīhānīānī-ī Dīhāņāngāh [q.v.], and at another, as Dīmanjātī, a disciple of Zinda ʿAḥmad Mādār (Islam in India, ed. W. Crooke, London 1921, 141-2, 172-3.
Malangs aim at total distinctiveness from the external world, in which are included the prescriptions of the Sharia as followed by the more orthodox, baqar Khattab Sufis, in order to enter the inner spiritual world. Hence the use of hashish and other narcotics is common amongst them, as is the wearing of a particular style of dress and type of long hair arrangement, together with the use of bangles, rings and other feminine ornaments to symbolise the Malang's role as the bride of God, hence subservient to Him; cf. the descriptions of Dja'far Sharif, loc. cit.

MALARYA, a neologism in Arabic for malaria, an infection of the blood by a minute plasmodium parasite. The disease is characterised clinically by fever, which is often periodic; varying degrees of anaemia; splenic enlargement; and various syndromes resulting from the physiological and pathological involvement of certain organs, including the brain, liver and kidneys. The severity of the disease is dependent on the age, health, and degree of immunity of the victim and the particular species of the plasmodium parasite. Under suitable environmental conditions, malaria is transmitted by the mosquito genus Anopheles; out of about 375 species of anopheline mosquitoes, more than 70 are vectors of the four species of human malaria, i.e. P. falciparum, P. vivax, P. malariae, and P. ovale. Although the geographical distributions of plasmodial and anopheline species are not uniform, malaria is today a serious endemic disease in most Islamic countries from North Africa to South-East Asia, evoking widespread eradication programs.

Malaria seems to have originated in tropical Africa in prehistoric times. With the Neolithic revolution, the infection appears to have spread and established itself in the great centres of riverine civilisation in Mesopotamia, India, South China and the Nile valley, from which it invaded the Mediterranean littoral. From these five foci, malaria extended its hold over most of the tropical world and much of the land in the temperate climates. Moreover, it appears that high gene frequencies of abnormal haemoglobins were created that protected human population against malaria and allowed for the exploitation of malarious areas.

Considerable attention has been devoted to the history of malaria and its deleterious effects on Graeco-Roman civilisation. It would appear, that malaria became endemic in Greece and Italy at least by the 5th century B.C.: Because of the prevalence of the disease, malarial symptoms were recorded in the Hippocratic corpus and later medical works (see W. H. S. Jones, Malaria and Greek history, Manchester 1909, ch. 3). Aside from simplistic cultural notions of degeneration, the major effects of malaria on a population are a high infant mortality rate and a reduction in its work efficiency.

Malaria appears to have existed from late antiquity until modern times in most of the regions where Islam was established as the predominant religion. The spread of rice cultivation in the medieval period, especially, may have significantly augmented the disease. The history of malaria in Islamic society, however, has not been the subject of any systematic investigation. The medical literature, particularly, has not been studied with regard to malaria; in one instance, al-Razi gives a case that had been misdiagnosed as malarial (E. G. Browne, Arabian medicine, Cambridge 1921, 51 f.; M. Meyerhof, Thirty-three clinical observations by Rhazes (circa 900 A.D.), in Isis, xxiii [1934], 332 f.). Generally, the descriptions of fevers (hama'id) in Arabic medical literature appear to be greatly dependent on the Greek medical tradition mentioned above. M. Meyerhof, 'Ali at-Tahar’s “Paradise of wisdom”, one of the oldest Arabic compendiums of medicine, in Isis, xvi [1931], 29 f.; idem, The “Book of treasure”, an early Arabic treatise on medicine, in Isis, xiv [1930], 71 f.; M. Ullmann, Die Medizin im Islam, Leiden 1970, 42, 137 f., 214).

WASIM, THUGHUR
[see
AWASIM, THUGHUR] and was
frontier fortresses [see ‘AWASIM, THUGHUR] and was
used as a base for the summer campaigns into Byzan-
tium. In the time of 'Abd al-Malik, it reverted to the
Greeks, and was resettled by Armenian and NabatT
(i.e. Aramaic-speaking) peasants. In the course of the
2nd/8th century, Malatya was once more occupied by
the Muslims, rebuilt by Hisham, razed to the ground
by Constantine VI Copronymos in 320/932 by the
Ham-dād Sa’did al-Dawla of Mawṣil. When Nicephorus
Phocas reconquered Syria, he wished to rebuild and
to repopulate Malatya with Greek settlers, but they
refused to live there because of the town’s exposure
to Arab raids; hence Syrian Jacobites were in 969 invited
to settle there, with the result that by the year 1100
there were said to be 53 churches in Malatya and its
district, and 60,000 Jacobite and Melkite Christians
able of bearing arms (Michael of Tinnis and
Barbarra of Harim). During the years of Byzantine re-occupation,
Malatya was held for a time by the rebel and claimant
to the imperial throne Bardas Scleros (366/976-7), but
in the following century began the attacks of the
Turkmens. The first raid is recorded in the Syriac
and Armenian sources as taking place in 1058, or slightly
earlier in the reign of Constantine IX, and soon the
Greeks were being by-passed by Turkmens raiding as
far as Kyseri and beyond, making their tenure of
Malatya impossible. Hence it was held for a while by the
Armenian Phularets as the centre of his
ephemeral principality on the thughur, under caliphal protection. Despite help from the Prankish Crusaders, recent events were unfavorable; the Seljuk sultans were generally the holders of power there, in alliance with the Ayyubids. In 628/1231 the Mongols penetrated to Hisn Ziyâd and the neighbourhood of Malatya, and after their victory at Kose Dagh near Siwa in 641/1243, Malatya was on two occasions besieged by the Mongols and its vicinity laid waste; then in the time of the Il-Khan Abaka (663-80/1265-82), Malatya fell within the share of the Seljuk sultanate of Rûm allotted under Mongol suzerainty, to Ghiyath al-Dîn Mâlûd b. 'Izz al-Dîn Kay Kâwûs. It is from the Seljûk period that the oldest monument in Malatya, the Ulu Djamâ', stems.

In the 12th and 13th centuries lived the two great Syriac historians, both born in Malatya, to whose chronicles we mainly owe our knowledge of the history of the town: the patriarch Michael I (1126-90), son of the priest Derya, who belonged to the family of Kindasi in Malatya and the Mafr'îyân Gregor Abu 'l-Faradj called Barhebraeus (1226-86 [see Ibn al-Abbî]), whose father, the baptised Jewish physician Ahrôn, had restrained his fellow citizens in Malatya from stupidly flying before the Tatars (Baumstark, Gesch. d. syr. Lit., 290-300, 312-20). Michael's principal authority, Ignatius (d. 1104), was also metropolitan of Malatya (Baumstark, op. cit., 291).

The increasing weakness of the Seljûks about 1300 favoured the formation of local Turkmen and Armenian petty states, especially in the east of Asia Minor. According to Abu 'l-Fidâ', Christians and Muslims in Malatya in those days lived on the best of terms, with the 10th/16th century. A first list of taxable inhabitants.

Malatya for the next few decades belonged to the Mamlûk sultans. As their remotest province, it was ruled by Halâb in 791/1389 the scene of a great rebellion led by the governors Mintâf and Yîlbogha against Barkûk [q. v.]. About this time, the Turkish family of the Dulghâdîr or Dhu 'l-Kadr-oghlu [see dhu 'l-ka'dîr] began to rise to power in the region of Malatya and Albistan, where they ruled till 921/1515 under Mamlûk suzerainty. About 794/1391-2, Bayezid I conquered the town, and in 903/1490 Timûr, by the battle of Koc Hisâr (922/1316) it fell into the hands of Selim I [q. v.] who destroyed the Dhu 'l-Kadr-oghlu. This was the cause of his war against Egypt, which was rapidly decided on the field of Mardj Dâbîk [q. v.]. At a later date under the Ottomans, the quwyûb to which the sağıdîk of Malatya belonged was still called Dhu 'l-Kadrîyâ.

2. The Ottoman and modern periods.

Reliable information on the size of Malatya begins with the 10th/16th century. A first list of taxable inhabitants was prepared in 924/1518, shortly after the end of Mamluk rule. In 929/1522-3, the town possessed 1,540 taxpayers, who probably represented a total population of 6,900-7,000 inhabitants. Almost forty years later, in 967/1559-60, the number of taxpayers had risen to 1,946. By this time, the total population should have amounted to about 8,700 inhabitants.

Malatya's commercial importance during the 10th/16th century was great enough to warrant the construction of a covered market (bedestân). In addition, the existence of a bridge toll collected at the Kirkgoz bridge, a Seljûk structure over which the
road to Siwas crossed the Tokhma Suyu, equally shows that 10th/16th century Malatya played a certain role in local and interregional trade. Moreover, it seems also during this period the town was located at a road at least one major kaghan [q.v.]. Of the constructions which existed in the middle of the 10th/16th century and produced appreciable revenues for the Sultan's treasury, nothing at present remains. But in 1046/1636-7, Sultan Murad IV's kapudan-ı derya, Silahdar Mustafa Paşa, had a new kaghan constructed, which survives today and about whose original shape accurate information can be found in numerous documents. This kaghan, in which several hundreds of camels could be stabled, probably possessed military as well as commercial functions.

For the 11th/17th and 12th/18th centuries, only indirect information concerning the population of Malatya is available. In ca. 1068/1657-8, the town consisted of 293 taxable units ("auird-khane"). At the beginning of the 12th/18th century, the town consisted of almost 100 taxable units ("auird-khane"), while the number of houses inhabited by tax-paying families amounted to about 370. Even if a large number of people lived in one house, the town must have declined appreciably between 967/1559-60 and the early 12th/18th century.

Throughout the 11th/17th century, Malatya, as described by travellers such as Ewliya Çelebi and the early 12th/18th century. Both the gradual decline of Malatya, and the rise of Aspuzu were accelerated by eternal factors. In 1838-9 described by travellers such as Ewliya Celebi and the early 12th/18th century. have declined appreciably between 967/1559-60 and while the number of houses inhabited by tax-paying families amounted to about 370. Even if a large number of people lived in one house, the town must have declined appreciably between 967/1559-60 and the early 12th/18th century.

MALATYA — MALAY PENINSULA

MALATYA — MALAY PENINSULA

MALAY PENINSULA. 1. Geographical considerations. The Malay peninsula, together with the Borneo states of Sabah (formerly North Borneo) [see BORNEO in Suppl.] and Sarawak, became the Federation of Malaysia in 1963. The population of the Federation in 1977 was estimated at 12.74 million, of whom 10.5 million lived on the peninsula, and the ethnic composition (according to 1970 census figures) was approximately: Malay 46.8%, Chinese 34.1%, Indians 9%, Dayaks (including Ibans) 3.7%, Kadazan 1.8%, other native groups 3.2%, and others (Eurasians, Arabs, Siamese, Filipinos, Indonesians, etc.) 1.4%. While almost all Malays, Indonesians, and some of the native groups are Sunni Muslims of the Shâfi'i school, the other ethnic communities are mainly Christian, Buddhist and Hindu." "Peninsular Malaysia", as the Malay peninsula is officially known to distinguish it from the Borneo half, covers some 131,794 square kilometres and comprises the eleven states of Perlis, Kedah, Penang, Perak, Selangor (in which is located the separate Federal Capital Territory of Kuala Lumpur), Malacca, Johor, Negri Sembilan, Pahang, Trengganu and Kelantan.

Peninsular Malaysia's unique location explains much about its prominent role in the history of Islam in Southeast Asia. Lying athwart the Strait of Malacca, the Malay peninsula is in the southernmost extension of mainland Southeast Asia and forms, with the islands of the Indonesian archipelago, a large
breakwater between the Pacific and Indian Oceans. Until the advent of air travel, seaborne traffic moving between the major civilisations of the East and the West was forced to sail through either the Sunda Straits, separating the Indonesian islands of Java and Sumatra, or the Malacca Straits. The latter was indeed almost the only passageway used until the Sunda Straits became better known in the 10th/16th century, with the invention of ships capable of open sea sailing and with the discovery of the winds known as the "Roaring Forties", enabling ships to sail quickly and easily from east coast Africa to Indonesia.

The Malay peninsula is also strategically located in terms of the seasonal monsoon winds circulating over the Indian Ocean and the China Sea. With the onset of the southwest monsoon in April, the winds blow from the Indian Ocean on to the Sumatra coast then in May across the Malay peninsula. While this monsoon gradually decreases, the northeast monsoon develops in the northern part of the South China Sea in October. It reaches a peak in January, when it covers all equatorial Southeast Asia except for Java and southern Sumatra, and then slowly lessens in intensity until the cycle begins again in April. Sailing ships in earlier centuries were dependent upon these winds to move quickly between east and west, and experienced mariners soon realised that the Straits of Malacca were ideal as a harbouring place because they were sheltered from the winds and were the beginning and end points of the monsoon winds.

Another important geographical consideration is the Malay peninsula's virtually inaccessible interior and its long coastlines. Along the whole length of the peninsula for about 483 km is a north-south mountain range varying between 914 and 2,134 m. above sea level. This main range and inhospitable interior jungles have been the main barriers to trans-peninsular contact by land. On the opposite shore of the Straits, in Sumatra, fairly similar conditions are found. From very early on, therefore, inhabitants living on the Malay peninsula and east-coast Sumatra have regarded the rivers and seas around them as the primary means of contact with one another. The Straits of Malacca between the west coast of the peninsula and the east coast of Sumatra became an internal lake linking the people living in lands adjoining it and helping to create a basically common culture. Communication between these peoples was often even closer than that between those living on the west and east coasts of the peninsula itself.

2. Early contact with the outside world. It is generally accepted that by the 2nd century A.D. there were Indian traders in the area of the Straits. The search for gold may have provided the initial impetus, but soon a profitable exchange of local products with Indian goods sustained the trade. The participation of the Chinese and other traders from the East and the Indonesian archipelago, all using the Straits as a convenient harbouring place and later exchange site, was an added attraction to Indian traders. Entering native chieftains quickly seized the opportunity to make their particular settlement the centre of trade. The few places which developed into major entrepôts had responded successfully to the demands of foreign merchants and provided the physical facilities and the legal and governmental apparatus to assure the rapidity, fairness and security of trade.

Through contact with Indians, the Malays were introduced to religio-political and cultural ideas which struck a familiar chord, since both societies shared a basic Monsoon Asian belief system. What was different and hence attractive to the locals was the elaboration and refinement of these ideas from India which had been a result of the incorporation of the Indo-European Aryan culture to local Monsoon Asian belief. Although little is known of how this "Indianisation" process occurred in the Malay areas, its success can be gauged by the survival of Indian terms, themes, and practices in present-day Malay language, literature and court ceremonies. India, then, was regarded from early times by Malays as the homeland of a rich culture worthy of consideration and emulation.

China's contact with the Malay peninsula was much more limited since it only began using the Straits more to reach the West from about the 5th century A.D. Even then, China's political philosophy regarding the self-sufficiency of the kingdom discouraged official involvement in international trade. Nevertheless, some trade under various guises and rationalisations did occur and was carried on principally by Persians and Arabs in the first millennium A.D. Only later in the period of the famous Ming voyages of the late 15th/16th and early 19th/18th centuries did the Malay areas begin to appreciate the splendour and the might of the culture from China. Like India, China now became regarded by Malays as a respectable source of goods and ideas.

A third group to have visited the Malay areas in earlier centuries was the Arabs. By the 3rd/9th century, Arab traders knew a large part of Southeast Asia, but appeared to have neglected this area in favour of the lucrative China trade. Although Arab sources mention the northwestern and eastern coasts of Sumatra, the Malacca Straits down to Palembang, Johor, part of the Riau-Lingga archipelago and Pulau Tioman, there is no hint of organised Arab trade with these areas until the mid-4th/mid-10th century. By the 7th/13th century, Arab trade to Southeast Asia was all but superseded by that of their Muslim brethren from India, and it is to them that the spread of Islam through the archipelago is generally attributed.

3. The coming of Islam to the Malay lands. The Malay areas were accustomed to regard India as a source of respectable and exciting ideas, and they welcomed Indians bearing tidings of Islam in the same way that they had greeted their predecessors with their Hindu-Buddhist ideas. Although the question as to which Indian group was responsible for the conversion of Southeast Asia may never be answered conclusively, the direct relationship between trade and the spread of Islam is rarely denied. After the fall of Baghdad and the destruction of the 'Abbasid caliphate by the Mongols in 657/1258, the spice route from the east through the Persian Gulf, up to the Levantine coast, and thence to northern Europe, was effectively closed. A new route now went from the east to India, then to aden in southern Arabia, through the Red Sea up to Alexandria, and thence northward. Since the authorities in Egypt refused any but Muslim trading as far as Alexandria, the Muslim ports of Cambay, Surat and Diu in Gujûrât province of India acquired great importance as trans-shipment centres for spices. Growing demand for Eastern spices by a prosperous Renaissance Europe and the cessation from the 8th/14th century of direct Chinese trade to India brought the Gujûrâti merchants into great prominence as intermediaries in the spice trade. Their great numbers in Malacca [q.v.], the major emporium in the Malay-Indonesian archipelago in the 9th/15th and early 10th/16th centuries, facilitated the work of Muslim missionaries in spreading the ideas of Islam in the region. By the beginning of the 10th/16th cen-
tury, in addition to the thousand or so Gujarati merchants resident in the city of Malacca, there were about three to four thousand others always en route being transferred to another. But the Gujaratis did not have the exclusive control of trade to Southeast Asia. There were substantial numbers of other Indian traders from the Malabar and Coromandel Coasts in South India, as well as from Bengal. In fact, some of the strongest arguments, based on local traditions and survival of certain religious terms, have been made for a Southern Indian origin of the Islamic ideas which came to Southeast Asia.

A theory has recently been advanced which does not attempt to single out any particular group for the honour of bringing Islam to Malay shores. Instead, it suggests that there was a general Islamic "fall-out" around the shores of the Indian Ocean which "showered" the Malay areas. When the Portuguese fleet rounded the Cape of Good Hope in 904/1498, they entered what has been described as an "Arabic-speaking Mediterranean". The extensive trading network which stretched from east-coast Africa to India was dominated by Muslims, and Arabic was the lingua franca. Malays had already long been a part of this trading world in which the Muslim network was simply the latest development. A 6th/12th century Arab account mentions Malays from Záboğ (identified with Sriwijaya, a kingdom which flourished in the Straits of Malacca area between the 1st/7th and 8th/14th centuries) participating in the trade to east coast Africa, while an 8th/14th century Arabic source describes a trip from China to Sumatra on a junk manned by Malays. The latter had moved from being simply engaged in facilitating the trade of others to active traders themselves. They, therefore, according to this theory of "fall-out", were already subject to Islamic ideas prevalent in the Indian Ocean area.

Another theory concerning the coming of Islam to the Malay lands points to an eastern route, from China to Champa in central Vietnam and then to the western half of the Malay-Indonesian archipelago. The participation of Muslim Arabs and Persians as shippers for the Chinese traders in earlier centuries, and the later movement of Malacca and the Straits of Malacca to Chinese traders, would have provided the vehicle for movement of ideas from Muslims in China to these trading intermediaries. Early Chinese contacts with the Malay areas, especially with the 9-10th/15-16th century kingdom of Malacca, had already made such an avenue for ideas both acceptable and respectable.

4. The adoption of Islam by Malay society. A foreign Muslim trading colony is said to have existed at some time in the 4th/10th century in Kalah [q.v.] a place tentatively located in the northern part of the Malay peninsula. Other evidence of early Muslim activity on the peninsula itself is scattered and difficult to corroborate. In 965 a Muslim tombstone was found in Kedah bearing the Arabic date 291 A.H. (903 A.D.). Another find was a gold coin in Kelantan identified with Sriwijaya, a kingdom which flourished in the Straits of Malacca area between the 1st/7th and 8th/14th centuries (903 A.D.). Another find was a gold coin in Kelantan which identified with Sriwijaya, a kingdom which flourished in the Straits of Malacca area between the 1st/7th and 8th/14th centuries). [q.v.] were similar to the seances of the local shaman (pawang); and the healing powers attributed to the Sufi (pawang) were a trait also associated with the traditional village doctor (bomoh). The successful co-existence of Islamic and local spirit practices is clearly demonstrated in a 12th/18th century Malay text from Perak, the Misa Melayu. It describes how, when the sultan was ill, prayers were offered to the Prophet, the saints, as well as the ancestors. Pawangs commonly ascribed their incantations to the Hindu deities Siva and Brahma, as well as to Lukman al-Hakim, father of Arabian magic [see LUKMAS]. Among Malay farmers today there are various Kitab Tuh, Islamic works on magic, saint worship, and other practices considered to be only vaguely Muslim. One of the most well-known of these works is the Taj al-Malik (Tagi al-malak) respected among Malay farmers as the standard source on Islamic magic.

Another factor which may have facilitated conversion to Islam was the introduction of Muslim tales into the already vast international repertoire of stories found among the Malays. Tales of Islamic heroes appealed to the people as much as the heroes of the well-known episodes from the Indian epics, the Mahabharata and the Ramayana. Stories of the lives of Muslim saints were a source of entertainment and religious edification, and treatises on magic and divination helped confirm Islam as another important, if not the most superior, source of spiritual power for the Malay community.

One other reason should be cited for the adoption of Islam as a religion among Malays. In all levels of society, there would have been people who would have understood the basic teachings of the religion and seen their value for this life and for that in the hereafter. For such people, the act of embracing Islam was a spiritual commitment to the basic tenets preached by the Prophet Muhammad.

5. The role of Malays and the Malay language in the propagation of Islam. The conversion of Malacca to Islam [see MALACCA] was an important factor in that kingdom's rise to become one of the greatest commercial emporiums in the 9th/15th century world and the centre for the propagation of Islamic knowledge in Southeast Asia. With Malacca as the hub of a vast international trading network, which included even the easternmost islands of the Indonesian archipelago, Malay and other traders prepared the way for more formal conversion by Muslim missionaries. Malacca's predominance on the Malay peninsula meant that Islam quickly became established as a religion in all the vassal courts and riverine settlements.

The incorporation of the Malay peninsula and other areas in the archipelago into the Islamic ummat provided a basis for united action against the Christian Europeans who began appearing in the area from the beginning of the 10th/16th century. But unity was more a hope than a reality, and in 917/1511 the famous entrepot kingdom of Malacca fell to the Portuguese, to be replaced by new centres of power in the Islamic world itself, these writers read, wrote, and discussed in Arabic.

For anyone wishing to go beyond the few rudiments of Islamic law and doctrine, a knowledge of Malay was essential. Even in those few manuals written in other regional languages there were numerous Malay words. But the more important information was contained in kitabs, which are works written in Malay but derived and compiled from Arabic sources. In general, only the introduction, the conclusion, and a few comments are the original work of the local "author", while the remainder is simply a translation. These kitabs were the principal tools of Islamic learning for many who were unable to read Arabic. One inhabitant in early 19th century Malacca describes how a poor Arab sayid (Malay, sayid) from the Hadramawt with a knowledge of both Arab and Malay gave lessons on Islam for five dollars per year per pupil. The first text used was the Ummu 'l-baharin (Umum al-baharih), and then he went on to other manuscripts, all in Malay, to teach canon law, matters concerning prayers and similar devotional practices, various branches of Islamic knowledge and didactic stories. Malay, then, had become a language of Islam and an instrument for the wide circulation of religious ideas throughout the Southeast Asian Islamic world.

6. Impressions of Islamic institutions before the mid-19th century. There is very little material about Islam in the Malay peninsula before the early period of British rule in the mid-19th century. What one knows about Islamic institutions before this must perforce remain as impressions from scattered and often disparate evidence in Malay sources and contemporary European reports. It appears that one of the most important Islamic officials in the Malay states was the kadi (kdi). In early 12th/18th century Johor, the kadi was ranked next to the principal ministers as the most powerful individual in the kingdom. His respected status has been a result of his Muslim learning, which would have still been considered to be a rare achievement in the Malay world at this time. Even in the early 19th century, an episode is related in the Hikayat Abdullah of how the rare appearance in Malacca of a learned sayid from Atjeh resulted in a virtual self-imposed seclusion of those who previously had claimed to be local religious scholars. The kadi appeared to have had close ties with the royal family and may even have married into local royalty. His knowledge of Islam would have made him in the eyes of the local people a superior individual with access to strong spiritual powers. But as the number of Muslim
236 MALAY PENINSULA

teachers and scholars increased, especially in the sec-

ond half of the 18th and 19th centuries, the kadi
generally lost his unique standing. Nevertheless, in
the 19th century he was still described as “presiding
over a number of mosques”.

The only indication that one has of a religious
hierarchy, although not necessarily an official one, is
from the Misa Melayu. At the occasion of the opening
of a new palace (mahalai), which coincided with the
Prophet Muhammad’s birthday, special celebrations
were arranged with the secular and religious guests
seated according to rank. On the first level was the
sultan and his religious counterpart, the sharif; on the
second level the nobles and the ulama; on the third
level the court attendants and the imam; on the fourth
level the district official (hulubalang) and the khatib;
and on the fifth level the official in charge of a settlement
around a mosque (penghalu mukim) and the bilal (i.e.
the muezzin); on the sixth level the ordinary people
and the experts on religious matters (lebai and alim);
and on the lowest level, the foreign traders, itinerant
travellers and the religious mendicants (fakir).

The sharif family was especially honoured in Perak,
but everywhere else in the Malay peninsula, descen-
dants of the Prophet, whether sayid or sharif (Malays
rarely distinguished between the two), generally were
 accorded a high place in society and even regarded as
suitable marriage partners for the sultans' daughters.
In the pre-19th-century sources rarely speak of them until
the arrival of Hadramawt sayids and sharifs in the ar-
chipelago from the mid-12th/18th century. Once
again, as the kadi in Johor in the early 12th/18th cen-
tury, the prominent position of the sayid or sharif was
most likely due to his religious knowledge, which
would have been substantially greater than most other
Muslims in the kingdom. But more important, the
sharif or sayid had an even greater claim to respect and
honour among the Malays because of his direct des-
cent from the Prophet.

While there does not appear to have been any of-

ficial hierarchy extending from the chief religious
figures at the court to the other Muslim officials in the
kingdom, there was a definite ranking at the village
level. The person usually lost his unique status
village family, was the head of the village prayer
house (surau), which functioned as the gathering place
for Friday prayers, village Islamic rituals, village
education, and certain community-wide religious
celebrations. Mosques were usually found only in the
larger settlements and in the towns. Below the imam
was the khatib who delivered the Friday sermons and
performed the wedding ceremonies. Next in line was
the bilal, who called the faithful to prayer and of-
ficiated at funerals; and finally there was the penghalu
mukim, combining both secular and religious ad-
ministrative duties, who kept the mosque in good
order, assisted in ceremonies, reminded the faithful of
the Friday services, reported absences to the imam and
beat the wooden gong outside the mosque to summon
the people to prayer. The kadi and the village elders
screened individuals before selecting them for these
posts. Funds for the partial remuneration of these
religious functionaries and for the upkeep of the surau
or mosque were obtained through a collection of the
annual zakat and fitrah (zakāt al-fitr), the taxes or alms,
from the villagers.

Other than the small village Islamic officialdom,
with the kadi at the apex in charge of a number of
village suraus or mosques, there is no mention in the
sources of any united kingdom-wide religious hierar-
chy. A study of the state of Kelantan suggests that above
this village hierarchy may have functioned a
nominally state-wide authority of a mujāfi and kadi with
the various other officials associated with the religious
courts. But in other states the picture is less clear, and
the only reference one has of any united Islamic effort
is when holy war is declared against the Europeans.
But such calls for Muslim unity were mainly unsuccess-
ful since personal, ethnic, and state rivalries and
antagonisms often proved stronger than the appeal to
a common religious bond.

7. Islam in British Malaya. Only in the 19th
century with the establishment of British rule in
Singapore (1819) and the Malay peninsula
(1874-1919) did a more formal organisation of Islam
occur. The British long maintained the pretense that
they were merely advisers to the Malay sultans, while
effectively exercising control over all aspects of
government except “religion and custom”. This lat-
ter sphere was regarded as being under the jurisdic-
tion of the sultans. Unable to exercise much authority
in matters of government, the sultans in the last two
decades of the 19th century created a religious
administration modelled after the centralised
bureaucratic system imposed by the British to govern
the Malay states. In Kelantan, which together with
Trengganu, Perlis and Kedah were under Siam until
1909, religious administrative change occurred
toward the end of the 19th century more as a result of
attempts to forge a more cohesive provincial reform efforts than to
any British example.

By the second decade of the 20th century, most
states had a form of centralised Islamic bureaucracy
which was co-ordinated by bodies such as Perak’s
Council of Chiefs and Ulamas, Kelantan’s Council of
Religion and Malay Custom, Selangor’s various com-
mittees under the State Council, and Johor’s Council
of Ministers. These bodies, which included the state
Mufti (Shafi’ul-Islam) and the Chief Kadi as ex-officio
members, were appointed by the sultan and served as
his religious advisers. What differed significantly from
the past was the presence in these organisations of a
majority of non-Islamic officials from the royal
household and senior chiefs, a development which
reflected the limited opportunities now open to the
traditional ruling classes in the new British colonial
government. Their participation in the newly-
formalised religious hierarchy further strengthened the
long-standing mutually supportive relationship be-
 tween religious and secular authorities. This
alliance guaranteed that any Islamic reform move-
ment which threatened to weaken the established
religion would find little favour among the ruling
classes. It is noteworthy that the reformist Wahhābī
movement which made such a great impression in In-
donesia, especially in Sumatra at the end of the 18th
and 19th centuries, created barely a ripple in the
Malay peninsula.

In the new Islamic bureaucracy, the previously
independent village Muslim officials became incor-
porated into a system which bound them closer to the
secular authorities than ever before. Although im-
plementation of policies from the centre was often dif-
ficult because of the relative inaccessibility of some of
the villages, the new religious structure did reinforce,
at least in the eyes of the people, Islam’s traditional
support for the ruler.

Islamic scholarship, too, became much more
organised and extensive in the peninsula in the 19th
century. One major factor in this development was the
new Islamic intellectual activity being fostered in such
centres as Atjēh, Palembang and Riau. Malay
translations from the Arabic of authoritative Muslim
treatises on doctrine, law, exegesis, commentary,
Sufism, prayer and catechism were produced, together with popular religious works in Malay which now also included the purity of Islam, made it an exemplar of Islamic thought and attitudes for the rest of the Malay world. From the beginning of the 19th century, reformist Islamic ideas were encouraged on Riau, as were the Sufi mystical brotherhoods divested of their "accretions". In the congenial atmosphere of the Riau court, particularly that of the Raja Muda on the island of Penyengat, religious writings and theological debates flourished, attracting Muslim scholars from all parts of the archipelago.

One of the members of the Raja Muda family and a prominent Malayan scholar was Raja Ali Haji ibni Raja Ahmad (ca. 1809-ca. 1870). He encouraged the recruitment of Islamic teachers and was sufficiently regarded as an Islamic scholar himself to have been consulted on religious doctrine by the royal family and even appointed as the religious adviser to the Raja Muda. He was greatly influenced by al-Ghazālī's Ḥikmat al-dīn and Nasihat al-mulūk, as can be seen by Raja Ali Haji's application of theological and ethical argument in viewing the Malay past in his monumental work, the Tuhfat al-nafsi. Raja Ali Haji also had sisters and sons who promoted the study of Islam in such groups as the Persikatan Rasyidah. But Raja Ali Haji remained the dominant intellectual figure in Riau, and his religious ideas became the basis for many of the views expounded later by the Virtual Muda group in Singapore.

The Straits Settlements of Malacca, Penang and Singapore, geographically and culturally on the edge of Malay society, contributed further to the development of Islamic thought in the region. Created as an administrative unit by the British in 1867, the Straits Settlements were cosmopolitan centres serving as a gateway for the flow of labour, capital and ideas to the Malay Peninsula. The wealth and dynamism of Penang and Singapore, enjoying the protection of British rule, fostered religious and political ideas which were less acceptable in the Malay states. A heterogeneous Muslim community became resident in these straits, particularly in Singapore, since it was an important port of call for Southeast Asian Muslims going on the pilgrimage to Mecca.

From the last two decades of the 19th century until about 1920, when Penang challenged its position, Singapore had a reputation as a principal centre of Islamic learning. Muslims from Southeast Asia, India, and the Middle East gathered in the city to debate the latest religious ideas, and Islamic tracts in Arabic were translated and simplified into Malay for consumption throughout the archipelago, a practice which had already begun in the 9th/15th century in the heyday of the Malacca kingdom. No stronger comment can be made concerning the vitality of Islam in Singapore than to mention that those in the archipelago wishing to study Islamic law or theology went either to Mecca or to Singapore. The establishment of a number of hand lithograph presses in Singapore in the late 19th century operated principally by Jauzi Penakan (those of mixed Malay-Indian origin) enabled the publication of a growing body of Islamic literature in Arabic, Malay and even in some regional languages. The generally liberal attitude of the British authorities toward religious activities in the Straits Settlements facilitated the publication of works and journals not in favour with the religious establishment in the peninsula.

In July 1906 a periodical Al-Imam, modelled intellectually after the Egyptian periodical al-Manār, began publication in Singapore, promoting the modernist Islamic ideas of the Egyptian thinker Muḥammad b. Ḥaddūd al-Andalusi. Al-Imam's readership was small, limited mainly to the intellectuals in urban areas, its ideas did percolate to the countryside in the peninsula. The presence of Al-Imam's representatives in most Malay states and the interest which it generated among religious teachers in the modernist Islamic schools, the madrasahs, assured the transmission of its viewpoints to an audience outside the cities. This, and other similar publications, advocated a return to the original strength of early Islam and rejection of accretions to Islam which had prevented the revival of the Malay nation. A number of madrasahs began to be established introducing a more modern curriculum than that offered by the pondok ("hut") schools, which employed the method of recitation and exegesis by a teacher as the principal means of imparting religious knowledge to the pupils. The madrasahs were intended to put into practice the ideas advanced in the modernist Islamic publications. Instruction was by no means confined to Islam, and such commercial subjects as mathematics, history, English, business, techniques for wet-rice agriculture, and soap- and soy sauce-making were also introduced to instruct a good Muslim how to survive and flourish in a modern society.

Because of the traditionally supportive role between the religious and secular authorities in the Malay states, the modernist Islamic press attacks on established religious officialdom became viewed as an attack on the ruling classes. Attempts were made to prevent entry of these publications into the peninsula from the Straits Settlements. In 1934 there was a public burning of a tract on free will written by a Malay modernist who had studied at al-Azhar university in Cairo. But the debate could not be stifled. Opponents of the movement referred to the modernists as Kaum Muda, the "Younger Faction", while reserving for themselves the more respectable appellation of Kaum Tua, or "Older Faction". The modernists objected to their label, since they regarded themselves as the true "Older Faction" who advocated a return to the original pure teachings of the Prophet. Despite the forcefulness of the rhetoric in the modernist Islamic literature and the progress made in the establishment of madrasahs, the impact of modernist ideas was much less in the countryside than in urban areas. With the British creation of Malay vernacular schools throughout the countryside, and the introduction of Kur'ān lessons within these schools, the village Muslim officials were able to strengthen their influence among the people. Their new formal positions provided them with security and respectability, and reinforced their traditional ties with the existing secular authorities. The opposition of these village Muslim officials to the modernist Islamic ideas being propagated via the Straits Settlements seriously weakened the impact of such ideas in the Malay countryside. During the Japanese Occupation in Malaya (1942-5), the links between the ruler and the Islamic hierarchy were further reinforced, since more of the secular functions of the ruler were removed, leaving him basically only with religion as an area of responsibility.

8. Islam since independence. Since the independence of Malaya in 1957, there has been constitutionally a separation between Church and State. The various sultans are regarded as the head of religion in their respective states, and in Malacca and Penang, which have no sultans, the quintessentially-
Malay Peninsula

The elected Paramount Ruler (Yang Dipertuan Agung) is regarded as the religious head. Since 1948 every state has had a religious affairs department, a type of council of the religion, the Treasury or Beyt al-Mal, and a department of zakat. While Islam is the proclaimed official religion of Malaysia today, freedom to worship any other religion is guaranteed by the Constitution. The protection of the non-Muslim citizen is evident in the controlled application of hukum syara and Shari'a law. The religious courts (mukhunam syar'i) deal mainly with Muslim personal laws, especially with marriage, divorce and property matters, but have no jurisdiction over non-Muslims. In any conflict between the religious courts and the civil courts, the latter prevail.

The most significant religious development in the peninsula since independence has been the dakwah movement. Dakwah is described in Malaysia today as a call inviting those who are not yet Muslim to embrace the faith, and those who are Muslims to practice it in their lives. The movement stresses Islam as demo, a total system, which provides an effective alternative to Western materialism and secularisation. The movement seems strongest among government officials, teachers, and young urban Malays from English or Malay schools, rather than from Islamic educational institutions as one would have expected. Even among Muslim students studying abroad, there has been a noticeable increase in dakwah participation.

The origins of the movement can be traced directly to the government's policy after 1969 to increase Malay enrolments in the universities. Many of these graduates, who became teachers or bureaucrats in the education system, were the dakwah activists of the 1970s. The movement gained popularity, particularly after 1974, when government restrictions on student political activity on the campuses led many to re-channel their discontent via the dakwah movement, with its stress on Islam as a total system. So pervasive is the movement that the term dakwah has been used to categorise behaviour (returning to the simple, less materialistic life style), dress (wearing short praying veils for women, and the turban and long white, green, or black robes for men) and organisation (any group viewing itself as advancing the cause of the movement). Such dedication is encouraged by a steady supply of Islamic literature, both in Indonesian and English, now filling the bookstores in the urban areas.

The basic dakwah ideas are in the tradition of earlier Islamic reform movements, such as Wahhabism and the modernism of Muhammad 'Abduh. They all preach the rejection of 'corrupt' Islamic accretions and the return to the purity of Islam as practised by the Prophet. And as in earlier reformist waves, the dakwah movement is seen as a threat to the existing religious and secular authorities and has been resisted by both. In the villages, many of the Muslim officials reject the movement and have managed to retain the loyalty of the villagers. In the urban areas, where the movement is strongest, traditional religious officials have to a large extent been sheltered by the government's cautious attitude toward the movement. The government has sought to contain or domesticate the movement by creating its own dakwah organisations within the various departments. While fears have been expressed concerning the possibility of an Islamic revolution along the lines which have transformed Iran into a theocratic state, the more realistic concern is the movement's threat to disrupt the stable unity painstakingly created by the nation's leaders between the Malays and the large non-Muslim Chinese and Indian minorities in the country. The movement is viewed suspiciously by some of the latter as yet another instrument by which the Malays would justify their dominance over the other ethnic communities.

The strength of the traditional relationship between the religious and secular authorities has thus far succeeded in diverting dakwah energies along the least disruptive channels. Unlike earlier reformist movements, however, dakwah activities have become much more forceful and prominent because of the resurgence of Islam and power throughout the world. Yet one can still detect in the movement, and the attempts by established authority to contain and mould it, the process by which new ideas have always filtered into the Malay peninsula. The Malays are now undergoing a re-examination of their religion and society and will no doubt, as in the past, select only those ideas which will best strengthen and make more meaningful their chosen way of life.

**MALAYS, a people of South-East Asia.** The Malays speak Malay, one of the languages of the Austronesian language family. Inscriptions from the area of Palembang in Sumatra dating from the 7th century are the oldest evidence of Malay. They show that Malay functioned as an official language in an Indonesianised kingdom. It is sometimes assumed, on somewhat tenuous ground, that this region of Sumatra and the islands off its east coast are the homeland of the Malay-speaking peoples of South-East Asia.

The Malay language takes three forms. It is a series of local dialects; it is a *lingua franca*, and it is the official language of Indonesia, of Malaysia, of Brunei and one of the national languages of Singapore. Its speakers rank sixth in number amongst those of other world languages. Most of these, however, do not have Malay as their first language. Malay is spoken also in Southern Thailand, in Sri Lanka by descendants of slaves brought there, and in the Netherlands by 40,000 Moluccan Malays. What is sometimes called Cape Malay is actually not Malay at all, but Afrikaans with unimportant Malay influence. As the official language of Indonesia [see Indonesia, iii. Languages] it is one of approximately 800 languages. It is spoken as a local dialect in the southern part of Sumatra, around the city of Medan on that island and in the islands of Bangka, Bilton, and in Riau; in Kalimantan it is spoken around the rim of the island; in Java it is spoken as a local dialect in pockets along the north coast. "Moluccan Malay" is one name given to several varieties of the local dialects in Eastern Indonesia. From a linguistic point of view, the situation of dialects has not yet been properly studied. Trew notes that the varieties of types of influence—via traders, religious figures, wanderers and others—has left "an intricate complex of Malay, Malay-like and Malay-influenced languages and dialects". In Malaysia, the language of Johor and Riau is considered the correct language. There is much divergence from this form of Malay. However, linguistic study does not yet allow us to specify how many dialects can be isolated.

Malay already existed as a *lingua franca* during the period of Portuguese activity in Eastern Indonesia. Its status as a national language was furthered by its use by both Dutch and British in dealing with their colonial subjects. The Japanese replaced Dutch and English with Malay during World War II and thus helped development of Malay as a language of administration and learning. This marked the beginning of efforts to expand the use of the language that continues to the present. Malay is more of a success as a national language in Indonesia than in Malaysia. It has often become the language of domestic life in Malay for Indonesian cities, as well as the language of youth. The complicated Malay linguistic situation makes it difficult to isolate the speech groups are therefore not. In Malaysia the term *himpunan*, meaning "son of the soil" is used to distinguish Malays from Chinese and Indians. When it is so used it refers to native speakers of Malay who are Muslim and born in Malaysia. The same term in Borneo, however, refers to tribes who may or may not speak a form of Malay. Though the term *himpunan* is recent, the notion, as Gullick notes, goes back to British rule. Before colonial times, it is doubtful that an equivalent term was used by anyone to designate themselves, Malay speakers rather referring to themselves as inhabitants of certain places or followers of certain rulers.

Before the colonial period, Malay states were typically situated at the mouths of rivers. Revenues collected from the control of trade were the source of the ruler's power. With these revenues, the ruler maintained a band of retainers. Before the coming of the British, peasants fled from one area to the next as they felt pressure from rulers to pay taxes or perform labour services. The limitation of aristocratic power and the bringing of peace to the Malay Peninsula allowed for the building of permanent Malay settlements. It resulted also in immigration from Sumatra to the central areas of the peninsula. Rubber became a major smallholder crop between 1910 and 1920 and thus a mainstay of the Malay economy on the West Coast. In other states, rice became the chief crop. The growing of those crops along with fishing, the cultivation of copra and palm oil, work on estates and in the civil service comprise the chief occupations of Malaysians today.

It is more difficult to isolate a notion of "Malay" in Indonesia with its more complicated linguistic and ethnic composition and different colonial history. What have been termed "Coastal Malays" have been little studied. Pigeaud has used the Malay word meaning "coastal" to term the culture that includes coastal Malays as well as other groups, "Pasissir culture". Hildred Geertz has elaborated this notion. She sees Pasissir culture as developing around the spice trade of the 14th to the 18th centuries and associated with the spread of Islam. In this process, Malay culture was mixed with other influences—Javanese and Makassarese as well as Arabic and south Indian, with different mixtures evolving in different localities. In addition to Islam, Geertz stresses an orientation to the market and the development of literary forms as features of Pasissir culture. As was the case in the Malay states, a system of status was tied to actual political power so that office was not a sure sign of authority, rulers having to validate their power through the maintenance of retainers.

Malays are Sunni Muslims. Their religious institutions vary from place to place. There is usually a village religious official, often termed a *lebai*. In the traditional states, there were religious officials, including *kadis*, associated with the courts as well as religious functionaries independent of the states and connected often with mosques or with religious boarding schools in the countryside. Peripatetic teachers from the Middle East as well as the pilgrimage have long been important vehicles of influence. The oldest Malay texts which show Muslim influences come from Trengganu in Malaysia and Atjeh in Indonesia. Both date from the 14th century. Tomb inscriptions showing adherence to Islam date from the 15th century. (J. SIEGEL)

Of pre-Islamic Malay literature, nothing is known. As far as may be concluded from a few old-
scriptions in Hindu script, it seems that Malay was written in Kawi-like characters, but literature, in its earliest known form, is written in Arabic letters only. The oldest manuscripts are preserved in the Cambridge and Oxford libraries; they date from the last years of the 16th and the first decade of the 17th century. The only literary-historical evidence of the existence of written literature in the 16th century is the mention, in a 17th century chronicle, of the use made of a royal library at Malacca at the time when the Portuguese endeavoured to capture that town (1511). Malay literature, as it presents itself now, seems for the greater part original. Hardly any of the chronicles, tales and poems are derived from Arabic sources directly, most of the religious and semi-historical romances having been translated from Persian; but all these literary products are imbued with the Muslim atmosphere, being full of Arabic words and phrases and laden with Islamic theory. There are, it is true, some indigenous farcical tales, and some fables, especially the sometime highly appreciated mouse-deer tales, moreover some original romances with Hinduistic influences, and several adapted old Javanese tales, that do not betray real Islamic influence; but the very fact that all these books are written in Arabic characters makes them overflow with Arabic words in a way that shows that they belong to Islamic mentality. In this short account, there will be no mention of literary products going back to the great Sanskrit epic poems, nor of the tales that do not show traces of Muslim influence; only in so far as Malay literature has Islamic features will it be treated here. The originally genuine Indonesian deer-fable has undergone an Islamic correction. The historical writings, more or less mythical and semi-romantic, are almost absolutely Islamised. To that class of works, like e.g. the chronicle Seraph Malay, and other ones, as the chronicles of Kutawaringin, Kutai, Atjeh and Pasai, are to be reckoned. A partly historical but for the greater part fictitious, romance is the Hikayat Hang Tuah. A host of romances, dealing with foreign princes and princesses and their endless adventures, has been spread over a great part of the Malay reading East-Indian world; the titles of all those popular, but for European readers less attractive, books, may be found in the catalogues of Malay manuscripts at Leiden, Batavia and London. Some books of fiction have been translated from Persian, Arabic or Hindustani. A group of them is to be traced to the Hitopadesa-collection, another one to the Tuti-nama-series, a third one to the Badar! cycle. Only exceptionally have foreign authors written in Malay; e.g. the Rádpút Núr al-Dín al-Ránírf, who wrote a great encyclopaedic chronicle at the instigation of an Atjehnese queen. A very great number of texts deals with the former prophets, the Prophet Muhammad, his family and friends. Those works, like e.g. the romances of Amír Hamza and Muhammad b. al-Ḥanafiyya, have Persian originals. The purely religious books cannot be regarded as Malay literature.

Poetical literature has a different character. The real Malay kind of poetry, though not devoid of Persian influences, is the pantun, i.e., popular quatrains, whose first two kinds deal with a natural fact, or a well known event, and are intended to prelude, phonetically, the third and fourth lines, that contain the real meaning of the usually erotic poem. The other "genre" is the sha'ir. Its form is the stanza of four rhyming lines. Some of these very extensive overloaded poems are from the Javanese, some others are versified versions of prose romances, moreover

historical events, love-scenes, religious matters, mystical speculations etc. are dealt with in innumerable sha'ir.

P. van Rónkel.

The development of Malay as a modern literary language is generally said to begin with the writings of Abdullah bin Abdul Kadir Munshi, 1796-1854 (known as Munshi Abdullah), who introduced a colloquial style and who relied on his own observations for the content of his writing. The Islamic features of the literature that developed after Munshi Abdullah are difficult to specify. The progress of modern literature meant a decisive break with older forms, such as the sha'ir, with their strong Muslim overtones. At the same time, the development of contemporary forms such as the novel and short story can be seen as means of continuing the expression of traditional social tensions which often centred around Islam. Writers from the 1920s and 1930s who were responsible for the acceptance of modern styles were mostly from the Minangkabau region of Sumatra. Taufik Abdullah has shown that a continuous tension and resolution between Minangkabau tradition which featured matrilineal descent and Islam resulted in the perpetual generation of new social forms. The modern novel and short story as exemplified in the works of writers such as Marah Rusli, born 1889, Nur Surat Islandar, born 1893, and Sutan Takdir Alisjahbana, born 1908, can be seen as continuing the expression of this tension. At the same time, one cannot point to a specifically Islamic literature, though writers such as Hadi Abdul Malik Karim Amrullah, born 1908 (known as Hamka) continue to deal with Islamic themes.

MALAYSIA. Political developments since 1957. The Federation of Malaya (consisting of nine peninsular Malay states plus Singapore and Melaka) achieved sovereign independence within the Commonwealth on 31 August 1957. The written constitution (amended at various times since) provided a
strong central authority comprising the Yang di-Pertuan Agong (the constitutional monarch who is elected at five-yearly intervals by and from the nine hereditary Malay Rulers), a partially nominated Senate and a fully elected House of Representatives. The Malay Rulers remained heads of their respective states (though Governors occupied this position in Penang and Melaka), each of which was provided with an executive council responsible to the state assembly. The Rulers were also confirmed as heads of the Islamic religion in their states. For a society where differences between Malays, Chinese and Indians are marked, a single nationality was created with provisions enabling all persons to qualify for citizenship either by birth or according to requirements of residence, language and allegiance. Though this would allow the proportion of non-Malay citizens to rise steadily, it was made acceptable to the Malays by constitutional safeguards for their religion, language and "special position" in public service, education, land reservations, etc. Lawyers and politicians have had some difficulty reconciling the historic principles of "the special position of the Malays" with the more modern concept of "common nationality".

Tunku Abdul Rahman's Alliance coalition of the United Malays National Organization (UMNO), Malayan Chinese Association (MCA) and Malayan Indian Congress (MIC) was intended to make compatible the interests of the three major communities. The arrangement allowed Malay political hegemony and non-Malay domination of the economy in the short term while holding out the prospect of a gradual breakdown of these respective preserves. The Alliance majority was confirmed at the 1959 elections and on 1 August 1960 it was confident enough to end the Emergency which has been declared on the outbreak of the communist insurrection (June 1948). Conservatives, educationalists and rural developmental policies were launched to improve the economic lot of the Malays.

On 27 May 1961 the Tunku proposed the formation of "Malaysia" from Malaya and the British dependencies of Singapore, Brunei, North Borneo (Sabah) and Sarawak. Neither the Tunku nor Lee Kuan Yew (Chief Minister of Singapore) believed that an independent Malayominated Singapore could survive on its own, while the former was confident that the peoples of Borneo would counter-balance the Chinese of Singapore. Reassured about their military base in Singapore, the British were prepared to decolonise the rest of their Southeast Asian empire via the Malaysia plan. Despite protests in Borneo (e.g. the Sarawak United People's Party; Azahari's revolt in Brunei, December 1962), the Coghislold Commission and a UN Mission separately concluded that the majorities in Sabah and Sarawak favoured Malaysia which was inaugurated, but without Brunei's membership, on 16 September 1963.

The new federation faced problems within and without. Sukarno condemned it as a "neo-colonial" conspiracy and "frontline" between Indonesian and Malay-dominated forces. In July 1963, the Indonesian and the Malayan-Commonwealth forces lasted until May 1966, while the Philippines laid claim to Sabah. Relations between Kuala Lumpur and some state governments were also strained. The Pan-Malayan Islamic Party (PMIP) controlled Kelantan, and the federal government had to intervene in the affairs of Sabah and Sarawak to ensure state governments to its liking. Lee Kuan Yew's commitment to a "Malaysian Malaysia" challenged the Alliance formula for the harmonisation of communal differences and roused UMNO "ultras". In August 1965, Singapore was forced to secede from Malaysia. Nevertheless, the Alliance had increased its majority in the 1964 federal elections.

The elections five years later, however, were bitterly contested. The PMIP and some Malays within UMNO criticized Tunku Abdul Rahman for "giving in" to the Chinese, while the Democratic Action Party (DAP), Gerakan and People's Progressive Party complained about the disadvantages suffered by non-Malays. Reduction of the Alliance majority, particularly the MCA's poor performance, provoked demonstration and counter-demonstration which spilled into inter-communal violence in Kuala Lumpur on 13 May 1969. Probably many hundreds were killed. Parliamentary government was suspended until February 1971.

1969 is a turning-point in the modern history of Malaysia. Tun Abdul Razak, for years the Tunku's deputy, assumed the leadership of government, first as Director of the National Operations Council and later as Prime Minister (September 1970 to January 1976). Razak evolved a strategy for stability which was continued by Hussein Onn (1976-81) and Mahathir (since 1981). The Rukunegara (national creed) was proclaimed, but public and parliamentary debate of "sensitive issues", notably the paramountcy of the Malay Rulers, the special position of bumiputras ("princes of the soil", i.e. Malays and other indigenous peoples) and the citizenship rights of non-Malays, was outlawed. Authoritarianism has been a characteristic of Malaysian government; in 1960 when the Emergency ended, the executive equipped itself with even wider emergency powers by amending the Internal Security Act, and detention without trial and news censorship have been features of the period since the return to parliamentary government in 1971. The coalition has been enlarged to incorporate former opposition parties, including the Parti Islam Sa-Malaysia (PAS, previously PMIP), between 1973 and 1977, but not the DAP. This National Front (NF or Barisan Nasional), like the old Alliance, has been dominated by UMNO. In the 1974 elections, the NF won well over two-thirds of the federal seats (the amount needed to amend the constitution) and control of all 13 states.

Perhaps the most significant result of the 1969 riots was a shift in economic planning. One of the most prosperous countries in Asia and enjoying an enviable growth rate, Malaysia has nonetheless suffered from rural poverty and an uneven distribution of income. To break down the communal compartmentalisation of society, in which bumiputras were identified with traditional activities while Chinese and Indians were obviously associated with the modern sector, the New Economic Policy (NEP) was devised. Through a series of Five Years Plans (1971-5, 1976-80, 1981-5), the NEP has aimed to eradicate poverty and to increase the bumiputras' share of corporate wealth to 30% by 1990. There is tension between these objectives, and irritation arising from their immediate pursuit or failure to attain long-term goals could exacerbate communal relations and popular grievances. Since independence, the economy has diversified considerably and the manufacturing sector has been developed, but Malaysia still relies on the export of commodities (petroleum, rubber, tin, palm oil, timber and more recently cocoa) and is thus vulnerable to world-market fluctuations. Since the mid-70s, government has been aware that world recession might upset the timetable of the NEP. So, too, might the rapid growth of population (currently at 2.7% p.a.) which, according to the 1983 estimate,
totalled 14,744,000 and is ethnically divided in the approximate proportions of Malays 47%, Chinese 33%, Indians 9% and Borneo peoples 9% (plus 2% others), and is distributed geographically between Peninsular Malaysians 83% and East Malaysians 17%.

In foreign affairs, too, the early 1970s saw a shift in emphasis. The Anglophile Tunku had stayed firmly in the Western camp; though Malaysia had not joined SEATO, the Anglo-Malayan (Malaysian) Defence Agreement (AMDA) had underwritten the country's security, and Malaysia had supported the US in Vietnam. In 1971 AMDA was replaced by the Five Power Defence Arrangement (Australia, Britain, Malaysia, New Zealand, Singapore) in which Britain played a less prominent role. At the same time, Malaysia became interested in the neutralisation of the region through the Association of Southeast Asian Nations (ASEAN, 1967). Without compromising its anti-communism, it established diplomatic relations with China (1974). Communist expansion and Sino-Soviet rivalry in Indo-China since 1973 has been tackled by Malaysia as an ASEAN matter rather than through the Commonwealth, in which the present Prime Minister shows little interest.

In 1975-6, world recession, resurgent terrorism, political crisis in Sabah, corruption involving the Selangor Chief Minister and the death of Tun Razak (January 1976) might have shaken the régime, but the calm control asserted by Datuk (later Tun) Hussein Onn was endorsed by the 1978 elections. In July 1981 he was succeeded by the more abrasive Datuk Seri Dr Mahathir Mohamad, a vigorous champion of Malays within a "Greater Malaysia". "Leadership by example", "Malaysia incorporated" and "Look East" are some of the slogans illustrating his drive for administrative efficiency, entrepreneurial zeal and international repute. Since the NF's landslide victory in the elections of April 1982, however, he has been embarrassed by a constitutional wrangle with the Rulers, a financial scandal arising from the Bank Bumiputra's involvement in property development in Hong Kong, the Islamic revivalism of PAS and the defeat of the NF party (Berjaya) in the Sabah state election (April 1985). Though Mahathir's command of UMNO, the NF and the country is unassailable at the moment (June 1985), he has to counter the blandishments of PAS and guard against splits between NF partners and within parties such as the MCA and MIC, which are notoriously disunited. Apart from the politics of the moment, some are exercised by the fear of a slump in Malaysia's economy whose continuing buoyancy is essential to the integration of this new state.

MALAZGIRD. 1. The town. The modern Turkish Malazgird constitutes a district (îliş) centre in the province (il) of Muş in eastern Anatolia. The area surrounding the town is rich in cuneiform inscriptions, and it is possible that the battle between Tiglathpileser I and the Nairi kings took place in the area. The name of the town itself, which probably goes back no further than the Parthian period, in Old Armenian is recorded as Manavazakert, Manavazakert and Manazkert, while the oldest Arabic form is Manazjird. It has been supposed that this name preserves the memory of the Urartu king Menas of Van, whose name is mentioned in many inscriptions which have been found in the Malazgird area.

Very little is known about the town's pre-Islamic history. Constantine Porphyrogenitus remarks that the local dynasty who held Malazgird in the 4th/10th century paid tribute to the Byzantine Empire. However, the members of this dynasty, which originally had been subordinate to the Bagratids, bore Arabic names, the nasta derived from Malazgird being very prominent. The name of the town itself, which probably goes back no further than the Parthian period, in Old Armenian is recorded as al-ManazT. Thus, during the campaign of the Hamândi Sayf al-Dawla into eastern Anatolia (328/940), we hear of a prince of Malazgird named ʿAbd al-Hamîd. In 353/964 a ghulam of Sayf al-Dawla's conquered the town, and in 359/969-70 it was taken by the Byzantines. The Byzantine occupation of Malazgird must have been very brief, for in 382/992-3 another Byzantine army tried to take possession of the town, this time without success. On the other hand, 446/1054-5 Malazgird must have once again fallen into Byzantine hands, because Ibn al-Athîr records that in 446/1054-5 Malazgird resisted a siege by the Saljûq Toghrîl Beg.

However, the main event in the history of the town was the battle of Malazgird between the Saljûq sultan Alp Arslan and the Byzantine ruler Romanus Diogenes (463/1071) [for details, see 2. below]. The outcome of this battle led to the gradual settlement of Anatolia by Turkish nomads and then townsmen, and to the establishment of the Rûm Saljûq sultanate in central and eastern Anatolia.

On the other hand, the town of Malazgird itself never played a prominent role, neither in the Saljûq nor during the Ottoman period. During the 7th/13th century, the name of Malazgird is occasionally mentioned in chronicles (particularly Ibn al-Athîr), but no references can be found concerning the economic life of the town. Equally sparse is the material for the Ottoman period. Thus it has not been possible to locate an enumeration of Malazgird tax-payers in the tahrîrs of the 10th/16th century, although an Ottoman document from the year 1001/1592-3 refers to a sandâq of Malazgird, in the wâjdât of Diyârbekir, which was inhabited by the Kara Ulas nomads (Başbakanîk Arşıvi, Divan-i hûmayûn Ruus Kalemi, 253/46a, p. 63). However, Kâtib Celebi (Djihan-name, 426) makes a brief reference to the existence of the town, which in the 11th/17th century could be reached in two days' travel from Erzurum. Moreover, the town lay on a road connecting Adilecevaz and Bitlis, which was used by the Ottoman army on one of its campaigns in 1480 (Irâk).
villages, the main settlement containing 213 houses and 19 shops. The kada, then as now, as the cultivation of wheat, barley, beans, and maize. Vegetables and industrial cultures (sunflowers, sugar beet) were being encouraged by government projects. The number of craftsmen was low, and the cildm possessed no industry. According to the Il yilhi of Muq published in 1973, the town had by 1970 grown to 10,711 inhabitants (1975: 13,094). A hydroelectrical power plant had been established, so that Malazgird is now supplied with electricity. As an administrative centre, the town also provides educational services for its district: a high school (lis) was opened in 1971, and the construction of a cultural and sports centre began about 1970. An irrigation project had equally been undertaken by 1970, and the first producers’ cooperatives were making their appearance. However industry continues to be practically absent from the cildm of Malazgird.

2. The battle. As noted above, the most important event with which the name of the town is connected is the battle of Manteincourt fought in Dhu ’l-Ka’da’s (August 1071 between Alp Arslan [q. v.] and Romanus IV Diogenes. This event is treated by a variety of sources, Byzantine Greek, Armenian, Syriac and Arabic. The most valuable account is surely that of Attaliates, who was present at the battle itself as well as being an adviser of the Emperor, whereas that of Psellus, tutor of Michael VII Ducas who was to replace Romanus on the imperial throne after the battle, is hostile. Although Cahen (1934, see Bibli.) was critical of Attaliates’ detailed testimony, more recently Vryonis and Cheynet (see Bibli.) have reinstated him as the prime source for the battle. A relevant Western source is the Gesta Roberti Wiscardi of William of Apulia (see Bibli.); other later Christian writers such as Michael the Syrian and Matthew of Edessa are strongly anti-Byzantine, viewing the Sâl’djik invasions of Anatolia as divine retribution for the Emperors’ treatment of non-Melkite religious minorities of the empire. There is no contemporary Muslim account, the earliest extant one being that of Ibn al-Kalânisî (d. 555/1160), but the long description by Sîh b. al-Djawi (probably deriving from Ghârs al-Nî’ma Muhammad b. Hîdâl al-Sâbî’s lost Usân-l-tawârabî) is, among other Muslim sources, detailed and valuable.

The policy adopted by Romanus when he became Emperor in January 1068 was to take the offensive against the Muslim enemy beyond the Byzantine frontiers rather than to wait for raids to take place, and the campaign which culminated at Malazgird was the last of three conducted by the Emperor himself, for which he left Constantinople in spring 463/1071, aiming to secure against the Sâl’djik the fortresses of Aklâhî [q. v.] and Malazgird. Alp Arslan was for his part besieging Edessa in the spring, but on hearing of the arrival of the Byzantine army in the east, decided to move in that direction, probably via Mawsil and Khûy, to assemble reinforcements. Romanus detached a contingent of his army under the Byzantine Pope Michael the Syrian to take Akhlat, whilst his own army took and garrisoned Malazgird itself. Preliminary skirmishes took place, during which time some of the Uze (sc. Ghuzz) mercenaries in the Byzantine army deserted to the enemy, whilst Roussel and the Georgian Joseph Trachaniotes fled westwards from Aklâhî, deserting the Emperor, at the approach of Alp Arslan. The Muslim side offered peace, but Romanus refused any terms, feeling that he had numerical superiority and being unwilling to throw away the immense effort put behind his campaign. The Muslim sources emphasise Alp Arslan’s pessimism before the battle, but the fact that the battle took place on a Friday meant that the force of universal Muslim prayer was felt as an advantage (cf. al-Husaynî, Aqhdî al-dawla al-sâl’djik, 47-9, which purports to give the text of special prayers offered up throughout the Sunni world at the caliph al-Kârim’s orders).

Although the figures in the Muslim sources for Romanus’s army (from 200,000 to 400,000) must be exaggerated, the Emperor must, despite defections, have had superiority in numbers; Cheynet estimates his army at probably 60,000, with much baggage and impediment. Its morale however was not high, and its composition very heterogeneous; amongst foreign mercenaries are mentioned Franks, Arabs, Rûs, Pechenegians, Georgians, Akk hazians, Khazars, Ghuzz, Kipchak, Scyths, Alans and Armenians. Alp Arslan is generally credited in the Muslim sources with having 15,000 troops at the battle. The exact date of the battle has not hitherto been established with certainty, but the fact that it was a Friday in Dhu ’l-Ka’da seems to limit the possibilities to 20 Dhu ’l-Ka’da/19 August or the next week; in fact, astronomical indications, confirming Attaliates’ information that the night before the battle was moonless, point to 27 Dhu ’l-Ka’da 463/26 August 1071, as is shown in a recent popular book on the battle, A. Friendly, The dreadful day, London 1981, 178. The exact location of the field of battle is likewise uncertain, though it was along the road between Malazgird and Aklâhî; the al-Rahwa road between Malazgird and Akhlat; the al-Rahwa (cf. Yakût, ii, 880) of Sîh b. al-Djawi, Ibn al-Djawi and Ibn al-Adîm seems most probable.

The course of the battle is described in most detail by Attaliates and by the anti-Romanus, later writer Nicephorus Bryennius. A Byzantine return to camp at nightfall seems to have been interpreted as a retreat; the rearguard under Andronicus Ducas left the field, leaving the army’s rear unprotected; and in the later stages, the Sâl’djik forces lured the Greeks into ambushes. The Emperor was captured and was honourably treated by Alp Arslan; several sources record the famous conversation in which the sultan asked Romanus what treatment should be meted out to him. A peace agreement was drawn up, the precise terms of which are not known, but which probably included a ransom, the cession of various frontier fortresses, and the provision of troops and annual tribute to the sultan; but since during Romanus’s brief captivity, Michael VII Ducas had been proclaimed Emperor and Romanus was eventually blinded and
killed by his supplanter (August 1072), it is likely that these terms were never put into force anyway.

Romanus's defeat seems to have sprung in part from inadequate intelligence about the movements of the Akkâl force, which was to rejoin him, and a poor choice of terrain, one favourable to the Sâlîjûks' mounted archers; but internal dissensions within the Byzantine empire, moreover, had been reflected in the army itself, for Andronicus Ducas, cousin of the future Emperor Michael VII, had been ill-disposed towards Romanus. A Fâtîmîd involvement in the campaign was also suggested by Hamdâni (see Bihâl), but this remains speculative.

Was the battle indeed "the greatest disaster of Byzantine history" (Grousset)? In many ways, it was the decade of internecine strife within the Empire after the battle which harmed the Empire more and allowed Turks to infiltrate Byzantine territory. Byzantine prestige abroad was certainly harmed by the ignominy of Romanus's capture, and some Crusader chroniclers (e.g. William of Tyre) see Western European involvement in the Levant as dating from this time with the Franks replacing the Greeks as upholders of Christianity against Islam there. The Muslim historians, for their part, tend to over-dramatise the event, probably because it was the only major military confrontation during the infiltration process.

MALDIVES [a group of islands in the Indian Ocean.]

1. History and social organisation

The Republic of Maldives, formerly a Sultānate, forms an independent Asian state located in the north-central Indian Ocean some 650 km. south-west of Ceylon (q.v.). The name “Maldives” is a foreign designation, probably derived from the Sanskrit māladvipa, “garland of islands”; the indigenous name Divehi Rājje “island realm” is gradually assuming some international currency.

The Maldives Archipelago consists of a narrow, 750 km. long chain of coral islands, lying scattered on a north-south axis between lat. 7°6' N. and 0°42' S and long. 72° and 74° E. The country is divided into nineteen administrative atolls, comprising an estimated 1,196 islands, of which 211 are presently (1980) inhabited. According to the 1977 Maldivian Government Census, the total population was 143,469, of whom 29,555 lived in Male, the capital and only town of the archipelago.

The Maldives were said to have been settled by the first of several waves of Sinhalese in the 5th or 4th century B.C., though both legend and scientific evidence point to the presence of an earlier Vedvōd or Tamil population (Bell, 1940, 16; Maloney, 1980, 28-71). The islands seem never to have passed under Ceylonese political control, however, and with the exception of a brief period of Portuguese domination (1658-1558-73) have remained effectively independent throughout recorded history.

Little is known of the history or culture of the Maldives Islanders in the pre-Islamic period. There are indications both of an indigenous praligious pantheon (in which Rānāmārī, a powerful deity of sea and storm, may have played a leading role), and of Hindu influence, both etymologically (Maloney, 1980, 51) and archaeologically (a Shivalingam, possibly indicating the site of a former Hindu temple, was excavated in Arij Atoll, Ariyaddu Island, in 1959). It is clear, however, that from ca. 300 A.D. onwards, Theravada Buddhism emanating from neighbouring Ceylon came to dominate the archipelago (Bell, 1940, passim; Reynolds, 1974, 1978; Maloney, 1980, 72-98). Thus by the 4th/10th century, Buddhist monasteries and stupas existed throughout the country, especially in the southern and central atolls.

The initial advent of Islam to the islands remains shrouded in mystery. However, it is clear that the existence of the Maldives must have been known to Arab (and Persian) mariners even in pre-Islamic times, and it is therefore reasonable to assume that Muslim merchants and sailors first visited the remote archipelago as early as the 1st/7th century (Forbes, 1981, 62-77). For the next four centuries, Buddhism remained established as the dominant religious creed of the islands, though it is possible that, during the 4th/5th/10th-11th centuries, some of the northern atolls fell under the political and cultural influence of the (Hindi) Chola monarchs Rājarāja I and Rājendrā I (Sastri, 1953, 220; Forbes, 1979, 138). During this period a mixed Arabo-Maldivian population, albeit of small size, must have developed at Male, in some respects paralleling the development of the neighbouring Mappila [q.v.] community of Malabar [q.v.] and elsewhere on the Indian Ocean littoral. As with the Mappillas, this nascent Maldivian Muslim community is likely to have wielded economic, political and cultural influence out of all proportion to its numbers.

According to the Maldivian Ta'rikh (a historical chronicle dating from the early 12th/18th century—see Bell, 1940, 18-43), the last Buddhist monarch of the Maldives, who bore the Sinhalese-style birudā (epithet) “Siri Bavanāḍītta”, was converted to Islam by a Muslim visitor to the islands on the 12th day of Rabī‘ II 548 (1153 A.D.), upon which he adopted the Muslim name and title “Sūlān Muḥammad al-ʻĀdī”. Certain controversies surround this event. Thus, according to Ibn Baṭṭūṭa (who visited the islands between 1343-4 and again in 1346), the shaykh responsible for the conversion was a Māghribī styled Abu l-Barakāt al-Barbārī, a Sunnī Muslim of the Mālikī madhhab (text, iv, 127; English tr. Gray, 1882, 14). In contrast, the Maldivian Ta'rikh ascribes the conversion to one Shaykh Yūsuf Shams al-Dīn Tabrīzī, by whose almost certainly a Persian or perhaps a Turk, of uncertain rite (Bell, 1940, 18-19). Today, Abu l-Barakāt is officially recognised as the shaykh responsible for the conversion, and his tomb stands in Malé’s Henveru district, the most venerated ziyāra in the country.

Other early epigraphic evidence ascribing the conversion to Shams al-Dīn is extant, however (Bell, 1940, 190; Forbes, 1982), and the exact role played by the Mālikī shaykh “al-Furūsān” (who was venerated throughout the country) remains uncertain.

Following the conversion of Muhammad al-ʻĀdī to Islam, both the Ta'rikh and Ibn Baṭṭūtā's Riḥla are agreed that the new faith was rapidly embraced by all Maldivians. Recently-translated epigraphic evidence casts doubt on this claim, however. Thus according to a copper-plate grant (lomdfdnū) preserved at the Bodgala Mosque in Malé, more than half-a-century after the initial conversion, it was necessary for the Malé authorities to send a military expedition to crush an “infidel” (presumably Buddhist) king in the south of the country (a transcript of this lomdfdnū is currently in press at Malé). It may be safely assumed, however, that by the late 7th/13th century the country was universally Muslim, a situation which remains unchallenged today.

Following the initial Portuguese assault upon the traditional trade network of the Indian Ocean, much of the indigenous, Muslim-dominated trade of the Malabar region was re-routed via the Maldives, thus exposing the islanders to more direct and regular contact both with Arabia and with Islamic South-East Asia. This development led in turn to an increased (and unofficial) Portuguese interest in the islands, culminating in the brief but destructive Portuguese occupation when, between 965-81/1558-73, Malé passed under the control of the hated “ʻAdīri ʻAdīri” and “the sea grew red with Muslim blood” (Ta'rikh: Bell, 1940, 26). In response to this Portuguese aggression, the Maldivians, under the inspired leadership of Muhammad Bodū Takurufānū, a son of the ʻAbdūl of Utīm in the north of the country, waged an unremitting guerilla struggle. By 981/1573 the Portuguese were forced to withdraw, and Muhammad Takurufānū became sultan. One last result of the Portuguese occupation was a change in the madhhab followed by the Maldivians. Thus according to the Ta'rikh (Bell, 1940, 27), following the expulsion of the Portuguese it was discovered that the Maldivian ʻāsma' had been decimated, and that no shaykh of the Mālikī madhhab remained alive. At this time there chanced to be a Muslim from southern Arabia, Muhammad Qāmāl al-Dīn Ḥuważ, who bore the Muslim name and title “Sūlān Muḥammad al-ʻĀdī”. Therefore, Male authorities to send a military expedition to crush an “infidel” (presumably Buddhist) king in the south of the country (a transcript of this lomdfdnū is currently in press at Malé). It may be safely assumed, however, that by the late 7th/13th century the country was universally Muslim, a situation which remains unchallenged today. 

Following the initial Portuguese assault upon the traditional trade network of the Indian Ocean, much of the indigenous, Muslim-dominated trade of the Malabar region was re-routed via the Maldives, thus exposing the islanders to more direct and regular contact both with Arabia and with Islamic South-East Asia. This development led in turn to an increased (and unofficial) Portuguese interest in the islands, culminating in the brief but destructive Portuguese occupation when, between 965-81/1558-73, Malé passed under the control of the hated “ʻAdīri ʻAdīri” and “the sea grew red with Muslim blood” (Ta'rikh: Bell, 1940, 26). In response to this Portuguese aggression, the Maldivians, under the inspired leadership of Muhammad Bodū Takurufānū, a son of the ʻAbdūl of Utīm in the north of the country, waged an unremitting guerilla struggle. By 981/1573 the Portuguese were forced to withdraw, and Muhammad Takurufānū became sultan. One last result of the Portuguese occupation was a change in the madhhab followed by the Maldivians. Thus according to the Ta'rikh (Bell, 1940, 27), following the expulsion of the Portuguese it was discovered that the Maldivian ʻāsma' had been decimated, and that no shaykh of the Mālikī madhhab remained alive. At this time there chanced to be a Muslim from southern Arabia, Muhammad Qāmāl al-Dīn Ḥuważ, who bore the Muslim name and title “Sūlān Muḥammad al-ʻĀdī” (q.v.).
a Maldivian "ddim who had spent many years studying at the Shafi'i centres of the Wadi Hadramawt and at Zabid in the Yemen. He was subsequently appointed khadij by the Imam of Mitha and from this time the Mālikī maddhab was replaced by the Shafi'i one as the formal rite of the Maldives.

From 981/1573 to the present day, the Maldives have remained effectively independent, though in 1887 an agreement was signed between Sultan İbrahim Nūr al-Dīn and the British Crown by which the islands assumed British protectorate status in matters of foreign policy, but retained internal self-government. In 1932 a constitution was introduced for the first time, though the Sultanate was retained for a further 21 years, when the First Republic was established under the Presidency of Muhammad Amin Dīdī. In 1954, following the overthrow and death of the latter, the Sultanate was briefly re-established. However in 1968, three years after the attainment of full independence from Britain, the Sultanate was finally abolished and a Second Republic proclaimed under the Presidency of Ibrahim Nasir. Today, the President of the Republic of Maldives is Maumoon Abdul Gayoom, a graduate of al-Azhar who is fluent in both Arabic and English.

The people of the Maldives Islands are predominantly of Indo-European origin, being linked ethnically and culturally with the Sinhalese people of Ceylon and the inhabitants of Minicoy Island, now grouped with the neighbouring Laccadive Islands [q. v.] to the north. Other important constituent elements in Maldivian culture are the Dravidian and the Arabo-Muslim ones. Maldivians are 100% Sunni Muslims of the Shafi'i maddhab. The only non-Muslims to be found in the country are foreign experts or businessmen, all of whom are resident on a strict temporary basis, and none of whom may acquire property or Maldivian nationality without first becoming Shafi'i Sunni. The Ismā'ili Bohra community (originating from Gujārat [see BHOJRAS]) which dominated Maldivian trade from the late 19th century to the early 1950s has been expelled, and their solitary mosque (in Male) has passed under Shafi'i control. Unlike the neighbouring Laccadive Islands, the Maldivian Muslims are partly patrilineal, nor is "caste" a factor, though class distinctions were—and in some cases remain—strong. Maldivian Islam is therefore distinguished by considerable orthodoxy at the official level. At a popular level, however, it is characterised by an unusually widespread belief in spirits and in all manner of dīnī, as well as by the extensive practice of fadīta (cf. Sanskrit pandita, "a learned person"), a religio-magical science widely accepted throughout the archipelago and described by Maloney (1980, 242-73) as "a parallel religious system". Today the Maldivian religious establishment—which draws much of its inspiration from the reformist ideologies with their roots in Arabia and elsewhere in the Middle East—is anxious to limit the role played by fadīta in Maldivian society, and actively discourages sihura (cf. Ar. sīhūr 'magic'), fadīta's black magic counterpart. Despite these pressures, however, widespread belief in fadīta and in a plethora of dīnī persists, providing intriguing evidence of parallels between popular Islam in the Maldives and in its counterpart in the Malay-Indonesian archipelago.

2. Language and literature. The Maldivian language, called Divehi, is an Indo-Aryan tongue closely related to Sinhalese, with which it shares some distinctive features as the half-nasals before voiced stops and the "umlaut" of e to i in certain positions. It maintains the distinction, now lost in Sinhalese, between dental l and retroflex l. It was formerly written in a script derived ultimately from Brāhmī and closely resembling earlier forms of Sinhalese script. This script, known as Dīsī akuru ("Maldivian letters"), survives on tombstones and inscriptions and in some manuscripts, but was gradually replaced during the 18th century by a script called tana, written from right to left (which facilitated the use of Urdu or Persian loanwords written in Arabic script). This script contains 24 letters (one of which is known as alif, though it has more than one function). It was a local invention; the first nine letters are forms of the Arabic alif; the remaining 15 are components of dāʾīma, which is defined as "palatization".

No ancient literature has survived. Surviving writings on palmeleaf are mostly magical or medical treatises. A few historical works exist, though not generally available for inspection. Learned works were sometimes written in Arabic; thus an Arabic tawārikh of the Maldivian Kingdom (Dīdehi rajā) exists, compiled in 1725 and brought up to date in 1821, as well as some 18th-century histories in Maldivian called Rādiwalī ("line of Kings"); these histories all begin from the time of adoption of Islam in 548/1153. Surviving poems include Dīṣī raṭwarī ("The song of Dīsī"), an obscure romance of travels in the Indian Ocean dating from about 1810.

It is only with the 20th century that books became common and duplication of texts was practised. Grammatical formulation of the Maldivian language may be dated from the publication of Sullam al-arīf by Shāhīk Hādīrīn Rūghī in A.H. 1355. Amīn Dīdī, Chief Minister and later first President of the Maldives (1909-54), was a prolific writer and encour-
aged and promoted literary compositions by others. Literary magazines feature among the early competitions became fashionable at the time. Amīn Dīnī also wrote historical and biographical works, including a history of the Maldives during the 1939–45 war.

There was also a tradition of religious writing, usually of a commentarial character. Literary figures of the recent past who wrote on both secular and religious subjects are Ṣayḥāḥ Saḥāl al-Dīn (d. 1950) and Bodufinavagū Sīdī (also known as Ṣafī al-Dīn) (d. 1969). Most of their works remain in manuscript.

**Bibliography:** H. C. P. Bell, The Maldives Islands: monograph on the history, archaeology and epigraphy, Colombo 1940. (C. H. B. REYNOLDS)

MALHAMA (A) in modern times designates an epic [seen ḥamāsā] and also corresponds to a usage already in evidence in the Old Testament, where malhāmā is applied to the wars of Yahweh (I Sam. xviii, 17, 20, 28), but in the Islamic Middle Ages this word means a writing or a series of a divina character, the Malhamat Dāniyāl [cf. dāniyāl]. It is a question of a collection of meteorological signs with their divinatory meanings, derived from the day of the week on which 1 January falls (from the Saturday to the Friday), eclipses of the moon, following the same order, lightning, thunder, the appearance of halos around the sun and the moon, a rainbow, the appearance of a sign in the sky and earthquakes. This first series of signs is followed by another, referring to the effects of the winds on events, those of days of the week and those of days of the week on which 1 Thoth of the Coptic year falls, and the first day of the Arab year (cf. Istanbul ms. Bayezit, Veltūnī Ef. 2294,3, fols. 58-65).

Another recension of this malhama (Istanbul, Bağdat Vehbi 2234, fols. 1-6a) enlarges the range of these predictions based on the lunar mansions, thunder according to months, eclipses of the moon, earthquakes, new moons, a rainbow, parhelions (al-gubāb ‘a‘la waḍgh al-qahma), the moon’s disc, snow, hail, clouds, comets, the blowing of winds, rains, etc.

A third recension (Istanbul, Reisülkuttab Mustafa Ef. 1164,2, fols. 15a-95a) enumerates the signs and information supplied by “celestial and terrestrial phenomena; a chapter on physiognomy, according to the calendar of the Christians, Muslims, Jews, Armenians and Copts. This compilation contains, in addition, various calculations, information on the festivals of the Harranians, where Ibn al-Bahlūl refers to the Führst (of Ibn al-Nadim), whose author he gives as Yaḥyā b. Ḥātim Ḥanā (؟) (تهن), and an account of the Mandaeans of Wāṣīt. One table brings together prognostics derived from atmospheric phenomena; a chapter on physiology (based on the Kannad al-Mansor of Abū Bakr al-Rāzī and other writings); symptoms of poisons and their antidotes; signs of the humours which predominate in the body; rules for the purchase of slaves; the diagnosis of illness; the recognition of horses’ illnesses; a compendium of dream interpretation.

There followed (fols. 94a-140a) preceded by a section on the festivals of the Harranians, where Ibn al-Nadīm refers to the Shadjara al-nuṣraīya (fols. 1b-2b) and (3) the Risāla al-ḥarīfija al-arba‘a, containing: (1) an anonymous commentary on al-Shaṭfara al-nuṣraīya (fols. 9a-140a) preceded by the Risāla al-burḥān fi ’alāmah madhī al-ḥājr al-ṣumā‘ (fols. 1-92b) of ‘Abī b. Ḥusām al-Dīn known by the name of al-Muttab (d. between 975 and 1576/1577).

With this current of apocalyptical malhama, malhāmā [cf. l. q. l. a. a. om. asd.], became associated.

**MALHŪN (malhūn)** designates the state of the language which served for the expression of certain forms of dialectal poetry in the Maghīb, as well as this poetry itself. Although the verse composed may be generally intended to be intoned and chanted by amateurs or professionals with a momentary musical accompaniment, this term does not come from lāhn “melody”, as Muhammad al-Fāṣī
would have it (Abad al-Dhiyā, 43-4), but from 'lahana (cf. Djirārī, Kasīda, 55-7) understood in the sense of "to stray from the linguistic norm" i.e. from literary Arabic [see Tanīn al-Samā'ī]. In the Maghreb there are various forms of popular poetry in dialect which grew up there or were imported [see in particular Bukāla, Ḥawfī and Zādjal], but, although the distinction may not always be perceived or even perceptible, mulhūn properly so-called, which also has various names such as kasīda ṣagāiyta or 'ilm māshaḥū/miḥāb because this art was innate (see Djirārī, 54-64) or simply kām, comprises more specifically strophic poems or ones derived from the classical kasīda [q.v.], whose fundamental characteristic appears to be (apart from liberties taken by poets) the tendency to use an internal rhyme, the first hemistichs of all the lines rhyming throughout the poem or in each of the strophes.

In the present article, we will not neglect Tripolitania, and we will concern ourselves with Tunisia, where popular poetry is still very much alive, but more particularly with Morocco and Algeria, for it is concerning these two countries that there is the most information, due to the significant number of bards (gawwalīr, pl. gawwādīn) and poets (nāṣīm, ṣayyād) who were famous there from an earlier period, and due also to the abundance of works which have been published concerning them. However, we must limit ourselves to citing those of whom are the most renowned and, as it is impossible to reserve a notice for each of them in this Encyclopaedia, we will indicate in brief the principal references which concern them, asking the reader to refer to the general bibliography, where the titles will be given in their complete form.

The origin of mulhūn. Mulhūn does not appear to have arisen from any of the categories of poetic production in dialectal Arabic with which Spain [see Zadjāl] and the Near East (see Sa'īf al-Dīn al-Hillī, al-'Aṣīl al-ḥāli, ed. W. Hoenerbach, Die vulgáresische Poesie, Wiesbaden 1956) were already acquainted in the Middle Ages. Ibn Khālūdūn, to whom the merit, among other things, must be acknowledged of taking popular poetry into account, does not use the word mulhūn, but he forms at the end of the Muḥaddith (in 417 ff.; French tr. de Slane, iii, 445 ff. Eng. tr. Rosenthal, iii, 466 ff.) some examples of townspeople's poetry which he calls 'arāḍ al-balad and whose creation he attributes to an Andalusian by the name of Ibn 'Umayr who had emigrated to Fās. It is a strophic poetry with a double rhyme which Ibn Khālūdūn regards as deriving from the maragākh [q.v.] and whose structure is similar to certain pieces of urban mūlḥūn (see A. Tahar, Poésie populaire, 363 ff.). The author of the Mukaddima adds that Ibn 'Umayr respected i-'āb, but that the Fāsīs abandoned it because it did not interest them. Despite its undeniable value, this evidence does not allow us to ascertain the period in which the first manifestations of the genre which concerns us arose; that of Leo Africanus [q.v.] (10th/16th century) is not of much more help; he says in fact (Description de l'Afrique, 214-15) that there were in Fās many poets composing love poems in the 'vernacular' and, each year, on the occasion of the festival of the Prophet's birthday (mawlid/mulūd) [q.v.], a piece of verse in his praise [see Mawīldiyāt], but it is quite likely that the "vernacular" in question was Hispanic Arabic, as this must also have been the language of the 'arāḍ al-balad. According to G.S. Colin (in Inscription au Maroc, 224-7; EI, art. MOROCCO, vol. 2), two periods are to be distinguished in the evolution of popular poetry; during the first, which stretches until the beginning of the Sa'dīds (middle of the 10th/16th century), Moroccan poetry in dialectal Arabic was a direct heritage from al-Andalus and was expressed in Hispanic Arabic, having become the "classical" language of the sa'dāf; the second begins in the 10th/16th century, and it is under the "Bedouinising dynasties" of the Sa'dīds and ʿAlawīds (from 1076/1666) that mulhūn properly so-called, a special language influenced by Bedouin dialects made its appearance and developed. The word designating, in Algeria, the popular poet (gawwalī and not kawwalī), the significant number of bards belonging to nomadic or at least rural tribes, and the fact that the oldest specimen of the genre which have been preserved date from the 10th/16th century, seem to lend credence to G.S. Colin. However, this mulhūn was not born overnight, and it is probable that the Arab tribes who had emigrated into North Africa in the 9th/11th century had preserved their traditions and that they composed some verse in their own dialect; only a study of the language of the most ancient remnants of dialectal poetry could shed some light on this problem. It is actually dangerous to contest G.S. Colin's theory by citing, as Djirārī had done (549-60), poets earlier than the 10th/16th century, without taking account of the language—which is really hard to define—that they used in their compositions.

Whatever may be the case, the first who is known was one called Abū ʿAbdūd who lived in Fās at the end of the Waṭṭāṣīd dynasty (first half of the 10th/16th century); he is famous in Morocco for a "war poem" (harbī) inspired by the battle of 942/1536 between Waṭṭāṣīds and Sa'dīds, at which he was present (Rabat ms. G594; see E. Dermeignon and M. El Fasi, Poèmes marocains, 96; M. El Fasi, La Pensée, no. 1 (November 1962), 68; M. al-Fasī, Adab al-miṣri, 46). Two poets of the same period, the Moroccan al-Maḍjīdī b. ʿAbd al-Majīdī (q.v.), author of well-known quatrains which constitute a category on their own, and the Algerian Siḍī Lāḥīḍār Bāḥhīlīf al-ʿAkhḍār, alaṣar al-ʿAṣāb b. ʿAbd Allah b. Makkhūfī, of the Mostaganem region, are counted among the earliest; in a poem on the Battle of Mazagran delivered against the Spaniards in 965/1558, he says that his people participated in this combat in person, so that if this detail is authentic, he supplies a valuable chronological reference; the works of this bard are still appreciated, so that it has been possible to collect them in a Diwan published by M. Bekhoucha in Rabat in 1951 (31 poems, among which figure several panegyrics of the Prophet, which are still sung by the tolba, in funerary vigils, to the tune of the Burdā [q.v.]; see also J. Desparmet, Blida, 146-66; idem, Chansons de geste, 195, 216-19; Sonneck, no. 112; M. al-Kāḍī, Kanz, 7-15; A. Tahar, index).

The principal poets from the 10th/16th century to the present. In the second half of the century there lived another Moroccan originally from the Tafsīlt called Abū Fāris Abū al-ʿAṣīz al-Maghrawī (d. 1014/1605) who has also remained famous, to the point that there is a proverb: ʿĀlāb khāʾi, gībt mānkhā w-al-Maghrawī "Everything tall is empty, except the palm-tree and al-Maghrawī" because he was very tall and expressed such wisdom in his verses that sanctity was attributed to him (see Rabat ms. Bibl. Royale 594; Aubin, Le
move men and women at weddings” (S. Bencheneb, in Initiation à l'Algerie, 302; see Sonneck, no. 32; M. Ben Cheneb, Itineraire, Desparmet, Bédia, 8, Kadi, Kanz, 134-42, 147-9; A. Hamidou, Poèmes maghrebin, 1007-30; Bekhouche, Poèmes érotiques, 6-33; idem and Sekkal, Printanières, 124-7; Belhalfaoui, 72-91; Tahar, index; al-Dhawhari al-Hasan 285-316; his Divan (31 poems) was collected and published in Tlemcen in 1370/1951 by M. Bekhouche.

'Ali Kūra (end of the 12th/13th century), of the Relizane region who celebrated Platonic and mystical love (see Belhalfaoui, 148-3; Tahar, 208, 210).

Ibn Swikāt (Bessoukiet), an Oranian of the same period, whose achievement was translated into his opposition to the Turkish occupation, although al-Bakkālī claims that he was a Turk (see A. Cour, Poésie politique, 486; Belhalfaoui, 144-7, on his dying horse; Tahar, index).

'Ali al-Baghdādi, a Moroccan poet of the same period, whose fame rests on a kūtāda entitled al-Harrīs (watchman = rakīb of the Andalusians = gardener of the troubadours), which is a little satirical comedy (French tr. E. Dermenghem and M. El Fasi, Poèmes marocains, reproduced in H. Duquaire, 213-22 and E. Dermenghem, Les plus beaux textes arabes, Paris 1951, 322-31; see also M. al-Fasi, Adab shābī, 61-2).

Ibn Hammādi of Relizane (early 19th/20th century) who extolled love and the Prophet (see Belhalfaoui, 149-52; Sekkal, 293-8).

Ibn 'Ali: this poet who is cited by al-Bakkālī must be Muhammad b. 'Ali wuldū Rznī of Tafilāl (d. 1237/1822), whose best known work today in Morocco is a love poem in which the tājīmīn (‘young hawk’) symbolises the loved one (text and French tr. by M. El Fasi, Le tachoun (le petit faucon) de Ben 'Ali Chérif, in Hespéris-Tamuda, vi [1965], 39-52; see also Sonneck, no. 39; Aubin, 343; Bekhouche, Poèmes érotiques, 115-54; idem and Sekkal, Printanières, 75-89; M. al-Fasi, Adab shābī, 60-1); he is notable for his composition of a poem (preserved, but inaccessible) on Bonaparte’s expedition to Egypt (see Dījarī, 625-7).

al-'Amīr of Meknēs (middle of the 13th/14th century), who attracted attention on account of his poems called dījarīya full of reflections of a political character which led him to make predictions about future events (see M. al-Fasi, Adab shābī, 62; Dījarī, 627-8).

al-Hādīdī Muhammad al-Nādīrī of Marrakesh, son-in-law and copyist of Mthlīrad (see below), who left many panegyrics of the Prophet, a poem in which he alluded to an eclipse and a mantikha of Hamdūn b. al-Hādīdī (see Ibn al-Haḍīrī in Suppl.) which is preserved in Rabat ms. 396/D (see Aubin, 343; Bekhouche and Sekkal, Printanières, M. al-Fasi, Adab shābī, 58; Dījarī, 616-19).

His contemporary Kaddūr al-'Alāmī of Meknēs (d. 1266/1850), who is one of the most popular; that al-Bakkālī, who was his master, cites him among his authorities is an indication of the prestige which he already enjoyed. This illetterate poet, who claimed descent from 'Abd al-Salam b. Maghār [q.v.] and led a pious life, is a kind of saint regarded as possessing thaumaturgical gifts; moreover, he recounts several miracles in his poems which he composed with extreme facility. There appears to have been no attempt to collect his works, but a certain number of them, preserved by his disciples and nāris (also called in Morocco hafīd < haffīd), still enjoy great popularity, even in the humblest circles. Siddī Khaddūr, who belongs to the urban school, is the author of zarāf, a genre dealing with mystically religious subjects and of kāyd (bāsā’īd) to which a religious character is attributed, even when they have an en-
tirely erotic appearance. One of his most famous compositions is that in which he tells the story of his house, sold, miraculously recovered and transformed into a much-frequented darse. He was later buried. His biography, which figures in Ibn Zaydân (Ihâf, v., 336-52) has been discussed by M. T. Buret, in Hespéris, xxvI (1938), 85-92 (see also Lakhdar, Vie littéraire, 337-8; on his verses, see the Ihâf, loc. cit.; Sonneck, no. 12; A. Fischer, Literatur, nos. 17, 26, 29, 34; Lévi-Provençal, in Arch. Berb., iv [1919-20], 67-75; Kâdi, Kan, 143; Bekhoucha, Poèmes érotiques; J. Bouin, in Hespéris, 1959/1-2, 87-103; M. al-Fâsi, Adab shâbî, 62-3; DjirarT, 629-39; Tahar, index; Belhalfaoui, 47, for whom a line of Kaddur rightly recalls the beginning of a famous poem of Rutebeuf).

Abû 'l-Âtâ'îbâ, who is doubtless Murâbâb Abu 'l-Âtâ'îbâ (Mârb Bû Lebîthâ), an Oranian poet, author of ghazaâtatâ (see Desparmet, Chansons de geste, 195; M. al-Fâsi, Adab shâbî, 56, 58).

Al-Bakkâli further cites an Ibn 'Ârûs, who is perhaps identical with al-'Ârûs al-Tilâmânî (see Desparmet, Chansons de geste, 195, 205 ff.), and four other unidentified poets.

On the other hand, several great names have been omitted and, although the limits of this article do not perhaps identical with al-'Ârûs, has already been cited as a specialist in humorous kasidas which have been preserved and published at the end of his Diwan (lit. Tunis and Fas n.d.; ed. Meknès, n.d.), he himself made the subject of a study, al-Nâr al-lâmîc âl-bârîrâ fi tâdjamât Muhammad al-Harrâk.Rabat ms. 960; see Lâvi- Provençal, Chofra, 343, n. 8).

Tuhamî al-Mâdgharî (d. 1273/1856) whom we have already encountered, composed also in classical Arabic; his works consist of some occasional poems, khamryeytât and ghazal, as well as the panegyric of the prince Muhammad b. 'Abd al-Rahmân (see Sonneck, no. 14; Kâdi, Kan, 162-4; Desparmet, in Bull. Soc. Géogr. Alg., xxii [1917], 40-51; M. al-Fâsi, Adab shâbî, 63-4; Un poème marocain inédit: «les Bourcevs» de Thami al-Ouldâgh, recueilli et traduit par M. El Fasi et E. Dermerghem, in L'Islem et l'Ocident, Cahiers du Sud, 1947, 434-8; DjirarT, 643-9).

Ahmad al-Ganduz, who lived in the reign of Mawlây 'Abd al-Rahmân (d. 1238-76/1823-59) and his son Muhammad (1276-90/1859-73), is the author of an elegy on the first and poems in honour of the Hamâdshâ [q.v.] in Suppl. (see DjirarT, 650-2). al-Mâdgharî al-Turkumâni (d. 1303/1886) is regarded as a specialist in humorous kasidas (see Sonneck, no. 11; M. al-Fâsi, Adab shâbî, 64).

Idrisb. 'Ali, surnamed al-Hanâsh (d. 1319/1901), left a classical darse and a kasida in khamma [q. v.] in addition to his poems in muhîn (see DjirarT, 665-7).

Several more or less renowned Moroccan poets might also be cited in the three principal centres of composition; Fâs, Meknès and Marrakesh (see al-Fâsî, Adab shâbî, 64; DjirarT, 534-704, passim).

In Algeria, we should not pass over in silence the Tlemceni singer of love, Muhammad al-Sahlâ (end of the 12th/18th century), whose works enjoy a lasting success (see Sonneck, nos. 29, 30; Desparmet, Bîda, B.; J. Joly, Répertoire algérois, 58-66; Bekhoucha, Poèmes érotiques, 70-111 (on Muhammad b. Sahlâ and his son); idem and Sekkal, Printanieres, 122-4; Hamidou, Poèse vulgaire, 1025, 1037; Belhalfaoui, 170-9; al-Djouânhî al-biânî, 371-88). His son Abû Madyan (Boumediène) followed his father’s example and also sang of love (see Sonneck, no. 31; El Boudali Safir, in Hanât. al-Djârîr, no. 61 [1958], 35-7; Tahar, index; al-Djouânhî al-biânî, 389-97).

In the 19th century, Ibn al-'Abâbîs (Belabbès) of Mascara, combined with love poetry philosophical and political themes (see Belhalfaoui, 116-19), while his fellow citizen Hâbbîb b. Gannûn (Benguenou) composed principally during his long life (1767-1864) erotic poems (see Bresmier, Cours, 90-91; A. L. Algiers 1846, 83; A. Tahar, in Bull. des Ét. Ar., no. 12 [1943], 42-3; Belhalfaoui, 92-9; Tahar, index).

The most famous gawwâl is, however, Mu'tâfâb b.
Ibrahim (Maṣṭfa ban Brähim, 1800?-67), whose rich Diwdn was collected by cAbd al-Kadir cAzza (see below); having had much success with women and celebrated love at length, this Oranian bard, following a valiant adventure, had to seek exile in Fez, where he expressed his nostalgia in a highly-esteemed poem, al-Gomi "the dove" ([Diwdn], no. 34, 242-84). He then returned to his country and, like all his compatriots on returning from exile, ceased to sing of women in order to turn to religious poetry. Some of his poems are still sung at weddings and circumcision feasts.

For the beginning of the 20th century, the most popular of the gawwdlin appears to have been ʿAbd Allāh b. Kerrīw of Laghwāt (d. 1921), whose romances are still appreciated (see J. Joly, in R Afr., lii [1909], 285-303; [Hunā ʿl-Djazāʾir, no. 13 [1954], 22, no. 27 [1954], 27-8; S. Bencheneb, in Initiation à l’Algérie, 302; Tahar, 87-9).

The poems of Tripolitanian origin gathered by Sonneck (nos. 16, 17, 45, 101, 102) are generally anonymous and come from the Mahāmāt tribe. As for Stemme (Beduinenlieder), it was an informant from the Matmāta, illiterate but provided with a collection, who supplied him with his documentation on Tripolitania and South Tunisia. The specimens collected by P. Marty (Chants lyriques) at the beginning of the century in this latter region are all anonymous; those which Stemme reproduced in Märchen und Gedichte, relying on an informant from Tunis, are also unnamed, whereas the authors of some of the 23 Tunisian poems which figure in Sonneck’s collection are known, but are not very old and barely go back to the 19th century. Among them can be cited ʿAbd Allāh b. Bū Ḳabā a al-Kāfī (no. 107) who, like Maṣṭfa b. Brähim, entrusted a message to a pigeon in a strophic Ḳāricsī. Sāsī b. Muḥāmād (19th-20th century) of the Dīḥākīyyīn (nos. 46, 65, 67, 75) who describes at length the horse and its rider (no. 65) as well as a hunting party (no. 67); Uṭḥmān Uḥdī of Bīzerta, who celebrates (no. 106) the construction of a bridge; Aḥmād b. Ḳūḏūja who exalts the merits of the saint ʿAlīgīṣa al-Mannūbīyya [q.v.]; finally Aḥmād b. Muṣā (d. 1893; see Briquez) to whom is attributed, probably wrongly (see Marzukl, 1981, 107-9), a poem of 29 lines, of which one only, packed with proverbs and maxims, is introduced by a letter of the alphabet followed by a word beginning with the same letter; however, this poem (Ālīf al-ʿaḍāb) is more likely to be the work of Aḥmād Mālāk from Sīaḥ, who was his contemporary and lived in a period where popular poetry had developed, in part due to the impetus given it by Ahmad Bey (1253-71/1837-55). The Diwdn of this latter poet, who deals with all kinds of subjects (social, wise, religious, but also amorous, satirical and rural) was published in the form of extracts by Muḥammad al-Marzūkī, Aḥmād Mālāk, Ḳūḥair al-Ḥunām wa ʿl-Mahāmāt, Tunis 1980. Mālāk is described here as an epic poet, but we do not know exactly whether it is him or Ḳūḥair who is the author of a kind of narrative poem inspired by the legend of Ḳūḥair al-Ḥunām; the latter was made the subject of another poem of Sālim al-ʿAyḍūdī that M. Marzūkī published and studied, with the preceding poem, in Ḳūḥair al-Ḥunām, shābtaṣiyah, Tunis 1976.

In our own time, mahānūn is always very much in favour in the whole of North Africa. Eqirār further cites (671-87) several contemporary Moroccan poets who bear witness to the vitality of dialectal poetry. In Algeria, Muḥammad ʿAbābūs (d. 1953), surnamed the “Bard of the tribes” (ghusir al-aṭalāḥ), expresses "philosophical" ideas, e.g. on peace and fraternity (in [Hunā ʿl-Djazāʾir, no. 10 [1953], 16-17); Al-Tāhir Ṭarāḫūb greets the spring, the month of Ramadan, the feast of the sacrifices, tells of a journey to Sicily and eulogises the Prophet in two poems of 126 lines each (see [Hunā ʿl-Djazāʾir, no. 11, 14 [1953], 43, 44 [1956], 56 [1957], 61 [1958]).

In Tunisia, the government encourages not only the study of popular poetry of the past, but also the composition of poems on the occasion of anniversaries of national events which have marked the recent fortunes of the country: festivals of the Revolution (18 January), Independence (20 March), Victory (1 June), the Republic (25 July), the Day of the Occupiers (15 October), as well as that of the birth of President Bourguiba (3 August); the Minister of Cultural Affairs publishes, under the suggestive title ʿUkāziyya [see ʿUkāz], a selection of these occasional poems. The authors will not be cited, as they are still alive, but by way of information we will note that the ʿUkāziyya of the years 1977-80 and of 18 January 1981 contain a total of 73 poems by 24 poets, among whom several provided 4 to 10 compositions.

Subjects treated in mahānūn. As suggested by the preceding, poetry in dialectal Arabic covers the same fields as that which is expressed in literary Arabic, and the classical genres are present in it, sc. mādīḥ, ḥūṣūṣ, ḥashāl, etc., but certainly in different proportions. As S. Bencheneb rightly remarks (in Initiation à l’Algérie, 302), the gawwdlin “derive their inspiration from all sources, chivalrous adventures as well as love stories, miracles as well as everyday life”; for his part, G. S. Colin (in Initiation au Maroc, 226) makes out poems which are amorous, mystico-erotic, satirical, political (against the French presence), didactic (or on wisdom themes), burlesque, to which must be added those which celebrate wine (mystical or not), sing the beauties of nature, glorify the Prophet and the saints or eulogise a person living or dead. M. al-Fāṣī presents (Abad ʾaḥī bi, 51-6) a comprehensive list of the subjects treated, and Dijirārī devotes a very long discussion (198-529) to the poems of the Moroccan mahānūn which he analyses with great care. Although no statistics are available, we cannot help but remark on the important place occupied by love in the poems of these poets. Dijirārī notes 5 lines, of which each one only, packed with proverbs and maxims, is introduced by a letter of the alphabet followed by a word beginning with the same letter; however, this poem (Ālīf al-ʿaḍāb) is more likely to be the work of Aḥmād Mālāk of Sīaḥ, who was his contemporary and lived in a period where popular poetry had developed, in part due to the impetus given it by Ahmad Bey (1253-71/1837-55). The Diwdn of this latter poet, who deals with all kinds of subjects (social, wise, religious, but also amorous, satirical and rural) was published in the form of extracts by Muḥammad al-Marzūkī, Aḥmād Mālāk, Ḳūḥair al-Ḥunām wa ʿl-Mahāmāt, Tunis 1980. Mālāk is described here as an epic poet, but we do not know exactly whether it is him or Ḳūḥair who is the author of a kind of narrative poem inspired by the legend of Ḳūḥair al-Ḥunām; the latter was made the subject of another poem of Sālim al-ʿAyḍūdī that M. Marzūkī published and studied, with the preceding poem, in Ḳūḥair al-Ḥunām, shābtaṣiyah, Tunis 1976. Among the Bedouins, beside love, nature and animals, both wild and domesticated (horse, camel, pigeon), are very often celebrated in accordance with archaic tradition, and hunting with the falcon is a traditional theme (see above, al-Ḥādīṭī ʿl-Ṣis and Gen. A. Margueritte, Chansons de l’Algérie), while wars between tribes gave further inspiration to the bards of the south at the times when these wars were still endemic (see P. Marty, Chants lyriques).

As the poets enjoy much freedom, some acts of daily life and family events are a source of inspiration which is not negligible (we will mention notably a poem on the death of his wife, a relatively rare theme in Arabic verse, see Marzukl, 1981, 115-22; G. S. Colin, Aṣḥāb al-Sawād al-Šārīr al-Ṭūrī).
Some dramatic events which made a deep impression also find an echo in popular poetry. Venture de Paradis had collected Une chant algerien of the XVIIIe siecle of 114 lines (published in Réfr., xxxviii [1894], 325-45) and was also lamented in Malhûn. It has been seen that the earlier that Bonaparte’s expedition to Egypt was made the subject of a Moroccan poem, just as the construction of a bridge at Bizerta had been celebrated in its time.

The events which have so far been alluded to until now have a lesser weight, in the eyes of the Maghrûbis, than the conquest and colonisation of North Africa. In Algeria, they have, since 1830, given rise to a whole series of compositions (see e.g. Gen. E. Daumas, Mœurs et coutumes de l’Algérie, 1858, 160-74, on the capture of Algiers; J. Desparmet, La conquête racontée par les indigènes, in Bull. Soc. Gogra. Alger., cxxxii [1932], 437-56). The resistance of the amîb ‘Abd al-Kàdir [q.v.] was bound to find an echo among malhûn poets, such as Kàddûr wuld Muhammad al-Bûrûjî, called Bû Ngàb (d. 1850), of the Mascara region (see A. Cour, Poésie politique, 473-75; Kàddûr, Kanz, 92, 94, 96, 100, 104-6; Moh. Abderrahman, Enseignement de l’arabe parti, 1923, 44 ff.) or Tàhiîr al-Hâwàwa, which fought him, was taken prisoner, then eulogised (see A. Cour, Poésie politique, 478-83; Kàddûr, Kanz, 75-85; Desparmet, Élégies et satires, 48-9).

In a general way, the poets who tackle political themes deplore what they consider as the ruin of Maghrûbi civilisation, and pour out their sarcasm on that which their conquerors bring them (see Desparmet, Élégies et satires). Opposition to the French penetration is manifested indirectly in some poems which the malhûn poets, such as Kàddûr wuld Muhammad al-Bûrûjî, called Bû Ngàb (d. 1850), of the Mascara region (see A. Cour, Poésie politique, 473-75; Kàddûr, Kanz, 92, 94, 96, 100, 104-6; Moh. Abderrahman, Enseignement de l’arabe parti, 1923, 44 ff.) or Tàhiîr al-Hâwàwa, which fought him, was taken prisoner, then eulogised (see A. Cour, Poésie politique, 478-83; Kàddûr, Kanz, 75-8; Desparmet, Élégies et satires, 48-9).

By way of example, we will cite Muhammad b. al-Khûyyar (Belkhirî) who was deported to Corsica after taking part in the insurrection of the Awdâl Sidi Shaykh of 1864-6; he addresses a prayer to God and expresses in touching terms his nostalgia, in a poem which deserves to be cited among the works composed by prisoners (see Sonneck, nos. 44; Kàddûr, Kanz, 177-9; Tahar, 74-88). The 38 poems gathered by P. Marty in southern Tunisia, between 1902 and 1907, are classified into 4 categories (see Chants lyriques) according to the subject which inspires them: love, war between tribes, nature, and finally the situation created in Tunisia by the installation of the French protectorate; in this ‘modern cycle’ (for the other poems are older) some poets express their surprise and their anxieties or glorify the epic action for independence of some rebels, whilst others discover in the new themes material for irony or for reflection (see e.g. Sonneck, nos. 70 and 71, against the French in 1881).

The two World Wars have also found an echo in malhûn French, whose Amîb ‘ Alîgîn is that is probable that the events which took place in Algeria from 1954 to 1962 have given rise to a certain form of heroic poetry, but the author of the present article only possesses in this connection some works of poets writing in French. In southern Tunisia, al-Fîtrî Tlijîb (d. after 1943) derives his inspiration from the political and military situation during the Second World War, and uses symbols to express his loyalty with regard to the French authorities who had thrown him into prison; but horses and camels are not absent from his work, which has been collected in a Diûân and published by M. Marzûkî (Tunis 1976). Today, the ‘Ukâzîyya performances are eloquent, and the patriotic themes are greatly developed in them.

Transmission and preservation of malhûn. As was said at the beginning of this article, the compositions of poets earlier than the 10th/16th century, if they existed, have not been preserved. It can be still ascertained that, among the Beduins, the gawwâlî was used to go, in the manner of troubadours, from encampment to encampment, from the house of a notable to the tent of a tribal chief in order to provide a spectacle on the occasion of festivals: wedding, circumcision, anniversaries, etc., being accompanied by a rudimentary orchestra playing the oboe, flute and tambourine, while, sometimes, dancers complete the troupe. Several authors who have described these festivals (e.g. C. Trumellet, Les Français dans le désert, 249-61; P. Marty, Chants lyriques, in RT, 1936/1, 96) stress the transmission of the traditions of song in families. “It is rare”, adds Marty, “for them to make them publicly known or for a stranger to be allowed to record them ... But the refrains are known by everyone or at least learnt and remembered at once, and the whole audience, especially the women who are always very excited, repeat in chorus this refrain, which is ordinarily indicated by the two last rhymes of the couplet.” In southern Algeria, a distinction is established between the gawwâlî of the poet, who improvises and modifies the works of others, and the fîsîbî who improves and modifies from his own inspiration a theme which is learnt and known, without always distinguishing exactly what he has remembered from what is of his own creation. In Morocco, Aubin (343) says with regard to the kasîda that “it is the work of a poet who, himself, is not a musician and who is content to provide professionals with his compositions and entrust them with retaining them from house to house. The latter learn by heart the new song and apply to it a known tune which appears to suit it.” M. el-Fasi confirms this information (in Hespera-Tamuda, vi [1965], 39) and states that the town poets who compose kasidas without ever writing them “entrust them to the memory of a hâfîdû or râvi who teaches them to the îsîbîy (wâygh), pl. of šîbî” who sing to classical ‘Andalusian’ music, have an orchestra formed by the lute, the ràhid (rebeck) with two strings, the tambourine (tarr) and the violin.”

Thus, as among the ancient Arabs, the popular poets do not make a point of writing their compositions, more especially as they are often illiterate, and the executants, who trust to their extraordinary memory, only rarely transcribe them in notebooks (dhânîd or) on loose leaves, so as more surely to retain
the dialectologists and ethnologists have sometimes succeeded in procuring some of these documents, and in 1898 A. Fischer could have at his disposal, in Tangier, a rich collection (Malhūn, 253) of poems in dialectal Arabic, all anonymous, and some poems of well-known classical authors, such as al-‘Abbas and al-Ahnaf, Ibn al-Rūmī, Abu l-‘Atāhīya, Abu Nuwās and al-Mutanabbī. Not all investigators have been as fortunate, and H. Stummes (Beethovenlieder, 2-3) that he was refused the permission of examining a collection whose existence he knew of. Thejealous care with which the written documents are preserved by their owners is a constant trait of which researchers do not cease to complain (see e.g. the complaints of Dījrārī, 5, whose entreaties often met with no response, or of Marzūkī, Malhūn, 6). In a general way, in a period in which the tape recorder did not exist, the investigators had to be content with collecting from the mouth of more compliant informants, some texts which they transcribed and, in many cases, translated. Jeanne Joun relates (in Hesperis, 1959/1-2, 78) that she was able to have a Moroccan girl or woman, whose father owned a collection of the works of Kaddīr al-‘Alamī (see above), recite a kasīda “which he was often pleased to chant aloud for the joy and edification of his family who appreciated it very much” and had ended by learning it by heart. Fortunately, Dījrārī (700-3) supplied some scattered manuscripts, to reconstruct at least partially some diwān and publish them in Arabic script, in spite of the inconvenience that this procedure presents (see below). Fraudulent attributions are doubtless more numerous than those which have been laid bare, but, after all, this poetry is a common patrimony, and it is not of great importance that the authenticity of each poem be exactly defined. As P. Marty relates (Chansons lyriques, 67), the author of at least partially some diwāni and publish them in Arabic script, in spite of the inconvenience that this procedure presents (see below). Fraudulent attributions are doubtless more numerous than those which have been laid bare, but, after all, this poetry is a common patrimony, and it is not of great importance that the authenticity of each poem be exactly defined. As P. Marty relates (Chansons lyriques, 67), the author of a certain collection, whose title is all anonymous: “The singers do not, however, have to divide them so as to perpetuate their rule over the eyes of many, to bring these works to light, was to do the work of a salvaging enterprise to rescue from oblivion the little which remains of popular poetry”. No one ever really believed in the propaganda which aroused this speculation on “linguistic partition”, and especially not A. Tahar who, an ardent admirer of malhūn, had begun to study it well before the independence of Algeria; in 1933, in fact, he has presented an (unpublished) mémoire on Ben Guen- noun and, some years later, promised his collaboration to Henri Pérès. The latter, after having given in the BFA, no. 1 (1940), 17-19, a general bibliography of Algerian popular poetry, published (ibid., no. 4, 111-15) under an engaging title (Pour un corpus des poésies populaires de l’Algérie), a list of 85 gawawālī whose works had to be collected and edited according to a necessarily subjective order of urgency. In the period, five diwān were in the course of preparation, but to our knowledge, only three of them have been published: those of Sidi Lakhdar (who came quite low in the order of urgency), Ibn Amāsib (see above) and Mīṣfa bān Bāŕi (see below). Actually, the project of H. Pérès was quite ambitious and difficult to achieve integrally, but it is regrettable that it was not more largely known. As a result of efforts put in by a number of collectors, the popular poetry presents as an authentic element of the national patrimony, an eloquent representative of the personality of a country and evidence of a sensibility which cannot always be expressed in classical Arabic, the author of the present article accepted the supervision of three theses on this subject: those of Abdelkader Azza (Maṣṭa bān Bārbī, barda l’Oranais et chantre des Bani ‘Azza), M. Belhalfaoui (La poésie arabe maghrébien d’expression populaire) and A. Tahar (La poésie populaire algérienne (malhūn). Rythmes, mères et formes). All three have been printed, but only the latter in exten- so (Algiers 1975); to elaborate on the first, which was treated in H. Pérès’ list, the candidate had collected the works of Maṣṭa bān Bārbī and had transcribed them in Arabic and Latin script and commented on them; but the publishing of this work has been abandoned, exclusively in Arabic. (D. ( = Dukkūr) ʿAbd al-Kādir ʿAzza, Maṣṭa bān Bārbī, ʿAmīr u-wa-maddāḥ al-kabbāl al-ʿawhrānīya, Algiers 1977). The case of the second is entirely different, for M. Belhalfaoui, in order to publish it in Paris in 1973, had to remove the apparatus criticus and transcriptions into Latin script, so as to present a literary study only—of high quality and very suggestive—as well as a selection of poems reproduced in Arabic script and translated. Actually, a fourth thesis ought to be added, that of Mohamad El Moktar Ould Bah, which was submitted in 1969, but has remained unpublished; it is a collection of Mauritanian poems in literary as well as dialectal Arabic, which the author presented in a Introduction à la poésie mauritanienne (1650-1900), published in Arabe (xvii [1971], 1-48); a paragraph in it was devoted to the popular poetry which is expressed in the dialect of the country, Hassānjīya, and is called ḍaḥī (dakhāī), although, in an unspecified work of Muhammad al-Yadali, it also bears the name malhūn; the reader will find several examples of this in this Introduction (which he will be able to supplement with Ahmad al-Shinkēlī, al-Wasīṭ fi tārīxmubtā ṣīnātī Shīνītī, Cairo 1960, studied by A. B. Miske, in BIFAN, B, xxxi [1968]; A. Leriche, Poésie de l’Algérie, BIFAN, B, 1954, 1227-56; D. Cohen, Hassānjīya, 236-43; H. T. Norris, Shingiṭī folk literature and song, Oxford 1968). It is essential to insist on the necessity of not estric-
tting oneself to publishing in Arabic script the texts gathered, if one wants to write a useful work and present a study which can be used beyond the limits of one land or indeed region. The efforts of M. El-Fas to explain how he arranges the Arabic writing so as to allow the correct reading of a text (Hesperis-Tamuda, vi [1965], 45) would certainly have been more conclusive if he had added to the good translation of the poem studied a transcription in Latin script, especially as his article is in French and is addressed to a public who may well be ignorant of Arabic. For his part, Djeriári doubtless devised an analogous system, but could not prevent the printer from omitting the vowels and reading signs, conscious though he was of the difficulty that is encountered in reading a dialectal poem. The vowels which figure in the ʿUkṣiyiyat and in certain publications of M. Marzuki are useful, without being totally satisfactory. The thesis of A. Tahar proves that it is possible to produce works which combine a care to preserve the poems in their Arabic script with a concern to make them appreciated and studied by Arabists and, thanks to translations, to procure proper evidence to nourish Arabic script with a concern to make them appreciated and studied by Arabists and, thanks to translations, to procure proper evidence to nourish fruitful studies in comparative literature.

The language of malhūn. If we have insisted on the importance of presenting transcriptions and translations (accompanied by suitable annotation), it is also because this poetry is not always perfectly clear; the differences of interpretation which can be brought forward among qualified experts are an irrefutable proof. With regard to Morocco, E. Aubin (343) writes: "The song—qacida—is composed in the common language and permits, consequently, the dialect of each province", which would appear evident. On the other hand, A. Fischer (Liederbuch, p. ix) distinguishes, midway between the dialectal (Vulgärsprache) and the classical (Schriftsprache), some poems in a mixed language (Mischsprache), and G. S. Colin (op. laud., 225) describes, for his part, the language of popular poetry as a "kind of literarised poetic koine, based on common Moroccan Arabic, but influenced above all by Bedouin dialects. "It seems furthermore", he adds, "that this poetry may be of Bedouin origin". This last suggestion seems very plausible, and one cannot help thinking of the poetic koine of the pre-Islamic period which transcended the speech of the tribes and tended to a certain unity. Mutatis mutandis, a similar phenomenon has been able to take place with malhūn which serves so to speak as a common language for poets of different regions, without extending, however, to the whole of North Africa. On the other hand, the literary genre also represented was not limited to the Bedouins and countryfolk, and it must be recognised that a more or less independent malhūn developed in certain towns and adopted, besides, some rather different structures (see below).

Given that the language of popular poetry has still not been studied in depth, in spite of the efforts of M. al-Fasī (Lughāt al-malhūn), it is best to be very prudent and beware of any peremptory assertion. M. Bethalhaoui (53-4) describes malhūn as "a language whose expression, while remaining popular and current, possesses a vocabulary which is sometimes entirely that of classical Arabic, with some minor modifications; some forms which are often actually the same as those of classical Arabic, without our losing sight of the notable differences in morphology and above all the semantic evolutions which confer here and there on the dialectal expression a stamp sui generis far removed from the classical source. We believe that we can assert that the dialectal language—that of the people and that of the bards—is today remarkably similar to that which was already attested in the works of El-Maghraoui or Lakhdar Ben Khlouf and Abderrahmane El-Mejdoub, all three of the 16th century and, he could have added, of different origin. Here we have a highly optimistic assertion, and certainly an imprudent one in the present state of our knowledge. Even if the language of the bards appears palpably that of the people, one cannot fail to remark some differences, which thorough comparisons and exhaustive inventories would reveal more clearly. Proofs of these particulars are not lacking: A. Joly (Poésie moderne) and Abdelkader Azza (at the end of his original thesis) gave a list of words which do not figure in Beauissier's dictionary; M. al-Fasī (Lughāt al-malhūn, 199) recognises that the language of malhūn is not easily intelligible, and Djeriári writes (6): "It has not been easy for us to understand these texts, especially those which were recorded in writing, because of the evolution of the language and our ignorance of the meaning of many words. And their pronunciation." M. Marzuki takes care to explain, at the end of each of the poems that he publishes, the difficult terms, and often claims that only the context enlightens them. Fortunately these exist a number of texts in malhūn transcribed in Hebrew characters, so that further studies in this respect will probably yield useful information.

When the poets are educated (like al-Mandasi in the 'Afrika), it is understandable and inevitable that they use classical words and forms (omitting the nawb and certain short internal vowels), but the illiterate poets themselves, formed by the tradition and example of their masters or predecessors, are acquainted with some of them and use them in their compositions. Some at the very least provide food for thought; thus the word nawb (wine), already poetic in classical, is quite frequent in malhūn; is it a case of a borrowing or a survival from the poetic tradition brought by the conquerors and consequently a pre-classical word? As Djeriári has rightly perceived, it is the whole problem of the Arabisation of North Africa which is hereby posed (see W. Marçais, Comment l'Afrique du Nord a été arabisée).

Apart from classical words, certain poets go as far as inserting in their verses, as a pleasantry (l. 'l-dahik; Sonneck, no. 117, of 'Ali b. al-Ṭāhir of Djellā, some French words (or Berber, notably in Mauritania) possessing the required syllabic quantity, and this remark must lead us directly to another problem which appears to be a very difficult one, that of metre.

The metrics of malhūn. The first researchers who concerned themselves with popular poetry were Arabists, naturally inclined to look for connections with classical metrics, but they stumbled against the problem of identifying the rhythm and proposed various solutions. H. Stumme (Tunisische Märchen und Gedichte, 87-103) detects in the verses studied a metre based on accent, then discovers in the Bedouin malhūn of Tunisia and Tripolitania (Beduinenleiter, 24, 38, 39, 40, 44, 45) some iambic lines of classical poetry. W. Marçais (Tiemen, 208-9) discerns in his turn in the haeji [q.e.] a classical basit. R. Basset finds a radjaz magdža in Une complainte arabe, 4. However, J. Desparment (Blida, 445) considers that the rhythm of the malhūn is based on the "numeration of syllables which are accentted in conformity with dialectal pronunciation". For G. S. Colin (in Initiation au Maroc, 225 and ÉP, art. mocco, vii/2), the metre is "based exclusively on the number of syllables of each line (as in French)". S. Bencheneb (Chansons satiriques, 90) emphasises the number of syllables and the rhyme. A.
Málhún

Chottin (Musique marocaine, 134) is of the opinion that
the rhythm rests on the number of syllables and on
an accentuation which he can hardly define. E.
Demengheng and M. El Fasi (Poèmes marocains, 99)
imply that the málhún is characterised by the number
of syllables and the rhyme. For Azza, it is the number
of syllables which characterises the version of Ban
Brâhim. Djarârî (131-46) recognises that the metre of
al-Kâlîf [q.e.] cannot be applied to málhûn, and says
that the Moroccan zadâljâbîb have particular tafîlât
which they call sarîf and which are of two kinds: the
dândan (dândûn) and mâli mâli, owed respectively to
al-Maghrawi and al-Masmûdi (592-6). M. al-Fâsi,
who undertook a study in depth of the structure of
málhûn, also considers ('Arâd al-málhûn, 8-9) that
the rhythm is syllabic, but remarks that certain poems
pose quite complicated problems.
A. Tahar, after having been won over to the view
of S. Bencheneb, not without taking into account the
accentuation (Métrique, in BÉA, no. 11 [1943], 1-7),
edevoured to deepen his study of the question and
finally discovered and explained, in his thesis cited
above, a new theory which appears attractive. Given
that Maghrîbi Arabic possesses only end short open
syllables (CV), while such syllables are preserved in
literary Arabic in the body of the word, a line in
málhûn cannot be scanned according to the classical
metrical rules. In ál-málhûn, all the syllables are thus long
(CCC, CS) or overlong, and the latter (CCV, CCVC,
CCGC, CCGG, CCSC, CGCC, CCSC) present a particular
importance. So, after having examined a considerable
number of lines and separated the syllables which they
contain, this scholar has come to the conclusion that
the rhythm of the málhûn is essentially characterised
by the identity of the number and the place of the over-
long syllables in the lines of a poem. Here is an exam-
ple taken from the work of the Moroccan Kâddûr
al-Álamî:

In spite of the impressive number of examples
cited, this theory does not seem to be applicable to all
poetry in málhûn, at least when one attempts to put it
into practice on written texts; however, it is worthy of
being taken into consideration.

Pursuing his researches, A. Tahar has tried to
determine the different 'metres' according to the
number of syllables and the place of the over-long
ones and, in imitation of al-Kâlîf, has even given
them names. For example, the line above belongs to
metre no. 1, called al-šûr 'the old', formed by two
decasyllabic hemistichs with four over-long syllables
in the first and three in the second. In all, seven
metres have been distinguished, but some of them
contain a considerable series of variants, so that the
question, in so far as it is of interest, would have to be
reconsidered. In any case, pp. 176-349, which are
devoted to the analysis of the metres, have the addi-
tional advantage of containing a mass of verse
reproduced in Arabic script, transcribed and
translated.

The structure and forms of málhûn. In an
urduzât of some 5,000 lines, al-Ukhrâm fi málhûd3
al-šûrân, which is a veritable encyclopedia (see M.
Lakhdr, Vie litteraire, 93-5), 'Abd al-Rahmân al-Fâsi
(d. 1096/1683 [see al-Fâsi in Suppl.] approaches the
'sîm mizân al-málhûn (see Djarârî, 62) and counts 15
decasyllabic hemistichs with four over-long syllables,
of which the last is al-šûrân al-djârî; one might
as well say that one can hardly make use of this docu-
ment where wazn appears to designate at once the
form and the rhythm. Anyway, analysis is com-
plicated by a confusion in the terminology and the ex-
tension of the word málhûn to everything which is
composed in dialectal Arabic, and notably to zaqâl, in
which is included the êkàsîd, also known as grîbîs. In
fact, although the forms of mâlûn may be extremely
varied, it is permissible to distinguish, for the sake of
simplication, two principal categories: the Bedouin
type and the urban type.
Among the Bedouins and the townsfolk who follow
the Bedouin tradition, we meet with isometric poems
generally described as êkàsîd or êkàsîd (gûlûd/gûfîd) and
recalling the old êkàsîd, with, however, some essential
differences: the bi- or tripartite frame is not com-
pulsory; the rhythm (see above) has nothing in com-
mon with classical metres and especially the kàfîsîa,
the final rhyme, is doubled by an internal rhyme, i.e. all
the first hemistichs rhyme also within themselves. For
example, the line Kâddûr al-Álamî cited above
belongs to a poem in which the odd hemistichs end in
-dî, and the even, in -rî; in al-ÁBahîlî's poem used at
the beginning of his treatise, the rhyme respectively in
-dî and -rî (G. Boris, Documents, 166-7) reproduces a
satire of seven lines rhyming in
-rî and -ân. The examples could be multiplied, and it
suffices to go over the great collections in order to take
account of the importance of internal rhyme, which
appears so fundamental that it is respected even in the
case where the bard takes the liberty of changing the
rhyme of the second hemistich in each line.

The word êkàsîd (et var.) naturally applied to poems
of the preceding type, is extended, among the
Bedouins themselves to a strophic structure which, far
from being uniform, presents very numerous varieties
which it is impossible to reduce to only a few forms.
A. Tahar has undertaken a work analogous to that of
Ibn Sâna' al-Mulk [q.e.] on the masâqîlah [q.e.], and
one can only refer to his analysis (363-494). The sim-
elpest form to be recognised is constituted, in
Bedouin malûhûn, by a succession of strophes with a
double rhyme whose designation is variable from one
region to another. We are not able to enter here into
doing all these details, and will limit ourselves to recalling
that in Algeria these strophes, which alternate with
one another, are called btâdî and frâhdî, the poem be-
ing and ending with a btâdî; such an arrangement
is particularly regular in the Dînân of Msâfîn ban
Brâhim. In Morocco, the êkàsîd with a double rhyme
contains several divisions called kâsîm (pl. kûsm),
themselves having subdivisions whose terminology
does not seem clearly fixed. It is the same in Tunisia,
and this question will merit being made the subject of
an analysis in depth. Finally, the quatrain is also to be
met with in Bedouin mâlûhûn.

As for the urban type, which may be compared with
the arâd al-balâd cited by Ibn Kahlûdûn, it also presents
some variable forms, for the strophic arrangement
which is prevalent leaves the field open to all the im-
provisations, and the terminology, here again, is quite
confused. For example, in Algeria, a prelude (maùlâ'
or maâshibâ') is followed by strophes of two or three
parts: bi or arâbî, then kuft or bi, dâmé and kuft. The
structure and terminology of Moroccan mâlûhûn have
been made the subject of a thorough study by M. al-
Fâsi ('Arâd al-málhûn, Djarârî (147-73) analyses a
êkàsîd containing a prelude (sarrâh) intended to set the
rhythm and comprising an introduction (dhikûl) followed by two or three lines forming a nûwa, one strophe and one linking hemistich (rusûma); then comes the ksâm which follow a refrain (harba); the latter ksâm of which contain the name of the author and the date of the composition clearly announced or in a cryptic form and, for the latter, by means of the Maghribi ab-qâd [q.v.] (an example in Behlafaloui, 168).

In his edition of the Tarshûn (Hesperis-Tamuda [1963], 39 ff.), M. El-Fasi divides the poem into: ksâm of introduction followed by a harba (refrain), then four other ksâm constituted by a strophe (nûwa), a harba (still refrain), a ksâm and a harba. So we see that the structure of malhûn and the terms which designate the different parts of a kasita are extremely variable. The common point remains, nevertheless, the principle of the double rhyme, which tends to be quite widely respected in each of the constituent elements.

It is clear from all that precedes that the Maghribi malhûn which we have attempted to present concisely to the Arabist and comparativist an extremely extensive field of research. Although the corpus already available, thanks to dialectologists and enlightened amateurs, may as a whole be considerable, it will be desirable in the first place to collect the greatest possible number of poems preserved in the memory of the nûwa or in notebooks still too jealously guarded, to transcribe them in Arabic and Latin script and translate them or at least elucidate the obscure passages. The national radios today give a large place to popular poetry, and the singers hardly have reasons to refuse to communicate their répertoire; so it will be necessary to record it in such a way as to be in a position to resolve definitively the problem of rhythm and set to rights a terminology which seems anarchic, and finally to make an inventory of the vocabulary so as to determine the origin of the different elements which constitute it.

Bibliography: Although some references have appeared in full in the main article, they are repeated here also.

I.—There is a general bibl. on the Algerian malhûn, by H. Pèrès, in Bull. des études arabes (BEA), no. 1 (1941), 17-19; the same author completed it up to 1958 in L’arabe dialectal algérien et saharien: Bibliographie analytique avec un index méthodique (see ‘poésie’), Algiers 1958; a summary bibliography comes after the names of the poets listed by idem, Pour un corpus des poésies populaires de l’Algérie, in BEA, no. 4 (1991), 111-15.

The Malinke (i.e. "the people of Mali"), also known as Mandinka, of the large group of Mande-speaking peoples. Its ruler embraced Islam after a Muslim visitor had prayed for rain and had saved the country from severe drought. The Malinke of 17

Encyclopaedia of Islam, VI
al-Bakri must have been one of several chiefdoms which, according to oral traditions, emerged among the Malinke during the 11th and 12th centuries. Mali thus reached that area of the Upper Niger river on their way to the goldfields of Burne, the exploitation of which began about that time.

Mali was Ghana’s successor as the hegemonic power in the Western Sudan. But in between (towards the end of the 12th century), after the decline of Ghana [q.v.] and before the rise of Mali, the Susu, a southern Soninke group, conquered territories to the north (Ghana) and south (the Malinke chiefdoms).

The Susu represented a traditional reaction to Islam, which by then had become a significant factor in quite a few chieftly courts. The Malinke war of liberation from the rule of the Susu was led by Sundjata, who became recognised as head of all the Malinke, with the title of mansa.

In the first half of the 13th century, following the victory over the Susu, the new kingdom of Mali expanded northwards to the Sahel. The termini of the trans-Saharan trade, where Muslim communities flourished, became part of Mali, and served as a link with the Muslim world north of the Sahara. As the small Malinke chiefdom turned into a multi-ethnic kingdom, with influential Muslim elements inside and extensive Islamic relations with the outside, the rulers of Mali became more oriented to Islam.

Mansa Ull (or Wall), son of the founder of Mali, extended the conquests of his father. He secured the northern frontiers of Mali in the Sahara, which permitted him to perform the pilgrimage to Mecca. He passed through Cairo during the reign of Baybars (658-76/1260-77). There was a long tradition of royal pilgrimages in West Africa, especially among the more powerful rulers. Ibn Khaldoun, to whom we are in debt for an excellent chronicle of the kings of Mali in the 13th and 14th centuries (ed. Paris 1847, i, 264-8), recorded also the pilgrimage of Sakôrû during the second reign of al-Malik al-Nâjir b. Kalâwûn (698-708/1299-1309). But the most famous of all royal pilgrimages was Mansa Mûsâ’s [q.v.], who visited Cairo in 724/1324.

Visits of kings of Mali to North Africa, Egypt and Mecca established the fame of Mali (often referred to as Taktûr in Egyptian chronicles) as a Muslim kingdom rich in gold. Religious, cultural and commercial relations between Egypt and Mali became more intensive. At home, the blessing (baraq) ascribed to pilgrims was respected by Muslims and non-Muslims alike and added to the authority of the king. The performance of the pilgrimage, and the encounter with the central lands of Islam, called the rulers’ attention to the laxity of Islam in their own lands. Mansa Mûsà pursued a more vigorous Islamic policy after his return from the hajj; he built new mosques and sent local ‘ulamâ’ to study abroad in Fâs. In 737/1337, Mansa Mûsà initiated the exchange of ambassadors and gifts with the Moroccan Sultan Abu ‘l-Hasan ‘Alî of the Marinid dynasty, which were continued under their successors until 762/1360-1.

The Moroccan traveller Ibn Baṭûta visited Mali in 753-4/1352-3, during the reign of Mansa Sulaymân, the brother of Mansa Mûsà. In many Malian towns, Ibn Baṭûta met residents from Morocco. Ibn Baṭûta’s account reveals strong traditional survivals in Mali beneath a veneer of Islam. Royal presence at the public prayer of the two Islamic festivals turned them into official ceremonies to which non-Muslims were admitted. With the return of Mansa Mûsà, the prestige of Islam was used to extort loyalty to the king during the khutba. As national festivals, the Islamic festivals had to accommodate pre-Islamic rites, which were among the sources of the king’s legitimacy. Ibn Baṭûta condemned this and other pre-Islamic customs at the court of Mali. But he also had words of praise for the devotion to the prayer of Malian Muslims, in particular the Friday prayer, and their concern with the study of the Qur’ân by heart. The ritual rather than the legal aspects of Islam were of greater significance. The precepts of the Share’â were observed only by foreign residents and by a small but committed group of local traders and clerics. Islam penetrated into African societies through the rulers’ courts. But it was in the purely Muslim towns, mostly commercial centres, that Islam was more vigorous and the ‘ulamâ’ were in authority. The kings of Mali respected the autonomy of these towns, the most important of which was Timbuktu [q.v.].

Timbuktu, which had begun as a summer camp and a trading entrepôt for the Tuaregs, developed into an important commercial town and a cultural centre of Islam since the 14th century. The Andalusian poet and architect Abû Ishâk al-Sâhilî, who accompanied Mansa Mûsà back to Mali from the hajj, died in Timbuktu in 1346. Timbuktu must have been by then an intellectual centre of some importance for al-Sâhilî to have settled there.

By the beginning of the 15th century, Timbuktu was “full of Sudanese barâkât” (al-Sa’îdî, Ta‘rikh al-Sudân, 51). One of the leading scholars of Timbuktu was Modibo Muhammad, who had come from the town of Kâbôra on the Niger south of Timbuktu. This town was mentioned by Ibn Baṭûta (iv, 395) together with Dîghâ, the people of which “were Muslims of old, and are distinguished by their piety and their quest for knowledge”.

Towards the end of the 14th century, Mali was weakened by rivalries over the royal succession and lost its hold over the Sahelian provinces. In 837/1433-4 Timbuktu passed into the hands of the Tuaregs. The political vacuum caused by the decline of Mali invited the expansion of the rising kingdom of Songhay [q.v.] into the area west of the Niger bend. The hegemony of Songhay over the northern section of the present Republic of Mali in the second half of the 15th and through the 16th centuries coincided with the most illustrious period in the economic and intellectual history of Timbuktu. The history of Songhay and Timbuktu may be reconstructed from the biographical treatises of Ahmad Bâbâ (d. 1036/1627) and from the mid-17th-century chronicles of Timbuktu, the Ta‘rikh al-Sudân by al-Sa’îdî and the Ta‘rikh al-Fattîkh by Ibn al-Mukhâtîr. Djenné, which was linked by the Niger waterway with Timbuktu, was the commercial and Islamic metropolis of the Sudanic hinterland. About the level of Islamic learning in Djenné, one may learn from the career of two of its sons, the brothers Muhammad and Ahmad Baghyughu, who moved to Timbuktu and were among the leading scholars there. From Djenné and its region, the Dyula and Marka, Muslim traders who spoke Malinke and Bambara dialects extended their commercial network southwards as far as the fringes of the forest. These traders were known also as Wangara. Their impact on Hausaland is recorded by the Kano chronicle (J. of the Anthropological Institute [1908], 70): “The Wangarawa came from Mali bringing with them the Mohammedan religion.”

The Songhay empire expanded mainly along the Niger river as far as Djenné in the south. Mali continued to have an arched, rather than a straight or even wavy, line of succession. But it was weakened by rivalries over the royal succession and suffered attacks until the beginning of the 17th century. Niani, the capital of Mali, was on the Sankarani, one of the
tributaries of the Upper Niger (today in Guinea). Because its ethnic and political base was deep in the Savannah, Mali survived longer than the two other powers of the Western Sudan, Ghana and Songhay. Both had their centres in the northern Sahel, exposed to external intervention: the Almoravids [see Al-
MURĀBĪTĪN] in the 11th century and the Moroccans at the end of the 16th century.

In 1591 a Moroccan expeditionary force sent by the Sultan Ahmad al-Mansūr [q.v.] defeated the Songhay army by its superior firearms and conquered Gao, Timbuktu and Djenné. Timbuktu became the capital of a pashalik, which soon became virtually independent of Morocco, and ruled by a hereditary military caste, the descendants of the Moroccan conquerors, known as al-rumūdi or arma. The pashalik survived until the beginning of the 19th century.

As seen from the north, through Muslim records, Mali was reduced to a kingdom of local importance during the 15th and 16th centuries. But the Portuguese, who about that time reached the Gambia, became aware of the powerful inland ruler of Mali, whose authority extended to the Atlantic coast. Mali’s westward expansion was consolidated by the migration of Malinke warriors, peasants and traders to the Gambia. In 1621, sailing up the Gambia river, the British adventurer E. W. Bovill met many hundred of Arab and Berber descent, who ‘have free recourse through all places’ even in times of war (Jobson, in London 1932, 17-8, §4, 106).

In Mali and Songhay, Islam had become integrated into the imperial texture ideologically and institutionally. Yet even the great mansis and ashikas, who had been exposed to external Islamic influences and rules, were attached to the pre-Islamic heritage of their people. Islam was confined to urban traders and ‘ulamā’. Similar patterns persisted into the 17th and 18th centuries, except that the rulers of smaller states, which had emerged as a result of the fragmentation of the great empires, had no contacts with Islamic centres north of the Sahara and had fewer and smaller towns. Consequently, Islamic influences were mitigated by traditional particularisms.

The BAMBARA, one of the major ethnic groups in present-day Mali, are closely related to the Malinke and speak a similar dialect. They call themselves Ban-
mana, and the term Bambara has the connotation of ‘infidels’. Under ancient Mali they were among the subject peoples, the common peasantry, who had no share in the imperial culture of which Islam was an important component. Following the disintegration of Mali, the Bambara entered upon a process of state-building, which culminated with the establishment of the powerful Bambara states of Segu and Kaarta in the 18th century. With Bambara clans in political authority, their chiefs came under Islamic influences.

Muslim elements penetrated the culture of the Bambara, but the latter remained tradition-oriented. They were treated as infidels by most of the militant Islamic leaders of the 19th century.

The northern frontiers of the modern Republic of Mali cut deep into the Sahara to incorporate important Arabo-Berber groups. Thus Mali, like Niger and Chad, accommodates both the pastoralists of the southern Sahara and the peasants of the Sahel and the savannah. Tension between these two elements is an important feature in the political life of these states. Though the present frontiers were determined by colonial France, the interaction between desert and Sahel has a longer tradition. The southern Sahara was of strategic importance for the Sudanic states as the outlet of the desert trade routes. On the other hand, the pastoralists of the southern Sahara were attracted, mainly during years of drought, to the more promising pastures of the Sahel.

Whenever a strong state dominated the Sahel (Ghāna of the 11th century, Mali of the 14th century and Songhay of the 16th century), its authority extended over the Tuareg of the southern Sahara. But in between these periods, the pastoralists pressed south. The most decisive and lasting invasion of the Tuareg into the Niger bend began in the second half of the 17th century with the decline of the power of the pashalik of Timbuktu.

The southern Sahara was not, however, only a threat to the Sahel, but also a source for religious and spiritual leadership. The most prominent scholars of Timbuktu, such as the famous Akīt family, were of Sahādja origin. The harshness of the desert pastoralists was mitigated by the marabouts, from holy families, whose religious prestige carried political influence. In the 18th century the Kunta [q.v.], a clan of Arab and Berber descent, established one of its centres in Azawad, north of Timbuktu. Their leader Sīdī al-Mukhtar al-Kunti (1728-1811) was venerated by the Tuareg warriors, and through them he extended his influence over the Bilma and Timbuktu. His religious authority expanded even farther as the head (mukaddam) of the Kādiriyah Sūfī brotherhood [q.v.], which was for the first time spread effectively among Islamic communities of the Savannah by Sīdī al-Mukhtar’s numerous disciples.

The introduction of Sūfism into the western Sudan contributed to Islamic revivalism and militancy, which bred the ghādāt movements. In 1830 Shekhu Ahmadu (Hū, Al-Muhammad), a scholar of Fulbe origin and a follower of the Kunta Kādiriyyah, initiated a ghāḍah against the Fulbe clan leaders in Massina who practiced mixed Islam. He also challenged the religious authority of the established ‘ulamā’ of Djenné, who sanctioned the existing socio-political order and reconciled it with the marginal role of Islam. The military success of Shekhu Ahmadu resulted in the creation of a theocratic state (known as dina) with its capital in the new town of Tamahallā. The state existed for over forty years under the successful rule of Shekhu Ahmadu’s son and grandson.

In 1852 Hamdallāh was conquered and destroyed by a rival mudghādh, al-Hādhūq Umar b. Sa’īd al-
Hādhūq Umar, whose way to his own land of Futa Toro, on the lower Senegal, had been blocked by the French, turned east against the infidel Bambara state of Segu. He then attacked the theocratic state of Ham-
dallāh, which he anathemised as an ally of the infidel Bambara. Behind this pretext was the fierce conflict between two Sīfī brotherhoods; the Kādiriyah of Hamdallāh and the Tūḍāniyyah of al-Hādhūq Umar. The Tūḍāniyyah represented a more rigorous, radical and populist way (tardah) which challenged the aristocratic, established way of the Kādiriyyah. The leader of the Kādiriyah Ahmad al-Bakkātī (grandson of the great Sīdi al-Mukhtar al-Kunti), who had first resented the militant aggression of Hamdallāh, now rose to oppose the Tūḍāniyyah threat of al-Hādhūq Umar. The forces which he mobilised fought al-Hādhūq Umar, who was killed in battle in 1864.

The latter’s son Ahmad ruled for almost thirty years in Segu, the former Bambara capital. His authority had to be enforced by his army, composed of Tokolor followers and local conscripts (sofa), against continuous resistance of local ethnic groups.
The French military commanders in their advance towards the Niger exploited the internal dissensions in the Tidjâni empire of Segu, until its final defeat in 1898. A number of different groups, like the Bambara, greedied their liberation from Tidjâni rule. Many of those who had been forcibly converted to Islam by the Tidjâni now returned to their ancestral ways.

During the colonial period (when the present Republic of Mali was known as the French Sudan), Islam progressed among most ethnic groups, winning over those who moved to the growing towns and those who joined the seasonal labour migration to the more prosperous colonies. With better roads and greater security, more clerics (marabouts) visited villages, converted non-Muslims and invigorated religion among long-established Muslim communities.

These marabouts helped the spread of Sufi brotherhoods. The younger and more vigorous Tidjâniyya expanded faster and further than the old Kâdiriya. But the Tidjâniyya in its turn was challenged by a new brotherhood, a splinter group, the Hamâliyya, named after its founder Hamâliyya (1883-1943). The French colonial authorities, seeking to avoid instability, intervened in defence of the old Tidjâniyya brotherhood. They deported Hamâliyya, harassed his followers and as in other cases of self-fulfilling prophecies, provoked the Hamâliists to violence.

In the 1930s, some young Muslim scholars who returned from studies at al-Azhar resented the growing influence of the Sufi brotherhoods and deployed the exploitation of the believers by the marabouts. The reformists, sometimes referred to as neo-Wahhabis, considered ignorance as the source of all evils and devoted themselves to the promotion of Islamic education, with emphasis on the teaching of Arabic. But to some, the capital of the French Sudan, was an important centre for their activities. Religious reformism and fundamentalism soon had political implications; at home they challenged the authority of the old marabouts, and abroad they subscribed to pan-Islamic ideologies. Both trends were considered a threat to the public security, and the reformists were closely watched by the French colonial authorities and their activities were severely curtailed. The reformists were among the first supporters of the radical, anti-colonial party, the Union Soudanaise (US - RDA).

The post-war political struggle in the French Sudan was between the US and the PPS (Parti Progressiste Soudanais). The latter was the party supported by the French colonial authorities and those who had most to gain from the Tidjâni empire and those who had been forcibly converted to Islam by the Tidjâni. The government also curtailed the activities of the US pursued a "scientific" though not an "academic" Islam in Tropical Africa, in The New Statesman and the middle Niger, c. 1750-1811, London 1972; A. A. Bakr, Ahmad Bâba de Tombouctou, 1847-1865, unpubl. Ph.D. diss., U. of Birmingham 1972; A. A. Bakr, Ahmad Bâba de Tombouctou, 1847-1865, unpubl. Ph.D. diss., U. of London (SOAS) 1974.

Aspects of the Islam in Mali, in Notes et études sur l'Islam en Afrique noire, Paris 1962; R. Schachter-Morgenthal, Political par-

MALIK, the Arabic word for king (pl. mUluk), stemming from the old Semitic root m-l-k (the Hebrew equivalent is melakk, Aramaic malkâ, Akkadian malku; Assyrian maltu, malka), which signifies "possession" and, by extension, "rule" or "government". As a kingly title, the term appears repeatedly in pre-
Islamic inscriptions from southern Arabia and the Syrian desert fringes (e.g. the Namâra epigraph of Imru' al-Kays, "King of the Arabs", from 328 A.D. [see TARGUMS]). The Kurâân mentions several historical and legendary kings (muluk), among them Pharaoh and Saul (II, 246-7; XII, 42 f.); and the hadîth discusses numerous others.

Islam, however, presented a new order in which God alone was "the King, the Truth", "the Possessor of Heavens and Earth" as the Kurâân says, "Say, O God, Possessor of sovereignty (malik al-
muluk), You give sovereignty to whomever You choose and take it from whomever You choose" (III, 26). In this view, heads of the community of believers, the caliphs, were vested with the exercise of God's sovereignty so that they could administer His divinely-created polity; yet its ultimate possession, as well as the kingly title, remained exclusively His. Ac-
cordingly, a man's claim to such a title was regarded as a contemptible feature of the prior, unholy order that Islam sought to replace (an analogous approach may be seen in the Old Testament, where the idea of human kingship is discredited as unfit for the pious community of the People of Israel; cf. Judges, viii, 22-3; I Samuel, viii, 4-20). Malîk thus came to con-
note the temporal, mundane facet of government—the antithesis of khâlîfah and imâm [q. v.]—which signified piety and righteousness. The Umayyads were termed mulîk and their rule mulk by their op-
ponents, who thus expressed disdain for an irreligious and worldly-minded government. Considered to be a term of abuse, malîk was not officially assumed by Muslim rulers in the early centuries of Islam; on the other hand, it was commonly applied, sometimes with unconcealed scorn, to non-Muslim monarchs.

The spread of the Islamic empire brought it under the impact of non-Arab traditions, which played a major role in shaping the Muslim concept of government in the early centuries of Islam. Under Sâsâni influence, authors of "Mirrors for princes", from the beginning of the 'Abbasâd period, introduced theories on the divine right of kings. God, it was stated, "bestowed upon kings His special grace (kâmâlah) and endowed them with His authority (sultânah)" (Khîb al-Tâdîf fi akhlâk al-malîk, attributed to al-
Dzhâzî, ed. Ahmad Zakî, Cairo 1914, 2). Discussing in great detail the privileges, duties and recommended conduct of kings, this literature emphasised the elevated status of a malîk within his community. The principles underlying these writings, distant from the initial Islamic theory of rulership, represented the revival of pre-Arab concepts in the formerly Persian regions of the empire.

The use of the royal title in such a manner gradually led to a modification in its import, and consequent-
ly to its adoption by Muslim rulers. Towards the middle of the 4th/10th century the Bûyûd, new rulers of the empire, were reviving the Sâsânî tradition of regnal epithet, and in the year 393/975 Ali b. Bûyû, one of the three founders of the dynasty, assumed the per-
sian title jâhânshâh (i.e. "king of kings") [q. v.]; and his nephew and heir, 'Abdul al-Dawla (338-72/948-83 [q. v.]) added malîk to his list of epithets (al-Makrîzî, Sulât, 28). Meanwhile, in the north-eastern prov-
cinces, Sâsânî rulers likewise assumed kingship as a measure of asserting their independence from the Bûyûd and Bûyûd dominion; on coins dating from the years 339/950-1, i.e. from the reign of Nâr b. Nasr (331-43/943-54), the latter is designated al-malîk al-umayyad. Later members of his dynasty employed the title in a similar way (S. Lane Poole, Catalogue of coins in the British Museum, ii, 100, 103, 105-6, 109-10, 115-16). Other non-Arab dynasties followed suit: Khârazmî, Qazanawîd and Saljuqî rulers called themselves malîk, usually in combination with honorific adjectives, e.g. al-kâmîl, al-salîh, al-îâdil, which accordingly became a highly common feature of mediavel Islamic titulature. On the western flank of the Islamic empire, Fâtîmid rulers in the late 5th/11th century similarly adopted malîk as their royal epithet. The Ayyûbids inherited it from them (one of Sâlâm al-Dîn's titles was al-malîk al-nâsîr), and in turn passed it on to the Mamûlûks. In the Bûyûd, Bâdiq, Fâtîmid, Ayyûbîd, and Mamûlûk states the title was not reserved for the heads of the monarchy alone, but was rather freely applied to princes, wazârâd and prov-
cincial governors as well (see examples in Hasan al-
Bâshâ, al-Alâkh al-Islâmîsâ, Cairo 1957, 496-500).

The increasing number of potentates identifying themselves as malîk gradually rendered the name less majestic, for it came to imply limited sway over one region among many, and subject to a supreme suzerain. Its devaluation, once again, was reflected in the fact that many a ruler assumed, in addition to malîk, other and more pretentious designations. Several Bûyûd heads of state (e.g. Djalâl al-Dawla, Bahâ al-Dawla) and Ayyûbîd ones (e.g. al-Âdîl) adopted the epithet malîk al-mulûk, modelled on the Persian jâhânshâh; while others called themselves al-sultân [q. v.], a title signifying a new sense of independent sovereignty. The Mamûlûks, in a similar manner, combined these last two names, iden-
tifying themselves as al-malîk al-sultân, while calling high-ranking governors in the Egyptian and Syrian provinces malîk al-umârâ' i.e. chief amir. In one in-
stance in the Mamûlûk state the term was employed in the feminine, as the regnal designation of Shâdîjâl al-
Durr [q. v.] (d. 655/1257), who entitled herself mulûk bi al-mulûmîn. Another occurrence of the name in the feminine was in India, where malîk was not other-
wise in use; the queen Râdiyya [q. v.] of Dîhil (634-7/1236-40), the only female ruler in Muslim In-
daia, adopted it in lieu of the title sultân carried by the male members of the dynasty.

The depreciation of the title was apparently the main reason for its disappearance in later times. The Ottoman Sultans did not commonly use it. By the time when they were in power, the name retained but little of its former glory.

In the 20th century, malîk has appeared again in the Muslim countries, carrying a new sense of grandeur. Following more than a century of contacts with Euro-
pean monarchies, the idea of kingship acquired new respect in the Islamic countries, and malîk lost its whatever sense, at least in its uncompromised form. Its reappearance was, thus, not a revivalisation of the old title but rather a calque of "king" or "roi" in the
MALIK — MALIK B. ANAS

modern European sense. The first to use malik in this novel sense was the Hashimite Husayn, the sharif of Mecca, who in 1916 declared himself "King of the Arab countries"; after some international discussion, he was recognised by Britain and France as "King (malik) of the Hijāḍ". The Ḥāḍimite kingdom of the Hijāḍ existed until 1925, when it was conquered by the Saʿūdī ʿAbd al-ʿAzīz Ibn Saʿūd, the Sultan of Najd. In 1926 the latter declared himself "Sultan of Najd and King of the Hijāḍ and its Dependencies", and in 1932 he merged the different units, thereby becoming malik of the "Kingdom of Saudi Arabia".

The style of royal titles reached the peak of its prestige in the Islamic countries in the 1920s, when several kingdoms were established. In 1920 the Ḥāḍimite King Husayn’s son, Faysal, was declared King of Syria; his monarchy lasted for four short months, at the end of which he left for ʿIrāq, where he became king in 1921. In the following year, the Sultan of Egypt, Fuʾād I [see FUĀD AL-ANWALL], followed the latter’s footsteps and assumed the title malik. In 1926 Amān Allāh [q.v. in Suppl.], the amir of Afgānistan, abandoned his former title and declared himself king; and in the same year the Imām Yahyā of Yemen was first recognised as malik in a treaty with Italy. Yemeni rulers, more commonly known by the title Imām, were thereafter formally acknowledged as kings in international documents. Muslim rulers continued to adopt the royal epithet in later years: in Trans-Jordan in 1926; in Trans-Jordan in 1946 the Ḥāḍimite amīr ʿAbd Allāh took the title "King of Trans-Jordan" (since 1948: of the "Kingdom of Jordan"); in 1951 the amīr Idrīs al-Sanūsī of Cyrenaica was declared malik of the nascent state of Libya; and in Morocco in 1957, the Sultan Muhammad V changed his title to malik, thus marking his intention to introduce a modern type of government.

By that time, however, malik was no longer the venerated and popular title it used to be in the earlier part of the century. Anti-monarchical revolutions and uprisings swept away most kings reigning in the Islamic countries—in Egypt in 1952; in ʿIrāq in 1958; in Yemen in 1962; in Libya in 1969; and in Afghanistan in 1973. Thus the last third of the 20th century has witnessed the abrupt disappearance of the standing of the kingly title, which has lost ground to more attractive alternatives inspired by leftist, revolutionary trends.

MALIK B. ABI 'L-SAMH AL-TA'N (d. Ca. 136/754), one of the great musicians of the 1st/7th century. According to a tradition given in the Aḥdāt, the famous ʿIshāk al-Mawṣill classed him among the four finest singers, of whom two were Mec-cans, Ibn Mubrīz and Ibn Suraydī, and two Medinans, Maʿbad and Malik.

His father, who came from a branch of the tribe of Tāyy, died when Malik was still very young; his mother, who came from the Kūrāyshite tribe of Maḥrūm [q. v.], had to leave the mountains of the Ṭayy because of famine and settled with her children in Medina. According to the Aḥānī again, Malik became fascinated by singing, and spent his days at the door of ʿAbd Allāh b. al-Zubayr’s son Ḥamza, listening to the latter’s protégé, the famous singer Maʿbad, and in whose company he spent the greater part of his time. One day, the amīr invited in the strange young Bedouin who had stationed himself at the door, and after a brief audition, instructed Maʿbad to teach him music. The relations between master and pupil were not always unequivocal. Subsequently, Malik attached himself to Sulaymān b. ʿAlī al-Ḥāшимī, who became his patron. When al-Saffādh came to power, he nominated his uncle Sulaymān as governor of the lower Tigris region. The latter installed himself at Basra and summoned thither his protégé Malik. After a short stay, Malik decided to return to Medina, where, after some time, he died at over 80 years old.

Malik learnt very easily the songs which he heard; but although he could easily remember the tunes, with all their nuances, he found it hard to remember the poetic texts. Even since his first meeting with Hamza, he showed a remarkable mastery in the exact and tasteful reproduction of the melodies of Maʿbad, whom he captivated when listening at the door. In regard to the words, he confessed frankly that he could not remember them. In accordance with the norms of the period, Malik was not considered as a creative artist and he himself did not consider himself as such. His practice was to declare that he was happy to embellish and enrich the works of others. Accordingly, he was in some way a musical aesthete whose whole imagination and energy were concentrated on the refinement and embellishment of the melody and on the beauty of its execution, rather than on the creation of new songs. Being careful to discover an exact expression of the facts just mentioned, he questioned his confèrre Ibn Suraydī about the qualities of the perfect musician, and heard this reply: "The musician who enriches the melody, has good wind, gives the correct proportion to the phrases, underlines the pronunciation, respects the grammatical endings of words, gives long notes their proper value, separates clearly the short notes and, finally, uses correctly the various rhythmic modes, can be considered as perfect". It is very likely that Malik embodied these qualities of the perfect musician.

Finally, Malik remained faithful to his origins among the people, for we read on several occasions that he took as the basis of this compositions folkloristic melodies which a mourning woman, a weaver, an ass-driver, etc., sang.

MALIK b. ANAS, a Muslim jurist, the Imām of the maḏhab of the Maliks, which is named after him [see MALIKIYYA], and frequently called briefly the Imām of Maḏa. 1. The sources for Malik’s biography.

The oldest authority of any length for Malik, Ibn Saʿūd’s account (d. 230/845 [q. v.]), which is based on al-Wākidī (d. 207/822 [q. v.]) and which places him in the sixth class of the Medinan "successors", is lost, as there is a hiatus in the manuscript of the work; but it is possible to reconstruct the bulk of it from the quotations preserved, mainly in al-Ṭabarī (iii, 2519 ff.), in the Kūtāb al-ʿUṣūn (fragm. hist. arab., i, 297 ff.), in Ibn Kathīrīn and in al-Suyūṭī (7, 6 ff., 12 ff., 41, 46).
From this, it is evident that the brief biographical notes in Ibn Kutayba (d. 276/889 [q.v.]) and the somewhat more full ones in the Fihrist (compiled in 377/987) are based on Ibn Sa'd's. The article on Malik in al-Tabarī's (d. 310/922 [q.v.]) Ḥaqīqat al-Mudhayyal is essentially dependent on the same source, while a few other short references there and in his history are based on other authorities. Al-Samānī (wrote ca. 530/1156 [q.v.]) with the minimum of bare facts gives only the legendary version of an otherwise quite well established incident, while in Ibn Khallikān (d. 681/1282 [q.v.]), and particularly in al-Nawawī (d. 677/1281), the legendary features are more pronounced, although isolated facts of importance are also preserved by them. Al-Suyūṭī (d. 911/1505 [q.v.]) gives a detailed compilation drawn from Ibn Sa'd and other works, most of which are now no longer accessible but are for the most part of later date and unreliable, like the Muʿmad Ḥadīṯ al-Muwātāḍa of al-Ghāfikī, the Ḥilya of Abū Nuʿaym, the Khisāṣ al-Muṣafak wa l-makhtulaf of al-Khāṭib al-Ḥāǧdāḏī, the Kitāb Tūrīb al-madārik of al-Kādī ʿIyāḍ and the Fadāʾil Mālik of Abū ʿI-Ḥasan Fīrḥ. The bulk of the later Manāṣık [q.v.], for example that of al-Zawāwī, are of no independent value.

Mālik's full name was Abū ʿAbd Allāh Malik b. Anas. Malik b. Abī ʿAmir b. Abī ʿAmr b.-al-Ḥaǧībī b. Ṣulaymān b.-Abī al-ʿĀṣbāḥī; he belonged to the Ḥumāyir, who are included in the Banū Taym b. Murra (Taym Kūrāyḥ). The date of his birth is not known; the dates given, varying between 90 and 977/708-16, are hypotheses, which are presumably approximately correct. As early as Ibn Sa'd we find the statement that he spent three years in his mother's womb (over two, according to Ibn Kutayba, 290), a legend, the origin of which is a wrong interpretation of an alleged statement by Malik in the possible duration of pregnancy, is still evident in the text of Ibn Sa'd. According to a tradition preserved by al-Tirmīzhī, Muhammad himself is said to have foretold his coming as well as that of Abū Ḥanīfa and al-Shāfiʿī. His grandfather and his uncle on the father's side are mentioned by al-Samānī as traditionists, so that there is nothing remarkable in his also being a student. According to the Kitāb al-Aḥqāfī, he is said to have first wanted to become a singer, and only exchanged his career for the study of fīkā on his mother's advice on account of his ugliness (cf. Goldzihër, Muh. Studien, ii, 79, n. 2); but such anecdotes are little more than evidence that someone did not particularly admire him. Very little reliable information is known about his studies, but the story that he studied fīkā with the celebrated Rabīʿa b. Farrukh (d. 132 or 143/749-60), who cultivated raʿy in Medina, whence he is called Rabīʿat al-Raʿay, can hardly be an invention, although it is only found in somewhat later sources (cf. Goldzihër, op. cit., ii, 80). Later legends increase the number of his teachers to incredible figures: 900, including 300 tābīʿīs are mentioned. He is said to have learned kraʿa from Nāḥīyāt [q.v.]. Abū Nuʿaym. He transmitted traditions from al-Zuhrī, Nāḥīyāt; the maʿāla of Ibn ʿUmar, Abu ʿI-Zinād, Ḥāḡīm b. ʿUrwa, Yāḥyā b. Saʿīd, ʿAbd Allāh b. Dīnār, Muhammad b. al-Munkadīr, Abu ʿl-Zubayr and others, but the ināds of course are not sufficient evidence that he studied the authorities with questions; a list of 95 shaykhs is given by al-Suyūṭī, 48 ff.

A fixed chronological point in his life, most of which has not been treated here, is the rising of the ʿAlīd pretender Muhammad b. ʿAbd Allāh in 145/762 (on the other hand, the story of Malik's alleg-
view that was held of the relation between the two Imams.

A. Malik's great work is the Kitāb al-Muwatta, which, if we except the Corpus juris of Zayd b. 'Ali, is the earliest surviving Muslim law-book. Its object is to give a survey of law and justice; ritual and practice of religion according to the idgāma of Islam in Medina, according to the sunna usual in Medina; and to create a theoretical standard for matters which were not settled from the point of view of idgāma and sunna. In a period of recognition and appreciation of the canon law under the early Abbāsids, there was a practical interest in pointing out a "smoothed path" (this is practically what al-muwatta means) through the far-reaching differences of opinion even on the most elementary questions. Malik wished to help this interest on the basis of the practice in the Ḥijāz, and to codify and systematise the customary law of Medina. Tradition, which he interprets from the point of view of practice, is with him not an end but a mean; the older jurists are therefore hardly ever quoted except as authorities for Malik himself. As he was only concerned with the documentation of the sunna and not with criticism of its form, he is exceedingly careless as far as order is concerned in his treatment of traditions. The Muwatta thus represents the transition from the simple style of the earliest period to the pure science of hadith.

Malik was not alone among his contemporaries in the composition of the Muwatta; al-Mādżásţīn (d. 164/781) is said to have dealt with the consensus of the scholars of Medina without quoting the pertinent traditions, and works quite in the style of the Muwatta are recorded by several Medina scholars of the same time (cf. Goldzihér, op. cit., ii, 221) but nothing of them has survived for us. The success of the Muwatta is due to the fact that it always takes an average view on disputed points (see below, section 4).

In transmitting the Muwatta, Malik did not make a definitive text, either oral or by munāwala, to be disseminated; on the contrary, the different riwayā (recensions) of his work differ in places very much (cf. Goldzihér, op. cit., ii, 222). The reason for this, besides the fact that in those days every little stress was laid on accurate literal repetition of such texts and riwayas, is due to the fact that it always takes an average view on disputed points (see below, section 4).

Fifteen recensions in all of the Muwatta are known, only two of which were to survive in their entirety, while some five were studied in the 3rd-4th/9th-10th centuries in Spain (Goldzihér, op. cit., ii, 222, nn. 2 and 4) and twelve were still available to al-Rudānī (d. 1094/1683) (Heifeneng, Fremderrecht, 144, n. 1):

a. the vulgate of the work transmitted by Yahyā b. Yahyā al-Masmūdī (d. 234/846-9), often printed e.g. Brussels, 1216, 1296 (without ṭadāl and with Hindustāni transliterations), and Lahore 1279-80 (with the commentary of Muḥammad b. ʿAbd al-Bākī al-Zurkānī, d. 1122/1710), Lahore 1889, Tunis 1280; numerous commentaries, editions and synopses; cf. Brockelmann, i, 176, S 1, 297-9; Alhwárdt, Katalog Berlin, 1145; Muḥammad ʿAbd al-Hāfiẓ al-Murādi (transcription to the edition of the regression), Lucknow 1297, 21 ff.; al-Suyūtī, 3 passim (work of al-Ghāfikī), 57 (on Ibn ʿAbd al-Barr) and 58 (chief passage); Goldzihér, op. cit., ii, 230, n. 2; Schacht, in Abbas. Presse. Ak. (1928), no. 2 c, and al-Suyūtī, Isāʾi al-muwaṭṭā bi-niqaṭ al-muwaṭṭa, Delhi 1320, and Muḥammad b. Ṭāhir al-Patnī, Mağmūʿ biḥār al-anwār, Lucknow 1283.

b. the recension of Muḥammad b. al-Ḥasan al-Shaybānī (d. 1189/1870) which certainly goes back to Malik himself, besides the fact that in those days every little stress was laid on accurate literal repetition of such texts and riwayas. The other recensions of the Muwatta are given by al-Lakhnawī, op. cit., 18 ff.; further lists of transmitters of the Muwatta are given in al-Suyūtī, 48, 51, and in al-Nawawī.

B. Whether Malik composed other works besides the Muwatta is doubtful (the statements in the Fihrist, 199, 29, which speak of a number of works by Malik are quite vague and uncertain). The books ascribed to him fall into two groups: legal and otherwise. Among the legal ones we read of a Kitāb al-Sunna or al-Sunna (Fihrist, 199, ii, 9, 16) transmitted by Ibn Wahb or by ʿAbd Allāh b. Wahb (d. 197/813) which are preserved by the fragments of al-Ṭabarī's Kitāb Iḥdālī al-fuḥākā (ed. Kern, Cairo 1902, and Schacht, op. cit., no. 22) are fairly comprehensive; this riwaqā follows that of Yahyā b. Yahyā quite closely.

The other recensions of the Muwatta are given by al-Lakhnawī, op. cit., 18 ff.; further lists of transmitters of the Muwatta are given in al-Suyūtī, 48, 51, and in al-Nawawī.

C. There are two other main sources for Malik's view that was held of the relation between the two Imams.

1. Malik's writings. Further sources for his teachings.

A. Malik's great work is the Kitāb al-Muwatta, which, if we except the Corpus juris of Zayd b. 'Ali, is the earliest surviving Muslim law-book. Its object is to give a survey of law and justice; ritual and practice of religion according to the idgāma of Islam in Medina, according to the sunna usual in Medina; and to create a theoretical standard for matters which were not settled from the point of view of idgāma and sunna. In a period of recognition and appreciation of the canon law under the early Abbāsids, there was a practical interest in pointing out a "smoothed path" (this is practically what al-muwatta means) through the far-reaching differences of opinion even on the most elementary questions. Malik wished to help this interest on the basis of the practice in the Ḥijāz, and to codify and systematise the customary law of Medina. Tradition, which he interprets from the point of view of practice, is with him not an end but a mean; the older jurists are therefore hardly ever quoted except as authorities for Malik himself. As he was only concerned with the documentation of the sunna and not with criticism of its form, he is exceedingly careless as far as order is concerned in his treatment of traditions. The Muwatta thus represents the transition from the simple style of the earliest period to the pure science of hadith.

Malik was not alone among his contemporaries in the composition of the Muwatta; al-Mādżásţīn (d. 164/781) is said to have dealt with the consensus of the scholars of Medina without quoting the pertinent traditions, and works quite in the style of the Muwatta are recorded by several Medina scholars of the same time (cf. Goldzihér, op. cit., ii, 221) but nothing of them has survived for us. The success of the Muwatta is due to the fact that it always takes an average view on disputed points (see below, section 4).

In transmitting the Muwatta, Malik did not make a definitive text, either oral or by munāwala, to be disseminated; on the contrary, the different riwayā (recensions) of his work differ in places very much (cf. Goldzihér, op. cit., ii, 222). The reason for this, besides the fact that in those days every little stress was laid on accurate literal repetition of such texts and great liberty was taken by the transmitters (cf. Goldzihér, op. cit., ii, 221), lies probably in the fact that Malik did not always give exactly the same form to his orally-delivered teachings. But the name Muwatta, which certainly goes back to Malik himself, and is found in all recensions, is a guarantee that Malik wanted to create a "work" in the later sense of the term, although of course the stories which make Malik talk of his writings reflect the conditions of a later period. In later times, the Muwatta was regarded by many as canonical (cf. Goldzihér, op. cit., ii, 213, 265 ff.; al-Suyūtī, 47) and numerous legends deal with its origin (al-Suyūtī, 42 ff.).

Fifteen recensions in all of the Muwatta are known, only two of which were to survive in their entirety, while some five were studied in the 3rd-4th/9th-10th centuries in Spain (Goldzihér, op. cit., ii, 222, nn. 2 and 4) and twelve were still available to al-Rudānī (d. 1094/1683) (Heifeneng, Fremderrecht, 144, n. 1):

a. the vulgate of the work transmitted by Yahyā b. Yahyā al-Masmūdī (d. 234/846-9), often printed e.g. Brussels, 1216, 1296 (without ṭadāl and with Hindustāni transliterations), and Lahore 1279-80 (with the commentary of Muḥammad b. ʿAbd al-Bākī al-Zurkānī, d. 1122/1710), Lahore 1889, Tunis 1280; numerous commentaries, editions and synopses; cf. Brockelmann, i, 176, S 1, 297-9; Alhwárdt, Katalog Berlin, 1145; Muḥammad ʿAbd al-Hāfiẓ al-Murādi (transcription to the edition of the regression), Lucknow 1297, 21 ff.; al-Suyūtī, 3 passim (work of al-Ghāfikī), 57 (on Ibn ʿAbd al-Barr) and 58 (chief passage); Goldzihér, op. cit., ii, 230, n. 2; Schacht, in Abbas. Presse. Ak. (1928), no. 2 c, and al-Suyūtī, Isāʾi al-muwaṭṭā bi-niqaṭ al-muwaṭṭa, Delhi 1320, and Muḥammad b. Ṭāhir al-Patnī, Mağmūʿ biḥār al-anwār, Lucknow 1283.

b. the recension of Muḥammad b. al-Ḥasan al-Shaybānī (d. 1189/1870) which certainly goes back to Malik himself, besides the fact that in those days every little stress was laid on accurate literal repetition of such texts and riwayas. The other recensions of the Muwatta are given by al-Lakhnawī, op. cit., 18 ff.; further lists of transmitters of the Muwatta are given in al-Suyūtī, 48, 51, and in al-Nawawī.

C. There are two other main sources for Malik's
teaching (setting aside the later accounts of the doctrine of the Malikī madhab):
The more important is the al-Mudawwana al-Mu’ta of Sahnūn (d. 240/854 [q.v.]) which contains replies by Ibn Kāsim (d. 191/807) according to the school of Malik, or according to his own rā’, to questions of Sahnūn as well as traditions and opinions of Ibn Wāh (d. 197/813) (cf. Brockelmann, op. cit., 177; Heffening, op. cit., 144; Krenkow, in EI 14 art. Sahnūn).

Al-Taβarī, who in his Kitāb Ikhtilāf al-fuqahā? has preserved fragments of the Muwatta’ recension of Ibn Wāh (cf. above), also quotes frequently traditions and opinions of Malik in his commentary on the Qur’ān on the “legal” verses.

4. Malik’s position in the history of fiqh.
Malik represents, in time, a stage in the development of fiqh in which the reasoning is not yet thorough and fundamental but only occasional and for a special purpose, in which the legal thought of Islam has not yet become jurisprudence; and, in place, the customs of the town of Medina where the decisive foundations of Muslim law were laid down. One of the main objects in the juristic thought that appears in the Muwatta’ is the permeation of the whole legal life by religious and moral ideas. This characteristic of the formation of legal ideas in early Islam is very clear, not only in the method of putting questions but in the structures of the legal material itself. The legal material, having in itself no connection with religion, that has to be permeated by religious and moral points of view, is the customary law of Medina, by no means primitive but adapted to the demands of a highly developed trading community, which for us is the principal representative of old Arabian customary law: it appears in Malik sometimes as sunna ‘use and wont’, sometimes it is concealed under the Medina idgma?, which he ascertains with great care.

Broadly speaking, this only means that objections on religious grounds have not been raised by anyone against a principle, etc., of customary law. The older jurisprudence had another main object: the formation of a system which sets out from principles of a more general character, which aims at the formation of legal concepts in contrast to the prevailing casuistry and is to some extent rounded off in a codification, if still a loose one, of the whole legal material.

While the Islamisation of the law had been already concluded in its essential principles before Malik, many generations had still to work at its systematisation; therefore, Malik’s own legal achievement can only have consisted in the development of the formation of a system. How great his share in this cannot be ascertained with certainty from the lack of material for comparison. The surprising success achieved by the Muwatta’, out of a number of similar works, would in any case be completely explained by the fact that it recorded the usual consensus of opinion in Medina without any considerable work of the author’s own and came to be regarded as authoritative as the expression of compromise (just as the works on Tradition came to be regarded as canonical). The Muwatta’ would in this case have to be regarded less as evidence of Malik’s individual activity than as evidence of the stage reached in the general development of law in his time. It may be said that this average character was just what Malik aimed at (cf. above, section 3, A).

The high estimation in which Malik is held in the older sources is justified by his strict criticism of hadiths and not by his activity in the interests of fiqh (al-Taβarī, iii, 2484, 2492; al-Sam‘ānī; al-Nawawī; Goldzhīer, op. cit., ii, 147, 168; idem, Zāhirīm, 230); even this only means that with his hadiths he kept within the later consensus. That al-Shāfi‘ī devoted special attention to him out of all the Medinan scholars (cf. his Kitāb Ikhtilāf Malik wā ‘l-Shāfi‘ī) is explained by the fact that he was a disciple of him.

As to the style of legal reasoning found in the Muwatta’, hadith is not by any means the highest or the only court of appeal for Malik; on the one hand, he gives the ‘amal, the actual undoubted practice in Medina, the preference over traditions, when these differ (cf. al-Taβarī, iii, 2505 ff.), and on the other hand, in cases where neither Medinan tradition nor Medinan idgma? existed, he laid down the law independently. In other words, he exercises rā’, and to such an extent that he is occasionally reproached with ta’arruk, agreement with the Irākīs (cf. Goldzhīer, Muh. Studien, ii, 217, idem, Zāhirīm, 4 ff., 20, n. 1). According to a later anti-rā’ legend, he is said to have repented of it on his deathbed (Ibn Khallikān). It is scarcely to be supposed that he had diverged seriously from his Medinan contemporaries in the results of his rā’.

5. Malik’s pupils.

In the strict sense, Malik no more formed a school than did Abū Hanīfa; evidence of this is found in the oldest names Abi al-Hadīṣ and Abi al-Irāk, etc. compared for example with Abi al-Shāfi‘ī’s. These names at once indicate the probable origin of the Malikī madhab; after a regular Shāfi‘ī school had been formed, which in view of al-Shāfi‘ī’s personal achievement, is quite intelligible in the development of fiqh (cf. Bergstrāßer, op. cit., 76, 80 ff.), it became necessary for the two older schools of fiqh, whose difference was probably originally the result of geographical conditions in the main, also to combine to form a regular school, when a typical representative of the average views like Malik or Abū Hanīfa was regarded as head.

In the case of Malik, the high personal esteem, which he must have enjoyed even in his lifetime (see above, section 2) no doubt contributed to this also. But it is to his pupils that his elevation to the head of a school is mainly due. Traces of this process are still to be found in the varying classification of old jurists as of the Ḥadīth school or as independent mudarris (cf. also Fihrist, 199, 1.22).

On the Malikī law school, see Malikiyā.

On Malik’s writings: Brockelmann, I, 175, S I, 297-9; Sezgin, GÄS, i, 457-84; Goldzhīer, Muhammedische Studien, ii, 215 ff. (Fr. tr. L. Berger, 269 ff.; Eng. tr. S. M. Stern and C. M. Barber, ii, 198 ff.); al-Lakhnavī, op. cit.

On Malik’s position in the history of fiqh: Bergsträßer, in Isl., xiv, 76 ff.; Goldzhīer, op. cit. (J. Schacht)

MALIK b. ‘AWF b. SA‘D b. RABI‘A AL-NAṢIRI Bedouin chief and contemporary of Muhammad, who belonged to the clan of the Banu Nāṣir b. Mu‘awiyah of the powerful Kaysī tribe of the
Hawazîn, whom he commanded at the battle of Hunayn [q.v.] against the Muslims; it is mainly through this rôle that he has achieved a place in history.

We know little about his early history, but one may assume that the battle of Hunayn (Aqabâ'î, xix, 81) when he commanded a detachment of the Hawazîn in the Fidjar [q.v.] war.

This distinction he perhaps also owed to the consideration which his clan, the Banû Nasr b. Mu'awiyâ, enjoyed among the Banû Hawazîn. Allies of the tribe of Thakaff (Aghdami, viii, 160), the Banû Nasr b. Mu'awiyâ seems to have been above all a most eloquent preacher and moralist of Basra, who copied the Holy Book for a living and who was interested, it seems, in the question of the Kur'ânic readings ( Ibn al-Djazari, Tabakät al-kurdi, i, 36).

He was the mu'alla of a woman of the Banû Sama b. Lu'âyâ, whom he had married, and when he was given to an enclosure commanded by an 'utm or tower. Mâlik's had probably only brick walls like the little stronghold in Yemen described by al-Muqaddasi (Ahsan al-takdün, 84). A century ago, the traveller Maurice Taminier (Voyage en Arabie, Paris 1840, ii, 6) passing through Liyâya saw there "une forteresse flanquée de tours" intended as in earlier times, to guard the road. Muhammad easily destroyed Mâlik's fort, and when the latter learned of the approach of the Muslims, he fought it prudent to seek refuge behind the ramparts of Tâ'if.

In the interval, all the booty taken by the Muslims at Hunayn had been collected in the camp at Djîrâna, including Mâlik's family and flocks. To the Hawazîn deputies sent to negotiate the ransom of the prisoners, Muhammad said: "If Mâlik comes to em-brace Islam, I shall return him his family and property with the addition of a gift of a hundred camels". Whatever the decision adopted by Mâlik, this declaration could not fail to compromise him with the Thakaff. He had to recognize that his position in Tâ'if had become untenable. He succeeded in escapes from the town and presented his submission to Muhammad, who fulfilled his promise to the letter.

Mâlik then pronounced the Muslim confession of faith and, to use the traditional formula, "his Islam was of good quality".

The new proselyte had extensive connections and was remarkably well acquainted with the Thakaff region. The Prophet was glad to use him against Tâ'if, which he had been unable to take by force. He put Mâlik at the head of the Kayâi tribes who had adopted Islam. Mâlik therefore organised a guerilla war against his old allies in Thakaff. No caravan could leave Tâ'if without being intercepted by Mâlik's men. Exhausted by this unceasing struggle, the Thakaffis decided to sue for terms. Mâlik then became the representative of the Prophet among the Banû Hawazîn, and the caliph Abu Bakr later confirmed him in the office. He took part in the wars of conquest, and was at the taking of Damascus and the victory of al-Kâdisiyya in 'Irâk.

MALIK B. DISMA' [see MASAMI A].

MALIK B. NUWAYRA B. DIAMARA B. SHADDAB B. ʿUbayd b. Thilalaba b. Yarbū, Abu ʿI-Mughwār, brother of the poet Muṭtamīm [q. v.], and a poet in his own right, considered as the chief of the B. Yarbū during Muhammad's lifetime. The B. Yarbū was one of the most powerful tribes of the Tamīm confederation, and was involved in many of the battles [ayyām al-ʿarāb] [q. v.] in the Dāhīliyya. The office of ṣayfī—a kind of viceroyship in the court of al-Ḥira—was traditionally held by members of Yarbū, among whom was Malik b. Nuwayra (there is, however, an account according to which he was offered the ṣayfī, but rejected it. See Dārīr, Dīwān, 261-2). Malik's clan, the B. Thilalaba b. Yarbū, was incorporated into the body-politic of Mecca in the Dāhīliyya, through the organisation of the ḥums (see M. J. Kister, Mecca and Tamīm, in JESHO, iii/2 [1965], 139, 146).

Malik is usually portrayed as a noble, ambitious and brave warrior, a hero of whom the Yarbū poet Dārīr boasts, according to him as “the knight (fāris) of Dhu ʿl-Khāmīr” (heroes often being called after their horses). The saying “a man but not like Malik” (fata wā-lā ka-Mālik) is taken to reflect his bravery. Not withstanding all these descriptions, concrete details of his heroic exploits are sparse if not altogether lacking, and in the abundant and detailed material concerning the ayyām of Yarbū he is hardly mentioned at all. The few verses attributed to him concerning certain battles do not necessarily indicate that he participated in them (see e.g. Ḥakī, Balūdān, s.v. Muḥgāṭa). There is, however, an incident in which it is implied that Malik held a senior position in his clan: during a conflict between groups of Tamīm, peace was proposed to the B. Ḥanzadā (the larger tribal group which includes the B. Yarbū), and all its leaders accepted except for Malik. Nevertheless, he had to comply with the decision of the others (Nakāʾīd, ed. Bevan, i, 258-9, al-Maṣṣārī, Muṣṭafā al-amqīlī, Beirut 1962, ii, 525, al-Alūsī, Badrī al-arāf, ii, 75). It seems, then, that Malik's fame as a chief and warrior in the Dāhīliyya has no solid basis in actual accounts of his glorious exploits. Indeed, even the saying “a man but not like Malik” seems originally to refer to his reliability rather than his valour (see Abu Ḥārum al-Sūjrānī, al-Muʾammārīn wa l-ʿuṣūṣīn, ed. ʿAbd al-Muṭṭām ʿAmīr, 1961, 15). It is rather his brother's descriptions of him which have earned him his fame. Muṭtamīm, who lamented bitterly Malik's death, glorified him in elegies which have come to be counted among the most famous of their kind in Arabic literature.

Not much is known about Malik's attitude towards Islam during the lifetime of the Prophet. There is a dubious tradition which records that when the sage Akhārn b. Sayf [q. v.] recommended to them that they should adopt Islam, Malik objected. However, he is said to have been appointed by Muhammad as tax-collector (in the year 9 or 11 A.H.). His responsibilities are said to have included the tribe of Yarbū or the larger group of ʿAlī b. Ṭabara, who were to be exaggerated by the careless way in which tradition uses tribal names. It is safer to accept Abū Rayyāḥ's statement, that Malik was appointed over his own clan only, namely, the B. Thilalaba b. Yarbū (see Abu Ṭammām, Ḥanāsa, ed. Freytag, i, 370, al-Baghdādi, Khizāna, ed. ʿAbd al-Salām Ḥārūn, ii, 24).

In contrast to the sparsity of information about Malik's life, there is an abundance of details concerning the circumstances of his death. This is due to the fact that his execution during the reda wars, apparently by order of Khālid b. al-Walīd, aroused a fierce dispute among the Muslims. Some claimed that Malik was an apostate (mattaṣud) and therefore deserved his fate, while others maintained that he was a Muslim, and that Khālid had him murdered because he coveted his wife. The affair was used in political conflicts, as Khālid's enemies, both from among the Quraysh and the Ansār, used it against him, while the Shi'a accused Abū Bakr of having ordered Malik's execution for his alleged support of ʿAll (see the Maqṣūlīs, Birhār al-anwār, [Tehran 1301-15], viii, 267; Ibn Abī ʿl-Hādīd, Bahrah al-baṣāṣab, Cairo 1963, xvii, 202). Also reflected in this affair is the juridical and theological debate concerning the conditions required from a man in order to be considered a Muslim (see e.g. al-Haythāmi, Maṣāma al-zawāʾid wa maḥbūb ʿal-fawāʾid, Cairo 1352-3, vii, 293-4). All details of the traditions about Malik's execution should be examined in the light of these debates.

The sources are in agreement that Malik was killed by the Muslims in the year 11 A.H. There are, generally speaking, three different accounts of the events.

Account (a), the most prevalent of the three, runs as follows: Malik was the tax-collector of his people. Upon Muhammad's death he did not hand over to Medina the camels which he had collected as sadāka, but instead gave them back to his fellow-tribesmen; hence his nickname al-Djaful (it should however be noted that djaful also means ‘one who has abundant hair’), a trait for which Malik was known. See e.g. Ibn Nubātā, Sarh al-aṣwān, Cairo 1931, 54). When Abū Bakr learned of Malik's deed he was furious, and had Khālid b. al-Walīd promise before God that he would kill Malik if he could lay hands on him. As Khālid was advancing through Najd, having conquered some rebellious tribes, one of his detachments came upon a group of twelve Yarbūs, among whom was Malik b. Nuwayra. The Yarbūs offered no resistance, declared that they were Muslims, and were taken to Khālid's camp at al-Butūb (or Baṣūda) where they were executed as rebels. Some of the captors, chiefly the Ansārī Abū Katāda, tried to prevent the execution by arguing that the captives were inviolable, since they had declared themselves to be Muslims and performed the ritual prayer. Khālid, however, disregarded these arguments, ordered the execution, and married Malik's widow. When ʿUmar learned of Khālid's conduct, he pressed Abū Bakr in vain to punish him, or at least to dismiss him. Eventually, Abū Bakr openly forgave Khālid, after having heard his version of the story.

Account (b), the unique tradition of Sayf b. ʿUmar (preserved in the annals of al-Ṭabārī, Ibn al-ʿAthrī and Ibn Khaṭḥār, and in the Ḥaʾīna). This tradition connects Malik with the so-called false prophetess Sajāḥ [q. v.]. It relates that Muhammad's death found the confederacy of Tamīm in a state of internal
conflict, with groups of it preparing for war against one another. At this point, Sadjah and her army reached Tamimterritory. Malik persuaded her to abandon her original plan, which was to attack Medina, and to join him against his (Tamim) enemies. A battle took place, in which the combined forces of Sadjah, Malik and another chief of Hanza were defeated. Sadjah’s army was defeated in yet another battle, whereupon she headed for al-Yamama, while Malik stayed behind, realising that his policy had failed. He ordered his men to disperse and cautioned them not to offer any resistance to the Muslims, who would reach their territory, but to submit and adopt Islam. He himself retreated to his dwelling-place, where he was captured by the Muslims. The details of his capture and execution closely resemble those given above in account (a). Into these two accounts are sometimes woven traditions justifying the conduct of Khalid b. al-Walid. For instance, it is recorded that in a conversation held between Khalid and Malik, the latter referred to Muhammad as “your man” (or “your master”) instead of “our man” (or “our master”), thus excluding himself from the Muslim community. In a variant of this tradition, Malik further insisted on withholding the sadaka payment, and therefore Khalid put him to death (needless to say, this additional detail spoils the original argument). The reason why Malik withheld the sadaka was the causus belli of the ridda, it was immaterial how he referred to Muhammad in a conversation). Another tradition claims that the captives were killed by mistake, as Khalid’s soldiers misinterpreted his words, and Malik, the latter referred to Muhammad as “your man” (or “our master”), thus excluding himself from the Muslim community. As we have seen, this tradition is practically identical. It thus appears that the truth behind Malik’s career and death will remain buried under a heap of conflicting traditions.

**Account (c)**, the unique tradition quoted from Abu Rayya Ash (Ahmad b. Abi Hāghīm) (preserved in al-Baghḍī’s **Khāzīna** and al-Tabrīzī’s commentary to the **Hamasa**). This tradition records that upon his return from the battle of Medina, Khalid b. al-Walid, with his famous place, where he was captured by the Muslims. The details of his capture and execution closely resemble those given above in account (a). Into these two accounts are sometimes woven traditions justifying the conduct of Khalid b. al-Walid. For instance, it is recorded that in a conversation held between Khalid and Malik, the latter referred to Muhammad as “your man” (or “your master”) instead of “our man” (or “our master”), thus excluding himself from the Muslim community. In a variant of this tradition, Malik further insisted on withholding the sadaka payment, and therefore Khalid put him to death (needless to say, this additional detail spoils the original argument). The reason why Malik withheld the sadaka was the causus belli of the ridda, it was immaterial how he referred to Muhammad in a conversation). Another tradition claims that the captives were killed by mistake, as Khalid’s soldiers misinterpreted his words, and Malik, the latter referred to Muhammad as “your man” (or “our master”), thus excluding himself from the Muslim community. As we have seen, this tradition is practically identical. It thus appears that the truth behind Malik’s career and death will remain buried under a heap of conflicting traditions.

For modern studies and resumes of Malik’s career, see Nöldeke, Beiträge zur Kenntnis der Poetik der aller alten Arabier, Hanover 1864, 87-95, 134; Cauzès de Perceval, Essai, iii, 360-7; Ahlwardt, in Sammlungen alter Arabischer Dichter, (Elafma), ii, 7-8; and Ar. text, 25-6; Lyall, Translations of ancient Arabian poetry, London 1930, 35-6; idem, tr. and notes to Muhammad b. ʿAbī Ḥabīb, ed. Malik Ahmad Bahrī, later styled Ahmad Nizām Shāh Bahrī and regarded as the first independent ruler of the Nizām Shāhī [q.v.], was born in 875/1469. His father, Malik Bahrī, the converted Hindu who eventually became a ważīr of the Bahmānī sultanate after the murder of Malik Bahādur Mūgān [q.v.], in 886/1471. There is no reliable evidence concerning his date of birth or his early years, but he is known to have accompanied his father when the latter was appointed governor of Tehgānā in 875/1471. Here his ability and promise were so conspicuous that Mughār Nizām al-Mulk Bahrī, the converted Hindu who eventually became a ważīr of the Bahmānī sultanate after the murder of Malik Bahādur Mūgān [q.v.], in 886/1471.
found his way to Istanbul, where he was sold to a trader having business connections with India. Endowed by nature with valour and wisdom, he proved to be the “jewel of a great price” in the estimate of his master who, finding in one of his business trips to Gujrat, made a gift of him to the reigning Sultan Mahmoud I, popularly known in history as Sultan Begadá. A legend has it that he attained instant fame when he brought down, with a well-aimed arrow, a hawk which defecated on the head of the Sultan during an expedition against Málwá; the delighted Sultan granted him freedom on the spot and conferred on him the title of Malik. By showing gallantry on the battle-field and prudence in council, Ayáz rose steadily in the confidence of the king, who ultimately made him governor of Div [see Dú], an island situated off the coast of India in the extreme south of the Kathiawar peninsula.

In 1484, Malik Ayáz played a vital part in securing form Mahmoud I the great and impregnable Rádiput hill-fortress of Pátá Pavá in Çámpanér, following its investment over a period of 20 months. Its fall signalled the end of the centuries-old sovereignty of the Rádiput dynasty of Pátá Pavá over Çámpanér, which for the next 50 years remained the political capital of Gujrat under the Muslims. In 1511, Malik Ayáz was called upon by Sultan Muzaffar II to salvage the prestige of Gujrat, severely mauled by the inroads of Rana Sangha of Çítb. Placed in supreme command of what is described as 100,000 cavalry and assisted by generals like Malik Sáráng and Múbáriz Al-Mulk, Ayáz proved his mettle in capturing enemy strongholds like Dungarpur and Mandasor, and also through his diplomatic skill concluded peace with Rana Sangha.

But it is round the administration of the historic island city of Div that the career of Malik Ayáz is most clearly centred. In view of its strategic situation and commercial importance, the island during the late 15th century had become a bone of contention between the maritime powers of Europe and the Gujrat Sultans. The most determined challenge came from the Portuguese, who had already made their appearance on the western shores of India. They made persistent demands from the Muslim rulers for the use of Div as a naval base which for the next 50 years remained the political capital of Gujrat under the Muslims.

The Portuguese now tried diplomacy, and won support from local courts such as those of the Mazyadids at Mawsil Hilla and the Ukaylids at Mawsil [q. v.]. The last Buwayhids, a position second in power only to the Sultan himself.

**AL-MALIK AL-‘AZĪZ, ĀBŪ MĀNSÚR KHUSRAW-FĪRŪZ,** eldest son of Djalal Al-Dawla Shírizí, Búyíd prince (407-41/1016 or 1017-1049). In the lifetime of his father Djalal Al-Dawla [q. v.], ruler of Baghdad, he was governor of Baṣra and Wásit and latterly heir to the throne, but when his father died in Shábán 435/March 1044, Khusraw-Firuz was forced to wander between local courts such as those of the Mazyadids at Hilla and the ‘Ukaylids at Ma‘wíl [q. v.], making abortive military attempts to secure his father’s throne, and died at Māyyāfārīn in Rabi‘ I 441/August 1049 whilst staying with the Marwánid of Divárāb [q. v.].

**MALIK DĀNISHMAND** [see Dānīshmand].

**MALIK KĀFÜR, military commander of the Dúl dynasties.**

Originally a Hindu eunuch, nicknamed Hazár-
MALIK KAFUR — MALIK MUGHITH

He left Kazwin, according to Azād Bilgrāmi, in 987/1579 and, reaching Aḥmadnagar, took up residence at Aḥmadnagar, enjoying the favours of Murtuẓā Nizām Shāh I (1565-98) and, upon the latter's death, of Bābur Nizām Shāh II (1594-1605) [see KĀLĀWŪN]. It is mentioned in the Maʿādhir-i Rāhimi that after the fall of Aḥmadnagar to Aḥkār's forces, he served temporarily under 'Abd al-Raḥim Kān-i Khānān, whom he praises in several of his ḵaṣāṣ. Finally, he settled down in Bīḍājāpur, attaching himself to the ruler of that state, Ibrāhīm 'Adil Shāh II (1580-1627) [see 'ADIL-ŠAHS]. There he reached the highest point of his career, with his appointment as poet laureate in the Bīḍājāpur court. In Aḥmadnagar, and later in Bīḍājāpur, he developed close relations with Zuhūrī (ca. 1537-1616), to whom he gave his daughter in marriage.

He was the author of many works, written either independently or in collaboration with Zuhūrī. In his personal life he was inclined towards mysticism, and has been praised for his pious habits and purity of character.

MALIK AL-KĀMĪL II [see 'AMĪN]

MALIK KUMMĪ, Indo-Muslim poet, was born at Kūnī in about 934/1528. The author of the Maykhdāna states that his full name was Malik Muhammad. He went at an early age to Kashān, where he stayed nearly twenty years, and then spent approximately four years in Kazwin, frequenting the company of writers and scholars in both places. Already during his youth he seems to have won distinction for himself in poetical competitions with his contemporaries, and was regarded highly by such literary figures as Muḥtārām Khānān (d. 996/1587-8) and Dāmīrī of Iṣfahān (d. ca. 1578) for his innovative tendencies. He was respected in important circles, and was sought after by Ṣafawī nobles and other Persian dignitaries.

MALIK KAFUR, military commander under the rulers of Māhwā [q.v.].

...
The son of a Turkish noble named 'Ali Shir Khurd, he played a conspicuously important role in the history of medieval Malwa. He came into prominence during the reign of Sultan to bring Shah Ghūrī (809-38/1406-35), who appointed him minister in recognition of his meritorious service and conferred on him the titles of Aḥraḥ al-Malik and Khān-i-Dījahān. He was instrumental in bringing about the accession of his son Mahbud Khādījī I (839-73/1436-69), whom he helped to achieve signal victories against rival chieftains of central India, to extend the limit of frontiers to its widest extent and to bring unprecedented glory to Malwa. The galaxy of honorific denominations which Malik Mughith received, such as Amīr al-Umārī, Zodbat al-Mulk, Khuldsat al-Mulwa, Ḥāzim-i Humayūn and Masnad-i 'Āli, amply reflect the influence and prestige which he enjoyed throughout his life. His death in 846/1443, following a brief illness, left the Sultan so distracted with grief that he "tore his hair and raved like one bereft of his senses" (Firishta, ii, 488). He lies buried in the Khādījī family mausoleum at Māndū (q. v.) where he has also left an architectural legacy in the shape of an elegant mosque called the Masjīd-i Malik Mughith, which he built in 835/1432.

Bibliography: Ghalam Yazdani, Manda, City of Joy, Oxford 1929; Upendra Nath Dey, Medieval Malwa (1401-1562), Delhi 1965. (ABDUS-SUHABAN)

MALIK MUHAMMAD DJAYASÍ (DJAYA$) (990/1493 to 7949/1542), Indian Sūfī and poet, was born at Dījas (Dhayas) in Awadh (q. v.) and died at nearby Amēthī. Educated locally, he became a disciple of the Cāhib Shāykh Muhīt 'Īl-Din. He had Hindu as well as Muslim teachers, and showed a religious tolerance which some ascribe to the influence of Kabir. He wrote poetry in Awadhī, a form of Eastern Hindi, including two fairly short religious poems, one of which, Ākhtī kalām, is on the Day of Judgement. But he is famed chiefly for his Padmāvatī, a narrative and descriptive poem of over 5,000 verses probably, but not conclusively, written in Persian script, although it is best preserved in Nāgarī, and moreover probably the earliest major work in any Indian vernacular extant in an authentic form, apart from its intrinsic literary merits. It combines some elements of the earlier Hindi bardic epic, elements of the traditional mahākīvya and some metrical resemblances to the Persian mathnawī, being a story of war and love, the heroine of the title being a paragon among women. It ends with the death of Padmāvatī's husband, who is ruler of Cītūr, and her sāt, followed by the capture of Cītūr by 'Alā'ī al-Din, Sultan of Dīhilī.

Despite the apparent secular nature of the poem, K. B. Jindal (History, 45, see Bibli.) regards it as a Sūfī love poem. The poet, in his envoy (if this is authentic and not a later addition), states that it is an allegory, briefly explaining the symbolism: but A. G. Shireff (Padmāvatī, p. viii, see Bibli.) describes it as "half-fairytale and half historical romance". The first canto (again, if this is authentic) is of interest to Islamologists. The poet praises God, Muhammad the Prophet, the first four caliphs, Šer Şakib, the Sultan of Dīhilī, the poet's Čāhib teachers and predecessors and the city of Dījas. Hindu and Islamic terminology is intermingled, the Kūrān being so named and also called purāna, for example. All the essentials of Islam are referred to in Hindu terms, with a deliberately propagandist intent in accordance with Čāhib ideals, e.g. 'Uthmān is called pāndī, 'Allāh va y collaborations [see OBGHAR AL-MAHAB, II, 1938-9, pp. 192-3], Hanball cause, and the Turkish commander Arslan Basāsī [q. v.] inclining towards the Shi'ī, being

Malik Muhammad Dījasī has been revered on religious grounds by both Hindus and Muslims of the sub-continent, while his poetry gives him importance in the tradition of both Hindi and, to a lesser extent, Urdu literature.

Bibliography: Brief critical accounts of the poet will be found in F. E. Keay, A history of Hindi literature, London, etc. 1920, 31-3; K. B. Jindal, A history of Hindi literature, Allahabad 1955, 44-7; G. A. Grierson and N. A. Dvivedi, The Padmāvatī of Malik Muhammad Jaisī, Calcutta 1911, i, Introd. 1-5; A. G. Shireff, Padmāvatī, Calcutta 1944, contains his masterly authentic translation of the whole poem; the text of the collected poetry is found in Rāmchandra Shukla, Dījasī grāntkhāvī, 1st ed. Benares 1924, 5th ed., Allahabad 1951, and Mātārāsādāl Gourta, Dījasī grāntkhāvī, Allahabad 1952 (both in the Devānāgarī script). Grierson and Dvivedi's work contains the text of half the Padmāvatī in the same script, with a translation in vol. ii. L. Dhar, Padmāvatī - a linguistic study of 16th century Hindi (Avadhī), London 1949, gives the text of cantos 26-51 (out of 57) in Roman transliteration, with an indifferent or worse English translation and lexical analyses. There are five mss. of the text in Persian script, three dating from around the end of the 11th/12th century, in the India Office Library, London. Unfortunately, there is no parallel Persian or Urdu edition. Nevertheless, the Persian poets having largely concentrated on producing a reliable Devānāgarī version, since the Persian script, even when fully vowelled, is not entirely satisfactory for Hindi. They have compared Persian-script mss. with earlier ones in Devānāgarī, but the process of establishing a definitive version is not yet complete. For further bibliography, including historical and religious background, see Shireff, op. cit., pp. xi-xiii, to which should be added, as the best modern study, Vāsudev Śaran Agraival, Padmāvatī, Jhanī 2012 V.S./1955, with a critical introd., analysis, edited text based largely on Gourta's but also taking into account recently-discovered ms., translation and commentary. See also hīndī and hīndī._ (J. A. HAYWOOD)
suspected of furthering the designs of the Fātimids on Ṭrāṭ. Toghril marched on Baghdad and entered it in Ṣaḥar, 1535, with his name pronounced in the ḥudūd the Khan was soon afterwards arrested and deposited, and spent the last four years of his life in captivity, dying at Ray in 450/1058. The rule of the Būyids in Trāṭ accordingly ended, though it continued for a few years more in Fārs under Fūlād-Sūṭūn.

**MALIK SARWAR,** or Khwājā Dāhān, the founder of the sultanate of Djawnpur [q. v.] in northern India. A eunuch of common birth, Malik Sarwar rose in the service of Sultan Firūz Tughlāk to become the governor of the city of Dīhil. In the political confusion that followed the death of Sultan Firūz in 790/1388, Malik Sarwar lent powerful support to Prince Muhammad, his chief patron and a younger son of Firūz, in Muhammad’s bid for the throne. Several years later the prince eventually ascended the Dīhil throne as Sultan Muhammad Shāh and in 792/1390 elevated Malik Sarwar from governor of Dīhil to wa’āṣ of the sultanate, conferring upon him the title Khwājā Dāhān. But the sultan died the next year, and the state of political affairs in Dīhil plunged still deeper in chaos, with provincial governors and Hindu chieftains openly defying the authority of the court.

In these circumstances, Sultan Naṣir al-Dīn Muhīammad Shāh, shortly after becoming sultan in 796/1394, made Malik Sarwar governor of all the Dīhil’s sultanate’s possessions from Kanawīd to Bihār, and conferred upon him the title Malik al-Shark or “Lord of the East”. The new governor promptly repaired to these domains with twenty elephants and a large army. After a victorious campaign, in which he succeeded in subduing rebellious princes throughout the lower Djūmnā Ganges Dīhil and Bihār, Malik Sarwar established himself in the provincial capital of Djawnpur as a virtually independent monarch, a circumstance enhanced by Dīhil’s own preoccupation with Timūr’s invasion of India in 801/1398. During his brief rule, Malik Sarwar’s power increased and his administration flourished, with even the kings of Bengal paying to him the tribute formerly sent up to Dīhil. Upon his death in 802/1399, he bequeathed to his adopted son Kārānful a vast kingdom stretching from just east of Dīhil to through the heart of the Gangetic plain to Bengal. Through the patronage of Malik Sarwar’s successors, the Dhārki kings of Djawnpur, the city of Djawnpur emerged as an important regional centre of Indo-Muslim culture in the 9th/15th century.

**MALIK-SHĀH,** the name of various Saldjūk rulers.

1. **MALIK-SHĀH I b. ALP ARSLĀN, DILALĀ AL-DAWSLA MUḤĪZ AL-DĪN ABU ‘L-FATH, GREAT SALDJŪK SULTAN, born in 447/1055, reigned 465-85/1072-92. During his reign, the Great Saldjūk empire reached its zenith of territorial extent—from Syria to the west to Khurṣān in the east—and military might.

Alp Arslān [q. v.] had made Malik-Shāh his wāli ‘l-saad or heir to the throne in 458/1066, when various governorships on the eastern fringes were at this same time distributed to several members of the ruling family. Although Alp Arslān was fatally wounded during his Transoxanian campaign against the Karakhanids [see ILEK-KHANS], he lingered long enough to clear his intended arrangements for the future of the empire, leaving his son Ayāz in the upper Oxus provinces and his brother Kāwūr [q. v.] to continue in the largely autonomous principality of Kirmān which he had carved out. Through the prompt action of the experienced vizīr Nizām al-Mulk [q. v.], Malik-Shāh’s succession to the sultanate was officially notified to the caliph in Baghdad, and the key city in Khurṣān of Nīkhārāt and its treasury secured for the young prince. The revolt of the disgruntled Kāwūr, who regarded his position as superior to that of senior member of the Saldjūk family as giving him a superior claim, was quelled at Hamādān in 466/1074 and Kāwūr strangled, though the sultan subsequently (467/1074) restored his sons Sulṭān-Shāh and Tūrān-Shāh to Kirmān (see E. Merçīrl, *Kirmān Seçakları*, İstanbul 1936, 456/1074); the subsequent disputes of Shams al-Mulk with the eastern branch of his dynasty in Kāshgār kept the Kāwūr generally submissive to Malik-Shāh suzerainty over the ensuing years (see W. Barthold, *Turkestān down to the Mongol invasion*, London 1928, 314-15).

Ayāz b. Alp Arslān died just before the Transoxanian campaign of his elder brother, and Malik-Shāh now gave Balkh and Tukhār to his other brother Tekiḡ. For some years, Tekiḡ governed Kirmān effectively, but in 473/1080-1 took into his service 7,000 mercenary troops discharged by Malik-Shāh as an economy measure, even though Nizām al-Mulk had warned him of the dangers of throwing such a large group of desperadoes out of employment (cf. Sjōström, *Skj.,* ch. xli, ed. H. Darke, Tehran 1340/1962, 209-10, tr. idem, London 1960, 170-1). With these soldiers, Tekiḡ rebelled, but failed to capture Nīkhārāt and had to submit. The sultan pardoned him, but four years later, in 477/1084, Tekiḡ again renounced his allegiance whilst Malik-Shāh was in the Dīzārā at the other end of the empire; this time, Malik-Shāh showed no mercy, and after quelling the outbreak, blinded and jailed Tekiḡ. These draconian measures kept further potential trouble-makers within the Saldjūk family quiet for the rest of the reign.

Peace was also established on the eastern fringes by the achievement of a modus vivendi with the Ghaznawids [q. v.] of eastern Afghanistan and India. The succession quarrels at the outset of Malik-Shāh’s reign tempted the Ghaznawid sultan Ibrāhīm b. Mas‘ūd (451-92/1059-99) to make a bid for the recovery of the Ghaznawid territories in Khurṣān lost to the Saldjūks 30 years before. Ibrāhīm attacked the Saldjūk prince ‘Uṯmān b. ‘Uṯmān b. ‘Uṯmān b. Mas‘ūd in northern Afghanistan and captured him, but Malik-Shāh
Shāh sent an army and restored the situation there (465/1073). Thereafter, Ibrahim seems to have been established by Malik-Shah's great-uncle Toghril Beg [q.v.], as an institution deriving its legitimacy from its joint operations conducted by the Seljuk and Saffarid mighty Saffarid dynasty [q.v.] as vassals of the former western provinces, and peaceful relations between them. The later reconciliation to the permanent loss of the Ghaznavid princely Sistan, governed by scions of the once-mighty Saffārīd dynasty [q. v.] as vassals of the Seljuks, Malik-Shah's authority was reasserted, and joint operations conducted by the Seljuks and Saffarids forces against the Isma'ilis of Kuhistān [q.v.].

Seljuk-Karakhanid relations also remained pacific, as noted above, for the rest of Shams al-Mulk Nāṣir's reign and during the short reign of Khusraw Khan b. Ibrahim at the latter's son Ahmad, nephew of Malik-Shah's Karakhanid wife Tekin Khatun, whom the sultan had married when a child in 456/1064. But the discontent of the orthodox ulama in Transoxania led Malik-Shah to invade Transoxania once more in 482/1089, to depose Ahmad Khan [though he was later restored before his final deposition and execution, ostensibly because of his Isma'ilī sympathies, in 488/1095] and to penetrate as far as Semireyje, overawing the eastern Karakhanid ruler of Khāshqār and Khotan, Hārūn Khan b. Sulaymān, who now acknowledged Malik-Shah in the khauf of his dominions. Recognition of the Seljuks here represented the culmination of Seljuk prestige in the east (see Barthold, Turchistan, 316-18).

Temporarily displays of military force were sufficient to subdue ambitious Seljuk rivals, to bring into line Karakhanīd princes torn by family dissensions and to persuade the Ghaznavids that their fortunes now lay in the exploitation of India rather than in futile irredentist dreams in the west. The situation on the western borders of the Great Seljuk empire was more complex and the frontier, towards which Türkmen adventurers and ghāzis had for some time been deflected by government policy, more fluid and shifting. There was a zone of local Arab and Kurdish amirates, jealous of their independence, mingled with ambitious Turkish slave commanders and Türkmen beys; beyond them, in western Transcaucasia and western Anatolia, lay the hostile Christian powers of Georgia and Byzantium. Hence the special importance to the Seljuks of defending the northwestern provinces of Adharbaydājn, Ārān and Armenia against Georgian attacks and of preserving these regions as areas of concentration for Türkmen forces. Soon after he came to the throne, Malik-Shah took steps to strengthen his frontier by deposing the Kurdish Shaddādī [q. v.] prince of Gādgān and Dvin Fadl(un) III b. Fadl II (466-8/1073-5) and installing there the veteran Turkish slave commander of Alp Arslan's, Sawtigin, Turkish slave commander of Alp Arslan's, Sawtigin, who was already well-familiar with the situation in the Caucasus region. Malik-Shah campaigned here personally in 471/1087-8, after the Georgian king had temporarily captured Kars from the Muslims, and again in 478/1085 after the restored Shaddādī Fadl III had rebelled (see V. Minorsky, Studies in Caucasian history, London 1953, I. New light on the Shaddādīs of Ganja, 67-8). This time, the main line of the Shaddādīs in Ganja and Dvin passed放手, but a collateral branch continued in Ani till the end of the 6th/12th century (see ibid., II. The Shaddādīs of Ani, 79-106). The submission of the Shirwānī-Saljuḳ Fariburz [see Shirwān] was also received. Much of the Arabo-Kur basin, i.e. eastern Transcaucasia, was now placed under Malik-Shah's suzerainty. For the sultan's Türkmen commanders, with Malik-Shah's cousin Kūšb Ḏal'in Ismā'īl b. Yākūt as overlord.

The overturning of Anatolia and the gradual pushing-back of the Greeks continued essentially as an enterprise of individual Türkmen leaders, prominent among whom were the sons of the Seljuk Kutlugmoh b. Arslan Isfilm, Sulaymān and Manṣūr. Although the later historiography of the Rūm Seljuks makes Malik-Shah officially invest these princes with the governorship of Anatolia, the assumption of the title of sultan by these last seems to have been a unilateral act which Malik-Shah probably could only regard as one of lēse-majesté; and two others of Kutlugmoh's sons actually fought at the side of the Fatimids in Palestine against the Seljuk cause (see Cl. Cahen, Qutulmush et ses fils avant l'Asie Mineure, in Isl., xxi (1964), 267; idem, Pre-Ottoman Turkey, London 1968, 73 ff.).

In the Arab lands of Trak, the Djiyazira and Syria, Seljuk policy aimed at containing the Isma'ilī Fātimids [q. v.] in Palestine, at curbing their influence among the Shī'ī Arab amirates of the desert fringes and within the Arabian peninsula, at assuring Sunni control of major cities like Aleppo and Damascus, and at establishing some measure of control over the Türkmen bands ranging across these lands of Syria and the Djiyazira and competing with the existing Arab population for pasture-grounds. The caliphal vizier Fakhr al-Dawla Ibne Djihr [see Djihr, Banū] secured Seljuk military help in order to reduce the Kurdish principality of the Marwānids [q. v.] of Diyarbekr in 478/1085, eventually incorporating it into the Seljuk empire. Malik-Shah's authority in Syria was imposed in the face of opposition from the Armenian former general of the Byzantines, Philarétos, in the middle Taurus Mountains region, from the U'kaylids [q. v.] under their amir Muslim b. Kuraysh in the lands between Mawahl and Aleppo, and from Sulaymān b. Kutlugmoh, firstly through the agency of Malik-Shah's brother Tughūk and then in 477-8/1084-5 by an army of the capital under the sultan's personal command (see Cahen, La Syrie du Nord à l'époque des Croisades, Paris 1940, 177 ff.; idem, Pre-Ottoman Turkey, 30-2). Triumphing over his rivals, Malik-Shah's authority was now extended as far as the Mediterranean shores, and Turkish slave commanders installed as governors in Amiit, Aleppo and Edessa. Seljuk influence was even carried southwards into the Arabian peninsula, for in 469/1076-7 Malik-Shah's commander Artuk b. Eskeb (later, the founder of a dynasty of Türkmen beys in Diyarbekr [see Artuks]) marched into al-Áhsā in eastern Arabia against the Carmathians [see Karamita]; the Sharifs of Mecca were suborned from their Fātimid allegiance; and Yemen and Aden were temporarily occupied.

Relations with the 'Abbasid caliphs were necessarily important for a power like the Seljuks which claimed to be the spearhead of Sunni orthodoxy and protector of the Commander of the Faithful against Shī'ī threats. Malik-Shah did not manage personally to visit Baghdad until 479-80/1086-7, when al-Muṣṭafā [q. v.] formally granted him the saltana or secular authority. As Cahen has pointed out (op. cit., 42), Malik-Shah and Niẓām al-Mulk regarded the sultanate, which they shared over the caliph had been established by Malik-Shah's great-uncle Toghril Beg [q. v.], as an institution deriving its legitimacy from its
very self and having a full entitlement to intervene even in religious matters. The caliphs could not of course concede the validity of this constitutional interpretation of the ordering of affairs in Islam, hence the inevitability of a state decision, however of lesser degree, between the two focuses of authority (see G. Makdisi, Les reports entre califé et sultan à l'époque Saljou- qide, in IJMES, vi [1975], 228–36).

The sultans had installed in Baghdad a shíma [q. v.] or military commander, who had to keep order in the city and often in ʿIrāk in general, and an ʿamīd [q. v.] or official in charge of civil and financial matters, including the allocation to the caliph of his ʿiskās and other allowances. These personages could, and at times did, exert considerable pressure on the caliphs. Central policy in the Saljuq state was directed from the diwān of the great vizier Niẓām al-Mulk, who had been first appointed under Alp Arslan; for a detailed survey of his policy, see Niẓām al-Mulk. Part of this policy lay in facilitating the revival of Sunni Islam, as the alternation of Shīʿa powers like the Buwayhids or Buwayhids [q. v.] and Fāṭimidis disappeared or waned, by financial and other support to the orthodox religious institution, including the encouragement of the founding of madrasas [q. v.], and this in theory meant harmonious co-operation with the ʿAbbāsīd caliphs, the moral heads of Sunni Islam. In practice, strains arose between Niẓām al-Mulk and the Banū ʿDāhir, viziers to the caliphs from Khūṭab to al-Muqtafī, with a nodding of heads in relation to 471/1079 when Niẓām al-Mulk secured Fākhr al-Dāwla Ibn ʿDāhir’s dismissal. The arranging of the betrothal of one of Malik-Shāh’s daughters to al-Muktādī in 474/1081-2 (another daughter was later to marry the next caliph al-Muṣṭaḥfir) only brought about détente when the sultan came personally to Baghdad and the marriage was celebrated in 480/1087. Even then, relations speedily deteriorated, and on his second visit to Baghdad, shortly before his death, the caliph was largely ignored by Malik-Shāh, who set in motion extensive building operations, including a great mosque, the Dżāmiʿ al-Sultān, and palaces for the great men of state, intending to make Baghdad his winter capital (see Makdisi, The topography of eleventh-century Baghdad, in JESHO, iii [1959], 292, 298-9). It seems that the sultan planned to set up his infant grandson Ḏafar, the “Little Commander of the Faithful” and fruit of the alliance between the caliph and the Saljuq princess, as caliph; but in the middle of Șawwāl 485/November 1092, not very long after Niẓām al-Mulk’s assassination, of complicity in which some people thought him guilty, Malik-Shāh died of fever at the age of 58, suspectedly poisoned (see M. T. Houtsma, The death of Niẓām al-Mulk and its consequences, in Inl. of Indian history, iii [1924], 147 ff.). The caliph was thereby assured of a reprieve. Terken ʿKhāṭūn and her protégé the mustawfī ʿṬaqī al-Mulk Abu ʿl-Ghānaʿīm endeavoured to place Terken ʿKhāṭūn’s four-year-old son Mahmūd on the throne, but the Niẓāmīyya, the relatives and partisans of the dead vizier, succeeded in killing ʿṬaqī al-Mulk and eventually securing the succession of the thirteen-year-old Berk-yaruk, Malik-Shāh’s eldest son by another wife, Zubaydah ʿKhāṭūn. The Great Saljuq sultanate now entered a period of internal dissenension under Malik-Shāh’s sons [see BARK-YARUK; MUHAMMAD B. MALIK-SHAH; SMĀʾAR], so that the political authority of the caliphate could revive in the 9th/12th century as that of the sultans declined. Malik-Shāh’s body was carried back to Isfahān and buried in a madrasa there.

Although probably no more cultured than the rest of the early Saljuq sultans, he acquired, in the conventional pattern of Islamic rulers, the reputation of being a patron of learning and literature. The great Persian poet and stylist al-Tughra [q. v.] served in his chancery, and amongst Persian poets, Muʿīzẓ [q. v.] in fact derived his takhallus from Malik-Shāh’s honorific of Muʿīzẓ al-Dīn. Umar Khayyām [q. v.] seems to have been attracted into the Saljuq service at the time of Malik-Shāh’s Transoxanian campaign against Shams al-Mulk Nār, and to have played a leading role in the reform of the calendar, involving the introduction of the new Malikī or Djalalī era (after the sultan’s iskab of Djalāl al-Dawla [see QALUL]), and in the construction of an observatory at Isfahān. A collection of legal responsa, the Masāʾil al-Malikšāhīyya fi ʿl-kawādīm al-sharīʿa, perhaps composed for the sultan, is mentioned in certain sources, e.g. in Muhammad b. Muhammad al-Ḥusaynī’s abridgement of Rawandūl al-ʿUrda fi ʿl-hikdya al-saljūkīyya, ed. K. Süssheim, Leiden 1909, 69-71.

Bibliography: In addition to works mentioned in the article): Of primary sources, see the standard Arabic and Persian ones for the period, such as Zahir al-Dīn Nīshāpūrī, Rawandūl; Bundārī, Sadr al-Dīn al-Husaynī, Ibn al-ʿAthīr, Ibn al-Djawi, Sibṭ b. al-Djawi, and the Syriac one of Barhebraeus. Ibn Khāhilīn, ed. Ḥasan ʿAbbās, v, 283-9, tr. de Slane, iii, 440-6, has a biography of Malik Shāh, deriving his material from the construction of Miskawayh by Muhammad b. ʿAbd al-Malik al-Hamadānī (d. 521/1127).

Of secondary sources, see H. Kafeṣoglu, Sultan Melikşah denizinde Büyük Selçuklu imperatorluğu, Istanbul 1953; C. E. Bosworth, in Cambridge history of Iran, v, 66-102, for political and dynastic history, and A. K. S. Lambton in ibid., 203 ff. for administrative history; O. Turan, Selçuklar tarhi ve Türk-Islam medeniyeti, Istanbul 1969, 152-75.

2. Mālik-Sḥāh II b. Berk-yaruk, infant son of sultan Berk-yaruk, who, after the latter’s death in 498/1105, was briefly proclaimed sultan in Baghdad, with Ayāz as his Atabeg and Sa’d al-Mulk Abu ʿl-Mahāsin as vizier, but who soon had to yield to Muhammad b. Malik-Shāh I [q. v.].

Bibliography: Bosworth, in Camb. hist. of Iran, v, 111.

3. Malik-Shāh III b. Mohamūd b. Muḥammad Muṣīn al-Dīn (547-8/1152-3), son of sultan Mahmūd [q. v.], who, with the support of the amīr ʿKhāṣṣ Bag Arslan and of Ildigiz [q. v.], Atabeg of ʿAr- rān and most of ʿĀḏḡarbayjān, briefly became sultan in western Persia after the death of his uncle Maḥṣūd b. Muhammad [q. v.] without direct heir. His incapability as a ruler—the caliph al-Muktafī was now able to get rid of all Saljuq authority from Baghdad and ʿIrāk—speedily led to his deposition in favour of his brother Muhammad. He was imprisoned, escaped and then was granted the governorship of Fars by Muhammad, but died at Isfahān in 555/1160.

Bibliography: Bosworth, in Camb. hist. of Iran, vi, 169, 175-7.

4. Malik-Shāh was also the name of two members of the Saljuqs of Rūm in the 6th/12th century: (a) Malik-Shāh b. Kılıkg Arslan I b. Sulaymān b. Kutlumuş (for a brief spell after his father’s death in 500/1107); and (b) Malik-Shāh b. Kılıkg Arslan II b. Maṣūd, Kūṭ al-Dīn, who during the division of territories during the latter part of his father’s reign (i.e. 551/1156-92), received Siwās and Alašrāy, and who then kept his father in semi-captivity in Konya [see Kılıkg Arslan II].
The title of the poet laureate was a privilege, given occasionally to court poets, of choosing a pen name based on the name or one of the lashabs of their patron.

Certain responsibilities went with the title, at least during the Middle Ages. The poet laureate was a supervisor of the poets assembled at the court and passed judgment on poems before they were presented to the patron. He also decided about the admission of applicants to the position of a court poet, but it is evident from some of the anecdotes related by Nizaml-yi Arudi that such introductions could equally be sought through the intermediacy of other dignitaries. Being the guardian of the ruler’s reputation as a benefactor of letters, he occupied a position of trust; it is frequently mentioned that the poet laureate was a prominent boon companion (nadîm) of his patron. E. E. Bertels ascribed an important role in the development of Persian poetry before the Mongol period to the institution; the influences exerted by a poet laureate on the poets under his control fostered the rise of local traditions marked by common stylistic features.

The scarce information about literary life at the Sâsânid court available to us suggests that the rank of favourite artist was known in Iran prior to Islam. The story about the rivalry between Sârash and Bârßrâb over the first place among the minstrels of Khusraw Parviz can be taken as an indication (cf. A. Christensen, *L’Iran sous les Sassanides*, Copenhagen 1944, 484). The founding of a dîrsân al-ghir for the distribution of rewards to poets by the Barmâka (q. v.) and the appointment of Abân al-Lâhîkî (died about 200/18516-17) as an official critic of the poems presented to these Iranian vizards of the Abbâsids, point into the same direction (see also D. Sourdul, *Le vizirat Abbasside de 749 à 936*, Damascus 1959-60, i, 143 f.).

Dawlaâsh (fl. at the end of the 9th/15th century) recorded the formal appointment of ‘Unsurî as a poet laureate by Muḥammad of Ghazna through a mîjâhîl-i malik al-shu’ârâ’î, in the early 5th/11th century. The duties of this office were similar to those incumbent on the holder of the office instituted by the Barmâka (Tadhkira al-shu’ârâ’, London-Leiden 1901, 44 f.). Although the actual title is not mentioned in sources from his own time, there is little reason to doubt that ‘Unsurî did occupy the leading position at the Ghazânawid court ascribed to him. This need not mean, however, that he was the first Persian poet who was honoured in this manner. The chapter on the poets in the Câhâr makâla, the anecdotes of which illustrate the most important aspects of early court poetry, refers to the special position held by Rûdûkî under the Sâmânsids in the 4th/10th century. Particularly informative is the story on Nizâmî-yi Arûdî’s visit to Amîr Mu‘izzî’s grandfather. The incident is recorded in an anonymous text which in 510/1116-17 in order to get a reward for a lament presented to this poet-laureate of the Sâlûqân, it contains a detailed account of Mu‘izzî’s succession to the post of amîr al-shu’ârâ’î which was held already by his father Burhânî. The remunerations attached to this function consisted of a dânmas and an iţfâd, the kinds of salary regularly assigned to officials (see Dâmârîyya). Another anecdote tells about a conflict at the court of the Khâkânîyân (i.e. the ilek-Khâns [q. e.]) of Transoxana between rival poets. Râshîdî defies successfully the authority of the amîr al-shu’ârâ’î Amâk and wins for himself the title of sayyid al-shu’ârâ’î. It should be noted that the title of malîk al-shu’ârâ’î, which later appears to be in general use, does not occur in the Câhâr makâla.

The institution remained a part of the organisation of courts wherever poetry was practised according to the Persian tradition. We find it under the Sâlûqîs of Anatolia as well as under the Muslim rulers of the Indian subcontinent. For the later periods, it is difficult to decide to what extent its significance exceeded that of a merely honorary office. A remarkable revival of mediaeval customs came about in 19th-century Iran under the Kâdîjîr dynasty. Fath ‘Ali Shah tried to imitate the literary splendour of the ancient court of Ghazna by attracting a great number of court poets who were united in a society called anîmsan-i Khâkân. He gave the title of malîk al-shu’ârâ’î to Sâbâ, the author of the Shadhînshadh-ndma, which in the style of the Shâh-nâmâ glorified the exploits of Fath ‘Ali Shah. Many honorifics of this kind were handed out by Sâbâ, viziers and provincial governors to their favourite poets throughout this period. Among the last who received the title of malîk al-shu’ârâ’î was Muhammad Taki Bahâr [q. e.]. In 1904, when he was only eighteen, Muzaffar al-Dîn Shah allowed him to adopt this title which was previously held by his father Sabûrî. In spite of his subsequent renouncing of feudal poetry, the title remained attached to Bahâr’s name till the end of his days.

Malik al-Tudjudjar (A. "king of the big merchants"), an office and a title which existed in Iran from Safawid times (J. Chardin, *Journal de voyages du Chevalier Chardin*, in Perse, et autres lieux de l’Orient ..., ed. L. Langles, v, Paris 1811, 262), and probably earlier, until the end of the Kâdîjîr period. It is not clear precisely what the functions of the malîk al-tudjudjar were during the Safawid and early Kâdîjîr periods, or to what extent the office existed in the various commercial centres of the country. It is, however, obvious, that not all major towns had a malîk al-tudjudjar in the first half of the 19th century. In Dju’mâdî I 1260/May-June 1844 Muhammad Shah (1834-48) issued a farnâmân which ordered that a malîk al-tudjudjar be appointed “in every place in Persia where extended commerce is carried on ...” ("Firman relating to bankruptcies ...", in L. Hertslet [ed.], *A complete collection of the treaties and conventions ... between Great Britain and foreign powers*, i, London 1856, 614). By the second half of the 19th century, big merchants (tudjudjar) acting as malîk al-tudjudjar were to be found in most major commercial centres of Iran (Mirzâ Bahâr al-Dîn Fath ’Ali Khamîr-ad-dîn-i Sânî [q. v.], Nisârî al-Buldûn-i Nisârî, Tehran...
The economic developments of the 1870s and 1880s were bound to bring to an end the co-operation which had existed between the government and the big merchants. While the central government found itself faced by growing fiscal difficulties, the big merchants became wealthier. Against this background, the government initiated new economic measures. The tobacco concession (1890) and the new customs administration and regulations (1890-1904) in particular aroused the opposition of the big merchants to the government. Big merchants holding the office of malik al-tudjjar in several major towns played a central role in the protest movements which brought about the cancellation of the tobacco concession in 1892, and the granting of a constitution (kam-i asâ) and the establishment of a national consultative assembly (mu'askat-i shirâ-yi millî) in 1906 (see further Mêlikzâda, Tarîkh-i inshâ-yi màhârî-sâyi âmân, Tehran 1328/1949, i, 128-30, 278-9; ii, 28, 168-72; Ibrâhîm Taymûrî, Tarîhî-i tan-bâkî-yi yâ auwâlî mu'makawanat-i manfî dar Iran, Tehran 1328/1949, 78-9, 112; Nâzîm lî-am Kîrmânî, Tarîh-i bâlî-yi Irânîyân, Tehran 1322/1952, 12; Mîrzâ 'Ali Khan Ahmadî Sânî, Ruznâma-yi Dawlat-i 'Abbâsa-yi Iran, ed. Hafiz Farmanfarayan, Tehran 1341/1962, 155; Yahâbî Dawlatâbâ'dî, Tarîkh-i mu'askîrî-yi bâhây-yi Yadâyeh, Tehran n.d., i, 108; A. K. S. Lam- 

The malik al-tudjjar was not a government official. He did not receive any payment for holding the office, nor was he officially a member of any government department. He had two main functions: (1) he was the merchants' representative, or better, the link between the holders of the office of a government or provincial and the authorities, and (2) he was entrusted with authority to settle disputes between the Iranian merchants and their customers, among the merchants themselves, and between local and foreign merchants and trading-firms (Polak, Persien, ii, 188-9; J. M. de Rochechouart, Souvenir d’un voyage en Perse, Paris 1867, 176; G. J. Wills, Persia as it is, London 1886, 45; G. N. Curzon, Persia and the Persian question, London 1892, i, 450; A. Houtum-Schindler, ed. Persia, I. Geography and statistics, in Encyclopaedia Britannica, 10th ed., London 1902, xxxi, 619; Greenfield, Verfassung, 143; idem, Das Handelsrecht... von Persien, Berlin 1906, 22, 27). It was the latter function, especially so far as it concerned the claims of foreign merchants in cases of the bankruptcy of Iranian merchants, that provoked the opinion of Muhammad Shah’s above-mentioned farman. Nâzîr al-Dîn Shâhad extended the functions of the malik al-tudjjar to include, in collaboration with the provincial official in charge of trade and commerce (ra’îs tudjjarat), the encouragement of commercial activity in particular and of the economy of the country in general (Greenfield, Verfassung, 143). In Tehran, the malik al-tudjjar was conferred by the government on commercial and various other communities. In the latter case, it was asked by the al-Dîn Shâh to form a council of the prominent big merchants of the capital which would hold regular meetings, in which the question of developing and encouraging trade and commerce, should be discussed, and the results of its deliberations communicated to the government (‘Imâm al-Salţana, Tarîkh, iii, 231. Cf. Houtum-Schindler, in EBB, xxxi, 619).

With the fall of the Kâdgârs and the adoption of modern forms of government and Western institutions, the office of malik al-tudjjar lapsed, its functions being taken over by the Chambers of Commerce of the major towns and by several government departments.

(M. G. GILBAR)
In 1695, the defterdar [see DARTAR] of the time elaborated the bases of a new form of malikâne, i.e. a grant of the enjoyment of revenues for life, with care to protect the properties of the state from the dilapidation allowed by unceasing leases, heedless of the ultimate fate of properties granted to them. The fiscal revenues were, as in ordinary leases, put up for auction and sold to the highest bidder. This last paid over to the state the “price” of the lease called mawadda and contracted to hand over each year a fixed sum corresponding to the fiscal revenues taken on lease. In the case of a new sovereign coming to the throne, he paid additionally 25% of the cost of the lease, and in times of war, 10%. Given the fact that the holders of these leases for life came from the class of high officials and persons (such as civilian and military dignitaries and scholars) who usually lived in the capital, they in turn sub-let the properties they had leased. In 1715 a firman decreed the abolition of the system, but it continued in existence till ca. 1839.

The first to be mentioned are the works of Ibn Abi Zayd al-Kayrawanî (d. 160-240/776-854), with a list of authors who have passed away and that it describes mercantile practices (documentations). See G. H. Bousquet, La Mudawwana, 2nd ed., Paris 1956-63), to say nothing of partial translations. It is the work of the Kayrawanî Sahnun (160-240/776-854 [q.v.]), and is a collection of Malikî fikî which contains the corrections and responses made to Sahnun by Ibn al-Kâsim al-Urâdi (d. 191/806), a disciple of Malik, according to the opinions of Malik himself, of his contemporaries and his masters in tradition including Abu Zuhri (d. 124/740), Nâfi‘ (d. 116/734) and Rabii’ al-Râyî. The Mudawwana was also called the Mughallatî, since it completed and improved upon, through the diversity of subjects considered, the Asadiyya of Ibn al-Furat (d. 213/828), a work based on the teaching of Malik and of the Hanafîs of ‘Irâk. The practical interest of the Mudawwana consists in the fact that it illustrates the connections between religion and trade and that it describes mercantile practices (documentation, bills of exchange and all kinds of commercial transactions). See G. H. Boussquet, La Mudawwana. Index (avec la table générale des matières), in Arachica, xvii/2 (1970), 113-50.

This work gave rise to a whole literature of commentaries of which the principal examples will be indicated here, some of which have been translated. The first to be mentioned are the works of Ibn Abi Zayd al-Kayrawânî (d. 386/996): the Ikhtisâr al-Mudawwana al-kubrâ. It is thus an abridged version of Malikî law, translated by L. Bercher, Algiers 1935 (see H. R. Idris, Note sur l’identification du dédicataire de la Risâla d’Ibn Abi Zayd al-Qarâwînî, in CT, 1 [1953], 63-8). Another work which enjoyed great success in North Africa is the Tahâdib al-Mudawwana, Tunis ms. Zaytûna, of Abî Sa‘id al-Barbâ‘î (d. 400/1009). In imitation of Sahnûn, the Andalusian Ibn Habîb (d. 338/945) composed al-Wadîhâ after a visit to Egypt as the guest of Ibn al-Kâsim. One of his pupils, al-Uthâbi (d. 355/969), made an abridged version of it entitled al-Uthîyâ. The Mudawwana also inspired Ibn Râghi (d. 646/1248) who restated the precepts of the Malikî school in his Mukhtasar fi ’r-fura‘. Khalîl b. Ishâk (d. 776/1374 [q.v.]) is the author of a Mukhtasar of this work. It has been translated into French by Perron (Précis de jurisprudence musulmane, 2nd éd., Paris 1877); into Italian by Guidi and Santillana in 1919, and again into French by G. H. Boussquet (Abrége de la loi musulmane de l'école de l'Imâm Malik, Algiers-Paris 1956-63), to say nothing of partial translations.
This Mukhtasar of Khalil, a basic text of Maliki law, is in its turn barely usable without the aid of commentaries, of which the best known are:

—al-Sharh ‘allî Mukhtasar Khalîl of al-Zurkânî (d. 1099/1687), published in Cairo in 1307 with a commentary by al-Bannâni (a version highly valued in the Orient);
—al-Sharh al-saghrî of Dârdîr (d. 1201/1786), Bûlâk 1289, and, of the same author;
—al-Sharh al-kabîr, Bûlâk 1295, with glosses by al-Darâsîk;
—Mukhtasar Kharîl of al-Kharîsî, with glosses by al-‘Adawî, Bûlâk 1316, vols. i and iv;

Transmission of the doctrine. According to Ibn Khâldûn (Mukhtâdîma, Cairo n.d.), until the 5th/11th century the Mâlikî school was divided into three tendencies (turâk): Kayrâwâni, Andalusian and eastern, the last-named including the ‘Irâkî, Egyptian and Alexandrian transmissions. The following are the lines of transmission from Mâlik onwards:

Kayrâwâni sanâd: Ibn al-Kâsim (d. 191/806), Sûrâ 240/854, who also inherited from Asad b. al-Furât (d. 213/828) and, by this indirect means, from the disciples of Abû Hanîfî. After Sahnûn, there are the commentaries of Abû Zâyad al-Kayrâwânî (d. 386/996), of al-Bardhâ’î (d. 400/1009), of Ibn Yûnûs (d. 451/1059), of Ibn Mûhrîz (d. 450/1058), of al-Tûnîsî (d. 443/1051) and of al-‘Aqîmî (d. 478/1085). This line of transmission established the reputation of the Mâdâwâsan and of its commentaries for the Maghrîb.

Andalusian sanâd: Yahyâ b. Yahyâ al-Layhî (d. 234/848), al-‘Ashâbî (d. 224/838), Ibn al-Mâdîshûn (d. 214/829), al-Mu’tarrifî (d. 220/835), Ibn al-Kâsim (d. 191/806) who transmitted to Ibn al-Hâshîb (d. 238/845) and in his turn to al-Utbi (d. 255/869). The Andalusian transmission for its part accorded the greatest respect to the ‘Irâkî transmission in the Orient; of which the best known commentary is the Bayân of Ibn Ruhâd (d. 520/1126 [q.v.]).

‘Irâkî sanâd: Kâdî Ismâ’îl (d. 246/860), Ibn Khwawizmînâd, Ibn al-Labbân and al-‘Abharî (d. 375/985) who transmitted to ‘Abî al-Wâhâbî (d. 421/1030). The last-named, who settled in Egypt, was to influence directly and profoundly the Egyptian sanâd.

Egyptian sanâd: Ibn ‘Abî al-Hâkâm (d. 214/829), Ibn al-Kâsim (d. 191/806) and Aqâbî (d. 204/819); al-Hârîb b. Miskîn (d. 250/864) inherited from both these last two. The following may be regarded as the most significant links in this chain of transmission: Ibn al-Rashîk (d. 632/1234) and Ibn al-Hâdîqî (d. 646/1248), the latter inheriting via the Alexandrian sanâd from Ibn ‘Inânî (d. 541/1146), Ibn ‘Atîr Allâh (d. 612/1215) and Ibn ‘A‘fî (d. 581/1185), and transmitting to al-Kârîfî (d. 684/1285). The connection between eastern and Andalusian transmission was established in the 6th/12th century with Abû Bâkî al-Turâshî (d. 520/1126), who travelled to Egypt and secured employment as a teacher in Alexandria (see V. Lagardère, L’unificateur du malikisme oriental et ocidental à Alexandrie: Abû Bâkî al-Turâshî, in ROMM, i [1981]). This connection with the Egyptian school, already manifest in the transmittance of the ‘Irâkî transmission in the person of the kâdî ‘Abî al-Wâhâbî, was to have as its consequence the abandonment, in the 7th/13th century, of the Mâdâwâsan and of the ‘Ubîyîya in favour of the Mukhtasar fi ‘l-fura’ of Ibn al-Hâdîqî (d. 646/1248). These two basic works of Mâlikî doctrine, which had led to the production of a significant output of judicial writing, continued to be influential for some time after the disappearance of Cordova and Kayrâwân as centres of learning, but lost their effective role at the end of the 8th/14th century.

Principles and judicial theory. Like other schools of Sunni Islam, Mâlikism bases its doctrine on the Kur‘ân, the Sunna and ‘îdâma [q.v.]; nevertheless, divergencies of greater or lesser significance exist in regard to the other rites. While there is unanimity surrounding the Holy Book, a primary difference appears concerning the Sunna. The tradition of the Prophet Muhammad and that of the Companions constitute the Sunna according to Mâlik, who excludes from it the tradition of ‘Ali, which other schools incorporate (in fact, in refusing to choose between ‘Ali and ‘Uthmân, Mâlik would have recognised the legitimacy of their caliphate, but, according to another trend of opinion, he would have agreed as to the superiority of ‘Uthmân, which would seem more likely in view of the fact that his school also flourished at Baghîr in an ‘Uthmânî milieu).

To ‘îdâma, universal consensus of the Musulmans, there is added the Medînîn ‘îdâma which proceeds from the distribution of the Sunna by the Prophet. By this indirect means, it can even result that this consensus prevails over hadîth. Medînîn opinion being considered to testify to the acts of the Prophet. For Mâlik, hadîth is thus not the most important source, and personal judgment, ‘a’îd, is to be used in parallel, when ‘îdâma cannot provide the answer to a question and only if this procedure does not injure the public good (masâila). Mâlik is sometimes reproached for making too much use of this method. Kijjî [q.v.], reasoning by analogy, which had many opponents among the Sunnis, is applied by the Mâlikis in cases of ‘îdâma al-‘umma.

Mâlikism and schismatics. It was the intolerance of Mâlik towards schismatics which made his school so successful. The hostility of his teaching towards the Kadaariyya [q.v.] and the Khârîjîs is based on the fact that these are considered to be outside the pale of public order and agents of corruption (fâsiqî). Khârîjîs must make an act of repentance (tawbâ); if they refuse, they are condemned to capital punishment. For the zindik [q.v.], even repentance is not allowed; he is immediately condemned to death for the crime of apostasy. In the temporal authorities, notably the ‘Abâsîd caliphate, often had recourse to a Mâlikî kâdî to judge heretics, public agitators or those considered as such. Thus it was the Mâlikî Grand Kâdî of Baghîr, Abu ‘Umar Ibn Yusuf, who tried and condemned to death al-Hâlîqî [q.v.] in 319/922. Two Shi‘î extremists of the Middle Ages are known to have perished in similar circumstances: Hasan b. Muhammâd al-Sâkânî, executed at Damascus in 744/1342, and ‘Ali b. al-Hâsân al-Halâbi, executed in 755/1354.

Mâlikism and mysticism. There is a priori no place for mysticism in the school of Mâlik. A hadîth of the Prophet forbids monasticism, which is even regarded as bid‘a. Nevertheless, under the impulse of piety an ascetic movement was established, and until the 2nd/8th century it attracted little attention. But, stimulated by the intense intellectual activity which developed in the Orient from the end of this century, mysticism spread widely and attained proportions which were disturbing for the prevailing orthodoxy. In the heartland of the Islamic State, the police of the state, in the name of the nation and the faith, condemned and the works of al-Ghazâlî (d. 505/1111), Sûfism gained ground with the Almoravids and even
flourished under the Almohads. In al-Andalus, where the milieu was particularly intolerant, the mystical movement enjoyed a brief period of ascendency with Ibn Mavara (d. 319/931) (q.v.) and his disciples (see V. Lagardère, La Tarîqa et la révolte des Murîdîn en 539H/1144 en Andalús, in ROMM, i [1983]).

The following may be named among the Mālikī mystics: Abu 'l-Kāsim al-Shirbî (d. Baghdad, 334/945), the Irīfīkīny Abū 'Uthmān Ibn Sallāmī al-Maghribī (d. Nisābūr, 373/983). After al-Ghazzâlî, mysticism triumphed with the Ḥanbâlī Abū al-Kādir al-Dīlî (d. 561/1165), whose school spread widely both in the East and the West. Abu Madyān al-Andalûsî diffused his doctrine in the Maghrib, and one of his pupils was Abû al-Salām b. Makrî (d. 624/1227), the teacher of al-Shâhîdî (d. 656/1258), who was educated in Irīfīkîya and in Egypt and had numerous disciples in Syria and the Hijāz. From this time onwards, there were many Shi‘îs among the Mālikîs. In Syria, around Ibn al-'Arabî (d. 638/1240), the greatest mystic of Muslim Spain, a complete organisation was established and zāwiyas were built for his followers. Among known Mālikī Shi‘îs, also worthy of mention are Muhammad b. Ahmad al-Bisâtî (d. 842/1438), Mālikī kādî and shaykh of the Shi‘îs of Cairo, and 'Abî b. Mūhammad al-Kurṣâî (d. Alexandria, 808/1405). Another who should be mentioned is a famous Egyptian Shi‘î who introduced gnosis (ma‘rifa) into his doctrine, Abû l-Nun al-Miṣrî; a Mālikî, he is the author of a version of the Musawwa.[1983].

Works of Ṭabākāt, other sources for the knowledge of Mālikism and of its disciples. Although the first text of Mālikī tabākāt is owed to the pen of Ibn Abî Dalîm (d. 351/962), under the title of Kitâb al-Ṭabākāt fi man yar-ṣî an Mâlik wa-ṣabīhā him mën aḥî al-amārîn, it is not this that is regarded by posterity as a fundamental work, both of tabākāt and of history of the doctrine, but the second of the genre in chronological order, that of the kādî 'Iyād (d. 544/1149 [q.v.]), which bore the title Tarît al-madârik wa-takrib al-masâlik. This source is particularly important for the reason that, in addition to the biographies of Eastern and Western Mālikîs, it contains a lengthy study of the life of Malik, his work, the expansion before dealing with the expansion itself. The next text, which contains the biographies of Mālikîs who lived after the time of 'Iyād until the end of the 8th/14th century, is the work of the Andalusian Ibn Farhûn (d. 799/1396) and is intitled al-Dhâhî al-mudhadh bî fi ma‘ṣîrat dâ‘în 'ulamâ‘ al-madhâhîb.

The Šâhîfî al-Sakkâwî (d. 780/1378) is the author of Tabākît mâlikîyya which is composed on the basis of some twenty sources mentioned in the conclusion. Two further works of Ṭabākāt directly inspired by the Dhâhî of Ibn Farhûn should be noted: Nayî al-ṣibhādî bi-tatîris al-Dhâhî of Ahmad Bâhâ (d. 1032/1622 [q.v.]), printed in the margins of the Dhâhî, and the Tawîl al-Dhâhî of al-Kâfî (d. 1008/1600). The last text of Mālikī tabākât is that of the Tunisian Mūhammad Mâlikî who lived at the beginning of the 20th century; it is intitled Ša‘ādîsîr al-nâr al-zâktîyya fi tabâkât al-Mâlikîyya and was published in Cairo in 1931. It is the most complete source, since it relates the biographies of the Prophet, of the Companions, of the tabî‘în, then those of the eminent fukahî (q.v.) of the Hijāz, of 'Irāq, of Egypt, of the Maghrib and of Andalusia, concluding with those of the masters who instructed the author in 1922.

2. THE EXPANSION OF MĀLIKISM

The Orient. In general, in the East as in the West, it was the disciples of Malik who took upon themselves the task of spreading his doctrine in his lifetime. In the Tarîh al-madârik, the kādî 'Iyād informs us that it was in Egypt, at Alexandria, that the second centre of Mālikism after Medina was established, through the efforts of 'Uthmān b. 'Abî al-Hâkam al-Dhâjâhîmi (d. 163/779), Sa‘îd b. 'Abî Allâh al-Ma‘ṣûrî who introduced Mālikism to Alexandria, and Ibn al-Kāsim al-'Utrî who lived for a long time at Medina as an intimate of Malik and was the intermediary through whom the doctrine gained sway in the Maghrib and in Muslim Spain. On his death in 479/1086, 'Abî Allâh b. Wahh (d. 197/982) succeeded him as leader of the Mālikîs of Egypt. These eminent fukahî were successful in definitively implanting Mālikism in this country in spite of the difficulties caused by living in proximity with Şâ‘îism which was ultimately to supplant it; today, this school is dominant in Egypt, but Mālikism remains active in the Şâ‘îidî.
However, the intransigent doctrine which became the norm in the Maghrib had the effect of suppressing intellectual effort and religious feeling. In fact, the study of the Qur'an and of hadith, as well as fiqh (personal effort at interpretation) were abandoned in favour of the manuals of applied f ith (furū'). The Almoravids sovereigns gave their support to these methods and encouraged the fukahā to accord supreme importance to the study of manuals of furū'. This abandonment of recourse to the Qur'an and the Sunna is denounced by al-Ghazālī in the Iḥyāʾūlīman (d. 804/1401), who considers that the Almoravids as practised by its disciples no longer had any connection with the religion as it had developed. He also condemns the important role played by the fukahā in political life. Ibn Tūmār (q.v.) went even further than al-Ghazālī. Inspired by his principles, he declared war on the Almoravids, appointed himself judge of morals, appropriated the title of Mahdī, and, by violent means, restored the orthodoxy. He banned the works of furū', and established as the basis of his doctrine elements of the pure orthodoxy, sc. Qur'an, Sunna and consensus of the umma. The doctrine of Ibn Tūmār was to be the impetus for an important mystical movement throughout the whole of the Maghrib, and in spite of the collapse of the Almohad empire, and thus of its political support, it was to imprint upon victorious Malikism an indelible mark of austerity (segregation of the sexes, fasting, dietary prohibitions, among other elements characteristic of Maghribi austerity).

It is, on the one hand, with the Hafṣīd civilisation in Ifrīqiya, under the influence of the judicial schools of Tunis, Bougie and Kairouān, and of scholars of the calibre of Ibn ʿArāfa (d. 804/1401), and on the other, with the Marinid civilisation in the Western Maghrib, and the famous madrāsas of Fās and Tlemcen, that the Renaissance of Malikism in North Africa is observed. If, today, Maghribī Islam seems particularly rigorous, this is due to Malikism. In fact, practice and doctrine have remained totally unchanged since the middle of the 7th/13th century, immediately after the fall of the Almohads. The success of Malikism in North Africa may be explained by reference to the theory Ibn Khaldūn (d. 880/1476) according to whom Bedouin culture accounts for the predominance of this school in the Muslim West. Effectively, Malikism is loyal to the Tradition and hostile to rational explanations; it is perfectly suited to the Berber mentality of the Maghribīs who refuse to accept any idea unless it can be traced back to a tradition. It is for this reason that Maghribī Malikism seems rigid in comparison to that of the East, which does not reject effort at interpretation (t i g h ā dā). In contemporary North Africa, Malikism is predominant in Morocco, Algeria, Tunisia and Libya; it coexists with some Ibadī and Ḥanāfī centres in the three last-named countries. It is exclusive in Mauritania where it has been the object, over the centuries, of an interesting adaptation (see Ould Bah, Littérature juridique). 

Muslim Spain. It was at the end of the 2nd/8th century that Malikism was introduced into Muslim Spain where it superseded the Syrian doctrine of al-Awāzī. Those who brought to the country the principles of the I mām of Medina were Andalusian scholars, initiated by Mālik himself or by his pupils. The best known among them are Ziyād b. ʿAbd al-Hakam, Yāḥyā b. Yāḥyā al-Layṭḥī, Yāḥyā b. Muḥād and Qaḥīb b. Dāmas. The latter was the nucleus of a clerical aristocracy which, throughout the duration of the Umayyad dynasty, exercised real power in the state and made Malikism the sole official rite of al-Andalus. This state of affairs, which lasted for nearly two centuries, coincided with the period of the transmitters of Malik and of the Medinan tradition, of the compilation and codification of the legal corpus, and of the composition of restatements. Andalusian Malikism was characterised then by an intransigent austerity, exclusively attached to the study of manuals of jurisprudence (f urū'), forsaking, in the manner of its Maghribī neighbour, the study of hadiths and prescribing all effort at personal reflection (i q t i g h ŏ dā).

The fall of the Umayyad caliphate, then the emergence of regional principalities (m u l k ā t al-jawārī) in the 5th/11th century, and later, the domination of the Almohads, put an end to the supremacy of jurisprudence. Political decentralisation, stimulated, at an early stage, a socio-cultural renewal with individuals including Ibn ʿAbd al-Barr (d. 1063/1653), Ibn Ḥādī (d. 547/1151) and Ibn Ḥazm (d. 1065/1653); with the last-named, a Zāhirī jurist who opposed the Mālikī doctrine, hadith, the oral fākā and polemics of judicial methodology (ṣ i l a) became the order of the day (see in this context, the edition of al-Miḥrābī ḍī l- ḍ ārīʾī ḍī l-ḥaḍārī of ḍārīʾī ḍī l-ḥaḍārī, edited by A. M. Turki, Paris 1978, and Turki, P o l é m i q u e i n t e r i m B i n Ḥ a z m e t ḍ a s i i s u r les p r i n c i p e s d e la l o i m u s l i m a n e, Algiers 1976).

This opening towards the exterior, towards other systems of thought, is given formal expression in the work of Ibn Rushān (d. 502/1108), especially with the B i l a d a r j a n, i n t r o d u c t o r y work of Ibn al-Malikīn, muluk tā r (ed. C. Corso 1329). Nevertheless, the class of the f ukahā retained a dominant position until the last days of the Andalusian principalities and in particular that of Granada, by means of individuals like Ibn Lubb and Muḥām mād al-Sarākūṣī in the 8th/14th and 9th/15th centuries, and through them, Malikism, as the compilations of treatises testify.

Africa, Bilād al-Sūdān. Islam was propagated at an early stage in the Sudan, among the Nūba of the Nile Valley. But it was not until the 10th/16th century that it was introduced to Dār ʿFūr by Arab tribes. The progress of Islam became most definitive towards the end of the 13th/19th century under the influence of the M a h d ī Muḥammad Ahmad. At the present time, the majority of the Muslims of the Sudan are of the Mālikī rite and use the M u k h t ā s ā r of Khalīl. Islam spread to Kanem in the 5th/11th century and was firmly established around Lake Chad from the 9th/15th century onwards.

In West Africa, Malikism was introduced by the Almoravid conquest of the T akūr (Fūta Tōrō) among tribes which were to a greater or lesser extent vassals of Ghāna. At the end of the 5th/11th century, Islamisation gained sway in the Gold Coast. Tim- buktu became the Islamic metropolis of the western Sudan in the 8th/14th century, and its influence lasted until the conquest of Songhay by Morocco in 1000/1591. It was especially among political functionaries and senior officials that the Muslim faith was spread. It was not until the 12th/18th and 13th/19th centuries that theocratic monarchies were established in Fūta Djalon and Fūta Tōrō, following the victories of the Toucouleur Muslims over the Peuls who were forcibly converted. The Toucouleur Usmānī Fōdį preached ḍ ī l-ḥaḍād and founded the empire of Sokoto in 1207/1802. Muslim law was introduced to Masina by the Peul Sēku Hamadu Bari in 1225/1810 and, in 1256/1820, the Toucouleur al-Ḥādī ʿUmar had himself appointed khālīfā t i g h ā n āt for the Sudan. A vast empire was established in which the Muslim faith was dominant. But, at the present time, there are Malikī Muslims in the Black African states of Senegal, Mali, Niger, Togo, Chad and Nigeria.

Bibliography: I. For the general study of
MALIKIYYA — MALIYYE

MALINDI, a town on the Kenya coast in lat 4°N. It is first mentioned in literature by al-Idrīsī (ca. 1150); the Ma-in mentioned by Ou-yang Hsiu, Hsin T'ang-shu, ca. 1600, is more likely to have been situated in Somalia. Al-Idrīsī says that it was a town of hunters and fishermen, whose inhabitants owned and exploited iron mines. Iron was their greatest source of profit. The iron, however, as A. O. Thompson has shown, was not mined, but recoverable from seashore deposits. Al-Idrīsī also mentions Malindi as a centre of witchcraft, a view also confirmed by Abu l-Fida (1273-1331), who adds that it was the capital of the King of the Zandī; he is likewise aware of the exploitation of iron. Malindi was visited by the Chinese admiral Chen Hō in the course of his fifth diplomatic and commercial voyage in the Indian Ocean. Otherwise, little is known of the town in the Middle Ages.

It was from Malindi that Vasco da Gama set off for India in 1498 under the guidance of the pilot Ahmad b. Mādīj al-Nadjāfī [see nāmān]. Da Gama had been cold-shouldered at Mombasa, but was well received at Malindi, where the ruler had an ancient enmity against Mombasa. The town of Malindi, which in Swahili means ‘deep-water anchorage’, lay in a bay and extended along the shore. A more detailed description is given by Duarte Barbosa in ca. 1517-18. The place was well laid out, with many storeyed houses with flat roofs. The people traded gold, ivory and wax, importing rice, millet and wheat from Cambodia. It was visited briefly by St Francis Xavier in 1542, when he had a conversation with a kādī, who would seem to have been a Shī'ī. He reported that the practice of Islam had greatly declined in recent years, and that, out of seventeen mosques, only three were in use. A later missionary, Fr João dos Santos O. P., reported in 1609 that the whole coast from Mozambique to Lamu was Shī'ī.

The royal family of Malindi was of Shi'ī descent, and possibly related to that of Kilwa [p. 40]. When the royal line of Mombasa failed in ca. 1570, the Portuguese who were virtual sovereign powers over them which even the Sultan of Kilwa could not overrule. After the move of the royal house to Mombasa, the town lost its importance. Captain Owen found it deserted in 1827. The modern seaside resort contains few Islamic antiquities: two ruined mosques, a cemetery, and a piller tomb which is possibly near the site of the former royal palace.

Ten miles from Malindi to the south, and two miles inland, is the very remarkable Islamic site of Gedi, which was occupied from the 11th until the 17th century, when it was abandoned to nature. The outer wall encloses an area of about 45 acres, and may have contained a population of some 10,000. Within the inner wall are a palace, a Friday mosque and several other small mosques, numerous houses and what may have been a commercial centre. The place is not mentioned either in Arabic or Portuguese literature. Its proximity to Malindi, and the fact that it lies some two miles from the sea, suggests that, unlike other eastern African coastal sites, which were primarily trading centres, Gedi was, as it were, a country residence of the sultans of Malindi, around which a small town had grown up. Three architectural features of the houses are of especial interest: the houses are divided into two distinct compartments, presumably for a wife each; of these compartments one has a store especially designed for cowrie shells, the local currency; and the palace and houses have elaborately constructed water conduits, leading to internal ablations and latrines.

MALIYYE. In the Ottoman Empire and successor states. In the 19th and 20th centuries, this term has been used in Arabic and Turkish to refer to financial affairs and financial administration. In the Ottoman Empire, and in various of its successor states, the term has also acquired a more specific reference to the Ministry of Finance (Maliyye Nezāreti under the empire; Maliyye Wekālet or bakānlığı under the Turkish Republic; Wizārat al-Maliyye in the Arab states). The history of financial institutions in the Ottoman Empire and its successor states still awaits thorough research. In part, this fact is attributable to problems of the original sources, which remain largely inaccessible even for the empire (e.g., Çetin, 28-35, 42, 83, 128, 153-4, 155-60; Serroğlu, 62-7, 72, tughue donated Mombasa to the Malindi dynasty, which then reigned from Mombasa until 1632 [see MOMBASA]. In the 18th century the Malindi traders at Kilwa had as their chief an officer known as the Malindi governor, a powerful figure of whom even the Sultan of Kilwa could not overrule. After the move of the royal house to Mombasa, the town lost its importance. Captain Owen found it deserted in 1827. The modern seaside resort contains few Islamic antiquities: two ruined mosques, a cemetery, and a pillar tomb which is possibly near the site of the former royal palace.

74, 78-9, 85). In part, the challenge of studying the history of the financial institutions, or financial problems more generally, derives from the fact that the economic and financial topics of the first, second, and third "divisions" (defterdar-ı şhîkî-ı nüseb, ûnûrî, iltîzâm) have concentrated on problems of particular interest to people outside the Islamic world, this discussion will concentrate on maliyye in the sense of institutions for financial administration. Even within that limit, it will focus on the Ministry of Finance of the Ottoman Empire and the Republic of Turkey. A concluding section will offer comments aimed at setting Ottoman and republican Turkish developments in a comparative perspective that encompasses other Islamic states.

1. The late Ottoman Empire. During the last quarter of the 18th century, the Ottoman financial agencies were still concentrated in a large building situated between Top Kapî Palace and the Sublime Porte and referred to by terms such as Bâb-ı Defteri. These agencies were presided over by three officials known respectively as the defterdar [q.v.] of the first, second, and third "divisions" (defterdar-ı şhîkî-ı nüseb, ûnûrî, iltîzâm). In the 18th century, the first defterdar functioned as the real head of the financial departments, and the other two as assistants to him. Different sources from the period show the Bâb-ı Defteri as including a slightly varying list of bureaux, numbering close to 30. In addition to records on the revenues and disbursements of the empire, these bureaux kept the muster rolls and pay records of various categories of military personnel and palace functionaries, as well as the records on the provisioning of the capital city and major fortresses. Other responsibilities of the offices of the Bâb-ı Defteri included processing the papers for appointments of Muslim religious functionaries, maintaining records on relations between the imperial government and the non-Muslim religious authorities of the empire, and disposing of the estates (mükkeflât) of important officials, when these estates reverted to the sultan by death or expropriation. As was characteristic of Ottoman government agencies of the period, these responsibilities were parcelled out among the various bureaux in a way that reflected the effects of accretion over time, more than any effort at systematisation. At the head of each bureaux stood an official holding the rank of the scribal elite (khâkin-i deyân). The potential for gradual change among the financial agencies, even before the beginning of serious efforts at innovative reform, was illustrated by the introduction, at the beginning of the reign of Selim III, of a type of internal debt securities (eshâm) and the creation of a new bureau to maintain the records on them (Eshâm Müktef-ı Kâlêm). According to a source of ca. 1770-90 (Top Kapu Sarayı Arşivi D3208), the number of officials employed in the offices discussed here was about 650. This fact made the Bâb-ı Defterî the largest, though not the most influential, of the scribal agencies.

Eighteenth-century Ottoman financial practice displayed several traits of particular significance for later periods. One was the custom of assigning specific revenues to specific expenses and limiting the extent to which transfers could be made. This practice goes back to the beginnings of Islamic fiscal practice and is still found in many parts of the world, but is in contrast to the preferred modern practice, at least in the West, of pooling revenues in a unified budget (Heidbreder, ii, 12-14). A second characteristic, particularly prominent among the Ottomans in the era of imperial decline: revenue collection by means of tax farms, either on an annual basis (iltûzûm) or for life (mâlikânî [q.v.]; Issawi, Turkey, 343-7). A third practice, which helps to explain the reliance on tax farming, was that some of the most important revenues continued to be collected in kind.

The chief business of the offices of the Bâb-ı Defterî was to keep records of transactions organised on these bases. In furtherance of this, the staff included, in addition to the bureaux discussed above, an auctioneer (mürtî dellâtî bagîşîtî) to conduct auctions of tax farms, an 'âlim appointed with the title mürtî kâthîbî to hear cases arising between the financial department and revenue farmers or other individuals; and stafis of quasi-police officers (bâsh bâsh kâtû, kâthîb bâsh bâsh kâtû) whose responsibility was to collect overdue revenues (d'Ossios, iii, 375-9; Hammer, Staats., ii, 145-69; Uzuçarşılı, 319-73).

In the late 18th century, the treasury was still located in Top Kapî Palace. In fact, there were two treasuries. One was known as the outer treasury (khażîne-ye bûrûn, āfûrîa khażîne-i) or state treasury (khażîne-i umûmî). The other was known as the inner treasury (khażîne-ye endûrûn, iî khażîne-i). The latter was supposed to be a reserve treasury, filled at least in part out of the surplus of the former and bound to aid the former in event of shortage. In addition, there were a number of so-called khażînes, including a "privy purse" (qeyb-î humâyûne) at the palace and a number of others located in specific government agencies [see khażînez]. These were little more than special funds or cashiers' offices for specific needs or departments (Deny, 119-20).

Substantial efforts at reform of Ottoman financial institutions began under Selim III (1789-1807 [q.v.]) in conjunction with his programme of military reform. To finance his new military force, he created a "new receipts treasury" (rûdî-î qâtîd khażîne-i), under the control of the former defterdar of the "second division" (şhîkî-ı ûnûrî), and assigned a number of revenues to him. The new treasury survived until the end of Selim's reign, when, like other reforms of his "new order" (nizâm-i qâtîd [q.v.]), it was eliminated. Those of its revenues sources that were still productive were reassigned to the "treasury of the Mint (darbkhânâ-î umûmî khażînên), which was a branch of the inner or private treasury (Mûstafâ Nûri, iv, 113-14; Pakaln, OTD, ii, 79-80; Shaw, Old and New, 128-34). Selim's reforms also included some efforts to limit fiscal exactions and to reorganise the state treasury (ibid., 170, 174).

Under Mahmud II (1808-29 [q.v.]), financial reform resumed in the 1820s, at first, it appears, as a concomitant of efforts in other fields. For example, Mahmûd assigned a number of Anatolian sandûqs to a kind of collection agents (mütezelîm), rather than the normal type of provincial administrators (wâli, mutasarrîf). Such assignment of mütezelîms was not new, but this time the revenues that would otherwise have gone to the wâli or mutasarrîf were diverted to Istanbul [see khażînez, iv, 1185]. Another of Mahmûd's policies affected the timar [q.v.] system and the provincial cavalry (sipahi [q.v.]) who had traditionally benefited from it. In 1241/1825-6, Mahmûd began re-assigning timars and sipahis to other types of military forces (Drewdet, Ta'shîx xii, 143-4). In 1831,
he attempted to abolish what remained of the timar-system and to carry out a land survey and census (Lewis, 90-2).

While the exact course of events is still not entirely clear, Maḥmūd's reforms had clearly extended by then into a direct reorganisation of financial offices. With the abolition of the Janissaries in 1826, the one of the offices of the Bāb-ı Defteri that had been responsible for maintaining records of that corps, that of the yeḥi-leri kābiṣ, went through a series of changes of name and function, emerging as a "military supervisory" (vakfne-i nežāreti; Lufti, i, 132, 143; Pakalın, Maliye, i, 22-3). By 1831, further change had produced at least two financial "supervisorships", a maṣāřfīnāt nežāreti, responsible for military expenditure, and a muḳāṭātāt nežāreti, responsible for other aspects of government finance. This nomenclature is somewhat confusing, since presumably the revenues assigned to both agencies were farmed out, although the term muṣābāta might be taken to indicate that this was true only of the second (Heidborn, ii, 37; Pakalın, Maliye, i, 10; idem, OTD, ii, 578). Over the next several years, there were a number of further reorganisations, a persistent feature, at least until 1838, being maintenance of one agency for military finance and another for government finance more generally (Hammer, Histoire, xvii, 102; Lufti, iv, 111; idem, OTD, ii, 578-5). In 1829-30, for example, we find a state treasury (khazīne-yi ʿamīre) and a financial agency for the army, referred to as the mansūrī defterdārātī (Heidborn, ii, 37; Pakalın, OTD, ii, 406-7). In 1251/1835-6, the state treasury (khazīne-yi ʿamīre) was combined with that of the mint (darb-khāne), the new agency being placed under the headship of a darb-khāne defterdārā (Lufti, v, 17). Then on 3 Dhu 'l-Hijja 1253/28 February 1839, the mansūrī defterdārālī was added to the organisation, the mint was again separated out, and the result became known as the Ministry of Financial Affairs (Umūr-i Miṣāliyye Neżāret). The second half of the 1830s was when Maḥmūd organised the larger departments of the Ottoman government into European-style ministries, for which he adopted the generic term neżāret. From that point onwards, that term continued, as in the past, to refer both to small-scale agencies, where it is more appropriately translated as "supervisory", and to the new ministries. The financial agency created in 1838 was clearly of the latter type (Lufti, v, 105-116; idem, OTD, ii, 578). Following the death of Maḥmūd II, the development of the Ottoman system of financial administration reflected both the goals of reformers like Muṣṭafā Reğ fid [q.v.], and the intensity of the political struggle that surrounded them. At the death of Maḥmūd, Khosrow Paşha [q.v.] seized the grand vizierate and set to work undoing many of the reforms of the late sultan and his civilian bureaucratic advisers, who were Khosrow's enemies. Among other things, Khosrow abolished the Ministry of Financial Affairs (Qumāda-i ʿÜlû 1255/July-August 1839), replacing it with a dual system of state treasury (khazīne-yi ʿamīre) and a defterdātī for farmed revenues (muḳāṭātā; Pakalın, Maliye, iii, 96). When Muṣṭafā Reğ fid and his friends managed to topple Khosrow in 1840, they also launched an ambitious attempt to replace tax-farming with direct collection of revenues, at least in selected localities. About the same time, it appears that they converted the defterdātī for farmed revenues into a Ministry of Finance (Miṣāliyye Neżāret) responsible for supervision of the system of direct collection, delegating responsibility for revenues that continued to be administered in the "old way" to the state treasury (khazīne-yi ʿamīre; Lufti, vi, 68-9, 106). At the beginning of 1257/1841, the treasury was again combined with the mint to form a Ministry of Financial Affairs (Umūr-i Miṣāliyye Neżāret; Pakalın, Maliye, i, 26). Muṣṭafā Reğ fid and his friends did not consolidate their hold on high office until ca. 1845; however, the history of the Ministry of Finance was continuous from 1841 onwards. By the early 1840s, the bureaux formerly attached to the Bāb-ı Defteri had also undergone considerable modification; and the ministry had acquired a number of new functionaries and agencies. The resulting organisation remained essentially unchanged from that point until 1297/1880 (Lufti, v, 105, 116; vi, 125-6; Pakalın, Maliye, i, 26-7; iii, 29-31, 34).

Had Muṣṭafā Reğ fid and his colleagues succeeded in realising the policy goals that lay behind these changes of organisation, the results might have done a lot to provide the Tanzimat [q.v.] reforms with the sound economic foundation that they never acquired. What the reformers intended was a fundamental reorganisation of the system of taxation: eliminating many of the old taxes, especially the arbitrary exactions (takâlif-i ʿarfjī), substituting direct collection for revenue farming, centralising receipts and disbursements in the state treasury, and assigning generally to all officials to replace the prebendal forms (μοναπόστολοι) of connected officials, and the bureaux, which most of them had previously depended. In 1838, the tax reforms were inaugurated on an experimental basis in selected provinces, and the salary system was supposed to go into effect. The Gûlûkhanâ Decree of 1839 proclaimed the general principles underlying the changes. Subsequent acts generalised the fiscal reforms to a larger number of provinces. The chief agents of the new system of revenue-collection were to be collectors (muḥājīlîs) appointed to assess and collect revenues in collaboration with locally appointed administrative councils (mēdīlis-i idārē), which were to include both ex officio members and representatives of the local populace (ʿAbd al-Raḥmān Wefik, i, 346-7; ii, 6-50; Inalcik, Tanzimat ve uygulamaları, 623 ff.; idem, Application de la Tanzimat, 97 ff.; Shaw, Tax reform, 420). These reforms failed, and the Ottomans never succeeded in overcoming the consequences. In part, the failure resulted from the fact that the Ottoman system of financial administration was not ready for the demands that fiscal centralisation made on it. In part, the problem resulted from the opposition of former tax farmers or ṣarāfs [q.v.], who had vested interests in the old system (Pakalın, Maliye, iii, 52-4; Shaw, Tax reform, 422). In any case, revenue receipts fell off. In 1258/1842, tax farming (ilīṭāzām, but not the life farms, mālkhān) had to be restored (Pakalın, OTD, ii, 397). Direct collection was later revived for some taxes. But for the time on agricultural produce (ašāf), the most important single revenue, tax farming continued at least into the Young Turk period (Heidborn, ii, 117-30; Lewis, 385-6, 438; Shaw, Tax reform, 420-9; Issawi, Turkey, 351-60). The failure of the effort at centralisation of revenue collection crippled the new system of official salaries from the start. And that was not all.

The extent to which the Ottoman Empire had been integrated, prior to the 19th century, into the worldwide system of European economic dominance is clear from the evolution of the capitulations (imṭāyāzāt [q.v.]) and the abuses that developed out of them. One of the saddest ironies of the Tanzimat is that the economic subordination of the empire underwent a critical tightening in 1838, just as the new period was about to open. This occurred with the adoption of
the Anglo-Ottoman Commercial Convention of Balta Liman. This, and comparable treaties concluded later with other states, marked the substitution of negotiated bilateral treaties for the capitulations. More important, it forced Ottoman statesmen, who were desperate at that point for European help against the Egyptian challenge, to accept what amounted to free trade (Bailey, Kütükoğlu). The effects on an unindustrialised economy, in which customs revenues had traditionally been one of the most important cash revenues, were very serious. Not only were Ottoman markets now open wide to European industrial goods, but the ability of the Ottoman government to raise new revenue, either by taxation or by setting up monopolies or other government enterprises, was limited by the terms of the treaties (du Velay, 338).

The deteriorating economic situation, and the political and military crisis with Egypt, led to the issue in 1846 of the first Ottoman paper money (kağıt para). This remained in circulation until 1862, and gave rise to serious problems of counterfeiting and depreciation. Paper money was again issued in the wake of the Russo-Turkish War and during World War I (Toprak, 205 ff.). The coinage, too, was in disarray (Schaeler, 25 ff.; Issawi, Turkey, 326-31).

The monetary problems were aggravated by the lack, prior to the second half of the century, of modern banking facilities; when created, these were essentially foreign enterprises (du Velay, 132 ff.; Biliotti; Issawi, Turkey, 339-42).

To make matters worse, the Ottoman government began during the Crimean War to contract foreign loans (Djewdet, Tefâikir, 1-12, 20-3; du Velay, 134 ff.). In a little over twenty years, the empire acquired a foreign debt of 200 million pounds sterling (Blaisdell, 74) and expected a complete collapse of its credit. The crisis over the public debt resulted in Muharram 1299/1881 in the creation of an international Council of the Public Debt (düvân-i umûmmiyê [q.v.]), to which the Ottoman government was forced to cede control of a number of revenues (du Velay, 463 ff.; Young, v, 55 ff.; Blaisdell, 90 ff.; Issawi, Turkey, 361-5). The Russo-Turkish War also left the empire saddled with an indemnity of 35 million Turkish pounds to pay to Russia (Blaisdell, 85; Heidborn, ii, 45-9; du Velay, 174-88, 317-24).

The late 19th century nonetheless witnessed some efforts to improve the organisation and efficiency of financial institutions. There was an attempt in 1277/1861 to organise a hierarchy of fiscal officials to serve in the local administrative system then being created (Dâistâr, ii, 4-25). Under ʻAbd al-Hamîd, there were further acts on this subject and on the related issue of tax collection (Young, v, 18-21). The Constitution of 1876 contained a special section on financial affairs, including articles on taxation, budgeting, and the creation of an independent Board of Audit (Düvân-ı Muhasâbat; Dâistâr, iv, 16-17, arts. 96-107). The law of 1877 on provincial municipalities authorised them to have their own budgets (Young, i, 69-84; Dâistâr, iv, 538-53). After the Russo-Turkish War, there was a flurry of effort at reorganisation on a number of fronts, the purpose being to convince the major powers of the empire's capacity for reform. Among the measures then enacted were one of 1296/1879 setting up the Board of Audit (Düvân-ı Muhasâbat; Dâistâr, iv, 602-13) and another of 1297/1880 reorganising the Ministry of Finance (ibid., iv, 674-84; Pakalîn, Mâliyye, i, 28-30, 32-7). The latter measure reorganised the ministry and its personnel into two components, the central organisation (heyyî-i merkezîyye) and the attached agencies (heyyî-i muhâfaza) located either in the provinces or in other ministries at the centre. The central organisation was to include a corps of inspectors (heyvî-i teşfîhiyye) empowered to investigate the accounts of all central and provincial departments. Under the Hamîdîn régime, control measures such as the inspectorate and the Board of Audit produced little real effect. The practice of filling the post of undersecretary of finance (Mâliyye muhtesîbi) with a foreign expert did at least preserve a continuing source of critical perspective on fiscal affairs (Young, v, 16).
There was also another extensive reorganisation of the ministry in ca. 1305/1888. The ministry in this form appears to have been distinguished by the complexity of its internal organisation and records-keeping procedures (Pasha, Ministry of Finance, ii, 137-42). Like most governmental agencies under 'Abd al-Hamid, it also became grossly overstaffed. The number of officials in its central offices stood at 650 in 1879, 750 in 1888, and perhaps 1,400 at the time of the Young Turk Revolution (ibid., i, 36, 32).

The 1908 Revolution opened the way for efforts at fundamental reform in finance, as in other fields. The most important reforms of the period appear to have been three in number. First, as part of a program affecting the bureaucracy in general, there was a purge (tengibât) of superfluous and unreliable officials and a reduction of salaries for all others (Findley, 296-8). The purge was carried out in several waves and reduced the number of officials in the central offices of the ministry for a time to about 800. Second, as a natural extension of the purge, there was a reorganisation of the ministry. Thenceforth, its central agencies consisted of the minister, his undersecretary, a directorate general for accounts, eight specialised departments, and two consultative bodies. One of these, the Financial Reform Commission (İslâhât-i Maliyye Komisyonu), included foreign as well as Ottoman members and served to study reform proposals and draft legislation on them; the other, the Consultative Committee (Endşâm-i Mülkâbene), was to advise on implementation of a new accounting system. Even more important, the inspectorate of finance and the Board of Audit (Düvân-i Mühâsbêt) were at last made into active institutions. The ongoing practice of training financial inspectors by a period of apprenticeship abroad dates from this period (Ayni, 25). The third major reform of the Young Turk years was a new system of accountability, embodied in a law (usul-i mühâşebet-i sümâmiyye kânûnî) that went into effect in 1911. The new system centralised control of revenue and expenditure in the Ministry of Finance, established in principle the universality of the state budget, defined the system for budget preparation, and provided for a directorate of accounts, controlled by the minister of finance, in every ministry. These major reforms of the Young Turk period were the most important innovations attempted in government finance since the beginning of the Tanzimat (Heidborn, ii, 42-65; Pakahn, Maliyye, i, 30-1, 50-5).

In addition, the Young Turk years also included many other financial innovations. Publication of budgets and other acts of fiscal relevance began for the first time on a prompt and regular basis, and the budgets were much more realistic than any published before (see Bibb.). Some taxes were abolished, and the assessment and collection of many others revised. The law of 1913 on provincial administration allowed each province to have a budget consisting of revenue and expenditure items controlled at the provincial level (Dişisin', v, 144, 186-216, arts. 79-83; vi, 505-8). The Land Registry Office (Dişfet-i Kâhidâni [p. v.]), was attached to the Ministry of Finance. A special school for financial officials (Maliyye Mektebi) was founded in 1910. The privileges that foreigners enjoyed under the capitulations were unilaterally repudiated in 1914. In response to wartime needs, a Ministry of Supply (Jâde Nezâri) was eventually created. Many of these reforms occurred during the four periods between 1909 and 1918 when Djâwâd Bey [p. v.] was minister of finance (Pakahn, Maliyye, iv, 238-9, 243, 246-7).

2. The Turkish Republic. Following the collapse of the empire, the Turkish Republic managed to extricate itself from the problems that had done most to breach Ottoman economic sovereignty. The position of Ottoman debt among the various successor states, states, and the shrinkage during the armistice period of the territory under control of the Ottoman government (Blaisdell, 179 ff.). The Treaty of Lausanne (1923) recognised the end of the capitulatory régime in Turkey and apportioned the Ottoman debt among the various successor states, setting the share of the Turkish Republic at 67%. The Turkish government accepted the debt obligations assigned to it, but later unilaterally suspended payment, and in 1943 made a final offer to redeem outstanding bonds at a reduced rate (Robinson, 98-9).

Meanwhile, the development of the Ministry of Finance, as of other agencies of the new government, was "evolutionary, rather than revolutionary" (Dodd, 47). Although the matter appears not to have been studied, there must have been substantial initial carry-over of personnel and organisation from the imperial government. Serious efforts at financial reorganisation came only with the abolition of the tithes (a'zân) in 1925 and subsequent tax reforms (Ayni, 29), then in 1929 with a reorganisation of the Ministry of Finance under a law on unification and equalisation of government payrolls (deslet memurlarının maaşlarının tevhid ve taadul hakkındaki kanun; Ulker, 91). These provisions were superseded by a law of 1936 on the organisation and duties of the Ministry of Finance (maliye bakaniyla teşkilât ve vazifeleri hakkındaki kanun; Gorvine and Barber, 78-89). With numerous amendments, this remained in effect in the mid-1970s (Ulker, 91-2; Teşkilât ve Vazifevi 1976). Under the Republic, the mission of the Ministry of Finance has been defined as "to carry out the financial administration of the State in harmony with the efforts directed toward the economic development of the country" (Organization and functions, 164). In keeping with this extension of the old concept of financial administration into the newer one of economic development, the internal organisation and the size of the ministry have become considerably greater than in the Ottoman period, while a number of other organisations with related missions have also come into existence.

In contrast to the bipartite organisation of central and attached officials prescribed for the ministry in 1880, the Republican Ministry of Finance comprises four categories of agencies: central, provincial, international, and attached (bağlı) or related (iletilidâ). During the mid-1970s, the central organisation had at its top the minister, with his undersecretary, assistant undersecretaries, and private secretariat. There were five advisory and staff units, including the Financial Inspectorate (teşhis kurulu), the Board of Accounting Experts, and the Board of Certified Bank Examiners (bankalar yönetim merkezleri kurulu). The ministry had six principal organisational units, including a department for legal counsel and general directorates for budget and financial control, accounts (muhasebet), revenues (gelirler), and the treasury, the last also serving as a general secretariat for international economic co-operation. There were also support agencies in charge of personnel (izlêk ifleri), the mint and printing plant, the accounts of the ministry itself, etc. The provincial agencies of the Ministry of Finance were found at the two highest jurisdictional levels of the local administrative hierarchy, the il (province) and the ilçe.
At the province level, the chief financial officer continued to bear the old title defterdar. There were a number of agencies attached to him with functions parallel to various of the central agencies. The most important of these provincial agencies were those responsible for assessment and collection of taxes. At the next lower administrative level, the îleçı, the senior official was the mal müdürü, whose functions and staff were a reduced-scale replica of those of the provincial defterdar. The international agencies included financial representatives serving with the Turkish missions to organisations like the North Atlantic Treaty Organisation (Brussels) or the United Nations (New York), as well as financial counsellors attached to embassies and consulates. The category of agencies attached or related to the Ministry of Finance included the Central Bank, the State Investment Bank, the government retirement fund, and the national lottery (Turkish government organization manual, 138 ff.; Ulker, 92 ff.; Teşkilât tebrihi 1976, 333 ff.).

During the mid-1960s, the staff of the ministry reportedly stood on average at 2,000 in the central offices and 15,000 in all (Ulker, 92). A decade later, it was reported at 5,600 in the central offices and over 40,000 in total (Teşkilât tebrihi 1976, 342). The comparison between these two sets of figures is startling, suggesting that political forces have again been at work, as in the days of 'Abd al-Ḥamīd, to blot the bare facts of this explanation of the short-term contrast, that between either of these sets of figures and those dating from the empire is probably more significant. Whatever other factors may be at work, the presence of many times more financial officials in a state much smaller than the empire surely reflects the greater demands made on the ministry in a society committed not just to financial administration, but to economic development.

Indeed, the growth of the Ministry of Finance is only a partial illustration of this point. To appreciate it fully, one must also note the proliferation of governmental agencies with financial and economic responsibilities. The empire in its day had ministries, which appear not to have been very effective, for trade, agriculture, public works, forests and mines, as well as interior administration. Atatürk committed the Republic to eliminating the hold of foreign interests over the economy and to étatism, and the first state plan for economic development went into effect in 1934 (Robinson, 103 ff.; Hershlag, 31 ff.; Issawi, Turkey, 367-8). By then, the development of a new series of official and semi-official agencies had begun. By the mid-1960s, this series included the State Planning Organisation (Devlet Planlama Teşkilati, created 1960), Board of Audit (now known as Savunmaşyet instead of Dîwan-i Mubâhebâtî), the ministries of customs and monopolies, commerce, industry, public works, communications, agriculture, health and social assistance, reconstruction and settlement, tourism and information, plus other agencies or enterprises concerned with banking, energy, natural resources, land tenure, and various forms of industrial production (Organization and functions, 62-6, 163-4, 196-317). The obvious need for coordination among so many agencies has given rise to several interministerial bodies intended to perform this function in support of the development plans (Teşkilât tebrihi 1976, 139-43, 156-8). Where the Ministry of Finance is concerned, probably the most critical need for co-ordination arises between it and the State Planning Organisation, which not only provides general guidelines, but also prepares plans for the state but also plays a central role, together with the Ministry of Finance, in budget preparation (Dodd, 245-6; Organization and functions, 175-76).

The Ministry of Finance of the Turkish Republic, though vastly larger in size and wider-ranging in functions than its imperial prototype, has thus been surrounded with a galaxy of agencies with financial and economic responsibilities. According to recent sources, some major developmental needs of the ministry are still unmet. These include improved coordination with other agencies, especially the planning organisation; the full acceptance of "programme budgeting", as opposed to dispersion of sums needed for a given project under different headings; and an end to the age-old practice of assigning specific revenues to specific needs (Dodd, 246; Organization and functions, 170-1, 179-80). The last point, in particular, shows that the Ottoman tradition dies hard. To these problems must, of course, be added others of general economic significance, such as the monetary instability and mounting public debt that have again come to plague the republic.

3. Comparative note. In the 19th century, the financial and economic history of autonomous regions within the Empire passed through stages parallel to those observable in Istanbul. The similarities derive from a common institutional heritage, similar economic and environmental constraints, and confrontation with the same set of problems in dealing with the outside world. At many points, there is not only parallelism, but also contemporaneity, in the major economic events occurring in different localities. In the 20th century, parallels are equally noticeable, the main difference being the proliferation of sovereign states and the growth of emphasis on economic development. In both periods, similar traits can be found in Islamic states beyond the frontiers or former frontiers of the empire, as well as farther afield.

In the 19th century, there were two regions in the Islamic parts of the empire that the Ottomans acknowledged as autonomous. These were the "privileged provinces" (zâyiêt-i miyâtâtî) of Egypt and Tunisia. As early as the time of Muhammad 'Ali (1805-49), Egypt, at least, began to develop financial agencies that resembled, and for a time anticipated, those of Istanbul in their development. Both Tunisia and Egypt, in addition to their extensively organised system of ministries in the 1850s; the Istanbul government had done so in the late 1830s. Tunisia and Egypt resembled their suzerain in the form and weakness of procedures for budgeting and revenue control. They shared the same problems where the privileges of foreigners were concerned. Tunis, Cairo, and Istanbul all began to accumulate a foreign debt between 1854 and 1862. Bankruptcy occurred for Tunisia as early as 1866; for Cairo and Istanbul, it came a decade later, although Egypt had been in deep trouble ever since the collapse of the cotton boom enjoyed during the American Civil War (1861-5). Fiscal control agencies, dominated by Europeans, were established in all three places between 1870 and 1881. In Egypt, there was not only a Caisse de la dette, but also an Anglo-French dual controllership over the remainder of government finance. Even the personal fortune of the Khedive was taken under European control (Deny, 104-20, 131-43, 398-414, 519-48; Rivlin, 75-136; Landes, 278 ff.; Issawi, Egypt: an economic and social analysis, 23-5; idem, Economic history of the Middle East and North Africa, 62-70; Owen, 122-52, 216-43; Brown, 134-7, 245-50, 335-49; Ganiage, 99-112, 186-216, 298-334, 348-402). It is true that Tunisia came under French domination in 1881, and Egypt did in 1882, while the territories remaining under control of the Istanbul government did not. Yet for the Istanbul government, as for the few other
Asian and African states that retained nominal independence in this period, sovereignty became almost a fiction. With its fiscal system a weaker version of the Ottoman one, and its economy even more dominated by foreign interests, Ködör Irán is one of the clearest examples (Bakhsh, *Evolution, 139 ff.; idem, *Iran, 102-4, 110-14, 142-4, 166-7, 263-6, 270-81).

Despite this uncertainty in matters of chronology, evidence, such as the listing of a number of villages in the näbiye of Malkara as forming part of the waqf of Sulayyûn Pasha, and the names of some of them (e.g. Sarukhanlu, Kastamolu, Tatdarlar, Karî Akki, Kara Yalbûhi; cf. Gökbilgin, op. cit., 167-8; Beldiceanu-Steinherr, op. cit., 142-3), suggests both the origin and the rapidity of Turkish colonisation in that part of Thrace. Malkara, indeed, from the earliest period of Turkish rule, seems to have been a place of particular resort for akhis and dervish elements (cf. the numerous 9th/15th and 10th/16th century foundations of minor tekkes and za'iriyes in and around Malkara, Gökbilgin, op. cit., passim). Conversely, the yârîk element in the population appears to have been scanty in comparison with districts more to the north and north-west (Gökbilgin, Tûrâkîler, 262).

In the later centuries of Ottoman rule, the history of Malkara appears to have been both obscure and uneventful. In the reign of Mehemed II, Malkara possessed 938 Muslim hearths, but there was still a Christian element in the population, not only at the end of the 9th/15th century (cf. Barkan, Belgeliler, i/1 [1964], Ek cedvel I), but also in the 19th century (150 Armenian houses and one chapel; 100 Greek houses and one church (Journals of Benjamin Barker [1823], cf. R. Clogg, in Unic. Birmingham Historical Journal, xxxii [1979], 197-205]). At the same time, a rather meagre description of the town at this time is given by Ewliyâ Celebi ([q. v.]); a rather more detailed image of the town at this time is provided by Selçuklu-nâmê, v, 325).

At the end of the 11th/17th century, it figures as a relay-station (maznî-kândâ) according to the above-mentioned yol kol, between Tekir Daghî and Kêshân (Istanbul, Bahbakanlî Arşivi, Kepeci 3006).

(C. J. Heywood)

MALKOM KHAN, MIRZê, NAZIM AL-DAWLA (1249-1326/1833-1908). Perso-Armenian diplomat, journalist and concession-monger, important in the history of 19th-century Iran for his early advocacy of governmental reform and thorough-going westernisation. He was also the first to expose the pernicious effects of privately-circulated treatises and then in the celebrated newspaper Namûnî.

He was born in the Isfahan suburb of Djulfa ([q. v. in Suppl.] to an Armenian family whose ancestors had been transplanted there by Shâh 'Abbâs from Karâbâgh ([q. v.] in the southern Caucasus. His father, Mirzê Ya'qûb, was converted to Islam soon after the birth of Malkom, but the profession of Islam appears to have been twofold: the propagation of ideas on behalf of Malkom Khan. Fearing that the farâmînâ-kâmâ might be the centre of a republican conspiracy, Nâṣîr-al-Dîn Shâh ordered its dissolution in October 1861, and soon after banished Malkom to Arâb-î Râsûl. After Malkom had spent a few months in Baghâdî, the Ottoman authorities, responding to Iranian pressure, had him transferred to Istanbul.

There he was able to acquire the friendship of Mirzê Hûsâyîn Khân, the Iranian ambassador, and to enter his service. With his livelihood thus assured, he resumed writing his treatises, and also began to take an interest in alphabet reform, corresponding extensively (in Persian) with the noted Karabâyînî playwright Fath 'Ali Aghchâzâdê ([q. v.]).

In 1288/1871, Mirzê Hûsuyîn Khân was recalled to Iran and appointed prime minister, and the following year he invited Malkom to join him as special adviser. Malkom accepted, and his influence is to be seen on the measures of governmental reorganisation that Mirzê Hûsuyîn Khân undertook. But a new emphasis had emerged in the thinking and aspirations of both men: the attraction of foreign capital to Iran, for the sake of personal profit as well as economic development. Thus Malkom became profitably involved in the negotiations surrounding the notorious Reuter concession, and it was partly in connection with the unfinished business of the concession that he left Iran early in 1873 to take up an appointment as Iranian envoy in London. He was now destined to spend the rest of his life in Europe, with the exception of four brief return visits to Iran, later in 1873, in 1881, in 1887 and in 1888.

His sixteen years as minister in London were spent chiefly in fruitless attempts to promote various concessions, above all for the construction of railways in Iran, and to interest Britain more closely in Iran, in the hope that she would provide a counterweight to Russia and would encourage reform in Iran. Despite his relative ineffectiveness in these areas, Malkom exerted some influence on events through correspondence with numerous princes and politicians, the most important of whom were Mirzê 'Ali Khân Amin al-Dawlâ, a confidant of Nâṣîr-al-Dîn Shâh and later prime minister; Mirzê Yusuf Khân Mustâhîr al-Dawlâ, Iranian ambassador in Paris; Mas'ûd Mirzê Zîl al-Sulûm, the governor of Isfahan; and Muzaffar al-Dîn Mirzê, the heir-apparent. He also continued to compose treatises on the problems of government and reform, and took up again the question of alphabet reform (the scheme he finally elaborated is set forth in Namûnî-yi khâtât-i adâmîyat, London 1303/1885).

The most important period of Malkom's career began after his dismissal from his diplomatic post in December 1889. The preceding year, he had obtained from Nâṣîr-al-Dîn Shânî a concession for the organisation of a national lottery and the construction of casinos in Iran. The concession was swiftly rescinded,
but Malkom deftly sold it to European investors before they had a chance to realise it was worthless. He invoked diplomatic immunity and escaped legal condemnation, but the profitable venture cost him his post of ambassador. Partly to avenge himself for his dismissal, he embarked on the publication of a newspaper, Kānān ("The Law"), in which he castigated the Iranian government—particularly Amin al-Sultan, the prime minister of the day—for its corruption, and hinted at the existence of a vast revolutionary network in Iran, owing allegiance to himself. It is unlikely that such a network did exist, although an association called Madīma-i' ādāmiyyat ("The League of Humanity") did operate under Malkom's general and remote supervision, chiefly for the purpose of distributing Kānān. Malkom also attempted to implicate the Bahā'īs in its activities, almost certainly without foundation (see the letter of ʿAbd al-Bahā'ī to E.G. Browne quoted in Browne, Materials for the study of the Bahā'ī religion, Cambridge 1918, 296). Despite these ambiguities, it is certain that the newspaper was widely-circulated and avidly-read in Iran. Its strictures on tyranny struck a responsive chord, and it is indeed the impact made by Kānān during the years preceding the constitutional revolution that is Malkom's chief claim to a place of importance in modern Iranian history. In keeping with its agitational purposes, Kānān contained detailed accounts of Malkom's proposed; noteworthy, however, is the demand, put forward in no. 35 of the newspaper, for the institution of a bicameral legislature, with the lower house to be elected by popular vote.

The contents of Kānān appear to have been written almost exclusively by Malkom himself. Nonetheless, during the years of its publication he had extensive contact with other notable opponents of the Tehran government: Sayyid Djalāl al-Dir Asadābādī ("Afghānī") [g.e.], who met Malkom in London in 1891; Mirzā Akā Khān Kirmāni, a formerly Azall freethinker resident in Istanbul, who helped in the distribution of Kānān in the Ottoman Empire; and Shāykh al-Ra'-īs Abū Ḥasan Mīrza, a Kadjar prince of unconventional views living in India. When Nāgār al-Salṭān was assassinated in 1896 and it appeared to Malkom that his political fortunes might be restored, the insurrectional tone which had marked Kānān was abruptly abandoned. Two years later, in anticipation of his appointment to the Iranian embassy in Rome, Malkom ceased publishing Kānān altogether. He retained his diplomatic post in Italy until the end of his life in July 1908, and no longer seriously involved himself in Iranian politics. Another organisation operating under this supervision, the Djamā'ī ' ādāmiyyat ("The Society of Humanity"), did, however, play a role of marginal importance in the struggles over the constitution in 1907 and 1908, and, more importantly, many of those active in promoting its cause can be shown to have belonged to the readership of Kānān.

Most of those who knew Malkom personally—even those who can be termed his collaborators—seem to have had a low opinion of his personal qualities, regarding him as venal, arrogant and inconstant, despite his obvious talents as writer and thinker. Subsequent Iranian historiography accorded him a detailed account of Malkom's struggle for the freedom of religion in Iran; among the most serious involved himself in Iranian politics. Another organisation operating under this supervision, the Djamā'ī ' ādāmiyyat ("The Society of Humanity"), did, however, play a role of marginal importance in the struggles over the constitution in 1907 and 1908, and, more importantly, many of those active in promoting its cause can be shown to have belonged to the readership of Kānān.

Morocco, it is the name given to the place of residence assigned to the Jewish dhimmis. At the outset, it is necessary to distinguish the urban mallāh from the rural mallāh. The former, as in several large towns, is a quarter adjacent to the Muslim city, integrated within it or shifted to the nearby periphery, yet enclosed within a separate enceinte defended by a wall and a fortified gateway. It is most often situated close to the ḥarablūs (citadel), the residence of the king or the governor, in order to guarantee the security of its inhabitants, some of whose representations in the civil administration or carry out important functions in the royal palace and must therefore remain close at hand in order to answer the summons, should their presence be required. The latter, the rural mallāh, that of the mountains and valleys of the Atlas and the Rif, the southern and eastern plains as far as the fringes of the Sahara, is an "open" village exclusively inhabited by Jews, situated some distance from the nearest Muslim kṣar or the fortress of the protector kāfīd). Also to be noted is the existence, in some towns, of an old and a new mallāh, mallāh kādim and mallāh jidīd. The reason may be a transfer of the Jewish population from one to the other, in order to move it away from an already existing site of Muslim culture or for purposes of construction (here we may note the religious scruples of the pious sultan Mawlay Slimān/Sulaymān, with reference to Tétouan and Sīdī, or it may be an extension of the former quarter on account of its overpopulation (al-Sawīrā and Meknēs/Mīknās).

Not all towns necessarily possess a mallāh, and with those that do have one, it has not always been so. The institution of the mallāh was only imposed on some communities at a relatively recent date, as their history testifies. Whereas, in Christian cultures, segregation was the rule (although originally, here too, there was a preference for living together in the same quarter for reasons of security or simply for convenience, in order to facilitate the practice of ritual and the communal observance of religious laws, customs and usages), in Islamic lands the Jews coexisted for a long time, and almost everywhere, in the towns as well as in the country, with their Muslim fellow-citizens, and this provision in the same quarters and the same streets. Very often, and this predates the Arab conquest, there is evidence of a deliberate choice on the part of ethnic, religious and professional groups, to live together in the same space, with their own streets and quarters. Jewish quarters are called ḥārā in Algiers, Tunisia and Tripoli; kās in the Yemen; mahalla in Persia, or quite simply darb al-yahud "the street of the Jews" or al-ghut "the avenue".

The etymology of the term mallāh is closely associated with the history of the Jewish community of Fās and with what might be called its "ghettoisation". At the end of the 7th/13th century, the Marinids founded, alongside Fās al-Bālī ("Old Fez"), Fās al-Jidd ("New Fez"), and close by, a little later (first half of the 8th/14th century), the town of Hīnjūs, which was initially allocated to the ḍayāt archers and the Christian militia; then, at the beginning of the 9th/15th century, in 1438 according to the Jewish chronicles (Kisse ha-melakhim "Throne of the Kings", by Raphaël Moïse Elbaz; Yah absorbs Fās "Genealogy of Fās" by Abner Hassarfalli), the Jews were compelled to leave their homes in Fās al-Bālī and to settle in Hīnjūs, which had been built on a site known as al-Mallāh "the saline area". From the root m-l-h it may be admitted (from the root m-l-h with the connotations "salt", "to salt", etc.), this term is extended in a generic sense, becoming a common name which, passing from Fās to the other towns of Morocco, ultimately designated the Jewish quarter. All the other proposed etymologies are to be rejected, in particular that which maintains that mallāh is "salted, cursed ground" and that the Jews are "those appointed to the task of salting the heads of decapitated rebels". It should be noted that originally there was nothing derogatory about this term: some documents employ the expression "mallāh of the Muslims" and conversely, the Jewish quarter contained large and beautiful dwellings which were often accompanied by the conversion to Islam of those who refused to submit to the exodus imposed by the royal edicts and to abandon their homes and their shops. This was what happened at Fās in 1438 and, much later, at Sīdī al-Mālik in 1807.

The mallāh of Fās is, in every respect, the oldest in Morocco and, for a long time, remained the only and the most important one. It is only in the second half of the 10th/16th century (ca. 1557) that the term mallāh appears in Marrakesh, with the settlement there of Jewish and Judaised populations from the Atlas and, in particular, from the city of Aghmāt where there had lived, since time immemorial, an important Jewish community. G. Kisse ha-melakhim (Histoire des Conquestes de Moulay Arba, Paris 1683): "In Fās and in Morocco (= Marrakesh), the Jews are separated from the inhabitants, having their own quarters set apart, surrounded by walls of which the gates are guarded by men appointed by the King ... In the other towns, they are intermingled with the Moors." It was not until 1682, or more than a century later, that a third mallāh was founded; it was that of the town of Mīknās, new capital of the kingdom of Mawlay Isma'il (1672-1727). At the beginning of the 19th century, ca. 1807, the "ghettoisation" of the Jews was undertaken by the pious sultan Mawlay Sulaymān in the towns of the coastal region, at Rabat and Sālē, at al-Sawīrā (Mogador) and at Tétouan. With the exception of the town of Tétouan, where the Spanish word judería is used, elsewhere it is the term mallāh which designates the new Jewish residential areas.

In Rabat, the Jews were living alongside the Muslims in the Bhīrāquarter when, in 1807, the sultan ordered the construction of a mallāh at the eastern extremity of the town, buying the land with his own money, building houses, kilns, mills and shops, all in the space of one year. In Sālē, the New Mallāh, built in 1807, is a long avenue extending from the Gate of the Mallāh to the old monumental gate dating from the Marinid period; in the alleyways which open out on this avenue there are 200 houses, 20 shops and trading booths, two kilns and two mills.

The Jewish community of Mogador deserves a special mention: the Jews were for a long time a majority in this town which was familiar with intense commercial activity and uninterrupted international relations (with the United States and Europe) from its recent foundation, in 1765, on ancient sites (the Purple Islands in the time of Juba II, the Portuguese Castello Real) until the beginning of the 20th century. When Muhammad b. ʿAbd Allāh set about building the town, there were Jews living in the village of Dyabat on the Oued Ḥosb, some 2 km. to the south of the town. To repopulate the new city, designed to replace Agadir as a centre of international commerce, the sultan appealed to the wealthiest and most
dynamic Jews of other Moroccan communities, con-
ferring upon them, along with the title ... Bombay 1960;

MALLU IKBAL KHAN, Indian military
leader of the Tughluq period.

The decade of decadence following the death of Sultan Firuz Shâh of Dihlî in 790/1388 is marked by the manoeuvrings of the princes, intrigues of the
nobles and sufferings of the people. According to Firîghta, the vast conqueror of the Tughluks fell to
pieces and the central administration lost all authority over the outlying provinces. Confusion reached such a
point that there occurred an unprecedented spect-
tacle of two sovereigns within a radius of 12 miles of
Dihlî, i.e. Nusrat Shâh at Firûzabâd and Mumhâd Shâh at Djâhanpâñâh, like two kings in the game of
chess, to use Badû’în’s words. Both the monarchs
were no more than puppets in the hands of their
ambitious but unscrupulous patron-nobles; and Mallû
Ikbal Khan was one such noble who emerged as the
strongest out of this internecine mêlée.

Mallû was one of the three sons of Darya Khan,
better known as Zafar Khan Lodi II, the influential
Afghan chief under Firûz Shâh Tughluq. Along with his
elder brother Sârang Khân, who was governor of
Dîpâlpûr, he obtained ascendency over all other amirs
of Sultan Mumhâd, who gave him the title Ikbâl
Khan and the command of the fortress of Siri, modern
Shahpur Jat, east of the Dihlî-Kutb road. He owed his
rise also to the Sultan’s ministe, Mukarrab Khân,
another myrmidon of the ruling military oligarchy of
that time. Perfidious as he was by nature, Ikbâl Khân
gradually got rid of those whom he regarded as rivals.
He first aligned himself with the other king, Sultan
Nusrat Shâh, whom he deceitfully dislodged from
Firûzabâd, which he immediately occupied in
800/1398. He followed it up by treacherously killing
his benefactor Mukarrab Khân and securing complete
control of Dihlî. Annexation of Pûnsîâ a little later made Ikbâl Khân undisputed master of the region.

His triumph proved short-lived, as Timûr’s sudden
invasion of the Dîâb country caught him unawares.
He confronted the Mongol invaders, but had to flee
in order to avoid complete annihilation. He escaped to
Dhul’urred (modern Daulâshahr), while Sultan Mumhâd
fled to Gudjâdûr.

After Timûr’s onslaught ended, Ikbâl Khân again
occupied possession of the ruined city of Dihlî. Though he
had the capital of the sultanate under his sway, his
writ did not extend beyond a part of the Dîâb and some
districts round Dihlî. In 804/1401, he invited thither the fugitive Sultan Mumhâd Shâh and accorded
him a warm reception, without however partaking
with the reality of power. Not content with a limited
sovereignty, Ikbâl Khân was bent upon extending the
boundaries of his suzerainty. But he felt frustrated by
the powerful Shârqi rulers of Dîawnpur [q. v.] in the
east and the influential governor of Multân, Khidr
Khan, in the west. Accompanied by Sultan Mumhâd, Ikbâl
Khân undertook an expedition against Dîawnpur, where Ibrahim Shâh, who had lately
descended the throne. At a time when battle lines were
being drawn, Sultan Mumhâd secretly deserted
Ikbâl’s camp and went over to the ruler of Dîawnpur
with a view to securing his assistance to extricate himself from tutelage of Ikbâl Khân. On failing there,
the Sultan went to Kanaâdû [q. v.], an appanage of the
Shârqi kingdom, where he was allowed to live with
the status of a local king as long as Ikbâl lived. Ikbâl
returned to Dihlî in 805/1402 disappointed.

Ikbâl Khân now decided to try his luck in the west,
an attempt which brought about his downfall. He first
marched to Samâna, which was ruled by Bahûrân
Khân Turkbûcch, who was in league with Khidr
Khân. Though Ikbâl managed to have Bahûrân Khân
murdered, he had to face the challenge of Khidr
Khan. Ikbâl Khân, more over-trade by the river Dahin-
da in Advodhâna (modern Pakpattan in Pakistan), Ikbâl Khân was defeated and killed by Khidr Khan’s
army in 808/1405. His severed head was presented to
Khidr Khan, who sent it to Fatpûr, the latter’s
native town, where it was fixed on the gate of the city.
According to the Tâbakât-I Abâki, the family and
dependents of Ikbâl Khan were expelled from Dihlî
and sent to Kol, but none of them was harmed in any
way.

A Persian inscription of Ikbâl Khân, fixed on
the southern bastion of an old ‘idgâh at Khârâvah
village near Dihlî, describes him as Mallû Sulûhâni,
indicating that he insisted on being called a slave or servant
of the Sultan. It must be said to his credit that in spite
of possessing what were in effect the absolute political
and administrative powers of a king, Ikbâl Khân
never assumed royal prerogatives, such as striking
coins in his name and inserting his name in the
khutba.

The epitaph referred to above also reveals his religious
zeal in having erected the place of worship with his
own money, and condemns the destruction and
desolation wrought by the Mongol marauders.

MALTA (ancient Melita; Ar. Mal(i)ta; French Malte), the name of the main island of a Mediterranean archipelago which is situated around 100 km from Sicily and about 300 km from Tunisia and which also includes Gozo, Comino, Cominotto, Filf(o)la and some unimportant rocks, measuring 47 km. from the north-west to the south-east. The island of Malta measures 27 km in length and 14 km in breadth; its main town is Valletta (Fr. La Valette), the capital of what has been since 22 September 1964 an independent state included however in the British Commonwealth. In 1968, the total population was around 320,000. Malta is exclusively Christian, and owes its mention in theEI solely because it was occupied for more than two centuries by the Muslims and because its official language derives from an Arabic dialect.

1. History. Malta was inhabited in ancient times by a Mediterranean race, whose megalithic monuments are preserved at Hagar Kim ("standing stones"), Hal Tarxen and Hal Saflieni. It was colonised very early, certainly before the 10th century B.C., by the Phoenicians, and formed a base for their trading ships. It is not certain that the name of Malta is derived from the Phoenician, while the Phoenician origin of Gozo (Gozo), meaning "a merchant boat of round shape", seems certain.

The Carthaginians became masters of the island in the 7th-6th century B.C. and kept it for four or five centuries. The Romans conquered it in 218 B.C., and for the next ten centuries Malta remained under Roman and Greek influence, being situated near Eastern Sicily. Gozo had only Greek coins, and Greek and Roman coins in great number were minted in Malta. Very early, with St. Paul in the 1st century A.D., the island was converted to Christianity; during the Western Empire's decay the Byzantines established themselves in it; after their conquest of Northern Africa, the possession of Malta became indispensable to them.

The Muslim conquest of Malta is generally fixed in 870, but it is possible that the island was the goal of another Arab raid in 221/835-6, if one considers it probable that the island was included amongst those against which the Aghlabid Ibrahim ibn al-Athlr sent a fleet in that year. E. Rossi (in EI² s.v.) thought that it would not be too bold to adopt the view of Malta's falling under Muslim domination even before 184/800, and added that de Goeje shared his opinion (in ZDMG, lviii, 905 n 2), but there is nothing to confirm this hypothesis. What seems certain is that in 256/870 a squadron left Sicily under the command of Ahmad (called Hababi) b. Umar b. Abd Allâh b. Ibrahim ibn al-Aghlab in order to relieve Malta, which was being invested by a Byzantine fleet (Ibn al-Aghir, vi, 307, and al-Nuwayri, ed. Remiro, ii, 81, do not give the exact year). This shows that the island was already occupied by the Muslims before that date, and the year 255/869 indicated notably by Ibn Khaldûn ("Ibar, iv, 430) and al-Kalkhashendi ("Subb, vi, 121) should probably be retained. The retreat, without a fight, of the Byzantine fleet on 28 Ramadân 256/29 August 870 seems to have given the signal for ill-treatment inflicted on the Greek population of the island, the arrest of his bishop, who was then sent into captivity at Palermo, and the destruction of the church, the materials from which were re-used at the time of the construction of the Kasr Hababi at Sousse.

In Malta, the Muslim occupation was certainly more permanent and strongly established than in Sicily; the narrow island was completely subjugated by the conquerors, who made it a strategic base; this helps us to understand how the Arab-Berber Muslims of Africa succeeded in forcing upon Malta the Arabic language, from which the modern Maltese dialect is derived (see below, 2).

Besides the Arabic language and place-names, the Muslims have left in Malta a few coins and a considerable number of inscriptions on tombstones; one of them, the celebrated inscription called of Maymuna, dated 568/1173, was published more than a century ago, and repeatedly studied by orientalists (Italinski, Lanci, Amari, Nallino, etc.); another one, found in Gozo, is to be seen in the Malta Museum. About twenty more have been found in the excavations in 1922-5 at Râbato (near the place called Notabile); they are preserved in the Museum of the Villa Romana, near the place of the excavations.

The Muslims lost Malta in 483/1090, when the Normans conquered it; they were however allowed to live on the island under the Norman government until 647/1249, the date when Frederick II expelled them. From 1530 to 1798 Malta was the seat of the Order of St. John of Jerusalem, which the Turks had expelled from Rhodes in 1522. The Order organised there an important war fleet. The island was in constant relations with the East and with Barbary; thousands of Muslim slaves were taken to Malta; the Maltese ships had repeated encounters with those of the Porte and the Levantine and Barbary pirates. The Turks attempted to occupy Malta in 1565, with their well-known expedition, which ended in disaster, and again in 1614; more than once, they threatened to invade it under Sultan Mehmed IV.

A few Arabic manuscripts and nautical charts, of no great value, are preserved in the Public Library of Malta and in its Museum.

2. The Maltese language. Maltese is the language of the inhabitants of the Maltese Islands (Malta, Gozo, and Comino; ca. 330,000 speakers). It is to some extent a mixed language, for its basic structure, together with much of the vocabulary for the more basic features of life, are derived from Arabic—mainly North African Arabic—while an important Romance substratum (mainly Siculo-Italian) comprises, in particular, vocabulary linked with more advanced civilisation. The relation between the two constituent elements is comparable to that between the Anglo-Saxon and Norman French elements in English. For several centuries mainly a medium of oral communication, Maltese became a literary language chiefly during the 19th and 20th centuries; it gained official recognition in 1933, and became the national language of Malta in 1964. It is written in a modified form of the Latin alphabet (see table), being the only Semitic language thus written; the present system, officially adopted in 1934, follows
experimentation influenced by Italian and Arabic models from the 18th century onwards. The language has thus been subject to standardising influences only for a comparatively brief period, and it is still actively developing in response to modern needs. Several variants of contemporary Maltese can be distinguished. Literary Standard Maltese, used in belles lettres, tends to aim at a mainly Semitic dictum. Journ-alistic Maltese tends to differ from it slightly in spelling, phonology, morphology and syntax, but substantially in vocabulary and phraseology (many foreign loanwords and calques). Colloquial Standard Maltese is intermediate between the two, varying in composition according to socio-linguistic factors such as the social standing of individual speakers. In addition, there is dialectal Maltese, varying from town to town and from village to village, but essentially to be divided into urban and rural. Dialectal Maltese is now under threat, owing to the levelling effects of compulsory education and the news media. Any attempt to offer a description of present-day Maltese, and still face some of the past history of the language, is faced with some difficulties. Grammars and dictionaries of Maltese were indeed being made at least by the 18th century: notably early works are Agius de Soldanis’ grammar Delia lingua Punic presenimenti usata dal Maltesi (Rome 1750), and his unpublished publishing in his Dizionario Malti (pre-Hilalian) Arabic which is still the basis of Maltese. This included some Berber elements in vocabulary (cf. G. Wettinger, in Journal of Maltese Studies, vi [1971], 37 ff.), links Malta with Egypt rather than the North African dialect region, which has mta. Eastern Arabic-derived religious terms were possibly brought to Malta by Maronite clergy (J. Aquilina, Maltese linguistic surveys, Malta 1976, 25 ff.). Possible links with Eastern Arabic, like the Maltese realisation of k as a glottal stop, are less cogent, though bid, recently identified in transcription in 15th century Maltese lists as the ancestral form of present Maltese la “of” (G. Wettinger, Journal of Maltese Studies, vi [1971], 37 ff.), links Malta with Egypt rather than the North African dialect region, which has mta. Eastern Arabic-derived religious terms were possibly brought to Malta by Maronite clergy (J. Aquilina, Maltese linguistic surveys, Malta 1976, 25 ff.). The essentially Western Arabic dialect ancestry of Maltese is in fact sufficiently evident from two morphological features: the formation of the first persons singular and plural of the imperfect of verbs according to the pattern nktl/nktlu against Classical and Eastern Arabic knt/nktl, and the replacement of the verbal form derived from IX by a modified XI, with a resultative meaning (like kmar (kmar) “to redden”). See further on the whole question, Ph. Marquis, Arabiya. 3. Western dialects.

Nevertheless, classical literary Arabic was used in Malta as well, down to ca. 1200 A.D. at least, as is shown by a Justinianic prayer list compiled at the end of the 11th century, and another word list compiled by the English traveller Philip Skippon (cf. A. Cremona, A historical review of the Maltese language, Malta 1945, 14), as well as a sonnet by G. P. Bonamico (ca. 1672). From the 18th century, a few prose texts also survive, such as popular dialogues by de Soldanis, sermons and other devotional work, the Lord’s Prayer (1718) and the first catechism in Maltese (1752)—brief bibliographical notes concerning all of which can be found in Wettinger and Fsadni, op. cit., 8 ff. Broadly speaking, however, Maltese prose literature postdates the age of the early grammarians and lexicographers, though the origins of Maltese folklore (songs, ballads, tales, proverbs) are earlier. Confronted with this scarcity of data, scholars attempting to trace the development of Maltese, and to explain its character and relations to Arabic dialects, have been compelled to work back from the present state of the language, to some extent, through theoretical reconstruction. It can, however, be said that Maltese contains, according to present information, no recognisable linguistic elements going back to the pre-Phoenician prehistoric period. Though Phoenician or Punic was both spoken and written in Malta from ca. 800 B.C. to the Roman conquest of 218 B.C. and probably afterwards, the once popular opinion that Maltese is a direct descendant from Phoenician or Punic is now antiquated (cf. P. Grech, Journal of Maltese Studies, vi [1961], 130 ff.).

The influence of Phoenician substratum influences in Maltese has been suggested by J. Cantineau with reference to the realisation of as as in Maltese rural dialects (Cours de phonétique arabe, Paris 1960, 100), and other scholars have suggested morphological or lexical survivals; but all this remains hypothetical at present. The existence of Latin elements in Maltese vocabulary going back to the period of Roman rule there is also disputed (cf. J. Aquilina, Papers in Maltese linguistics, Malta 1961, 8 ff.), and Greek terms which should date from the time of Byzantine supremacy, like lapsi (from Greek analepsis “Ascension Day”) are remarkably few. The linguistic board appears in fact to have been wiped clean to an astonishing extent by the Arab conquest of A.D. 870, which brought in the North African dialectal (prefix-italic) Arabic which is still the basis of Maltese. This included some Berber elements in vocabulary (cf. G. S. Colin, in Mémorial André Basset (1895-1956), Paris 1957, 7-16; J. Aquilina, Maltese linguistic surveys, Malta 1975, 25 ff.).
least among the educated. However, the Norman conquest of A.D. 1090, followed by the expulsion of the Romans in 1530–1798, and the coming of British rule (1813-1964) and administration, literature and culture, up to the mid-20th century. The coming of British rule (1813-1964) added an English element to the language, which is noticeable now particularly in such semantic fields as sport, commerce and administration, and in professional and technical vocabularies. The English component in Maltese is still developing, owing to the importance of English as an international medium and also because it is taught in Maltese schools. On the other hand, recent interest in Malta's Arab connections has not so far found much linguistic reflection. The present condition of the language thus evolved can be summarised as follows. While the Semitic vocabulary in Maltese may be limited, it is quantitatively very strong where actual use is concerned. In particular, the Arabic textbook material amounts to over 90% of the total, according to word-list statistical investigation. In spoken Maltese the percentage is smaller, but even in newspapers with their tendency to use foreign loan words the Semitic element comes to over two-thirds, the Romance element to not quite one-third. There is also a marked mixture with political, social, and economic matters (cf. F. Krier, Le maltais au contact de l'italien, in Forum phoneticum, xv, Hamburg 1976, 110 ff.; E. Fenech, Contemporary journalistic Maltese, Leiden 1978, 216-17 and passim). The growth of this Romance component can be followed to some extent over the centuries: in Peter Caxaro's Cantilena there is one single purely Romance term, but by the mid-18th century de Soldanis' dictionary shows the Romance constituent in Maltese vocabulary was fairly substantial. English words in most contexts on the other hand amount to less than 5% of the total.

Phonetically, the Semitic stock of Maltese has undergone considerable changes. Among consonants, the emphatics, primary or secondary, have become fused with the corresponding non-emphatics: \( > t, d \)
\( > d, d \)
\( > s, r \) (etc.). However, the former presence or absence of emphasis may still be responsible for the different colouring of adjoining vowels: contrast Maltese sayf "summer" (Arabic sayf) with sayf "sword" (Arabic sayf). Interdental fricatives \( \theta, \theta \) have become stops \( d, t \). Arabic \( k \) is normally replaced in Standard Maltese pronunciation by glottal stop (occasionally by \( g \), and in some dialect pronunciations by \( k \)). \( x \) has become fused with \( h \), and \( w \) with \( b \) (but \( f \) and \( g \) and the latter by \( k \) in some rural dialects). while still written, is no longer pronounced: it has left traces of various kinds (pharyngalisation, colouring, or lengthening of neighbouring vowels); in some contexts it is replaced by \( h \).\( h \) in standard Maltese is mostly silent (in which case it may cause compensatory lengthening in neighbouring vowels); in certain conditions it may become \( h \). Many of these changes seem to have occurred after the mid-18th century. In pre-Hilalian Arabic, from which Maltese descended, and \( h \) had become \( d \) in Muslim Sicily); \( h \) and \( g \) were still fairly widely used in the 18th century. The diminishing Semitic consonantal repertoire was on the other hand augmented by the inclusion of Romance phonemic consonants \( s, z, d, t \) and Romance influence is responsible for a much wider use of \( g \). The voiced pronunciation of voiced consonants, an occasional feature in Arabic dialects, became regular in word final position or before voiceless consonants (thus bieb "door" is pronounced approximately biep, and libsa "suit" libpa). Vice versa, voiceless consonants before voiced consonants become voiced. Consonant assimilation, fairly frequent, also affects the verbal prefix \( t \) (e.g. iggib (for Arabic taghib) "you/she bring(s)" (via tīgib). As for vowels, the various realisations of phonemic vowels \( a, u, a, i, a \) inherited from Arabic are supplemented by the phonemic vowels \( e, o, t, o \) taken over from Romance. Since there is pronounced stress in Maltese, short unstressed vowels may disappear. Original Arabic \( i \) and \( u \) in open syllable before stress normally vanish, but short \( a \) is preserved near former emphatics and after \( f \) or \( g \); since in some environments it may have gone into \( e \) before disappearing, Maltese may originally have been a "differential" dialect in Cantineau's terminology (a in the feminine singular ending -a once seems to have undergone imāla—15th century transcriptions not rarely give it as \( e \), but present Standard Maltese again has -a; the reasons for this change are not clear. Imāla of -a may still occur in rural dialects). Among long vowels, as much as is now mostly represented by \( i \) in Maltese, rarely by \( i \).
except near former emphatics, velars, and pharyngals, where it may survive as ā. This ā is very typical of Maltese, it seems to have spread by the expense of ē during the last four centuries. Diphthongs mostly survive with some modification, though Arabic ay may be represented by ī, and au by ā, as in xītan (Arabic ǧīyān) "devil", or muhd (Arabic muḥād) "born". Vowel harmony, and the formation of prothetic and epenthetic vowels, are all noticeable features.

Maltese morphology remains essentially that of dialectal Arabic, somewhat modified and reduced. Foreign loan words may be fitted into this framework: thus, among nouns, spalla "shoulder" is given the dual ending -ejn (spallaż "two shoulders"), and sound or broken plurals are often given to loan words. On the other hand, foreign plural endings may be preserved: Italian -i (standing also for Italian -i), and English -s, the latter in recent loans. Incorporation often involves restructuring of loan words. In the case of Romance loan terms, this has most recently been studied by F. Krier (Le maltaius au contact de l'Italien, following J. Aquilina, The structure of Maltese, Malta 1959; Papers in Maltese linguistics. Italian vowels may undergo the impact of Sicilian: cf. Maltese munita with Italian moneta. Nouns may lose vocalic endings but receive prothetic prefixes (cf. Maltese sītis with Italian sieta). Clusters of voiced consonants, may be lost (cf. Maltese storbju with Italian disturbo, archaic variant disturbio). Early Romance loan words in particular may show a replacement of Romance by corresponding Semitic consonants (cf. Sicilian palla with Maltese balla). English loan words, recently studied by E. Fenech (Contemporary journalistic Maltese) have undergone similar restructuring: cf. e.g. Maltese kildja, plural kildji, for English kettle. Verbs of both Romance and English derivation are similarly adapted, e.g. by internal modifications, or the addition of prefixes or suffixes; cf. e.g. ikkopja "copied" jibbrajba "brides".—The Romance element has in turn affected the Semitic by the incorporation of endings—azz (from Sicilian - aga) and -un (Italian -one) cf. sakra (v. sakkun) to dju (kif dju) and kandel "big house", from Semitic sākrah and dār, respectively.

This substantial influx of foreign terms has led to many Romance-Semitic doubles, such as hu stessu/hu nnsfu, both meaning "he himself". Sometimes there are different shades of meaning. The occurrence of numerous calques derived from Italian and English expressions is a related feature. On the other hand, foreign influence in syntax is rather less marked, though e.g. the frequency of the sentence structure in which the verbal predicate follows rather than precedes the subject may owe something to European models.

Dialectal Maltese has received attention since the 18th century, when Vassalli recognised the existence of five regional dialects in the Maltese Islands and outlined their respective characteristics. H. Stimmie's Maltesische Studien (Leipziger Semitische Studien, i-v, Leipziz 1904) made an outstanding contribution of permanent value; within the last decade, study has received a renewed impetus (cf. works by P. Schabert, J. Aquilina and B. S. J. Isserlin, and A. Borg listed in the Bibli.). While urban dialects may be nearer to Standard Maltese, rural dialects show some archaic features: šh and gh are still sounded in some Gozitan villages, and the smile of Arabic ā into ē (or i— the latter in Gozo) is probably a 12th century transcription. The realisation of the ā, preserved as ā in standard Maltese, as ɵ is typical of country dialects, so is a tendency towards the diphthongisation of simple vowels, such as ā into eo or eu. The age of the former phenomenon is unclear—up to now, it has not been attested in early transcriptions—but the latter may have spread during the past few centuries. A greater tendency to use rare or archaic terms and broken plurals, and to employ Semitic rather than Romance vocabulary, are shared also by some oral folk literature. All in all, rural dialectal Maltese may represent to some extent a strain parallel to Standard Maltese, but one which is less far removed from the Western Mediterranean Arabic ancestry of the Maltese language than the latter.

3. Maltese literature

The literature of the small Maltese archipelago emanates from a culture which may still be defined today as Christian, and more specifically as Roman Catholic, in all its essential aspects. The very early Christianisation of the island of Malta (which its inhabitants trace back to a visit made there by Saint Paul—Acts, xxviii, 1-10) was able to resist a Muslim domination of almost four centuries, and Islam does not seem to have exerted a significant influence.

Until the 19th century, Italian, the official and administrative language, the language of education, was the vehicle of Maltese literature, just as it was the language of social relations among the educated classes. But alongside this learned literature, written in a foreign language, there existed, and still exists, an oral and genuinely national literature. At the festival of Imnarja, a great popular gathering in the woods of Buskett attended by peasants and artisans from all the villages of the island, among other displays there take place, on the night of 28/9 June, poetical contests and improvised songs in many forms which are approved by public acclamation.

On the other hand, since the end of the 19th cen-

Note: Long and short vowels are not distinguished in Maltese writings; e.g. dar stands for dār.
cellent Maltese version of the Gospels (1823-9).
Richard Taylor (1818-68) produced in 1846 a translation of
\textit{Robinson Crusoe} which is still highly regarded to
day, but all these works, although written in the
Maltese language, unjustly scorned by the
educated classes, was capable of serving literature of the
highest quality.

It is only in the last quarter of the 19th century that an
original prose is seen to emerge. The first novels,
described as “Gothic” by the Maltese, enjoyed con-
siderable popular success, in spite of their somewhat
medieval quality. \textit{Nirku u qoqita} (“Henry and
Judith”), 1872), by M. German, \textit{Gorg il-Bdot}
(“George the Pilot”), 1880 by Ninu Muscat Fenech
and \textit{Ermelinda u l-rendetta tal-Konti} (“Ermelinde
and the vengeance of the Count”), 1894) by A. Adam
are nothing more than somewhat pale imitations of
popular foreign novels. However, some works testify
even at this time to a greater degree of independence,
such as \textit{Fernanda Montagnes} (1896) by Alwig Vella,
the stories of V. Busuttil, \textit{Il-Habib tal-familji}
(“The friend of the families”), 1893-4). Here too the
phraseology is of Italian type, but the reader is no
longer aware of the awkwardness of a language of
translation. In fact, it should not be forgotten that all
these authors began their writings in Italian, a situa-
tion still applying at the beginning of the 20th cen-
tury, before Italian was displaced in favour of English,
which became an official language in 1934, at which
time Maltese achieved the same status.

Two authors succeeded particularly well in defying
the ascendency of Italian, an achievement which
earns them a special place in the history of Maltese
literature. The first, A. E. Caruana, is distinguished
by the purity of his language and the facility with
which he expresses complex notions in spite of a
vocabulary remarkably deficient in abstract terms.
These features are especially evident in his historical
novel \textit{Inet Farrag}, which appeared in 1889 and of
which the action is set in the 15th century during the
Spanish occupation, but which denounces by impli-
cation all the foreign powers who have ruled the
archipelago. The second, Guze Muscat Azzopardi
(1853-1927), was concerned above all to give to the
Maltese language a literary syntax of its own. It may
be said that he achieved his purpose with \textit{Najju Ellul}
(1909), a historical work describing the Maltese
resistance to the occupation by Napoleonien troops.

But the Maltese novelists of this period, guided by
concern for purity and nobility of expression, were
generally unable to avoid the pitfalls of an excessively
neutral language, of a frigid style dominated by the
taste for oratorical eloquence. A further four decades
were to elapse before they were able to rid themselves
of the shackles of Italian romanticism.

However, their ambitious works exerted only a
limited influence on the authors of the 20th century.
The stories composed by F. M. Galea (1861-1941),
\textit{Moghjija taż-zmien} (“Entertainments”), between 1899
and 1915, provided a model for a popular literature;
written in a simple and living language, dealing with
issues of daily and local life, they enjoyed immediate
success. But it is to Temi Zammit (1864-1935) that
there belongs the privilege of being considered the
founder of the Maltese short story, idiomatic and con-
cise. His writings were collected by Cremona in \textit{Stiejer,
hrejff u kitba ohra} (“Stories, tales and other works”) and
\textit{Stiejer u kitba ohra} (“Stories and other works”) in 1961.

The historical and patriotic vein continued predominant in the inter-war period. Among the
works produced at this time and worthy of mention
are \textit{Imhabbu u mieghda} (“Love and hate”), 1927) and
\textit{Helsien} (“Liberty”), 1940) by Gużè Bonnici (1907-40),
\textit{Zmien l-Ispanjoli} (“The time of the Spanish”), 1938) by
Gużè Galea (1901-1978) and \textit{Angli u n-nxik} (“Angels of
sadness”), 1938) by Gino Muscat Azzopardi
(1899-1982), the son of Gużè Muscat Azzopardi.

But, at the same time, new tendencies are taking
shape. There is observed the appearance of an ironic
tone, hitherto absent from Maltese literature, and
Gwann Mamo (1886-1941) is its initiator. His novel
\textit{Ulied in-nann Venut fl-Amerika} (“The children
of Grandmother Venut in America”), 1936) is described
by the author himself as a “satirico-descriptive, con-
temporary, semi-political novel”. \textit{Lela ta’ Haz-Zghir}
(“Christmas of Haz-Zghir”), 1938) by Gużè Ellul
Mercer (1989-1961) is written in the same vein.

Some clear social preoccupations also begin to be
observed, as in \textit{Tetšilhom hajjithom} (“To improve their
life”), 1937) by John Francia Marko (1894-1954) or in
\textit{Il-Sabih tal-fidda} (“The cross of silver”), 1939) by
Henry Wistin Born (b. 1910).

However, the novel which is still today considered
the masterpiece of modern prose belongs to the
historical vein. The work in question is \textit{Tahit tliet salmiet}
(“Under three dominations”), published in 1937 by
Gużè Aquilina, then only 26 years old. But
historical anecdote is here only the pretext for a more
general social critique which goes far beyond the scope
of the traditional historical novel. Furthermore, the
work contains neither melodramatic plot nor rudi-
mentary psychology. In addition, the work is distin-
guished by a great virtuosity of writing, Aquilina
possessing perfect knowledge of the language and its
popular usages.

Although under increasing competition, the
historical novel was to remain an important genre un-
til the decade of the 1970s. Examples include \textit{Mansel Gellet}
(1961) by Gużè Cardona (b. 1922), \textit{Il-Qavis li rebek}
(“The victorious priest”), 1970) by Gorg Scicluna (1923-74), or \textit{Beraq u qawslli} (“Lightning
and rainbow”), 1976) of Gorg Pisani (b. 1909).

The “ironical” novel was also to be developed by
M. C. Spiteri (b. 1917) in \textit{L-Ghafrid} (“The devil”),
1975), and Trevor Zahra (b. 1947) in \textit{Il-Surmati}

But two European movements were to give rise to a
new literary genre, the “social” genre, after the
Second World War; these were the expressionist move-
ment, which reached the archipelago at a late stage,
and the theories of existentialism. The Maltese
novel began to turn more and more towards contemporary
social reality. Numerous authors achieved renown in
this genre, notably Gužè Chetcuti (b. 1914) who was
the pioneer with \textit{Niżien ta’ mhabb} (“The fires of
love”), 1961). He was followed in particular by Victor
Apap (b. 1913) and Alfred Massa (b. 1938). The
former published \textit{F’ bieb il-hajja} (“At the doors of
life”) in 1975, the latter \textit{Il-Tfajla tal-bikini vjola} (“The
girl in the violet bikini”) in 1979.

However, this movement only really began to be
taken seriously under the pen of J. J. Camilleri (b.
1929). Thus \textit{Ahna sinjuri} (“We are rich”), 1965) is a
political diatribe against certain aspects of Maltese
life.

Finally, since the end of the decade of the 1960s, it
has been the psychological novel which has
dominated. The characters are no longer out-of-the-
orinary heroes; they are simple individuals,
confronted by daily reality. The way was opened in 1968
by Frans Sammut (b. 1945) with his stories \textit{Labrinti u
stiejer ohra} (“Labyrinth and other tales”). But it was
especially in his first novel \textit{Il-Gagga} (“The cage”),
1971) that he showed himself a writer of talent, confirming this four years later with *Samuraj* ("Samurai"). Alfred Sant (b. 1948) for his part shows more philosophical preoccupations in *L-Ewvol u seqi tal-bajjar* ("The first leaves of the fig-trees"), which appeared in 1969. Also worthy of mention are J. J. Camilleri for *Is-Seqha tal-art* ("The call of the earth", 1974), T. Zahra for *Hijja in-nisxiexa* ("Close to the source"); 1975). Anton Grasso (b. 1952) for *Ahjar jiha jokoll* ("Better continue to dream", 1975), and Oliver Friggieri (b. 1947) with *L-Istram* ("The strange one", 1980).

Unlike the novel, dramatic art had a long time to wait before attaining a position of prestige. With Italian opera exerting a strong attraction upon the educated classes, theatre was relegated to a status of simple entertainment designed for the people, who had to be content with mediocrity.

It is to Luigi Rosato (1795-1872) that Maltese literature owes its first dramatic work, *Katarina* (1856), a historical and patriotic drama written in verse. But most of the works produced in the 19th century were nothing other than farces and melodramas, without much psychology or technical originality, and served by feeble, barely natural dialogues and excessively conventional situations.

The beginning of the 20th century saw the extinction of a genre which was peculiar to the archipelago, as is attested by the study devoted jointly by the Maltese P. Grech and the Englishman A. J. Arberry. He wrote one work of great lyrical inspiration, or of social character, for example *X’ Inhuma l-fatati* ("What phantoms are"), a comedy in two acts dating from 1874. Later, his son Gino also wrote numerous dramatic works of some merit, including *Huwa* ("He").

Later still, certain authors distinguished themselves by sound knowledge of scenic technique and by vivid dialogue. Cremona set the example with a versified drama in five acts, *Il-Fidusa tal-bidna* ("The redemption of the farmers"), written in 1913, published in 1936. Subsequently added to the repertoire were some pieces by A. Born (b. 1901), whose main concern was in adapting French or Italian vaudeville, and by E. Sarracino Inglot (1904-83), in whose work the formal influence of the Classical Greek theatre is clearly perceivable. Cremona wrote also a versified comedy in three acts, *Il-Vizzju tal-vjaggi* ("The vice of journeys"), and Gorg Pisani for four comedies of social nature derived directly from the expressionist trend: *Il-Sengha tal-imhabba* ("The art of love", 1945), *Ghanja tar-rebbiegha* ("Song of spring", 1947), *Il-Kaz taz-Zija Olga* ("The knife of the sack"), and *Il-Kaiz taz-Zja Olga* ("The case of aunt Olga") and *Coqqa u dublett* ("Hood and petticcoat"), of a very different style which G. Aquilina defines as "the exploration of the mystic aspects of pathological crime".

Francis Ebejer is for his part considered the leading light of the new Maltese dramatic art. His theatre, very philosophical and symbolic, has been strongly influenced by the "Theatre of the absurd" of Ionesco, although he lacks the latter’s pessimism, since he always endows his characters with a certain willingness to change. In *Boulevard*, he denounces the absurdity of stereotyped and mechanical human language, as an image of the alienating ascendancy of society over the individual. In *Menz*, a more overtly political play, he contrasts the romantic hero, a positive and revolutionary figure, with the anti-hero, a man without qualities or illusions. These two plays were published in 1970.

Belonging to the same vein is the work of Oreste Calleja, whose four *Drammi* ("Dramas"), appearing in 1972, were favourably received by critics.

With the exception of Dwardu Cachia (1858-1907), whose poems were for the most part based on the octosyllabic metre of popular verse, a form of which M. A. Vassalli was a leading advocate, Maltese poetry, since its beginnings in the 19th century, has been much influenced by the Italian school, copying the metre, the accentual rhythms and strophic forms of classical and romantic poetry.

It was initially in the field of translations that the efforts of the first versifiers, who at this stage can hardly be called poets, were deployed. At around the middle of the 19th century, Dun Dovik Mifsud Tommasi (1796-1879) translated the hymns of the *Breviary* (1853), as well as the original compositions of a Salvatore Brumana (1810-72) or of an Indri Schembri (1805-72); Richard Taylor also provided a version of the *Psalms* (1846), then adapted a canto of the *Divine Comedy* in 1864.

Gan Anton Vassallo (1817-67) has left a corpus that is more personal, although considerably less spontaneous, in which he has experimented extensively in metrical forms. His epic *Il-Cfen Tor* ("The Turkish galley"), based on the folklore tradition of piracy, written in 1844 and published in 1853, is still widely known.

These authors had opened the way, at least in part, and all that was lacking was a poet of real quality. This was found in the person of Guzè Muscat Azzopardi. By means of pure and simple language, he was able to avoid the stiffness and monotony of his predecessors, and to adapt an original content to a borrowed form. His poetry, essentially religious, like all Maltese poetry, sought to express the preoccupations of his contemporaries. To him belongs the credit of having removed poetry from servile imitation of classical Italian forms. His influence on the following generation, of which Dun Karm is the most eminent representative, was essential.

The reputation of Dun Karm, considered the national hero, has extended far beyond the frontiers of the archipelago, as is attested by the study devoted to him jointly by the Maltese P. Grech and the Englishman A. J. Arberry. He wrote one work of great lyrical in-
spiration which has led him to be compared with Foscolo and Leopardi. In its entirety, it is a long meditation on nature (Deli u dji, "Shadow and Light"), history (Li Lil Malti, "To Malta"), the condition of Man, especially in his relationship to God (Jiara lil Gesu, "Visit to Jesus"), and on the destiny of the poet himself (Non omnis moriar). Although very romantic in its inspiration and sentiments, the versifying of Dun Karm remained classical and in conformity with the model of Azzopardi, although no constraint is perceptible since the writing is smooth and fluent. The major part of his works was published in 1940 by G. Bonnici in three volumes: X' Habb u x' kaseb il-poeta ("What the poet likes and thinks"), X' Emmen il-poeta ("What the poet believes"), and X' Chamel izied il-poeta ("What the poet does most"). O. Friggieri devoted a critical edition to him in 1980: Dun Karm, il-poetizji migbara (Dun Karm, collected poems). Among his contemporaries, Anastasju Cushieri (1876-1962) and Ninu Cremona showed the greatest audacity in prosodic and rhythmical style. Cushieri's poem Il-Milled ("Christmas") contains no less than six different metres within a very complex structure. Cremona has adopted the rhythms and the lightness of popular poetry in his recent Ghana Malti ("Maltese songs"), after going somewhat astray in attempts at complicated syntax. A collection of his poems was even published under the title Mi-Sigra ta' bajt, waraq mar-rh ("From the tree of my life, leaves in the wind").

All of this poetry is characterised chiefly by a very serious and relatively objective manner of approaching religious, patriotic or narrative subjects, which is found in such diverse works as those of Gorg Fisani, who gives the impression of being an Epicurean (Il-Ghad tas-zgbejja, "The feast of youth", 1945), Gorg Zammit (b. 1908), G. Aquilina, Mary Meylaq (1905-75), a poet of nature as is shown by her collection Flegg il-hena ("The promise of joy", 1945) and Villa Meylaq (1947), Anton Buttigieg (1912-83), or Gużè Delia (1900-80), renowned as the poet of legends following the appearance in 1958 of his collection Leggendi. Nevertheless, even among the poets of this generation there is already a perceptible change, with the deepening of poetic sentiment. "Religious fervour is tainted by pessimism and often has the object of questioning the norms of social life. Patriotic exaltation yields to philosophical or poetic satire. Lyricism becomes more personal" (David Cohen, La littérature maltaise, in Encyclopédie de la Pâtisserie). The work of a certain Karmenu Vassallo (b. 1913) takes this new tendency to the extreme. His collections, Nirien ("Flames", 1938), Kwiekba ta' gailbi ("Stars of my heart", 1944), Flamin u striep ("Doves and serpents", 1959) and Tnemm ("Flickerings", 1970) give the impression of a man disgusted with his century. Even Ruzzar Briffa (1906-63), in spite of the elegance and the musicality which characterise his work, is not immune from existential pessimism (Jem ma naf sox, "I know nothing", 1957) and from social and political indignation (Mi-lid atomika, "Atomic Christmas", 1957).

His influence, as well as that of Wallace Gula (b. 1926) who has greatly diversified his source of inspiration, has exerted a powerful influence on contemporary poetry. Indignation and lyricism, despair and hope, are intermingled in the world of young Maltese poetry, and there has been a revival of amorous poetry. Moreover, unlike their elders who were moulded by the influence of the Italian school, contemporary poets turn rather towards English poetry (of that of T. S. Eliot for example) or French, abandon-
the effort represented by the flowering of Maltese language and literature, coming from a small nation of 320,000 souls, is such as to fill us ... with astonishment and admiration'.

(Martine Vanhoova)

AL-MA'LÜF, a Lebanon family name which became renowned throughout the Arab world through the literary and other intellectual efforts of at least ten of its members, both in Lebanon and in the Mahdjar [q.v.], during the past 150 years. The best known members are Nāṣif ibn Amr b. al-Ma'lūf, who died in 316/928 and his brother Maymūn b. al-Ma'lūf mentioned is Abu 'Umar Ibn Maymūn b. 'Amr b. al-Ma'lūf, who died in 316/928 (see al-Ma'lūf family).

I. Nāṣif al-Ma'lūf (Nassif Mallouf), born in Zabbüğha (Lebanon) 20 March 1823, died near Smyrna 14 May 1865.

He received his first educational lessons at Bayt al-Din, where he went with his father, 'amūl of the amīr Bashīr II (1788-1840). He met there the poets and the scholars who were invited to Bayt al-Din by Amir Bashīr, among whom he met Nāṣif al-Yazdī. Languages attracted his prime interest. He was engaged by a merchant from Smyrna to instruct his sons in Arabic and to teach them the basic rules of French in 1843. Part of his time was reserved for the business of the merchant. In 1845 he was nominated teacher of eastern languages at the school of the Propaganda of the Lazarists at Smyrna. From then on, he used his spare time for the study of Turkish, Italian and modern Greek. He was Dragoman to Lord Raglan, the supreme commander of the English forces during the Crimean War, whom he accompanied from August 1855 to September 1856. His travels with Lord Raglan brought him to London, where he stayed until the end of the year. During this stay, he was elected a member of the Athenaean Club. He then became Dragoman to Sir Henry Bulwer, whom he accompanied from Bucharest to Istanbul. In 1858 he went back to Smyrna to become the first Dragoman of the English consul. He died in 1865 from yellow fever.

All his chroniclers make mention of the fact that Nāṣif al-Ma'lūf was a member of both the English and the French Asiatic Societies. He is listed as a member of the Société Asiatique from 1854, and the Royal Asiatic Society has his name on its lists of members from 1860 until 1867. A curriculum vitae was published in French in the Courrier d'Orient.

His most renowned works are his French-Turkish and Turkish-French dictionaries. The first was printed in Smyrna in 1849 and reprinted in 1856 by Maisonneuve in Paris and listed as Nassif Mallouf, Dictionnaire français-turc. The companion volume Turc-français was first published in 1863. Most of his polyglot and two-language conversation books had at least one reprint edition. His Grammaire élémentaire de la langue turque was published by Maisonneuve.

II. Lūwīs al-Ma'lūf, SJ (Louis Ma'luf), born in Zahla 18 October 1867, died in Beirut, 7 August 1947. He was baptised with the name Zahir, which he changed into Louis upon his entry into the Jesuit Society. He studied at the Jesuit College in Beirut, went to England to study philosophy and studied theology in France, where he stayed for ten years. He is best known for his al-Manqiqd fi l-lughah wa l-adab wa l-'ulūm, the first edition of which dates from 1908 and which has since been reprinted and expanded in many editions.

From 1906-32 he was director and editor of the Catholic weekly al-Bashir. Its annual supplement Takwīm al-Bashir, the almanac, was made by him into a useful instrument of information on matters of calendar, church and state, in that order. His Maktālī falsafyya badima bi-ba'd maṭlahī falsafī fī al-'arab, muslimīn wa-nasārā was first published in Beirut in 1911 by the Imprimerie Catholique and then allāh al-Malikī. This manuscript mentions the Āl al-Ma'lūf al-muslimīn fi Sīkhīyya wa l-'Kaysrīn wa-Sūsā. The oldest Ma'luf mentioned is Abū 'Umar Ibn Maymūn b. 'Amr b. al-Ma'lūf, who died in 316/928 (see al-Ma'lūf family)
reproduced at Frankfurt in 1911 with the French title
Traites inedits d’anciens philosophes arabes musulmans et
chretiens, publiees dans la revue al-Machqiq par L. Malouf, E.
Eddeet L. Cheikho. He edited the Turkish newspaper
wa-Lubnān min sanat 1197 ila sanat 1257 (1782-1841) of
Mikhyāl al-Dimāghki, Beirut 1912. His Risālā
ra’iyiya li l-kahana hasab jārkat al-kiddis Iğmā’iyus was published in 1937 in Beirut.

**Bibliography:** Dāhir, Masādir, ii, 727-9; Ziriklī, al-Âlam, v, 247; Riyyād al-Maślif, شاٰاراٰ - al-Maślif, Beirut 1962, 85.

3. Yūsuf Nuĺuf, born at Zahla 1870, died at New York, 18 June 1956. He emigrated to North America, settled in New York and founded the newspaper al-Ayydm, which survived for ten years from 1897 to 1907. He enlisted the help of his nephew Djamīl (no. 6), who migrated for this purpose. Through their newspaper they made propaganda for Arab independence, and thus earned the displeasure of the Ottoman government. Both were condemned to death under Dāmrāl Pāsha, the military governor of Syria from 1915 until the end of the Syrian campaign of the combined Arab-English forces. Yūsuf, however, never came within reach of the Ottoman authorities. Together with Djamīl he published Kitāb Khidnāt al-‘aṣyām fi tārīqāt al-‘isām, New York 1899, a biographical dictionary of important men, Arabs and non-Arabs. One al-‘isām is Yūsuf al-‘ārād al-‘adāsī al-tābī, New York 1900. His other publications were Lā‘iḥat Iblīl Bek, and Hikayāt Abī l-‘Hudā.

**Bibliography:** Dāhir, Masādir, iii/2, 623-5; Saydāb, Abūdunā wa-usdābunā fi ’l-Muḥādar al-‘Ajmiyya, Beirut 1917, 31, 207; al-Badawī al-Maślif, Beirut 1933, 450-1; Riyad al-Maślif, شاٰاراٰ - al-Maślif, 80.

4. Aīmīn Fāhm al-Maślif, born in al-Shwayfāt (Lebanon), 1871, died in Cairo, 21 January 1943. Aīmīn al-Maślif studied medicine at the Medical University of Beirut until 1894 and then went to Istanbul to obtain his idgāza. He served as a physician in the Egyptian army and took part in the Sudan expedition, the battle of Khartoum and the occupation of the Bahr al-Ghazāl. An account of the Bahr al-Ghazāl occupation by his hand was published in ten instalments in al-Mukāsaf in 1911 and 1912.

He was active during the Balkan war and during the battle of the Dardanelles in the First World War, and then joined the Arab forces of Shari‘ī Huṣayn. He taught biology at the Mu‘adn al-Tibbī al-‘Arabī in Damascus after the capture of that city. When the French put an end to the rule of Faysal over Syria and of the literary club Riwaq al-Ma‘ṣari, both in São Paulo. The Riwaq al-Ma‘ṣari was quite popular, having many itinerant merchants among its members. Their main activity was the recitation of newly-received poems by Ahmad Shawkī and Khālīl Mutrán, followed by comments and imitations along well-known lines of the mu‘arada (Saydāb, 151). The activities of the Riwaq came to an end during the First World War, when preference for nationalistic content to the detriment of literary value drove the better poets of Beirut to escape from it (Saydāb, iii, 316). Kayzār had meanwhile, in 1906 (Riyyād al-Maślif, شاٰاراٰ - al-Maślif, 369, 85) went to Paris and made contact with the Turks who were working for the deposition of ʿAbd Hamīd II.

The list of his publications opens with a play in verse, Riwaqāt Nirān, Zahla 1894. His dīsān, Tīgāhār al-Maḥāqīr, was published in São Paulo in 1904, as were his novels: al-Qhādā al-Surīyya fi ’l-dīyār al-‘Arabīyya, Beirut 1933, 450-1; Riyyād al-Maślif, شاٰاراٰ - al-Maślif, 43; Dāhir, Masādir, iii/2, 1256 f.; Ziriklī, al-Âlam, v, 209 f.; Saydāb, Abūdunā wa-usdābunā, 151, 316-7.

In 1895 he emigrated to São Paulo, Brazil. In 1898 he became editor of the newspaper al-Barāzī, which had been founded in Santos in 1896 and had been moved to São Paulo in 1897. He continued to work for this paper until 1903, when it was absorbed by the newspaper al-‘Akār. He was one of the founding members of an Arabic literary circle among emigrants al-Nahdā al-adābyya and of the literary club Riwaq al-Ma‘ṣari, both in São Paulo. The Riwaq al-Ma‘ṣari was quite popular, having many itinerant merchants among its members. Their main activity was the recitation of newly-received poems by Ahmad Shawkī and Khālīl Mutrán, followed by comments and imitations along well-known lines of the mu‘arada (Saydāb, 151). The activities of the Riwaq came to an end during the First World War, when preference for nationalistic content to the detriment of literary value drove the better poets of Beirut to escape from it (Saydāb, iii, 316). Kayzār had meanwhile, in 1906 (Riyyād al-Maślif, شاٰاراٰ - al-Maślif, 369, 85) went to Paris and made contact with the Turks who were working for the deposition of ʿAbd Hamīd II.

He learned Turkish in Beirut and then, in 1896, answering the call of his uncle, he migrated to the United States and helped in editing the newspaper al-Ayyām. He became a member of the literary circle al-Halāk al-Afghānīya. Part of his time he spent travelling between New York, São Paulo and Lebanon. In 1908 he went to Paris and made contact with the Turks who were working for the deposition of ʿAbd Hamīd II. The following year, after ʿAbd Hamīd’s reign had come to an end, Djamīl travelled via Istanbul to Beirut. The coming of Djamīl Pāsha as military governor of Syria turned out to be a direct threat against his life. He was condemned to death, but escaped from being hanged as his family knew how to hide him from Turkish eyes. An incurable disease put him in hospital before the First World War ended, and there he remained until his death in 1950.
book, but the catalogue of Atatürk's library does not mention the book. Damll advocated turcification of the country, the separation of church and state, unified schooling programmes, the adoption of the European dress, etc. His main publications include Wasiyyat Fuad Bâsha, Sao Paulo 1908, and Kanun al-tâtâ'â' al-sârâyya, also 1908, which he translated from the Turkish.

7. Mîschîl al-Ma'âlîf, born in Zahla, 1889, died in Beirut, 3 June 1942; younger brother of Kaysar and Damll, brother-in-law of 'îsâ Iskandar, and nephew of Yusuf Nu'mân al-Ma'âlîf, his paternal uncle.

His fame chiefly rests on the fact that he was one of the founding-members and the first chairman of al-'Usha al-Andalûsîyya from 1932 to 1938, being one of the sponsors who made the publication of the monthly al-'Usha possible. In 1938 he returned to Lebanon. His contribution to Arabic poetry was limited. Some of his poems are reprinted as an appendix to the memorial volume Fi haykal al-âshârî, containing the commemorative speeches and the elegies of the members of al-'Usha al-Andalûsîyya, as well as the "In memoriam' which had appeared in Durrâtât Zahla al-Fâtât and in the monthly al-Adîb. A play by his hand, Sadjîn al-zulm, was printed at Zahla in 1910.

**Bibliography:** Fi haykal al-dhikrî, Sao Paulo 1944; Riyâd al-Ma'âlîf, 'Shî'ara' al-Ma'âlîf, 51.

8. 'îsâ Iskandar al-Ma'âlîf, born at Kfar 'Akkâb, 23 April 1869, died 2 July 1956. He married in 1897 'Afta Ma'âlîf, the daughter of Ibrahim Bâsha al-Ma'âlîf. Out of this marriage were born Fawzî Ma'âlîf, 1908-1930, and Shafîk (1905-76), for whom see below, nos. 9 and 10.

'îsâ Iskandar received his education at the Scottish Missionary school in his home village and at the Scottish Missionary school in al-Shuwayr. Circumstances forced him to leave school and to pursue his studies privately. In 1890 he was nominated reader at the Patriarchal Orthodox school in Damascus. Almost simultaneously, he began to contribute historical articles to the periodical al-Nîma, and in December of the same year he started to work as the editor, secretary and proof-reader of the newspaper Lubnân. He exchanged Damascus for Zahla in 1898 to teach Arabic, English and Mathematics at al-Kulliya al-Sharkiyya (al-Adawi al-Mu'allimîh, 'îsâ Iskandar, 49). His articles in al-Machrig in this period have his name followed by the words madaris adâb al-lugha al-'arabiyya wa l-tâmîsâh ta al-kulliya al-Sharkiyya (al-Adawi al-Mu'allimîh, 'îsâ Iskandar, 49). His efforts in the field of learning were so much appreciated that he became a member of the learned societies in Lebanon, Syria and Egypt on the very first day of their existence. On 8 January 1918 the Shu'bat al-targumîn was formed during the reign of Faysal in Syria. It was transformed into the Miftâh ul-ma'ârif and then in 1919 into al-Mugâ'im al-'ilmî al-'arabî. He was a member of these societies from the first day, as also of al-Mugâ'im al-'ilmî al-Lubnânî, founded on 20 February, 1928. The Mugâ'im al-tâ'îlîgh al-'arabiyya Egypt counted him among its members on its foundation-day, 6 October 1933. In 1936 he was nominated corresponding member of the Royal Academy of History and Literature in Rio de Janeiro.

He was a very prolific writer. Tarrazi, Tarîkh al-Shîhâ, ii, 234-38, lists almost 40 journals and magazines to which he contributed his articles on a wide variety of subjects. Larger works were often serialised in magazines and then printed in book-form. Dâghîr lists 22 printed works and more than 50 titles of works which did not pass the manuscript-stage. During his lifetime he acquired a large library of about 1,000 manuscripts and 10,000 printed works. Some 500 manuscripts were purchased by the American University in Beirut and catalogued.

The following is a list of works published in book-form or serialised in the periodicals al-Adîb, al-Machrig and al-Muktafat:

al-Khithâr: a volume of studies on script, language and writing (84 pp.), 1895—"Lama fi t's-tawî 'ra fi t's-alâ'im (April 1902)—"al-Khithâr. Ma'âsim, 1902—al-Muktafat, 1902—al-MubâyîNA, a collection of elegies in memory of Mrs. Mahibâ bint Yusuf Abî 'All al-Ma'âlîf, the wife of Ibrahim al-Aswad, proprietor of the newspaper Lubnân, 1903—"al-Mihdîdât wa-ka'bâratîyât, about last words and epitaphs. A series of articles in al-Muktafat, xxx-xxxi (1905-6)—"al-Mugâ'im al-'ilmî wa-lusratuhu, a series of articles on the origins of the Ma'âlîf family and a short biography of Nasîf al-Ma'âlîf, in al-Machrig, vii-ix (1905-6)—"al-Khîrî dirajîs 'îsî al-Lubnânî, 2 parts, in al-Machrig, ix, (1906)—"Nûkhâ ma' âinwân 'Inân ibn Hâkim al-Hakim al-Halabî, 4 parts, in al-Machrig, x (1907)—"DAWNI al-ka'tût fi sirat Bani Ma'âlîf, al-Ma'ta'sa 'al-Ummînîyya, 1908. Apart from being a family history, the Ma'âlûf, other families are also followed. The book is a compendium of the history of Lebanon, Syria and Palestine with information about customs. Asad Rustum, in al-Machrig, liii (1963), 518-20, describes the book as the basic and encyclopaedia of the situation in Lebanon in the first half of the 19th century as it survived in the memories of the old people at the end of that century. The subtitle is a general socio-historical book, being a description of facts, morals and customs and cultural affairs. —Nûkhâ ma' amri al-kiss Hanânî al-Munir, 5 parts, in al-Machrig, xii, (1909)—"al-Shu'ara' wa l-t's-râtîk wa l-ma'âhidîh al-ghîriyya, 16 parts, in al-Muktafat, xxxvii-xxxix, dlv-xlv (1910-1915)—"Tarîkh madinat Zahla, 298 pp., Zahla 1911 and 1912—"Tarîkh Lubnân, printed during World War I, it is said. —"Mu'âradât Ya lay fî yâbâl, a collection of mu'âradât and the original poem by al-Husri al-Kayrawanî see Abu 'l-Hasan al-Husri al-Kayrawanî, ed. of M. Marzukî and D. b. al-Hadjâdj Yahyâ, Tunis 1963, 143-9 and mu'âradât, 150-201, containing Câser al-Ma'âlîf (177-9), 'îsâ Iskandar (182-4), Fawzî al-Ma'âlîf, (185-6) and a mu'âradât by 'îsâ Iskandar 1921, also published in al-Muktafat, lix, (1921)—"Tarîkh al-tîbî hâbi al-arab, 55 pp., 1924—"Tarîkh al-tîbî ind al-arab, Damascus 1924—"Kîlât wa l-hayyân fi 'arabîy, in al-Machrig, li-xiv, li-xv (1924-4)—"Sâna'at Dimashq, for the al-Kulliya al-Sharkiyya, Damascus 1924—"Tarîkh karî Al al-'Azem bi-Dimashq, Beirut 1926. This was serialised in al-Machrig, xxxv

Encyclopaedia of Islam, VI
(1926) with the title *Kasr Ascad Bdshd al-cAzm fi Dimashk—al-Ka4a? fi Lubndn bi-zaman al-umard* (60 pp.), also published in *al-Machriq* until vol. xxx (1932)—al-Usra al-arabiyya fi al-ad Bdshd al-cAzm, serialised in *djam tahlil asmd^al-ashkhds* al-Machriq, Beirut 1947. ShafTk left for Sao Paulo in 1926 to a textile factory there. With his uncle Mishal and his maternal uncle and engaged in commerce at this meeting were published in a special issue of al-Adib, part 2, Beirut 1956, 747; Shuf^fi Wa-^ayndki mihradjdn, Beirut 1973. (C. NIJLAND)

In 1922, he founded *al-Mashjar al-Djami*, which was completed in 1923 but not published till 1973 at Bkfyâla—al-Akhbar al-mansu^ya fi ta'nkh al-usar al-sharkiyya, only partly published in periodicals.

Of the principal constituent elements of his development, mention may be made of the influence of his father (see al-Did, v [1935]; Aoun, 28-9) and the dual cultural background that he acquired in the two clerical institutions of al-Sharkiya (in Zahlâ) and of the Brothers of the Christian Schools (Beirut 1914-15). The World War and the severe famine in Lebanon forced him to interrupt his studies; in 1916 he was employed by the Wheat Commission (Bikaâ, ms. Jan. 1956; Dd, viii/5, 181-2). In 1919, he was appointed bur- sar of the teachers' training college in Zahlâ, and secretary to the Dean of the School of Medicine (al-Ma'had al-tibbi, vii, 127; Dd, 4, Aoun, 33-4). It is to this period that his literary first-fruits belong (Dd, 5-6, 8-11, 39), and in 1921 his poem *Alfdawes al-ma'sada* won him a literary prize. On 17 September of the same year, apparently under compulsion (Dd, 30; Ddus, 25-26), he emigrated to Brazil and settled in São Paulo, where he joined his maternal uncle and engaged in commerce (al-Shark, iv [March 1931]; Dd, 186-8).

In 1922, he founded *al-Muntadâl al-Zaht fi al-Mashjar al-Djami*, Beirut 1930; al-Rabbâ, 10 January 1930; Dd, 4-5, 185), which led to a redoubling of both social and literary activity, and Spanish-Portuguese culture came to be grafted on to his original Arabic-French background (Dd, 37). Although well-known in emigre society from the year 1923 onward, his name only began to arouse the interest of Brazilian literary circles after the appearance, in 1926, of his poem *Alâ bistâ al-ri*.

Details concerning his short life, his generous nature, his illness (20 November 1929) and his death in the English Hospital in Rio de Janeiro (7 January 1930) have been carefully collected by his father (Dd, passim): al-Adib, xxxiii (March 1973), 53d, reprints a letter of ShafTk to *Isâ al-Nâ-gâ, saying that Fawzî had not died of appendicitis but of an inflammation of the duodenum, but that he had told his parents at the time that Fawzî was suffering from an appendicitis in order to allay their worries. The letter was written after *Isâ al-Nâ-gâ had written in al-Adib, xxii/11 (Nov. 1972), 46, that Fawzî had possibly died of a venereal disease or of tuberculosis.

The rare unedited works preserved in his father's library (fragments of poetry, the first issue of a monthly revue, *al-Adab*, intended to be distributed in the school—ms. January 1914—assorted meditations, proverbs and aphorisms translated from French, two panegyrics—ms. 1914-15) display tendency towards an elegant and elaborate prose (*al-Adab*, preface), a quasi-traditional prosody, a romantic taste and a con-
cern for the collation or insertion of items of wisdom. His first novelas, including 
Salmd and 
Ald bisdt al-rih. His position in contemporary Arabic poetry rests, however, on 'Ala 
his soul and the body. Faced by his insoluble dilemma, the divided and shattered being searches for
its lost unity. The transitory tends towards immortality and the finite towards infinity. Thanks to his ima-
naginative power, the poet, a stranger in the material world, seeks deliverance from his terrestrial imprison-
ment and project himself into space (canto x, ii, iii). The stellar journey is marked out with dialogues, notably that of the winged and planetary race. These passages nevertheless bear the melancholic accent of a broken and lonely poet facing his implacable destiny (canto x, vii, viii). The spatial distance opens up a vertical perspective on the world; seen from these spiritual altitudes, controversies deepen, life takes on the appearance of a thin flux of ephemeral beings and there is a proliferation of meditations on the passions of mankind, his vanity and the destructive materialism of a perverse and perfidious civilisation ruled by the spirit of evil (canto x to xii). The poet's expiation is achieved by purificatory inspiration, and original unity is regained by the fusion of the two unyielding elements. But this state of grace attained through the mystery of love is dissipated like "the brightness of a dream" and the flesh is seen to fail. Only the pen, the poet's beloved harp, remains as the sole instrument of consolation and deliverance (canto xiv).

His poetic style takes as its starting-point the neo-
classicism of his contemporaries, where the new pro-
fesses to be the offspring of an older tradition, a prose-
dy. Then he frees himself from this genre so as to integrate himself with the emigrant literary move-
ment. We may recall, in this connection, the elaborate themes, the nature of the imagery, the dimensions of the poetic state, the system of evocative language, which form common ground with the plein of 
Khayyam (1929). Other reminiscences seem to recall the Arabic version of the 
Djurdj Hassun, who knew him well in 
Shuwayr and then studied law at the Jesuit College in 1907 to study law and that he practis-
ed as a barrister for two years before he left Lebanon 
Sten al-tayydra, 
Cairo 1967, 465-72; T. luf, 
C 11 • DJURDJ HASSUN MA
LUF, born at Bikfaya 1893, died in São Paulo 1965. He visited the English school at Shuwayr and then studied law at the Jesuit College in Beirut. Ya'kub al-'Awidt, who knew him well in later years, relates that Djurdj Hassun joined the Jesuit College in 1907 to study law and that he practis-
ed as a barrister for two years before he left Lebanon for Argentine in 1911. There he worked as the secretary to the Ottoman Consulate at Buenos Aires for one year and then he went to Brazil.
one of the founding-members of al-'Uṣba al-andalusiyya. Though he had an astounding knowledge of Arabic poetry, prose held his chief interest. He translated from French, Spanish and Portuguese, and composed some stories himself, apart from numerous articles. He wrote a long introduction (32 pp.) to the Diwan of Ilyās Farḥāt in 1932. Al-Uṣba al-andalusiyya published a volume of stories, partly translated, partly original, with the title Akāsī in 1954. The first installment of a book on the literature of the Mahgār was published in al-Marāḥil. He died in 1965 in a car accident.

MAʿLULĀ, a place in Syria.

1. The locality. Maʿlulā is situated 38 miles/60 km. to the south-east of Damascus, 6 miles/10 km. to the west of the main Damascus-Hims road, on the second plateau (5,000 feet/1,500 metres altitude) of the Djabal Kalamūn, the last chain of the Anti-Lebanon. The agglomeration is constructed in the form of an amphitheatre, inside a wide and deep gap; access to it is protected, from the side of the third plateau, by two defiles which open on to its flanks. There is access by one of these defiles to the monastery of St. Sergius, whose church with a cupola supported on pendentives is of Byzantine date; at the entrance to the other defile there is built, partly on the rock, the monastery of St. Thecla. The parish church of St. Leontius has no features of interest, but a mosaic from the 4th century A.D. has been found in the church of St. Elias.

Maʿlulā is mentioned by George of Cyprus as Magloula and as forming part of Lebanese Phoenicia; Yakūt gives it as a district (ṣūra) of the environs of Damascus. It is known to have been the seat of a Melkite Orthodox bishopric in the 17th century, and in 1724 was attached to Saydnāyā. At the time of the rebellion of the amīr of Baʿlabakk, Muhammad Harbāsh in 1850, Maʿlulā was sacked by the Turkish troops of Muṣṭafā Pāsha chasing the rebels who had taken shelter in the village against the desires of the local population. In 1900 and 1925, Maʿlulā was again attacked and besieged.

The fame of this picturesque place comes from the fact that its inhabitants (about 2,000), who have remained Christians, mainly Melkite Catholics, still speak a Western Aramaic dialect, just like the people of two other nearby villages, Djjubba ‘adīn and Baḥkha, which became Muslim in the 16th century. Since the time of the first notes on the Aramaic or Maʿlulā and Djjubba is mentioned, apart from the regional prestige speech of the city of Damascus—a process already completed for Maʿlulā itself—in all outside relations. Hence it is not astonishing that there is a strong Arabic influence on their Aramaic vernacular, especially in the field of vocabulary: a random count will yield an average of about 20% and even more of words of Arabic origin in any given text. Loan translations abound. Nevertheless, the Aramaic language of Maʿlulā and Djjubba is preserved in full vigour, while at Baḥkha there seems to be a marked tendency, especially among the younger generation, to supplant it entirely by Arabic, which, of course, in due time will lead to its extinction there; in 1971 people of less than forty years’ age were, according to information by inhabitants of the village, no longer able to use the vernacular correctly, although they had no difficulties in understanding it. Understandability among the three villages is mutual, except for smaller details which on the whole will not impair the comprehension of any utterance.

The characteristics of Maʿlulā Aramaic (or, to be more exact, Western Neo-Aramaic) include:

General. MA is a descendant of the western branch of Aramaic (giktul, kallem-e, inter alia), its closest relationship being to Judaeo-Aramaic and Syro-Palestinian.

Phonology. Long vowels of Older Aramaic have been preserved under stress; ā > ə. In unstressed position, they appear shortened -ā > ā - and partially merged, e.g. hēmī < hāmī, pāṣī < pāṣī. Short vowels in a stressed syllable seem to continue the former state, while, when unstressed, they too have undergone, at least phonologically, certain mergers (e > a, o > u against a, pre-tonic even e > a > s against a). Stress is usually on the penult, and may hit even originally prothetic vowels: ēbā < brā via shēd. Voiced plosives consonants have been devoiced (b d g > p t k), voiceless plosives consonants except p palatalised (j k > ā k); Djj. ‘A. k > ā, p has become f > 3 b. Bagdadīfīt laws are no longer operating, although they have left many traces; roots containing susceptible consonants will appear either unified: irkheb < ‘irkheb “he mounted (a horse)” or rikhēb < ‘arkhēb “be put somebody on horseback” corresponding to older arkeb which, except for palatalisation and b > 3 b, should have remained unchanged (for p, see below); or there exists a so-called root-variant: irkēb as above: rikhēp “I mounted”, the p has been generalised in the causative (see above example). Initially, in general the spirant version of these consonants has been perpetuated (original context pronunciation after final vowel).

Morphology. On the whole, the older system has changed very little, much less than in eastern Neo-Aramaic. This is doubtless to be attributed to a certain preserving force exerted by the structurally very similar surrounding Arabic dialects. Salient innovative features out of Aramaic material are the development by fusion of analytical constructions of obligatory verbal forms to show the definiteness of a following direct or indirect nominal object (giktul gahrōna “they hit a man”; kaffīl gahrīna “they hit the man”, < kaffīn-eh f) and the personal inflexion of predicative adjectives by prefixes formally identical with those of the imperfect (ana n-sfer “I’m poor”), as well as the strongly extended use of old kīl and kaffīl participles as a resultative or perfect. Arabic has contributed in addition to a good many of verbal stems (III, V, VI, VII—the normal expression of the

speaking neighbouring villages, Baḥkha and Djjubba ‘Adīn-Ghuppa ‘Odh are bilingual, and use varieties of dialectal Arabic more or less rapidly assimilating to the regional prestige speech of the city of Damascus—a process already completed for Maʿlulā itself—in all outside relations. Hence it is not astonishing that there is a strong Arabic influence on their Aramaic vernacular, especially in the field of vocabulary: a random count will yield an average of about 20% and even more of words of Arabic origin in any given text. Loan translations abound. Nevertheless, the Aramaic language of Maʿlulā and Djjubba is preserved in full vigour, while at Baḥkha there seems to be a marked tendency, especially among the younger generation, to supplant it entirely by Arabic, which, of course, in due time will lead to its extinction there; in 1971 people of less than forty years’ age were, according to information by inhabitants of the village, no longer able to use the vernacular correctly, although they had no difficulties in understanding it. This is doubtless to be attributed to a certain preserving force exerted by the structurally very similar surrounding Arabic dialects. Salient innovative features out of Aramaic material are the development by fusion of analytical constructions of obligatory verbal forms to show the definiteness of a following direct or indirect nominal object (giktul gahrōna “they hit a man”; kaffīl gahrīna “they hit the man”, < kaffīn-eh f) and the personal inflexion of predicative adjectives by prefixes formally identical with those of the imperfect (ana n-sfer “I’m poor”), as well as the strongly extended use of old kīl and kaffīl participles as a resultative or perfect. Arabic has contributed in addition to a good many of verbal stems (III, V, VI, VII—the normal expression of the
passive voice—, VIII, X), which, with the exception of VII, of course may be regarded as a special kind of Aramaic roots on the model of Arabic (Aaron = "bigger")

Syntax: For category syntax, see the preceding section. Clause and sentence connection is realised on the one hand to a large extent by intonation alone (asynesis), while on the other hand there is, as far as clause adverbials of time are concerned, a real profusion of incessantly reappearing temporal conjunctions. Very remarkable is the introduction from Arabic of the asynetic relative clause (the which) to be used in exactly the same circumstances (indefinite clause-head) as in the tongue of origin.

The value of western Neo-Aramaic for the clarification of difficult problems raised by our not always complete understanding of the intricacies of the grammar of Older Aramaic has not yet been fathomed; there is still a grave lack of studies of this kind.

MALWA proper is an inland district of India bordered on the south by Vindhylas, and lying between lat. 24° 30' N. and long. 80° 30' E. To this tract, known in the age of the Mahābhārata as Nishadhara, and later as Avanti, from the name of its capital, now Ujjain, was afterwards added Akara, or eastern Malwa, with its capital, Bhilsa, and the country lying between the Vindhylas and the Satpūras. Primitive tribes like Ahibras and Bhils have been dwelling among the hills and jungles of Malwa since ancient times, some of whom still cling to their primitive way of life. The province formed part of the dominions of the Mauryas, the Western Satraps, the Guptas of Magadha, the white Huns, and the kingdom of Kanawd [q.v.], and then passed to the Malawas, from whom it has its name since about the 5th century A.D. These when Hinduised formed the Paramāra tribe of Rājpūts, which bore sway in Malwa from 800 to 1200, but from the middle of the 11th century onward their power was increasingly challenged by a confederacy of the Çālukyas of Anhilvada and the Kalāṭuris of Tripūri.

Malwa, at the crossroads between northern India and the Dakhan, and between the western provinces and the seaports of Gudjarat [q.v.], always occupied a position of great strategic and commercial importance. It was therefore only a matter of time for the territory to attract the attention of the Sultans of Dihlī. In 632/1234-5 Shīhu’ al-Dīn Dilāwar Ghuri of the Ghurīs [q.v.] went to Dihlī, and from the capital he invaded Ujjain, demolished the temple of Mahākāl, and sacked Bhilsa. This, however, was no more than a predatory raid and did not lead to annexation. Sultan ‘Alā’ al-Dīn Khalḍjī [see KHALDJIS]—who as governor of Kārā had led a successful raid on Bhilsa in 691/1292—sent his commander ‘Ayān al-Mulk Multānī [q.v. in Suppl.], “a master of pen and sword” (Amīr Khusraw), in 705/1305 to conquer Malwa. It now became a province of Dihlī, and, with interludes of Hindu revolt, remained so until, in 804/1401-2, on the disintegration of the Kingdom of Dihlī after Timūr’s invasion, the Afghān governor Dīlāwar Khalīl Khalīrī made it an independent kingdom. With the help of Muzaffar II of the Parama tribe of Rājputas, which bears sway in Malwa since ancient times, some of whom still cling to their primitive way of life. The province formed part of the dominions of the Mauryas, the Western Satraps, the Guptas of Magadha, the white Huns, and the kingdom of Kanawd [q.v.], and then passed to the Malawas, from whom it has its name since about the 5th century A.D. These when Hinduised formed the Paramāra tribe of Rājpūts, which bore sway in Malwa from 800 to 1200, but from the middle of the 11th century onward their power was increasingly challenged by a confederacy of the Çālukyas of Anhilvada and the Kalāṭuris of Tripūri.

Malwa, at the crossroads between northern India and the Dakhan, and between the western provinces and the seaports of Gudjarat [q.v.], always occupied a position of great strategic and commercial importance. On his death in 873/1469 he was succeeded by his son ʿAbd al-Kādīr Ghiyāth al-Dīn. Though Ghiyāth al-Din was well-versed in warfare, he had the sagacity to shift the emphasis from conquest to consolidation. He gave up his father’s aggressive foreign policy and tried to maintain friendly relations with his neighbours. His reign was a period of peace and plenty, and of cultural development. Having a large harem to look after, he increasingly associated his son Nāṣir al-Dīn in state affairs. In the event, Nāṣir al-Dīn removed all rivals from the throne, forced abdication on his father and himself ascended the throne (906/1500). His cruel reign ended with his death in 916/1510, leaving the kingdom in disarray and beset with grave problems. He was succeeded by his son Muhāmmadh al-Dīn [q.v.], who, though he tried to do a poor general. With the help of Muzaffar II of
MALWA — MALZUZA

Gujarat he rid himself of his powerful Radjput minister, Mednl Ral, but in doing so embroiled himself with Sangrâmá Rànài of Citor, who defeated him in the field and took him prisoner, but generously released him. He then became a province of Gujarât, and in 941/1535 the emperor Humâyùn [q.v.], invading that kingdom, defeated Bahâdûr Shàh at Mandasor and captured Mândù, but was recalled to Hindûstàn in the following year by the menacing attitude of Shîr Khán in Bengal; hence Mâllû Khán, an officer of Mahmûd II, established himself in Mâlâwâ and assumed the title of Kàdir Shådja [q.v.] and Hâdîji Khán, two officers of Shîr Shàh, drove him from Mâlâwâ and assumed the government of the province. Shådja-Khán died in 962/1554-5, and was succeeded by his son Malik Bâyâzîd, known as Bâz Bahâdûr, who, during the decline of the power of the Sûr emperors, became independent. A severe defeat at the hands of the queen of the Gond Kingdom of Garha Mandala engendered in him a distaste for warlike enterprise, and he devoted himself to the reading of books and to the embraces of the beautiful Rûpmàtì. In 968/1561, the Mâlâwâ were conquered by Akbar’s army under Adham Káhàn and defeated his troops, put him to flight, and captured his mistress, who took poison rather than become the conqueror’s paramour. Bâz Bahâdûr fled into Khándeh [q.v.] and Pir Muhammad Khán, second-in-command of Akbar’s army, who followed him there, was defeated by Mâhàrâk Khán of Khándeh and drowned in the Narbâdà. Bâz Bahâdûr returned and again reigned in Mândù, but in 969/1562 another Mughal army under ’Abd Allâh Khán the Uzbek invaded Mâlâwâ and compelled him to flee to Cîtor. He remained a fugitive until 978/1570, when he submitted to Akbar and entered his service. Abu ’l-Fadl mentions him among the adventurer[s] (Râghûbîr Sînh).

It seems that the majority of the Malzuza were annihilated by the Abbasids general Yazíd b. Hâtim b. Kâbiša b. al-Muhallab during the great massacre of the Berber peoples of Tripoli. According to another passage of the History of the Berber of Ibn Khalûdîn, the Malzuza were not a sister-tribe of the Maghllà, but rather a clan of this latter people. Another genealogy of the Malzuza, quite different from that of Ibn Khalûdîn, was given by Ibn al-Abmâr in his monograph on the Manîtids entitled Ra’awât al-nirzîn fi da’wát Bani Marîn. According to this author, the Malzuza belonged, together with the Maghllà, the Maghâr (sic), the Mâyûnà, the Khâshâyà (or Khashâ), the Matmàtà, and the Lamâyà, and also the people of Fâtîn, not to the descendants of Dûnà, but to the great Berber branch of the Zanàtâ.

(T. W. HAIQ - [RIAZUL ISLAM])

MALZUZA, an ancient Berber people belonging to the branch of the But, and to the family of Dârisa, who most probably lived in Tripolitania.

If we are to believe Ibn Khaldûn (9th/14th century) and his sources, the Berber genealogists, the Malzuza were descendants of Fâtîn, son of Tamzît, son of Dârî (eponym of the Dârisa) and were the sister-tribe of the important Berber tribes of the Mâhgrâra, the Lâmâyà, the Šàdînâ, the Kûmiyà, the Mâyûnà, the Mâhghîlî, the Mâtîmàtà, the Khashâyà (or Khashâ) and the Dûnà. The majority of these peoples have survived until the present day, except for three, sc. the Malzuza, Khashàna and Dûnà, who became extinct at an early date and whom the mediaeval Arab historians knew only by name. According to Ibn Khalûdûn, all the nine peoples above-mentioned occupied, before the 8th/14th century, “an exalted rank among the Berber populations and were distinguished by their great exploits”. One should add that, according to the passage of the History of the Berber of Ibn Khalûdûn, the Malzuza were not a sister-tribe of the Maghllà, but rather a clan of this latter people.

Another genealogy of the Malzuza, quite different from that of Ibn Khalûdûn, was given by Ibn al-Abmâr in his monograph on the Manîtids entitled Ra’awât al-nirzîn fi da’wát Bani Marîn. According to this author, the Malzuza belonged, together with the Maghllà, the Maghâr (sic), the Mâyûnà, the Khâshâyà (or Khashâ), the Matmàtà and the Lamâyà, and also the people of Fâtîn, not to the descendants of Dûrî, but to the great Berber branch of the Zanàtà.

It seems that the majority of the Malzuza were annihilated by the Abbasids general Yazíd b. Hâtim b. Kâbiša b. al-Muhallab during the great massacre of the Berber peoples of Tripolitania which took place after the defeat and death of the Bâdî‘ i-mand Abû Hâtim al-Malzuza [q.v.]. The Malzuza, his fellow tribesmen, were to suffer in particular after his fall. However, it is not impossible that a clan of the Malzuza survived until the 4th/10th century. Indeed, one would be tempted to link the name of Malzûza with that of Malzûrâ, a people whose clans formed the most powerful and prominent at six military stations during the great rebellion of 1857.

Bibliography: Ibn Khalûdûn, Histoire des...
ABU HATIM AL-MALZUZI, the famous Ibadi imam. He is mentioned in the Kitab al-Sira wa-akhbarr al-an'ama, an Ibadi chronicle written shortly after 504/1110-11 by Abu Zakariyya. He is also known by other names. In the chronicle, which is one of the last commentaries on biographies of the provincial governors of Berber peoples of Ibn Hawkal (4th/10th century). It should be noted that the tribe into which Abu Hātim was born, the Malzuza, was regarded by Ibn Khaldūn and the Berber genealogists on whom he depended as the sister tribe of the Maghila or, indeed, as a clan of this latter tribe.

As for the orthodox Arabic sources, only three authors tell us of Abu Hātim al-Malzuza: Ibn 'Idhāri al-Marrakūši (7th/13th century), al-Nuwayri (9th/14th century) and Ibn Khuldūn, who lived in the same century. Ibn 'Idhāri tells us of him simply Abu Hātim, except in the passage where he cites al-Tāhiri and where this imām is called Abu Hātim al-İbādī. Al-Nuwayri says that this leader bore the name Abu Hātim b. Ḥabīb and that he was also called Abu Kādim. Abu Hātim was a mawḍūʿ of the Arab tribe of Kinda. Sometimes he is named by al-Nuwayri quite simply as Abu Hātim. Ibn Khuldūn gives the Berber leader the name of Abu Hātim Ya’kūb b. Ḥabīb, according to Ibn Khuldūn, he also bore the name of Abu Kādim; this historian also makes him an amīr of the tribe of the Maghila. It should be noted that the tribe into which Abu Hātim was born, the Malzuza, was according to this author, a sister tribe of the Arab tribe of Kinda. Abu Kādim also bore the name of Abu Hatim Ya’kūb b. Ḥabīb al-Malzuza al-Nadjīsī; he was, according to this author, a mawād of the Arab tribe of Kinda. The latter author cites the Nadjīsī among the peoples of Tripolitania. Similarly, the tribe of the Malzuza seem to have belonged to the Mazāta or, indeed, as a clan of this latter tribe. The latter author also makes him an amīr of the tribe of the Maghila who professed Khāridjī, Ibādī and Suhrī doctrines, as early as the imāmāte of Abu l-Khaṭṭāb ‘Abd al-A‘lā al-Ma‘ṣīfī (110-4/757-61). In fact, if we are to believe Abu Zakariyya, he was governor of the city of Tripoli during the 9th/15th century, and was written as an autograph in an appendix to al-Shammakhl’s Kitab al-Siyar (ed. Cairo, 598-600). At the end of this life, we read that ‘one face towards the oratory opposite the tomb of Abu Hātim’. No doubt this is Abu Hātim al-Malzuza who was killed, as we shall see, in a battle with the ‘Abbāsid army in the Djabal Nafusa and buried in a place in this district. Finally, a distinguished Ibadi writer of the 9th/15th century, Abu l-Kāsim al-Bahṭārī, calls the leader in question Abu Hātim Ya’kūb b. Ḥabīb al-Malzuza al-Hawwārī. As for the orthodox Arabic sources, only three
Malzuzi moved against Tuba, at the head of the Ibadf insurgents of Tripolitania and Hirkiya, who then joined with the other Ibad and Sufr groups besieging Umar b. Hafs. The latter put up a brave defence, at the head of 15,000 soldiers. As for the besieging forces, they formed a huge army, in which Abū Kurra stood out at the head of 40,000 Sufirs. Another band of Sufirs numbering 2,000 soldiers was commanded by 'Abd al-Malik b. Sakardid. Several Ibadf forces, commanded by different leaders, were independent of one another. The sources mention among these latter troops: Abū Hātim at the head of a considerable number of warriors; Yūsuf al-Miswar b. Rustam, with 15,000; 'Aṣīm al-Sadratl at the head of 6,000 warriors and al-Miswar b. Hāni with 10,000. The army under the command of Djarir b. Mas'ūd al-Madyūni was also composed of Ibadf.

During the siege of Tuba, Abū Hātim al-Malzuzi was only one of the leaders of the Ibadf groups and not the commander-in-chief of the Ibadf armies who besieged Umar b. Hafs. The latter, threatened by the great Khāridji army, whose total strength was about four times that of his own army, bought the neutrality of Abū Kurra for 40,000 dirhams. After this, the latter's warriors left Tuba. Similarly, 'Abd al-Rahmān b. Rustam, whose troops had been routed by a detachment of the garrison of Umar b. Hafs, hastened to lead back to Tāhār, his capital, the remnants of his army. It was on this occasion that Abū Hātim and Malzuzi took charge of the besieging forces. Umar b. Hafs, seeing that the forces of the Ibadf surrounding Tuba were very much weakened, succeeded in escaping from this fortress and making haste to Kayrawān, which was also besieged by the Ibadf. The Ibadf army which was besieging this city was already commanded by Abū Hātim, who had abandoned the siege of Tuba to make an end of the affair. It consisted of 6,000 warriors and 3,000 men, besides al-Miswar b. Rustam, whose troops had been routed by a detachment of the garrison of Umar b. Hafs, hastened to lead back to Tāhār, his capital, the remnants of his army. It was on this occasion that Abū Hātim and Malzuzi took charge of the besieging forces.

Abū Hātim, whose biography he is ignorant about. This is why, on reading the final dictionary, the term indicates the widest repertory existing of arbitrators. These deficiencies led the contemporary scholar Muhammad Tāzī al-Tustarl to write a temporary scholar Muhammad Tāzī al-Tustarl to write a temporary scholar Muhammad Tāzī al-Tustarl to write a final dictionary, the term becomes merely a person forward as definitive in this particular sphere.
Qāmūs al-riqāl di Tustan: per una guida alia lettura dei testi prosopografici imamiti, in ibid., 37-49.

AL-MĀMĪ, AL-SHAYKH MUHAMMAD (d. 1282-7), traditional Mauritanian scholar of a highly individualistic nature, whose reputation is founded less upon his considerable qualities as a poet and a Mālikī jurist than upon some of his statements, which caused a sensation in their time.

Thus, for example, he claimed to know the number of grains of sand contained by the earth, by means of a calculation which he reveals in a poem in ḩusūmniyya Arabic, although he refrains from giving the precise result of his computations. He caused something of a scandal by declaring the principle of the roundness of the earth, something of which his compatriots, adhering to the letter of the Kurān: “The earth, We have stretched it out ...” (XV, 19), were still unaware in the 19th century. He is also credited with having predicted the existence of the rich mineral deposits which are exploited today in Mauritania. Legend has it that from his reading of all the books currently available (except two!) he acquired original knowledge which is revealed particularly in his poems in dialectal Arabic. He employed this same mode of expression to declare grammatical rules or to formulate prayers, but he resorted to classical Arabic for anything that could be described as didactic poetry; the latter includes in particular the kasidas entitled al-Misāṭ biyya on the art of debate, and al-Dulfīniyya which express the essence of his judicial teaching.

Concerned to adapt law in such a way as to legitimise the practices of his time, he naturally rejects takdīl, blind imitation, and reveals himself an advocate of idhāḥāt, personal effort; while not going to far as to claim for himself the status of a mujtahid, he skilfully recommends recourse to the practice of taqlīd, which consists in formulating general rules on the basis of the teaching of a particular school, in his case, Mālikism.

A practical problem which engaged the attention of al-Māmī is that of the zakāt [q. v.] of animals owned by the tributaries of a Mauritanian tribe; he considers that they should be relieved of this obligation and bases his conclusion on substantial arguments. Otherwise, in a general fashion, he makes it his business to give legal foundation, in conformity with the shāri‘a, to all the customs rooted in his social milieu and, in his principal work entitled, significantly, Kitāb al-Bādiyya, he addresses himself to the specific problems of nomadic societies: the open-air mosque, the valuation of war) or the natural one (notably: the middle of a road). But the most current denotation of the word, in this latter sense, is that of a piece of territory under the control of some authority—in the modern meaning of the term, a kingdom.

Arabic geographical literature provides some interesting developments of the word. It adopts it, on one hand, in its plural form mamlākît, as it attested by the titles of several works of the type of geography called “that concerned with roads and kingdoms” (Kitāb al-Maslīlī wa l-mamlākī [q. v.]), made popular by Ibn Khurradadhbih. But it is the singular form mamlakat which merits attention here. One of the pioneers of Arab geography, al-Djāhīz, distinguishes in his K. al-Amsār wa-sudjābīn al-buldān between the mamlakat al-‘Arab and the mamlakat al-‘Ajam, which was a classic distinction in the framework of the Shufūbiyya controversies. About 70 years later, around 316-20/928-32, another pioneer of the genre, representing administrative geography, Kudāma b. Dja’far, want beyond the controversy and reunited the two mamlakas into a single one, the mamlakat al-‘īlam or, more simply, al-mamlaka. This course of evolution ended with the geographers of the Balkh school, that of the so-called “atlas of Islam” who devoted themselves to depicting the Islamic world and that world only. The mamlakat al-‘īlam from this time onwards monopolizes geographical description in al-‘Iṣṭakhri, Ibn Ḥawākī and above all al-Muḳaddasi, who opposes, en bloc, this mamlaka to the whole of the remaining world, calling it, according to the needs of the context, mamlakat al-‘īlam, al-mamlaka or al-‘īlam. The feeling of unity, based on economic links and the sense of belonging to the same civilisation, here transcends the political cleavage inherent in the existence of two caliphates at Cordova and Cairo, the rivals of the one in Baghdiyya by the appearance of the Turks in the 5th/11th century en masse, and the decline of the caliphate were to justify this vision;
political divisions were to make this vision disappear, at a single blow, after the year 1000 (Subh al-a^shd, iv, 457, 1.9-458, 1.3). Both sellers and buyers had a very strong interest in the continuation of the slave-trade, with the exception of those under the Mamluk world, with the exception of those under the Mamluk sultanate of Egypt and Syria (see next article), see Bahli; for these last in various parts of the Islamic world, the exception of those under the Mamluk sultanate of Egypt and Syria (see next article), see Bahli. Although for many centuries the basis of several Islamic powers, the institution of military slavery can in many ways best be studied within the framework of the Mamluk sultanate of Egypt and Syria (648-922/1250-1517) since the latter is so richly documented in the historical sources, many of them contemporary to the events which they describe and containing definitions and descriptions of that sultanate's institutions. Although differences of circumstances and the need to handle the Mamlук sources with care (since many of them are partial or inaccurate or valid only for the author's own time) call for caution in making a comparative study, it is nevertheless true that an examination of Mamluk military slavery can in many ways best be studied with care (since many of them are partial or inaccurate or valid only for the author's own time) call for caution in making a comparative study, it is nevertheless true that an examination of Mamluk military slavery is bound to shed much light on other Islamic societies in which the institution played a leading rôle. Of all the slave societies which should be examined in connection with that of the Mamlûks, it is obvious that those immediately preceding and following it (in the Ayyubid period and in Ottoman Egypt) should have first priority.

1. Countries of origin and racial composition.

We know quite a lot about the racial composition of the Mamluk of the Mamluk sultanate and their countries of origin (called quite often simply al-bilâd; see e.g. Ibn al-Dawâdârî, ix, 71, 11.12-13). By contrast, though we know that the greater part of the Ayyubid's Mamlûks were Turkish, we do not know their exact lands of origin, with the certain exception of al-Malik al-Sâlih Nagâm al-Dîn Ayyûb's reign, the direct predecessor of the Mamluk period, and with the possible exception of the reigns of one or two of his Ayyubid contemporaries or immediate predecessors. The source evidence on the characteristics of the peoples supplying the Mamlûks and on the various factors which brought about those Mamlûks' sale and importation into the sultanate, clarifies the reasons for the creation of a military slave institution and explains its unparalleled success and durability as the major military force for its time in the lands of Islam.

A most important description of the Kipčâk steppe [see DÂSHT-I KÎPKÂC in Suppl.] and its people, the major source of military slaves for the Mamluk sultanate in the first part of its existence, is that of Ibn Faḍl Allah al-'Umârî, who based it on the evidence of persons who visited the Golden Horde (K. Lech, Das Mongolische Weltreich, Wiesbaden 1968, 68-71 of the Arabic text, which is an excerpt of the Mašâlik al-âbâr, al-Kalkashandî, Subh al-a^shâ; iv, 456-8). There the author stresses both the very harsh circumstances in which the inhabitants of that steppe live, their primitiveness (including that of their pagan religion), as well as their military ability, faithfulness and loyalty (see also al-Dîmâqâhî, Naqshat al-dahr, 264, 11. 4-11). Particularly children, a combination of quality which made them highly suitable raw fighting material. The sources attest a unanimous conviction that the Mamlûks of Egypt and Syria had been the decisive factor in saving Islam both from the Frankish and the Mongol threats since the battles of al-Manâqûra (647/1249) and the Later battles against the Ilkhâns of Persia and Trâk (al-'Umârî, op. cit., 70, 1-71, 1.12; Subh, iv, 458. See also D. Ayâlon, The transfer of the Abhâbân caliphate, 58-9, and n. 1; idem, The European-Asiatic steppe, 47-52; idem, The Great Yasa, part Cx1, 117-130, part Cx2, 148-56; idem, From Ayyubids to Mamlûks). This unprecedented and repeated evidence is crowned by Ibn Khaldûn's evaluation of the Mamlûk phenomenon in the lands of Islam in general and in the Mamluk sultanate in particular ('Bar, v, 369-73; Ayâlon, Mamlûkyydt, 340-3). The resultant prestige greatly helped the Mamlûks in overthrowing the Ayyubids, in firmly establishing their rule, and in thoroughly incorporating in their realm an undivided Syria, as a region with a status very inferior to that of Egypt.

The factors which led to the sale of slaves by the inhabitants of the Kipčâk steppe and their rulers were the following ones: the general destitution of the population, which forced it, in certain years, to sell its children ('Umârî, 70, 11. 2-4; Subh, iv, 458, 1.12; al-Mâkzîrî, Sulâk, i, 942, 11. 10-12); the need to sell the children in lieu of taxes to the ruler (Subh, iv, 476, 11. 11-16); the ruler's capturing and selling the children and women of his subjects (Subh, iv, 474, 11. 10-475, 1.1). It was not, however, only under duress and such pressures that those children were sold. The high sums paid for them constituted an immense incentive. In the third reign of al-Nâṣîr Muḥammad b. Kalâwîn (1309-40 [q.v.]), who was exceptionally lavish in his buying of Mamlûks, the Mongols competed so fiercely with each other in selling their boys, girls and relatives to the slave merchants, that it marred their internal relations (Sulâk, ii, 525, 11.6-10).

It is true that the Mongol attacks on the Kipčâk steppe filled the slave markets with Turks from there, thus facilitating their purchase by the later Ayyubids and particularly by al-Sâlih Nagâm al-Dîn Ayyûb, and indirectly contributing to the establishment of the Mamluk state (see e.g. Ayâlon, Le régime Bahriya, 133-4; idem, The Great Yasa, part Cx1, 117 ff.). However, prisoners of war captured by any kind of external enemy, or even by a Muslim ruler, could not guarantee the uninterrupted supply of Mamlûks, particularly children below military age, without the constant co-operation of local elements, whether the ruler, or the heads of the tribes, or above all, the parents and relatives of those children. Furthermore, that co-operation in selling their own flesh and blood was not confined to the subjugated peoples, but included as well the conquering and subjugating Mongols, and we are even informed as well that the subjugated peoples of that region used to steal the children of their Mongol conquerers and sell them to the slave-dealers ('Umârî, 72, 14.11-17).

The Islamisation of the Mongol dynasty of the Golden Horde and many of its constituent peoples must have contributed, in the long run, to the diminution of military manpower for the lands of Islam from the Kipčâk steppe and especially for the Mamlûk sultanate. In the short run, however, it is quite doubtful whether the adoption of Islam had a considerable effect on the slave-trade from that region. For many years, those who became Muslims retained many of their old pagan habits, and numerous other remained pagan ('Umârî, 72, 14.11-19; Subh, iv, 457, 1.19-458, 1.3). Both sellers and buyers had a very strong interest in the continuation of the slave-trade,
which meant that new converts to Islam were not necessarily excluded from becoming Mamluks (ibid.). For the effects of conversion to Judaism or Christiani-
yty of nomads of the Eurasian steppe at an earlier period on their readiness to sell their children, see al-
Iṣṭaḥābī, 223, 11.11-15.

One of the major drawbacks of the Mamluk system, from which almost all the Muslim states suffered, was that they had little or no control on their sources of supply (the outstanding exception being the Ottoman empire, which recruited most of its kullar from the Christian peoples living within its boundaries). The states which were not contiguous to those sources of supply had an additional major problem, that of being dependent on favourable factors concerning the routes leading to the sources in question (be they sea or land-routes) (see e.g. Ayalon, Aspects of the Mamluk phenomenon, i, 207-9). The Mamluk sultanate was, in this respect, completely dependent on foreign factors both on land and on sea; hence its attempts to diversify its routes (and very probably its sources) of supply as far as it could.

The main route was by sea through the Bosphorus and the Dardanelles, and this was under the complete command of Byzantium, and later the Ottomans, and the Franks. In the Byzantine period there is no complaint in the Mamluk sources about Byzantine interference with very few of the routes of the Mamluk sultanate, in spite of Byzantium's ambivalent policy in its relations with the Mongols of the Golden Horde, the Ilkhan of Persia and I'tâk and the Mamluks. In the correspondence between Michael Palaeologus and Kalâwûn in 680/1281 concerning the conclusion of a pact between the two states, the slave traffic figures quite prominently. The emperor promises, inter alia, safe passage of Mamluks and slave girls, on the condition that there will be no Christians among them, but demands the release of all the Christian Mamluks already in the sultanate to Byzantium. The sultan agrees, in his answer, to most of the emperor's suggestions, and stresses the importance of granting safe conduct to the merchants coming from Sûdûk and the Kîpçâk steppe, but completely ignores the emperor's demand about the Christians of Little Armenia, as well as the importance of the route, is questionable. Interference with the ordinary flow of slaves to the Byzantine realm by this Eastern Anatolian route. One of the stipulations of the Mamluk sultan in that treaty was the free purchase of Mamluks in the Ilkhanid dominions (Esclangon, 3; al-
Safrâdi, al-Wâţî fi l-fasâ'id, vi, Wiesbaden 1974, 220, 1.9-221, 1.6; Ibn al-Dawâdârî, Kâz n al-durar, ix, 312, 1.16-313, 1.10; al-Mâkûrî, Sulûk, ii, index, p. 1020b), and it is thus very probable that the flow of Mamluks through Ilkhanid territory increased as a result of the treaty. It is true that Dîmûrâd b. Dîjûbân, the Ilkhanid governor of Anatolia (Bîlîd al-Rûm), prohibited, after 1225, the dispatch of Mamluks to Egypt by sea or through the straits of the Dardanelles (al-Makrizî, Kanz al-durar, ix, 312, 1.16-313, 1.10; al-Mâkûrî, Sulûk, ii, p. 1293, 11.1-8), but the attitude of that highly controversial ruler, for which he paid with his life, should be considered as exceptional. How the slave trade from the Ilkhanid empire went on after its disintegration in 736/1336 is unknown.

In the third reign of al-Nâsîr Muḥammad b. Kalâwûn, the purchase of Mamluks reached, perhaps, its peak. He is said to have imported Mamluks and slave girls from "V. the Golden Horde (Bîlîd Uzbek), Anatolia (al-Rûm), Tabrîz and Baghâdîd and other countries" (Sulûk, ii, 524, 11.13-15); clearly, at this time all the three main routes connecting his realm with the Mamluks' countries of origin were in use.

In summing up the problem of the routes through which military manpower was supplied to the Mamluk sultanate, it can be said that interference with the flow of slaves into it, be it by Byzantines, Ottomans, rulers of Little Armenia, Ilkhanid Mongols or Christian Europeans, never seriously affected the military strength of that sultanate; only an effective embargo on this item alone might have broken that strength.

One of the major events in the history of the Mamluk sultanate, which transformed the racial composition of its military aristocracy, was the supplanting of the Kîpçâk Turks by the Circassians. The
Mamlük sources attribute that transformation solely to internal causes (Ayalon, Circassians, 135-6). There are, however, good reasons to suggest that the situation in the Mamluks' countries of origin had some share in bringing about that result. There is a considerable amount of evidence about the comparatively flourishing situation and the dense population of the Kıpçak steppe in ca. 1200-1350 (ibid., 136, and n. 2), although the process of its decline seems to have started with the Mongol occupation (al-Umarî, 71, 11.15-18). Ibn ʿArabghallah gives quite a detailed description of how it had been devastated and depopulated by internal wars and the attack of Timur (Akkhâr Timurî, 113, 1.5-115, 1.4, 122, 1.2, 126, 1.2-127, 1.4; see also A. N. Poliak, in REI [1935], 241-2; idem, in BSOS, x, 864-7). The very fact that the area had been a major source for the supply of Mamluks must have contributed considerably to its depopulation and perhaps even to the military devaluation of its human material, since the slave traffic was confined mainly to a particular section of a small age group, namely, the cream of adolescent boys and girls who still had all the reproductive years ahead of them, and this must have adversely affected the future generations in the steppe. Although the number of the Royal Mamluks (al-mamlûk al-sulânîyya) was not very great, it should be remembered that many of the commanders, both in Egypt and in Syria, had their own Mamluks, and that the owning of white slaves existed in sections of society well beyond the military aristocracy. Furthermore, the Kıpçak steppe supplied slaves to countries outside the Mamlûk sultanate as well. Finally, the rate of mortality among those Mamluks in the countries to which they had been imported was very high, especially in times of epidemics, necessitating the more or less constant need for the replenishment of their thinning ranks. The long-range effects of the islamisation of the peoples of the Kıpçak steppe have already been mentioned.

Before enumerating the races of the Mamluks, the term Türk must be discussed. It had two meanings; one very wide, the other much narrower. We shall start with the wider meaning, leaving the other to the enumeration of the races. Türk or Atrak in the wide sense embraced all the Mamlûk races, and was practically synonymous with Mamlûks. The Mamlûk sultanate was called Đaâlalât al-Turk or Đaâlalât al-Atrak or al-Daâlalât al-Turkiyya. The commonest designation of the Mamlûk sultans was Maltûl al-Turk. But whereas the sultans of the Kıpçak period had only this designation, each of the sultans of the Circassian period had a double designation; thus Sultan Qânûna was the thirty-fourth of “Maltûl al-Turk and their sons” and the tenth of the “Qânûniyya and their sons”1; and so on.

To compile a list of the various races represented in Mamlûk military society is quite easy. But to evaluate the respective weight of the various racial groups, with the exception of the two major ones (the Türk and the Đaâlalâts) is very difficult. This is because it is quite rare that the sources refer to the racial affiliation of individual Mamlûks, who were usually given Turkish names irrespective of their racial origin; moreover, the mention of racial groups taking an active part in a certain event or struggle (again with the exception of the two main races) is even more rarer (some lists of Mamlûk racial groups do however exist). This is in glaring contrast to the extremely rich and varied data furnished by those sources about the groups (zaawâli, sing. āliyya) based on slave and patron relations, like the Zâhiriyya of Baybars, Mansûríyya of Kâlûwân, Nâsirîyya of Farâdji, Aṣârifîyya of Kâyîbtây, etc. Therefore, our picture of these groups and their relations (on whom see below) is far clearer than that of the racial groups (ṣânîn, sing. ʿin). The racial struggle concerns itself mainly in connection with the Circassians and from a comparatively early date in the Turkish-Kıpçak period, reaching its peak in the closing decades of the 8th/14th century. After the almost total victory of the Circassians, it is brushed aside, with the exception of some flickers of antagonism on the part of other races, and of repeated expressions of haughtiness towards and discrimination against those races on the part of the Circassians.

In Ottoman Egypt, the racial factor is even more subdued than the Mamlûk one. Furthermore, at least as far as the chronicle of al-Djibartî [q.v.] is concerned, practically the only data we possess about the racial composition of the military aristocracy are that source’s mentioning of the racial affiliation of a certain number of individual Mamluks.

From the data in the sources of the Mamlûk period (including the lists of personnel), the following general list can be reconstructed: Türk (or Atrak), Kıpçak, Tatar, Mughul (or Mughâl), Khâqâniyya, Rûs, Rûm, Arman, Ās, Abâza, Lâz and Đaâlalâts.

By far the two dominant races were the Türk and the Đaâlalâts, if the whole Mamlûk period is considered. The Đaâlalâts seem to have constituted an important element already in the Burdíyya [q.v.] regiment created by Kâlûwân, and are the only ones mentioned as repeatedly challenging the supremacy of the Türk. The Kıpçak are rarely referred to in the above-mentioned data and lists, and are an obvious synonym of Türk. The case of the Mughul and the Tatar is more complicated. The Mughul, who are mentioned only in the Kıpçak period, seem to have been distinct from the Türk, although perhaps with a certain degree of overlapping. The Tatar, on the other hand, especially under the Circassians, were very often synonymous with Türk. This can be proved in two ways: (a) Türk and Tatar are never mentioned together in the same list, or in connection with the same event; and (b) a good number of individual Mamlûks in the Circassian period are said to have been Türk al-ʿin on one occasion and Tatar al-ʿin on another. The reason for that alternation is obvious.

The more the Tatars advanced in the steppe, the greater was the Turkish element which they subjugated and incorporated in their armies; and since the Turks were much more numerous, it was they who absorbed their conquerors. Already Ibn Faḍl Allâh al-Umarî says that the Tatars were completely assimilated by the Kıpçâks and lost their own identity (op. cit., 73, 11, 17-20).

The Rûs were third in importance. There is no sufficient information for establishing the relative importance of the other racial groups. The Rûs are never mentioned as a racial group outside the lists, and there are hardly any individual Mamlûks who are said to have belonged to that race (the best-known individual is Baybûgha Rûs, or Urus or Urûs).

The Franks (Farâdji, Fîrângî) are never mentioned in the Mamlûk sources as a racial group. There are, however, a fair number of Mamlûks who are said to have been of Frankish origin; and since the Mamlûks, as already stated, did not preserve their original infidel names—especially if they had not been Turks—and since the origin of many of them is not mentioned, the number of the Franks amongst them might well have been considerably higher. Yet the sources’ absolute silence about the Franks as a separate body does not support the claim of some mediaeval Euro-
pean writers about the very great proportion of Franks in the Mamluk army. One should, however, take into consideration the possibility that there might have been a certain degree of overlapping between 

There were some Muslim-born people, even from within the boundaries of the Mamluk sultanate, or from the neighbouring countries (particularly the areas inhabited by the Turcomans), or from regions lying further away, who managed to join the Mamluk military aristocracy either by fraudulent means (such as an arrangement with the slave dealer), or because they were taken prisoners and found the status of a Mamluk too good to give up by admitting that they were in reality Muslims. Some of these whose bluff had been called were ousted from the military aristocracy, deprived of their Mamluk names and forced to bear again their original names. These Muslim-born Mamluks constituted, however, only a very marginal element in Mamluk society. A few of the Turcomans who became Mamluks were called Rūmīs as well.

2. The arrival and early training of the Mamlūk

The crucial stage in the Mamlūk’s career, from his leaving his country of origin, through his education and upbringing, and up to his manumission, can be reconstructed fairly well in the Mamluk sultanate, despite numerous gaps which affect the sureness of the general picture; even so, this picture is far superior to what we know at present about the parallel careers of military slaves in the rest of the mediaeval Muslim world, including the Ottoman empire, up to the beginning of the 10th/16th century.

In the life story of each Mamlūk, his slave merchant, and especially the one who brought him over from his country of origin, figured most prominently. He was his first patron and protector from the hardships and dangers during the long voyage to his adopting country. He also served as the most usual link between him and his original homeland, so that Mamlūk was usually bound with strong ties of affection and veneration to that merchant. All of those merchants were Muslim civilians from outside the Mamluk sultanate, and some of them became very influential in that sultanate. They should not be confused with the “merchant of the Mamlūks” (tājīr al-mamālīk, or fully, tājīr al-mamālīk al-sulṭānīyya), who was generally a low-ranking Mamlūk amīr (amīr of ten) and whose function was to supervise the commerce of the Mamlūks; this personage usually stayed within the boundaries of the sultanate.

While we know very little about the slave-market and its functioning, we know much more about how the sultans bought their Mamlūks; they in fact usually bought them from the Bayāt al-Māl [q.v.] or treasury. Those of them who had not yet been manumitted before the death or dismissal of the reigning sultan were returned to the Bayāt al-Māl and bought from there by the new sultan.

The sultan’s Mamlūks were brought up in a military school situated in the barracks (tābaka, tābāk, sing. tabaka) of the Cairo citadel, of which there were 12. It would appear that each of those barracks had a special (probably separate and secluded) section assigned to the Mamlūk novices (kuṭūbah, or possibly kuṭūbiyya, sing. kuṭūbah or kuṭūbi), since (a) after having finished their period of training, and as long as they had not been driven out of the citadel, the Mamlūks continued to stay in those barracks and being called by their respective names; and (b) the barracks accommodated a bigger numbers of Mamlūks than the number of novices staying there at any given moment.

The education of the novice was divided into two main parts: the study of the elements of Islam and afterwards the military training (amuṣūṭ or ṣawīn al-harb or al-furūṣiyya). The first part was most essential; for, in spite of its unavoidable elementary character, it inculcated in him the conviction that he had been led in the right path from the darkness of heathendom to the light of Islam (see also Baybars al-Mansūrī, Zubātāt al-fikrā, B. L. ms. no. 23235, fol. 51b, 11.5-16). The second part of the novices’ education of the Mamlūk, even if later in his career he did not lead a very strict religious life, was at least as important as his other kinds of gratitude to the Muslim environment in general, and to his patron in particular, for raising him from poverty to richness and from anonymity to fame and high position. As al-Makrizī aptly puts it in his well-known passage on the Mamlūk’s upbringing, the combination of his identification with his new religion, and a great proficiency in the art of war (more precisely, in horsemanship) were the targets of the Mamlūk’s education. “[U]ntil the glorification of Islam and its people had been merged in his heart, and he became strong in archery, in handling the lance and in riding the horse’’ (Kitāb, ii, 214, 11.1-2).

Curtailing the religious education, or dropping it altogether, because of the need or desire to shorten the period of apprenticeship, was always a symptom of decline in the Mamlūk sultanate or elsewhere.

3. The role of the eunuchs

The overwhelming dominant element in the personnel of the military school was that of the eunuchs [see kaṣīr], who took part in the upbringing of the novices (even in the religious field, in addition to the theologians), as well as in keeping very strict discipline among them. A major reason for manning the school with eunuchs was to use them as a buffer between the young and adult Mamlūks to prevent pederasty [see liwāt]. A novice proved to have been the object of sodomy could be sentenced to death (Kitāb, ii, 214, 11.6-8).

The eunuchs in the military school formed a kind of a pyramid, as the basis of which were the simple eunuchs called khūdām (or tawāyjīs) al-tabhāk. At the head of each barracks was a eunuch called mukaddam al-tabākā, and all the barracks were commanded by a eunuch who was called mukaddam al-mamālīk al-sulṭānīyya and who had a deputy (maḥb), also a eunuch. There does not seem to have been a separation between eunuchs serving in the school and in other military or administrative capacity and those of them serving in the harem or in religious institutions. It would appear, however, that they did not usually perform those different functions simultaneously.

The eunuchs as a body were extremely strong and influential under the Mamlūk sultans. It is difficult to compare their power with that of the eunuchs in other Muslim mediaeval states, because the eunuch hierarchy of those other states cannot be reconstructed to the same degree. What is certain, however, is that individual eunuchs in the Mamlūk sultanate could not rise to the highest ranks or be as powerful as those in other Muslim states, including under the Ayyūbids and in the very early decades of the Mamlūk sultanate; neither could they be commanders in the field of battle, as happened so often in earlier Muslim states. The highest rank that a eunuch could reach under the Mamlūks was the middle one, namely, amīr of forty, and even to this rank only one single eunuch could be appointed, the Mukaddam al-Mamālīk al-
Sultaniyya. Only in the chaotic conditions prevailing in the years immediately following al-Nasir Muhammad b. Kalâwîn’s third reign, to a very great extent as a result of that reign, the eunuchs, together with the women and slave-girls of the court, accumulated unprecedented power. This kind of power could not have lasted for long, for in addition to its running counter to the basic concepts of Muslim society, it would have destroyed the very foundations of Mamlûk aristocracy. Other evils originating from that reign (usually believed to be good and great, with only partial justification) lasted much longer (see below).

The eunuchs in the Mamlûk sultanate belonged mainly to four races, the Rûm, Habash, Hind and Takhrîr, the two first-named being the predominant races. Thus only one race, the Rûm, was common to them and to the Mamlûks. Like the Mamlûks, each one of them was considered to be Ibn ‘Abd Allâh (thus shrouding his infidel past in obscurity). Unlike them, however, they bore a special kind of Muslim names, representing the pleasant and beautiful (gems, perfumes, etc.; see Lâkâb). Only a few of them bore Turkish names.

With all the differences between them and the Mamlûks, the eunuchs of the court formed a very essential part of the aristocracy, and without them, the early stage of the Mamlûk’s career, which affected so decisively his subsequent one, would have been fundamentally different.

4. Completion of training and manumission

There is no evidence indicating the average length of the period which the novice had to stay in the military school. There is, however, much proof to show that, on the whole, that period was considerably shortened in the later period, a curtailment which adversely affected the proficiency of the Mamlûk soldier. Each single Mamlûk attending the school was manumitted on finishing his period of apprenticeship. The ceremony was a communal one, carried out in the presence of the sultan in a passing-out parade called Khânqâh, in which 150 to 500 “graduates” took part. Each one of them received a manumission certificate, called ‘isâda, which attested, at the same time, his being a fully-fledged soldier.

The amirs did not have at their disposal facilities even remotely similar to those of the sultan for upbringing and training their Mamlûks, a fact which was reflected in their comparatively military inferiority. There are, however, certain indications that the Mamlûks of the great amirs were brought up according to principles resembling those which were applied in the case of the sultan’s Mamlûks (see e.g. Zuhdât at-Fikr, fols. 51b, 11.5-16, 99b, 11.13-100, 1.4).

The Mamlûks, on their manumission, were simple soldiers. Thus they were given an equal start. However, they had a real chance to rise to the highest ranks only if they had been manumitted by a sultan and not merely by an amir, and this chance was greatly improved if the Mamlûk was included in the sultan’s personal guard (al-‘hâsisâkiyya [q.v.]). There was no school for training officers; these rose from the rank of simple soldier without having to undergo a special kind of training.

In a most illuminating passage, where al-Makrînî contrasts the attitude of al-Nâsir Muhammad b. Kalâwîn to his Mamlûks with that of the sultans who preceded him, the correct principles for creating a healthy and successful Mamlûk military body, as against the wrong ones, come to the fore: The earlier sultans, besides giving the Mamlûk the proper up bringing (already described earlier), used to dress him in comparatively simple clothes, raise his salary gradually and promote him slowly in rank and position. A Mamlûk thus treated, when reaching the top, will know how valuable is his new status, acquired with such efforts, and will be able to make the right comparison between his previous wretchedness (shakâz) and his present well-being (na‘îm) (Suluk, ii, 524 1.5-525 1.15).

5. The Mamlûk and his patron

The period of the Mamlûk’s slavery, terminated by his manumission, did not only affect his career (i.e. his chances of rising in the socio-military ladder), but also determined for life his close affiliations. He was bound by loyalty, on the one hand, to his manumitting patron (mawlîk, usâdîfî), and, on the other, to his colleagues in servitude and manumission (khushshâkiyya). The intensity of the Mamlûks’ feelings of loyalty to their patron is revealed in those cases when things did not work according to plan. It happened that a patron-sultan died or was dethroned, but shortly before the date fixed for the manumission of a certain group of his Mamlûks. This group refused sometimes to be manumitted by their new patron-sultan in spite of the fact that by doing so they practically dealt a death blow to their chances of becoming part of the uppermost stratum of the military aristocracy. The patron and his freedmen developed relations very similar to those of a family. He was considered to be their father (wâdhî), and they his sons (wâdâd, sing, wâlîd), and the freedmen amongst themselves were regarded as brothers (ikhwâm, sing. âkh), with special relations between senior and junior brothers (âhâwâd, sing. âghâ, and inyyût, sing. ini).

The ties binding the patron to his own freedmen and the same freedmen to each other constituted the pivot upon which Mamlûk internal relations hinged. These ties continued to be binding after the dismissal or death of the patron. That cohesive factor, most formidable in itself, was supplemented and strengthened by a repressive one: a freedman of patron A, who had been transferred to the service of patron B, would never be accepted by him and his own freedmen on an equal footing. He would always be considered as a stranger (gharb, adjnabi). A Mamlûk “family” or group or faction (ảfûn, pl. âsâbîn) kept outsiders serving their patron at arm’s length. Such a faction, if and when separated from its patron, could either be broken by killing its members, putting them in prison, sending them into exile and transferring them to the service of other patrons, under whom they were given an inferior status, or else remain intact and carry on until the death of the last of its members. In the Mamlûk sultanate, a new sultan quite often broke up part of his immediate predecessor’s freedmen and let the other part stay on until it petered out after several decades. Under the Circassians, where the attempts to create a dynasty failed constantly, and sultans followed each other in quick succession, numerous factions, owing allegiance to different sultans, existed simultaneously. Many combinations of short-lived coalitions between those factions were constantly forming and dissolving. A very instructive case in point is Ibn Taghrîbirdî’s account of the change in sultan Khushkadam’s position from almost complete shakiness to comparative stability as a result of the varying attitudes of the Mamlûks of the sultans who preceded him, both in their relations among themselves and with the Mamlûks of the reigning sultan, al-Zâhiriyya Khushkadam. The Mamlûks of the sultans who preceded Khushkadam were, in the order of their seniority, al-Mu’ayyadîyya Shâykh, al-
The particular ties existing between the patron and his slave soldiers go back to the very beginning of military slave society in Islam and always constituted one of that society’s mainstays. However, they clashed quite often with interests wider than those of the specific ruler and his military slaves, thus constituting a source of weakness as well. Yet on balance, they had, from a Muslim point of view, a positive value. The great drawback of the whole system was that it had outlived its purpose; it could not cope properly with the progress of technology and with the unavoidable military changes which it brought about, as was so decisively demonstrated in the annihilation of the Mamluk army and empire by the Ottomans [see ǎkko. iii. The Mamlūks]. In Ottoman Egypt, the antiquated character of the art of war as practised by the Mamluks was only accentuated. At the same time, the internal disensions within Mamluk society were greatly intensified, through a strange merging of hereditary and one-generation nobilities in that society. Hence Mamluk “houses” (bâyût, sing. bayt) did not peter out as they did in the Mamluk sultanate, but went on living indefinitely as long as they were not crushed by a factor external to the specific “house”. The longer they lived, the more deep-rooted and vehement became their mutual hatreds. The incidents necessitating the taking of blood revenge (al-akhḍ bi l-ṭahr) grew in number, ultimately leading to the unflinching determination of annihilating physically (baṣ’ , izda) the rival “house”. When the Fikārīyya wiped out the Kāsimīyya in 1142/1729, the causes which brought about the inevitably uncompromising struggles within the Mamluk society were not removed; the “houses” which grew out of the Fikārīyya continued their fights according to the old pattern.

6. Mamlūk Society

Mamlūk society in the sultanate was a very exclusive one. In order to become a member of it, one had to fulfill very definite requirements. One had to be a Mamluk. Of the many thousands of people who lived in the area stretching to the north and to the north-east of the lands of Islam; to be born an infidel; to be brought into the Mamluk sultanate as a child or young boy (preferably at the age of puberty); and to be bought, brought up and manumitted by a patron who was a member of the military aristocracy (preferably a Mamluk as well, and most preferably the sultan himself). The chances of a Mamluk who had been bought and manumitted by a civilian of joining the aristocracy, and particularly of rising high within it, were very meagre indeed.

What greatly helped in making the Mamluks such an easily distinguishable, distinct and exclusive caste was a practice which started long before the creation of the Mamluk sultanate, namely, that all of them, with but a few exceptions, bore Turkish names, irrespective of their origin. This was also the case of the Circassians when they came to constitute the major factor in the military aristocracy. The fact that most of the Mamluks’ sons (wulal al-nās ) bore Muslim names greatly helped in their smooth outing from that aristocracy, thus facilitating its preservation as a one-generation aristocracy. In Ottoman Egypt, the adoption of Muslim names by the overwhelming majority of the Mamluks was an important factor in the creation of a society in which hereditary and one-generation nobilities merged into one.

Another important aspect of the exclusiveness of that society was that its members married mainly slave-girls from their own countries of origin or daughters of Mamluks. Most of their concubines were also from the same region, although black girls were by no means excluded from that category. Marriages between Mamluk amirs and local girls (mainly the daughters of high-ranking officials, great merchants or distinguished ālamāt ) were quite rare. This meant that the number of slave-girls imported from the areas which served as the source for military slaves was at least as great as the number of Mamluks. Marriages between the sons of the Mamluks and local girls were much more numerous, and this represents one facet of the assimilation of the Mamluks’ offspring in the local population.

The Mamluks were also distinguished by their dress, which was considered to be much more respectable than that of any other class. This distinction goes back to the Mamluk regiment of the ʿAbbasīd caliph al-Muʿtaṣim (al-Masāʾili, Munjīd al-dhahab, vii, 118 = § 2801).

The owning of Mamluks was the prerogative of the Mamluks (although cases of Mamluks owned by civilians were quite frequent), as was the riding of horses. Orders prohibiting civilians from buying Mamluks were rarer than those forbidding them to ride horses (some of the highest civilian officials were explicitly exempted from the riding prohibition).

The language which the Mamluks used predominately among themselves was Turkish. The knowledge of Arabic of most of them seems to have been very superficial, although a more systematic study of this question may change that impression to a certain extent. Their Islamic awareness, however, was very strong. It was expressed, inter alia, in the numerous religious institutions which they built. This activity had also its material aspect, as stated by Ibn Khaḍūn: in order to assure the future of the Mamluks’ descendants, who could not join the military upper class, they appointed them as administrators or superintendents of the waqfs assigned to those institutions for their maintenance (al-Taʾrīf bi-Ibn Khāḍūn, 279).

The main body of the Mamluk sultanate’s army, namely, all the Royal Mamluks (al-mamlūk al-sultanīyya)—who formed the backbone of the Sultanate—and most of the armies of the first-ranking amirs were stationed in Cairo. It was very difficult to make any part of the Royal Mamluks serve as a garrison anywhere outside the capital. Units of the corps which were forced to stay in Syria, for example, soon declined in power and importance, and some minor exceptions to this rule do not affect the general picture. Considering the comparatively limited number of the Mamluks, keeping their élite element together must have been the only way of preserving its military might. This, in its turn, considerably increased the already great preponderance of the capital vis-à-vis the rest of the realm. Nothing could move the Royal Mamluks, of their own choice, from Cairo, not even epidemics, which wrought havoc among them.

This concentration in the capital had its grave drawbacks. Any serious revolt of the Bedouins or Turcomans anywhere in the realm could not be quelled without the participation of the Royal Mamluks, who were often stationed far away from the scene of the revolt. Worse still, all the major wars of the Mamluk sultanate took place in its northern part or beyond it, a great distance from the main centre of military might, and this became critical in the closing decades of Mamluk rule, when the Mamluks had to cope with
the Turcomans beyond their borders, who lived con-
tiguously to the Turcomans of their own realm, and
who were supported by the ominously growing power of
the Ottoman empire.

7. Mamlûks in other Islamic states

The Mamlûk sultanate served as an example to
other Muslim states, including in the reliance on
Mamlûk soldiers, many of whom were acquired in
Egypt. For the ruler of Yânûbî, see Ibn al-Furât, ix, 43, 11-6-9; for the ruler of Mecca, see Dâwûd al-suhib, 332; Ibn Iyüs, iv, p. 496, 11-10-12; Nûgûm, ed. Pop-
pûr, vi, 117, 11. 18-23; Ibn al-Furât, ix, 208, 11. 12-15, 308, 11. 7-20; for the ruler of Yemen, see Suhib, v, 35, 11. 15-17; Nûgûm, v, 81, 11. 1-2; for the ruler of Bûdjav, see Suhib, v, 137, 1-9; and for the sultan of Tâkûrîr, see Suhib, v, 300, 11. 7-9.

In 869/1464-5 the army of the ruler of Shîrûn and the adjacent areas, whose capital was Shâmâkhi, was estimated at 20,000 combat soldiers (mukdûl), of whom 1,000 were Circassian Mamlûks (Hawzdâlît al-
duhr), 579, 1. 16-580, 1. 13). This does not necessarily
imply direct influence from the Mamlûk sultanate, but what it certainly reflects is the great competition from other Muslim states which that sultanate had to face in drawing manpower from the same sources, and especially from states situated much nearer to
those sources.

The character, structure and development of military slavery in the Mamlûk sultanate can be more
properly understood if it is studied in connection with its Ayyûbîd predecessor. The Kurdishness of the Ayyûbîd régime and its army has been greatly exag-
gerated. The Turkish, and even more so the Turkish
Mamlûk element in its armed forces was the domi-
nant one throughout its history, as was only natural for a dynasty whose founders came from the ranks
of the Zangûd army. Shîrîkûh's private army, the
Asadîyâ, who numbered 500, and who were, most
probably, the main factor which enabled Shâlûh al-Dîn
to succeed his uncle, were—contrary to what students of the Ayyûbîds have written about them—a pure Mamlûk unit (see e.g. Abû Shâmà, i, 173, 1.1-2; as-
ma'kûrîz, îflûz al-bunûfâ, iii, 308, 11. 9-10), as were the other private armies of the Ayyûbîd sultans, like the Kâmisîyâ of Muhammad, the Ashrafiyyâ of Muâsû, the Nişrîyâ of Yûsûf, etc.

The reign of al-Malik al-Salih Nadjm al-Dîn
Ayyûb, the founder of the Bahriyyâ regiment which
topped the Ayyûbîds and established the Mamlûk sultanate, strengthened the Ayyûbîd impact on that sultanate. That sultan was venerated by his Bahriyya,
who looked upon him as the example which should be
followed. It was very rare that a ruler belonging to a
deposed dynasty should leave such an impress on its
deputies; it took the Bahriyya quite a long time to
disconnect themselves from the direct heritage of their
patron, and from their general Ayyûbîd heritage they
disconnected themselves only partly.

Mamlûk military slavery certainly shows an evolu-
tion in comparison with its Ayyûbîd prototype, but
the changes were quite slow and each of them has to
be traced and identified separately.

Bibliography: That given here is restricted to
studies dealing in some detail with Mamlûk military
slavery and with a few related subjects dis-
cussed above; works based on European sources are only perfunctorily mentioned.

MAMLUKS, the Mamlūk sultanate, i.e. the régime established and maintained by (emancipated) mamluks [see preceding article] in Egypt from 648/1250 to 922/1516; and with the role of their successors, the Mamluk sultanate was an embattled

degree of internal stability, contrasting with the

the effective founder of the Mamluk sultanate. In his

powers fall under direct Mamluk control, although the three minor lordships of Hims, Hamāt and al-Karak retained their autonomy. With the ending of this crisis, the invertebrate rivalry of the Mamluk households reappeared. Baybars headed a group of conspirators who murdered Kutuz. He then usurped the sultanate after undertaking to help his brothers-in-arms, the Bahriyya.

(b) The embattled sultanate

Al-Zahir Baybars, rather than his predecessors, was the effective founder of the Mamluk sultanate. In his comparatively long reign (658-76/1260-77), a high degree of internal stability, contrasting with the political vicissitudes of the previous decade, allowed the establishment of the characteristic political structure and institutions of the régime. Nevertheless, during his reign and those of his immediate successors, the Mamluk sultanate was an embattled power, threatened by the Mongol Ilkhāns [q. v.] in the east, and by the remains of the Frankish states on the Syro-Palestinian coast. Of the two, the Mongols were by far the greater danger. A few months after ʿAyn Ḏalūt, a second Mongol invasion of Syria was stopped by the Ayyūbids of Hims and Hamāt at the first battle of Ayn Ḏalūt (25 Ramadan 658/19 September 1260). An other critical encounter was at the second battle of

21
the caliphate assisted Baybars in his negotiations with Berke, in view of the social disparity between a mamluk and a Çingizid. In regard to the second aim, Baybars early took steps to ensure the succession of his son, Baraka (i.e. Berke) Khân, named after his maternal grandfather, a Khârâzamian warrior-chief. In Shâwâl 662/August 1263, Baraka Khân, aged about four years, was duly invested as joint-sultan with his father.

Baybars’s dynasty did not long survive, the essential cause of its downfall being the hostility between the veteran magnates of Baybars’s household, the Zâhiriyâ, and the Ashkâbâd, i.e. the court-mamlûks of his son. The leading opponent belonged to an older generation, and was Kalâwûn al-Alî, a comrade of Baybars. Having deposed Baraka Khân, the magnates installed his seven-year-old brother Salâmîsh (Sûleymîsh) as nominal sultan. A few weeks later, Kalâwûn usurped the throne (Râbi‘ II 678/August 1279), and exiled the sons of Baybars to al-Karak.

Al-Mansûr Kalâwûn was responsible for an important military innovation, viz. the establishment of a Cir- cassian mamûlîk regiment, known (from its quarters in the towers of the Citadel) as the Burdjiyyâ [q. v.]. This was the first indication of a threat to the ascendancy of the Kipchak Turkish mamûlîks. In other respects, Kalâwûn continued the policies of Baybars. Syria remained a central preoccupation. The governor of Damascus, Sunkûr al-Áshkâr, proclaimed himself sultan like Sandjar al-Halabi before him. He was defeated after some difficulty in Safar 679/June 1280, but succeeded in establishing himself in the former crusader-castle of Şâyûn, whence he controlled the fortresses in the mountainous hinterland of Latakia.

Finally, he joined Kalâwûn in operations against a Mongol force sent by the Ilkhan Abaka, which was routed at the second battle of Hims (Shabban 680/November 1281). Abaka died in the following year, and his successor, Tegûder Ašhad, a convert to Islam, sought good relations with the sultan. Kalâwûn was thus left free to pursue the djihâd against the Frankish states. Tripoli fell in Râbi‘ II 688/April 1289, and like the other coastal towns was demolished. Kalâwûn was about to lead an expedition against Acre when he died (Dhu ‘l-Ka‘a da 689/November 1290). Like Baybars, he endeavoured to establish a dynasty, but his intended successor, his son-al-Sâlih Alî, predeceased him. The throne passed to another son, al-Áshraf Khalîl [q. v.], for whom was reserved the crowning mercy of the capture of Acre (Dâumâd I 690/May 1291) and the extinction of the Latin kingdom. In the following year, Khalîl took the Armenian patriarchal see of Ka‘l-ât al-Rûm (Radjab 691/June 1292), but in Muharram 693/December 1293 he fell a victim to a conspiracy of magnates who had belonged to his father’s military household (the Manşûriyyâ), and who felt themselves threatened.

The murder of al-Áshraf Khalîl inaugurated seventeen years of political instability, during which magnates with the support of mamlûk factions dominated the sultanate. Twice in this period, in 693/1293-4 and 698-708/1299-1309, another son of Kalâwûn, al-Nâsir Muhammad, was installed as sultan. Aged less than ten at his first accession, he was no more than a figurehead, and he was twice set aside by usurpers; between 694/1294 and 698/1299 by Kitbughâ and Lâdin (Lâdin [q. v.]), and in 708-9/1309-10 by al-Mu’azzaf Baraybars al-Dâshnikîr [q. v.]. It is significant that this last usurper was a Circassian, originally recruited into the Burdjiyya. The part played by the Burdjiyya added a further com-
plication to the factional struggles after the death of al-Ashraf Khalil. In 709/1310, however, al-Nasir Muhammad, now mature in political experience and with a mamliq household of his own, emerged from exiled in al-Karak, and, with the support of the governors of Aleppo, Hamad and Tripoli, marched on Egypt and overthrew al-Muzaffar Baybars. 

(c) The autocracy of al-Nasir Muhammad

During the long third reign of al-Nasir Muhammad (709-41/1310-41) the mamliq sultanate was no longer threatened by external enemies. The Frankish states were gone, and with them any serious danger of a crusading threat from Europe. The last Mongol invasion, commanded by the Ilkhan Oldjetyū in the winter of 712/1312-13, was abortive. Thus the Sultan did not need to divide his time between Syria and Egypt, and al-Nasir Muhammad was free to concentrate on internal problems, and to establish an autocratic government. He had learnt to secure his own position. The usurper Baybars and his colleague Salār were put to death within a few months of the restoration. The three Syrian governors who, as kingmakers, might become dangerous were the next to go. One died naturally, the second was arrested, while the third fled to Oldjetyū. Meanwhile, with consummate political skill, al-Nasir Muhammad carried out the operation which had been fatal to several earlier sultans—the substitution of his own mamliqs for veteran magnates in key positions. Outstanding among his servants was Tankiz al-Husāmī, appointed governor of Damascus in 712/1312, and in effect governor-general of Syria two years later. Another, Arghūn al-Dawdār, received similar extensive powers as viceroy in Egypt (nāṭ ib al-sultana bi rīāy al-Misriyya). Early in the reign, the sultan carried out a fiscal reorganisation (al-rakūt al-Nasirī), which greatly strengthened his own position against the magnates. Such a reform had been attempted in 697/1298 by Lāqīm, and had been a principal cause of his murder. Al-Nasir Muhammad proceeded with his habitual caution, commissioning first a cadastral survey and redistribution of assignments of landed revenue (sing. khdiss [q.v.]; in the less politically sensitive province of Damascus/1313). This was followed in 715/1315 by the cadastral survey of Egypt, after which the sultan sat in full court to distribute warrants of assignments to the beneficiaries. In consequence of the rauk, the share of revenue assigned to the sultan’s fis (al-khdiss) was raised from one-sixth to five-twelfths at the expense of the other holders of assignments. At this time also he abolished a wide range of uncanonical taxes (muṣār [see Mār], many of them abusive. This was a popular act, which probably had little effect on the sultan’s own resources but worked to the detriment of the tax-farmers. Al-Nasir Muhammad’s third reign thus was a period of autocratic and sometimes arbitrary rule. His tenure of power was so secure that on three occasions (712/1313, 719/1320, 732/1332) he was able to absent himself from Cairo for the Pilgrimage—thereby also demonstrating his suzerainty over the Holy Cities. His relations with his magnates, although apparently close and cemented by political marriages, were liable to sudden rupture. Even Tankiz al-Husāmī was disgraced and put to death, after nearly thirty years’ service in Syria. In the last months of the sultan’s life, rival court-factions were forming around two of his favourites, Kawsūn (who had married a daughter of the sultan) and Baḥṭāk, although on his deathbed he obtained the semblance of a reconciliation between them. He died in Dhu ’l-Hijja 741/June 1341, having nominated his son, Aḥū Bakr, to succeed him.

(d) The ascendency of the magnates

Although three generations of al-Nasir Muhammad’s descendants succeeded him in the sultanate, the fact that twelve sultans reigned in less than half a century indicates their weakness. They were mostly young and inexperienced, some of them mere children, who lacked the essential power base of mamliq households. Behind these figureheads, the magnates controlled the state, and struggled among themselves for the ascendancy. The period also saw a rise in Circassian recruitment after an intermission during the reign of al-Nasir Muhammad. Political instability appeared immediately after al-Nasir Muhammad’s death. Three weeks later, Kawsūn obtained Aḥū Bakr’s approval for the arrest of Baḥṭāk and the sequestration of his vast wealth and assignments. The fallen amir was sent to Alexandria, where shortly afterwards he was put to death. Then in Safar 742/August 1341, Kawsūn forestalled a plot against himself by the sultan, whom he deposed, substituting an infant son of al-Nasir Muhammad, named (or perhaps nicknamed) Kudjuḵ, i.e. Kūčūk. The new sultan was certainly not more than seven years old, and Kawsūn was the effective ruler until he was overthrown, and his puppet-sultan deposed, in Rajab 742/January 1342. It would be otiose in this article to recount in detail the political history of the later Kalāwūnids. The one sultan in this period who showed some promise of repeating the success of his father, al-Nasir Muhammad, was al-Nasir Ḥasan. Eleven years old when he was first raised to the throne after the killing of his brother and predecessor (Ramadan 748/December 1347), he was deposed in favour of another brother in Qumādā II 752/August 1351. Restored in Shawwāl 753/October 1354, he succeeded in ridding himself of the kingmaker and regent, Sarghmatūgh al-Nāṣirī, in Ramādān 759/August 1358. He then promoted his own mamliqs, chief among them being Yalbughū al-Umāri, and tried to create a power-base of a new kind by conferring high amirates and provincial governorships on awldd al-nds (q.v.), i.e. descendants of the mamliqs, a socially privileged group who nevertheless did not normally form part of the military and ruling establishment. This experiment inevitably aroused the mistrust of the mamliqs, and an opposition faction appeared, headed (against the traditions of mamliq loyalty to the founder of the household) by Yalbughū al-Umāri. The sultan was defeated, captured, and put to death (Qumādā I 762/3March 1361). Yalbughū acted as regent until his own overthrow and death in Rabī’ II 766/December 1366. Sixteen years later, Barqūk b. Anas (q.v.), a Circassian nurtured in his military household, the Yalbughūwīyya, deposed the last Kalāwūnid and usurped the sultanate.

(e) The Circassian Mamlūk sultanate

The Circassian Mamlūk sultanate, which begins with al-Zahir Barqūk’s usurpation in Ramadan 784/November 1382, follows a regular and almost invariable pattern of succession. A magnate would usurp the throne, which on his death would pass to his son. Within a few years at most, the latter would be deposed by another usurper, and the cycle of events would be repeated. But the sultanate was not a prize open to all comers: the usurpers emerged from specific circles, namely the military households of previous sultans. The two principal nurseries of sultans were the households of Barqūk and of Kān b. Bāy (q.v.), each...
of which produced five rulers. Since Ka‘it Bay was a mamluk of Barsbay [q. v.], who was himself a mamluk of Barkuk, the Circassian sultans may be regarded as consisting of a dynasty by mamluk clientage rather than blood descent (cf. Table 2).

The Circassian sultanate faced in its early years a threat comparable to that which al-Zahir Baybars had confronted in the later 7th/13th century—the danger of annihilation by the Turco-Mongol forces of Timur Leng. Barkuk responded by offering asylum in 796/1394 to Ahmad b. Uways the Djalalird [q. v.] expelled from Baghdad by Timur, by establishing a common front with the Ottomans and the Golden Horde, and by replying defiantly to Timur. The storm did not break until 803/1400-1, during the reign of Barkuk’s son, Faraj [q. v.]. He and his forces were compelled to evacuate Syria, which Timur occupied and devastated. He did not, however, attempt to invade Egypt. In Shab‘bân 803/March 1400, he began to withdraw from Damascus, having secured his rank for an advance on the Ottomans.

Although throughout the 9th/15th century the Mamluk sultanate continued to present the appearance of a great power, it was undergoing a prolonged economic and military decline. Its growing economic weakness has usually been ascribed to political factors—the factional conflicts of the magnates, resulting in enfeebled administration, and hence in the decay of agriculture. These disorders were probably rather symptomatic than causative, and the basic reason for the economic decline may lie in the heavy mortality occasioned by successive epidemics of plague. The most serious of these (the Black Death of European history) occurred in 749/1348-9, during the first reign of al-Nasir Hasan, and there were twelve severe epidemics during the last century of the sultanate. Since mortality was particularly high among the mamluks, this must have necessitated very heavy expenditure by the sultans and magnates to keep up their military households. Even so, there seems to have been a marked fall in recruitment. The Royal Mamluks dropped from about 12,000 in the third reign of al-Nasir Muhammad to less than half the number under the Circassian sultans. The plague, however, inflicted its severest damage by its inroads upon the agrarian and industrial workforce. Villages were deserted, irrigation works neglected, and cultivated land went back to waste. The landed revenue of Egypt shrank in the last century of the sultanate from over 9 million dinars to less than 2 million. Alexandria, the centre of the textile industry, suffered badly from the Black Death, and its decline continued in the Circassian period. Both in Egypt and Syria, the weakening of administration and the decline of the sedentary population were reflected in growing tribal pressure on the cultivable areas and the routes. It is in this period that a fraction of Hawwara [q. v.], settled by Barkuk in Upper Egypt, established a domination there which they retained into the Ottoman period.

As the landed revenue decreased, the magnates and sultans made growing depredations upon commerce; e.g. they compelled merchants to buy goods at an artificially-enhanced price (tarh, rimaya), an abuse for which there had been sporadic precedents. The transit-trade, especially in spices, from the Indian Ocean, which had been handled since the 6th/12th century by the group known as the Kârimis [q. v.], was brought under strict control by Barsbay (825-41/1422-30). Qidwa, under Mamluk control from 828/1425, benefited in effect the staple in trade in the Red Sea, and its revenue was shared between the sultan and the Sharif of Mecca. In 832/1428 Barsbay established a monopoly of the pepper trade, forcing up the price at Alexandria to the detriment of the Venetian merchants. His interest in the transit-trade between the Red Sea and the Mediterranean explains two other developments in his reign. Three campaigns against Cyprus, culminating in the conquest of the island (829/1426) and the reduction of its king to a vassal of the sultan, ended the danger to Muslim shipping from this Frankish outpost. The campaigns are of interest as being the only major naval operations undertaken by the Mamluks. Furthermore, Barsbay’s refusal, repeated over ten years (828-38/1424-34), to allow Shâhrûkh the formal privilege of providing a veil for the Ka‘ba indicate a determination to deny the Timurid any locus standi within the Mamluk commercial sphere of interest.

Between the reign of Barkuk at the beginning of the Circassian period, and that of Kânsâw al-Ghawri [q. v.] at its end, the Mamluk sultans were involved in only one major land-war, that fought with the Ottomans between 890/1485 and 896/1491. The underlying cause of this war in the reign of Kâ‘it Bay (872-901/1468-96) was the threat offered by the Ottomans to the marcher-principalties, particularly Elbistan, which since its foundation by the ruling dynasty (Dulkadir, see DHU ‘L-KADR) in the first half of the 8th/14th century had been a Mamluk protectorate. This localized conflict of interests was aggravated by considerations of high policy when, on the accession of Sultan Bâyazîd II [q. v.] in 886/1481, Kâ‘it Bay gave asylum to his brother and rival, Qjem [q. v.]. Although in appearance the Mamluks confronted the Ottomans on equal terms, the outcome of the war was merely to maintain the status quo on the frontiers.

Bâyazîd had been unable to commit all his forces to the war, and the next conflict between the two powers was to reveal the inherent military and political weakness of the Mamluks. As a fighting-force they were obsolescent. Unlike the Ottomans, they had failed to take advantage of the development of firearms, the conservative Mamluk cavalry showing particular reluctance to adopt the use of the arquebus (cultivated only for siege-warfare only) since the later 8th/14th century. A principal cause of the overthrow of Kâ‘it Bay’s son and successor, al-Nâṣir Muhammad (901-4/1496-8) was his recruitment of a force of black arquebusiers. Kânsâw al-Ghawrî attempted to restore the military effectiveness of his state. An arquebuse unit (al-tabaka al-khâmîsa) was set up in 916/1510, but the old prejudice remained, and it was dissolved in 920/1514. He paid attention to the casting of cannon, which had been used by the Mamluks (but for siege-warfare only) since the later 8th/14th century, and he made efforts to revive the traditional cavalry-training.

At the beginning of Kânsâw al-Ghawrî’s reign (906-22/1501-16), the Mamluk sultanate was hemmed in by three great powers. To the north was the Ottoman state, which was now confronted on the east by the new military monarchy of the Safawid Shâh Ismâ‘îl [q. v.]. To the south, dominating the Indian Ocean and threatening the Red Sea, was the naval power of the Portuguese. The Mamluks lacked the maritime traditions and experience to deal with this danger. They received supplies of material and personnel for a naval expedition from the Ottomans in 520/1514. Ottoman-Safawid hostilities, however, in-
volved the Mamluks when Sultan Selim I invaded Syria, probably to safeguard his flank, and inflicted a second defeat on the Mamluks at al-Raydaniyya (29 Dhu 'l-Hijja 922/23 January 1517). Cairo fell, and the last Mamluk sultan, al-Ashraf Tumam Bây, was subsequently captured and hanged. Egypt thus became a province of the Ottoman Empire, and was separately administered from Syria.

(i) The Neo-Mamluks of the Ottoman period

The Ottoman conquest of Egypt was not followed by the extinction of the mamlûks. Indeed, from one point of view, it may be regarded as an episode in Mamluk factional politics, since Selim's victories were facilitated by Mamluk collaborators in opposition to Kânsâw al-Chawrî and Tûmân Bây. The leaders of this faction were the governors of Aleppo and Damascus, Khâ'sîr Bay and Dînjîbîrdi al-âshârî [q.v.], who received their reward from the conqueror, Khâ'sîr Bay being appointed viceroy in Cairo (where he maintained much of the state of the sultans, his predecessors), and Dînjîbîrdi being restored to Damascus. These arrangements marked, however, a transitional phase. On Selim's death in 926/1520, Dînjîbîrdi attempted to make himself independent, but his revolt was suppressed, and he himself killed (927/1521). Khâ'sîr Bay died in 928/1522, and thereafter Ottomans were appointed to both Damascus and Cairo. A last Mamluk rising headed by the kâdsîfs Dînjîm and Înâl was suppressed shortly afterwards.

Mamlûk recruitment and the formation of mamlûk military households nevertheless continued, and provided part of the armed forces of Egypt beside, but distinct from, the seven corps of the Ottoman garrison troops, the most important of which were the Janissaries and the šâsîfs [q.v.]. The establishment of the Mamlûk, nominally 24 in number, bore the Ottoman designation of sanâdîq beyi (whence in the Arabic chronicles sanâdîqiyât, sanâdîq), used as the plural of bašîbîeg, the modern baqâwît, a neologism, but his revolt was suppressed, and he himself killed (927/1521). Khâ'sîr Bay died in 928/1522, and thereafter Ottomans were appointed to both Damascus and Cairo. A last Mamluk rising headed by the kâdsîfs Dînjîm and Înâl was suppressed shortly afterwards.

Mamlûk recruitment and the formation of mamlûk military households nevertheless continued, and provided part of the armed forces of Egypt beside, but distinct from, the seven corps of the Ottoman garrison troops, the most important of which were the Janissaries and the šâsîfs [q.v.]. The establishment of the Mamlûk, nominally 24 in number, bore the Ottoman designation of sanâdîq beyi (whence in the Arabic chronicles sanâdîqiyât, sanâdîq), used as the plural of bašîbîeg, the modern baqâwît, a neologism, but his revolt was suppressed, and he himself killed (927/1521). Khâ'sîr Bay died in 928/1522, and thereafter Ottomans were appointed to both Damascus and Cairo. A last Mamluk rising headed by the kâdsîfs Dînjîm and Înâl was suppressed shortly afterwards.

The central and essential institution of Mamlûk society under both the sultanate and the Ottomans was the military household. This consisted of the mamlûks obtained, trained and emancipated by a master (ustâd), to whom they remained attached by loyalty and more formally by legal clientage (awâlî). This link was indicated by the mamlûk's nishâ. The loyalty felt towards the ustâd was narrowly personal; during the sultanate, it extended, if at all, only in a very attenuated form to his sons or other members of his family. The second bond of loyalty created by the Mamlûk household was the comradeship (âshâshiyât) existing among the mamlûks as brothers. The ustâd, the master (ustâd), the constant propensity of each generation of magnates to recruit new households of mamlûks virtually excluded their blood-descendants (awâlîl nâsî) from military functions, and hence from political power. The second and later generations of immigrant origin thus became absorbed into the Arabic-speaking Muslim society of Egypt and Syria, to the culture of which they made notable contributions.

The principal households were those of the sultans (the Royal Mamlûks), designated from the iṣâb of the founding ustâd, e.g. the Sâlihiyya of al-Malik al-Sâlih Ayyûb, the Žâhirîyya of al-Malik al-Žâhir Baybars etc. Since the mamlûks were immigrants, recruited at any one time principally from a single ethnic group (originally the Kipcak Turks, subsequently the Circassians), they formed in effect a synthetic alien tribe. The factional struggles among the different households, which form a recurrent feature of Mamlûk history, bear some analogy to clan warfare. The mamlûks depended upon their ustâd for patronage and advancement, while the ustâd depended upon his mamlûks for the maintenance of his own power and security. This was clearly the case as regards the royal household. The initial reign of many sultans, e.g. the later Kasûluwinids and the sons of Circassian usurpers, may largely be explained by their lack of mamlûk
The distinctive characteristic of the administrative system was the over-riding control exercised by the sultan through Mamluk amirs. The amirates that had existed under the Ayyubids were organized, probably in Ayyubid’s reign, into three principal ranks. At the top was that of amir al-talâkhdndh, who had the privilege of a military band, and came to be equated with the commander of 100 horsemen and head of a company of 1,000 warriors of the hâlka. With the differentiation of the Bahriyya from the hâlka which had been its matrix, the latter sank into being the bearer of ordinary subjects, to the detriment of the amirs. In theory there were 24 amirs of the highest rank. The second rank was that of amir tkhâlkhânahu, who had the privilege of a military band, and came to be equated with the commander of 100 house troopers. The third rank, amir tkhâsh, had a military household of ten horsemen. This was a hierarchical rank; it did not imply a chain of command, nor was there any kind of subfeudation, although it usually provided a curtas honorum. The military households, including that of the sultan, were maintained by assignments of landed revenue (sing. tkhâsh [q.v.], khâsh). As mentioned above were reorganised by al-Nâṣir Muhammad in 715/1315, thereby laying the fiscal basis of his autonomy. It was the Royal Mamlûks who were promoted to amirates and appointed to the great offices at court and in the provinces. Although their tenure of office was individually precarious, and their assignments were never entirely secure, they were always the potential opponents of the sultan. Repeated attempts to establish a species of contractual relationship by obtaining an accession-compact at the installation of a sultan were never effective in practice; hence many reigns ended in factional revolt, and the deposition (or even murder) of the ruler.

A noteworthy instance of the development of offices in this period, and of the extension of Mamlûk control over the administration, is provided by the history of the vizierate. Under the Ayyûbids, as under previous régimes, the greatest office of state had been the wazzir, a civilian usually trained as a jurist, who served during the ruler’s pleasure as his omnipotent minister. The erosion of the wazzir’s powers began with the establishment of the office of vicegerent (nâ’ib al-sultan), held by a mamlûk, as a permanent post, not an ad hoc appointment during the sultan’s absence on campaign. This development may be dated to the reign of Barâka Khân (676/1277). The close relationship which had existed between the ruler and the wazzir was further weakened in 678/1280 when Khâlidwan promoted the civilian head of the chancery (sâhib diwan al-inâja) to the confidential post of secretary (kâhidh al-sir) to himself. The secretariacy was held by a succession of civilian officials down to the end of the Mamlûk sultanate. The wazzir then was restricted to being the head of the state treasury (al-daula al-sharifa, diwan al-cizârah), but on several occasions Mamlûk amirs were appointed to the office until it was abolished by al-Adil. The new office of vizier (vizier al-dawlat al-sharifa), being the head of the state treasury (diwan al-khud), was also placed under a civilian controller (târikh al-dawlat al-sharifa, khâsh), who absorbed many of the wazzir’s financial functions as the secretary had taken over his chancery functions. Although the vizierate was restored after the reign of al-Nâṣir Muhammad, it was restricted to a limited financial field. Barkûk created two new personal treasuries, diwan al-murjad and diwan al-amlik, which were managed by a Mamlûk great officer of the household force of thirty men. This high steward (wâdar al-dâlîya from wâdar al-dâr al-dâlîya). The militarisation of household offices, and the acquisition by some of state functions, were characteristic developments of the Mamlûk sultanate. In contrast to the Ayyûbids, under whom only four court offices were normally held by the military, the Mamlûks beginning with Baybars quickly developed a hierarchy of such offices. The dawlat al-dâlîya was militarised, and its holder rose from being the bearer of the royal ink-well to being the channel of communication between the sultan and the chancery. Not until the 8th/14th century, however, was this office usually given to an amir of the highest rank. Another officer who acquired public functions was the chamberlain (khâsh [q.v.]), who obtained jurisdiction in disputes between the amirs and the soldiery. Originally, he acted in conjunction with the vicegerent, hence his importance increased when al-Nâṣir Muhammad left the vicegerency vacant after 727/1326. During the first half of the 9th/15th century, the chamberlain’s jurisdiction was abusively extended to ordinary subjects, to the detriment of the Khâsh’s courts. A proliferation of offices took place, e.g. by the end of Barkûk’s reign there were six chamberlains, Faraj raised the number to eight, and by the mid-14th century their numbers had increased still more.

An important military office, which went back to
through Ayyūbid and Zangid antecedents to a Saljūkid institution, was that of the atābak [q. v.], a tenure of the shaykh al-balad, which institutionalised the primacy held by military and political leaders. The title was originally a tenure of the amir al-âsâkir, with the second reign of al-Nâşir Hasan, Shaykhâbân al-âmarâni annexed the title to his office of atābak al-âsâkir, and the two terms were thenceforth synonymous. This was, however, itself an indication that the atābakâiya was coming to imply pre-eminence in rank rather than specific functions. From about the same time also, the title of atābak al-âsâkir comes to be held by amirs in the Syrian provinces, and so loses its uniqueness.

In contrast to the loose Ayyūbid family confederacy of autonomous principalities, the provinces of the Mamlūk sultanate were under close central control, being administered by governors of mamlūk origin serving as the sultan’s delegates (sing. nâ’ib al-saltana). In Egypt, this title was originally held solely by the vicegerent (al-nâ’ib al-kâfi’î), who (as indicated above) was in some respects the functional successor to the wâṣîr. The title of nâ’ib was extended in 761/1365 to the governor of Alexandria (after the brief occupation of the city by King Peter I of Cyprus), and by Barkûk to the governors of Upper and Lower Egypt. The vicegerency was characteristically allowed to lapse by al-Nâṣir Muhammad in 727/1326. Restored after his death, it was overshadowed by the atābakâiya. The last appointment was made by Farâq in 808/1405. The Syrian nâ’ibs held the title of malik al-âmarâni, which had been used by the Sâlûqs of Rûm [see BEGLERBEGI], and which continued to be borne by Khâdir Bey as viceroys of Egypt after the Ottoman conquest. Pre-eminent among them was the governor of Damascus. Although the Syrian governors seemed like kinglets in their provinces, they were subject to various controls, both from the arbitrary will of the sultan and of an administrative nature. Grants of assignments could only pass under the sultan’s signature, or sometimes that of the vicegerent. Several of the principal provincial officials, e.g. the governor of the citadel at Damascus and the chamberlain there, were appointed by the sultan, as was the governor’s secretary, who served as a spy on him. Governors of the Egyptian provinces bore the inferior titles of kâdî or wâlî.

(b) Neo-Mamlūk institutions

The extinction of the Mamlūk sultanate ended the recruitment of Royal Mamlūks, but the formation of mamlūk households continued until the time of Muhammad ʿAli Paša. Detailed information on their structure is only available from the early 12th/18th century with the copious data provided by al-Dhâbârî. By this time the households (sing. bayt) had developed into complex patronage-systems comprising the following elements: (1) the head (watâd) of the household, who might be a bey, an Ottoman garrison-officer, or even a native civilian (e.g. Saûl al-Fâllâh, d. before 1161/1748). (2) Children of the bey (watâd). By contrast with the normal pattern in the sultanate, sons of a watâd were members of the military household, and might succeed to its headship. Daughters or widows of a watâd might marry mamlūks of the household. (3) True mamlūks. The immigration (especially of Circassians) continued as under the sultanate, but there is some evidence of the recruitment for military purposes of black slaves (šeïd). (4) Free retainers recruited in Anatolia and Rumelia. They served chiefly as mounted bodyguards (sing. šarrâd), and were subsequently, it appears, enrolled in the Ottoman garrison-corps as clients (sing. čerak, whence čâvrâk or dîvrâk) of their former employers. They were thus largely excluded from the advancement open to true mamlūks, although the Bosniaks who appear in the Kâsimnâme in the 11th/17th century, and the future Djâzaâr Ahmad Paša, may have started their careers in this way. (5) Allies among the native urban population and the tribes, where Mamlūk factionalism tended to link up with an indigenous division into the rival groupings of Saʾd and Harâm. With the disappearance of the Royal Mamlūks, the old factional polarisation between kâdrînîs and shutâbîn ceased, but factionalism reappeared (perhaps not before the later 11th/17th century) basically to obtain high office and the control of the revenues of Egypt. Although the old kâdrî’s had been abolished after the Ottoman conquest, their place was soon taken by a system of tax-farms (sing. tilâzîm [q. v.]), many of which were appropriated by the neo-Mamlūks. The şuğâr bâys (an Ottoman term which almost certainly conceals their continuity with the amirs of the highest rank under the sultanate) were at one and the same time the leading mulâzims and the chiefs of the neo-Mamlūk establishment. Although they formed a military elite, the bâys were outside the cadres of the Ottoman garrison. Their lack of specific duties enabled them to assume a wide range of functions and to develop into a self-perpetuating ruling group. Their most principal functions were: (1) the command as tender of forces levied for service inside Egypt (e.g. against nomadic incursions) or outside in the Ottoman sultan’s wars. (2) The command of the annual tribute sent by land to Istanbul, held by the amir al-khâzâna. (3) The command of the annual Pilgrimage-caravan to Mecca, held by the amir al-hâdîsh (the form amir al-hâdîsh, which might be expected, is not found in mediaeval or later sources), who accompanied the maḥmal, sent, as during the Mamlūk sultanate, in token of sovereignty. (4) The headship of the financial administration as defârdâr. The earliest defârdârs after the conquest were Ottomans, but from the later 10th/16th century the post was held by a bey. (5) Service as acting viceroy (kâ dinner-makân [q. v.]) in the interim between the withdrawal of a viceroy and the arrival of his successor. In the factional struggles, such an appointment was a means of legitimating the position of the dominant group. In addition, during the 12th/18th century, bâys served as military governors of the sub-provinces of Egypt, thus reducing the status of the former governors, the kâdîs, who were also mamlūks by origin. They became in effect subordinates of the bâys. An important new office which emerged during the 12th/18th century was that of šuğâr al-bulâd, which institutionalised the primacy (ri’bi) held by military and political leaders. The title

* al-Musta'ın, caliph and sultan: 815/1412.
seems to have been held only by members of the beylicate. With the administrative reorganisation carried out by Muhammad 'Ali Paşa as the autonomous viceroy of Egypt, the neo-Mamluk titles and offices became obsolete.

MAMLUK B. HARUN AL-RASHID [see ABU URIYADA].

AL-MAMLUK [see AL-BA'TIHY, DAI L-SUNNAH].

AL-MAMLUK B. 'ABD ALLAH B. HARUN AL-RASHID, seventh 'Abbasid caliph. Born on 15 Rabih I 170/14 September 786, "the night of the three caliphs" (death of al-Hadi, accession of al-Ma'mun), he was the eldest of the eleven sons of al-Rashid. His mother, Maradjil, a concubine originally from Badhghis, died soon after his birth and he was brought up by Zubayda, the grand-daughter of al-Mansur, wife of al-Rashid and mother of Muhammad (al-Amin), who was born in Shawwal 170/April 787. He received a classical education in Arabic, tutored by al-Kisa'i [q.v.], in adab (as a pupil of Abu Muhammad al-Yazidi), in music and in poetry (where his tastes were classical). In religious sciences, he was trained in hadith (and became a transmitter himself) and in fiqh (taught by al-Hasan al-Lul'ui), where he excelled in Hanafi jurisprudence. He was distinguished by his love of knowledge, making him the most intellectual caliph of the 'Abbasid family, which accounts for the way in which his caliphate developed.

In 177/794, in response to the wishes of members of his family, al-Rashid named as his first successor Muhammad (al-Amin), the only caliph born to parents both of whom were 'Abbasids; proclaimed initially in Khurasan by his guardian al-Fadl b. Yahayä al-Barmaki [q.v.], he subsequently received the bay'a in Baghdad. As for 'Abd Allah (al-Ma'mun), he had to wait until the age of puberty to be declared second heir of al-Rashid, in 183/799, under the guardianship of Dja'far b. Yahayä al-Barmaki, the caliph's favourite. While reviving the Marwanid tradition of appointing two heirs to the throne in order to guarantee the stability of the regime and the future of the dynasty, al-Rashid made an innovation in accepting the appointment of a third successor, al-Käsim (al-Mu'tamim), the son of a concubine, sponsored by his 'Abbasid guardian 'Abd al-Malik b. Sâhâb [q.v.].

The protocol was solemnly proclaimed, during the pilgrimage of 186/802, in Mecca: the unity of the empire was re-affirmed by the existence of a single caliph-designate, Muhammad (al-Amin), residing in Baghdad, supported by his two heirs who were given charge of key-provinces: greater Khurasan, the heartland of the 'Abbasid régime since the success of the da'wa hâdžîmiyya (132/750), was entrusted to 'Abd Allah (al-Ma'mun) and the war-front in the struggle against the Byzantine Empire (al-Djazira and northern Syria), a major pre-occupation of al-Rashid, placed under the authority of al-Käsim (al-Mu'tamim). This interdependence between the different groupings of the empire conferred autonomy on Irîjâjîya, where the authority of the Aghlabïds was recognised in 184/800, with the purpose of containing the Kharidjîs, the 'Alids and the Umayyads who had subsequently in founding principalities in the Magrib and in al-Andalus, in the second half of the 9th/10th century.

On his return from the pilgrimage, al-Rashid rid himself of the patronage of the Barmakids, ordering the execution of Dja'far b. Yahayä on the night of 1 Safar 187/29 January 803, and arresting al-Fadl and his brothers, who were imprisoned at al-Râfikâ. Henceforward, 'Abd Allah (al-Ma'mun) had as his guardian al-Fadl b. Sahl, son of a Zoroastrian from a village near Baghdad, Cam the Zoroastrian. Cam the Zoroastrian was Barmakid and ultimately converted to Islam, in 190/806, assuming the role of kâthî-tutor, thus becoming qualified for the post of future vizier on the accession of al-Ma'mun.

At the age of eighteen, 'Abd Allah married his cousin, Umm Isâ, daughter of Musâ al-Hadi, who bore him two sons (Muhammad al-Asghar and 'Abd Allah), born in 192/806, one of whom contributed to In 192/806, having stabilised the war-front with the Byzantine empire, al-Rashid took personal charge of the situation in Khurasân, which was disturbed by the revolt of Ra'if b. Layth, grandson of Našr b. Sayyâr (the last Umayyad governor of Khurasân), against the centralising policy of the governor 'All b. Isâ b. Mâhân, who represented the abnâ' al-dawla (Khurasânians resident in 'Irâk). Accompanied by 'Abd Allah (al-Ma'mun) and al-Fadl b. Sahl, but also by the hadjib-vizier al-Fadl b. al-Rabî', successor to the Barmakids at the head of the central administration, he set out, but died at Tûs on 3 Dîumada II 193/24 March 809, al-Ma'mun having preceded him to Marw with a part of the army. Immediately, the new caliph in Baghdad began to take measures designed to reinforce the position of the central power in opposition to the autonomous aspirations of greater Khurasân, in line with the policy that had been in force for fifty years; he ordered the return of the army and of the treasury to Baghdad, which deprived the prince-governor al-Ma'mun of the means to "pacify" rapidly and completely the troubled regions (Transoxania; Sistan-Kirmân, disturbed by the revolt of the Kharidjî Hamza since 179/795; etc.). Nevertheless, al-Ma'mun did not lack the ingenuity to consolidate his position in confrontation with the caliphate, and following the example of his father, he devolved his responsibilities upon the Sahâls, who received full powers to manage affairs and to safeguard his rights of inheritance to the caliphate, which were sealed in the Ka'ba. A process of pacification and mobilisation of the forces of the eastern provinces was achieved by means of the recognition of the autonomy of local chieftains, the support of the aristocracy, which saw in the potentialities of the empire an opportunity of gaining unprecedented wealth and prestige, an increase in the wages of the army, the reduction of the kharâj by a quarter, the restoration of the efficiency of the administration and recourse to the mazâ'îm [q.v.], regularly presided over by al-Ma'mun. Particular efforts were applied in the direction of the fadâbâh and mutakallîmûn suffering persecution in 'Irâk (the Mu'tazila), whose opinions were canvassed. These various concessions, following the line of the Barma-kid policy of al-Fadl b. Yahayä, as practised at the time of his recruitment of an 'Abdâ'îs madâ'în (army (in 177/794), had the expected effects in regard to the maintenance of the territorial integrity of the province subject to the authority of al-Ma'mun (ending the various insurrections, except that of the Kharidjî Hamza in Sîstân) and the rallying of local populations to the "son of their sister" and a member of the Family of the Prophet whose rights to the imâmâ of the umma had been endorsed by the da'wa hâdžîmiyya, installed at Marw.

Similarly, in the West, supported by his hadjib-vizier al-Fadl b. al-Rabî' b. Yûnus, chief of the ma'dîrî of the caliph, whose role had been augmented at the expense of the kâthî of the administration
(represented by the Barmakids), his confidential ally Bakr b. al-Mu'tamir (the holder of the Seal), their chief Bakr b. al-Mu'tamir, chief of the Abnā\(^3\) (determined to preserve their privileges at the expense of the autonomist aspirations of Khurāsān), and the surviving Barmakids, including Mūsā b. Yahyā, who rallied to his cause, while Muhammad rejoined the camp of al-Ma'mūn. 'Abd b. Šāhī, the principal supporter of al-Ma'mūn, was arrested. Rule of law was reinstalled, and al-Ma'mūn was trusted to Šabīb b. Naṣr, grandson of Mālik b. al-Haytham al-Khuţā'ī (one of the twelve nukabā\(^3\) of the da'īwa hākimiyā, who became the confidential ally of Abū Muslim al-Khuţārānī), while Egypt, governed by Abd al-'Azīz b. 'Abd al-Raḥmān al-Asḍī (descended from a Ḥāshimitе da'ī'ī, former governor of Khurāsān), was potentially dissident. Only the Hijāz, which had benefited from irrigation projects and from the riches of Zubaydā, was firmly behind al-Ma'mūn (at the expense of the ʿAldīs). This bipolarisation has been the object of a historical misunderstanding, with the eastern provinces being identified with “Maghrib” and the western provinces with the contemporary Arab countries. In fact, greater Khurāsān extended only as far as Rayy and Hamadān (in the west). Mūsā b. Fārsī (a supporter of al-Ma'mūn) and the most advanced centres of Islamisation and Arabisation in the period of al-Ma'mūn were situated in al-Ma'mūn's empire (divided between al-Ma'mūn and al-Ma'mūn) than in the former Roman-Byzantine empire (Syria-Egypt); cf. R. W. Bulliet, Conversion to Islam in the medieval period: an essay in quantitative lexicostatistics, Cambridge, Mass.-London 1979. Likewise, the rivalry between al-Ma'mūn and al-Ma'mūn is not explained by the origin of their mothers (Arab and Iranian), in view of the patrilineral system of the ʿAbbāsid family, recalled by al-Maṣūr, son of a Berber concubine, to Muhammad al-Nāf al-Zakkiyya (who prided himself on being of pure and free descent on both the paternal and maternal side) to refute the legitimacy pretensions of the ʿAldīs (in 144/762; cf. al-Tabarî, iii/1, 211-15). Al-Ma'mūn attempted to copy the example of al-Maṣūr (in regard to 'Īsa b. Mūsā), of al-Maḥdi (in regard to the same 'Īsa b. Mūsā), and of al-Hādī (in regard to his brother al-Raḥīq), seeking to institute a direct line of succession, at the expense of his brothers (al-Mu'tamin and al-Ma'mūn). This attempt to modify the established order had its supporters, the mawāfi of the caliph, and the abnā\(^3\) al-da'wla of Irāk, whose privileges were threatened by the success of regional autonomism, beginning in the Maghrib and extending to greater Khurāsān, the pillar of the ʿAbbāsid régime. Under these circumstances, it comes as no surprise to find the eastern provinces supporting the defender of their aspirations. This was the first time that their status was officially defined (by the “Meccan Documents”) and that their representative was not only an ʿAbbāsid prince but also an heir to the caliphate. In other words, if victorious, the Khurāsānīs would win their autonomy and be assured of an influential position in the structure of the state. For al-Ma'mūn, it was his good fortune to reside beyond the jurisdiction of the reigning caliph, thus avoiding the fate undergone by 'Īsa b. Mūsā (obliged to abdicate in favour of the sons of al-Maḥdi) or that all but suffered by al-Raḥīq (whose son was an Hādī). His brother al-Mu'tamin did not have the same opportunity and his case confirmed a contrario the lot of al-Ma'mūn.

The conflict began in 194/810, sparked off by the appointment of Khurāsān's Mu'tamīn, the young son of al-Ma'mūn, to the list of heirs to the caliphate: al-Ma'mūn and al-Mu'tamin. A delegation was sent to Marw to persuade al-Ma'mūn to return to Baghdaḏ, where he was to take on the role of adviser of the caliph. Offered by his refusal, al-Ma'mūn attempted to re-assert his authority over the whole of the empire; he demanded the sending of the surplus revenues of certain provinces (Rayy, Kūm, and western Khurāsān), then the appointment of a new chief of fiscal agents and finally the appointment of a chief of postal services or intelligence officer at Marw, al-Ma'mūn's capital. The perspicacity of al-Fadl b. Saih, and the determination of the Khurāsānīs to defend the autonomy that they had finally acquired, helped al-Ma'mūn to refuse any modification of the letter of ‘Meccan Documents’ and thus to avoid any involvement with the mechanism set in motion by the advisers of al-Ma'mūn with the object of threatening his position. The rift opened wide in 195/811, with the removal of the caliph's name from the coinage and the tīrāt of Khurāsān. Taking advantage of the strength of his position, al-Ma'mūn resolved to settle the question of relations between the central power and Khurāsān, while there was still time. He proclaimed his son Mūsā b. Fārsī (son of an ʿAldī) second heir (at the expense of al-Mu'tamin), in flagrant violation of the “Meccan Documents”. Al-Ma'mūn replied by taking the title of Imam, following the example of the Imam Ibrāhīm, son of Muḥammad b. ʿAlī, heir of Abū Ḥāshim (son of Muḥammad b. ʿAlī). This return to the principles of the first da'īwa hākimiyat at Marw was further underlined by appeals sent to the various Arab tribal factions of Khurāsān, exalting the role of the nukabā\(^3\): Abū Dāwūd Khālid b. Ibrāhīm al-Dhuhāl b. Shābīyānī (confidential ally of Abū Muslim), Khaṭṭaba b. Shābī al-Ta'ā (commander of the revolutionary army), Mūsā b. Kāl b. al-Tamīnī, Mālik b. al-Haygān al-Khuţā'ī, etc. In addition, the authority of the Imam is of a more recent origin than that of the Amir al-Mu'minīn, this prefiguring the “imperial-papal” policy of al-Ma'mūn. Communications between Irāk and Khurāsān were cut, and the frontiers guarded to prevent the sending of intelligence to Baghdaḏ, while al-Ma'mūn's intelligence service was in action at the court itself (through the efforts of al-'Abbās, son of the former heir to the caliphate 'Īsa b. Mūsā, and other informers recruited by al-Fadl b. Saih).

The “Meccan Documents” were undermined and then revoked at the behest of al-Ma'mūn, who finally ordered his brother to recognise his complete authority over Khurāsān. The rupture became total with the appointment of 'Alī b. 'Īsa b. Māḥān, the deposed former governor of Khurāsān, as governor of Ḥijāb (the provinces of Kuṃm, Nihāwand, Hamadān, Isfāhān), with the mission of restoring the caliph's authority over Khurāsān (Dhūmādsā II 195/3 May 811). The caliph's army was composed of the abnā\(^3\) "sons" of the Khurāsānīs, army garrisoned in Irāk, of whom some were supporters of the conflict with Khurāsān (notably 'Alī b. 'Īsa b. Māḥān), while others showed themselves loyal, in spite of the reservations of some (in particular Khuzayma, son of Khālid b. Khuzaym al-Yamānī, governor of the region bordering on the Byzantine empire, the Qāsimīs [cf. al-Qāsimīs: ʿAbd Allāh b. Khaṭtab b. ʿAbd Allāh] and still another al-Ṭābas). Consequently, it is not appropriate to identify the par-
tisans of al-Amm with Arabs bent on vengeance, since this leads to a flagrant ... 812). The siege of Baghdad lasted thirteen months, prolonged by the popular resistance of the Khuzaa [q.v.], people Arabs or conquered and to solve the social problems of the empire. The politico-military "establishment" was divided on the question of centralisation as opposed to the autonomy of provinces, whose supporters were likewise of Arab and non-Arab origin. It is for this reason that a certain number of artisans of al-Amm with Arabs bent on vengeance, since this had destroyed the Kays army of al-Djazira, was governing Egypt in the name of al-Amm); Zuhayr, son of al-Musayyib b. Zuhayr al-Dabbâ, a native of Balkh; this former supporter of 'Isâ b. Mûsá (who accepted the idea of a partial autonomy for the Khuzarâns), having espoused the cause of al-Hâdi and become a confidential ally of al-Rashid, took the part of al-Ma'mûn, who appointed him chief of his bodyguard (although his son Hâtim was governing Egypt in the name of al-Amm); Zuhayr, son of al-Musayyib. They were on the side of al-Ma'mûn (who appointed him governor of Sittân), as did his brother al-'Abbâs, retained as chief of police by al-Ma'mûn (although another brother, Muham- mad, was an army officer in Baghdâd in the service of al-Amm); Shabib, grandson of Khaibar Shabib al-Mu'izzî, was appointed governor of al-Ma'mûn (who appointed him head of the Kûmân); the other of his family supported al-Amm; Muhammad b. al-'Ashârâ of al-Khuzaâ, whose family was resident in a village of Bûkharâ, supported al-Ma'mûn, while his grandsons of his namesake (who was a deputy of the nakhî) were in the camp of al-Amm.

The reserved attitude of 'Abbâd Allah, son of the nakkâsh al-Ma'mûn, who had borne a grudge against al-Ma'mûn since the latter ordered the sending of the army of al-Rashid and the treasury to Marw, in 193/809. Once more, Tâhir was victorious, and 'Abbâd al-Rashid was killed (196/812). The whole of the province of Dîbâlî was now conquered, opening the road to Irâq. To block the route of the Khuzarâns, al-Amm mobilised two new armies, one of 20,000 and the other of 20,000 Arabs commanded by the KaysAhmad b. Mazyad al-Shây'bânî, representing the Rabî'a of al-Djazira. Once more, Tâhir skillfully succeeded in playing these two sections of the army against each other by exploiting their rivalries (Kayis chieftains of their rights by the Khuzarâns for 60 years!). These repeated reverses suffered by the abnâ' of Irâq and the impracticability of mobilising the Arabs of al-Djazira forced al-Amm to attempt to raise levies in Syria, in spite of the recent revolt of the Sufyânids against him (195/811). 'Abbâd al-Malik b. Sâlih was reinstated as governor of the 'A'sâ'im of al-Djazira and Syria, and Husyân son of 'Ali b. 'Isâ b. Mâhân, his lieutenant, was sent on a recruiting mission to Syria. However, the division between al-Ma'mûn and Kâbil (Yemen) did not constitute a propitious climate, all the more so in that the Arabs of Syria had learned lessons from their participation in the struggle for the caliphate, and the support given to the 'Abbasids 'Abbâd Allah b. 'Ali against the caliph al-Manṣûr (136/754). Finding his task impossible, al-Husyân organised a coup d'état at Baghdâd; in Rajab 196/March 812, he ordered the arrest of al-Ma'mûn and proclaimed his brother al-Ma'mûn caliph. Nothing better illustrates the divisions of the abnâ' than the counter-coup which restored the caliphate of al-Amm, while al-Husyân was sent away to fight the army of Tâhir, but was killed in retribution. Henceforward, the bâji-vizier al-Fadîl al-Rabî, one of the leading instigators of the conflict with al-Ma'mûn, seeing the cause of al-Amm to be finally lost, decided to make a move towards the future by leaving the political scene and plunging into obscurity. He was replaced by the kâmil al-sîr of al-Amm, Ismâ'il b. Şuba'b al-Harrânî, who had little to say regarding the opening of further hostilities with al-Ma'mûn.

On the same date, al-Ma'mûn was officially proclaimed caliph at Marw, while al-Fadîl b. Sâlih was endowed with the title of 'Abd 'Allah (a dual civil and military command), and Tâhir al-Husyân received orders to march on Khuza'în, which was defended by a Muhallabîd, Muhammad b. Yazîd b. Hâtim, resident at Ahwâz. Tâhir won the battle, and this forced the Muhallabîd of Başra, Ibn Abî 'Uyayna, to assure the position of his family by rallying to the new caliph al-Ma'mûn. In return, he was appointed governor of Eastern Arabia (Babrayn, Yamāma and 'Umân), while an 'Abbasîd prince, Ismâ'il b. Dja'far, was charged with the government of Başra. Tâhir's troops marched on Kufa, where they encountered some resistance; they then set out towards al-Madia'în, which they occupied, and finally arrived at a point west of Baghdâd. A second Khuzarâns army, commanded by Harthama b. al-A'yan, one of the leading military chiefs under al-Rashid, advanced as far as al-Ma'mûn in order to attack the caliph from the east (Dhu 'l-Ḥiḍâya 196/August 812). The siege of Baghdâd lasted thirteen months, prolonged by the popular resistance of the 'Ayyûsîn [q.v.].
of humble origin, who exploited the situation to their advantage. This urban guerilla warfare checked the advance of the regular army of Tahir b. al-Husayn, who began a destructive bombardment of the "City of Peace". The provinces situated to the west of al-Ma'mun recognised the authority of al-Ma'mun in 197/813: the Hijāz (where the pilgrimage was under the supervision of al-'Abbās, son of Mūsā b. Ṣa'īd, an early ally of al-Ma'mūn); Egypt, where the ābīn were divided between partisans of al-Maḥdī (al-Āmin) and those allied to al-Ma'mūn, supported by the Yemeni Arabs (against the Kaysīs); Irīkiyya, autonomous kingdoms of the Aghlabids, which he had abolished the power; northern Syria and al-Djazīra, which had lost their governor Ābd al-Malik b. Ṣāliḥ (d. 196/812), took advantage of the situation to establish their autonomy, an example followed by Ādharbāyjān and Armenia.

As for al-Āmin, after squandering the resources of the public treasury (several hundreds of millions of dirhams), he lost his supporters, who negotiated with Tāhir b. al-Husayn in order to safeguard their interests. Finally, he was obliged to seek the protection of Ḥarthāma b. al-ʿAṣayn. But Tāhir captured him and ordered his execution on the night of 24-5 Muharram 198/24-5 September 813; this was the first time that an ʿAbbāsid caliph was thus humiliated and put to death by rebel soldiers, whose conduct contrasted with the more respectful and conciliatory attitude of the veteran Ḥarthāma b. al-ʿAṣayn.

The government of Irāk was entrusted to al-Ḥasan, brother of al-ʿAfḍal b. ʿAbd al-Fāṭīma, as was Basra (where Zayd al-Nāʾīr "the Firebrand" was arrested and sent to Marw). Other Shīʿites were disarmed in the Hijāz and the Yemen: at Mecca, the envoy of Abu ʿl-Sarayyār succeeded in organising the proclamation of Muḥammad al-Dībājī as ʿAlī b. Maḥsūn in 198/24-5 September 813; this was the first time that an ʿAbbāsid caliph was thus humiliated and put to death by rebel soldiers, whose conduct contrasted with the more respectful and conciliatory attitude of the veteran Ḥarthāma b. al-ʿAṣayn.

Other Shīʿites were disarmed in the Hijāz and the Yemen: at Mecca, the envoy of Abu ʿl-Sarayyār succeeded in organising the proclamation of Muḥammad al-Dībājī as ʿAlī b. Maḥsūn in 198/24-5 September 813; this was the first time that an ʿAbbāsid caliph was thus humiliated and put to death by rebel soldiers, whose conduct contrasted with the more respectful and conciliatory attitude of the veteran Ḥarthāma b. al-ʿAṣayn.

The government of Irāk was entrusted to al-Ḥasan, brother of al-ʿAfḍal b. ʿAbd al-Fāṭīma, as was Basra (where Zayd al-Nāʾīr "the Firebrand" was arrested and sent to Marw). Other Shīʿites were disarmed in the Hijāz and the Yemen: at Mecca, the envoy of Abu ʿl-Sarayyār succeeded in organising the proclamation of Muḥammad al-Dībājī as ʿAlī b. Maḥsūn in 198/24-5 September 813; this was the first time that an ʿAbbāsid caliph was thus humiliated and put to death by rebel soldiers, whose conduct contrasted with the more respectful and conciliatory attitude of the veteran Ḥarthāma b. al-ʿAṣayn.
Ma'mun against him and ultimately he had him executed in Dhu 'l-Kacda 200/June 816. In consequence, Hātim, son of Harthama b. al-'A'yan and governor of Egypt, wanted to distance himself from al-Ma'mun, with other local chieftains of Adhbarbadgan, Bābak al-Khurrāmī [q. v.] went into action in 201/816 at Badhīd [q. v. in Suppl.] in the mountainous region to the south of the Araxes.

The struggle for power in Baghdad and the attempt to impose 'Ali al-Riḍā as successor to al-Ma'mun granted a respite to the autonomists of Adhbarbadgan, of Armenia, of the Musūm of northern al-Djazira and Syria, of Syria and of Egypt. In fact, the resistance of the abna' forced al-Hasan b. Sahl to abandon the capital. A triple power was established there with the appointment of al-Manṣūr b. al-Mahdī, son of a Persian concubine, as delegate of al-Ma'mūn, from 25 Dju'mādād II 201/16 January 817 onwards. In addition, the urban lower classes supported the movement of Sahl b. Salāma al-Anṣāri, a native of Khurāsān, in the quarter of al-Harbiyya: "[the command] al-amr bi 'l-ma'rif wa 'l-nahy 'an al-munkar became identified more or less with political independence and with the self-government of small social groups" (J. van Ess, Une lecture à rebours de l'histoire du mu'tazilisme, in REI, xxvii/1 [1979], 68 = Extrait hors série 14, Paris 1984, 127), while Abu l-Hudhayl and al-Nazāzīm, who had in the meantime transferred to the court of al-Ma'mūn, worked, on the contrary, for a policy of reconciliation with the 'Abbāsid power. In other words, the process of recovery of the second half of the reign of al-Ma'mūn, was beginning to evolve. In the meantime, on 2 Ramadān 201/24 March 817, al-Ma'mūn proclaimed 'Ali b. Mūsā al-Kāẓim as his successor (at the expense of al-Mu'tamin, his brother), with the title of al-Riḍā min al-Mu'mammad, and abandoned the black colour of the 'Abbāsid in favour of the green colour (the Khāṭib al-khāḍir of the Prophet). Henceforward, the choice of caliph-İmām was to be made from among the descendants of Hāshim, common ancestor of Muhammad and of his uncles al-'Abbās and Abū Ṭālīb the father of 'Alī (a census taken in 818 recorded 30,000 Hāshimītes, who had their own nabi). When the news reached İrāq the stretch of four months lasted during which the separatists reasserted their acumen against this assault on their "acquired rights": the 'Abbāsid governor of Başra İsmā'il b. Ḍafar b. Sulaymān b. 'Alī refused to wear green, while in Baghdad, the sons of al-Mahdī led the opposition. When al-Manṣūr (whose mother was al-Buhturīyya, daughter of the Dabūyīd ispahbad, governor of Tabaristan, Khurāsān) refused to be proclaimed caliph, his half-brother İbrahīm b. al-Mahdī (whose mother was ʾShaḳla, daughter of the Masmūḥīn of Damāwānd, deposed at the time of the conquest of this district) accepted the title (28 Dhu l-Hijād 201/17 July 817) and chose his nephew Ishāḥ b. Mūsā al-Ḥādī, brother-in-law of al-Ma'mūn, as heir to the throne. He was supported by the 'Abbāsid princes, notably İbrahim b. Mūḥammad b. 'Abd al-Wahhāb b. İbrahim al-İmām (known as Ibn ʾAṣāla), Abū Ṭālīb the future al-Mu'taṣīm, the mawādī of the preceding caliph al-İmān, al-Fadl b. al-Rabı' (who returned to his post of ḥāṭib at the court), al-Sinbī d. ʾShaḥāk, re-appointed chief of the police, and the abna', comprising the sons of both 'Alī b. ʾĪsā b. Māḥān and of Abū Khaḍīl, and even of former partisans of al-Ma'mūn, including al-Muṭṭala'b b. 'Abd Allāḥ, grandson of the nabi Mālik b. ʾAbd Allāḥ b. Khuzaymī, or Nu'aym b. Khāzim b. Khuzaymī al-Tamīmī, whom al-Ma'mūn had appointed his brother Khuzaymī, who had remained loyal to al-İmān. In other words, this was the revival of the war between the two camps, dormant since 198/813. The fact that al-İmān was the son of an Arab wife, and İbrahim b. al-Ma'mūn that of a Persian concubine, like al-Ma'mūn himself, and especially İbrahim b. al-Riḍā, was exploited. İbrahim was waged, in terms of the relations between İrāk, (capital Baghdād) and Khurāsān (capital Marw).

The new caliph İbrahim b. al-Ma'mūn succeeded in extending his authority over the capital by putting and end to the activities of Sahl b. Salama al-Anṣāri in the quarter of al-Harbiyya. Then he sought to take control of Kūfa, from which the 'Alīd governor al-İbāhī, brother of 'Abd al-Riḍā, was expelled (Djumādā I 202/November 817). But Wāṣit served as a headquarters for al-İsan b. Sahl, who regained control of Başra. The governor of Egypt, 'Abd al-ʾAzīz b. 'Abd al-Raḥmān al-İzdī, rallied to İbrahim b. al-Ma'mūn, while the autonomous amīr of Ifrikiyya remained neutral as before. The gravity of the situation was hidden from al-Ma'mūn by al-Fadl b. Sahl, until 'Ali al-İrādī disclosed to him that İbrahim b. al-Ma'mūn had been proclaimed caliph, rather than amīr, in Baghdād. Henceforward, at the age of thirty-one years, al-Ma'mūn decided to take personal control of affairs; he recognised that a military solution was not appropriate and that only agreement between the social elements of the empire was capable of saving the régime, by enlarging its social base as a means of halting the drift towards the collapse. In the diffusion of the concession to the aristocracy of İrāk was effected through the announcement of his return to Baghdād, whose rôle as capital of the empire was thus assured; on 10 Ṭaḥā Ṭaḥā 202/22 January 818 al-Ma'mūn left Marw with the court, the administration and the army, leaving ʾGhassān b. ʾAbbād, a cousin of the Sahīds, as governor of Khurāsān at Marw. At Sarakhs, al-Fadl b. Sahl, who had attempted to usurp the authority of the caliph, suffered the same fate as the Barmakids; he was assassinated at the instigation of al-Ma'mūn (2 ʾSha'b 202/13 February 818), but unlike the Barma kids, the other Sahīds were spared; besides controlling Khurāsān and southern İrāk, they held influential posts in the central administration, with the promotion of al-Ḥasan b. Sahl to the post of vizier-amir which had been held by his brother al-İsfāḥānī. A matrimonial alliance was concluded to consolidate this situation, with the betrothal of al-Ma'mūn to Būrān, daughter of al-İsan b. Sahl (the marriage was to be celebrated in Ramadān 210/December 825). Two months later, al-Ma'mūn left Sarakhs for Tūs, making no attempt to hasten the issue. As for İbrahim b. al-Ma'mūn, he was harpered by lack of financial resources and was obliged to combat opposition movements: on the part of ʾAṣad, who raised a revolt in the quarter of al-Harbiyya (suppressed by ʾĪsā b. Mūḥammad b. Abū Khaḍīl); on the part of Maḥdī b. Abīn Ṣalāh (al-Ḥurtī), in the region between Baghdād and Madai'īn (the headquarters of İbrahim b. al-Ma'mūn), who was defeated by Abī Ṭālīb (al-Mu'taṣīm); and on the part of certain abna' who sought to come to terms with the generals of al-Ḥasan b. Sahl. Altered to this conspiracy, in which al-Manṣūr b. al-Ma'mūn was implicated, İbrahim b. al-Ma'mūn returned to Baghdād (14 Safar 203/21 August 818) and had his half-brother arrested, as well as Khuzaymī b. Khaḍīl, the other Sahlīd, although al-Muṭṭala'b b. 'Abd Allāḥ b. Khuzaymī succeeded in escaping. It was then that the army of al-Ḥasan b. Sahl captured al-Madai'īn and the Nahr Dīyās. Meanwhile, in Khurāsān, 'Alī al-Riḍā met with the arrest of İbrahim b. al-Ma'mūn (2 Safar 203/5 September 818), and the Shi'īs were convinced that al-Ma'mūn had had him poisoned
(whence the name of *Mashhad* [q.v.], given to this place). Not only was a heavy taxation levied, but in *Baghdad*, certain *abāz,* 2 conspired against Ibrahim b. al-Mahdi; [33] b. Abi Khalid was supposed to capture him and hand him over on Friday 29 Shawwāl 203/205 May 819, but his plan was revealed and he was imprisoned. To free him, the family of the Banū Khālid entered into conflict with Ibrahim b. al-Mahdi and rallied to the cause of al-Ma'mūn (*Dhu 'l-Kaʿda* 203/205 May 819), who was in *DJurdjān* at this date (in other words, it had taken him sixteen months, since leaving *Marw, to cover the twenty journey-stages which separated this town from *DJurdjān*). Feeling the cause lost, once more, the *bāḍiḡ al-Fadl* b. al-Rabiʿ deserted his caliph and his post and plunged again into obscurity. As for Ibrahim b. al-Mahdi, he was reduced to using his rival Sahl b. Salama al-Ansar in an attempt to mobilise the lower classes of *Baghdad.* After two years as caliph, Ibrahim decided to leave the political scene, at the same time escaping from a conspiracy of some of his military chiefs who had plotted to hand him over to al-Hasan b. Sahl (16 Muharram 204/13 July 819). The authority of al-Ma'mūn was restored in *Baghdad,* while al-Hasan b. Sahl withdrew from political life (on account of his ill-health). In other words, the way was clear when al-Ma'mūn (Dhu 'l-Kaʿda 203/May 819), who was in *DJurdjān* at this date (in other words, it had taken him sixteen months, since leaving *Marw, to cover the twenty journey-stages which separated this town from *DJurdjān*), entered into conflict with Ibrahim b. al-Mahdi and imprisoned. To free him, the family of the Banū Khalid was supposed to capture *Baghdad,* certain conspiracies of some of his military chiefs who had plotted to hand him over to al-Hasan b. Sahl (16 Muharram 204/13 July 819). The authority of al-Ma'mūn was restored in *Baghdad,* while al-Hasan b. Sahl withdrew from political life (on account of his ill-health). In other words, the way was clear when al-Ma'mūn (Dhu 'l-Kaʿda 203/May 819), who was in *DJurdjān* at this date (in other words, it had taken him sixteen months, since leaving *Marw, to cover the twenty journey-stages which separated this town from *DJurdjān*), entered into conflict with Ibrahim b. al-Mahdi and imprisoned. ...
ners (India) or political enemies (Byzantium). Scholars of all persuasions (Muslims, Christians, Jews, Zoroastrians and Šabians) and from different provinces of the empire (Khârâz, Farghânâ, Khurâsân, Tabaristan, al-Djazîra and Irâk) contributed to the advancement of Arab science, heir to the sciences of antiquity, adopted and adapted according to the requirements of Arab-Islamic civilisation.

These borrowings from various foreign cultures were not to the taste of the traditionists (muhaddîthûn) who adhered to the Kur’ân and the Sunna as sources of the law. While certain tafsîrûn were supporters of the religious orthodoxy (‘ilm) in questions of jurisprudence (particularly the Hânâfîs of Irâk), the majority tended to distrust divergences of opinion and, to maintain the purity of religion, re-affirmed the authority of the Kur’ân completed by the Sunna (at that time being edited in textual form, a process begun by Mâlik b. Anas).

Al-Ma’mûn applied himself to encouraging politico-religious controversies, on the one hand between representatives of different religions (cf. G. Tartar, Dialogue islamico-chretien sous le calife al-Ma’mûn. Les épîtres d’al-Hâshimi et d’al-Kindî, doctoral thesis, Univ. of Strasbourg, ii, 1977, repr. in the Bulletin Ecclésiastique, special issue, October 1982; Gudjastâk Aâbâshî, ed. and tr. A. Barthélemy, Paris 1887; the subject is a polemic between a Zoroastrian converted to Islam and a Christian). On the other hand, and most of all, between ‘ulamânî of the different tendencies with regard to the interpretations of Islam. Aware of the gulf between Mu’tazîlîm concepts (hitherto classed as zandaka) and those of the fâkalîs and muhaddîthûn, opposed to the notion of the created Kur’ân, al-Ma’mûn was at pains, over the years, to promote the Mu’tazîlî point of view, of which the political implications were obvious: the Imamî, seeking to correct the inequitable effects of the established order (particularly in terms of the taxation levied on citizens) borrowed from the Mu’tazîlîs that which he judged necessary for his purpose, this being the dogma of the created Kur’ân (only God is uncreated and eternal), which he was able to use in rectifying the order himself, by means of his knowledge (‘ilm). This perspicacity brought him close to the example of the Imam, the first of the Companions of Muhammad, who came to have understood that a practical interpretation of Islam was necessary after the upheavals set in motion by the success and the extent of the Arab conquests (634-44).

Furthermore, with the object of wooing the support of the Shi’ites, the Imam was proclaimed “the best of the companions” (imâm), and entrusted to Abu Ishâq Muhammad (al-Mu’âsîm, successor to al-Ma’mûn) and charged with the government of Egypt, where the situation was explosive. In 212/828, he took control of the armed forces, and divided them into three main army groups (each comprising a company of abnîs, troops of the ‘Âdâbîm and recruits drawn from the eastern provinces): the first under the command of Idhâbîs, charged with the maintenance of order in Irâk and in Djîbl and Fars, adjoining greater Khurâsân, which was entrusted to Talba b. Tâhir; the second under the orders of al-Abâbîs b. al-Mâ’mûn (responsible for the war-front in the struggle against the Byzantine empire in al-Djazira and northern Syria); and the third entrusted to Abû Ishâq Muḥammad (al-Mu’âsîm, successor to al-Ma’mûn) and charged with the government of Egypt, where the situation was explosive. In fact, from 214/829, the Mothems and the Copts fomented a revolt against the system of taxation and inflicted a defeat upon the forces of al-Ma’ṣâm. In northern Adhârâbâydjân, Bâbak al-Khurrami succeeded in killing Muhammad b. Humâyad al-Tâsi (214/829) and repelling his army, forcing al-Ma’mûn to charge ‘Abd Allâh b. Tâhir, veteran of the pacification of al-Djazîra and then of Egypt, with the suppression of this movement. However, before being able to intervene against Bâbak, ‘Abd Allâh b. Tâhir was transferred to Khurâsân on the death of his brother, Talba (214/829), this coinciding with the end of the revolt of the Khârîjîs Hamza b. Adârak (which had lasted for a third of a century in Sîstân-Kirmân). The task of pacifying Djîbl, Adhârâbâydjân and Armenia was then entrusted to ‘Ali b. Highâm, one of al-Ma’mûn’s leading generals, who did not however succeed in changing the territorial status quo.

This policy of restoring the unity of the empire preceded the outbreak of a new war-front against Byzantium, already under way with the settlement of Andalusiâns in Crete (210/826) and the conquest of Sicily by
the Aghlabids of Ifrikiya (a campaign launched in 211/827). In addition, deserters from the Byzantine empire were gathered together and posted in frontier sites (cf. P. Lemerle, L’histoire des Pauliciens d’Asie mineure d’après les sources grecques, in Travaux et Mémoires du Centre de recherches d’histoire et civilisation de Byzance, v [1973]; H. Gregoire, Manuel et Théophile, in Byzantion, ix [1934]; M. Rekaya, Mise au point sur Théophile et l’alliance de Bâbék avec Théophile, in ibid., xliv [1974]).

The first campaign began in 215/830 under the personal command of al-Ma’mun, who thus intended to prove himself worthy of his title of Imam, according to the Zaydi doctrine, which then obtained. The goal of this campaign was to maintain the rule of the Abbasids in the urban proletariat of Baghdad (cf. W. M. Patton, Ahmed ibn Hanbal and the Mihna, Leiden 1897). The conflict between the khāṣa and the ʿāmma of the capital was revived (leading the successor of al-Ma’mun to found a new capital at Sāmarrā).

Shortly before his death, al-Ma’mun chose as his successor not his son al-Abbās, who was in charge of the ʿĀṣārūna (in the manner of al-Mu’tamid, who was to be the third heir of al-Rashid), but his brother al-Mu’taṣim who was responsible for the new recruits from Transoxania. His political testament recommended the pursuit of his politico-religious work, incomplete in Radjab 218/August 833, the date of his death near Tarsus.

In conclusion, it is not inappropriate to compare al-Ma’mun’s world with that of Abū al-Malik b. Marwān (65-86/685-705), both of whom restored unity to the empire after a long civil war and promoted a political and cultural upheaval (of the 2nd/8th century in the case of Abū al-Malik, and of the 3rd/9th century in the case of al-Ma’mun). Their successors benefited from their work (built up over twenty years) and developed its main points of policy during their reign (of ten years); al-Mu’taṣim put an end to various centres of persistent revolt (the Khurramiyya of Djbīl in 218/833, the Zutt of the marshlands of lower Irāk in 219/834; the Khurramiyya of Bābāk in Adhbarbāyjān in 222/837; the ʿabnāʿ favourable to al-Abbās b. al-Ma’mun in 223/838; and the Sufyānīd al-Mubarkaḵ in Syria in 226/841). He endorsed the Tahirids, the pillars of the regime, going so far as to suppress the autonomist revolt of Mazyār, the prince-governor of Khurram. His political testament recommended the pursuit of his politico-religious work, incomplete in Radjab 218/August 833, the date of his death near Tarsus.

In spite of his preoccupation with the Byzantine war-front, and the political difficulties aroused by the persistent rebellions of the Zutt (of lower Irāk), of Bābak al-Kurramī in the north of Adhbarbāyjān, complicated by the sedition of All b. Hīqām, governor of Djbāl, of Adhbarbāyjān and of Armenia (executed in Djamāda I 217/June 832), al-Ma’mun did not neglect cultural matters (foundation of the Bayt al-Mihna in 217/832) and did not lose sight of his objective of having his “imperial-papal” policy recognised by the Sunni ʿulāma’. While preparing for the major campaign of 218/833 (of which the objective was Amorium, the natal city of the current Byzantine dynasty and thus the heart of Byzantium itself), al-Ma’mun engaged in a trial of strength with the ʿulāma’. In the Islamic sciences, instituting the mihna [q.v.] (Rabī’ I 218/April 833), four months before his death. Henceforward, Mu’taṣim was to be adopted by all as the ʿulamā’ (from 219/834), in order to preserve the strength of the strike force constituted by the army, dominated by Transoxanians, among whom the rôle of the Turkish guard was growing in importance.

AL-MAMUN, ABD AL-'ALI B. YUSUF B. "ABD AL-
Abd Allah b. Mardanish (Martinez).

At first, al-Ma'mun served in Spain as the lieute-
nant of his brother Abd Allah Muhammad
Abu 'l-'Adil, then on the throne. The latter had almost
left the Peninsula and return to Morocco without
having been able to subdue the rebel leader Abu
Muhammad al-Bayyasi, who was supported by Ferdi-
nand III of Castile, but he was soon betrayed by
his own men in his own land and assassinated in
624/1127. This murder was followed by the almost
simultaneous proclamations of al-Ma'mun and ano-
other Almohad pretender, nephew of the preceding,
Yahya b. al-Mansur, who took the

to take Marrakush, to massacre the Christians and destroy their church and to plunder the town. On hearing this, al-Ma'mūn, then busy with the siege of Ceuta, hurried off to the capital at once but fell ill and died on the way, in the valley of the Nafud, 13 days after the end of Dhū 'l-Hijja 629/1032

MA'MÜN B. MUHAMMAD ABU 'L-AS'IM; founder of the short-lived line of Ma'mūnids Khārazm-Shāhs in Khārazm [*q.v.*]. Ma'mūn was governor, probably as a nominal vassal of the Sāmānids [*q.v.*], in the town of Gurgandj [*q.v.*], which during the 4th/10th century had been prospering commercially at the expense of the ancient capital Kath [*q.v.*]; seat of the old-established line of Afrīghīd Khārazm-Shāh [*see KHĀRAZM-SHAHS*]. In 383/993 the Afrīghīs were overthrown and their dynasty extinguished, so that Ma'mūn became ruler of a unified Khārazm.

Very soon he was drawn into the struggle between the last Sāmānīd amīn, in particular, Nūh b. Ma'mūr, the last Samanid dynasty extinguished, so that Ma'mūn and the Afrīghīd Kharsujūr, a high-ranking military commander of the Sāmānids, who recommended him to the court in Baghdad after 343/953, left the capital in his youth and went to Rayy, where the famous Sāḥib Ibn 'Abbād [*q.v.*] made him a member of his learned circle. However, 'the scorpions of envy from the part of the boon-companions of the Sāhib were creeping around him', so he decided to move and went to Nīghāpur, where he was introduced to Ibn Simdjūr, a high-ranking military commander of the Sāmānids, who recommended him to the court in Buḫkārā. The brilliant young poet having arrived there, al-wazīr Abu 'l-Husayn al-Urbīb and his successor Abū Najr showered gifts and honours upon him. Al-Ma'mūn seems to have dreamed of regaining—or usurping—the throne of the old-established line of his forefathers (me^mur), of the naval arsenal (tersane) and so on. With its still somewhat clumsy mannerism, this poetry forms an interesting document for the development of the sophisticated Persian style, showing it at an early stage and in Arabic guise, as already pointed out by Bertels.

As far as one can tell from research done to date, the change was a matter of gradual transition, and not the result of any clearly-marked shift in governmental practice. This was, however, a period when traditional scribal institutions were undergoing extensive change, and scribal officials were being used increasingly for assignments or missions (me^mur), other than those evoked by such traditional designations for scribal roles as kāfa (from kāfli, normally applied to scribal officials only in the plural form khalifā), or khalafūs (also normally applied to officials only in the plural form khalifātūn). Usage in historical works of this period suggests that repeated references to individuals who were 'ordered' (me'mur) to perform a particular mission (me'murīyat) gradually caused these terms to float free of association with specific persons or duties and acquire the general meanings of "official" and "official position or appointment". In the History of Wāṣíf, published in 1219/1804, and in that of ʿĀṣim [*q.v.*], written about five years later, there are numbers of section headings containing the terms me'mur or me'murīyat (e.g. Wāṣíf, i, 148, 155, 140, ii, 110, 116, 119, 147, 154, 185, 207, 266, 268, 272, 294; ʿĀṣim, i, 62, 155, 174, 223, ii, 20, 26, 166). At some points, the word me'mur appears with meanings approaching that later conventional in Turkish. Me'murs go to Egypt and return (Wāṣíf, i, 172-3); the me'murs of the naval arsenal (tersane) are accused of negligence ('Āṣim, i, 51); Russian consuls behave inappropriately toward government officials (duvet me'murdar, ibid., i, 178-9).

From roughly the 1830s onwards, the term me'mur began to be associated in Ottoman official usage with the term mülküyse, which was then coming into use as a noun meaning "civil administration" or "civil service". Eventually, a civil official came to be known as a mülküyse me'mur, a compound that contrasted both the man and his branch of service with the scribe (kāfī, etc.) of the scribal service (kāmīyse), as it had been known prior to the beginning of reform. Since
the terms mülkü and mülküyye convey associations with both land ownership and sovereignty, generalised use of the new nomenclature may have been a result of the growing association of civil officials with provincial administration, thus with the vast domain of employment external to the bureaux in the capital city, in which most scribal officials had historically served. When Mahmūd II [p. v.] reorganised the central offices as a series of ministries, the first title of the new minister of the interior was, in fact, umur-i mülküyye nâşîrî, or "Minister of Civil Affairs". The title was conferred in 1251/1836 (Lufti, v, 29-31), but was changed to Minister of the Interior (tabird-i ilkî nâmî) a year later. Ultimately, however, the term mülküyye me'mür and its variations, such as the common plural me'mür-i mülküyye, clearly referred, not just to local administrators but to civil officials in general (Findley, 65-6, 140, 364, n. 66). Despite some inconsistency in usage, this fact became clearer as a systematic personnel policy emerged for this branch of service (ibid., 140-1, 297-0, 326-35). In the Turkish of the republican era, me'mür remains, first and foremost, a noun that means "official" and refers especially to the civil service.

Nineteenth-century lexicographical works were slow to register the use of me'mür in this sense. This fact alone does not reflect the tendency of the authors to rely on earlier written works; but it is probably also another sign that the shift in usage was not clearly marked. Works that do not mention the new usage include Alexandridis (1812), Bianchi (Vocabulare, 1831, s.vv. "fonction", "fonctionnaire", "officier"), Hindoğu (1838, s.v. "me'mür"), and Handjéri (1841, s.vv. "fonction", "fonctionnaire", "officier"). Even Redhouse, whose long years in Ottoman service made him a great authority, gave only conservative definitions in his first lexicographical publication, the Muntakhabât-i lughat-i othomânîyye, prepared by the ear-

nin eighteenth century and first published in 1269/1852-3 (see the printing of 1285/1868-9, 88). Even in his last dictionary, he gave the traditional meanings first, as was his wont (Turkish and English Lexicon, 1890, s.vv. me'mür, me'mürîyet). By then, however, indications of the new usages had long since appeared in Rhasis (1828, s.v. "fonctionnaire" and "civil", giving as one translation of the latter term mülkü [sic], with the example "troubles civils, ihtildîldî-i mülküyye ou dâğîliyye"), Bianchi (Dictionnaire turc-français, 1843, s.vv. "fonctionnaire"), and in Guzel-oglu (1852, s.v. "fonction"). In 1835, Bianchi and Kieffer (Dictionnaire turc-français, s.vv. me'mür, me'mürîyet, mülkü) had given the new meanings, but had associated them with Egyptian usage.

The reference to Egypt does reflect usage there, at least in Ottoman Turkish, under Muhommâd ʻAli Paşa. In Ottoman-language Egyptian documentation of that period, one finds me'mür as a general term for "official" (Deny, 106); by the 1820s, mülküyye was also in use in Egypt with essentially the meaning "civil affairs" (e.g. dîdanî-i mülküyye, as opposed to dîdanî-i dâğîliyye; ibid., 108, 111-5). From this period dates the use of the term me'mûr as a title for the chief officer of a given type of local administrative district (ibid., 130, 565); this usage has survived in Egypt. In general, mwaṣṣaf, rather than me'mûr has been the common term for "civil official" in modern Arabic.

1254/1838. In 1278/1862, upon a suggestion from the local governor Ismacil Pasha, the settlement was renamed Ma'murat al-Aziz in honour of the reigning sultan 'Abd al-Aziz [q.v.]. The name was extended to the sandjak and then in 1296/1879 to a new wilayet formed on these upper reaches of the Euphrates. It was soon transformed in popular parlance into al-'Aziz/Elaziz, and the present name Elazığ adopted in 1937.

Until the end of World War II, the growth of Elazığ was somewhat irregular. While the town probably consisted of about 10,000 to 12,000 inhabitants at the beginning of World War I, the first census conducted by the Turkish Republic in 1927 recorded 20,052 inhabitants. In 1940, this figure had risen to 25,465, but the shortages of the war years led to an exodus of population, so that in 1945 only 23,695 inhabitants were counted. However, from then onward, the city has gone through a period of dramatic and uninterrupted growth (1950: 29,317; 1955: 41,667; 1960: 60,289; 1965: 78,605; 1970: 107,364; 1975: 131,415).

The most important factor determining the growth of Elazığ in recent years has been the construction of the Keban power plant at a distance of only 45 km from the town (lake area: 68,000 ha., productive capacity 3,871,000 kwh/year). Throughout the construction period, building workers employed on the Keban power plant were usually housed in the town, so that during the nineteen-sixties and seventies, Elazığ was inhabited by many more males than females (1960: 32,449 males, 27,840 females; 1975: 69,797 males, 61,681 females).

Among the factories constructed in the area, some of the more important ones are connected more or less directly with the Keban dam project. Thus a cement factory belonging to the public sector of the Turkish economy was founded in the city, possessing a capacity of 400,000 ton/year. In addition, the city is located close to an important mining area, in which chrome is extracted; this situation accounts for the relatively high percentage of miners in the Elazığ district (2.5% of the active population in 1965). Due to these activities, the level of urbanisation in the district of Elazığ (40.2% in 1970) has surpassed the average not only for eastern Anatolia, but even for Turkey as a whole (38.7% in 1970).

The growth of Elazığ has also been stimulated by a side effect of the Keban dam, namely the total flooding of close to a hundred villages. In addition, over a hundred others have lost a large part of their agricultural lands. Among the 20,000 people who were forced to move, many apparently chose to settle in Elazığ and to invest the indemnities paid by the government in houses and small business. Some of the recipients of major indemnities were encouraged to invest their money in a holding company, which by 1972 had built a factory producing plastic pipes and tubes, and by 1977 had also erected a leather factory employing 260 workers. State offices and enterprises also absorbed some of the migrants, mainly in subordinate capacities. However, just as the electricity produced by the Keban dam is mainly consumed outside, the area, it appears that a considerable percentage of the money received as indemnities was invested in the large cities of western Turkey.

In 995/1587 Man Singh was transferred to the governorship of the suba

MÄ'MAR AL-CAZIZ — MÄN SINGH
of Bihar, where he pursued a vigorous policy against both recalcitrant Hindu rādjas and disaffected local Afghan chieftains fleeing to eastern Bengal. His campaigns against them were continued in his next appointment, as sābabār of Bengal, in 1002/1594. He built a new capital at Agmahal which he renamed Rādjmahl [q.v.], with fort, palace and large mosque (see Catherine B. Asher, Inventory of key monuments, in G. Mitchell (ed.), The Islamic heritage of Bengal, UNESCO-Paris 1984, 120-1). Further chastisement of dissident Afghans, and the conquest of Kashmir, occupied him until 1014/1605, when he returned to the imperial court at Agra with the mansab of 7,000. He was less successful as a courtier than as a military commander, for he urged the claims of a rival, possibly the descendants of Kurkumaz, to the throne of Bengal, in 1002/1594. He died a natural death in 1605.

As the master of two sandjas, Fakhr al-Dīn established himself in Sidon. He recruited a mercenary army of 7,000 mamluks and some 7,000 local Afghans, and cunningly used this force to remove the beylerbeyi, A1I Djanbulad, the usurper Pasha of Aleppo, by the Ottomans in 1022/1613. Fakhr al-Dīn fled to Damascus, but was permitted to return home in 1027/1618, to resume office as sandjak-beyi of Sidon, Beirut and Saşad. During the years that followed, he crushed rival chiefs in every direction, at first with Ottoman support and approval, until most of rural Syria fell under this control. Alarmed by the growth of his power, the Ottomans organised an expedition against him in 1042/1633. In the face of the Ottoman offensive, his power rapidly collapsed; his eldest son, 'Ali, was killed in battle, and he and his remaining two sons were captured and taken to Istanbul in 1045/1635. There Fakhr al-Dīn was put to death by strangulation in that year, along with his son Manṣūr. His youngest son, Husayn Ma'ān-zada [see MA'ĀN-ZADA], survived him to become chamberlain to the Sultan and Ottoman ambassador to India. This Husayn was an informant of the Ottoman historian Nātimā [q.v.], and the author of a book of adab literature entitled Kitāb al-Tamyiz.

At home, Fakhr al-Dīn was survived by a nephew, Mulhūm, whose political claims in the Shūf (the Sidon hinterland) and the other Druze districts (the Gharb, Djurd and Matn, in the Beirut hinterland) were challenged by the 'Alam al-Dīns—as already mentioned, the descendants of the 'Alam al-Dīn Sulaymān b. Ma'ān. At various times, Mulhūm held the sandjak of Saşad, or the sandjak of Batroun, the latter in the eyalet of Tripoli. Upon his death, reportedly in 1668/1658, he was survived by a son, Ahmad, who succeeded in expelling the 'Alam al-Dīns from the Druze districts and the Kīsrawān in 1708/1667 and in installing himself in their place as the local multazim, in subordination to the beylerbeyi of Sidon (an eyalet since 1700/1660). By holding this position without interruption for thirty years (1706-11/1667-97), Ahmad Ma'ān maintained his family's power, de facto, in the sidon Mountain, possibly the grandson of the first, died in 1585 while Ottoman forces were invading the Druze districts. This Kurkumāz left two sons, Fakhr al-Dīn and Yunis. By the 1590s, his son Fakhr al-Dīn (d. 1045/1635), commonly believed to have been the elder of the two, was already set on a career of political success which was to make him the dominant figure in the politics of Syria during the first three decades of the seventeenth century.

From small beginnings as a mukaddam and Ottoman multazim (tax farmer) in the Shūf, Fakhr al-Dīn rose by 1011/1602-3 to be the sandjak-beyi of Sidon-Beirut and of Saşad, under the beylerbeyi of Damascus. He had already taken possession of Beirut, along with the southern parts of the district of Kīsrawān, as far north as Nahr al-Kalb (the Dog River), in 1006/1598. In 1014/1605, he took possession of the whole of the Kīsrawān. He next became involved in the rebellion of 'Ali Djānbulād, the usurper Paşa of Aleppo, by coming to his support against the beylerbeyis of Tripoli and Damascus. This aroused the suspicion of the Porte against him for the first time.

The Islamic heritage of Bengal, UNESCO-Paris 1984. Further details of 'Alam al-Dīn, Fakhr al-Dīn and Sulayman, the rival chiefs of the house of Kurkumaz in the Shuf at the time, were also confirmed in the Mamluk administrative records. The Islamic heritage of Bengal, UNESCO-Paris 1984, 120-1. A1I Djanbulad, the usurper Pasha of Aleppo, by the Ottomans in 1022/1613, Fakhr al-Dīn fled to Damascus, but was permitted to return home in 1027/1618, to resume office as sandjak-beyi of Sidon, Beirut and Saşad. During the years that followed, he crushed rival chiefs in every direction, at first with Ottoman support and approval, until most of rural Syria fell under this control. Alarmed by the growth of his power, the Ottomans organised an expedition against him in 1042/1633. In the face of the Ottoman offensive, his power rapidly collapsed; his eldest son, 'Ali, was killed in battle, and he and his remaining two sons were captured and taken to Istanbul in 1045/1635.

There Fakhr al-Dīn was put to death by strangulation in that year, along with his son Manṣūr. His youngest son, Husayn Ma'ān-zada [see MA'ĀN-ZADA], survived him to become chamberlain to the Sultan and Ottoman ambassador to India. This Husayn was an informant of the Ottoman historian Nātimā [q.v.], and the author of a book of adab literature entitled Kitāb al-Tamyiz.

At home, Fakhr al-Dīn was survived by a nephew, Mulhūm, whose political claims in the Shūf (the Sidon hinterland) and the other Druze districts (the Gharb, Djurd and Matn, in the Beirut hinterland) were challenged by the 'Alam al-Dīns—as already mentioned, the descendants of the 'Alam al-Dīn Sulaymān b. Upon his death, reportedly in 1668/1658, he was survived by a son, Ahmad, who succeeded in expelling the 'Alam al-Dīns from the Druze districts and the Kīsrawān in 1708/1667 and in installing himself in their place as the local multazim, in subordination to the beylerbeyi of Sidon (an eyalet since 1700/1660). By holding this position without interruption for thirty years (1706-11/1667-97), Ahmad Ma'ān maintained his family's power, de facto, in the sidon Mountain, possibly the grandchild of the first, died in 1585 while Ottoman forces were invading the Druze districts. This Kurkumāz left two sons, Fakhr al-Dīn and Yunis. By the 1590s, his son Fakhr al-Dīn (d. 1045/1635), commonly believed to have been the elder of the two, was already set on a career of political success which was to make him the dominant figure in the politics of Syria during the first three decades of the seventeenth century.

From small beginnings as a mukaddam and Ottoman multazim (tax farmer) in the Shūf, Fakhr al-Dīn rose by 1011/1602-3 to be the sandjak-beyi of Sidon-Beirut and of Saşad, under the beylerbeyi of Damascus. He had already taken possession of Beirut, along with the southern parts of the district of Kīsrawān, as far north as Nahr al-Kalb (the Dog River), in 1006/1598. In 1014/1605, he took possession of the whole of the Kīsrawān. He next became involved in the rebellion of 'Ali Djānbulād, the usurper Paşa of Aleppo, by coming to his support against the beylerbeyis of Tripoli and Damascus. This aroused the suspicion of the Porte against him for the first time.
With the death of Ahmad Ma’n, the direct Ma’nid male line became extinct, and the iltizam of his territory passed over to his nephew (the son of his brother’s son) Bahíar I Şihâb (1109-1118/1697-1706), then to his grandson (daughter’s son) Haydar Şihâb, Sunni Muslim chiefs from Wâdi al-Taym, in the Anti-Lebanon. The ʿAlam al-Dins, apparently as Ma’n in the indirect line, rose to challenge this Şihâb succession sometimes by intrigue, sometimes by military action, until they were defeated in battle and killed to a man in 1125/1711.

In the modern Republic of Lebanon, the Banû Ma’n have become a national legend, and their tenure of their mountain territory in the southern Lebanon, as ma’tazims for the Ottoman State, has come to be regarded as a precursor to the modern Lebanese State. Fakhr al-Din, in particular, is regarded as a Lebanese national hero, although Lebanon in his time was no more than a geographical expression. The real achievements of the Banû Ma’n are of a different order. By controlling the predominantly Maronite district of Kirsrawân alongside the Druze districts of the Shuf, Gharb, Disur and Maţn, Fakhr al-Din and his Ma’n successors, more by accident than by design, laid the foundations of a political symbiosis between Maronites and Druzes in the sanqûds of Beirut-Sidon (after 1660, part of the eyalet of Sidon). This became, in its turn, the mainstay of the family’s de facto autonomy enjoyed by the same territory in subsequent Ottoman times. By encouraging silk production, and protecting foreign traders, the Ma’ns furthermore secured for their territory a modest prosperity unknown in other rural parts of Syria in Ottoman times.

Ma’n b. Aâs: Al-MAZUNI, Aраб poet belonging to the Ma’zuni tribe of the Muzayna (see Ibn al-Kalîbî, Casket, Djâmbhara, Tab. 88), which was established in a fertile region between Medina and Wâdi ʿl-Kurâ. He was considered to have been a muḥḍādram poet, but was probably born shortly before the mission of Muhammad and lived most of his life under Islam. He lost his sight towards the end of his life, which came about no earlier than 64/684, at least if the verses in which he complains about the hospitality offered by ʿAbd Allâh b. al-Zubayr [p. v.] in Mecca are authentic. Although probably converted along with his tribe before the capture of Mecca, he does not seem to have participated in the conquests, and his poetry more or less reflected the situation created by the new religion, which is mentioned only occasionally. Moreover, the available biographical information is sparse and is mainly concerned with his private life, his wives and his daughters (whom he by no means considered insignificant persons). Closely attached to an estate which he owned not far from Medina, and to the Bedouin life-style which he followed in his home territory and which he maintained even when visited Basra, where he is said to have met al-Farazdak [q. v.] and to have married a woman of his tribe, also of Syria, the country of origin of another of his wives. He wrote eulogies of a number of Muslim personalities, including ʿUbayd Allâh b. ʿAbd Allâh, ʿAṣîb b. ʿAbd Allâh b. al-ʿAzîz b. ʿUmar b. al-Ḵaṭîb b. al-Saʿîd b. al-ʿAsk, without deviating from the Bedouin tradition. Although Ibn Sallâm and Ibn Kustâbaya appear to ignore him, he is considered a talented poet, regarded by Ma’sawiya as almost the equal of his fellow-tribesman Zuhayr b. Abî Sulmâ. The fact is that his poetry contains, alongside personal references, passages of a moralistic nature. His name does not feature in the lists of diwâns, collected by the early ruwâtî, but P. Schwarz discovered in the Escorial an incomplete manuscript, with a commentary the contents of which go back to al-Kâli [p. v.] and published it under the title des Man b. Aus (Leipzig 1903) with an introductory account of the poet (cf. Noldé, in ZA 1903, 274 ff.; Reckendorf, in OLZ 1904, 138-40; R. Geyer, in WZKM, xvii, 246-70). Kamal Muṣṭâfâ reprinted the Schwarz edition, with some additions and omissions, under the title Man b. Aus, haydûth, ghârûth, aghbârûth, Cairo 1927; these collections could probably be enriched by the use of new sources. O. Rescher partially translated the diwân in his Beitrag zur arab. Poetik, vi/2, Istanbul 1956-8, 1-28, and M. R. al-Nadawi has devoted a study to the poet, Maʾn b. Aus al-Muṣâni, in Maṣallât al-Maṣâlim al-ʿIlmi al-Hindi, i (1936/1976), 107-25. A new edition of the Diwân, based on Muṣṭâfâ’s edition plus a combing of adâb works, etc., is by ʿUmar Muḥammad Sulaymân al-Kâji, Diwân Muʾāṣir Muḥammad b. Aâs al-Muṣâni (47 poems and fragments).

Maʾn b. Muhammad. B. Ahmed b. Šumâdîn al-Tughîbî, Abu ʿl-ʾAmâs, founder of a branch of the dynasty of the Tughîbîs which in the little principality of Almêria [see al-Marîyâ] in eastern Spain in the middle of the 5th/11th century. The principality had been founded in the latter’s death in 428/1037, their overlord ʿAbd al-ʿAzîz b. Abî ʿAmâr, king of Valencia, declared it his principality in 438/1047-8, placed his brother-in-law Maʾn b. Šumâdîn as governor there. The latter belonged to a noble family of Arab origin; his father
had been one of the generals of the celebrated Hādżib al-Mansūr [qv.], and was governor of the town Huesca [see WAGHI]. Ma'n remained loyal to the king of Valencia for nearly four years, then cast off his allegiance to the Abbasids and declared himself independent. He reigned at Almería for a few years longer and died in Ramān 443/January 1052.

(E. LÉVI - PROVENCAL)

**MA'N b. ZĀIDA, ABU 'L-WALĪD AL-SHAYBĀNĪ.** 

Military commander and governor of the late Umayyad and early Abbasid period. He came from the ashraf of the Shaybānī tribe and rose to importance through the patronage of Yazīd b. Umār b. Hubayrā (see IBN HUBAYRĀ), the last Umayyad governor of Irāq. He fought against the advancing Abbasids at the beginning of the Abbasid period. However, he was said to have killed the enemy commander, Khayatab b. Shabbīb [qv.]. He joined his master Ibn Hubayrā in the defence of Wāṣīt and was one of the few leaders not to be executed, apparently because he was in the defence of Wāṣīt and was one of the few leaders not to be executed, apparently because he was in the service of the Abbasids.

Thereafter he remained in hiding until the rebellion of the Rāwandiyya in the newly-founded capital of Ḥāshimiyya (variously dated 139 to 141/756-9), when he was able to rescue the caliph al-Mansūr and was appointed as a commander. He joined the king of Valencia for nearly four years, then cast off his allegiance to the Abbasids and declared himself independent. He reigned at Almería for a few years longer and died in Ramān 443/January 1052.

(E. LÉVI - PROVENCAL)

**MA'N b. MUHAMMAD — MA'N b. ZĀDA**

435

Very little is known about the childhood of Husayn and his younger brother Hasan. However, when Sultan Murād IV in 1043/1634 commissioned the governor of the province of Damascus, Kūčük Ahmad Pāgha, to eradicate the Ma'nīds, Fakhr al-Dīn instructed Husayn to take shelter in al-Markab citadel situated on the outskirts of Lādhiyya. Husayn was arrested and sent to Aleppo, whence he was eventually dispatched to Istanbul. In 1044/1635, his father and two of his sons were put to death, but the life of Husayn was spared because of his youth. He was sent to the Palace pages' school. After graduating from there, he served at the Ottoman court in the Khādsodan. It appears that he showed competence, because he was promoted to be a private secretary to Sultan Ahmed III [qv.]. He held the post of chief assistant at the treasury, khātāt-i kubā, and then in 1066/1656 that of kaptaji bashi or head of the Sultan's guards. Later in the same year, he was sent as the Sultan's special envoy (elcit) to the Moghal sultan in India Shāh Dīhān (1037-68/1628-57), travelling by land to Baṣra in the company of an ambassador sent by Shāh Dīhān, and from there they sailed to India: Husayn refers to this journey in his own surviving work *al-Tamīz*. Arriving in Dīhil, he found that the emperor had died and that fighting had broken out between his sons. It seems that his stay there did not last long, and he went back to Istanbul carrying a message of good wishes from Murād Bakhsh, son of the deceased sultan. It is possible that he was not on good terms with the new Grand Vizier Mehmed Köprülű (1656-61) [see Köprülű], since he was not appointed to any official post, although fortunately his property was not confiscated. This enabled him to devote ample time to his work *al-Tamīz*, for which he made use of his own rich library and other private libraries in Istanbul. During this period of his life, it seems that the court historian, Muṣṭafā Na'imā [qv.], (d. 1128/1716) came to acquire himself with Husayn and to make use of his knowledge and of his library; on several occasions, Na'imā requests his indefatigable help, especially in finding his vast knowledge, his modesty and zuhd. He states that his information about both Sultan Ibrāhim and Sultan Mehmed IV was taken orally from Husayn, but a recent study doubts this role accredited to Husayn by Na'imā.

The *Tamīz* comprises 26 books with a fasl (section) appended to each chapter. In the *fasl* he mentions the merits of the subject he is analysing, whereas in the *fasl* he relates what other learned sages have said for or against that particular subject. His citations came from innumerable sources, but mainly from the Kur'an, Hadith, al-Nahj al-balashīga and the Iḥyā 'ulum al-dīn. Na'imā states that on the request of Husayn, he made several copies of the *Tamīz*, which were presented by the author to the dignitaries of Istanbul, and particularly to the Grand Vizier Husayn Kermīr. It appears that he finished the first final copy in 1686.

Na'imā places Husayn's death in 1102/1690, while Muhammad Khalīl al-Husaynī al-Murādī (d. 1206/1791) mentions that this took place in 1109/1697, and this last report was accepted by some Lebanese historians such as the Patriarch Išṭān al-Duwāyhi (d. 1704), Haydar al-Shāhīb (d. 1835) and Ehūtūnī al-Sawārī (d. 1150).
Tannús al-Shidyak (d. 1859), who claim that Husayn intervened with Ottoman officials in 1697, when the grandson of amīr Ahmad al-Maʾnī, the last Maʾnī amīr, rather than amīr Bashīr al-Shihābī, to govern al-Shuf. If Naʾīmā is accurate in reporting the date of Husayn’s death (1102/1690), this aspect of local Lebanese history clearly needs further investigation.

In Ibn Hazm’s grammatical theory, finally, there is a strict distinction, contrary to the generally-accepted usage, between the intention of the speaker and the inherent meaning of the word. In this respect, Ibn Hazm’s grammar is fundamental in the history of Arabic grammar.

2. In philosophy. This term is used to translate a number of Greek expressions. Ma'na is frequently used as a synonym of ma'āl, corresponding to the Greek noēma, a concept, thought, or idea. Sometimes ma'na is used to translate the Greek term 'prokatalepsis' (as in al-Fārābī's commentary on Aristotle's De Interpretatione) and sometimes ma'na (as in his commentary on Aristotle's De Intellecctu). Išāb b. Hunayn uses ma'na in his translation of the De Interpretatione, but he also translated Aristotle's use of prókatalepsis (real things) by ma'ānī. (For an argument against the Latin translation of ma'na by intimo, see Gyeke). Al-Ghazālī uses ma'ānī to interpret the mechanical sense of 'natural sign in the soul'. Ibn Sinā's distinction between ma'ānī of the first and second understanding probably stems from Porphyry's distinction between terms of first and second imposition. The latter, ma'ānī of second understanding, are abstract notions which are applied to the notions of first understanding. The expressions ma'ānī ma'ālā, intelligible notions, or ma'ānī or just ma'ālālā, are often found in Ibn Sinā, all frequently translated as intellecta. These terms are important for his argument of the complex relationship between logic and language (see Sabra).

Mu'āmmar b. ʿAbdād al-Sulamlī, the Başrān Muťazālī philosopher, is undoubtedly the chief exponent of the use of the term ma'na as a vital part of a metaphysical system. According to him, every ma'na (entity) is brought about by another entity, which itself has its origin in a third entity, and so on ad infinitum. Mu'āmmar speaks of an infinite chain of determinant ma'ānī, the first determinant of which is God, and through which God is indirectly the real cause for the accidental external appearance of substances. For example, he talks of God creating countless ma'ānī of colour, the final effect of which is the accident 'colour'. The infinite chain of ma'ānī as entities, everlasting, and the occasionally evil accidents brought about thereby are caused by the substance through the real features of nature, not God. Ma'na is used by Mu'āmmar to represent the principle of individuation of one substance from another. Horovitz identifies ma'ānī with Plato's ideas, while Horton thinks they originate in the Indian system of categories. Watt identifies ma'ānī with Aristotelian etsid and Plato's ideas, as a real determination of a substance. Wollson relates it to Aristotle's concept of nature as the cause of motion and rest, a claim hotly contested by Frank. The latter describes it as an intrinsic causal determinant, a Stoic notion which certainly seems to be present in Mu'āmmar's distinction between primary and secondary causal determinants. Frank criticises the accounts of Mu'āmmar's use of ma'na provided by al-Ḥāzīlī and al-Shahrastānī and insists that ma'ānī in the original system inheres in the material substrate of atoms, not with the accidents (references in Frank). Daiber, in the fullest account of ma'ānī in Mu'āmmar's system yet to appear, on the contrary stresses their relational properties as opposed to their property of inherence in substance.

In poetry. Marked out to serve as a reflection on the language and to take its place in a cultural synthesis, poetry, after the preaching of Islam, assumed its role under the surveillance of academic phraseology. Scholars began to derive arguments from it to support their theories. Thus called upon by morpho-phonology, syntax, lexicography and even morphology, poetry served as an instrument and reduced to being just a speech practice meant for providing arguments for the basic disciplines of language and thought. Hence one should not be surprised at the lack, until the 4th/10th century, of a true theory of meaning visualised as starting from poetical experience. Until then the word ma'na had only two meanings:

(1) The meaning of a word or proposition in a certain given verse. This meaning limits the reading to a purely contextual explanation. The Kitāb Ma'ānī al-ghīr of Abū ʿUṯmān Saʿīd al-ʿUṯmānī, transmitted by Ibn Durayd, gives an example of these courses and monographs devoted to verses considered difficult. Lexically, attention is concentrated on terms which have become rare in usage (gharib) or culturally marginal (waqūfā), but also on those syntactic expressions which have the expressions ambiguous. Numerous works devoted to poetry are subsumed under this pragmatic aim and the elucidation of meaning.

(2) The meaning of a trope. The procedure here is similar, that of a clarification of the meaning, but the specific nature of the figurative expressions opens up perspectives which were later to become a semantics of poetry.
In this way, a fragmentary poetical text, reduced to citations, finds a place in lexicography, syntax and rhetoric. The school exercise of explaining it corresponds to a brand of criticism. The latter, born out of philology, requires the fitting of the various tropes of the maṣnā‘a or ḍharaḍ, with the supposition that what is said corresponds exactly to what it was intended to say. Every displacement between the intention and the statement betrays the poet’s inability to express what is correct with complete exactitude and shows up an inadequacy in the tools of the language. The maṣnā‘a is a target which may be missed in two ways: either by not respecting the established correlations between the word and its referent, or between the syntactic expression and the logical distribution of its meanings; or else by disturbing the rules of construction of such figurative expressions as comparison, metaphor, metonymy, etc. The divergence between what is said and what it was intended to say (bū‘ad) is the measure of the ambiguity in the meaning (ḍharaḍ). Criticism of meaning remains, within this framework, a criterion of effectiveness.

This enterprise ends up by updating the cultural codes prevailing in the language and makes an important contribution to the study of an archaeology of meaning. But one must note carefully that the works devoted to classification of meanings and tropes (Ibn Kutayba, al-Mubarrad, Tha‘lab, Ibn al-Mu‘taṣmez in the 3rd/9th century) do not have poetry in view in the first place, or else they do not make the tropes analysed there a specific phenomenon of poetic writing. Moreover, even the terms connected with a century, it is quite wrong to consider the marsū‘a as an analysis of thematic forms, even with an author writing. Till the end of the 3rd/9th century, this is quite wrong to consider the ḍharaḍ as an analysis of thematic forms, even with an author writing. Ibn Kutayba, who devotes a chapter of his Kitāb Maṣnā‘a l-ṣinawi to marāṣih.

It is Kudāmā b. Dījāfar [q. v.] in his Nakhd al-ṣīr who puts forward a general theory on the nature of poetry. This theory aims at defining an aesthetic, hence at regulating taste (gazāk), by setting out the rules of a science of what is good in poetry. Since the latter is an art (sinā‘a), its actualisation can be placed on a scale of values which it is possible to distil by reference to a set of established rules. Kudāmā brings forward these canons of the connections existing between the constituent elements of poetic writing (laṣf, maṣnā‘a, usam and ḍhīyya). The maṣnā‘a here does not mean significant, since the latter is a fact of language, but the register of expression. Thus there are six maṣnā‘a in poetry: maṭāb, ḩīda, marāṣih, tashbih, waṣf and naṣīb. Four of these names denote a semantic field relatively clearly delimited. Kudāmā is here remaining within the track traced by his forerunners. He is an innovator in that he included tashbih in this list; he considers it as a general way of proceeding for the production of poetic statements, and all his attention is concentrated on the figures of thought. Waṣf brings in the general problem of the relationship of the statement to the object described. We can discern here a trace, small but clear, of the Greek theory of meaning. The distinction of tashbih and waṣf is thus here set aside, for Kudāmā himself clearly, on this occasion, distances himself from all moralistic purposes.

Maṣnā‘a is definitively that particular form (iṣra) which poetry sketches out in a general sense. What is good may be measured by the amount of the conforming of the statement produced to an ideal statement (gazāk). The progress of poetry is contained in this movement which leads towards the perfect forms.

In fact, reflection about meaning in poetry eluded the udābā, who remained fixed on the need of philological and lexical explanations, and had no theoretical system which could enable them to go further ahead. Work on the maṣnā‘a and tashbih was to remain as a subject of thought for the analysts, especially for Ibn Sinā‘, ‘Abd al-Kādir al-Djurdjani, Ibn Rūghd and Hāzim al-Kartadjanni. Our point of departure is a re-interpretation of the Aristotelian mimēsis, which al-Kartadjanni in the end separates completely from speculative discourse. Tādhyīl denotes “the imaginative representation of the object which mimetic discourse (i.e. poetry) fixes in the speaker’s imagination. The meaning is thus contained in a relationship of the object with its aesthetic representation as the producer of an effect”. In this way, a fresh posing of the problem of meaning is formulated, and “the specificity and autonomy of poetry is circumscribed”. The poet, as the creator of images, thus throws of the task of being truthful to life and becomes consequently free to project on to the object chosen all the features which his imagination pictures for him. The theory of the poetic uslāb set forth by Ibn Kūlādūn in his Mūka‘adda is actually a theory of the genuine poetic image. The uslāb is the abstract form of the meaning which becomes fixed in the poet’s imagination. The latter realises it in statements made up of a thing signified (maṣnā‘a) contained within a framework of the phrase (tarkīb). The noncontour put forward by Ibn Kūlādūn stems from this: kalām/fann (poetry, in contrast to prose) maṭāb (madh, ṣīb, naṣīb) asālīb/aghrād or maṣnā‘a and tarkīb. Ibn Kūlādūn in this way completes his predecessors’ analysis by studying the mechanism of production of maṣnā‘a. Bibliography: Texts: Since the texts utilised are well-known and amply cited in the studies written so far, it is enough to say that the logicians’ developments of the topic of poetic theory are given in ‘Abd al-Rahmān Badawi’s Al-Aristīlīlī, fann al-ṣīr, Cairo 1954, with a better ed. of Ibn Rūghd’s commentary and a 1st ed. of al-Fārābī’s commentary on Aristotle’s Poetics has been tr. with an English commentary by I. M. Daiyat, Alexandria’s commentary on the Poetics of Aristotle, a critical study with an annotated translation of the text, Leiden 1974. Studies: J. E. Benchekih, Poétique arabe, Paris 1975; Ḍiʿā, A. ‘Usfīr, Maḥām al-ṣīr, Cairo 1978; K. Abu Deeb, Al-Furājān’s theory of poetic imagery, Warminster 1979; Benchekih, Min al-kawāṣil al-lisānīyya ila ʿl-ṣīr al-biṣṣayn, Ibn Kūlādūn wa-maḥābiyya al-ṣīr, in Amāl nadrat Ibn Kūlādūn, Casablanca 1981, 47 ff.; ‘A. al-Musāffī, al-Tāfīrī al-lisānī fi ‘l-hadār al-arbā‘iyara, Tripoli and Tunis 1981; H. Foda, Al formule due sens, essai sur al-Nuṣṭa fi ‘l-gaz al-Qur‘ān d’al-Rūmnā, in Analyses-Théories (1982), no. 1, 45-70; idem, La rhétorique au cœur des enjeux art. Littérature arabe, in Encyclopédia Universelle.
MANAF, name of a deity of ancient Arabia. This IVth form masdar from the root w-a-r is connected with the Qatabanite nafs "the exalted", an epithet describing Adhar-Venus at its zenith, as opposed to ʾshraa "the eastern" and ʾshraa "the western". From the same root is derived tanaf "that which climbs high in the firmament", an epithet of the sun, as opposed to ṣḥrīya "that which rises", and ṣādān "that which sets" (cf. A. Jamme, Le Panthéon sud-arabe prèslamique d'après les sources épigraphiques, in Le Muséon, 1x [1947], 88 and n. 225, 102, 106; on the meaning of this root and the vocabulary which is derived from it, cf. TA, s.v.). "Manaf was one of the greatest deities of Mecca"", states al-Tabari (i, 1092). Such a statement is nevertheless surprising, bearing in mind how little information we have on the subject. Only Ibn al-Kalbi (K. al-Azmām, ed. and Fr. tr. W. Atallah, Paris 1969, 26) devotes a few lines to it, repeated by al-Ṭabarī (i, 1091-2) and Yākūt (iv, 651); however, going by the inscriptions, the name was known in Thamudic (A. van den Branden, Les inscriptions thamoudeennes, 48 [Huber, 12], 225 [Huber, 696]), in Ṣafaitic and in Ḥiyanitic (G. Ryckmans, Les noms propres sud-sémitiques, i, Louvain 1934, 18; idem, Les religions arabes prèslamiques, Louvain 1953, 17), and altars were dedicated to him in the Ḥawrān (cf. P. Mouterde, Inscriptions grecques conservées à l'Institut français de Damas, no. 33, in Syria, vii [1925], 246-52 and at Volubilis in Morocco (cf. L. Robert, in Revue des études grecques [1936], 3-8).

Probably of South Arabian origin, the cult of this deity was widespread among the Ḥurayqīyētes, Ḥudhayl and Tamim, as is shown by the theophoric names composed with his name (cf. Ibn al-Kalbi, Anām, loc. cit.; Ibn Durayd, Isḥāqī, 1x, 16, 66; TA, iii, 470, 1, 7 f. to al-nīr). One of the most famous is that of ʿAbd Manaf, one of the four sons of Kuṣayy, reformer of the cult in Mecca. His mother had promised him to the god, so as to protect him from the evil eye, for he was so handsome that he was surnamed al-kamar "the moon" (al-Ṭabarī, loc. cit.). Ibn al-Kalbi, reproduced by Yākūt, notes a practice common to all the idols, mentioned by G. Ryckmans (Les religions arabes prèslamiques, 17) as being peculiar to Manaf; menstruating women did not touch them as a token of blessing and kept at a distance from them. Two verses, one by Bāḥṣ b. Kays, relating to Manaf, the other ʿAbī Ṣaḥīḥ, relating to Isāf, allude to this (Ibn al-Kalbi and Yākūt, locs citatis; Yākūt, i, 235).

MANAKIB (A.), plural substantive (sing manakha) featuring in the titles of a quite considerable number of biographical works of a laudatory nature, which have eventually become a part of hagiographical literature in Arabic, in Persian and in Turkish.

To define this term, the lexicographers make it a synonym of akhlāq, taken in the sense of "natural dispositions (good or bad), innate qualities, character", and associate it with nākība, explained by nafs "soul", ḫikalā or ṣabba, likewise signifying "trait of character, disposition", but also with fākhā al-nāṣ, "perspicacity", in such a way that the connection with the radical n-k-h, which is particularly expressive and implies especially the concrete sense of "perforate, pierce (a wall, for example)"; thus, in an abstract sense, "succeed in penetrating a secret", becomes perfectly clear. Perhaps it should be approached as is suggested by Ibn Manẓūr (LA, sub radīc e n-k-h, via nāṣ = "chief", thus named because he is privy to "the secrets of his fellow-travellers (dakhālit anw ar al-taʾamm) and to their manakīb, which is the means of knowing their affairs"; in short, manakīb would signify almost simultaneously both "traits of character" and "acts and deeds", and its use to introduce a biography centred not only on the actions, but also on the moral qualities of an individual, would be entirely legitimate. Finally, also worth consideration is an alternative meaning of the verb, which is to follow a narrow path", and a subtle connection may be observed between two senses of the singular manakha: on the one hand, "narrow street between two houses", or "difficult path on the mountain" (cf. Yākūt s.v. al-Manakīb; Ṣaṭa, ii, 468) and on the other hand, "nocturnal action", in contrast to maṭlāba "villainy, subject of shame" (see maṣḥāli, as is supported by the evidence of numerous titles, particularly that on the Kāšīb al-Manakīb wa t-maṭlābīh by Hibat Allāh Ibn ʿAbd al-Wāḥīd (Brockelmann, S II, 908), where the two antithetical terms possess the added advantage of mutual rhyme. If the last explanation suggested is correct, one is entitled to consider that a semantic evolution has occurred comparable to that of sita [q.v.].

However, although this last term may be accompanied by a depreciative epithet (e.g. sayyīr), manakīb, sometimes made more precise, sometimes not, by a qualitative (djamāl, karīm, etc.), is always taken in a good sense; the term may be rendered approximately by "qualities, virtues, talents, praiseworthy actions", and introduces a laudatory biography in which the virtues, merits and remarkable deeds of the individual concerned are given prominence. It will be observed that, immediately following the development of mysticism and the cult of saints, it is the marvellous aspects of the life, the miracles or at least the prodigies (karāmāt [q.v.]) of a Sūfī or of a saint believed to have been endowed with miraculous powers, which are the subjects preferred, and manakīb ultimately acquires the sense of "miracles" or "prodigies". It is perhaps a reminiscence of this last sense that is used to form an abstract applied in the sense of "mysterium" in Tāriqah or ṣaḥāḥīyāt al-ʿaskarīyāt, Beirut 1975.

Such is, schematically outlined, the apparent evolution of this concept, although it is not easy, in reality, to follow it with precision. In fact, the most ancient texts bearing the title of manakīb have in general hardly survived at all, and their existence is only known to us thanks to the biographers and bibliographers of the Middle Ages; on the other hand, that which could be called "the manakīb genre" is hard to isolate, since it is practically impossible, on account of constant interference, to establish a neat classification according to the etiquettes affixed by authors to the account of the life and enumeration of the virtues of the individual or the group chosen. The nomenclature in fact comprises a full gamut of titles which must be examined.

—taḥkīm, i.e. quite neutral, implies no particular quality and introduces any biography; it may be said, however, that this term features in titles where another would be expected, for example Tariqah Ahmad b. Ḥanbal or Tariqah al-Ṣafī bi ʿAbd al-Dhahabī (see ʿAbd al-Munadījīd, Muṣālim al-muʿāwīfi bīl-dīnākṣīyīn, Beirut 1398/1978, 445), while the founders of judicial schools are most often entitled to manakīb (see below).

—taʿrīf, likewise neutral, but already used by ʿĪyād
(see below) for the Prophet, appears in the title of lives of saints, possibly for reasons of discretion, in a period where manakib seems to be confined to the hagiographical sphere. For example, 'Abd al-Salâm al-Kâdiri (d. 1110/1698) devoted al-Muṣâba al-amâd fî l-tâsrîf bi-Sayyidna Ibn 'Abd Allâh Ibn Ma'n al-Andalusi (see E. Lévi-Provençal, Les historiers des Chorfa, Paris 1922, 278), while the monograph on the same saint by Muhammad al-Mahdî al-Fâsi (d. 1109/1698) [see al-Fâsi in Suppl.] is entitled 'Arjî 'Alâsîr al-munna bi-manakib Sayyidna (Stûl) Muhammad b. 'Abd Allâh mubârî li-sunnâta (Chorfa, 275) in Leiden, see P. Sj. van Koningsveld, Timar Arabic manuscripts—volumes of historical contents acquired by the Leiden Univ. Libr. after 1957, in E. van Donzel (ed.), Studies on Islam, Amsterdam—London 1974, 95. Similarly, Muhammad al-Masânâwi al-Dîlî (d. 1136/1724 [see al-Dîlî in Suppl.]), is the author of al-Taâ'sir fî l-shaykh 'Abî 'l-Abbâs al-Yamani (Chorfa, 302), 'Abd al-Mâqîd al-Zâbâdi (d. 1163/1750) [see Chorfa, 314], wrote the Hîfâd fîl mu'amâd bî l-tâsrîf fî l-shaykh Ibn Miṣâbî (d. 730/1290), and al-Dâ'î (12th/18th century), al-Raud al-zâhir fî l-tâsrîf fî l-shaykh Ibn Husayn wa-aqtabî fîl-akbarî, on the saint of Tamgrût named al-Kâbab (d. 1045/1635-6) [see Tawfîq, ed. Istanbul XXiv [1930], 1-15] on the pious men and women of early Islam; al-Diyâ' al-Ma'âmî (d. 645/1249-5) [see al-Diyâ' al-Makdisî (d. 600/1203); see Munadjdjid, 46, 442] eulogised the manakib of Dâ'far b. 'Abî Tâlib (ed. M.H. al-Yasin, all-Dhâbiyyâ) in the 7th/13th century, the afore-mentioned Muḥbîb al-Dîn al-Tâbarî, has, like al-Ghafîkî, celebrated the 'ten assured of Paradise' in al-Riyâd al-na'dîr fî manakib al-sa'dîr (ed. Cairo 1372/1953); al-Dhâhibî is himself credited with al-Thîyân fî manakib 'Ummân (Munadjdjid, 445) and Ibn 'Abd al-Hâdî (d. 909/1503); see Munadjdjid, 274, 276) even wrote a Ma'âd al-ilâhih fî manakib Sa'd b. Abî Waqâs (ms. Zâhiriyat 3248). If, for 'All b. Tâlib and his descendants, the use of manakib is fully justified in the works of those authors who particularly revere their memory (see below), the same cannot to a certain extent be said of 'Umar b. 'Abî A'azzâ, thus eulogised by Ibn al-Dhâwî, it is hard to say why the last-named (Kâôfî, iv, col. 560; Brockelmann, S I, 915-17) and, for example, al-Barzanjî (Brockelmann S II, 934) gave the title Manakib to their biographies of Abû Bakr and of 'Umar b. Al-Khâtâb. It is true that it is impossible to find the explanation in the variation which manifests itself in the Qur'ân al-sawâ'id min al-qâ'idât al-su'dîl [of Ibn al-Athîr] wa-Magâhî al-sawâ'id [of al-Hâshîmî], Medina 1381/1961, in which hadâlah concerning the Companions as a group are given under the title of Jâbîl (ii, 490-500), whilst those relating to the same Companions considered individually are given under that of manakib (ii, 500-81).

—mâjkhîr and mafaddîl, "exploits, objects of pride", normally feature in the titles of collections in tradition of tribes, peoples or groups and are the reverse of makhfîkîh; therefore, al-mâjkhîr, as is sometimes makhâsin, in those of monographs of individuals who have played an eminent political, politico-religious or military role. An example which may be mentioned, from Morocco, is a Raudat al-tâsrîf fî mafaddîl Moulâàna Imâ'm b. al-Shârî'î by an Idrînî (d. 1136 or 1157/1743-5 [q.v.]) which concerns a sultan (Chorfa, 275): al-Munâbâl l-mâjkhîr 'alâ mafaddîl al-Mansûr (ms. in Leiden, see von Kellinghausen, 94;
Brockelmann, S II, 679) by Ibn al-Kadl (d. 1065/1616 [q.v.]), where ma^dthir is sometimes replaced by ma^dthine, is a panegyric of the sultan al-Man^ur al-Dhahabi; on the other hand, the Rawdat al-mahdsin of al-Hasan al-Basri by Ibn al-Djawzi (d. 660/1262; see Munadjidid, 97) shows less discretion, since he entitled his work Mandkib al-kutub, the title of which no further proof is needed of the monopoly over the use of mandkib, the fact remains that a degree of fluctuation in the choice of terms demands constant vigilance.

While the Manakib of al-Bagi b. Abi Tlilb by Ahmad b. Hanbal (d. 241/855 [q.v.]) which Hadjdji Khalifa (ii, col. 1843-4) mentions, saying that later authors have to a large extent exploited this biography, and perhaps also that by al-Kudf (d. 300/931; Brockelmann, S I, 209), are probably no more than collections of traditions relating the virtues of the Prophet’s son-in-law, this probably does not apply to the Mandkib All b. Abi Tlilb by al-Kh^z^r^z^Azim (d. 568/1172; Brockelmann, S I, 623; there is said to be a ms. of it at Nadaf (al-Samawi library), which further possesses others; see RIMA, iv, 237, to the Manakib Al Abi Talib by al-^Abd al-^Aziz, and the most ap-
Dynasties, families, distinguished individuals, also have their compilations of manakib which are apparently nothing more than glorious deeds or achievements. Thus the following, which were gathered together those of the Banu 'l-A'bbās (Kazîf, ii, col. 1841) and al-Sūlī (d. 335/946-7 [q.v.]), those of Ibn al-Furat (d. 312/924 [q.v.]), as is noted by Ḥājjī Ḵalīfa (iv, col. 559), while Ibn al-Samāṭ (d. 674/1275-6 wrote a Kitāb Manakib al-ḵalIFA [Ḵazīf, ii, col. 1841) and Sadr al-Dīn al-Baṣrī (7th/13th century) dedicated to Baybars (d. 676/1277 [q.v.]) al-Manakib al-Suhayliyya wa l-maṣḥūra al-mustansiriyya (Broekelmann, i, 457), where the two terms used in parallel are evidently regarded by the author as synonymous. This Mamūk sultan was himself the subject of a biography by Šaḥīf b. ᴨ. Anas (d. 730/1330), Ḥusn al-manakib al-ṣirriyya al-munṭazaa aʿm al-sīrāt al-ṣāḥīyya, ed. al-Ḵhwāyjī, Riyād 1396/1976. The Manakib Bani Ḵālid wa-maṣḥūra Bani Ḵumayma (Ḵazīf, i, 377) and the Kitāb Manakib al-ḵitām fī manakib al-umman by a somewhat presumptuous author known as Shumaym al-Ḩilī (d. 602/1204; see Ḥaddījī, col. 1841) and Sadr al-Dīn al-Basn (7th/13th century) al-Haddīq al-WARDIYYA Fī Mandakib ( yayın tardīm) al-aʿīma al-Zaydiyya by the already-men- tioned Haydarābād (d. 288/900) for Malik b. Anas (see al-Makkarī, Ḵafīfat-awliyāʾ by Abū Nuʿaym [ed. Haydarābād 1307). This Ḵafīfat-awliyāʾ, xiii, 72) testify once more to the use of manakib as an antonym of maṣḥīb and as a synonym, here too, of faddīl or of maṭḥīr/mafākhir. These latter terms could without inconvenience be substituted for manakib in the titles of those works written in praise of the ḉābāsīd which have just been mentioned, and of the following, which contain biographies of the political figures: al-Kawakib al-durriyya fī l-mandakib al-Badrīyya, a maqāma (q.v.) written in 791/1389 by al-Ẓamakhshan (d. 791/1389 by al-Durr al-thānnī mandakib Nur al-Dīn (wa-dhikr tardīm) al-aʿīma al-Zaydiyya by the already-men- tioned Haydarābād (d. 288/900) for Malik b. Anas (see al-Makkarī, Ḵafīfat-awliyāʾ by Abū Nuʿaym [ed. Haydarābād 1307). This Ḵafīfat-awliyāʾ, xiii, 72) testify once more to the use of manakib as an antonym of maṣḥīb and as a synonym, here too, of faddīl or of maṭḥīr/mafākhir. These latter terms could without inconvenience be substituted for manakib in the titles of those works written in praise of the ḉābāsīd which have just been mentioned, and of the following, which contain biographies of the political figures: al-Kawakib al-durriyya fī l-mandakib al-Badrīyya, a maqāma (q.v.) written in 791/1389 by al-Ẓamakhshan (d. 791/1389 by al-Durr al-thānnī mandakib Nur al-Dīn (wa-dhikr tardīm) al-aʿīma al-Zaydiyya by the already-men- tioned Haydarābād (d. 288/900) for Malik b. Anas (see al-Makkarī, Ḵafīfat-awliyāʾ by Abū Nuʿaym [ed. Haydarābād 1307). This Ḵafīfat-awliyāʾ, xiii, 72) testify once more to the use of manakib as an antonym of maṣḥīb and as a synonym, here too, of faddīl or of maṭḥīr/mafākhir. These latter terms could without inconvenience be substituted for manakib in the titles of those works written in praise of the ḉābāsīd which have just been mentioned, and of the following, which contain biographies of the political figures: al-Kawakib al-durriyya fī l-mandakib al-Badrīyya, a maqāma (q.v.) written in 791/1389 by al-Ẓamakhshan (d. 791/1389 by al-Durr al-thānnī mandakib Nur al-Dīn (wa-dhikr tardīm) al-aʿīma al-Zaydiyya by the already-men- tioned Haydarābād (d. 288/900) for Malik b. Anas (see al-Makkarī, Ḵafīfat-awliyāʾ by Abū Nuʿaym [ed. Haydarābād 1307). This Ḵafīfat-awliyāʾ, xiii, 72) testify once more to the use of manakib as an antonym of maṣḥīb and as a synonym, here too, of faddīl or of maṭḥīr/mafākhir. These latter terms could without inconvenience be substituted for manakib in the titles of those works written in praise of the ḉābāsīd which have just been mentioned, and of the following, which contain biographies of the political figures: al-Kawakib al-durriyya fī l-mandakib al-Badrīyya, a maqāma (q.v.) written in 791/1389 by al-Ẓamakhshan (d. 791/1389 by al-Durr al-thānnī mandakib Nur al-Dīn (wa-dhikr tardīm) al-aʿīma al-Zaydiyya by the already-men- tioned Haydarābād (d. 288/900) for Malik b. Anas (see al-Makkarī, Ḵafīfat-awliyāʾ by Abū Nuʿaym [ed. Haydarābād 1307). This Ḵafīfat-awliyāʾ, xiii, 72) testify once more to the use of manakib as an antonym of maṣḥīb and as a synonym, here too, of faddīl or of maṭḥīr/mafākhir. These latter terms could without inconvenience be substituted for manakib in the titles of those works written in praise of the ḉābāsīd which have just been mentioned, and of the following, which contain biographies of the political figures: al-Kawakib al-durriyya fī l-mandakib al-Badrīyya, a maqāma (q.v.) written in 791/1389 by al-Ẓamakhshan (d. 791/1389 by al-Durr al-thānnī mandakib Nur al-Dīn (wa-dhikr tardīm) al-aʿīma al-Zaydiyya by the already-men- mentioned Haydarābād (d. 288/900) for Malik b. Anas (see al-Makkarī, Ḵafīfat-awliyāʾ by Abū Nuʿaym [ed. Haydarābād 1307). This Ḵafīfat-awliyāʾ, xiii, 72) testify once more to the use of manakib as an antonym of maṣḥīb and as a synonym, here too, of faddīl or of maṭḥīr/mafākhir. These latter terms could without inconvenience be substituted for manakib in the titles of those works written in praise of the ḉābāsīd which have just been mentioned, and of the following, which contain biographies of the political figures: al-Kawakib al-durriyya fī l-mandakib al-Badrīyya, a maqāma (q.v.) written in 791/1389 by al-Ẓamakhshan (d. 791/1389 by al-Durr al-thānnī mandakib Nur al-Dīn (wa-dhikr tardīm) al-aʿīma al-Zaydiyya by the already-men-
Among the Hanbalis, Ibn Taymiyya (d. 728/1328) was not slow to benefit from a favourable treatment, as three of his contemporaries dedicated compilations of manakib to him: Ibn 'Abd al-Ha'if (d. 724/1324), see Munajjedid, 157), al-'Azm al-Sib'al al-'Aliyya fi manakib shahid al-Islam Ibn Taymiyya (ed. Cairo 1556), Ibn Kudama al-Makdisi (d. 745/1344), see Brockelmann, S, II, 119 and al-Bazzar (d. 749/1349), al-Azam al-sib'al al-'Aliyya fi manakib shahid al-Islam Ibn Taymiyya, ed. Munajjedid, Beirut 1396/1976.

The Ma'alimik which prevails in North Africa owes much to one of its interpreters, Sa'dun (d. 240/854 [q.v.]), founder of a local line of memory, who dedicates a compilation of manakib, after Abu I-U4rab gave the title fasahib to his biography and to that of Ma'llik, while he had written a Kitab Manakib Bani Tamin. Among the eminent representatives of Ma'alimitik in Fesrkiyya, al-Kabiisi (d. 403/1012 [q.v.]) was the object of manakib (ed. H.R. Idris, Algiers 1959) on the part of Abu 'Abd Allah Muhammad al-Ma'llik (d. 438/1046), a similar honour was awarded to his disciple Abu Bakr Al-Mas'ud b. 'Abd al-Rahman (d. 432 or 435/1040;—see Idris, Deux maistres de l'ecole kairouanaise, in AIEO Alger, xiii [1955], 30-41) by a pupil of the latter, Ibn Sa'dun (d. 485 or 486/1092-3;—see Idris, ibid., 35-6). It is appropriate in this context to stress the importance of biographical works relating to this Ma'llik school which was so active in the Magrib, especially al-Fashhii fi manakib fahsh al-Kayrawani by 'Ali al-Tadjudi (d. 422/1030;—see Idris, Deux juristes kairouanais, in AIEO Alger, xii [1954], 153). The Tarif al-Madaris wa-ta'rikh al-mas'ilik al-'Aliyya fi-ma'rifat al-Ma'llik (ed. A. Bakir, Beirut 1967) by al-Kitab 'Iyad (d. 544/1149 [q.v.]), which begins with a lengthy biography of Ma'llik and in which the articles on the leading fahshi contain a paragraph entitled fahshah ( = manakib), and the Ma'allamim al-mutan'in al-ma'rifat af'al al-Kayrawani by Ibn Najidi (d. 839/1435 [q.v. in Suppl.]), who took up (see ed. Tunis, iii, 262, 263) the Ma'allamim al-mutan'in al-ma'rifat al-mahshurin min 'ulama' al-Kayrawan in of al-Dabbagh (d. 699/1300 [q.v. in Suppl.]), already continued by Ibrahimi al-Awwani (d. 720/1320), and is also furnished with Kayrawani manakib such as those of Sidi Abu Yusiif al-Dahmani or of Abu 'Ali al-Kadidi. R. Brunschvig (Hafsidai, ii, 392), who quotes these last-named authors, reckons that the biographies of the Ma'allamim "are closely linked to the manakib genre", meaning that they tend towards hagiography.

Hagiography

This second tendency appears all the less astonishing as certain of these Kayrawani jurists were drawn, from the beginning of the 4th/10th century, into the ascetic movement which held sway in Fesrkiyya and died more or less in an odour of sanctity or as "martyrs" in the ranks of the insurgents led by Abu Yazid (d. 336/947 [q.v.]): it is thus in this period that the manakib genre begins in the Magrib to take on a gradually more marked hagiographical tone. Featuring prominently among these persons is al-Rabi b. al-Ka'itani (d. 334/946) who, having renounced his activities as a fuqahii, withdrew from the world and died in an odour of sanctity or as "martyrs" in the ranks of the insurgents led by Abu Yazid (d. 336/947 [q.v.])—it is thus in this period that the manakib genre begins in the Magrib to take on a gradually more marked hagiographical tone. Featuring prominently among these persons is al-Rabi b. al-Ka'itani (d. 334/946) who, having renounced his activities as a fuqahii, withdrew from the world and died in an odour of sanctity or as "martyrs" in the ranks of the insurgents led by Abu Yazid (d. 336/947 [q.v.])—it is thus in this period that the manakib genre begins in the Magrib to take on a gradually more marked hagiographical tone. MANAKIB

al-Djabanyam (d. 369/979) and the patron saint of
Tunis, Muhriz b. Khalaf (Sidl Mahrez, d. 413/1022
[q. v . ] ) , have been the object, through the offices of, respectively, al-Labldl (d. 440/1048) and al-FarisI (d.
ca. 440-50/1048-58), of hagiographies which have
been published and translated by H.R. Idris (Mandqib
d'Abu Ishdq al-Jabanydni par Abu l-Qasim al-Labidi et
Mandqib de Muhriz b. fialaf par Abu Tdhir al-Fdrisi,
Tunis 1959, 111-20; one can also find there a short expose on the genre studied in the present article and a
description of several mss. containing various collections of mandkib, as well as the text and the translation
of those concerning (161-2, 329-30) Ibn al-Nafis (d.
479/1086) and (163-7, 331-3) Abu Zayd al-Manatikl;
see also Yusuf al-Hanashl, Kutub al-mandkib wamazdhir min al-haydt al-idjtimd^iyya bi-Ifnkiyafi 'l-karn alrdbic li ' l-hidjral al-^dshir milddi, in al-Fikr, xxvii/6
[1982], 111-20).
From that time onward, the development of
hagiolatry, then of religious orders, favoured in the
Muslim world as a whole the evolution and the rich
proliferation of a specialised mandkib genre, and there
is scarcely a single famous ascetic, venerated saint,
founder of a tarika [q. v. ] or eminent Sufi who did not
earn his own monograph or at very least an article in
general works, the titles of which do not necessarily
contain the word mandkib; this is the case, as has been
observed, of the Hilyat al-awliya? by Abu Nu c aym or
of the Indian and other Tadhkiras [q. v. ], or indeed, in
a later period, the Akhbdr al-akhydr (ed. DihlT
1309/1891) by cAbd al-Hakk Dihlawl (d. 1052/1642
[<?.y.]). But reference may be made to, for example,
the Mandkib al-abrdr min mahdsin al-akhydr by Ibn
Khamls 'al-Mawsill al-ShafTS
(d. 552/1157;
Brockelmann, S I, 776), the Mandkib al-abrdr fi
makdmdt al-akhydr by Muhammad b. al-Hasan alShaficl (d. 676/1277-8; Kashf, iv, col. 559), the
Mandkib al-^ibdd min sulahd^ al-bildd by al-Sayraft, of
whom HadjdjT Khalifa says (ii, col. 1843) that he took
some of his biographies from the Safwat al-safwa by
Ibn al-Djawzi, the Mandkib al-asfiyd^ (ed. Calcutta
1895) by Shu c ayb b. Djalal al-Dln Manfri (after the
8th/14th century) and, in Turkish, the Mandkibiawliyd^ of ShanfT-zade (d. 1040/1630-1; Kashf, iv,
560).
The eminent eastern saint Uways al-Karam (d.
37/657 [q.v.]), who is not lacking in biographies (see
for example Abu Nu c aym, Hilya, ii, 79-87), has,
omissions excepted, only at a late stage been the object
of a monograph, and in Turkish, by al-LamicI (d.
938/1531-2 [ q . v . ] , Mandkib-i Hadrat-i Uways al-Karam;
for mss. see G. K. Alpay, Ldmi^i Chelebi and his works,
mJNES, xxxvi [1976], 82, no. 9. The legend of AbO
Ayyub (d. 52/672) is recounted by Hadjdji cAbd Allah
in al-Athdr al-madjidiyya fi 'l-mandkib al-khdlidiyya (ed.
Istanbul 1257/1841), and Ibn al-DjawzI celebrates the
mandkib of Ma c ruf al-Karkhl (d. 200/815-16 [q.v.]),
609-80. On Dhu '1-Nun (d. 246/861 [q.v.]) we are
aware of al-Kawkab al-durri fi mandkib Phi 'l-Nun alMisri, attributed to Ibn c ArabT (d. 638/1240), but not
mentioned by O. Yahya (Histoire et classification de
I'oeuvre d'Ibn ^Arabi; a ms. of this work exists in
Leiden, see van Koningsveld, 108), while Ibn cArabI
himself has mandkib composed in his honour (Kashf, ii,
col. 1843), in particular by al-Suyutl (d. 956/1549) according to Hadjdji Khalifa (ii, col. 1835). The great
saint cAbd al-Kadir al-DijIlam (d. 561/1166 [q.v.})
naturally has his place in the hagiographical dictionaries, and it is even said that the Mir^dt al-zamdn
by Sibt Ibn al-DjawzI supplied al-Yunlnl (d.
726/1326) with the material for a collection of his

mandkib (Kashf, ii, col. 1842), which would be a further
indication of the close links that have already been observed between general biography and hagiography
when religious persons are concerned. HadjdjI
Khalifa lists numerous other monographs on the
eponymous founder of the Kadiriyya [0.z>.], notably
Asnd 'l-mafdkhirfi mandkib al-shaykh ^Abd al-Kadir by alYafFi (d. 768/1367 [q.v.]). Another founder of an
order, Abu 'l-cAbbas Ahmad b. CA1I al-Rifaci (d.
578/1183 [see AL-RIFA C I]) soon earned his mandkib
from the pen of al-Wasitl (d. 589/1194; see
Brockelmann, S I, 781, who also mentions the compilation by Dja c far al-BarzandjI, 1179/1765). For
their part, the Mawlawiyya [ q . v . ] , and in particular
their first shaykh, Djalal al-Dln RumI (d. 672/1273
[q. v. ]) and his successors, quickly inspired Aflaki
(8th/14th century [<?.y.]) to compose, in Persian, the
Mandkib al- ^drifin wa-mardtib al-kdshifin (French tr. Cl.
Huart, Les saints des derviches tourneurs, Paris 1918-22;
ed. T. Yazici, Ankara 1959); numerous other
religious persons have their mandkib written in
Turkish (see Kashf, ii, col. 1842, iv, col. 560); for instance, Ahmet Yasar Ocak presents in^, cclxvii/3-4
(1979) a Turkish mathnawi of Elwan Celebl (after
761/1360), Menakib 'ul-kudslya ft menasib 'il-unslya:
une source importantepour I'histoire religieuse de I'Anatolic au
XIIIe siecle, devoted to Baba Ilyas and his descendants. The saint so much respected in Egypt, Ahmad
al-Badawi (d. 675/1276 [q.v.]), has been honoured by
various compilations (see Brockelmann, S I, 808), but
c
Abd al-Samad Zayn al-Dln (d. 1028/1634-5), no
doubt judging mandkib insufficiently expressive, entitled his al-Djawdhir al-saniyyafi ''l-kardmdt al-Ahmadiyya
(numerous editions). Ibn Kiwam (7th/13th century)
owes to his grandson the Mandkib al-shaykh Abi Bakr Ibn
Kiwdm (mss. Zahiriyya 5398, 6951), while Ibn Tulun
(d. 953/1546 [q. v. ]) is content to entitle his biography
Tuhfat al-kirdm fi tardjamat Abi Bakr Ibn Kiwdm
(Munadjdjid, 291). Nakshband (d. 791/1389 [q.v.]),
eponymous founder of the Nakshbandiyya, speedily
acquired his mandkib through the offices of al-Sharif alDjurdjanl(d. 816/1413; Kashf, ii, col. 1841), while the
Khalwatiyya [q.v.] have been honoured by Muhammad b.- al-Makkl in al-Nafahdt al-rahmdniyya fi mandkib
ridjal al-Khalwatiyya (Istanbul 1927) and by Ibn c Azzuz
al-TunisI (Kashf, iv, col. 560). Ibn al-Bazzaz alArdabill (8th/14th century [q.v. in Suppl.] wrote a
biography of SafT '1-Dln, founder of the Safawiyya
order and eponymous ancestor of the Safawids, alMawdhib al-saniyyafi mandkib al-Safawiyya, or Safwat alsafd^ (lith. Bombay 1329/1911). The patron saint of
Aden or c Adan, Abu Bakr Ibn Aydarus (d. 914/1508
[see C AYDARUS]), found his panegyrist in the person of
his contemporary Husayn b. Siddlk al-Ahdal (d.
903/1497 [see AL-AHDAL]), author of the Mawdhib alkuddus fi mandkib Ibn ^Aydarus. Al-Dja c farI (d. after
1157/1744) wrote al-Tabib al-muddwi bi-mandkib alshaykh Ahmad al-Nahlawi on a saint who died in
1157/1744 (see Munadjdjid, 347), and mulld Nizam
al-Dln is the author of the Mandkib-i Razzdkiyya in
honour of the pir Sayyid cAbd al-Razzak [see FARANGI
MAHALL in Suppl.]. In the 13th/19th century, the
vogue for mandkib was perpetuated in the east. The
Egyptian Sufi saint Ahmad al-Sawi (d. 1241/1825) inspired a collective work, al-Nur al-waddd^ fi mandkib
wa-kardmdt cumdat al-awliyd^ Sayyidi Ahmad al-Sdwi (ed.
Cairo 1347/1928), al-Duwayhi (d. 1874 [q.v. in
Suppl.] has left behind a biography of his master
Ahmad b. Idris, partially reproduced in a compilation
of Salih b. Muhammad al-Madam, al-Muntakd al-nafis
fi mandkib Kutb dd^irat al-takdis Ahmad b. Idris, Cairo
1960, Khalifa al-Safti (d. 1296/1879) is the author of


the manakib al-shaykh ʿAbd al-Laṭif al-Kayyat (d. 1238/1822; ms. Yale 1209), and Husayn al-Dījīr dedicated the Nuzhat al-fikr ft manakib manā'īn ʿalā ḥarām al-tašāwuff (ed. A. Faure, Rabat 1958) of Ibn al-Zayyāt al-Tādli (d. 627/1229-30), founder of the tarīqa ḥisāfīyya, has found his hagiographer in the person of ʿAlī al-Dījīrāwī, author of al-Manḥal al-sāfī fi manakib al-Saṣwān al-Haṣanayn al-Hiṣāfī, Cairo 1330/1911-12.

Rich though the list of Ḥāḍīḍī Khālīfīa is, it is still incomplete, for it is highly probable that many hagiographies of a more or less popular nature, which must have circulated in Sūfī circles, have escaped this conscientious bibliographer, without counting, of course, those which appeared at a later time. Whatever the reason, he makes scant reference to the collections of manakīb composed in North Africa and particularly in Morocco, which was a breeding-ground of saints and marabouts. Just as hitherto there has been no attempt to cite all the relevant titles or to go beyond the 19th century, so we will confine ourselves to discussion of those Maghrībī works which appear to be the most characteristic.

The earliest compilations of Ḥīrīkīyan manakīb have already been mentioned. The Moroccan saint al-Sabtī (d. 601/1205 [q.v.]), whose memory has remained very much alive in the Maghribī, inspired a number of writings of them (ms. in Rabat, Algiers, Tunis, Paris etc.; see E. Lévi-Provengal, Les manuscrits arabes de Rabat, Paris 1921, no. 403; Brockelmann, S II, 1013).

ʿAbd al-Salām b. Ṭaḥfīsh (d. 625/1227-8 [q.v.]) has been honoured by al-Warrāk; Abū Saʿīd Ḥalāf al-Bāḏīj (d. 629/1230) enjoyed the same distinction, after 635/1235, through the offices of Ḥabīb al-Raywānī (see the catalogue of the mss. left by H.H. ʿAbd al-Waḥḥāb, in Hüsāyīn al-Dījīrāwī sa' tālīnīyīn, vii [1970], no. 205; Public Library of Tunis, ms. ar. no. 30). Al-Shāhīdī (d. 656/1258 [q.v.]), his disciples and even his grotto situation in the Ḩabīb al-Zalāḏījī (ms. ʿAbd al-Waḥḥāb, no. 655), have been the object of collections of manakīb which have survived (ms. ʿAbd al-Waḥḥāb nos. 45, 321, 653). In the same period (7th century), there lived in the Turks the saint ʿĀṣa al-Maḥmūbīyya [q.v.], whose manakīb have been published (Tunis 1344/1925). To a Tunisian saint of a later time, Sīdī Ben Ṭars (d. 868/1463; see R. Brunsvig, Hafsides, ii, 341-50), ʿUmar al-Raḵīḏī dedicated the Dīwān al-ḥayrūs wa-wadāy al-ṭariq br-manakīb al-shaykh Abī ʿAbd Allāh Ahmad b. Ṭars (ed. Tunis 1305); to a member al-Ṣamār (d. 981/1574 [q.v.]), of the order of the Ṭarāʾūsīyya founded by the above-named, numerous compilations have likewise been dedicated, among which that of Muḥammad b. Muḥammad al-Munṣṭirī, Tankhī ṭaqād al-azḥār ... fi manakīb Sīdī ʿAbd al-Salām al-Ṣamār, was published in Tunis in 1325/1907-8. A large number of monographs on Tunisian saints have yet to be published. Two mss. of the Great Mosque of Tunis (nos. 1097 and 3873) contain some fifteen of them, and in the catalogue of ʿAbd al-Waḥḥāb manuscripts more than half-a-dozen maḏmūna are to be found (nos. 45, 205, 321, 519, 520, 541, 655) comprising a total of some 45 texts (some of them in duplicate or triplicate); it is likely that private libraries have also preserved a certain number of them or manakīb, a genre which is, moreover, fairly monotonous, where virtues and miracles are compiled on the testimony of witnesses, living or dead, who are named. Works of panegyrist or of devotes, they should not be expected to show any critical tendency, and some of the historical information that they purport to contain is to be treated with caution. Often composed by the semi-literate who address a poorly-educated public, they are written in simple language, as close as possible to the spoken idiom .... In this sense, they constitute linguistic documents of some interest. Similarly, the insights that they supply, unpretentiously, on the topography and the 'reality' of their period are by no means to be disregarded, but above all they throw a useful light on the mentality and customs of these people, insignificant folk who congregated around the mystical shaikhs, eager to benefit from their baraka.''

In the course of the ensuing period, the cult of saints did not weaken in Tunisia, but the activity of the hagiographers seems to have declined somewhat. A. Chenoufi (Un savant tunisien du XIXe siècle, Tunis 1973, 495) notes that this literary genre "contains very few works", and, although monographs were probably still being composed, in addition to al-Fath al-munir fi taʾṣīl al-tarīqa al-shabbiyya by Muḥammad al-Maṣūfī al-Shābī (10-11th/16th-17th century), the third chapter of which contains the miracles and prophecies of the founder of the Shābīyya fraternity and of his sons, he points out and analyses only two hagiographical works: the first (149-53) is the Nūr al-arḍāsfi ft manakib Sayyīdī (Ṣūdī Abu) (sic) l-Ghayth al-Shābīshī (d. 1301/1612), written in 1032 by al-Muntasār b. Abū Līyāh al-Ḍawāsir, who put together a number of miracles (karāmah) "all of them equally impausible" (according to Ḥāḍīḍī Khālīfīa, i, col. 1835, a certain Muḥammad b. Ṭabīb al-Ḩarābūsī, d. 1020/1611, had already recorded the manakib of this saint); the second (385-6) is the Timūl al-salāhah wa l-aʿṣām li-μaṣʿūlim al-imām ft aṣūlīyī al-Kayrawānī (ms. Paris ENLOV, 452) by Ḥabīb al-Kinānī al-Kayrawānī (d. 1292/1875), which purports to be a sequel to the Maʿāṣīm al-imām by Ibn al-Nāḍīrī (see above) and contains "material borrowed from earlier manākīb.

Travel narratives of a later period [see RIHLA] are not lacking in hagiographical tendencies, but this does not apply to that of al-Sanāṣīr (d. 1318/1900 [q.v.]), who is nevertheless the author of numerous texts which A. Chennoufī (Un savant tunisien du XIVe siècle, al-Sanāṣīr, sa vie et son œuvre, Tunis 1977, 181-6) classifies under the heading "works of a hagiographical nature"; they do not bear the title manakīb, but the Tuhfat al-akhyār bi-maṣʿūlīd al-Muḥāṭār, where there is an account of "the miraculous happenings which attended the birth of the Prophet, and those which characterised his youth", and al-Maʿuṣūrd al-maʿāṣī fi dījūl al-ṭarābīn, which contains the laudatory biographies of the forty companions of al-Shāhīdī (see above) testify to the permanence of this literary genre in Tunisia.

In Morocco, hagiolatry made its appearance at approximately the same time as in Ḥīrīkīya, thus well before the springing-up, in the 9th/15th century, of the wave of mysticism which was to spread throughout North Africa and before the emergence of maraboutism as a characteristic of religious activity. In fact, the first elements of Moroccan hagiography appear as early as the 7th/13th century in the form of dictionaries such as the Tašauwūf wa ṣifā wa-nīṣāf niyāl al-tašauwūf (ed. A. Faure, Rabat 1967); of Ittihatīyīn al-Qādirīyyīn al-Maṣūfī (ed. Tunis 1327/1909-10; ms. Paris ENLOV, 452) which contains 277 biographies of san-
tons and Sūfis of the 5th-7th/11th-13th centuries, or al-Maṣṣīd al-Sharīf ... fi dhikr suūrah al-Rif (tr. G.S. Cohn, in AM, xxvi [1956]), of al-Badāris (d. after 722/1322) and of the Shadhiliyya (ms. in Leiden), a monograph, the Kitāb al-Maṣā'id fi manākīb Abī Ya'qūb (ms. in Rabat; see Chorfa, 239-40). Ibn Rasyūn al-ʿAlāmi (d. 1055/1645) is the author of the Manākīb al-Raṣūmiyyīn on his father and his paternal uncles (Ḥajjī, 520). To Ibn ʿAṣyūn al-Ṣarrār (d. 1109/1697) is attributed al-Raṣūli al-ḥāfūz fi ʿallah al-sāhibīn min ʿallah Fās (ms. in Rabat; see Ḥajjī, 712). The Saṣafat man intiṣār maṣāʾib al-ṣūrah duṣṭūrubh (lith. Fās n.d.) by al-ʾIrānī (d. 1151-1389 [q. v.]) is a catalogue of Moroccan saints, forming a sequel to the Daṣwa of Ibn ʿAskar. A Syrian emigre in Morocco, al-Ḥalabi (d. 1120/1708) is the author of al-Dur al-naṣīf wa l-nūr al-anīs fi manākīb al-ʿImām ʿĪdrīs b. ʿĪdrīs (lith. Fās, 1300, 1304; see Chorfa, 287). Abū al-Raḥmān al-Ḥāsfisi, who has already been mentioned on account of the fact that, like al-Ḥarāfī, he preferred qaṣfa to manākīb, nevertheless also wrote the Bustān al-ḍarīfīn fi manākīb al-ṣūrah Abū Muḥammad Abū al-Raḥmān (ms. in Rabat) on the saint and poet in malḥun al-Madīnī (q. v.). Also to be mentioned is the Marākit ʿUmar al-ḥaṣaṣṭān al-khaṭīb al-ṣuyūṭīyīn Muḥammad al-Raṣūli (ms. in Rabat), left by the founder of the Fāsi ʿUmar al- Ḥaṣaṣṭān (ms. in Rabat). Finally, it will be noted that Hamdūn b. al-Muṣāfīr (ms. in Leiden, see van Koningsveld, 94). Ahmad b. ʿAṣṣir al-Ḥāsfī (d. 1163/1750; see Chorfa, 313-14) is the author of a hagiographical work on his homonym, the patron saint of Fās (d. 764 or 765/1362 or 1363), the Taṣuṣat al-ṣarīf bi-ḥaṣaṣṭān Sayyīdīn (Ṣīdī) al-Ḥāsfī Abū al-Ḥāsfī Abū al-Ḥāsfī Moḥammad b. al-Muṣāfīr (ms. in Leiden, see van Koningsveld, 96). Ibn Kunfūdī al-Kusāntīnī (d. 810/1407-8 [q. v.]) uses manākīb in the sense of "prodigies" when he gives the title Taṣūṣat al-manākīb fi taḵmīl al-maṭūrīb (ms. in Rabat) to a commentary on his astronomical treatise, the Taṣūṣat al-muṣāfīr fi taḵmīl al-aṣbābīk, but curiously, he refrains from employing the term in the Us al-ṣarīf wa ʿezz al-ḥāṣarīkī, which is a biography of the patron saint of Tlemcen Abū Muḥammad (ed. M. al-Fasī and A. Faure, Rabat 1965). On account of the often-quoted ḥadīth: bi-ḏikr al-ḥāṣarīkī tanzīl al-raḥma "mention of the virtuous (s = saint) makes mercy descend," hagiographical literature developed to a considerable extent in Morocco under the ʿUṣūlīrīn dynasty, and the ḥadīth genre, even though this term is not always used, plays a significant role in the form both of hagiographical dictionaries and of monographs of saints or at least of persons whose memory is revered. To become familiar with ourselves here to reference to those which seem partic-
not always felt, even in the 19th century, necessarily to imply the accomplishment of miracles.

As may be observed through a perusal of the intentionally-abridged list which precedes, several hagiographers have compiled compilations in whose principal aim is to offer to the reader a moral portrait and information on the noble virtues and scrupulously to follow their example. Since the earliest centuries of Islam, manākib, which is thus invited to acquire their real or supposed virtues and scrupulously to follow their example. However, hagiolatry which begins to emerge at this time and subsequently expands to a considerable extent, is concerned to recount the lives of saints whose memory has not yet been effaced, while the gradual foundation of religious orders, a gradual process over the years, leads to the proliferation of ḥālīs who are to a greater or lesser extent tinged with an aura of sanctity; thus the manākib genre takes on an increasingly marked hagiographical nature, and the term which designates it, having been applied to the qualities and actions and behaviour of any human being, however little virtuous, becomes synonymous, in the public mind, with prodigies, even more with miracles performed by a saint recognised as such, or by a Ṣūfī, a marabout or indeed by a simple mortal to whom, rightly or wrongly, miraculous gifts are attributed.

Systematic research into the bibliographical catalogues, of biographical works and of general histories of Islamic literature, as well as a more detailed examination of texts bearing the title manākib, would certainly serve to bring into sharper focus the preceding outline. Just as the study of the tahākūt genre undertaken by I. Hafsi (in Arabic, xxiii/3 [1976], 227-65 and xxiv/1-2 [1977], 1-41, 150-86) has shown how a term as simple as the plural of tahākūt has undergone, in the sphere of biographical literature, an astonishing semantic evolution, so parallel researches into the manākib genre deserve to be undertaken, seeing that it involves a delicate and ultimately quite complex concept.

**Bibliography:** The principal sources have been cited in the article. What is offered here is a simple reminder of the titles of a few works to which reference has repeatedly been made: E. Lévi-Provençal, Les historiens des Chorfa, Paris 1922; R. Brunschvig, La Berbérie orientale sous les Hafsides, Paris 1940-7; A. Fu'ād Sayyid, Sources de l'histoire du Temps de l'Épopée musulmane, IFAO, Cairo 1974; P. Sj. van Koningsveld, Ten Arabic manuscript-volumes acquired by the Leiden University Library after 1957, in E. van Donzel (ed.), Studies on Islam, Amsterdam-London 1974; M. Haji, L'activité intellectuelle au Maroc à l'époque sa'dide, Rabat 1976; S. al-Munajjīd, Mu'ājam al-ma'arrāḏān al-dimaghāfīrīn, Beirut 1398/1979 (Cf. Pellat, **Al-MANĀMA**, the capital city of the amirate of Bahrain [q.v.] in the Persian Gulf. The city is located at latitude 26° 13' N and longitude 50° 35' E, on the north-eastern coast of the island of Bahrain, which was formerly known as Awāl. The shallow waters between Manāma and the neighbouring island of Muharrak [q.v.] have long been used to provide good shelter for native craft. It has been suggested that the name Manāma (Ar. 'a place of resting, sleeping') may reflect the proximity of a number of prehistoric burial mounds.

The early history of Manāma remains obscure, for reliable references are few and their topographical nomenclature is both vague and confusing. When the Portuguese seized Bahrain in the 10th/16th century, they built their major fortification on the coast at Kāl'at al-ʻAjdājī, some 4 miles west of Manāma. The Persians, who wrested control from the Portuguese in 1011/1602, held the archipelago for much of the
following turbulent period of 180 years, during which time they erected a defensive position on the current side of Manama. In 1197/1785 the Al Khalifa [q.v.] clan of the Utub tribe invaded the islands from Zubara in Katar, and after a siege of some 2 months the Persians were expelled from that fort. The Al Khalifa — who remain the ruling dynasty — did not, however, enjoy an unchallenged accession to power, and the Al Bu Sa'id [q.v.] rulers of 'Uman mounted a series of expeditions against Bahrain between 1214/1799 and 1244/1828 during which time the small town was attacked and occupied on several occasions. In the next century Manama became an important entrepôt port serving much of eastern Arabia, though its fortunes fluctuated in response to the vagaries and violence of local and regional political rivalries. Although Manama was becoming the commercial centre of the archipelago, the Al Khalifa usually resided at Muharrak, which was also the harbour used by the island's large pearling fleet. The ruling family used the fort at Manama only during the hottest months of the year, and it was not until the second decade of the 20th century that the town became the true capital of the amirate. European activities had, however, been concentrated at Manama since the end of the 19th century. In 1893 the Dutch Reformed Church of America established a mission in the town, and in 1902 that organisation built a hospital and a dispensary. A British Assistant Political Agent was appointed and took up residence in 1900; four years later the post was upgraded to a Political Agency. According to Lorimer, the population of Manama in 1905 was approximately 25,000, of whom 60% were Shi'i and 40% Sunni Muslims. There were, in addition, a small number of Hindu, Jewish and Christian residents. The development of the modern city began after the First World War. In 1920 a municipal administration was established, educational facilities at the primary school level were created, and electricity supplies were inaugurated in 1930. The discovery of oil at Diabat al-Duakhân in 1932, and the subsequent development of that resource, helped to stave off the otherwise serious economic and social consequences of the decline in pearl fishing. In 1935 the British established a naval base at Ra's al-Djufayr, some 2 miles southeast of Manama, following withdrawal from the Persian island of Handjäm. This base later became the major centre of British naval activity in the Gulf. In 1942 a causeway road was built linking Manama with Muharrak. In 1946 the British Political Residency was transferred from Bûshahr to Manama. By 1950, the population of the town had grown to over 40,000 and the following decades have seen even greater expansion and development. By 1981 the population was believed to be over 121,000, and Manama had become an important regional centre for banking, commerce and communications. Bibliography: As there are no works devoted exclusively to Manama, the reader is referred to the bibliographical sections of the entries for Bahrayn and Al-Khalifa, which list the standard sources. The following recent monographs contain some additional information. E. A. Nakleh, Bahrein: political development in a modernizing society, Lexington 1976; M.G. Rumaihi, Bahrain: social and political change since the First World War, London 1976; Fuad I. Khuri, Tribe and state in Bahrein: the transformation of social and political authority in an Arab state, Chicago 1980 and Mahdi Abdalla al-Tahir, Language and linguistic origins in Bahrein: the Baharna dialect of Arabic, London 1982.

MANAR, MANARA (A), 'lighthouse', an elevated place where a light or beacon is established; the means of marking (with fire, originally) routes for caravans or for the army in war; lampstand ('candelabrum', archaic meaning); minaret (in this sense normally in the fem., manara, whereas for 'lighthouse', in both the masc. and fem., manâr, manâra). In some modern Arabic dictionaries we also find fanar. It is by chance that this latter word resembles phare (French), faro (Italian, Spanish, which derive their origin from Pharos = the islet situated at the entrance to the port of Alexandria, on which Alexandria became the famous lighthouse; see below). Fanâr has no doubt come into Arabic via Turkish fanârî (fener, which comes from the Greek pharos, whose diminutive phanarião was used, for example in Byzantine Greek; in a parallel fashion, in mediaeval Latin fanarium = lantern, lighthouse, beacon light, French fanal (cf. von Hammer-Purgstall and I.A., s.v. Fenerîtes; but the Türk Ansiklopedisi, 1968, xvi, 230, confuses phanari and Phanos. From Turkish, the word has also passed into Persian. Classical Arabic literature describes several uses of fire among the ancient Arabs (nîrân al-'Arâb = 'fires of the Arabs'); see al-Dhâbi, Hayyâvân, iv, 461-91, v, 123, 133-4; al-Nuwayrî, Niânâ, i, 109-13; T. Fahd, Le feu chez les anciens Arabes, in Le feu dans le Proche-Orient antique, Leiden 1973, 43-61). Some of them were intended to guide caravans, convoys and individuals who were travelling, by night, indicating the route for them, or the beginning of it (irîdâl al-sârî). The roads were shown with 'landmarks' (stones, etc., with fire; then the meaning was extended to those even without fire); the historical legends give the ruler of Pre-Islamic South Arabia, Abraha, the title 'the man of the manara', for he was the first to mark out the routes, in time of war (see al-Suyûtî, al-Wasâ'î, ii, al-Adawi and 'Umar, 146). But among these clearly recorded fires, we find no mention of maritime lighting (see also Yâkût, s.v. manâra; al-Nuwayrî, Ilâmîm, iv, 3: manara of 'Adâd). The word manâra designates several objects (or buildings) which facilitated lighting; for example the candelabrum in the sense outlined above, and which supported the lamp (misîdâh; see al-Dhâbi, Buhûlî, ed. al-Hâjîrî, 19; al-Birrî, K. al-Dhânâshâr; 227: manâra in porcelain; and the iconographic evidence in a miniature of the illustrated ms. Paris BN, Ar. 5847, fol. 13b; Leningrad, Acad. of Sc., Or. S. 23, fol. 30; cf. in the Cairo Geniza, e.g. Camb. T-S, J.l, 15 and Ox. 2821 [16], fol. 56a [and see E. Ashor, in IESHO, vii, 179; idem, Histoire des prix, Paris 1969, under 'chandelier'], and even certain kinds of 'arms' (arm-rests of seats, thrones, etc. (Sadân, Mobihîr, 39, 126). The commonest word to designate the tower standing alongside (or on top of) a mosque and which is used to call the faithful to prayer, is mîz'dâhâ (q.v.), but manâra is also found. This word has produced, in the European languages, forms such as minaret and minareto (A. J. Butler, The Arab conquest of Egypt, thinks that the connection between manâra-lighthouse and manâra-minaret is much more than a pure and simple etymological connection; the lighthouse of Alexandria influenced, in his view, the creation and form of the minaret in Islamic architecture; in the new ed. of Butler-Fraser, pp. LXXIV-LXXV, other references have been added, for, in fact, there is no unanimity among researchers; cf. H. Thiersch, Pharsos, 98-201; Creswell, A short account of Muslim architecture, Beirut 1968, 14; and see massīgîyî). The research published on the pre-Islamic Arabs bears witness to the existence among some of a certain
knowledge of maritime life; however, they did not have very substantial experience. If we add that the "fires of the Arabs" do not contain anything on maritime lighting, we may assume that it is especially after the expansion of Islam that interest in this aspect was awakened. It seems that in the east of the Islamic world (Persian Gulf, Indian Ocean), the Arabs had discovered the sporadic use of fires, and only the more durable "lighthouse" of the khâshâbat [q.v.], near Başra, is mentioned in the description of Arab geographers.

Some sporadic use of fire are even confirmed in the information about the only fixed and noteworthy lighthouse, properly speaking, that of Alexandria: communication by signalling with fires on the departure of Muslims' ships towards the Alexandria lighthouse which, in its turn, gave warning of the arrival of an enemy (by lighting the fire in the direction of the town); some fires were lit on the Mediterranean coast from Alexandria as far as the regions of North Africa, so as to give notice of enemies and direct ships. It is even recorded that opposite the Palestinian coast there were exchanges of signals of this kind was made between ships and the coast (see, apart from the Bibl. below, M. Gaudet-Demombynes, La Syrie, 258-61; ribât, in EI, and especially A. Ef'ad, Coastal cities, in The Jerusalem Catahela, ii, 146-67, which summarise (following G. Marçais and others) information taken from al-Baladhuri, al-Makhdum and Ibn Majârî (according to E. Lévi-Provençal, in Hospit., v, 31 and al-Makrîzî, and cf. al-Kâkâshândî, Khîsat ch. iv of makâla 10). It was a system of lighted fire signals, rather than fixed lighting, but nothing prevented them from profiting from this use of fires for the security of maritime piloting (see al-Hamawî, in the Bibl.). These fires and their sites, near the sea, are called ni'am, ma'âfikî, makdîla and manâzîr; al-Mukdaâtî even uses the word manâzîr for a kind of "lighthouse" or beacon-light and even for a tower (minaret of a ribât?) being used as a lighthouse. Arabic geographical literature, and especially that of the maritime guides, e.g. in the 9th/15th century (Ibn Mâdiîjî and in the 10th/16th (Sulaymân al-Mahri), clearly reflects the dangers presented by reefs and other maritime obstacles and the various means used to avoid them, as if the existence of lighthouses was rare (see I. Y. Krâkòvskîî, Geografiscal'naia literature, Ar. tr., Cairo 1963-5, ii; G. R. Tibbets, Study, Leiden and London 1979, passim; A. M. ʿAtiyâ, Aṣâb al-bahr, Cairo 1981, 79-98).

The famous lighthouse of Alexandria was inherited by the Arabs from the civilisation which had preceded theirs; it had been built, at the entrance to the port, on the islet of Pharos (which is connected today to the coast by a causeway), by Potemkî Philadelphus, around 279 A.D. Since then and until the conquest of Alexandria by the Arabs (in 21/642), it had undergone some modifications and it has been concluded that its functioning and structure deteriorated successively. There is a tendency to accuse, often moreover without reason, the conquerors of the change of régime of being the cause of deterioration, and the assumption that two centuries after the conquest, the lighthouse had fallen completely into ruin (G. F. Hourani, Safarîng, 61: "The wonderful Pharos fell to ruin and no one could be found who knew to repair it") seems exaggerated; for several centuries the lighthouse was indeed used, although its functioning was not as perfect as before Islam.

It is logical to suppose that during the first years of the Islamic régime, maritime traditions persisted as before. It is to the Umayyad period that certain historian-geographers attribute its first deterioration; the legend relates that a Christian, pretending to be a Muslim, was able to convince the caliph al-Walîd (d. 87/705) to allow him to look for treasure near (and underneath) the lighthouse and that the sabotage carried out at that time caused some damage to the upper part of the tower. But the Muslims continued to light the fire on the lighthouse, and only the Arab writers (geographers, etc.) allude to the fact that, in the past, the technique used in its functioning (the lantern) was more perfect, in recounting to their readers that in earlier times it was equipped with mirrors (or a mirror); by concentrating the sun's rays, these mirrors could burn the enemy ships (the historical fact which is hidden here is, perhaps, the existence in ancient times of a reflector or another technical method; the technique consisting of adding a reflector to a lantern was not completely unknown in the Islamic world (see al-Makâkâ, Rawda, 13-14), but it was probably more difficult to repair the damage undergone by a proper lighthouse). In the 3rd/9th century, the governor Ibn Tülûn had the upper part of the lighthouse repaired, but the work was often in wood which was not strong and durable. The use of the lighthouse by the Arabs (lighting the fire on top, at night, by means of special custodians, who even had rooms intended for their lodging) continued until the 5th/11th century. In 578/1182-3 the lighthouse was only 50 cubits high; this diminution in the height of the construction was not as serious as it would appear, since the technique of the construction and to an earthquake (which was neither the first nor the last experienced by the lighthouse), so that the upper part had been destroyed. At the beginning of the 8th/14th century, it was no more than a ruin, despite the efforts made by certain sultans (for example, Baybars I (d. 676/1277) and Baybars II (d. 709/1310), some time earlier to repair it a little. Already al-Malk al-Kâmil (d. 635/1238) had built on this site a mosque, and the fort which is to be found there today (and which now houses the maritime museum of Alexandria) was constructed by the sultan Kâbi Baghdad (d. 901/1496).

As for the form of the lighthouse of Alexandria, it is often described by the mediaeval Arab authors, who strive to accentuate its splendour in the past (one of the "Seven Wonders of the World"); but it is hard to deduce what were its original dimensions, especially because the upper parts (a statue of Poseidon, on top, and the lantern) no longer existed in the Islamic period; some conclude that, during the major part of its history, after the birth of Islam, the lighthouse only reached two-thirds of its original height. Three attempts have been made to record its form and dimensions according to the description of the Muslim historians and geographers by H. Thiersch, Asîn Palacios (who also discovered a description of the 7th/13th century) and E. Lévi-Provençal (who added a source drawing on the description of the geographer al-Bakrî in the 5th/11th century). The latter is the most recent and may also be summarised. The rectangular base of 320 cubits was surmounted by a narrower, octagonal section of 80 cubits, then by another narrower, rectangular section (until the discovery of this description it was considered to be cylindrical) of 50 cubits; no more of it was in existence.

Manâr and farâq have given their names to some neighbouring quarters, e.g. in Istanbul (see Fanar- [alâk] = Fener + köy, J. von Hammer-Purgstall, Constantinopel und der Bosporus, 1822, 270, 279 and the Istanbul miniature of the 17th century, in B. Lewis, Istanbul, Norman, Oklahoma 1963, 99, on the left; see also Fenêtrès et Îles, however, the lighthouse or rather the signalling tower, Kiz Kulesi, at the en-
trance to the Bosporus—dates almost from our own times). With or without a direct connection with maritime illumination, some trading places, an important journal [see AL-MANAR, etc., are called ‘lighthouses’.

The modern age has witnessed several improvements and constructive efforts in the maritime field, including the building of lighthouses (e.g. in Morocco in 1865 [see MUHAMMAD B. ABD AL-RAHMAN], of a more organised nature, in the necessary places.

AL-MANAR, a journal of Muslim thought and doctrine which appeared in Cairo from 1898 to 1940. Its work was the counterpart of that of a printing-house, of the same name, which, besides its own publications, reissued articles previously published in the review, such as the famous modern commentary on the Kurān (Ta’ṣīr al-Manār). Without forming part of any particular school, the Manār subscribed to the reformist line of the salafīyya [q.v.]; this movement of cultural resistance towards colonial encroachment sought to restore to Islam its former power and to re-establish confidence in its traditional values, to bring with the Arabic language, while employing modern techniques. It elaborated an apologetic which is still widely known and influential today.

The Manār was the personal work of one man, Sayyid Rashīd Riḍā [q.v.], born in 1865 near Tripoli (Lebanon). At the end of 1897, the same year as the death of Djamāl al-Dīn al-Afghānī [q.v.], with whom he had dreamed of collaborating, he travelled to Cairo in order to work in partnership with the Imam Muhammad ʿAbduh [q.v.]. Resolved, from the outset, to found a journal which he entitled the Manār (“The Beacon”), he published the first issue at the end of Shawwāl 1315/March 1898. He was, over the course of the years, to include in it a number of articles by al-Afghānī, Muhammad ʿAbduh, al-Kawākibī, Djamāl al-Dīn al-Kāsimī, and others. Scientific questions were tackled by Dr. Tawfīq ʿSībī. After the war of 1914-18, the amīr ʿSharīf ʿArāsānī sent him copy from Geneva. But the bulk of the material was drawn from him own tireless pen.

As H. Laoust writes in his article Le reformisme orthodoxe des ‘Salafīyya’, “its discreet expertise, its Islamic internationalism and the reliability of its general documentation, direct the Manār towards a liberal, cultured minority. The publication of the commentary of ʿAbduh gives it the prestige of a great name. Its leading articles perfectly convey the progressive orthodox view, always well-argued and a balanced in form, of the major contemporary Islamo-Arab questions.” In addition, its judicial discussions, its criticism of books and its news of the Muslim world made it into a link back to 800 (ten issues per year). Each of its 35 volumes possesses either a detailed table of contents, or alphabetical indices, the form of which evolved over the years. The first 34 volumes covered a period of 37 years (1898-1935). As a result of the death of Rashīd Riḍā in 1935, the next volume (no. 35) had its ten issues spread over a period of six years (July 1935-September 1940). The Muslim Brothers [see al-Iṣlahwān AL-MUSLIMĪN] had quarantined its revival, but they preferred to concentrate their efforts on journals of their own. Initially printed in an edition of 1,500, then of 1,000, its circulation rose after the fifth volume with subscriptions from students. The figure of 300 subscribers henceforward guaranteed it a stable, basic readership. There were sometimes temporary difficulties in the distribution of the issues: these were later solved (cf. Turkish censorship in Syria in the first year of publication).

The collected corpus of the Manār provides a mine of information on the attitudes, the focuses of interest, the hopes and disappointments of reformists over a period of nearly forty years. It reflects the major events of the Muslim world seen from Cairo, as well as the personal development of Rashīd Riḍā. The judicial discussions have been separately reprinted in Beirut.

Being centred on the religious and social reform (iṣlah, [q.v.]) of the Islamic umma, the Manār vindicates the salafī heritage of al-Afghānī and of ʿAbduh, exorting a return to the Kurān and to the Sunna with a view to a purer taḥṣīl. It is concerned with the unity of the community, and makes appeals for the surrender of divisions. It opposes those Europeans who seek to efface the last vestiges of the Muslim law. It teaches the compatibility of Islam with science and with reason, in the best interests of mankind at all times and in all places. Following the expression of H. Laoust, “The canonical legitimacy of the sciences, the incorporation into the primitive conception of Islam of the most contemporary social and political ideas to which Muhammad ʿAbduh had attached his name”, have the right of free entry into the Manār. But Rashīd Riḍā remained cautious with regard to what was later to be called al-taṣīr al-ulīmī which seeks to discover in the Kurān all the modern sciences (cf. Manār, xxx, 514-16, on the taṣīrīl of Shaykh Ṭantāwī Dāwāhī on al-Uṣūlī, in Suppl.).

Diverging from the Ḥanafī-Māturīdīsm of ʿAbduh, the Manār turned towards Ḥanbalīsm. The journal’s continual attacks on culpable practices, contrary to the taḥṣīl (mausūl, bids, etc.) are based on Ibn Taymiyya and certain of his fatwas. This paved the way for the reconciliation which was realised through the eulogy of Wahhābism and the transformation of the Manār publishing-house into an active centre of Wahhābī propaganda, beginning after the war of 1914-18 and especially following the conquest of the Hijāz by Ibn Saʿīd (1924-6). In the Manār there is insistence on the need for Muslim propaganda and for guidance (al-daʿwa wa ʾl-ʿirshād). Many lines
are devoted to these topics, particularly to the idea of founding a seminary designed to train enthusiasts for this task. There are articles on Arab nationalism, on relations between Turks and Arabs and on the need to ensure for the Muslim world, mostly Arab. Attitudes towards Şhī‘ism are discussed. Polemic is directed as much against liberal Muslims (cf. that against the Sijṣās, which supported Tāḥā Ḥusayn, etc.) as against al-Azhār. There is news relating to the pilgrimage, the construction of the Ḥijāz railway, the wars in Tripolitania, in the Rif, etc., as well as European colonial policy, particularly in regard to the Syrian question after 1918, the Coptic Congress in Asyut in 1911, the Muslim Congresses of Cairo, of Mecca, etc.; relations with the Christians, their doctrine, missions of Western Christians, Western writers sympathetic to Islam, studies on the greatness and decadence of nations, on pedagogy, on the role of the ‘ulamā’ in the Muslim renaissance, etc. Literary and cultural Arab news items are not lacking. The judicial discussions tackle various difficulties, some of them relevant to the modern world, mentioning the position of Muhammad ‘Abduh (cf. for example the question of the Savings Bank). In short, the periodical contained material suitable for learned and illuminating monographs.

The commentary on the Kur’ān published from the third year onward was the work of Rashīd Riḍā; it included lengthy extracts from the commentary expounded by Muhammad ‘Abduh in evening lectures at al-Azhār, and the respective contributions of the two men were clearly distinguished. ‘Abduh went no further than v. 125 of sūra IV (al-Nisā’) whereas Riḍā continued to the end of sūra XII, (Yaṣīr, v. 107). Some of the positions adopted were daring: ‘Abduh maintained that the texts of the Jewish Scriptures and of the Gospels were authentic and that only their interpretation had been false (Riḍā denied the latter). He claimed that the execution of the Muslim apostate was a measure dating from a time of war during which apostasy constituted desertion in the face of the enemy—today this is not the case and the apostate who does not attack Islam should not be put to death; it is for God to punish him. These examples and other show how ‘Abduh sought to re-open the door of idjtihād. Reference to all these allusions are to be found in the studies mentioned in the bibliography.

Although a positive and very important work in the context of the modern Muslim awakening, it should be noted that the Manār sometimes confined itself to schematic views of an apologetic nature, simplifying in extreme fashion certain historical problems, notably those of the causal influences which helped to bring about the Renaissance of Europe. It also used its influence on behalf of the Gospel of Barnabas, ‘this undoubtedly apocryphal work’ according to L. Massignon, edited for the first time in the 14th century and later in the 16th, sponsoring its translation into Arabic in 1908. This apologetic must have responded to a deeply-felt need, for it enjoyed, and still enjoys, enormous success, even if it contributed little to imparting a sense of objectivity and of history to those who studied it. Similarly, the Manār seems to have ignored a fundamental question: did the adop-

MANĀR, MANĀR (a. m.) minaret.

ii. In the Islamic lands between the Maghrib and Afghanistan.

Unlike the other types of Islamic religious building, such as the mosque and the madrasa, the minaret is immediately and unambiguously recognisable for what it is. The reasons for this are worth investigating. It seems on the whole unrelated to its function of the adḥān [q. v.] calling the faithful to prayer, which can be made quite adequately from the roof of the mosque or even from a house-top. During the lifetime of the Prophet, his Abyssinian slave Bilāl [q. v.], was responsible for making the call to prayer in this way. The practice continued for another generation, a fact which demonstrates that the minaret is not an essential part of Islamic ritual. To this day, certain Islamic communities, especially the most orthodox ones like the Wahhābīs in Arabia, avoid building minarets while they growl at others they are ostentatious and unnecessary. Others are content with the so-called ‘staircase’ minarets which consist simply of a few broad external steps leading to a diminutive kiosk a little above roof level. These perpetuate a practice common in the first century of Islam. While such structures are obviously functional, it is very doubtful whether the same can be said for any minaret much more than 15 m. high. Without mechanical amplification, the human voice simply cannot make itself heard, especially in a noisy urban setting, from the top of such celebrated minarets as the Giralda in Seville [see Iṣbīliyya: 2. Historic buildings] or the Kūb Minār [q. v.] in Dīhil.

If then, the ostensible function of the minaret is somewhat misleading, what other purposes might it have served? If the investigation confines itself to the first instance to the early minarets of the Islamic world—i.e. those predating 1000 A.D.—three possible approaches may be suggested. One is to examine the role of the very earliest minarets in their particular historical setting, on the theory that these examples laid down guidelines for the further development of the form. Another is to see what clues lie in the Arabic words used for minaret, and in their etymology. A third approach would focus on the forms of these early minarets and on their immediate sources, and would
thus involve the assumption that at least traces of the earlier functions associated with these forms survived into the Islamic period. It must be remembered, however, that throughout the mediaeval period, the rôle of the minaret oscillated between two polarities: as a sign of power and as an instrument for the *adhan*. These functions were not mutually exclusive.

It will be convenient to begin by studying the circumstances in which the earliest minarets were built. According to the literary evidence, the first minaret was erected in ca. 45/665 by the governor of 'Irāk, Ziyād b. Abīhi. A *sawmaca* (minaret) was adapted from an earlier Baṣrī structure, the *adhdan* orders were given by the caliph Mu‘āwiya to the governor of Egypt, and the mosque of 'Amr at Fustāṭ was given a quartet of *sawma‘*s, whilst these were also added to other mosques in Egypt. Although nothing remains of these structures, this literary evidence is important in showing that the impetus to build was not a matter of local initiative but came from the highest power in the land, the idea emanating from Syria, where minarets were presumably added to at least some Syrian mosques at this time. It is hard not to see religious-political motives at work here. Christian Syria, within which the Muslims formed a few small enclaves, was lavishly endowed with fine stone churches whose most striking external feature was a tall tower. At the top of these towers was struck the *sindron*—the Orthodox equivalent of the church bell—to summon worshippers for divine service. Some attribute the change in the *adhan* to ʿUmar, but Mu‘āwiya, sensitively attuned as he was to the discrepancies between Christian and Muslim culture, and to the need to reconcile them wherever possible, can scarcely have failed to compare this Christian practice with its simpler Islamic equivalent. It would have been wholly in character for him to have decided to secure for the *adhan* a dignity and formality it had not hitherto possessed by giving it monumental expression. Typically, too, that expression borrowed a Christian form but imbued it with a new Muslim meaning. The slightly later case of the Dome of the Rock leaps to mind as the obvious parallel. The intrusion of political concerns into the forms of early Islamic religious architecture was to be a hallmark of the Umayyad period.

The arguments set out above are susceptible to more than one interpretation. They could support the theory that these early, essentially redundant, minarets were intended simply to demonstrate to the local non-Muslims that the new faith was no less capable than its rivals of devising monumental architecture to glorify itself. However, they could also imply the conclusion that from its very beginning the minaret was intended to function as an outward sign of Islam. A usage formulated in response to a hostile environment would then gradually have become canonical and would have persisted even when circumstances had overaken the need for it. These two interpretations will be considered in more detail below in the context of the form of the earliest minarets.

The second possibly approach to the original function of the minaret is through the etymology of the word itself. An attempt to describe this kind of building. It is perhaps significant that the three words most commonly used — *manāra*, *sawma‘*a* and *mi‘ḥāna*—all arguably refer to quite separate functional aspects of the building. Thus the notion that the minaret served multiple functions is embedded in the Arabic language itself. These functions quite naturally generated appropriate terms for themselves. Whether the prevalence of a given term in a given geographical area reflects the predominance of one function over another is, however, doubtful.
